

# Some Enjoyable Makes Use Of For A Distant Mac Mini Server

MacStadium does remote Mac mini internet hosting, providing customers a fully related Mac mini in a secure, managed datacenter (identical to the oldsters at MacMiniColo, who we've visited and written about before). When you have a Mac mini already, you may even send it to them for internet hosting, or you'll be able to rent or buy one your self proper from the corporate. Having a distant server all for yourself might be very useful, and utilizing a Mac mini for the job could be one of the cheapest and easiest methods to do so.

In fact, not only does MacStadium run hosting, however the company has also been placing up blog posts over the last month or so, going by just a few other ways to make use of a related mini for yourself. [MINECRAFT-SERVERS.BIZ](#) You could set up a distant Minecraft server on it, for example, making a world that you simply and your pals can log into anytime. Or you could possibly arrange something like Kerio Connect, which serves as a Microsoft Change-fashion way to share and ship email, contacts and calendars across a number of various customers.

Clearly, these tutorials are for MacStadium's hosted minis, however they should work for any Mac mini you've set up to be accessed remotely. Apple's littlest Mac is comparatively cheap however nonetheless very powerful and MacStadium's tutorials could possibly be a start to help you get essentially the most out of your remote mini.
