

Microsoft Office Install Stuck We'll Be Done In Just A Moment

This software makes the common computer user, a professional. It helps in editing, formatting, creating text document and also helps in making beautiful presentation. You can install this suite through [office.com/setup with key code](https://office.com/setup-with-key-code). This problem occurs when Window Installer is busy or you are trying to update other software simultaneously.

Fix “Microsoft office install stuck” problem:

For this, first you have to press the ctrl+alt+delete keys altogether. Then this will open your Task manager window on your PC. Now you have to select the Processes tab and then you have to locate the Windows Update Standalone Installer (wusa.exe). If you do not found it, then this means the update is already completed. But if it is not completed, then you have to start the Update installation process. Now you have reinstall [MS Office](#) and then check the issue is fixed.

Fix Microsoft office install stuck on running package scripts:

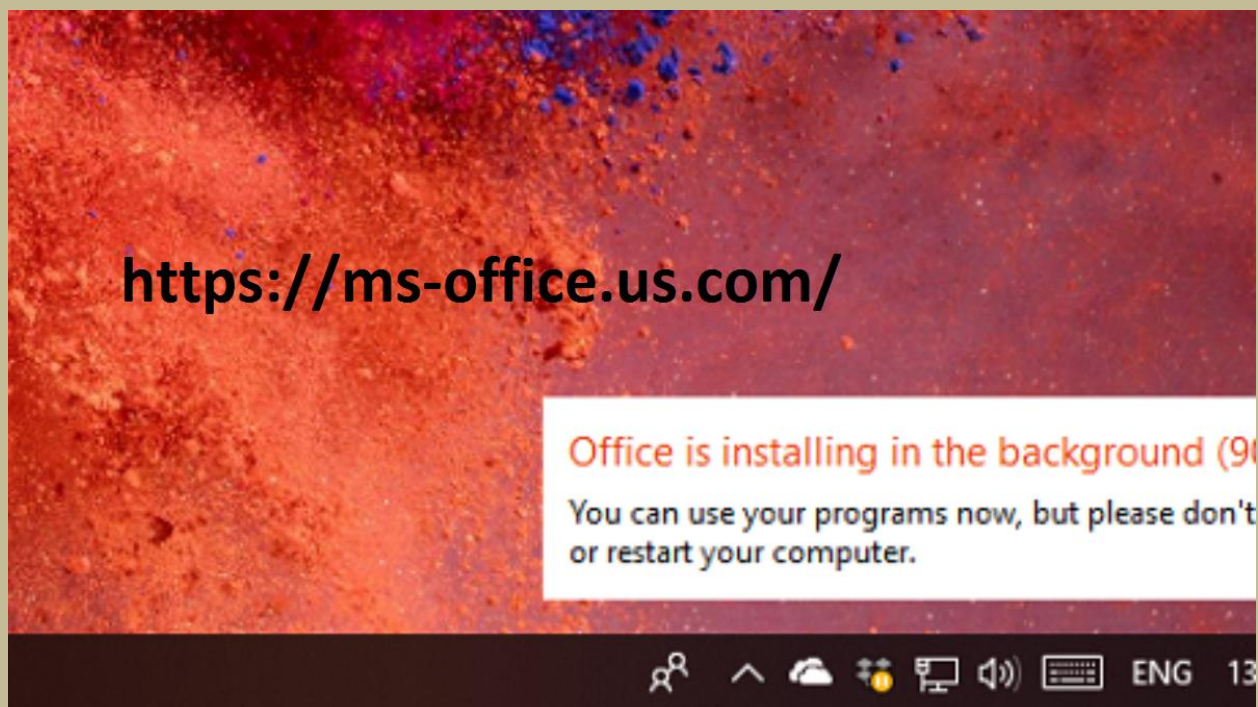

First you have to check if the Office application icons are already there in the Applications. If the icons are there, then you have to go to Activity Monitor and then you have to force quit the install. Here you have to disable the anti-virus before running the installation. Wait for the process to complete. Now run the install in “safe mode”. If there is any problem just update your Mac to the

latest version. If there is so much failed installations, then you have to uninstall the product completely. And then again you have to reinstall it.

If Office is taking too much time to install:

When [office install](#) gets stuck, at that time you should press ctrl+alt+delete key altogether. After this, you have to open the Task Manager. Then you have to go to the Processes tab and here you have to click on Windows Update Standalone Installer (wusa.exe). Now just click on the End task option.

Fix Office is installing in the background stuck:

You can try to fix this issue by restarting the PC. In this situation always use the wired connection, because it will provide you faster internet connectivity. But if your internet speed is slow, then go for the office installer. For this, you have to temporarily disable the anti-virus. To fix the issue, you can also run online repair from the Control Panel. If still you are having problem then uninstall Office and reinstall it.

This method will fix the Microsoft Office Install Stuck issues. But in case, if you are still having problem in installation, then you can call the customer care executive of MS Office anytime from any device. For detail information, you can go to the site of MS Office through [www.office.com/setup home and student 2019](http://www.office.com/setup/home-and-student-2019).
