

# Generic Cialis

<https://tadalafiloverthecounter.com>

Generic Cialis is a drug used for treatment of erectile dysfunction.

Its active substance is Tadalafil.

It belongs to the group of PDE-5 inhibitors, widely used for treating erectile problems.

Tadalafil's action manifests in a decrease in the tone of smooth muscles of the penis and an increase in blood flow to the tissues of the penis.

In such a way a natural productive erection is achieved.

Generic Cialis treats men from erectile dysfunction caused by either physical or psychological reasons.
