Use this document as a description for the Photos, I did my best to find the set's and minifigures' code number on bricklink

Rough order is:

SETS ▪ **Prequels** -> misc ; Separatists (starships, vehicles, white box) ; Republic (starships, vehicles, speeders) ▪ **OT** -> Rebel Alliance (...) ; Empire (starships, vehicles)

MINIFIGURES ▪ **Prequels** (various droids ; misc ; Speratists ; Republic) - **OT** (Rebellion ; Empire)

*Pdf isn't perfect as I wrote it in the span of a couple weeks, changing and modifing parts of it as time went on to better describe the collection, so if you find some small incoherences in like the usage of **bold**, color highlights ecc.. that's why. I checked many times it to fix any errors, tried to give it a comprehensive coherent "structure" and to address some potentially confusing things in the prologue of the document, but sometimes a section differs slightly from the previous one in usage of **bold**, underlines or abbreviations, hope it is not confusing.

- This is a childhood collection, it started as a mean to play, later in time it became more about displaying and collecting so newer sets were not tampered with. I used to play with the older ones with my brother, not the type of play that consists in smashing things so do not worry, overall little damage is to be found here, even if some pieces were damaged, I would have usually replaced them with newer ones. I mostly stopped buying around 2014 as I started to lack time, still occasionally bought stuff from bricklink and some new sets I got as gifts from friends. The majority of sets rested on shelves, displayed away from direct sunlight, occasionally dusted off. Some minifigures, especially "newer" ones (considering the collection as the reference) just sat in a set mostly untouched, some I literally only touched twice after I assembled them. Even most the older ones, however, after 2014 were put inside sets or boxes and stayed there for years, just being dusted off from time to time. So, even if I played with them prior to 2014, a big number of them have been mostly "inactive" for probably 5/6 years now and protected them sunlight.

That said, most minifigures from the sets are in different "piles" divided by armies and not with their sets, a couple were mixed to make new characters, weapons changed ecc... usually however both minifigures and sets were kept with care, in most cases the worst you can find is dust, I did however try to clean them up a bit back when I took the photos.

If you are wondering why I have 300+ minifigs but only 50 sets it's because I had many more sets but they were dismatled in time because me and my brother liked to play and build our own stuff with them. Plus I was an "army maker" guy so, during the years, I bought many minifigures on bricklink, mostly droids.

No, I did not count as sets the ones I only have the figures of.

(ex. 1) I had 2 mini AV-7 cannons, the were dismantled and combined in 1. Even as I sell the minifigures of both, I still count as selling 1 set because I consider the 1 cannon as 1 set.

(ex. 2) I have speeders from battlepacks, maybe there aren't all the minifigures or pieces of scenery but what I'm selling is the speeder and driver, so I count each as 1 set. I do not count, for example, STAPs as sets because they're very small, like droidekas.

(ex. 3) I have various Work in Progress (WiP) stuff, that doesn't count as a set.

Hope it's clear. At the end of the day "sets" are what would be called builds, except the smaller ones and environment, like barricades, rocks ecc...)

▪ . "No minifigure/no minifigures here/no other figures/minifigures here" in the description of the sets doesn't mean they're lost, most probably they're mixed in other sets or in minifigure piles.

For simplicity sake I just listed in the sets' descriptions the figures that were with them when I took the photos instead of reorganizing everything. Wanna know if a certain figure "missing" from its set is in the collection? Search in the Minifigure sections, use the "Find" / Ctrl+F fuction on your device to search the name (or better, the code) in the document or ask me.

● There are instruction booklets, I kept all of them in a box, there's a photo of all the ones I'm sellong with the collection. The conditions range from great to damaged. I think one has 1 sentence written on it. The LAAT Poster is included.

(X) = set Number
[X] = date of release
(sometimes a set number will be in blue, no worries it's just the system that thinks is a phone number)

▪ when it's present "from..x set" it means that in the photo I'm focusing only on one vehicle/ ship/element of the "x set", this is because some set may represent a battle between different forces or because the original set had also other structures/small vehicles ecc..(to set the mood/location) that were dismantled. For example there are some sets with separatist forces and a republican speeder, I'll have all those speeders in one section, so the other vehicle is in the separatist section of the list and both of them will be labled "from...x set"

- This first section serves as a description for the photos of sets, after that there's the section about all the minifigures in the collection, both those already seen in the sets' photos and those there were instead in boxes, armies ecc...

● ▪ ● ▪ PREQUELS ▪ ● ▪ ●

▪ Naboo ▪

- x1 - (9499): **Gungan Sub [2012]** - Ship is incomplete, probably ~5% of the original pieces are missing - mine and crates are included, stickers mostly ok. No minifigures here.
- x1 - (from 7877): **Naboo Starfighter [2011]** - Ship is complete with Stickers, missiles and pedestal - (sw0340) x1 Pilot included but not R2-D2 here.

