

# Free Minecraft Server: How To Create A Private Server

Want to make a free Minecraft server? Mojang has free server software that can be used to set up your Minecraft Java edition private server. This software is available for download from the Minecraft website. However the initial steps and how to manage your server will require more information.

Before you begin be sure that the Java edition is up-to-date. You can check if you have the most current Java edition installed by using the control panel on Windows. Once you've created a free Minecraft server you can invite your friends online and set your own rules, gameplay, and community within your own blocky creation.

Here's how to start in creating a cost-free Minecraft server as well as the options to host a server for free. For a thorough breakdown of frequently asked questions and their solutions, go through the Microsoft help article and Minecraft's recommended hosting guide. Follow these steps or take a look at the video to understand how to set up Minecraft servers.

## How to create an unpaid Minecraft server

- Download the latest version of Java and the Minecraft server software - Create a dedicated folder for your server - Drag the Minecraft server download into the folder - Start the Minecraft server software (server.jar) and locate the text file eula.txt and open it using a text editor. Change eula=false to eula=true to confirm that you have read, understood and accept the user licence agreement and save the file

You can also edit the server through the server settings file by right-clicking and then opening the settings in Notepad. To open the server, start Minecraft and click add server. Once Igralni 're in, create yourself as an administrator by entering 'op [your username]' to enable Minecraft console commands.

You can either share your server locally or use your external IP address to share with others, though we recommend taking care when sharing your server. It could be risky to share your IP address externally with people you do not know. To avoid any problems it is recommended to run your Minecraft server on a different PC to the one you host it on. This will ensure that your Minecraft server isn't slowing down your gaming performance.

## Free Minecraft server hosting

There are plenty of websites that provide free Minecraft server hosting, there are a few caveats that include addons that cost money and an absence of support. Most free server

hosting has an upper limit on players and therefore hosting for free Minecraft server hosting is a good option for those who are new to Minecraft servers or just want to play with a few of your friends online.

Before you sign up for any free Minecraft server hosting, be sure to investigate the type of customer support and other features it offers, such as DDoS protection and server backups.

## 24/7 hosting

If you want free 24/7 hosting, your options are extremely limited. While there are many free hosting options, not all of them can provide the exact service you require. If you're committed to running your server for a long period of time it is possible to convert an old computer into an server. Watch the video above.
