## The Imperium of Diamonds Federal government

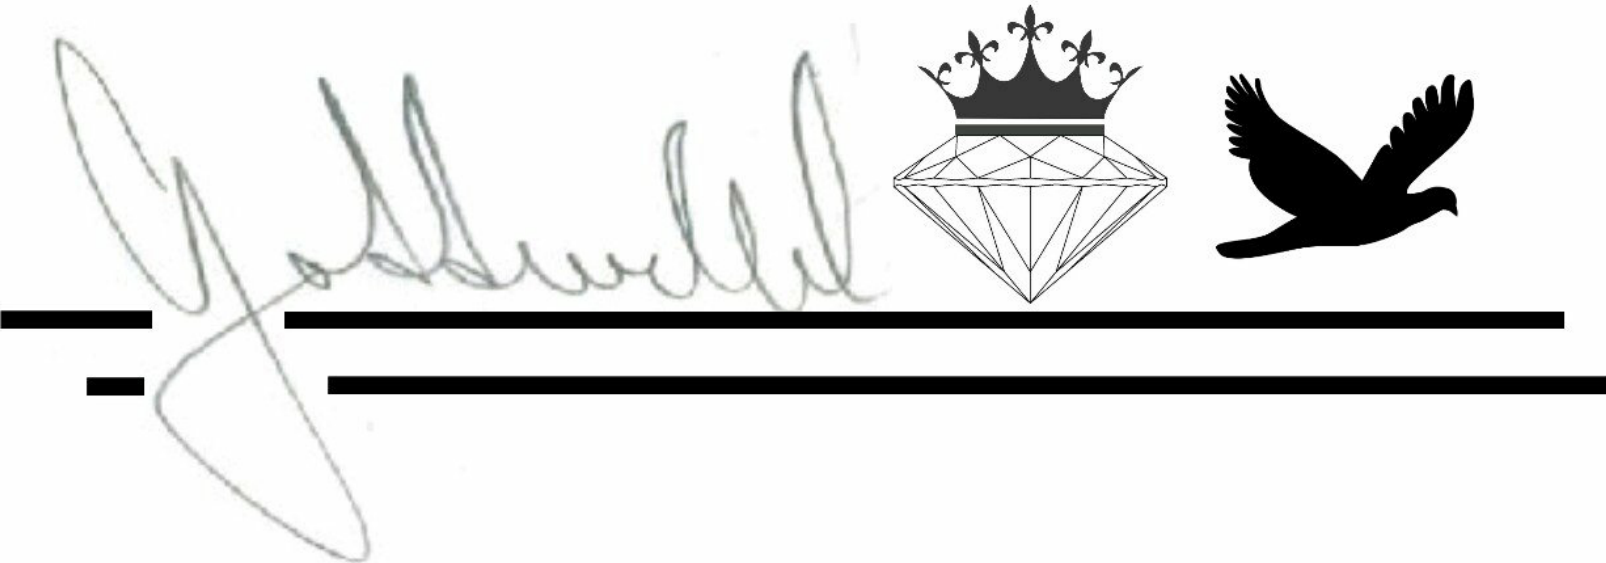

Imperium of Diamonds federal government with the intention of promote world peace and order to the global security, meaning the function of the legitimate rights of peace, it is because of such a reason;

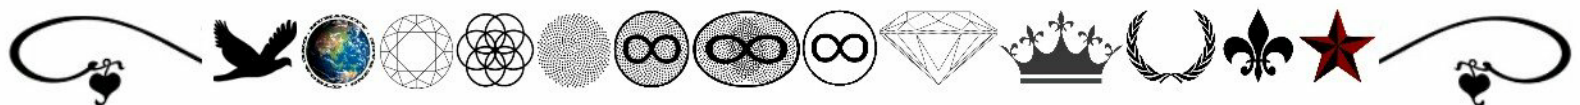

Due acknowledgment of unstable equilibrium of International security policy, confirmed acts of organized international terrorism for a radical overthrow of stability regimes legitimate governments and the occupation of the States to the often endorsed discrimination on democracy and crimes blocking legitimate state policy, and especially the inability to enforce International forces legal conventions and Declaration on security Global Democracy party governments and a bunch of the UN Charter, and thus ensure the security of the whole world because it is the interest of the federal government Imperium of Diamonds using a common purpose;

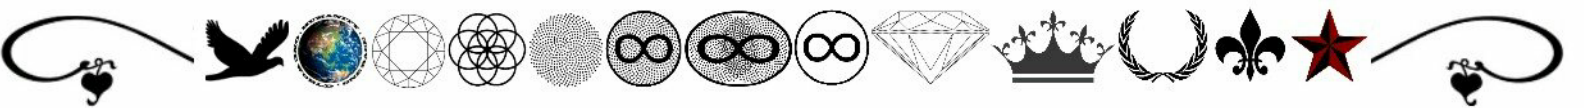

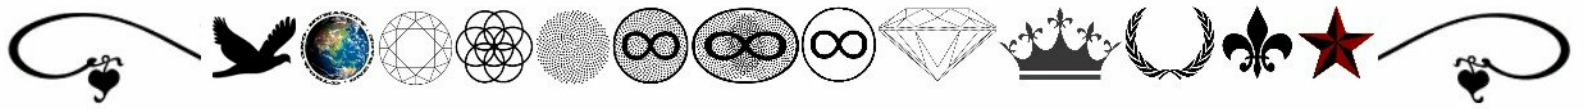

Launching joint military relations peace with the purpose of achieving strength of bilateral and multilateral relations implying a common agreement to act operation between The Military and Industrial Colonies on the territory of our countries, and therefore in order to develop our common security maintained The Global force under the full capabilities of emergency and own firearms and military arsenal, production and trade, as well as tactical and strategic use. Collaboration is common armies Training strategies and activities, training of troops for International operations, the development strategy of military infrastructure and ensure the growth of industrial output as evidence of the ability to ensure full success for the comparison of competitiveness on the side of the enemy.

