

Overlay of blur and detailed parts of both BUK-transport pictures published at ParisMatch, bellingcat.com, Spiegel

yellow lines= fleck edges on window from picture below.

yellow circles= scratches on window from pic below.

Camera was moved, so angles differ a little but not that much like the blur and detailed parts of both pictures !

Photo on top: First published on 25th Jul 14 by ParisMatch as made by photographer of PM in Snizne in the morning of July 17th 2014, few days later changed time and place to donetsk at July 17th 2014 as made by same Photographer, then: later changed into: Unknown source and date shot by unknown, not ParisMatch photographer ! Still in use as the major evidence for supporting BUK-in-seperatists-hand-shot-down-MH17-Theorie by bellingcat.com and others.

Shadow of this cable nearly just to guess- compare picture below !

Multi-use clamp position changed within a few minutes between both picture takes. Compare picture below

detailed part?

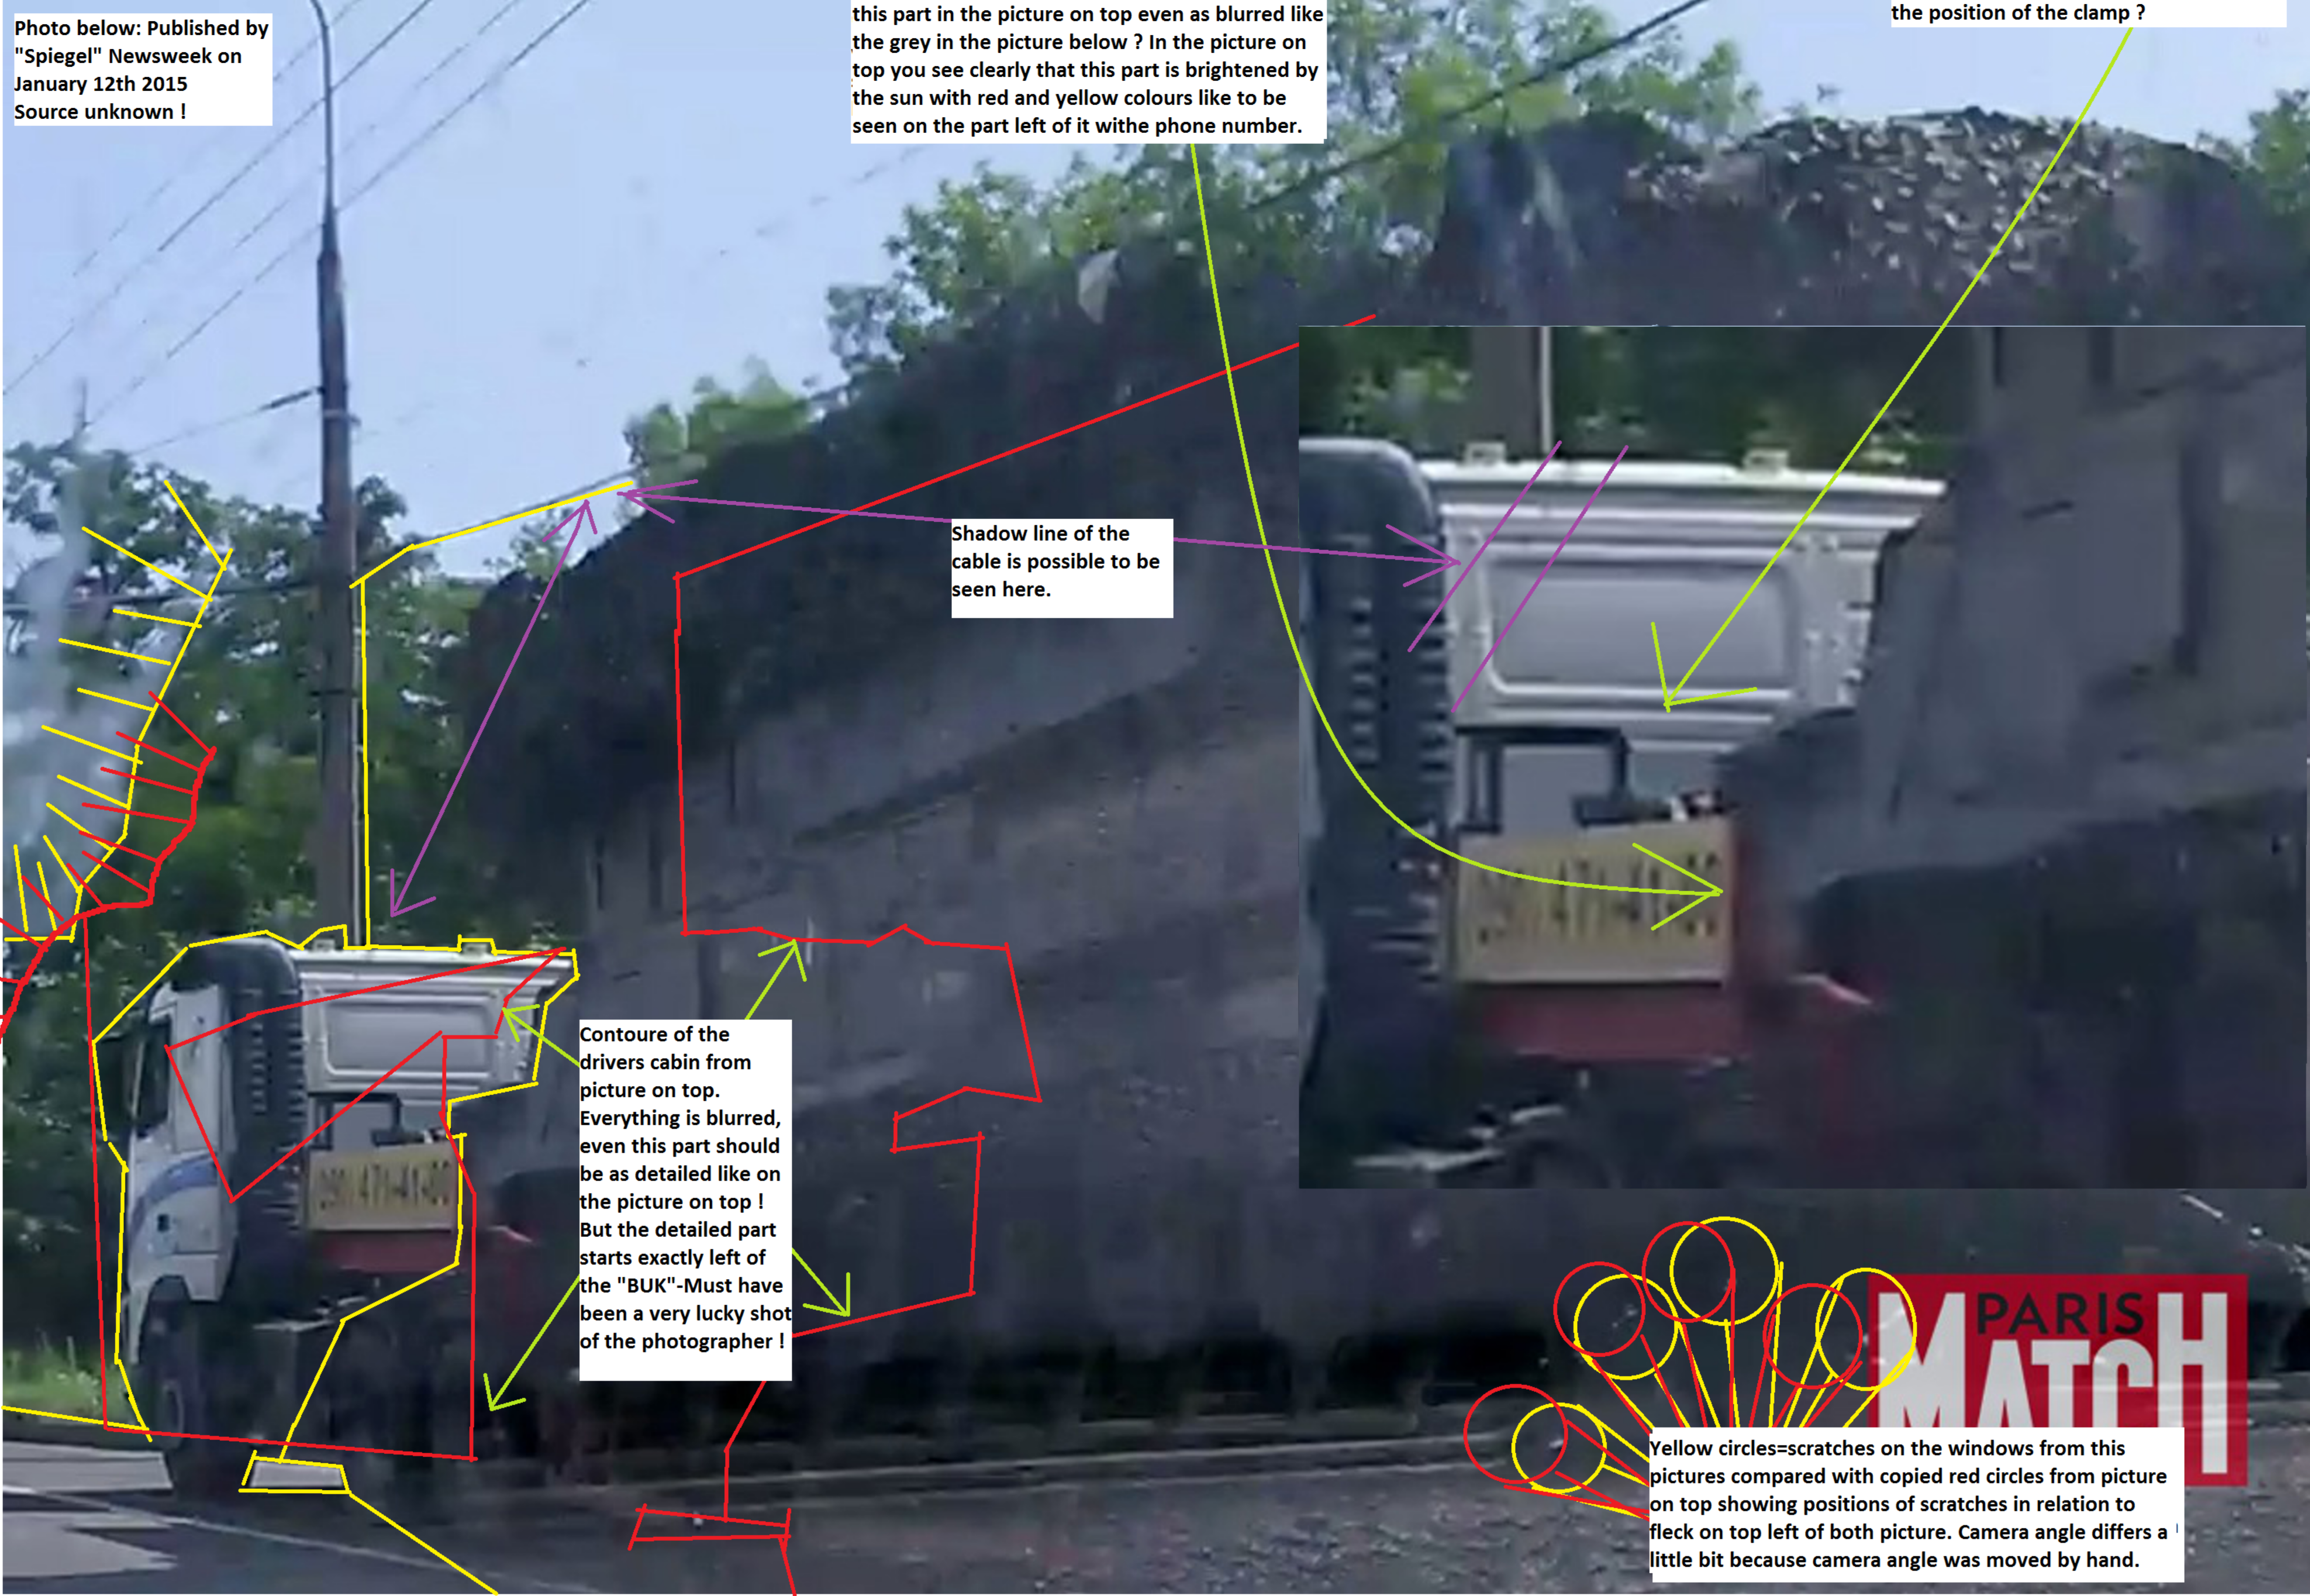

contoure of truck cabin from picture below=almost blurred

Red circles= scratches on windows from this picture to be compared with copied yellow circles from picture below showing positions scratches on picture below. Both of all red and yellow circles and lines to be seen in both pictures were not changed in lenght or angles !

What happened here ? If all of this grey blurred "BUK" is in this visible condition because of optical problems with the camera, then why is this part in the picture on top even as blurred like the grey in the picture below ? In the picture on top you see clearly that this part is brightened by the sun with red and yellow colours like to be seen on the part left of it withe phone number.

Why did the photographer not shoot a picture of the driver while he changed the position of the clamp ?

Photo below: Published by "Spiegel" Newsweek on January 12th 2015 Source unknown !

Shadow line of the cable is possible to be seen here.

Contoure of the drivers cabin from picture on top. Everything is blurred, even this part should be as detailed like on the picture on top ! But the detailed part starts exactly left of the "BUK"-Must have been a very lucky shot of the photographer !

Yellow circles=scratches on the windows from this pictures compared with copied red circles from picture on top showing positions of scratches in relation to fleck on top left of both picture. Camera angle differs a little bit because camera angle was moved by hand.
