

Torrent Method To Make Money With Pay Per Download

This is a method on using torrents to gain pay-per-download hits. Using torrents is a very effective method to spread your link to people who are desperate to download your file, which is exactly the traffic that will convert well to earn you big money. I have used this method myself and earned 000's of dollars, here's the payment proof.

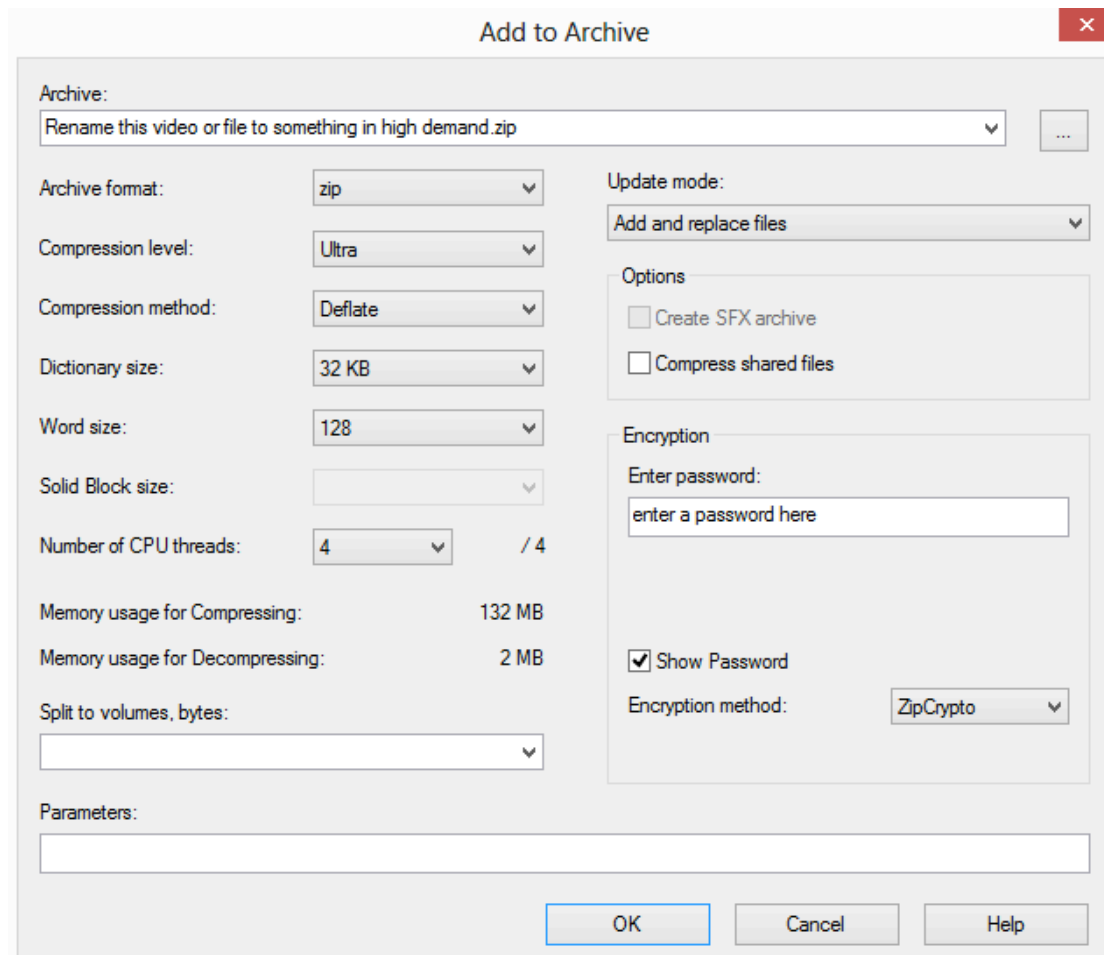

Finding A File And Niche

To begin, you're going to need to find a file that's relevant to the file you'll be advertising. A popular way to go is to download a movie and rename it to a new film that's recently been released in cinema. You could use any file and rename it to software that's highly popular such as a new game being released.

