

Commercial Payments Exchange (CPX)

Proxy Pay

Drive New Revenue & Improve Efficiency

Many supplier industries only accept payments via web or phone, which can cause pain points for companies who want to automate their manual payments process.

The CPX™ Proxy Pay solution specifically targets web and phone payments - enabling a complete electronic payment on behalf of the buyer.

How it Works:

The CPX Proxy Pay solution works in three easy steps:

[1]

First, CPX receives the buyer's spend file

[2]

CPX identifies Proxy suppliers with transactions above the threshold and forwards

[3]

Finally, CPX processes these payments through the Priority Call Center

The CPX™ Differentiator

CPX Proxy Pay creates an additional revenue stream while greatly improving overall efficiency. What's even better? CPX takes on the task of managing and processing the repetitive payment transactions so that you don't have to!

Specifically Tailored

CPX will conduct an average transaction analysis to identify the Proxy supplier targets and set transaction limits for Proxy payments. In any case where a transaction falls below the limit, CPX will process a check on behalf of the buyer.
