Only compound that gives me calf pumps which sucks for LISS with a heavy pack on a steep incline. Doesn't trash my lipids like it apparently does to everyone else; same on the UGL Var I've run and the Pharmacy Var I sold a testicle to buy. Really full looking delts and traps on par with some of the stronger orals But doesn't really give you a "hard" look like var just super pumped but not watery just full. IF it was up to me and not my lipid levels I would be on it 24/7 not a shit load, just 50mg is enough for me split. But this is True var, not some filler var bs which is probably winnie. Only other con for me is, I find it is often faked/underdosed, of several sources I have, I can only get real var from one. It is completely natural and keeps your body's natural test production working.

You won't necessarily need an anti-estrogen in this cycle but it depends if gyno becomes a problem for you. Once you're done, pull out the needle and wipe the injecting site if there's any bleeding, then gently massage the area to promote dispersion of the solution. Now take the next big step and put the needle into the upper half of a butt cheek, pull back on the needle a very small amount to ensure you're not hitting a vein.
