

## Why to get ICAMRL accreditation for ICAMRL MRI Facility?

ICAMRL stands for the Intersocietal Commission for the Accreditation of Magnetic Resonance Laboratories. It was set up to offer the multiple specialties applying MRI with a pathway to demonstrate quality. Under the Medicare Improvements for Providers and Patients Act of 2008, it is essential for advanced imaging service providers to get accreditation as a condition for reimbursement. The advances imaging services may include services like magnetic resonance, positron emission tomography, computed tomography and nuclear medicine.

This accreditation enables [ICAMRL MRI Facility in Anchorage](#) to demonstrate their commitment to quality magnetic resonance studies by attending a program that is developed with inputs from multiple specialties, including those representing the neurological surgery community. Alaska Neurology Center is among those clinics that have all the requisite facilities to conduct all types of magnetic resonance imaging tests.

The ICAMRL accreditation program gives an opportunity for neurological and other orthopedic laboratories to use extremity-only magnets to apply for accreditation. Accreditation is offered in the individually defined areas of body (abdomen, chest or breast and pelvis), cardiovascular, musculoskeletal (including extremity), and neurological. Laboratories can apply in any or all of these areas, depending on the types and numbers of procedures they perform.

Apart from potential reimbursement benefits, accreditation is a perfect mechanism for a neurological center to voluntarily demonstrate its commitment to quality patient care. It encourages accredited laboratories to proudly advertize their attainment to peers, referring physicians and patients by including the accredited laboratory logo on reports, articles in facility brochures and community as well as hospital newsletters.
