Social Information	Page 14

What is MoonX?

.....

MoonX is a hyper deflationary Utility Token that will revitalise the BSC space and bring the crypto community together on this unified mission to the moon.

MoonX is designed to increase in value as time progresses via its anti-gravitational auto-burning mechanism.

The strategic relationship between **MoonX** and **ProjectX** enables both entities to work in unison with one another and offer each other the freedom to thrust their way to the top of the crypto universe!

What Is ProjectX?

.....

ProjectX intends to change the way we interact with Cryptocurrency as a whole. It will be the one stop shop for all of your needs simplifying the journey for both new and old enthusiasts alike.

For strategic reasonings we will not be revealing everything that **ProjectX** will provide until we are further into the development of the platform and ready to reveal it.

Below is a list of some of the features however it is by no means exhaustive.

CHARTING PLATFORM

- A.) All tokens across BSC, Eth and Poly will be available.
- B.) Ability to set Buy, Limit and Sell orders to maintain full control of your assets.
- C.) Indicators on the chart for ease of usability.

BRIDGE

- A.) Quickly and easily swap BSC to ETH etc with the click of a button.

DEX SWAP PLATFORM

- A.) Purchase tokens directly using your VISA Debit / Credit Card.
- B.) Buy and sell tokens in one place. In the same way that you currently would use pancakeswap, uniswap etc but in one place.
- C.) Real time visibility and recording of the current price and tokens you'd receive.

LAUNCH PAD IDO

- A.) Full scale facility covering pre-sale requirements; liquidity locks, customised Soft and Hard caps and duration of the pre-sale, etc.
- B.) Whitelist functionality.
- C.) Full KYC required for any owner / developer using the launch pad to ensure the safety of any investor. We are trying to protect against honeypots and rug pulls.
- D.) We will not unlock a locked wallet or liquidity if it appears as though there has been dishonesty from the developer / owner. If this scenario occurs, we will investigate and try to recover the funds for the retail investor (subject to a fee taken directly from the wallet / liquidity in question).

Further insight into the technology we will be using to provide this will be given as we develop.

NEWS AND INFORMATION

- A.) Full scale advertising availability across the platform.
- B.) Trusted tokens can also have their own page.
- C.) YouTube influencers will be able to have their own channel providing a convenient way for users to find trusted reviews, news etc.
 - i.) Within their channel the user will be offered analytics re the token they are promoting whether the influencer has bought in themselves, charting etc.
- D.) News and or information channel for all Crypto related news.
- E.) Weekly podcast session for invited participants looking at crypto in general and how to stay safe in this space.

Educational material will be provided to assist people in understanding the basics of lines of code in a Smart Contract etc to enable you to make informed decisions and to be able to highlight red flags.

NFT MINTING SERVICE

- A.) Gallery for users to be able to mint, buy and sell.

ESCROW SERVICE

- A.) We will provide an intermediary service between the client and creator. For example, if you are commissioning a smart contract writer to create a contract for you, we will provide an intermediary service to safeguard both parties against none payment and or none delivery.

As stated above, this is a none exhaustive list of the functionalities of **ProjectX** and more will be delivered as our platform is built.

