ABSTRACT

The CATGE platform seeks to access and solve the recent challenges in the Decentralised Finance (De-Fi) industry by offering safe, innovative, all-inclusive, and transparent crypto financial services for global use. The CATGE platform gives its users room to participate in the DeFi market in a manner that gives them the opportunity to stake and trade cryptocurrencies easily and conveniently. The CATGE coin platform is not just a meme coin: CATGE is bringing the next generation of DeFi to the real world.

The CATGE team recognizes the need for Decentralised Finance in the world, hence the campaign to take the industry to the next level: DeFi is meant for everyone and the goal is to build the next-generation ecosystem for the Decentralised economy. CATGE has studied the DeFi market and realized that there is a problem that is keeping the DeFi from taking off. The platform sees the need not to limit cryptocurrencies to just being digital tokens: cryptocurrencies can also be paper bills, just like FIAT money. This whitepaper introduces the CATGE platform alongside all its relevant features.

Blockchain technology has created a path for Decentralised Finance (DeFi) platforms to tread. It is for this reason that CATGE aims to take the DeFi industry to the next level. Our platform is designed to specifically offer our users convenience, an improved platform, practicality, and intelligence. CATGE is designing a universal DeFi trust and reputation answer on the blockchain leveraging intelligent contract technological advanced tools. CATGE intends to resolve the financial challenges globally by offering its users a safe, upgraded, and all-inclusive environment that allows them to stake, print, deposit, withdraw, store and trade cryptocurrencies easily and conveniently.

Despite a massive growth in the later years, Decentralized Finance has proven very little of its real potential. The CATGE mission is to bring the potential of Decentralized Finance in the hands of the masses and to bring it out of its crypto enthusiast first niche

1. DISCLAIMER

Considering that CATGE provides this whitepaper to the general public and recipient, the recipients of this work acknowledge that the contents therein this publication are confidential to CATGE, and you consent to not disclose, distribute, or permit to be communicated verbally, directly or indirectly, or to otherwise publish the contents of this work except with the permission of CATGE. For the purpose of the acknowledgment, users, including without limitation, any principal, staff, or agent of the user. CATGE coins are tailored to serve as a utility token, and that is the aim of the CATGE distribution. This project may fail to grow and kickoff if the coin holders of CATGE hold onto their CATGE coin tokens and do nothing productive with them.

The publication or distribution of this whitepaper does not insinuate that any jurisdiction's applicable laws, regulatory requirements, or rules have been followed. To the highest level allowed by the applicable law, CATGE and its affiliates and respective officers, employees, or agents in relation to CATGE. CATGE will not be liable for any damages, including lost profits, loss of revenue, or third-party loss, whether foreseeable or not. For the avoidance of doubt, CATGE expressly disclaims any responsibility for any direct or consequential loss or damage of any sort arising directly or indirectly from (i) reliance on any information in this whitepaper, (ii) any error, omission, or inaccuracy in any such information, (iii) any action resulting therefrom, or (iv) usage or acquisition of CATGE platform.

The CATGE team will ensure to make a sincere effort to allow for the implementation of the CATGE platform. It is, however, vital to note that the CATGE platform will not be implemented for different reasons especially owing to funding and success-failure (e.g., support by adequately qualified and experienced coders and acceptance and use by the community of users) after and before the CATGE platform has been implemented. If the users and potential users abandon the CATGE platform, this may cause or trigger the dissolution of CATGE due to the discontinuation of the business reason.

The future business development of our business model requires that we maintain a good position in the market and continuously expand our customer base. Regarding this, there are risks from more intense competition and the appearance of competitors. In this context, we have also to consider the potential loss of acceptance of our offer by customers. You agree to accept all risks in line with your use of the CATGE platform, product, or service.

This whitepaper is created to serve informative purposes only. Thus, no one should not rely on the representations herein. More precisely, CATGE makes no representations or warranties (express or implied) and disclaims all liability that may arise from any information stated in this document. The whitepaper is subject to change, which means that CATGE is not bound by any representations to the future performance and any returns of CATGE. This whitepaper makes no form of binding representations or warranties about CATGE.

No regulatory authority has been assigned to assess or approve any of the information in this whitepaper. Thus, no form of action has been implemented under any jurisdiction's laws, regulations, requirements, or rules. The publication or distribution of this document does not imply that the relevant laws, regulations, requirements, or rules have been complied with.

The opinions, figures, and estimates outlined in this publication should not be considered as reflecting the views or carrying the endorsement of CATGE, its member States, or other organizations that have contributed to this document. Mention of specific names and commercial products and services does not imply the endorsement of the CATGE.

Any request for permission should state the purpose and the extent of the reproduction. For the sake of non-commercial purposes only, all materials in this publication may be quoted or reprinted freely. However, acknowledgment is required, alongside a copy of the publication having the quote or reprint.

Now that you are aware of relevant legal information, kindly continue reading to find out about CATGE.

2. INTRODUCTION

The launch of decentralized applications (dApps), information, and property security are important elements that have impacted the decentralized applications. Several asset security situations have constantly inflicted the industry as a whole.

The improvement of the system security of the blockchain applications and the protection assets has become an important issue every dApp and operation team tackle on a regular basis. Decentralized Finance (DeFi) is considered to be one of the foremost and prominent markets in the blockchain industry that experiences a high demand for secure and discreet financial services. The DeFi world is an optimistic one as it expects significant growth and development of the technology that ensures the appreciation and valuation of tokens indigenous to DeFi protocols.

With the growth and development of the DeFi market, digital assets built on the blockchain industry have turned out to become high-end assets globally. The users of this platform are able to check the issuers, conduct transactions, store their coins, trade, and access their transaction details efficiently and as transparently as possible. Financial products and services that are provided via a DeFi platform can be sent or transferred to other financial institutions. DeFi has opened an innovative market through which transactions can be implemented by traders and financial service providers in any part of the world.

Blockchain is a peer-group-friendly decentralized ledger innovation that allows the records of digital assets to remain transparent, accountable to its users, and unchangeable as it functions without the intervention of any third-party intermediary. Blockchain technology is an innovation that promotes transparency as the blocks have unique encryption combinations of previous blocks, transaction information, and corresponding timestamp.

Blocks are electronic transaction records. Blockchain technology has changed technology in various ways, and CATGE is adapting to these changes.

Decentralized Finance (DeFi) is one of the best markets in the blockchain industry. DeFi is a system that makes available financial goods on a publicized decentralized blockchain network to anyone. This negates the need for the users to procure these financial products through middlemen like brokerages and banks.

