

How To Find Minecraft Server IP Address?

Minecraft is a fantastic game that allows you to play with friends, on your own, or on multiple devices over an internet connection. You'll have been amazed at how simple the interface is if have ever been to the Minecraft world or watched anyone playing it. There aren't any fancy graphics or a rigid rules. Yet, it's highly entertaining and addictive.

Multiplayer games can be enjoyable. If you wish to play with other players in Minecraft, you can! To do this you have to play the game on servers. Now, the question is, what are the benefits of having a Minecraft server?

You are at the option of establishing your own set of rules. For instance, you could involve people to play with you according to your wish. Additionally, you can play with mods. If you'd like to feel a sense of freedom in the game, choose the option to play on servers. Let's move on to the main issue. We will discuss how to find the Minecraft server's IP address.

How do I find Minecraft Server IP address

When we discuss the Minecraft server IP address, it's the same as that of your computer. If someone wants to connect with you, they'll need your IP address. What is the best method to determine your IP address? It's quite simple. Take a look.

Step 1 Step 1: Press the Windows key + R . This will open the run window as the image below. If you'd like to know more about other shortcuts you can read our blog post windows shortcut keys.

Step 2 The window will show on your screens. Liberty and press Enter. As you can see in the screenshot below you will see a black screen on your device.

Step 3: The following step is to type in `ipconfig/all` and press Enter.

As you can see the red box shows the IPv4 address. Well, that's it. That's your Minecraft server's IP address too. If you connect via wire the IP address will be listed under the Ethernet. If you want to set up your own Minecraft server, you can keep your CMD window open, otherwise, simply close it.

Now, you need to forward ports to the Minecraft server via your router. To do this, consult the manual for your router. If you wish to connect to more than one player then you should forward the TCP port 25565.

To access the router's settings, type the IP Address into the address bar of your browser. The next step is to enter the username as well as the password in order to access the settings.

You might be wondering how to set up a server for your game. Here's how!

How to create your Minecraft server [Step by Step guide][Step by Step guide

It is very easy to create a Minecraft server. It is extremely time-efficient, too. For more information, take the following steps:

Step 1: Install Minecraft with Java and Java Edition Server. To keep the Minecraft files create a folder on your device. It is evident that a Minecraft server contains ample files, so you'll need a place to store them for them.

Step 2: Then you need to click the.jar file. Select the "Run as administrator" option. Check out this screenshot

Step 3: Next open eula.txt from the application folder. Also, change eula=false into true.

Step 4: Now, navigate to your cmd window , and then to your Minecraft folder. Type 'java -jar minecraft_server.1.9.5.jar' and press Enter afterward. You can change the filename to match the Minecraft name of the jar.

Here's a quick snapshot.

Step 5: Moving on step 5, you must check whether you can access the Minecraft server on the Minecraft website. Enter the IP address of your server, and select the checkbox.

To play on your server, you will need to type "Localhost" Subsequently, the other players have to use your IP address to connect to you.

Once you have set up the port forwarding, the server will be working properly for you. Now

you are ready to connect to the server.

Port forwarding is an essential part of the process, as, without it, the router will block any kind of outside connection requests.

The next section of this article will inform you about the process for users to join your server.

How can others join your Minecraft server [Step by Step Guide]
