The SnoreRx anti-snoring mouth piece

The SnoreRx is a simple stop snoring mouthpiece that can be customized to fit the mouth of any individual. The oral appliance delivers comfort and clinical effectiveness to combat snoring, which it does through the repositioning of the lower jaw. SnoreRX is FDA-cleared, the product is made of copolymer resin to provide an effective oral appliance that is, at the same time, safe to use during its recommended 12 to 15 month timespan.

The science behind SnoreRx is simple yet successful: the snoring mouthpiece gently move forward you jaw and increase the airflow , thereby preventing vibrations in the respiratory structures from occurring (which is what causes snoring). In this way, SnoreRx attacks the root of the problem while allowing custom adjustments to be made for one's comfort using the micro-adjustable Calibrator. Additionally, the tongue is also kept from flapping back into the throat, further combating the problem of snoring.

The SnoreRX mouthpiece is easy to use, though proper instructions must always be followed: first, two cups of water must be boiled in a pot over a stove. The SnoreRx is then placed in the water for precisely 90 seconds, after which it is taken out and dried with either a towel or tissue. Because the resin will not retain heat, the piece can then be immediately inserted into the mouth. After biting down as hard as possible for 30 seconds, the piece is removed from the mouth and placed into a bowl of ice water for 1 minute, to harden and retain the customized shape. After this final step, the SnoreRx should be dried off, and its lower jaw-advancing Calibrator adjusted in order perfectly fit the mouth.

The SnoreRx mouthpiece offer a precise, fitting anti-snoring product. Perhaps the most striking and unique feature is its "micro-adjustable" Calibrator that allows one to adjust jaw advancement millimeter by millimeter, to obtain the most comfortable fit possible. The Calibrator itself is clear and easy to read, as it is in a ruler-style format. Unlike other mouthpieces that claim to have a "universal fit", this product offers a level of adjustment superior all others. Posi-lock, as it is called, allows all adjustments made to be locked and unlocked to prevent unwanted setting changes. Those who worry that the mouthpiece will become too encroaching, making it difficult to breathe properly during use, will be put at ease with the V-Flow feature that allows maximum flow of air through the mouth for the most comfortable and relaxing experience imaginable. Additionally, unlike other oral appliances that are bulky and intricate with screws, rods, and springs, SnoreRx is as clean in design as it is in its effectiveness. Though expected soreness will occur in the first several days of

use, this mouthpiece is also laterally flexible, to relieve soreness and increase comfort.

It is safe to say that the SnoreRx mouthpiece is the most effective one of its kind, primarily because of its Micro-Fit feature that allows one to adjust his or her mouthpiece in 1mm increments, which cannot be done with other products. The ability to reset changes is also unique, allowing the user to experience not a "universal" product, but very personal one. According to many SnoreRx reviews, this is the key difference that allows the product to trump above all others in quality.

Additionally, brands such as SnoreMender and Pure Sleep have not been certified by the AASM (the American Academy of Sleep Medicine) and unlike most brands, SnoreRx has been FDA approved, making it completely safe for the consumer to use routinely. Its 100% satisfaction guarantee is an added bonus, allowing you to return the product within 30 days of purchase for a complete refund, even if you have already molded the mouthpiece and tried it on.
