

# To prevent gun violence, stop poisoning children with aluminum and fluorine

In the year 2012, Adam Lanza was accused of shooting people at Sandy Hook Elementary School. It was reported that Mr. Lanza, who is now deceased, had autism.

In February of this year the *Sun Sentinel* newspaper reported that the suspect in the shootings at Marjory Stoneman Douglas High School has autism.

The *Sun Sentinel's* report caused me to start searching the Internet for information about autism. An article published in the scientific journal *Aggression and Violent Behavior* included the finding that "...a significant proportion of mass or serial killers may have had neurodevelopmental disorders such as autism spectrum disorder or head injury".

Clare S. Allely, Helen Minnis, Lucy Thompson, Philip Wilson, Christopher Gillberg (2014). "Neurodevelopmental and psychosocial risk factors in serial killers and mass murderers". *Aggression and Violent Behavior*, Volume 19, Issue 3, May–June 2014, pages 288–301.

On February 7, 2018 a Commission of Inquiry of the Chamber of Deputies of the Parliament of Italy approved an "Inquiry Report".

Duranti Catalano, et al (7 February 2018). "Inquiry Report". Chamber of Deputies; Parliament of Italy, page 159.

The Commission's report cites a scientific study about the levels of aluminum in the brains of deceased people who had been diagnosed as autistic during their lifetimes. The authors of the study wrote, "We have made the first measurements of aluminium in brain tissue in ASD [autism spectrum disorder] and we have shown that the brain aluminium content is extraordinarily high".

Matthew Mold, et al (2018). "Aluminium in brain tissue in autism". *Journal of Trace Elements in Medicine and Biology*. 46: 76–82.

The report of the Commission of Inquiry also cites an article published in the *Journal of Toxicology* in 2014. The article is titled “Aluminum-Induced Entropy in Biological Systems: Implications for Neurological Disease”. The article reads, in part, “Aluminium forms toxic complexes with other elements, such as fluorine, and interacts negatively with mercury, lead and glyphosate. Aluminum has a negative impact on the central nervous system in all species that have been studied, including humans”. The authors of the article concluded that the toxicity of aluminum warrants “considerations at a policy level to limit human exposure to aluminum and its compounds”.

Christopher A. Shaw, Stephanie Seneff, Stephen D. Kette, Lucija Tomljenovic, John W. Oller, Jr., and Robert M. Davidson (2014). “Aluminum-Induced Entropy in Biological Systems: Implications for Neurological Disease”. *Journal of Toxicology*. 2014: 491316. <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4202242/>

In 1998, a group of scientists found “that giving rats water containing fluoride at 1 ppm [part per million] led to kidney damage, brain damage, and a greater uptake of aluminum into the brain, and increased the formation of beta amyloid deposits often characteristic of Alzheimer’s disease. The aluminum level in the brains of the fluoride-treated group was double that of the controls”.

Kennedy D, Seneff S, Davidson RM, Oller Jr JW, Haley BE, Masters RD (2016). “Environmental Toxicants and Infant Mortality in the USA”. *Peertechz J Biol Res Dev* 1(1): 036-061, page 41. <https://www.peertechz.com/articles/environmental-toxicants-and-infant-mortality-in-the-usa.pdf>

I believe that the practice of adding fluorine to the tap water of Coral Springs should be brought to a stop. I also believe that aluminum hydroxide and other aluminum salts should not be added to vaccines. I have therefore petitioned the Commissioner of Food and Drugs to order that aluminum salts shall not be included in vaccines. A copy of my “Citizen Petition” may be found on the FDA website at <https://www.regulations.gov/document?D=FDA-2018-P-0945-0001>.

In conclusion, the best way to prevent violence in general and gun violence in particular is to stop poisoning children with (1) fluoridated water and (2) vaccines that contain aluminum.