These technologies come together to make it impossible to tamper with data due to decentralization, ensure the anonymity of CATGE's community, record transactions, provide comprehensive transaction data, and eliminate the possibility of third-party persons verifying and approving transactions.

It is, however, essential to ensure that blockchain technology is integrated with the everyday lives of the community. It is on this premise that CATGE is created. A community-driven platform allows for inclusive participation and is designed to move the modern system to the next level and promote improvement. We urge you to join the CATGE ecosystem that provides users with a reliable, decentralized exchange platform.

3. ABOUT CATGE

The CATGE platform is a platform promotes advancement. Our platform is the symbol for the new generation holders and has a strong community that serves as its backbone. The CATGE platform has a symbol which is the cat, on its logo. The cat shows the old manipulators in the industry that the cryptocurrencies belong to only the community and no one else.

But most importantly: our platform aims to launch several innovative projects that look to trigger a revolution in the DeFi world.

4. OUR PROJECTS

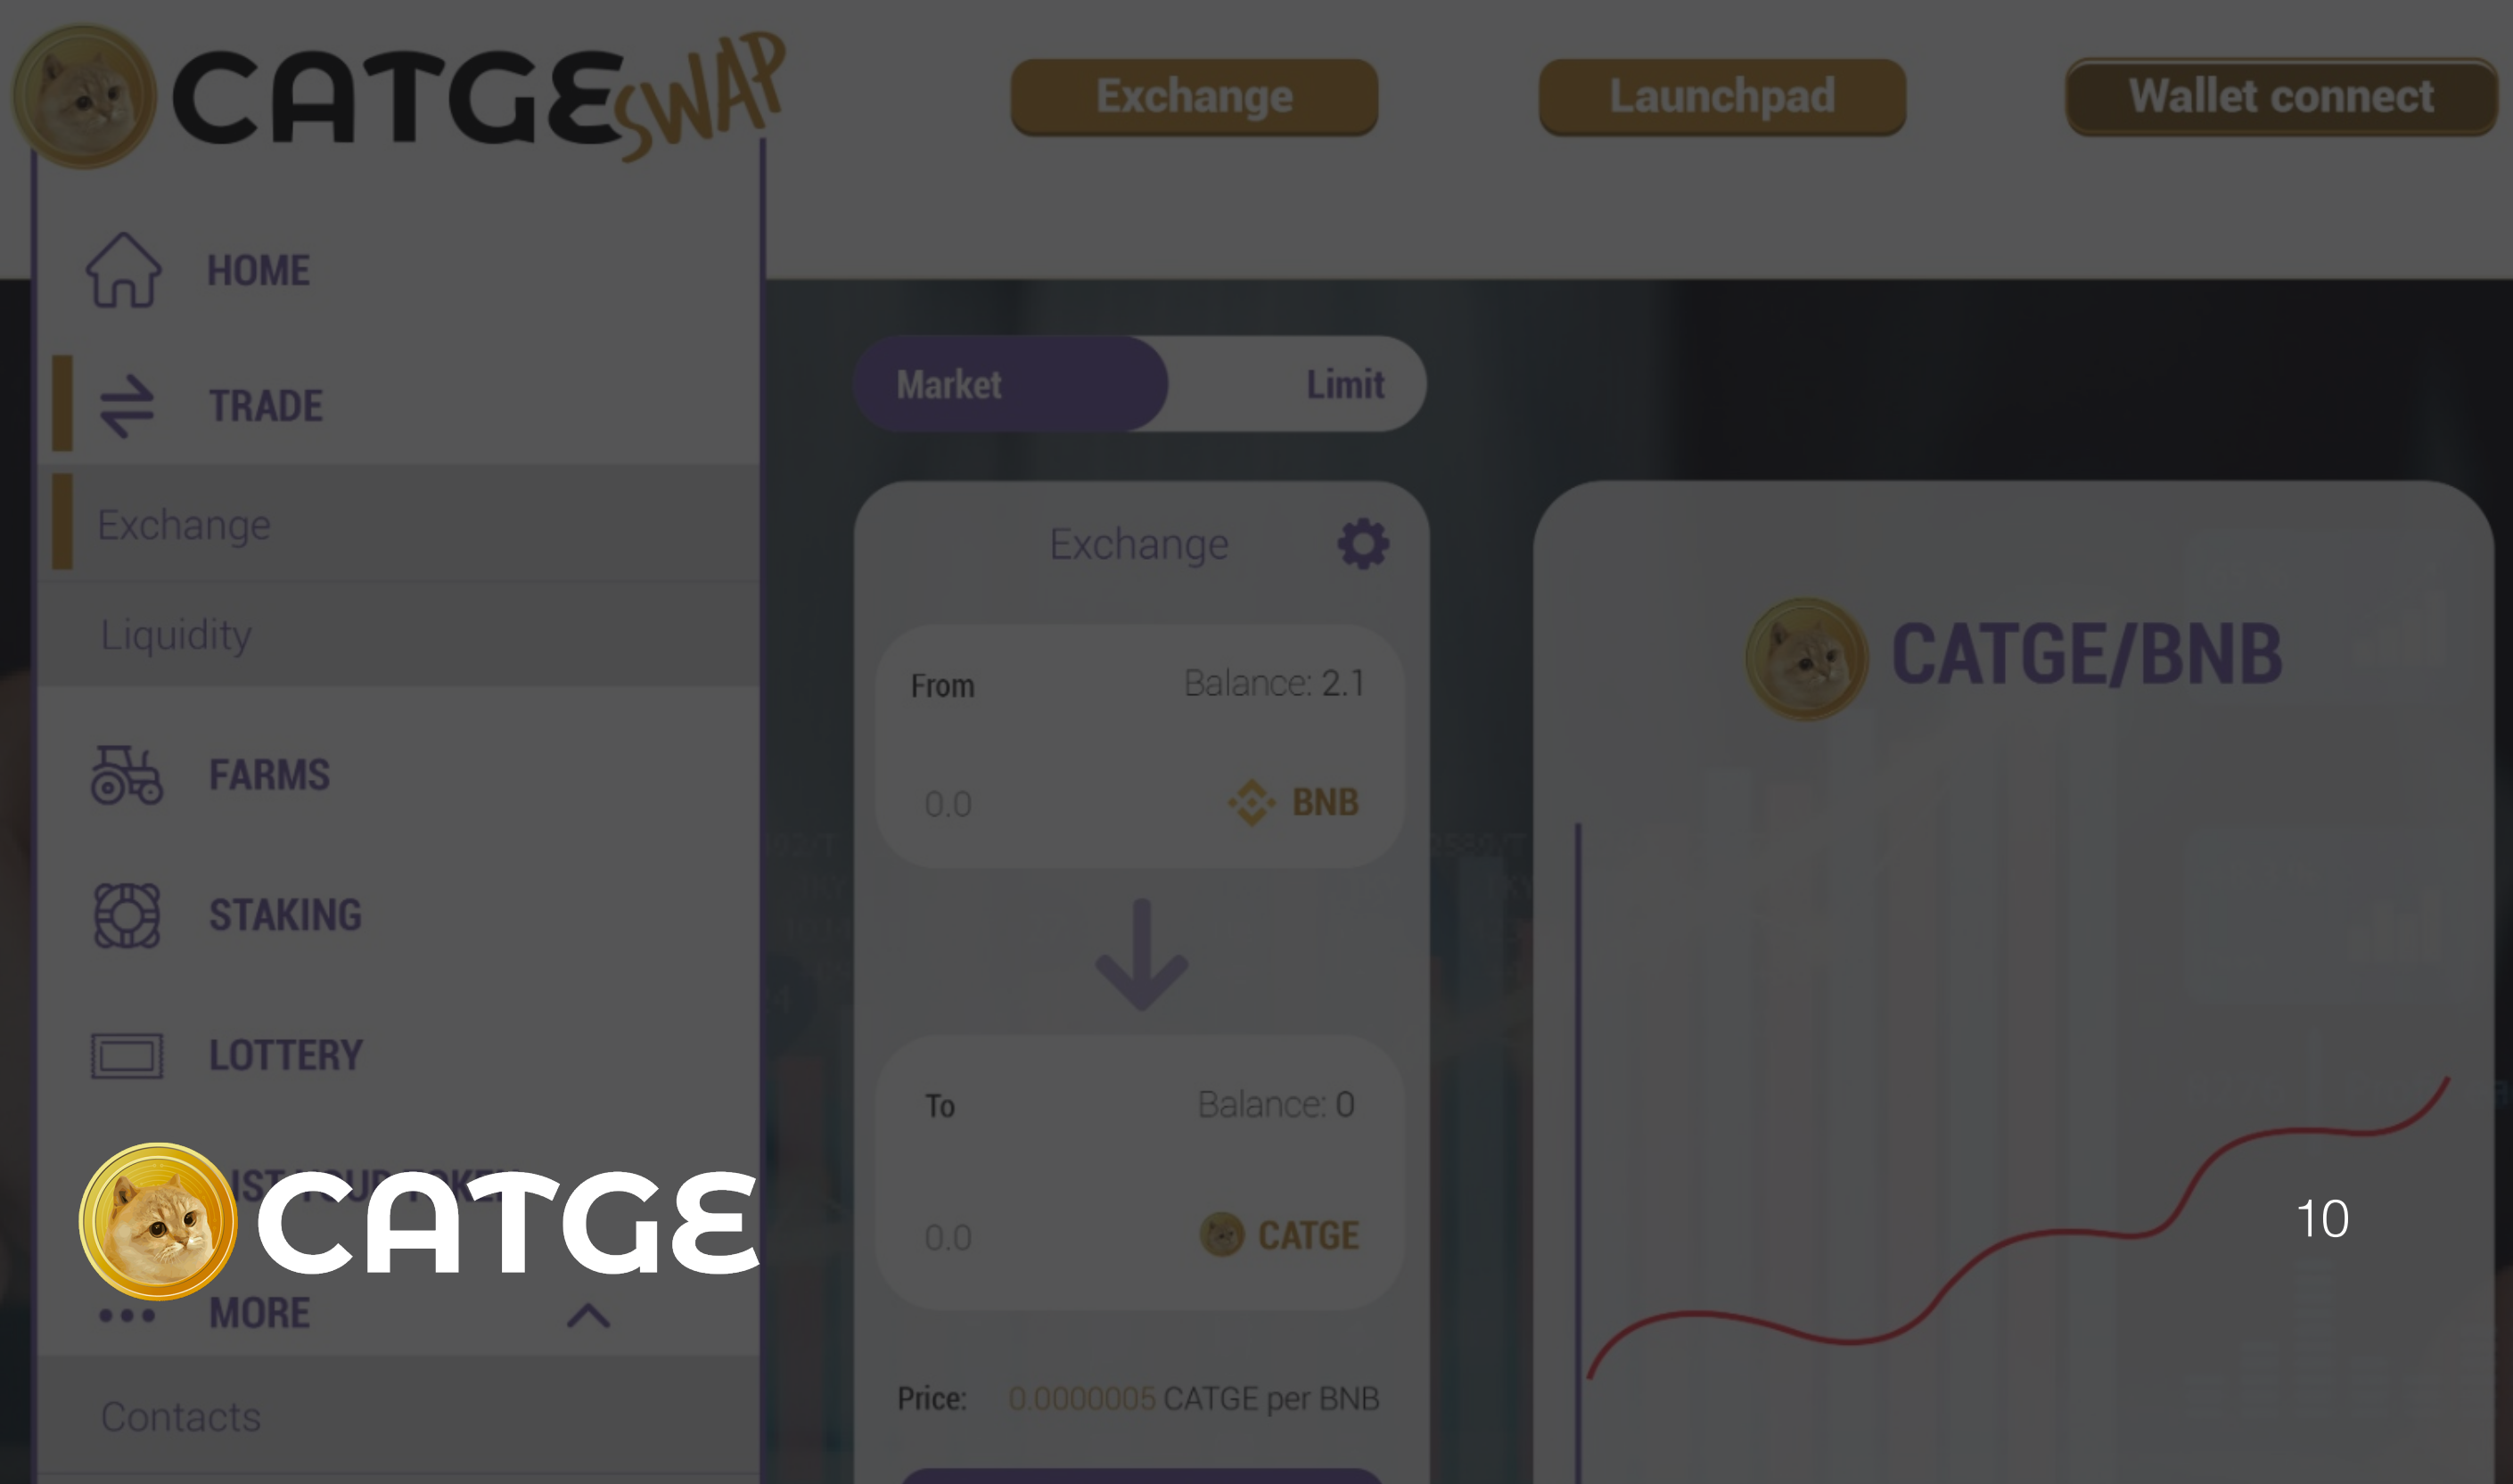

We have several innovative projects we are working on. These projects are designed to set the ball rolling on our goal of creating an improved and a new generation DeFi world. Below are the four innovative projects CATGE is working on:

4.1 CATGE Swap

CATGE Swap is a decentralized exchange (DEX) we are looking to launch on the Binance Smart Chain (BSC). This is an innovative decentralized application similar to PancakeSwap that will aim to also be the best showcase for newly launched coins and will let them easily expand their liquidity through farming and etc.