● ▪ ● ▪ REPUBLIC ▪ ● ▪ ●

|| ● ▪ Navy / Starships ▪

- x1 - (8039): **Venator-Class Republic Attack Cruiser** [2009] - Has All bombs, missiles, Escape pod and Death Star Plans - original minifigs included: (sw0221) x1 Gunner ; (sw0191) x1 Clone Pilot ; (sw0244) x2 Commando - no other minifigures, Palpatine is elsewhere. After I received it, many years ago, it fell on the floor 2 times in the span of one month. The second time I rebuilt it something must have gone wrong because it never felt quite the same again so I'm pretty sure I messed up some parts of the structure. Point is: should have ~95% of the pieces but some sections are probably built incorrectly.
- x1 - (75038): **Jedi Interceptor** [2014] - Ship is complete and I found the 2 green spring-projectiles. Minifigure is the correct one (sw0526) x1 Anakin, Armed - R2-D2 not included here.
- x1 - (7964): **Republic Frigate** [2011] - Ship is probably missing a couple pieces (some may be misplaced), it has a section, that I highlited in the photos, of which I do not remember the function, maybe a bomb-dropper? Or pieces missing, dunno - It has stickers, the special hologram piece (3062bpb037), crates and missiles - Crew not included here.
- x1 - (8019): **Republic Attack Shuttle** [2009] - ship is probably missing a few pieces but overall mostly complete, loaded with missiles and bombs + (sw0191) x1 Clone Pilot, no other minifigures here.
- x1 - (75021-1): **Republic Gunship** [2013] - Ship is complete with stickers, loaded with all missiles, extra bombs, crates and speeder - crew is composed of (sw0480) Coleman Trebor + all my Phase 1 Clones EXCEPT one (sw0481) Clone Commander that is in the AT-TE || ▪ ||

here inside the LAAT there are: (sw0442) x6 Clone Troopers ; (sw0438) x3 Clone Sergeant ; (sw0492) x1 Clone Captain ; (sw0491) x1 Clone Pilot, no other minifigures here.

- x1 - (10195): **Republic Dropship with AT-OT [2009] -** Ship and Vehicle mostly complete, I'd say 97% complete for the sake of argument but probably most of the "missing" pieces are just swapped (like the one highlighted in photo) / misplaced. About that, when I built this set the first time I made a mistake and as a result, year after year, the cockpit of the ship damaged the stickers on the AT-OT's cockpit as it was resting on it. Only after a long time I noticed, decided to take a closer look and fixed it. Now it should be A-OK but I added a support pillar anyway, better safe than sorry. That said - all other stickers should be fine, missiles and extra ammunitions are complete, contraption works. Crew consists of (sw0191) x2 Clone Pilot - no other figures here.
- x1 - (7931): **T-6 Jedi Shuttle [2011]** - Shell of it's former self, was heavily modified, still has the red insignia and sticker parts though. No crew here.

||■ ▪ Vehicles & Similar ▪

- x1 - (75019): **AT-TE [2013]** - Vehicle is complete, with all stickers and missiles. I added a bigger handle to pull it up since the original is a bit small. The only figure present is (sw0481) x1 Clone Commander, the last of my Phase 1. No other figures here.
- x1 - (8098): **Clone Turbo Tank [2010]** - Again, one of my first sets so probably some ""doors"" do not close exactly as intended and the vehicle has a few missing pieces, some swapped and misplaced. Case in point the mobile command center that was disassembled for parts. Other than that, AT-RT, crates, the weapon rack (without weapons) and stickers are included. Springs and other functions like the handle are perfect, there is no problem with the vehicle's structure, only a few missing details. No minifigures here.
- x1 - (75002): **AT-RT [2013]** - Vehicle is complete + (sw0445) x1 501st Legion Clone Armed (w/ handgun), no other minifigures here - the droideka was disassembled
- x1 - (8014): **Clone Walker Battle Pack [2009]** - Vehicle has some pieces misplaced and 1 Republic insignia is on a white plate instead of a grey one. The minifigure is a mix between an ARC and an ARF Elite trooper (sw0377 - sw0378). No other minifigures here.
- x1 - (from 9488): **mini AV-7 Cannon [2012]** - This is a crude, custom made AV7, built by combining two cannons from the set (I bought 2) + (sw0221) x1 Clone Gunner. No other minifigures here.
- x1 - (8091): **Republic Swamp Speeder [2010]** - Vehicle should be complete + (sw0380) x2 Commander Gree, Armed. No other minifigures here.

Republic Speeders (monoplace)

- x1 - (from 7869): **Red 2011 type CW Speeder [2011]** - Red version of the 2011 Clone wars speeder. The minifigure is a mix between an ARC and an ARF Elite trooper (sw0377 - sw0378). No other minifigures here.
- x2 - (7913): **Green 2011 type CW Speeder [2011]** - Green version of the 2011 Clone wars speeder + (sw0298) x2 Clone Trooper with Sand Green Markings (Horn Company). No other minifigures here.
- x3 - (from 75037): **Springloaded speeder [2014]** - Vehicles Complete with projectiles (added a cuople of dots underneath to pose them on tiles) + (sw0524) x3 BARC Trooper. No other minifigures here.

▪ Minifigures

- (A.) = Armed with Original weapon
- (UnA.) = Unarmed
- (A. no StudShooter) = Replaced studshooter with more congruous weapons
- (A. w/...x) = Armed with another weapon or added weapon to unarmed figure
- Nothing = originally unarmed, remained unarmed
- (×..n) = multiples of same figure

- This is a list of all the minifigures in the collection, the ones inside the sets, inside army boxes ecc...

- Prices are the ones I had estimated around 9 months ago, after discovering that Queen amidala was really sought after. Like the sets, prices are indicative, did my best to estimate them all but I can't do a perfect job, I thoroughly examined mostly the "important ones". Prices are based on overall condition (complete, like new, broken, missing accessories, faded prints..), bricklink's average price and the ones of the first page, second if they were pratically untouched. If the figure was really rare I limited myself to the first half of the first page.

I accounted for defects, like of 55 **sw0001c** droid some may be in worse condition than others so I detracted 0,30 off each of them from the average estimated price I had arrived to. That way even if ~14 of them are completley, utterly destroyed, there won't have been a loss of value. Same for every figure (except a few perfect ones) that way, if a leg or hand is a bit loose ecc... value shouldn't be lost.

That's my reasoning at least.
