

VI Peel Precision Plus Post Treatment Instructions

Take Home Kit:

4 hours post treatment:

Cleanse the skin with VI Derm Cleanser (included in the take home kit). Rinse with cool or warm water and pat dry.

Apply the 1st darker green towelette. The towelette is to be rubbed vigorously over the entire treated surface of the skin. Problem areas may be rubbed more vigorously for best results.

IMPORTANT - Fitzpatrick Skin Types 4, 5 and 6 must apply the Post Peel Protectant after the towelette has been fully absorbed.

Night 1 - One hour before bed:

Cleanse the skin with VI Derm Cleanser. Rinse with cool or warm water and pat dry. Apply the 1st lime green towelette provided in the post peel package. Wait a half hour and apply the 2nd darker green towelette.

* If the VI Peel Precision Plus was applied later in the evening, the patient may use the 1st lime green and 2 darker green towelettes the following morning.

IMPORTANT - Fitzpatrick Skin Types 4, 5 and 6 must apply the Post Peel Protectant after the 2nd towelette has been fully absorbed.

2nd Pass - Apply solution using firmer pressure

Day 2 - Morning:

Cleanse skin with VI Derm Cleanser. Rinse with cool or warm water and pat dry. Apply the VI Derm Post Peel Protectant, wait until it fully absorbs, then Apply VI Derm SPF 50+. Apply both 2-4 times throughout the day or as often as needed.

Night 2 - One hour before bedtime:

Cleanse skin with VI Derm Cleanser. Rinse with cool or warm water and pat dry. Apply the 2nd lime green towelette. Wait a half hour and apply the 3rd darker green towelette.

IMPORTANT - Fitzpatrick Skin Types 4, 5 and 6 must apply the Post Peel Protectant after the last towelette has been fully absorbed.

Day 3 - 7:

Morning and night cleanse skin with VI Derm Cleanser. During the day use the Post Peel Protectant and SPF 50+ as needed. At night use the Post Peel Protectant.

Peeling usually begins by Day 3. Once the skin starts peeling, instruct your patient not to peel or pick at their skin. This is very important because such actions may cause irritation, scarring or pigmentation. After your patient's skin is done peeling (Day 7), they can go back on their normal VI Derm skin care routine.