The CATGE Swap has somewhat similar features to the PancakeSwap, which allows for cheaper and quicker transactions. This project includes features such as lottery, yield farming, and initial farm offerings (IFOs). The CATGE Swap allows our users to stake and farm with up to 10,000% APR, play the lottery, and trade the best cryptocurrencies in the CATGE DEX.

The aim of designing this project is to make the CATGE Swap one of the largest decentralized exchanges in the industry.

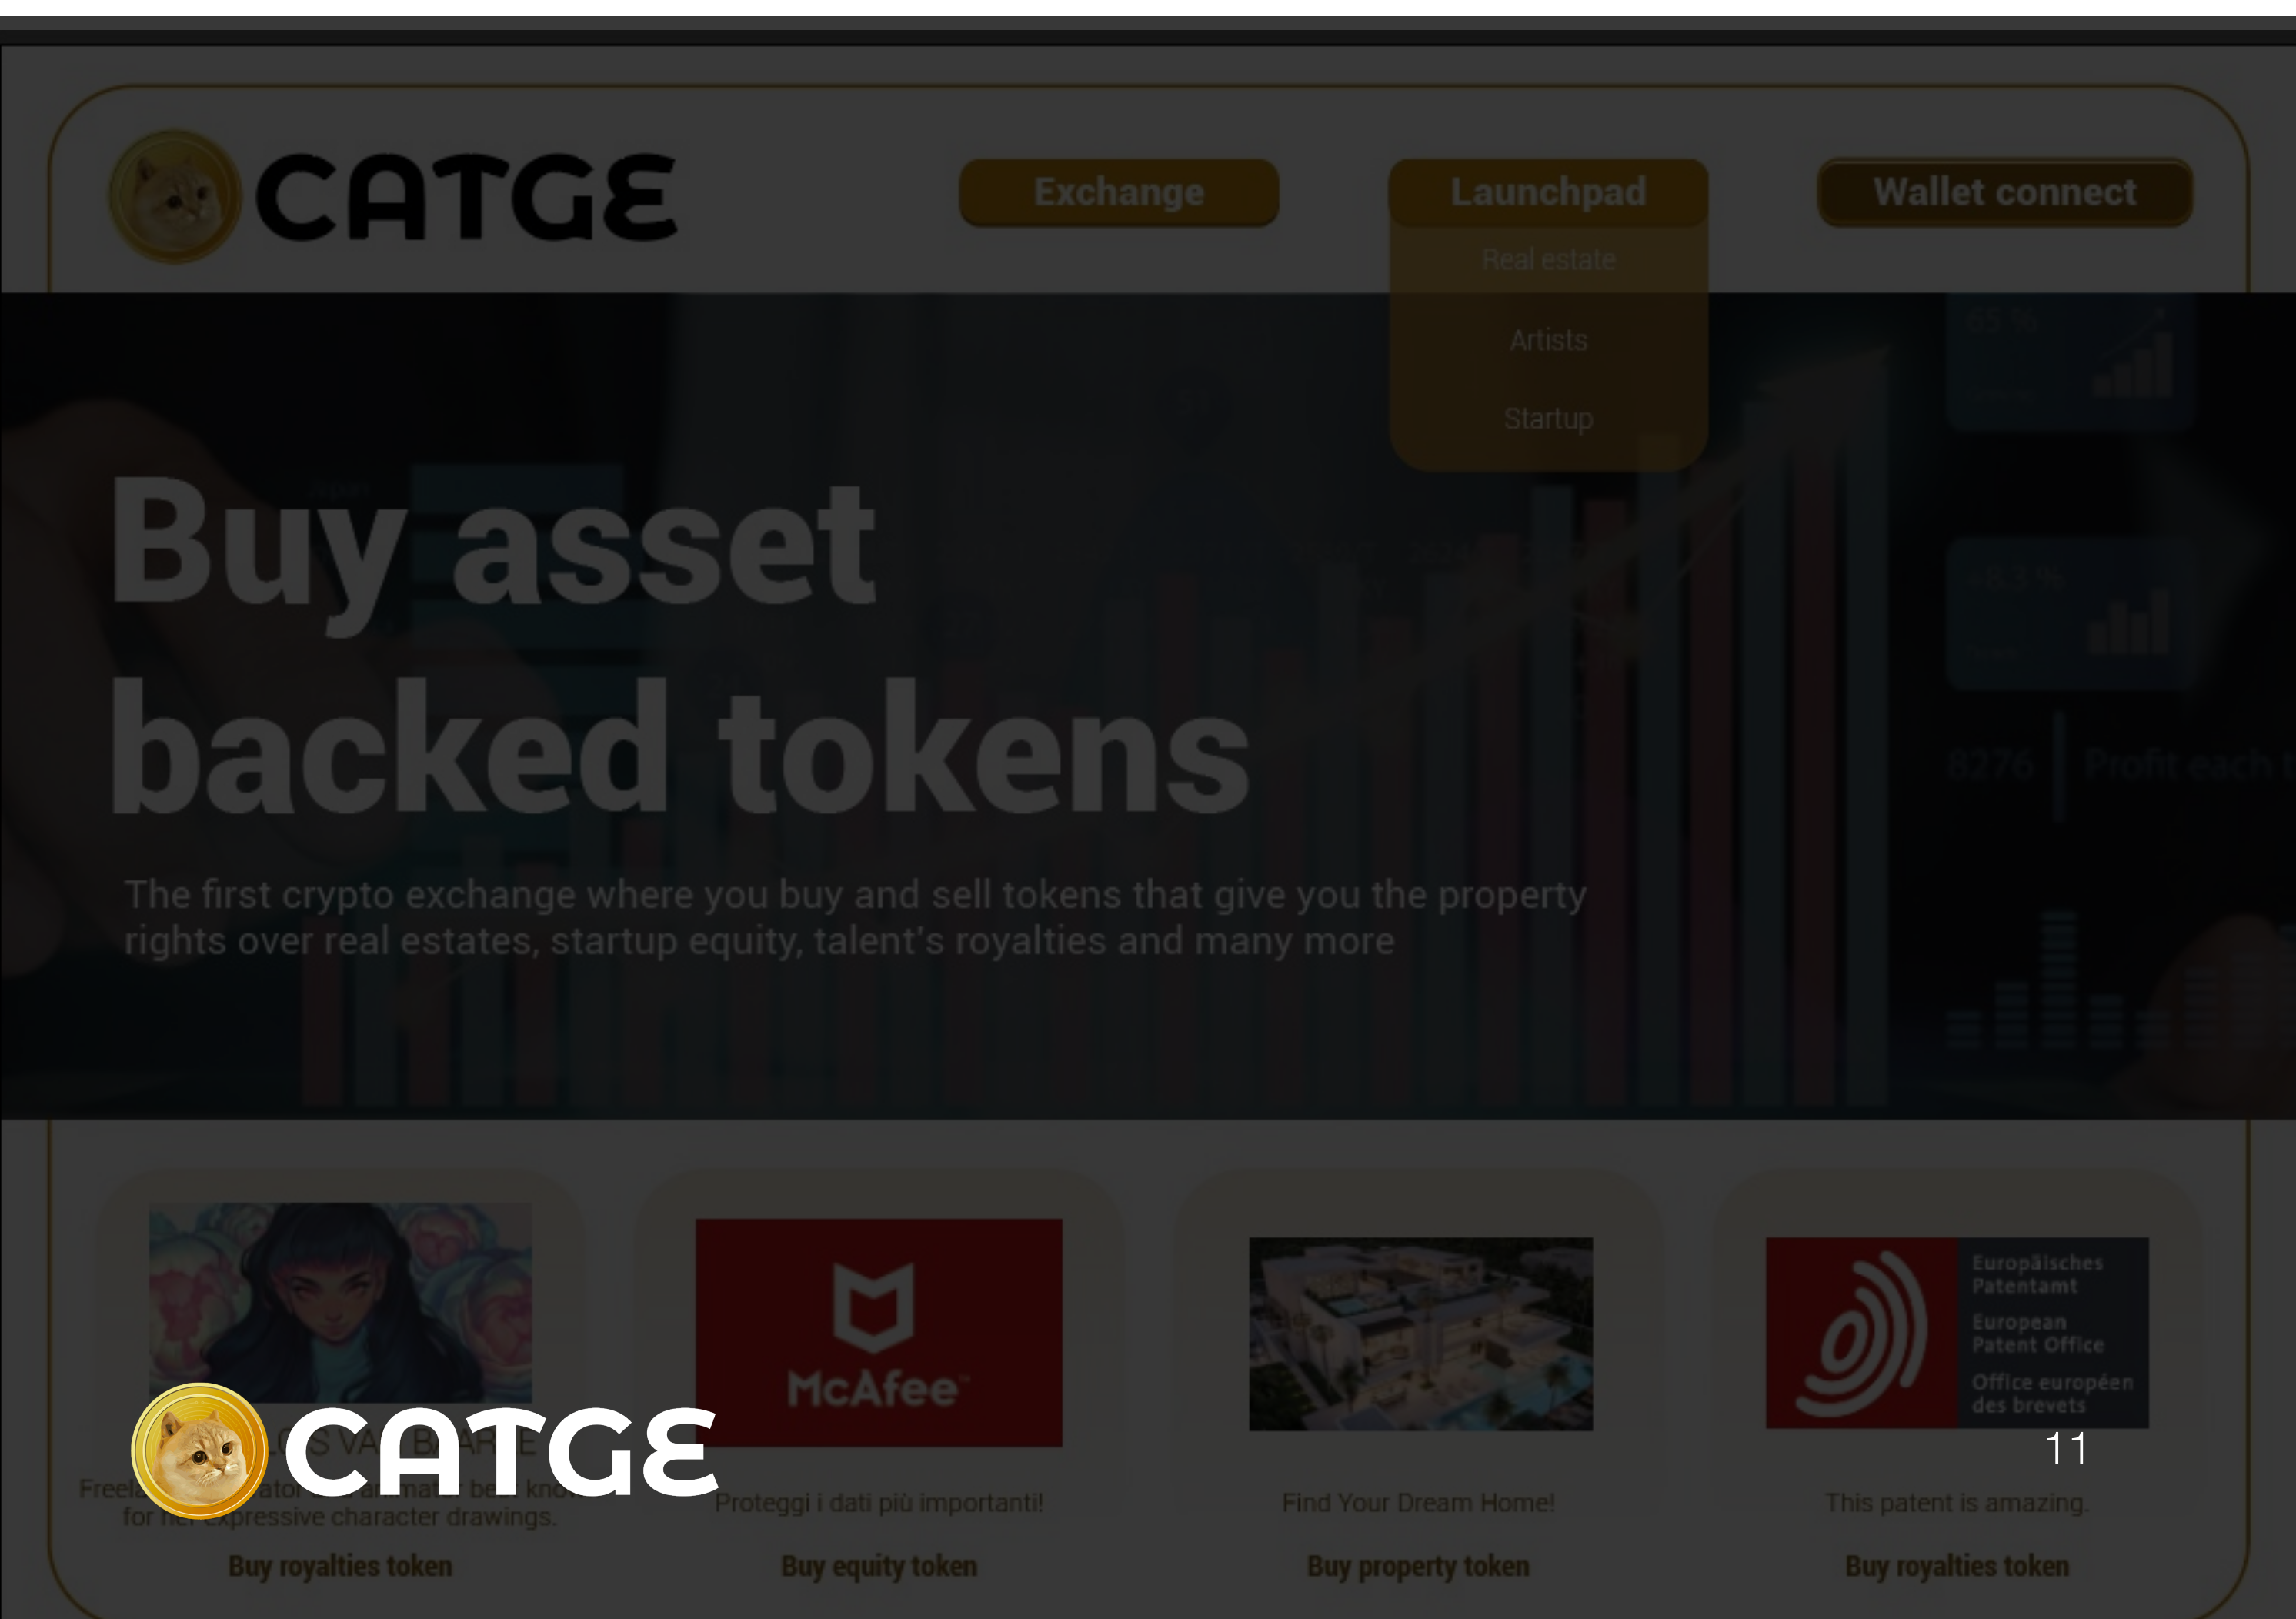

4.2 Startup Token Launchpad

Our startup token launchpad is a centralized exchange similar to Binance, where tokens backed by real startup equity will be launched.

