

Damir – Kha'Zix my way

Okay, I was going to do a guide but I didn't know where to, and I am not organized like those guides so I'm going to leave out all the bullshit and cut the to chase. I like to just think about stuff, and write it, so this is the only way I can get my thoughts out.

Initial Thoughts-----

-Please get rid of any other thoughts of why you think you are stuck low Elo or whatever. You lack game knowledge, you do not understand the game, that is the sole reason you are stuck in low Elo and cannot win.

-You need to learn the game if you want to climb. Take me for example, I have 0 mechanics, ask anyone that knows me (Mainly because of how I play this game, and how my setup is) but that's beside the point. I understand the game, I understand my enemies, I can predict them, I can outplay them, I know how much damage they do, How much damage I do, what their cooldowns are. These are just examples of what goes into understanding the game.

-This is not a "Kha'Zix guide" , you do not simply climb by just knowing how to play Kha'Zix, that is not how the game works. You need to understand the jungle, the game, and your champion. You cant just know your champion and get to high Elo.

What must you know, to achieve your "dream" rank of whatever it is, gold, plat, diamond, master, challenger?

Some basics are ; Routing, This is the most important part of jungling, your early routing can win the game in a matter of minutes.

Your own damage, many people do not understand their own damage, here are some what some people say "I'm so fed but the enemy team just groups and I cant do anything" , If you are fed, and you gold advantage, this usually means that you have item damage, and level advantage over your opponents. Stop having the delusion that you need isolation to kill people, if you have your advantages of level and items, you do not need isolation vs squishy people, say like enemy team is sieging your mid turret as 5, you can go to your raptor wall, w e q Tiamat auto

smite someone, r, and e away or go for more kills, obviously not everything works this way as games go very differently but this is just an example.

Enemy / Team Damage / cooldowns, learn these, its not hard, there are many sources for these

Learn how lanes are, learn what to do after you gank, and get a kill, be able to read enemies body movement

Stuff-----

Jungle- The jungle is no longer the old jungle, the new jungle benefits people who cheese, gank, and get gold advantage. In the previous jungle, your main priority was to get a level advantage, but since you no longer need level advantages due to the new Kha'Zix, this makes cheesing, ganking, and trying to get gold far more advantageous for you

Currently, my routes are just trying to get yourself and your team ahead as fast as possible to start your snowball fast.

Here are some of the routes I do;

Blue Side of map- 1) Red- > Wolves -> Blue -> Enemy Red (Kill The jungler, take the red, gank top/mid), Top / Mid gank

2) Red -> Enemy wolves(Sit in the camp)

Red Side of the map- Red- > Top (First Blood) -> Enemy Blue

Red - > Wolves - > Blue -> Mid or Enemy red if they started blue

Okay so you ganked someone, lets say, the top laner, you secured first blood, what now? Well there are many things. Does your top laner have tp? Is the lane not frozen and is it going to slow push to the enemy turret? Help your laner push out the wave, this will force the enemy top laner to have to tp to lane. If the lane is freezing to your teammate or pushing to your teammate, do not do anything,

both of you recall, this will also force the enemy top laner to tp to try to break the freeze.

When your jungling, the best strategy to win is to shit on the enemy jungler, that should be your main priority.

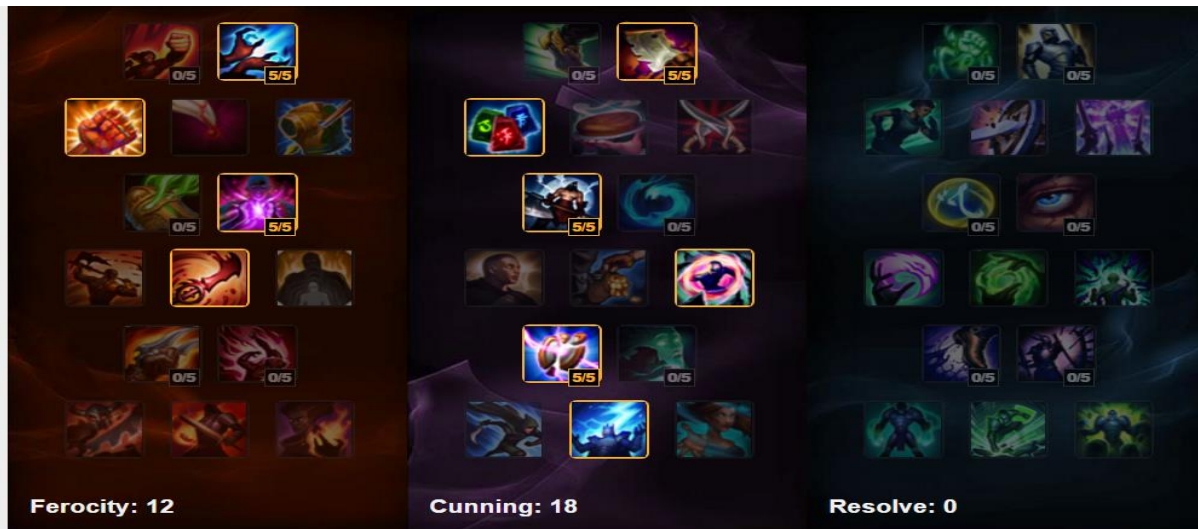

When I jungle, I want to shit on their (In order of priority) , Jungler , Top laner, Mid laner

Never gank bot, those guys are useless and you will just tilt and lose if you try, normally they are 0/4 by 8 minutes anyway

My KhaZix -----

Runes and masteries

Physical Dmg +15.3 Armor +9 Cooldown % -7.5%		
Mark		
	+0.95 attack damage	x9
Seal		
	+1 armor	x9
Glyph		
	-0.83% cooldowns	x9
Quintessence		
	+2.25 attack damage	x3

Level 1 – q , level 2- w, level 3 – e , level 4- q, level 5- q,
level 6 – r (Evolve Q->E->W)

Build – Start Machete Refill pot, Rush Warrior (Chilling Smite), then get Tiamat and boots(level 1), buy dirk -> warhammer-> ghostblade -> lord dominicks regard-> Duskblade

Not going to go into ‘tips’ and ‘tricks’ with khazix, you can find all of those on youtube just search tinjus or whatever

Like I said in my intro, You do not need mechanics, so these are all pointless, double jumps are pointless, you need to learn the game , you do not need mechanics

I’ve been climbing unranked accounts to Diamond + (challenger season 3, 4, 5 , 6, now 7) so Im gonna share my thoughts on how to climb the fastest, and the most efficient way

Duo with a top laner that can abuse his lead, especially early, since you effectively play to try to shit on the jungler, your secondary person to focus on is the top laner, the stuff you can do for your duo will snowball his lane out of control, and since the enemy jungler is effectively useless to help his top laner, you can focus on mid and bot if needed.

Closing thoughts

If you are still unsure just contact me about questions

My head is all over the place so I don’t think I covered everything I can

If you want to look at the builds vs enemy teams and whatnot, you can take a look at my op gg

<https://na.op.gg/summoner/userName=Hayastan>

I rarely have variances in build.

Hope you enjoyed, sorry about no proper guide, idk how to do it, I like to just write my thoughts.
