Testosterone Facts

Some men use **steroids** to get bigger and bulkier muscles so they "look" stronger and manlier!
The irony is that anabolic-androgenic steroids **reduce the production of testosterone** hormone
AKA male hormone!

There could be some other side effects such as
increased risk of heart disease
can cause liver damage
can cause gynecomastia (man-boobs)
can cause infertility
can cause male pattern baldness
can cause aggressive behavior

That's a lot to give up just to look bulkier!
