Missouri Amendment 3, Which Would Legalize Recreational Use of Marijuana, Tax its Sale, and Expunge Records Likely to Pass:

Missouri voters appear poised to legally allow the recreational use of marijuana when votes are counted next week, according to SurveyUSA's latest polling for Gray Television's Missouri stations (KMOV-TV in St. Louis, KCTV-TV in Kansas City, KYTV-TV in Springfield, KFVS-TV in Cape Girardeau, WGEM-TV in Quincy, IL; and KYOU-TV in Ottumwa, IA), and for KRCG-TV in Jefferson City and KOAM-TV in Pittsburg, KS.

Amendment 3 passes today with 61% of likely voters saying they are certain they will vote yes, 28% certain they will vote no, and 11% saying they are not certain. When those uncertain voters are asked how they lean, 43% lean toward yes, 16% toward no; 41% remain uncertain; recombining those leaners' votes produces Q5 below, showing 66% voting yes, 29% voting no, and 4% undecided. The measure needs a simple majority of votes to pass.

Support for the measure is strong across the board, with opposition concentrated among very conservative voters, 56% of whom initially vote no (58% after leaners are included). Among senior citizens, 46% initially vote yes, 38% initially vote no; when leaners are included, a majority of seniors support the measure, 53% to 41%. Among Republicans, 50% initially vote yes, 39% no; when leaners are included, 54% support, 41% oppose. A majority of all other demographic groups, and a majority in all regions of the state, say they will vote yes on the measure.

While opposition to ballot measures tends to increase as Election Day nears, SurveyUSA notes there is little tightening here, with 'yes' leading 'no' by a 40-point margin [in mid-September](#) , and by 33 points today.

Fully crosstabbed results follow ...

About the Poll / Filtering: SurveyUSA interviewed 1,200 Missouri adults online 10/27/22 through 11/01/22, using sample provided by Lucid Holdings LLC of New Orleans. Of the adults, 991 were identified as being registered to vote. Of the registered voters, 791 were determined to be likely to vote or to already have cast their ballots in the November 8 general election and were asked the questions which follow. The pool of adult survey respondents was weighted to US Census targets for gender, age, race, education, and home ownership.

1 Are you registered to vote in the state of Missouri?

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted “mixed-mode” (or “multi-mode”): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent’s cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent’s phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, “sampling error” is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principles of disclosure as recommended by the National Council on Public Polls (NCPP).
