Bitcoin Charts

Bitcoin is a digital currency, which is decentral and uses cryptography to encode the cryptocurrency. Bitcoin was born in the year 2009 and uses the SHA-256 algorithm. But how strong is that currency in reality? It began in 2009 with a value of dollar cents, went up to 20.000 US Dollar for just one Bitcoin, to stabilize now around 8.600 US Dollars. Analysts are talking about much more value in the upcoming years. But the basic idea of cryptocurrency is different, the vision was to bank the unbanked and there are nearly 2,5 Billion people out there who have no access to our existing financial system. Bitcoin could be a real alternative for this group.

Bitcoin is produced via a process called Mining, computer hardware is used and quite a bit of electricity is needed, to solve the arithmetical problem with the help of the Bitcoin algorithm.

NEXUS is delivering the mining directly to you and this with a fantastic high output of Bitcoins!

E-Sports

More than 2,6 Billion are playing video games worldwide, says a well known market research company. The turnover in this business sector will be over 1 Billion US Dollars this year. In the year 2024 E-Sports will be olympic! This is enough reason to implement E-Sports in our company for you.

The platform www.esports.com reflects perfectly the market and its rapid changes. Our distributors get the possibility through the E-Sports ICO to participate directly and without detours on this huge opportunity.

We are really proud to offer you this big deal!
