

Letters on a White Paper

by

**José-Hanimoto Obongo Smith-
Müller**

I had a dream last night that one day all the people on this world might no longer be dependent on paper money, virtual zeroes and ones in their accounts or first generation crypto currencies like 0/1-Coin, this Eukalypteria (or whatever it was called), Nega (tinder for stocks) or the other Whisky-thing from Germany (tinder for shopping). So while sitting on the toilet this morning (sidenote: mission accomplished) a solution came to my mind: the EKAF-Coin.

To make things short here are the advantages of my idea:

1. You won't need to waste time on reading 20+ pages of white paper. 2 should be enough to make you realize that EKAF-Coin is the real deal.
2. EKAF-Coin is so much better than others because we will have a maximum of 82 million. This means almost 4 times as much as similar 'products'. Size matters. Ask your wife and/or girlfriend.
3. It will be Made in Germany. And that means 'Quality, quality and quality'.
4. Here in Germany we have zero regulation regarding crypto currencies (at least none that I know of). Additionally it might be another year or two before we get a new government, because Jamaica didn't work out. So this gap will likely not close in the near term. Of course you have to be careful: There might be scams but this shouldn't be your problem because with EKAF-Coin 'You have found the future of crypto currencies - Made in Germany'.
5. There are already people who believe in EKAF-Coin: right before starting to write down my idea I found my first co-investor - my 93 year old uncle Fritz. He gave me 50 € accompanied with motivating words that sounded like 'Mach was draus, Junge'. This is German and means something like: 'I have no fucking clue what you're talking about. I had to fight in France in '44/'45. After that the communists came. And in '89 a guy called Hasselhoff came over to bring down our wall. So how much do you need to leave me alone? Aah - take this. It's 6.13 dude. Get the fuck out of my bedroom. Now!' It feels so good when people believe in you.
6. It will be written in Excel. So even non-programmers, politicians, bankers and technology consultants will have the chance to check for security holes. The others are 'only' open source.

Remember where you were 11/09/89 or 09/11/01? So mark 12/19/2017 in your calendar - the birthday of EKAF-Coin. The clock is ticking. In case you want to donate and be part of the future: please contact me. As long as our system is not up (remaining investment sum: 999.949 € - my oldest daughter just gave me another Euro - she's so cute), we only accept real money. Please transfer to the following account:

[UNICEF DEUTSCHLAND](#)

Bank für Sozialwirtschaft Köln

IBAN: DE57 3702 0500 0000 3000 00

BIC: BFSWDE33

To anyone who read this far: it's a satire.

**Before 'investing' in ICOs better donate to
people who are really in need for help.
Especially this time around the year.**

**In case you have found spelling errors or
missing commas: no problem. You can
keep them.**

**It might take another year or two to the
ICO of EKAF-Coin. So please don't sue
me.**

**To anyone who's asking him-/herself what
EKAF means: just read it backwards...**

Are drawings allowed in white papers?

No Idea :-)
