Passive income: passive income in the form of interest on minting (mining of coins) is achieved through the technical process of minting, in which, using the power of computer technology and filling the balance with a certain amount of PLC, new PLCs are created. There has been an increase in the value of PLATINCOIN since its creation.

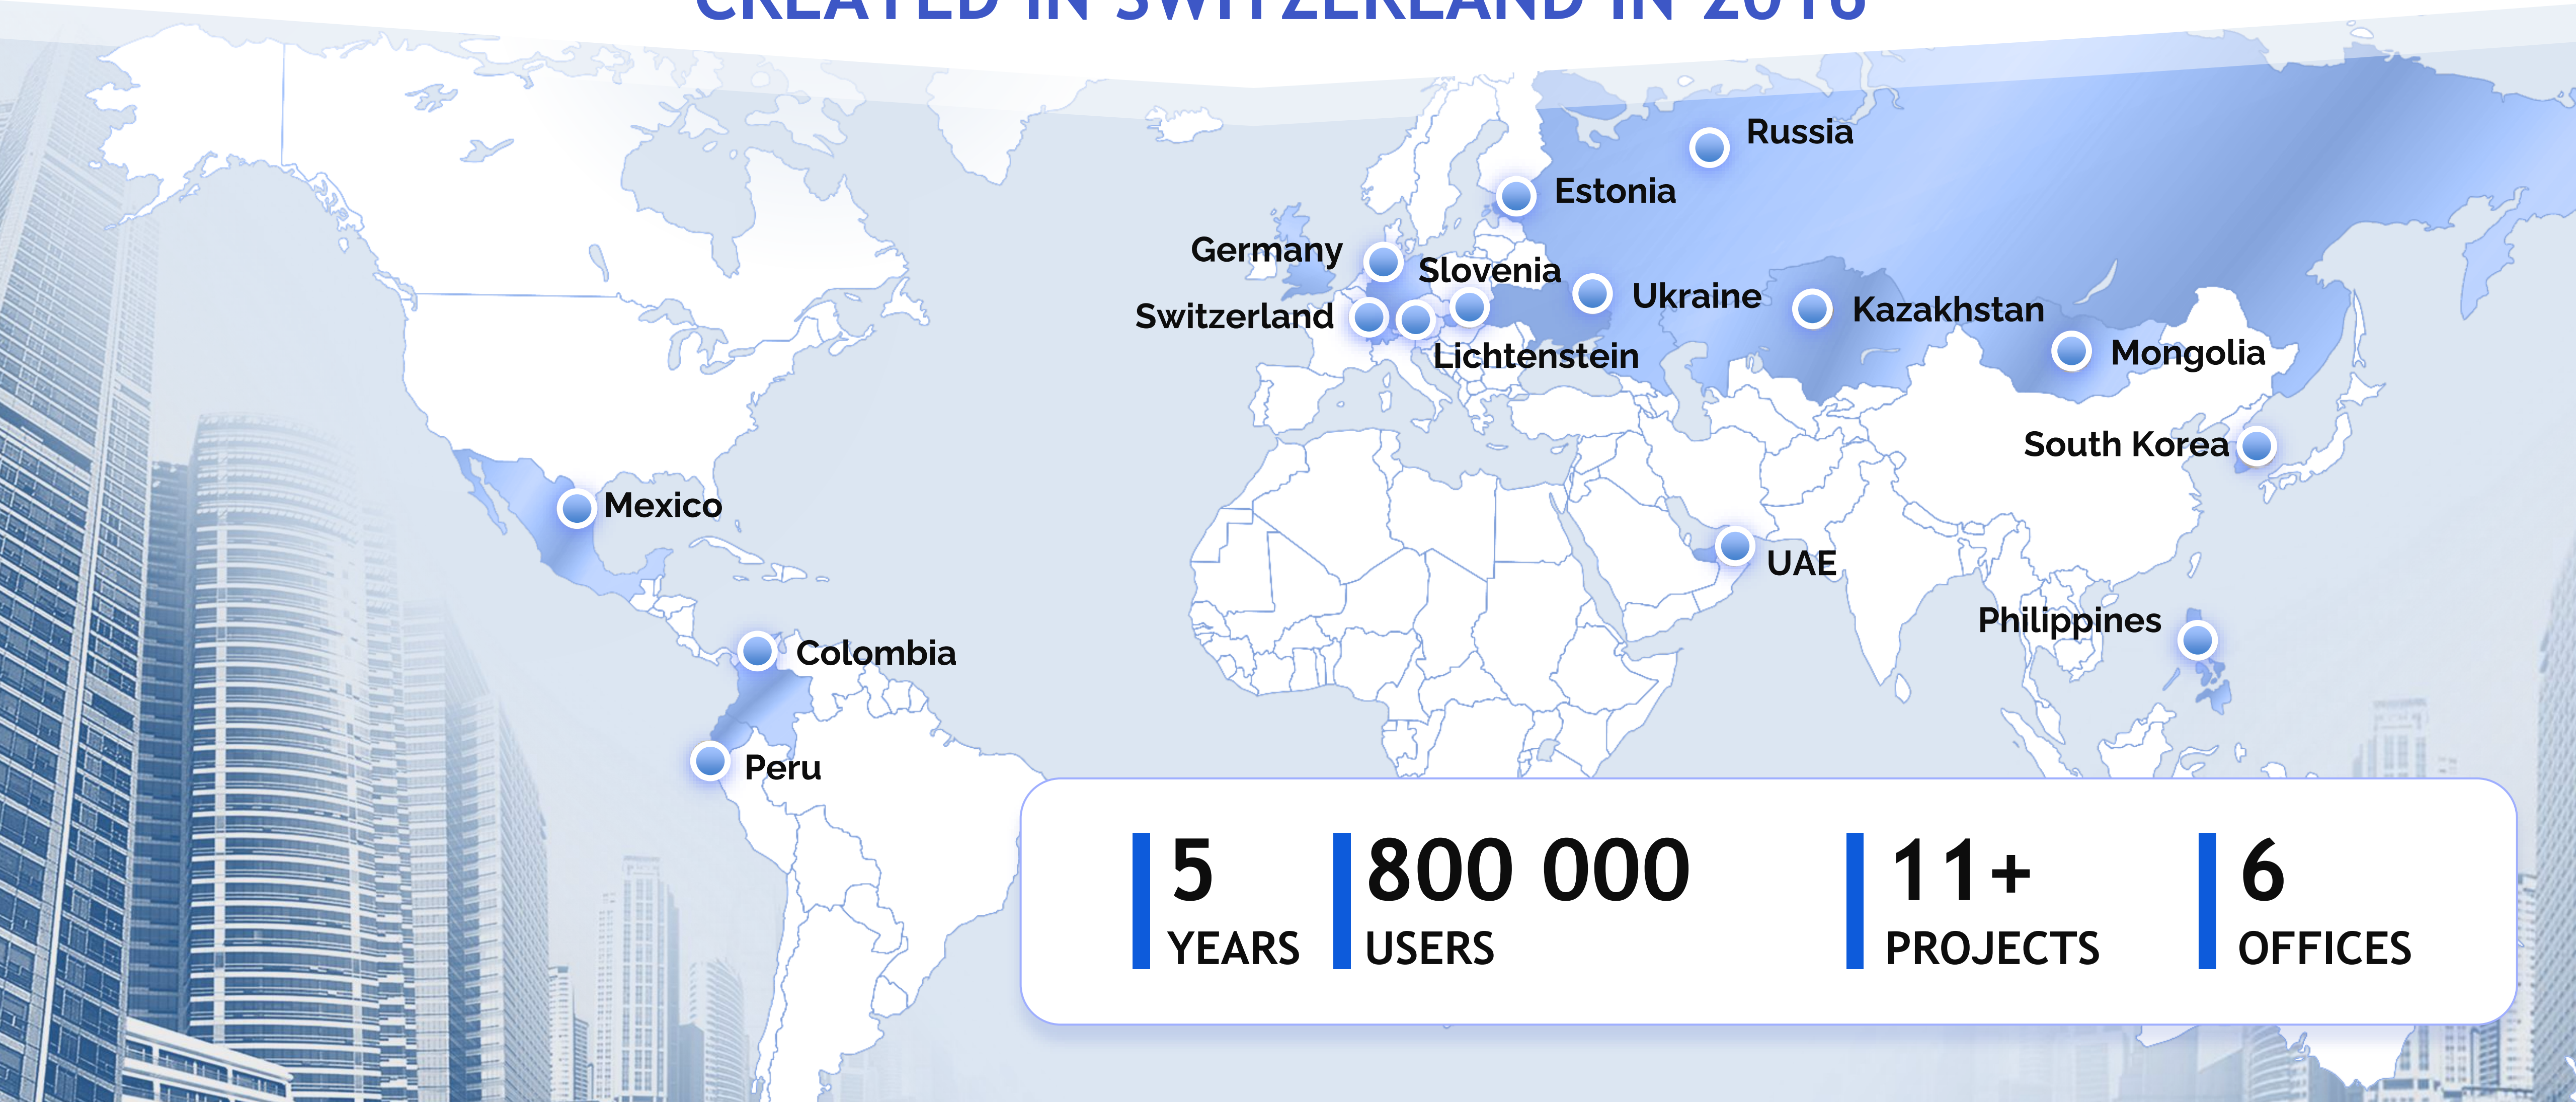

Examples of calculations: data shown in Euros depends on the PLCU exchange rate, which is subject to change. Provided is an approximate calculation with a PLC exchange rate of € 5 / € 10 / € 50 / € 250 or more. The indicated data refers to a period of ten years.

% per year: passive income in the form of interest on minting depends on the number of PLCs loaded into Power Minter. The percentage of minting is the result of the technical process of minting, in which, using the computing power of the machine and filling the balance with a certain amount of PLC, new PLCs are generated, namely % per year of the balance. Changes in the PLC course itself do not affect the minting process.

PLCU Tables: This is a forecast for the future and does not constitute any promise or guarantee. The PLC exchange rate may fluctuate and may rise or fall.

THE SOURCE OF INCOME IS ALREADY IN YOUR POCKET

The image illustrates a process flow from a user's smartphone to a specific application. It starts with a smartphone home screen showing a clock at 10:11 and several 3D metallic ring icons. This is followed by the Apple logo and the Google Play Store logo, with a plus sign between them. Next is a smartphone screen displaying two blue app icons with a white 'P' and a vertical line, and a central graphic of a blockchain network with a 'P' icon. An equals sign follows, leading to a detailed app dashboard. The dashboard shows a gauge for 'Available Balance' at 2,320.4935 PLCU, with a 'Max Load' of 5979 PLCU and a 'GET PROFIT' button. Below this is a table of smart contract statuses.

Smart contracts
