

## Advantages And Disadvantages Of Learning Online This Covid-19 Pandemic

As being a classroom teacher then, now online help guide to my select and lucky angels, well, everyday hurdle has been tough, challenging and, sometimes, taxing towards the psyche. Yes, not every my learners have the capability to coping up given that they do not have the appropriate technology like android cellphone, iPad, desktop, laptop or any sexual educational tools a number of the lucky few have.

Well, in the said situation, I, for just one, believe parents could take a step worthwhile because of their kids' education by exerting all efforts to experience a functional cellphone befitting for a web based class. However, you'll find varied main reasons why some parents will not have to be able to provide their children such as a result of poverty, joblessness, insufficient education or motivation checking up on current trends in education set up and delivery of learning especially this COVID-19 pandemic.

Anyway, you can find pros and cons of [Online Learning](#), specifically for blended learning, for kids and fogeys alike.

### PROS

1. Kids can have plenty of time navigating different applications around in an attempt to getting lessons absorbed, applied in their daily grind.
2. Parents are able to see how their kiddos are using their learning time. They might help them budget time in an attempt to do all task accessible sans getting other tasks put aside. Teachers, at all like me, are sending home guide for students, in the role of reference, for his or her subjects to become taken for a specific time, having a amount of minutes included.
3. Kids can show their skills in using the world wide web, say in researching to get a story to read, a photograph to publish an essay on, and details of important events in history especially during holidays and other commemorative exercises in Social Science subjects, to note one.

4. Parents have time to help you their kids with their task in reading and writing, likewise the down sides their kids encountering in numeracy, science and so on.

5. Kids also have some time to be more talkative looking at their camera or what while answering questions, sharing stories and also other activities where speaking will be the target especially on how they express themselves, with certainty without the in person interactions.

6. Parents, mostly, hold the possibility to learn also, kind of having a review of their previous schooling; obviously, with updated info where irrelevant ones was changed to correct one, particularly with Science subjects, say quantity of planets, and so forth.

7. Kids have also an opportunity to become world citizens learning everything about the internet of things and collaborating along with other learners around the world. Yes, teachers have to have a pal teacher from another country, say a Science class from the Philippines co-learning with Science class in USA regarding the different landscapes during wintertime, and, of course the sunny weather in the Philippines. With videos, photos and so on, both learners during these two countries could practice a lot from each slide presentation shared through Google Meet, Zoom meeting, among other technological tools right for this purpose.

## CONS

1. Children with no reliable net connection are still behind with regards to online learning. However, with modules available around; well, all of us have the opportunity to study the concepts, samples and deep learning when a conscientious teacher implements enrichment or remediation programs this sort of needing those. Yes, creativity is key toward providing each of the learning the opportunity to kids facing technological challenges in online learning. Besides lacking those gadgets like android cellphone, lappie or desktop, internet load also gets a hindrance, for who are able to afford such when parents are jobless, in dire poverty and also you know what.

2. Parents suffer stress increasingly when their children can't keep pace using peers, neighbors competing with their kids, and also other scenarios about unequal opportunities, a sad reality majority inside my class is owned by this situation wherein maintaining the Juans is impossible to do.

3. Kids, people who find themselves enterprising and all, head for online cheating. Yes, there's a group chat where solutions to modules are uploaded as well as a lazy bone will undoubtedly copy paste those and viola, get the perfect score, the recognition later much like highest honors and the like. Oh my, this sorry condition of education might be a proving ground for future leaders who won't do sane things but to self-aggrandizement, etc.

There you go. If you be without any such challenges, you might be lucky coping up with all these challenges, and would emerge victorious having continuity of learning amid this difficult time. However, grit, resiliency and perseverance, might be our savior when facing these glaring realities. Regardless of what challenges come in our way toward teaching/learning journey, we are always expecting the best result through our best effort. Keep head high, always. Keep safe, sane and a saint. Cheers!