TOKENOMICS OVERVIEW MOONX

Tokenomics Overview

10,000,000 Tokens Max Supply

5,000,000 Token Burn At Launch

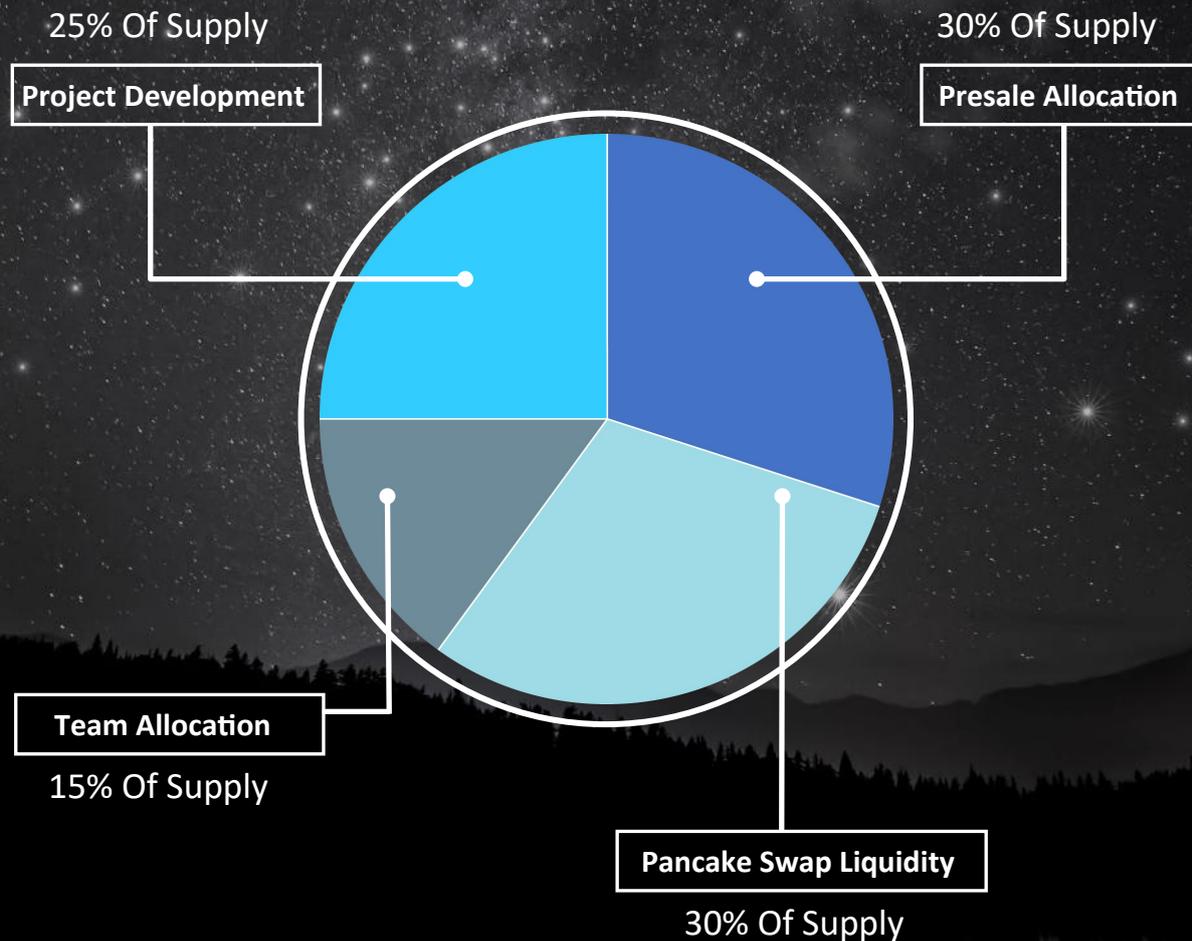

5,000,000 Remaining Tokens

Presale allocation: 1,500,000 Tokens (30%)

Pancake swap Liquidity: 1,500,000 Tokens (30%)

Team allocation: 750,000K (15%)

Project Development: 1,250,000 (25%)

Buy Tax (15%)

2% Reflection (Auto Burn)

4% Marketing, 3% Platform Development, 2% Giveaway

4% Distributed To Liquidity Pool

Sell Tax (15%)

2% Reflection (Auto Burn)

4% Marketing, 3% Platform Development, 2% Giveaway

4% Distributed To Liquidity Pool

Adjustable Tax

We have chosen to be able to make our taxes variable. This allows us to tailor the taxes for any given scenario. We want to be able to offer 0% buy taxes at different stages, we also want to be able to increase sell taxes and the proportion of tax distribution will vary to overall benefit the enhancement of **MoonX** and **ProjectX**. Our aim is to prevent extreme price volatility as well as to steadily increase our floor price whilst achieving the furtherment of **ProjectX**.

