

WEB API AND CLOUD DEVELOPMENT

BY

TRAWEX TECHNOLOGIES

An API or Application Programming Interface is a programming logic for accessing a web based apps. Trawex provides Travel XML API Integration for travel companies. This way our customer can benefit from the inventories and other travel XML API services provided by the third party, by having a quick and easy XML API integration. An API acts as a software to software interface enabling apps to interact without any user knowledge or intervention. Behind every outstanding web application or mobile app, there is a feature rich API. Extend your customers' choices to flight XML API booking, hotel XML API booking, car XML API booking, insurance and many more with access to both GDS and external content with our XML integration white label services. In the world of app development, all apps are powered by numerous highly specialized APIs, each API developed to serve a specific function. This is why API development becomes so important.

Web API Features

- Efficiency
- Wider Reach
- Customizable
- Personalization
- Data Ownership
- Easy to scale
- Integrations
- Time Effective
- Language-Independent
- Easy Integration with GUI

During the past decade we have seen continuous waves of disruption within the Travel software Development industry. Cloud computing and storage solutions to provide users and enterprises with various capabilities to store and process their data & applications. Trawex Technologies offers cloud application development, migration and testing services for Independent Software Vendor's and Enterprises. New processes such as Agile, Lean, development and operations help streamline workflows and drive collaboration. New technologies, from open source in the enterprise to emerging cloud and mobile platforms, have accelerated the pace of innovation and enable new opportunities for application integration. The number and accessibility of tools used to build and deploy software has grown rapidly as vendors and communities offer solutions to new, existing and foreseeable challenges.

Advantages of Cloud Computing

- Cost Savings
- Reliability
- Manageability
- Strategic Edge

APIs are the foundation of any successful web or mobile business applications. Developing and deploying applications on the cloud requires careful assessment and planning for security, scalability, capacity and integration with other on premise or cloud applications. APIs allow seamless integration and the ability to generate business from external sources.

Consider when you choose Web API?

- Feature Completeness
- Documentation
- Data Formats
- Interface
- API Limits
- Language Support
- Community & Support
