

# Racøøn

Artificial intelligence generated NFTs and \$RAC utility token

## TL;DR

1. This document is a work in progress.
2. \$RAC is an utility token that will grant access to exclusive NFTs and provide governance abilities to the community.
3. We emphasize the cooperation between deep learning developers and artists so they can build unprecedented type of NFTs.
4. Everyone should have their own interpretations of creativity and art. This is why we think art should have no standard.

## Motivation

Recently, some NFT projects were just a release of a fixed amount of pieces of art with owners wishing that it would become valuable. Although, the good projects ended up being *game changers* where communities generated new relationships, ideas, new projects and so on.

It is the latest that motivated us to issue a token that is linked to our NFT projects. Token holders would have governance powers over these projects. We believe this would generate more engagement, decentralization and empower the community around it.

## Tokenomics

The tokenomics was built to be community oriented

- Fixed supply of 1,000,000 \$RAC tokens
- Burn unclaimed airdrops after a given period

Racoon (\$RAC) Tokenomics
