Ok! i fix it, so if anyone have this problem just do this steps:

1. See if your java is updated, if it's not updated download it java for 32/64 bit and install it in correct place.
2. if you are using nVidia graphics card download GeForece experiance and download the update.
3. restart the pc so the driver can be fully installed.
4. if you have some problems still try reinstalling the game and it will help.

(i done all of this and it work perfect now)

Could you please just either shut your mouth or leave? You don't even read anything in the damnthread. You just want to apply for staff and let me tell you something; you're going to get insets denied if you apply now.

On this thread AGAIN; "I suggest that you watch videos to fix the problem". First of all; he already watched videos if you had read it. 2nd of all it has already been fixed. Pika doesn't need people like you as staff so stop trying.

Then grow a pair of brains and read threads. All your 11 posts have been useless. You might say this one isn't, but you're wrong in this post again, so again; useless. I won't discuss with kids like you. Yes I am a kid to, but at least mentally I am growing or whatever you want to

call it. I don't think you ever will... well or you have dyslexia and you just can't read the threads. Maybe that's why your English is so bad as well.

Hf in life man.

Regards and last msg to you till /ignore,

You know, I think they made that specific command just for you!
/ignore is useful =)

At least i'm doing something other than you just arguing with me rn.

Even though Rem is best girl, I still accept this as a valid saying of wisdom.

This happened to me once when I can't get in to 1.8. But one day when I tried to get in 1.8 it just fixed itself o_0

Once a Pika, always a Pika.

Does anyone remember me?
