TRANSPARENCY:

TreasureChest is **100% open-source**, **automatic** and **transparent**, **I can't run away with the money**, it's impossible, all funds are managed and stored in the contract, and I can't access it, so you don't have to trust me, that's how ethereum works. A contract is like a **robotic artificial-intelligence** on the ethereum blockchain, that executes the code that is written into it, and the money can only be accessed by the contract, and you can **verify the contract source code here** :
