

# Minecraft Launcher Won't Open (Mac)

Hey kinda late response but when this is still a problem for anybody just open activity monitor find Minecraft launcher and power give up it. Minecraft server list isn't a perfect repair but it is better than rebooting your laptop every time you wanna play.

it worked for me !!! thanks !

legend.

thanks! mounted

Whenever you open an software on macos, that software's emblem will bounce up and down just a few times and then open, but with Minecraft, it would not even bounce up and down. It just won't open.

Restart your pc or delete and then reinstall the game.

Don't return the sport but if u Have tried to return the game as a result of it's going to cease the sport from with the ability to load and the problem will look precisely like that

This occurred to me immediately too

Mine does this too. I ran Minecraft on my final mac with out an issue however I recently acquired a new one and cannot do away with this challenge.
