

Minecraft Java And Bedrock Editions Are No More Distinct

We hope that you're not too connected to either of the Minecraft Java and Bedrock editions of one of the top building games for PC because Microsoft and Mojang have confirmed that both will end on June 7 - and be replaced by the Minecraft Java and Bedrock Edition and Bedrock Edition, meaning you don't have to use them separately anymore.

Whether or not you're an avid player of the amazing sandbox game, you may be a bit confused by the fact that there are two versions of Minecraft on PC - the Java and Bedrock versions. PCGamesN offers a useful guide to clarify the differences between the two versions. However, if you have purchased one of them, you won't have access to the other. This is kind of crazy.

Mojang and Microsoft have clearly agreed, since now they have announced (thanks, Neowin) the Minecraft Java and Bedrock Edition - a single-purchase version of Minecraft on PC that will replace the separate editions. The game will be available for purchase on June 7 and becomes "the only and standard edition of the original Minecraft on Windows PC."

Anyone with either the Java or Bedrock editions of Minecraft will be upgraded to the combined edition. This upgrade is automatic, but it can take up to three days for all eligible players to see the game.

Minecraft

Mojang confirms that "Java and Bedrock will remain distinct games with their own distinctive features," with the only difference is that you don't have to purchase them separately, and can access both from the same Minecraft launcher. This is great news for everyone, except for those who recently bought both of them separately. However, it will make downloading Minecraft significantly simpler.
