

# The Minecraft Badlion Client has been Porting To Linux

Badlion, a very popular Minecraft launcher that bundles a variety of things together, has been officially ported over to Linux with the Badlion Client 3.1 update.

It's not worth it. It offers a few extra features in the standard version, such as enhancements such as Optifine and their own "Betterframes" tool, anti-cheat (not in the Linux version) as well as various tweaks for FPS improvements and a variety of mods are available, including Minimap, ArmorStatus, PotionStatus, Crosshair, CPS (clicks per second), and many more. minecraft servers list It is used by thousandsof users, so it is great to have official Linux options.

Here's how it appears on Linux. First is the actual launcher The second is the game's in-game display with their own menu system.

When discussing the Linux release, they said:

We are thrilled to share today with the whole Minecraft community that the Badlion Client is now accessible on Linux! Our development team has been hard at work for the past few months trying to finish the last bits of Linux support and fixing the compatibility issues we talked about earlier in our announcement about Linux last year. The team of developers was able to finish the Linux support just in time for BLC 3.0.

We'd like to take a moment to thank the Linux community for your constant patience with our team during the past few months. While we're disappointed that the Linux version was not released in the final quarter of 2020, as we had hoped for We hope that you are still excited to download the most complete Minecraft version for without cost!

It is available here. They provide it as an AppImage and it is able to be compatible with the majority of Linux distributions.
