for some cause, the obtain wont work for me both with and with out the command the window just pops up and goes or once i immediately execute the jar file it gives me the error "A JNI error has occurred, please test your set up and try again"

same for me

i had the same situation. after putting in jdk sixteen it works, the primary time you run it it'll generate eula.txt and you must edit it from false to true and then run it again

obtain this, this worked for me. <https://www.oracle.com/java/applied-sciences/javase-jdk16-downloads.html>

Hey there! Is the actual file itself downloading? Does the hyperlink result in any particular error/unregistered web page? If need be, you can even download the jar file straight from this official Mojang webpage: <https://www.minecraft.net/en-us/obtain/server>

Let me understand how that goes for you! Cheers!

It doesn't work?!?!?

help plz

Obtain this. search for the one that is your OS <https://www.oracle.com/java/applied/sciences/javase-jdk16-downloads.html>

If anyone is getting an error whereas launching the server.jar for 1.17 obtain the newest Java SE. It immediately fastened the problem <https://www.oracle.com/java/technologies/javase-jdk16-downloads.html>

i've gotten this error

Error: LinkageError occurred whereas loading fundamental class net.minecraft.bundler.Most important

java.lang.UnsupportedClassVersionError: net/minecraft/bundler/Principal has been compiled by a more recent model of the Java Runtime (class file version 61.0), this version of the Java Runtime only recognizes class file variations up to 60.0

can somebody tell what is incorrect?

Hey, you appear to be working the file using a different version of java, which is not compatible with the server file. Please be sure that you're using java eight on your server. When you've got any additional questions, please do let me know. Cheers!

Hi! I'm trying to obtain the jar, but it surely downloads as an explore link and it won't let me open it with java. It is purported to download as a javascript proper? how do I fix this? My world my life I perceive the remaining, I simply can't figure out how to change how it downloads. Or easy methods to open the explore link in java. Thank you!