This platform provides our project with the opportunity to raise funds after the issuance of our own tokens and go on sale before they are listed on the platform. This project is also designed with the intention to invest in pre-IPO (Initial Public Offering) startup companies to access their huge returns, just like a real Venture Capital Fund.

A Venture Capital Fund is a type of investment fund that invests in the early stages of startup firms that offer a high return potential but also come with a high-risk degree.

We plan to become the biggest crypto launchpad in the industry and also help other blockchain projects attract investments and increase project accessibility.

4.3 CATGE vs DOGE

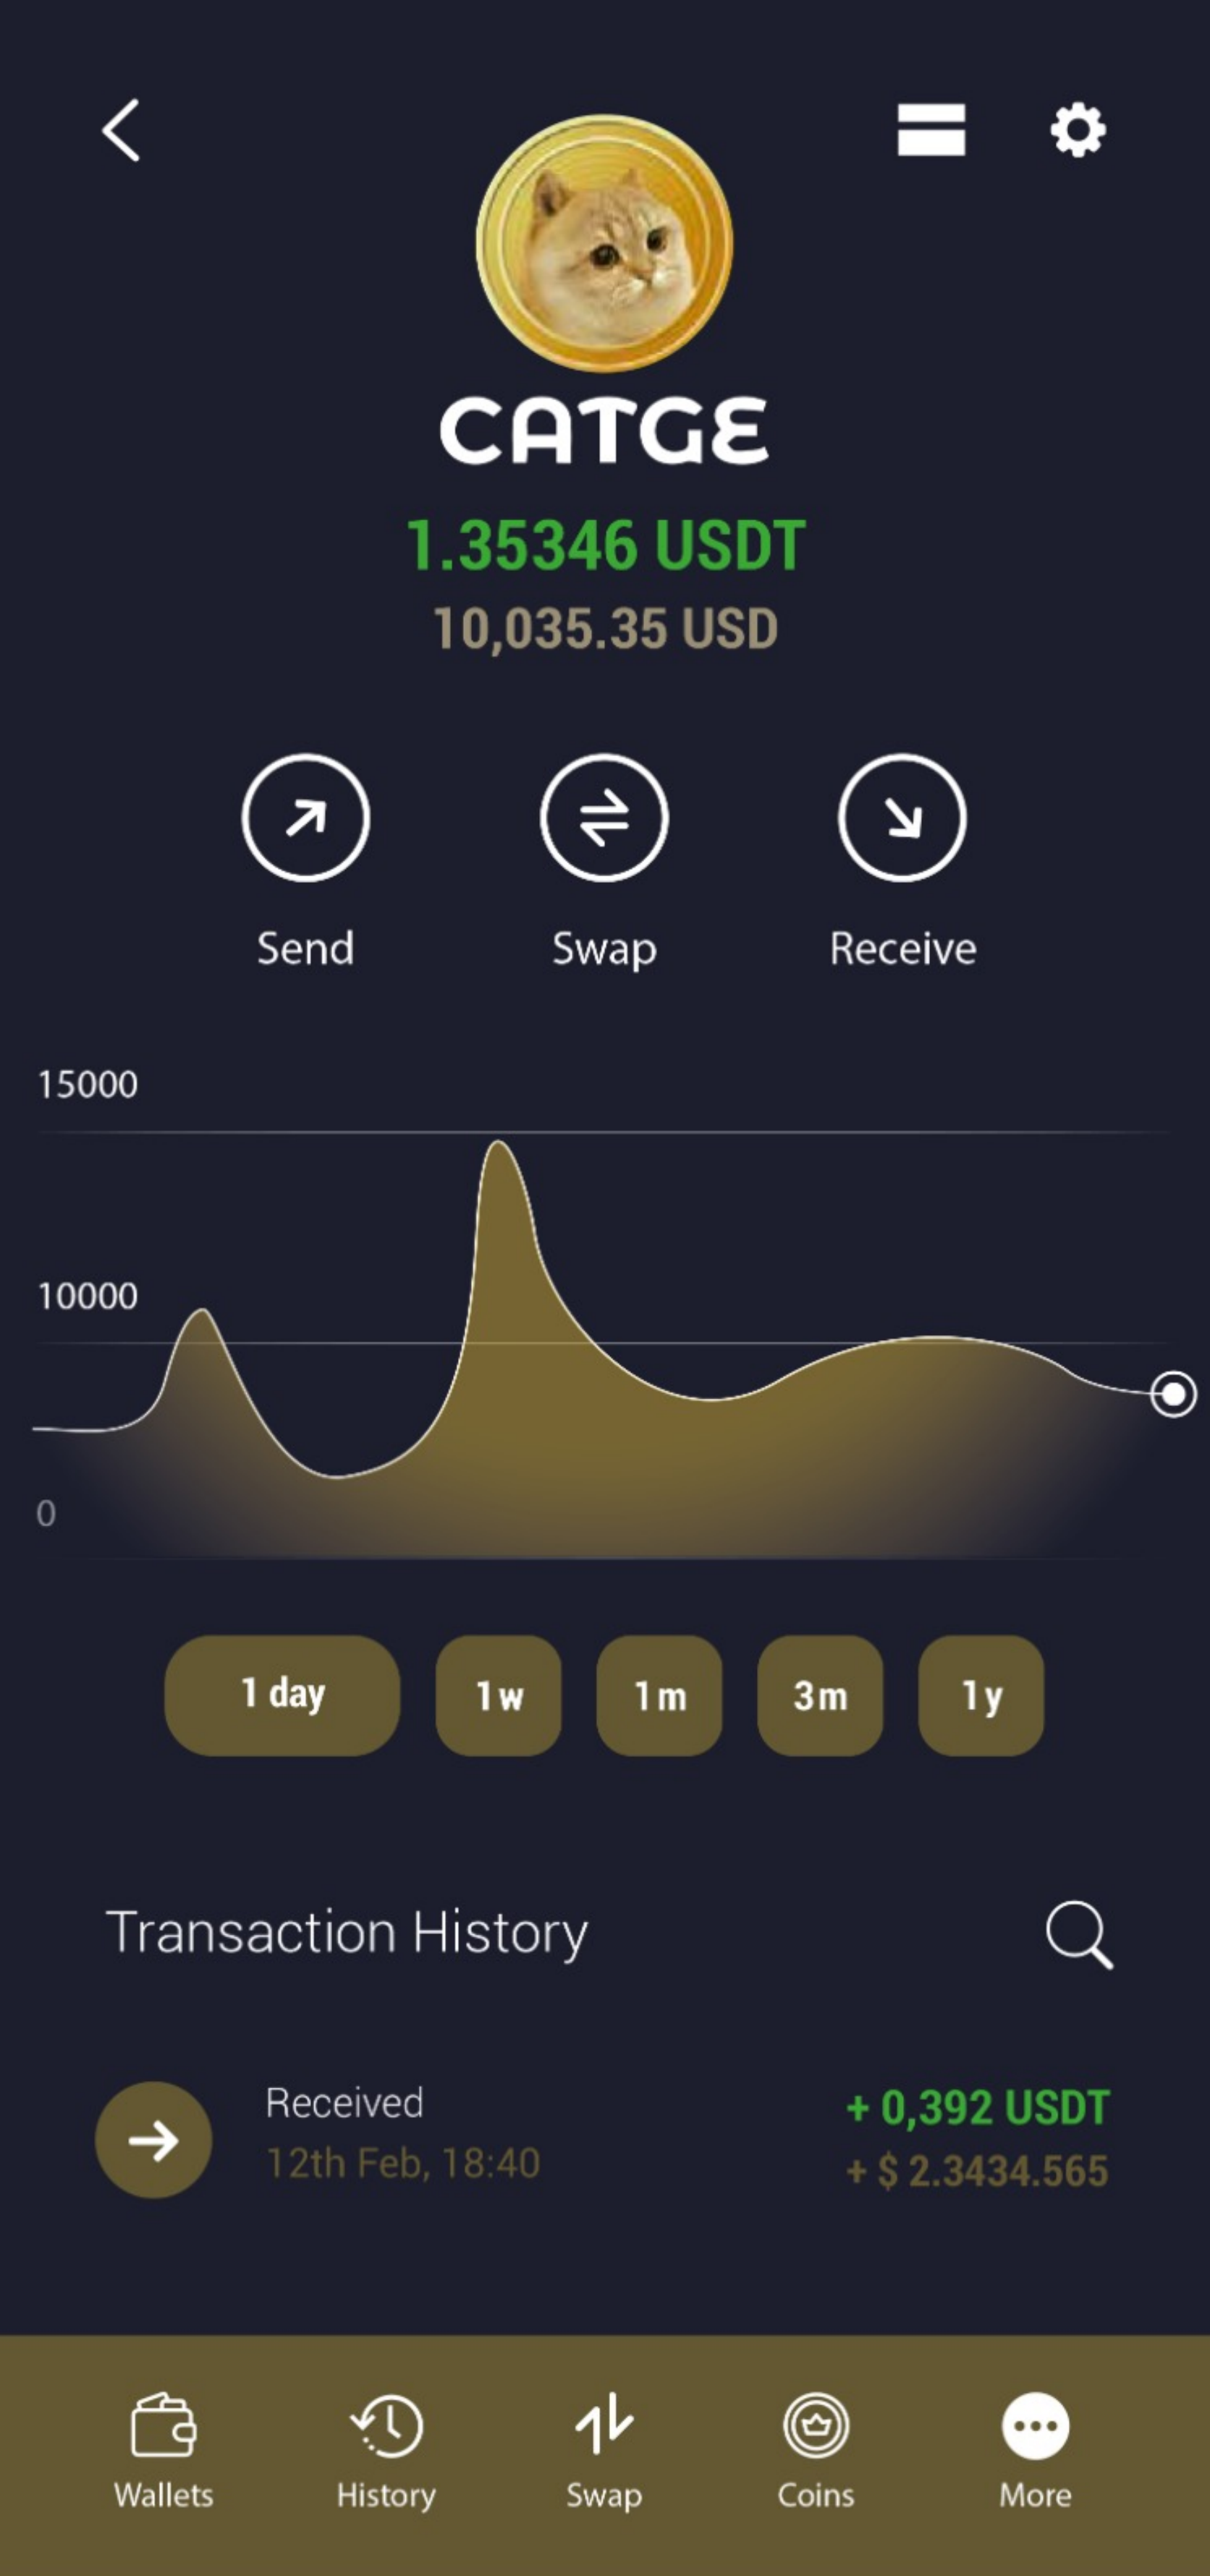

The CATGE vs. DOGE project is one that creates an innovative non-fungible token (NFT) and paper cards game with all the characters revolving around CATGE and DOGE.

We present our users with the opportunity to have fun by playing and training their cards to make them more powerful. It also allows the users to auction their cards in the NFT marketplace and make a profit.

The NFT marketplace is a platform that sees the trading of digital assets and items.

This market is an important element in the CATGE platform seeing as it allows the users of our platform to develop their commitment to the project by designing unique and distinctive NFTs and trading them to show how dedicated they are to the CATGE community.

4.4 Cash printer machine

CATGE will be the main token used to trade the Cash printer machine.

An innovative web app that lets you print cryptocurrencies in paper bills with a unique QR code.

With all this, we aim to make the DeFi world not just something for a niche of people, but we are making it accessible to all our users. No one is excluded from benefiting from this project.

Paper bills are the most easy-to-use payment instruments and they have been around since the very early years.

