

Rocco Borghese
Company & Projects

SENSO DEL ARTE

The Borghese family has more than three generations of experience in the art of developing handmade luxury lighting. Our Borghese Venetian foundry is renowned for Italian artisan technique. We ensure that all our armatures are manufactured in the UK, by our own steel specialists, with an emphasis on detail. The Rocco Borghese signature of distinction and name is synonymous with quality and elegance. We are the only glass lighting feature specialist with the ability to create a lifetime investment as individual as you.

Rocco Borghese

Experience

Rocco Borghese lighting is constructed with the finest quality blend of Venetian soda glass and crystal mix, or pure synthetic crystal. Many decades of research and experimentation has led to the development of many exquisite glass finish options, including ribbed with slight obscurity, and the clean look of the crystal droplets. These can be created as hollow tubes to avoid weight issues. Internal frames are designed with minimal obstructions and now include the latest advanced super-strong but almost invisible micro-wires.

Attention to detail

Our chandeliers are composed of hundreds of blown glass elements that together, make up elaborate, intricate compositions. True luxury lighting on a grand scale. The difference in feel, texture and lustre quality when compared to scientific or borosilicate glass used by some manufacturers is huge. Our glass will not tarnish or yellow, unlike other cheaper offerings. In terms of weight it is very important to have lightness without too much transparency. This is something we carefully consider with all our designs.

As personal as you

“My pieces are specifically designed to work with your exact requirements – a work of art that will not lose its beauty. To preserve the uniqueness and artistic value of the chandeliers and luxury lighting, I do not use ready-made or off-the-shelf components, all parts are designed specifically for you. As a high end lighting designer I place great importance on the visual appeal of everything I design and create. I take care not to show the inner armature of the chandelier. All inner lighting is designed to light up as a 360-degree spread, unlike the offerings of many of my competitors. I take exceptional care to ensure the correct flow of light, without hot-spots by employing up to five times as many lamps than many of my competitors”

Consultation

We assist interior design studios, property developers, architects as well as individual clients in optimizing their lighting designs, offering our experience in the specific field of high-end interior lighting. A full range of aesthetic criteria are considered to ensure the creations are beautifully finished; from the models to sizes and colours, everything is considered in order to enhance the settings where architecture, furnishings and accessories must be perfectly coordinated to create the desired elegant and refined atmosphere.

The Borghese Family

Many years of experience, passion, skilled craftsmanship and an unimaginable pride in our work ensure that all our chandeliers exude life and soul. We create 'art within glass' and add light to produce not only a high-end chandelier fit for a palace but also an experience that we hope you will enjoy from the moment our work is installed. The Borghese family have become experts in creating luxury lighting. Rocco Borghese, head designer, ensures the family business continues to design high end bespoke, artistic, modern, contemporary, traditional and unique glass work for a range of clients across the globe.

Corale D'oro

Rocco & Pasquale Borghese

Implementation

Once all the elements have been chosen and the workshop drawings approved by the client, the production department will start the new creation, which will be handmade throughout. A hand-blown glass sculpture is the embodiment of an artist's vision brought to life by the effort and skills of our craftsmen. Its luxurious and unique essence can never be replaced by machine-made alternatives

Installation and maintenance

Regardless of the venue location we offer installation and maintenance services carried out by our in-house team of technicians. If our presence is not required, we are happy to advise and liaise with the client's chosen labourers to make sure the installation/ maintenance is being carried out and accomplished safely and correctly.

Projects

Our works are found in private residences, palaces, villas, luxury hotels, resorts and cathedrals.

They are wonders to behold. In refined settings, the Borghese masterpieces express pure luxury for their uniqueness for being tailored to the tastes of every client. Rocco Borghese provides the designers with technical knowledge and then skilled staff to assist them during the design, creation and installation of the pieces – an all-round service.

ANNABELS

*46 Berkeley Square,
London W1J 5AT*

This was one of the recent challenging projects at this famous venue in London's Berkeley Square.

There is a huge wall of roses for the female vanity created in various shades of pinks and Verde Leaf greens that are meticulously lit with hidden halo lighting.

The Main Bar area had over 30 full size palm trees where the leaves had to be detailed in translucent champagne glass.

We also created cove glass leaf lighting with massively challenging bar canopy that was intricately put together and internally lit.

We are proud to have been the main glass artists for the development of this project.

LDS TEMPLE

Rome

Our Chandeliers pay Homage to the new LDS temple in Rome.

We are proud to have been part of this monumental Project for LDS ,
the project was very challenging.

Immense time was invested in creating the ultimate definition of luxury
vs Jewel like lighting features.

Via di Settebagni, 376, Rome, Italy

To Stand the test of time...

“Of all our high end lighting projects this was one of our most ambitious. A unique and luxurious realisation of classical and artistic pieces. We were given specifics to work with the clients Architects, we worked together with the clients’ designers. One of the most difficult aspects of producing almost Mother Nature looking pieces was to go back to the drawing board and measure lighting hues, kelvins, reflection with glass, weight ratios versus lightweight frame”

How we did it?

“The balance had to be calibrated so precisely that anything above and beyond would be too obvious, lighting hotspots were no longer visible. We did lots of research and mock-ups to balance the right sort of crystal which ended up being 3 layers of Swarovski Strass Crystal and a combination of 24ct gold leafing for all external hardware elements. The result of which now speaks for itself, a long journey to achieve unblemished pieces of art that to me feel like they have been born by some natural bio non mechanical creation”

Ancaster House

Mayfair

We are so proud to see our recent Mayfair project, Ancaster House, featured in the one hour Channel 4 documentary “Britain’s most expensive home: building for a billionaire.

The show followed the life of our client, John Caudwell, and culminated with the construction and fitting out of his incredible new home, now renamed Mayfair House. We were absolutely thrilled to see so many members of our team featured, as well as the exceptionally high-quality work we completed throughout the project. This was a truly unique opportunity for us to showcase one of our finest projects, as it's extremely rare for one of our clients to allow any publicity at all.
