

# How To Choose The Right Gaming Mouse

Multiple Lighting Modes Enhance the Game Atmosphere  
PICTEK 87-Key compact gaming keyboard is designed with 27 types lighting modes to meet your needs of different game scenes, which also allows you... Since we have so many gaming mice options that are available in the market, choosing the best... The Corsair Ironclaw RGB is best for people who have a bigger hand as it provides a better grip on them.

Smaller scroll wheel movements result in the tactile, stepped behaviour, while more enthusiast flicks of the wheel will result in smooth scrolling.

Though more expensive than standard mice, they are top of the line products designed for better performance and long periods of use.

At the bottom will get On/Off switch that can also be used to turn off LED lights to save power.

A fantastic PC gaming mouse is just as important as your gaming chair, gaming desk, and mechanical keyboard.

This might make it seem difficult to find the Goldilocks setting, but we promise this is something you can resolve and get used to right away.

Add on a sleek look and an ergonomic shape to reduce strain, and you have the best mouse that can do it all. The Pro Click can connect to up to four devices at once via either a 2.4GHz wireless or a USB dongle or Bluetooth, and you can change between them quickly and easily. You also get eight programmable buttons, which can really help your productivity by assigning common actions to them. This incredible theme is loved by everyone, because of simple design and minimalistic look.

## Corsair M65 Rgb Elite Gaming Mouse

It comes with 11 programmable buttons and 100 – 16,000 DPI sensitivity options for great gameplay in shooting and strategy games alike. This mouse is wireless but reliable with a 60-hour lifespan on a single charge and compatibility options for a continuous charge using Logitech's Powerplay mousepads. You'd have to know that the makers of the wireless gaming mouse would make the necessary gear to go alongside it. This G440 mouse pad is designed for Logitech G mice more than others, but it's still going to get the job done, and offer low friction for fast movement, and high DPI settings. The cost isn't totally justified based on the material used, however, when it comes to longevity, this mouse pad will be with you long after the sensors on your current mouse give out.

Mad Catz B.A.T. 6+ Gaming Mouse The Mad Catz B.A.T. 6+ is a modular gaming mouse

that's easy to use and easy on the eyes. Despite a high price, it should please most users looking for customization options. Many of us have converted kitchen tables and living rooms into home offices these days, and a good mouse is a major part of comfortably working from home.

The mouse has a traditional look and feel to its design, which will appeal to many, but it doesn't stand out in a sea of competitive gaming mice. The battery life lasts up to 90 hours with RGB turned off and connected via Bluetooth. Accurate and comfortable for long gaming sessions, the Roccat Burst Pro is a solid choice for gamers seeking something lightweight. However, it is quite pricey for a wired mouse with these features, especially since options like the wired Glorious Model O can be had for less. Other features of the Cooler Master MM711 gaming mouse that everyone can take advantage of include the 16,000 DPI optical sensor for minimal lag, little-to-no stuttering, and superior tracking. Coupled with the white PTFE feet, you are looking at smooth control and precise targeting in any game you play.

The mouse features anywhere between 5 and 9 buttons, depending on how you have it configured. The truly ambidextrous design allows you to remove certain buttons in the name of comfort entirely, and this is an ingenious feature that's absent from other ambidextrous gaming mice. This way, you'll never have to worry about inadvertently clicking additional buttons, even if you've disabled them with your mouse software.

## Razer Basilisk Ultimate Wireless Gaming Mouse W

RGB lights are readily available and somewhat customizable, however do not come below trying to find a complete suite of features. This spending plan gaming computer mouse takes the approach that a lean and functional mouse is better than an extra ostentatious one. If it feels awkward but is the correct size to your hands, then you aren't using it right. Picking a perfect mouse can become indecisiveness and take you apart from your aims. Our assortment of mouse reviews will give you an in-depth understanding of every model plus compare them against each other for differences.

Rapid charge gives you 5 hours of gaming from 10 minutes of charging and the Titan Switch Optical is faster and more durable than any mechanical switch. The scroll wheel is aluminium and the super-light honeycomb shell is the perfect frame for its AIMO RGB lighting, with 1 million colour possibilities. The updated optical sensor seeks to fix these long-term issues and, so far, people seem to like it.

My personal favorite feature, included in some but not all apps, is a battery life indicator that sits in your Windows tray so you can glance at it without opening the app. These features vary from manufacturer to manufacturer and mouse to mouse. I wouldn't say any one of them is likely to be a deal-breaker, but the usefulness of configuration software is something to keep in mind.

logitech gaming mice

It's not a huge change, but one that looks a treat and doesn't cost extra, in theory. If you can snag a bargain deal on the G203 Prodigy, we highly recommend that you move on it while stocks last. 1 ms report rate and robust lag-free connectivity are now available without a wire, thanks to end-to-end innovation.
