Possible Pros

- **Epilepsy:** The ketogenic diet was first used clinically to treat seizures. it's been wont to successfully reduce seizures for several years, with research to copy the advantages outweighing any cons.

- **Weight loss:** There are some great metabolic changes initially with this diet. In a piece of writing by Antonio Paoli, he notes that the health parameters related to carrying excess weight improve, like insulin resistance, high vital sign, and elevated cholesterol and triglycerides. it's true that fat oxidation does increase thanks to the body adapting to the upper dietary fat intake. However, fat oxidation and losing body fat are two different processes. When fat oxidation is higher it doesn't necessarily mean that there'll be a discount in body fat. Overall calorie intake and calorie burn are going to be the most determinant in fat loss.
- **Type 2 diabetes:** Carb restriction can have an immediate impact on glucose concentrations, lowering them over time. it's going to be a simple way one could get their diabetes in check. But one should consult a registered dietitian before utilizing this strategy, as a general healthful diet and carb control can produce equivalent results.
- **Cancer:** This is often a growing area of research for the ketogenic diet. The Warburg effect has established that tumor cells can break down glucose much faster (specifically 200x faster) compared to typical cells. the idea is that by "starving" tumor cells of glucose, you'll inhibit their growth and help prevent cancer.

Possible Cons

Some negative side effects of a long-term ketogenic diet are suggested during a review of the diet by Harvard's school of public health, including increased risk of kidney stones and osteoporosis, and increased blood levels of acid (a risk factor for gout). and therefore the biggest areas of concern below.

WHERE DO WE SEND YOUR BOTTLE?

- **Nutrient Deficiencies:** Because whole food groups are excluded, nutrients typically found in foods like whole grains and fruit that are restricted from the diet can cause deficiencies, especially if the diet is followed incorrectly or without proper guidance. It's vital to include a good sort of food while eating such high amounts of fat. Each food group offers different essential nutrition. Specialize in meats, seafood, vegetables, some legumes, and fruits to form sure you're getting fiber, B vitamins, and minerals like iron, magnesium, and zinc. It might be best to consult a registered dietitian to alleviate the likelihood of any deficiencies.
- **Keto Flu:** During the diet transition you'll experience uncomfortable side effects from significantly cutting carbs, sometimes called the "Keto Flu". Hunger, headaches, nausea, fatigue, irritability, constipation and brain "fog" may last days. Sleep and hydration will help, but it's going to not be a pleasing transition into the diet.
- **Adherence:** Point blank, following a really high-fat diet, could also be challenging to take care of for many. Keeping yourself satisfied with a limited sort of food and food groups and not being allowed to possess a number of the more pleasurable foods like fruit, rice dishes, ice cream, or cream-based soups could also be challenging to take care of. This is often very individual, but adhering to a healthy diet is vital. To really gain long-term health benefits, one must have healthy habits in situ year-round, not 30 days at a time.
- **Gut Health:** Using the restroom could also be difficult since removing whole grain and fruit will greatly lower one's fiber intake. Not great for gut health.