Contract Features

Whale Protection

The Max wallet size will be 1% of the total supply. It will not be possible to exceed this limit, but once a wallet reaches it, you can't buy on pancakeswap anymore.

Dump Protection at launch

We have implanted a 75% Sell tax for the first 60 seconds to prevent a dump at launch.

Auto Burns

This will be done when a buy and sell happens increasing the value of what you hold.

Auto Liquidity

Liquidity is generated through every buy and sell.

Liquidity Pool Lock

The Liquidity Pool (LP) will have a lock integrated within the contract that will lock both the initial liquidity as well as the additional liquidity that is raised through the auto function. By integrating a lock it provides security for the investors. We are implementing a feature where 20% of the liquidity will be unlocked every 7 days. Having the ability to remove a capped percentage of the LP is beneficial for multiple reasons. Examples being but not limited to; exchange listings, buy back and burn functionality to stabilise the floor price, project development if required, etc. By limiting the amount to 20% this also provides a safeguard for investors as the team will never be able to drain the liquidity. We chose to take this route for the benefit of the project development as well as giving security for our investors.

How To Buy (Part 1)

Download and setup a crypto wallet. There are two main ones – **MetaMask** and **TrustWallet**.

It is up to you which one you choose to use, however we find that **MetaMask** is more user friendly, especially on an iPhone.

Step by step instructions are as follows:

- Download MetaMask
- Your account is automatically in **Eth** so you need to add the Binance Smart Chain to your network list. You do this by clicking on settings, Network, Add network.

Fill out the fields in the following way:

Network Name: Smart Chain

New RPC URL: <https://bsc-dataseed.binance.org>

ChainID: 56

Symbol: BNB

Block Explorer URL: <https://bscscan.com>

You can find further information if required by visiting the following link:

<https://academy.binance.com/en/articles/connecting-metamask-to-binance-smart-chain>

How To Buy (Part 2)

You can buy BNB on an exchange. Examples being Binance, Coinbase, Kraken etc. It is up to you which you choose. For this example we will use Binance.

Once you have purchased your BNB you need to then transfer it from the exchange into your wallet. As standard the BNB is in the BEP2 format, and you need to make sure you send it as BEP20 which is the name for the Binance Smart Chain.

You need to find your wallet address. You can do this by clicking on the number above the receive, send etc buttons. This will automatically copy your address. Alternatively you can find it under "share my public address". BEP20 addresses start with 0x followed by a series of numbers and letters.

Once you have transferred your BNB to your wallet, you are ready to buy.

You will need to go to PancakeSwap (<https://pancakeswap.finance>) . Connect your wallet using wallet connect (this works for both trust and MetaMask).

You will then need to add the contract address for **MoonX**. Click import.

- In settings, make the slippage 1%
- Input the amount of BNB you want to convert over to **MoonX** tokens.
- When it shows you the amount of **MoonX** add .01 to the end of that figure.
- Click import and then swap. It will ask you to confirm various things within your wallet and then it will purchase the tokens for you.

To see the tokens within your wallet, make sure you add the full details for **MoonX** as a custom token.

MOONX

JOURNEY INTO THE FUTURE!

STAGE 4

- Token Integration
- Platform Release (BETA version)
- Targeted Marketing Campaign
- 100,000 holders
- MoonX Merch
- Charity Giveaway

STAGE 2

- Global Marketing Campaign
- YouTube Collaborations
- Stage 1 Selection Process for Platform BETA Testing
- 10,000 Twitter Followers
- 20,000+ Telegram Members
- Btok Engagement
- Listing on CoinMarketCap
- Charity Giveaway

STAGE 3

- Start Year With Celebrity Endorsement Deal
- Onboarding of Marketing Consultants
- Exchange Listings (CEX)
- Development of MoonX NFT Marketplace
- Further Strategic Partnerships
- Charity Giveaway

STAGE 1

- Token Release
- Website Launch
- White Paper Rollout
- Token Contract Audit
- 5 million token Community Burn
- 1st Marketing Campaign
- Community Building Missions & Rewards
- Listings on CoinGecko, CoinHunt etc.
- Start Platform Development
