Minecraft: Java edition for LINUX

This should install all the required dependencies for Debian based distributions like Ubuntu. If your environment doesn't have a graphical package installer you can install the package from the terminal like this:

```
apt-get install Minecraft.deb
```

On Arch and Arch based distributions, the package is available as minecraft-launcher from the AUR. AUR is a repository of packages maintained by the community. You can read more about how to use it on the Arch wiki.

alternateDownloadFirst alternative download.

On other distributions, you can download the raw launcher files as an archive, extract them somewhere and run them in any way that is convenient (from a terminal, creating a shortcut, etc.). You'll need Java and some dependencies, most of which should already be present on common Linux desktops.