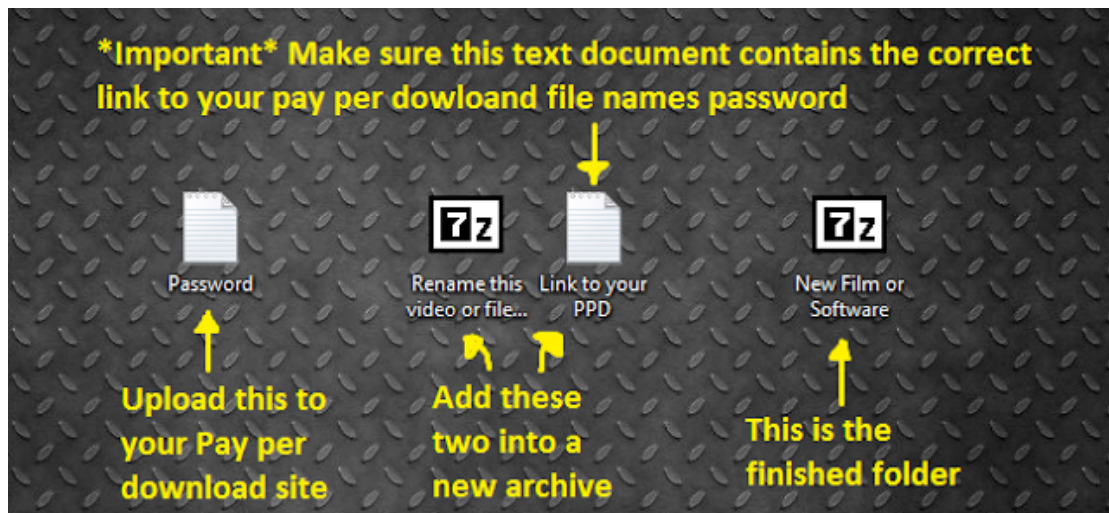

Creating The Files To Upload

Take your file and place it into a locked .Zip and password protect it. Try to name your locked folder something in demand, such as a new film or game. This is where niche research will come into play, the more demand for your particular file, the more downloads and more money.

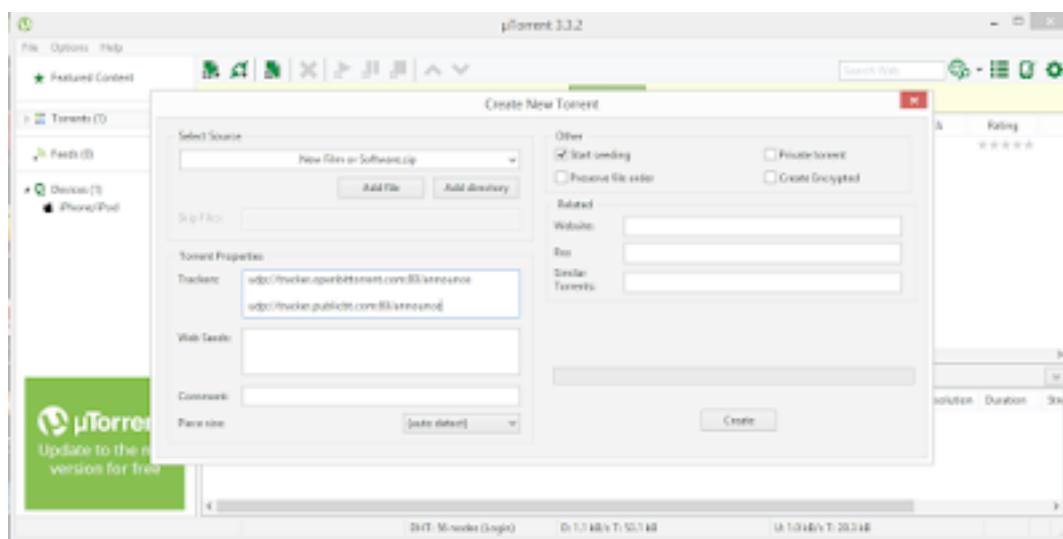

Create a text document containing the password and upload it to your chosen PPD site.

Now create a new folder, name it your chosen niche name such as 'CHOSEN NEW MOVIE'. Inside this new folder, add your locked zip folder containing the large file and a separate text document containing the pay per download link to your password file download. Name this document 'Read first' or something along those lines.

Creating The Torrent

Next create a torrent of this folder using a torrent program such as uTorrent or something similar.

Upload your torrent to as many torrent sites as you can, the more the better. This will increase your demand for your torrent. The longer you spend uploading to as many torrent sites as you can the more downloads you will get.

Leave your chosen torrent program open so you can seed your torrent. The longer you leave to seed the more people will download the whole file and eventually allow you to

stop seeding, but at the beginning for people to get your torrent, they'll have to seed the whole thing from you.

Now, sit back and watch the downloads of your torrent and password file role in. This can be repeated many times and the more torrents you upload the more downloads you will receive!
