#### **Disable System Restore**

- Go to Start, right-click on MY PC.
- Click on PROPERTIES and then SYSTEM RESTORE
- Now, tick on the turn off Computer Restore checkbox
- Click OK and then press YES
- It will show on time until the turn off System Restore

If it doesn't help you to solve the AVG Error Code 42125, later try the next Step.

## **Restart the system**

- Open Settings from the right side of the calculator screen
- Click to change the PC settings. Click to change the PC settings.
- Click to restore See the option named "Delete everything and reinstall Windows" to look for the Start button below it, and then click it.
- Follow the instructions and reboot the system.

## **Follow the next method once your reboot system**

### **Enable system restore again**

- Click the Start button and right-click My PC.
- Click on the properties and system restore
- Click to clear the Close System Restore check box, and then click OK.

### **Delete your temp folder**

You should try to clear your temporary folders for all user accounts (temp, IE, java, FF, Opera, Chrome, Safari), including

Administrator, All Users, Local Service, Network Service and any other account from user's folder. For that, you can download any clean software like TFC (Temp File Cleaner), easily available on the Internet. This software tool cleans the % system root% \ temp folder and also looks for .temp files in the % system drive%, % system root% root folder, and the system32 folder (32-bit and 64-bit operating systems on 64-bit operating systems). As a result, the tool will completely erase all temporary files where other temporary file cleaners may fail.

In case, if all the more than steps, is not working to fix [Avg Antivirus Error Code 42125](#), then you can contact with experts to fix instantly.
