

# eye in the sky

Having a camera on your site to monitor everything that goes on, 24/7, in real-time, is now a reality.

**B**ig Brother really is watching in 2014, but in a good way. Now you can have a camera on your building sites that captures on-site photos and provides real-time, on-site monitoring – 24 hours a day, seven days a week.

Onsite Eye is leading the way in on-site monitoring for construction and much more. It uses the latest in high-definition camera and mobile broadband technology to capture live images directly from site into the cloud, your browser, and your inbox. Simply nominate where you want a camera, and Onsite Eye does the rest.

From provisioning, installation, and complete camera-fleet management, everything is taken care of for you. Onsite Eye monitors and manages everything. No IT expertise or equipment is required from your end.

## What's included?

Onsite Eye makes site monitoring easy. All technical aspects of the solution are handled by the Onsite Eye team. The complete solution includes:

- all camera and communications hardware
- all pole and footing/mounting infrastructure
- on-site installation
- 24x7 mobile broadband service and all communications
- cloud hosting of all captured on-site images
- 24x7 access to the Onsite Eye software and your captured images
- automatic site updates via email
- email product support.

The brainchild of Insula Software's Chris Grigsby, Onsite Eye is a unique, self-contained and turnkey solution, ready to go. From an idea initiated by clients seeking more transparency into what was happening on their building sites, many prototypes were developed and tested before arriving at the final product, which is now 'robust, reliable and able to perform year after year', Chris says. It was made available exclusively for more than 12 months to a small group before being launched to the wider industry in May 2014.

The features and benefits of Onsite Eye are many. 'Onsite Eye can deliver dramatic cost-savings and efficiencies,' Chris explains. 'With never-before-seen transparency into on-site conditions and progress, the benefits have redefined remote site management.'

'The simplicity and ease of using Onsite Eye being available 24 hours a day, seven days a week, accessible from any web browser, on any device, from any location, is just the beginning.'

'Feedback has been amazing. Site supervisors can now view construction progress remotely, schedule deliveries faster, and coordinate tradespeople sooner, saving both time and money. Site supervisors now do not need to drive around from site to site or call to make sure deliveries have been made. They can simply connect into the chosen camera and view the building site remotely, quickly and easily.'

'The biggest reaction has been from the builder's customers. Never before has a building company been able to offer their customer the ability to access high-quality image updates via web and email from anywhere, on any device. They love it.'

Ultimately, Onsite Eye provides transparency, efficiency, safety, and security by:

- providing timely job status and updates for customers, staff, suppliers, and tradespeople
- updating customers and investors on the progress of their home when they can't regularly visit the site

- monitoring site progress remotely, saving time and money as site supervisors do not need to make unnecessary trips to sites
- confirming when trades are actually on site and deliveries have been made without making a phone call
- monitoring activity to better coordinate any-and-all on-site tasks
- implementing efficiencies across the business
- identifying and monitoring workplace health and safety issues
- monitoring site conditions, access, and cleanliness
- increasing site security, reducing theft and vandalism, and deterring illegal dumping
- supporting investigations should there be a complaint or incident
- having a pictorial history available for the authorities should an incident occur.

**'They can simply connect into the chosen camera and view the building site remotely, quickly and easily'**

For builders wanting to keep an eye on their sites anywhere, anytime, Onsite Eye is 'the future of site supervision', says one happy customer.
