Special design logo socks are made of polypropylene, elastane, cotton and polyamide.

Polypropylene is a thermal fibre with the lowest specific weight

available. It is moisture-resistant and moisture transportable. Polypropylene is 100% real colour, non-shrinking and recyclable. It gives perfect comfort to your feet and avoids skin irritation.

Stanno specifically uses polypropylene for high quality sports socks. All socks have flat seam stitches.

GOALKEEPERS GLOVES

FOAM MATERIAL

Hyper foam provides an excellent grip in both dry and wet conditions. In wet conditions the moisture is absorbed by the foam which greatly improves the grip.

Aqua Foam offers optimal grip in wet conditions. The soft and more open foam structure takes up water, which – in comparison to other types of foam – provides a 25% better grip. Additionally the Aqua Foam gloves contain an extra shock-absorbing function to reduce the impact of hard shots. The changing needs of professional keepers require that the characteristics and quality of the foam continually develop.

Super Soft Profi Foam has excellent properties for grip in both dry and wet conditions, and it also offers excellent cushioning. The use of the latest materials ensures durability and optimal comfort.

Soft Foam provides a reliable grip and excellent cushioning. Soft Foam ensures maximum ball control and optimal comfort.

FOAM PROPERTIES

GRIP DURING DRY WEATHER CONDITIONS

The adhesive properties of the foam are decisive for an optimal grip and the best performance. The weather is a big influence on the properties and performances of the foam material. Playing during dry weather requires specific foam components for optimal results.

GRIP DURING WET WEATHER CONDITIONS

Moisture, rain and wet conditions affect the grip and require additional components for a better grip. A softer and more open foam structure absorbs the water and is very suitable for wet weather conditions.

CUSHIONING

As well as grip, cushioning is an important factor in determining the most suitable goalkeeper gloves. The softer and thicker the foam, the better the impact of the ball can be absorbed. Also the thickness of the basic material of the gloves determines the amount of cushioning.

ABRASION RESISTANCE

Foam is a very soft material that needs special treatment. Regular ball contact leads to wear and tear of the foam. The degree of wear is determined by the surface structure and the density of the foam material. A more coarse and closed foam structure will lead to less wear.

FOAM RATING

 Grip dry weather	★★★★★	★★★★★	★★★★★	★★★★★
 Grip wet weather	★★★★★	★★★★★	★★★★★	★★★★★
 Cushioning	★★★★★	★★★★★	★★★★★	★★★★★
 Abrasion resistance	★★★☆☆	★★★★☆☆	★★★★☆☆	★★★★☆☆

Finger protection. Firm, flexible strips on the upper side of the fingers provide good protection against injuries in contact with the ball. The flexibility of the strips guarantees that suppleness remains guaranteed while throwing, punching and catching the ball.

Rubber patch. Gloves for artificial grass and other hard surfaces are provided with a rubber patch on the inside of the hand. The patch is placed on the part of the glove that most often comes into contact with the ground. This improves the wear resistance of the glove.

OPF design. The Volare Pro is equipped with the innovative One Piece Fit design. The supple, lightweight material of the wrist strap runs over the upper hand and provides an even better connection around the skin. The OPF design also results in an extra light glove.

One of the main features of goalkeeper gloves is the way in which the gloves are stitched. This determines the ball control, grip and comfort.

Rollfinger-model

With the **roll finger system**, the finger is completely surrounded by foam, without stitching. The magnification of the grip surface that is created in this way, allows for optimum grip on the ball.

Garment care: Stanno products are made to the highest standards and are subject to strict quality control procedures. Garments however can discolour due to substances such as mud and grass, liniment or oil, and of course perspiration, all of which may not be fully removable by washing. The extent of discolouration can be greatly reduced by following a few simple procedures. Soaking and/or washing of the garment in water and detergent as soon as possible after use can reduce discolouration, using at least the same volume of water as the garment being treated. Always follow detergent manufacturers instructions, especially those intended to tackle heavy stains and avoid products containing bleach. Stanno International cannot accept any liability for discolouration or damage to garments resulting from staining caused by elements foreign to the materials used in manufacture.

All catalogue prices are recommended prices inclusive of VAT. The copying of products, in whatever form that may take, is forbidden without the prior written consent of Stanno International. Stanno International reserves the right to modify product specifications and prices at any given time.
