KYC.Crypto

The Gateway into the Fiat World and Global Mass Adoption!

Why KYC.Crypto Makes Crypto Mainstream?

Fact: Not even 1% of decentralized apps built in 2020 have reached the Fiat Market!

The Problem: Regulations! No government will use or allow any decentralized app without meeting its regulations.

The Solution: KYC. Crypto meets the regulations to protect privacy and your properties!

$2.3 Bn

Crypto Wallets

Online Shops

"Even if a hacker gets hold of a user's private keys, the admin can remove that identity and allow the user to set up a new account and connect them again to his Third Party Accounts."

Decentralized Single Sign-On

D-ID Verified User Use Cases

➔ **Single, Global Sign-in:** A user can use the KYC.Crypto decentralized account to safely login to their social media accounts or login to a crypto exchange and make trades, all using the same, pre-verified identity and login credentials!

➔ **Token Assignment:** With your verified decentralized Wallet assigned ID you can assign tokenized Assets or all kinds of tokens directly to your Identity and protect your property.

➔ **Verified User:** Who is the third person or third party with which you are dealing? Verify Social Media Accounts with KYC.Crypto or approve your identity in online shops and remove your Third Party KYC access anytime when you like! With KYC.Crypto, we avoid fraud and protect the users' identities!