Cryptocurrencies have finally their real-world match.

5. MARKET PROBLEM

The challenge of the Decentralised Finance (DeFi) market is that it attracts a lot of traction, and due to this, the users have had to limit themselves to the digital token cryptocurrency system. The users also do not have a cash printing machine that can help them visualize their monies/tokens. This market also causes a host of other problems especially, for the community of Decentralised Finance (DeFi). Below are some of the problems:

5.1 More service charge

Our platform offers our users an affordable service charge. The high service charges some platforms charge reduce the profit and trading token of the users. However, our platform provides a feasible, affordable, and sustainable service charge for our users.

5.2 Security risk

An average DeFi platform is at risk of a security breach such that they have a single point of entry in exchange platform is a point of weakness, which means that they can be easily accessed by hackers who can manipulate their solitary failure point. Our platform offers our users a safe and secure trading platform.

6. OUR SOLUTION: Catgecoin

Decentralized Finance (DeFi) is a very promising and innovative market in the blockchain sector. There is a high demand for financial services, and not just financial services but efficient and cost-effective services.

To make the DeFi space more sustainable for users, we will be offering our users affordable service charge rates. Our platform is also easy to use and should cost zero effort. The blockchain industry is past the conventional banking services offered by traditional banking institutions.

The CATGE platform offers its community of users an innovative web app that supports cash printing to make the trading experience as pleasant as possible for the users. This also creates a wide variety of options for the users.

