2. Check that the newest model of Java is put in

To begin with, it's a must to download and install Java. If you already did, it is advisable to make it possible for the most recent version is installed on the Computer you'll use to host the server. Here's what you are able to do to carry out a Java model verify:

- In your Management Panel, click on Java (32 or 64-bit), go to the Update tab , and click

Update Now (check the screenshot).

- Go to the Java Version checker instrument and let it test the model for you. Word that this doesn't work on Chrome and Firefox.

- Launch the Command Immediate, type `java -version`, and hit Enter in your keyboard. Examine the model to the official website.

3. Obtain the Minecraft server files

You can find the Minecraft server files on the official website's Download section. It's potential to retrieve older versions, as well, however not from the official website. If you want the most recent developments, we recommend you all the time use the newest model from the official site.

Word that the server is a JAR file that won't work except you've Java in your system.

It's worth mentioning that the JAR file will create various configuration information in the location you launch it. So, before you launch the server, make sure it's in an appropriate location on your Laptop.

The best apply can be creating a devoted folder wherever you feel like, shifting the JAR file there, and launching it.

4. Launch the server

After you set every little thing up, just launch the server by double-clicking the JAR file. This could begin a course of that writes some configuration recordsdata and quits nearly immediately.

First, and foremost, we should comply with the EULA. Due to this fact, locate the `eula.txt` file within the server's folder and open it in a textual content editor. Edit the `eula=false` part inside the document to `eula=true`, put it aside and shut it. Be aware that doing so means you accept the EULA.

Note: with the intention to avoid any complications, make sure you always launch the Minecraft server as an Administrator.

If you want to keep your privacy secure while playing Minecraft, this simple repair will show you how to hook up with Minecraft with a VPN.
