

## *Use Facebook To Make Money With PPD*

This is a tutorial on how to earn money with **Pay-Per-Download** using **Facebook** or any other social media site.

Create a Facebook or other social media site account and a pay per download site if you don't already have one ([www.PureBits.net](http://www.PureBits.net)). Using fake details. (Hint: use a female username, more people will accept a girl over a guy)

Now try to make around 300 - 500 friends or more for best effect. This isn't incredibly difficult, but it's a time consuming task.

Once you have a decent amount of friends, upload a picture with your file link or post a status.

*Example status's :*

- Help me do something insert link
- Here's a link to some of my recent modelling photos insert link here

Try to make a unique and genuine bait. The more unique and genuine, the more downloads you'll earn. They're tons of 'lonely' people out there who'll go through the process of a simple survey to get an imaginary phone number or pictures. Experiment around with this as the examples here won't gain you anything.

Now you need people to think this profile is someone real so keep updating your profile to make it look more genuine and adding more and more friends. The more friends = the more you earn.

Your finished. To maximize your earning, create more than one profile. There's nothing stopping you having 1, 3, or 10 accounts, and if you do the maths, 10 accounts with 500 friends each, that's 5000 people your advertising your link to.