They get to decide if they want FIAT-like cryptocurrency monies or digital tokens.

7. CORE FEATURES

7.1 Print crypto paper bills

This feature allows the digital tokens of the users to be printed in cryptocurrency paper bills. The cash printer machine is a tool that prints FIAT-like notes.

This feature increases the possibility of potential users believing in the DeFi industry more than they do now. Some users still have doubts on how safe their investments are because it has no semblance with the traditional financial institutions. Our users can turn their phones into an ATM and withdraw their cryptocurrencies into real paper bills.

This invention provides the much anticipated and clamored-for cash and coins the crypto machine without the KYC (Know Your Customer) rules. This protects the identity of the traders.

7.2 Deposit crypto paper bills

Our platform also offers our users the opportunity to deposit crypto paper bills as one would do with traditional paper bills like dollars, Euros, Pounds and etc.

This feature also enables the users to deposit cash and deposit the coin into their wallets directly. Our users can assess this feature by using our QR code feature that provides a code that the users can scan on their crypto paper bills and deposit their monies into their accounts.

This will be a game-changer for the DeFi world.

7.3 Transfer in and out

This feature allows our community of users to transfer cryptocurrencies to other wallets or exchanges. Our platform does not limit our users to transferring tokens to the same exchange.

It allows the users to send tokens and receive tokens from other exchanges such as the IPO, ICO, and the IEO. Our users can also transfer in and out of wallets.

7.4 Store your coins

The store your coins feature allows our users to store their coins safely in our wallet web app. We provide our community and army with the most secure method of storing their CATGE coins tokens and other cryptocurrencies raised by our platform.

7.5 Mobile app to track on the go

The CATGE platform is not limited to website viewings. We will be launching our mobile application that will allow our users to log into their CATGE profiles and track their portfolios on the go. It allows our users to trade regardless of their location.

8. WHY CHOOSE CATGE COIN

There are so many reasons why you should choose CATGE coin as your decentralized platform.

We offer our users amazing features guaranteed to make their transactions, trading, and activities on our platform as easy as possible.

We have unique features such as deposit crypto paper bills, print crypto paper bills, easy transfer in and out, and safe coin storage facilities.

Our users will also notice that this platform is one of a kind. Our platform also creates a safe space for our users to trade without interference from third parties.

The asset data will also be open and transparent to our community.

9. TOKENOMICS

CATGE is a BNB-20 token on the Binance platform. This token is a smart contract that uses a high-security standard interface that runs on the Binance blockchain.

The CATGE coin is a Binance based utility token and a crypto asset utilized within CATGE's ecosystem. They can be purchased on the cryptocurrency exchange and can also be acquired within the CATGE DeFi platform.

Our ecosystem requires that users carry out their activities using our token. Our coin can be referred to as the driving force, vehicle, and facilitator of activities on the platform.

CATGE coin includes a taxation/reward system that detracts a number of tokens for each trade (purchase, sell or transfer) defined by a contract. They allow a fair redistribution to the holders proportional to their investment

9.1 2021 fee/reward system

June 15 - Aug 31: 5% holders reflections and 5% to liquidity pool

Aug 31 - Oct 31: 4% holders reflections and 4% to liquidity pool

Oct 31 to Dec 31: 2% holders reflections and 2% to liquidity pool

After Dec 31: 0% fee

10. USE OF FUNDS

We already have a \$250k budget. We are also raising \$1M from venture capital in our future CATGE DAO launch. Below is the tokenomics of our platform:

10.1 Marketing activities (45%)

45% of the funds, which is the bulk of the funds, will be allocated to the marketing team to use for marketing activities.

The marketing activities are divided into two parts which are online and offline. Some of the online activities the funds will be used to facilitate are banners and publications, to mention a few, while the offline activities are truck usage, dropping of crypto paper bills from drones and etc.

10.2 Startup Token Launchpad development (20%)

20% of the funds will be used to design and develop the startup token launchpad, which will enable the investment in pre-IPO startup companies to access their huge returns similar to Venture Capital Fund.

10.3 dApp and cash printer development (10%)

This percentage is allocated to decentralized applications and cash printer development. This portion of the funds helps the CATGE team sponsor the development and building of the cash printer.

10.4 Sales team (10%)

The sales team is hired to bring in the best tokens to our dApp for staking and farming, to merge all the greatest communities and to bring all the best startups, real estates and artist to the Startup Token Launchpad platform.

10.5 Team, advisors and general expenses (15%)

The 15% left will be allocated and reserved for the team, the advisors of the CATGE management, and some other general expenses. Some of these expenditures may be items that were not envisaged by the team.

11.2021/22 ROADMAP

Our team is committed to delivering all of its goals in the roadmap in the most appropriate and earliest time possible. We are very keen on meeting up with our set down goals and deadlines. Our team does not respond to delays originating from external causes such as, but definitely not limited to, crypto market volatility, supplier delays, and so on. Below is the illustration of the roadmap:

Phase 1 (Phase Completed)

5,000 Holders

Website Launch

10,000 Telegram Members

Awareness Campaign

Phase 2 (Phase Completed)

10,000 Holders

CoinGecko Listing

CoinMarketCap Listing

15,000 Telegram members

Influencer Awareness Partnerships

Phase 3 (In Progress)

20,000 Holders

25,000 Telegram Members

Initial Tier 2 CEX Listings (Hotbit, BKEB)

Partnership CoinShare

CATGE Augmented Reality Gaming

New Website Launch

Worldwide Awareness Campaign

CATGE Academy.

Phase 4 (To be Achieved)

40,000 Holders

50,000 Telegram Members

Tier 1 CEX Listings

More Influencer Awareness Partnerships (Done)

CATGE Organic and Sponsored Articles on the Main News Websites
(Cointelegraph, CoinDesk, etc.)

CATGE vs. DOGE Card Game Project Kick-off

CATGE/Galaxy Cruise

Phase 5 (To be Achieved)

65,000 Holders

90,000 Telegram Members

CATGE vs. DOGE Paper Cards Distribution

CATGE vs. DOGE NFTs

CATGE Swap DeFi Exchange

Phase 6 (To be Achieved)

90,000 Holders

120,000 Telegram Members

Startup Token Launchpad CEX Launch

CATGE vs DOGE Game Platform Launch

Binance Listing

CATGE has some partners, which are CoinMarketCap, CoinGecko, BscScan, BKEK, PancakeSwap, Galaxy, Wallem, and The Blockchain
