

Anyone Played Minecraft On An M1 Mac?

Anyone played Minecraft on an M1 Mac?

Hey!

The positive reviews for the new Macs, especially the MacBook Pro, make me want to upgrade from my Surface Pro 4 to a Mac. I used to be a Mac user during the Snow Leopard to Mavericks days, but I switched to Windows some time ago.

I have a bunch of programs I use that I've heard users say that work perfectly on M1 however, do you know if Minecraft (Java) can be played on an M1 Mac? It's one of my most played games and I don't think I could replace my PC with a machine that didn't run my favourite game. Java is available on ARM, but I've never heard of anyone playing Minecraft on an M1 Mac at this point!

Thanks! (I hope I posted it in the correct location!)

Highly recommend it. Performance-wise, the M1 Mac will blow your mind. It's only a matter of time until Minecraft is optimized for the M1. Until then souldevteam.net 'll be able to use either version. Bedrock (because M1's can natively run applications for iOS/iPadOS currently) and Java (translated in real-time running Rosetta 2 which is built in. You won't even be able to tell the difference.

I tried to side load Minecraft to my M1 Mac, but the keyboard and mouse wouldn't work. What method did you use to side load it?

yes

Information from the video: Java is not a native M1 application, therefore it must use Rosetta 2 emulation.

He was comparing the Baseline 7-core GPU MacBook Air to the Baseline 8-core GPU MacBook Pro. The MBP generated the world (same seeds on both) like a second quicker however, the MacBook Air seemed a bit faster for whatever reason (he was using the same graphics settings on both).

The problem with this comparison is that he kept the vsync feature on, which means that the

FPS limit is set at 60 FPS. It would have been interesting to find out how high it could really go

iOS, Android and Windows 10 versions of Minecraft all play well together, but the PC and Mac versions of Minecraft won't work with the Pocket Edition Realms server. You can still play with your friends on Android and an iOS device.