The International Military  
& Industrial Colony

*Strategy for Global Multilateral cooperation  
Political strategy, powerfull than UN  
& UN Charter security garant.*

**Reall form of Global Power !**

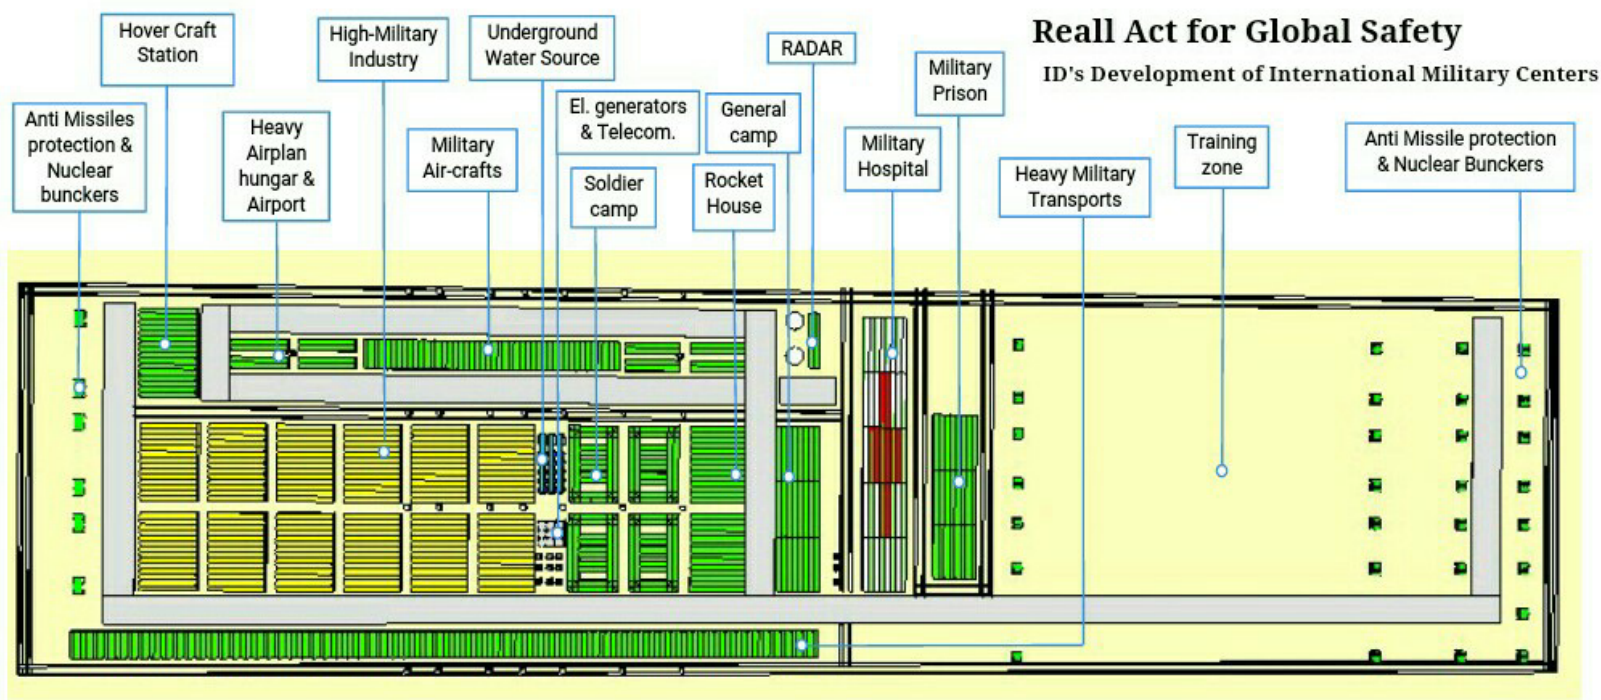

# The ID's International M&I Colony

Description about the project

Form of the Most Biggest Military Group in the World

## The Global Military Super Power

The colony is designed to act global military security along well with the main intention of cooperation for the global development of military industry and modernization technologies to exploit common colonies to manufacture weapons and so full of strengthening stability regime security against opposition parties to armed radical and terrorist groups for the purpose of crime.

Joint military and industrial colonies based on actual strategy of global cooperation as well as the principle of the UN Charter, according to rights obligations deciding on military cooperation of all members of the organization. Military colonies constitute a strategy for multilateral military force with the ability to immediately leverage the global strength of military cooperation that leads to ensure adequate defense against the enemy and a terrorist regime.

Therefore, the legal regime of government of every state is always the foundation of a safe condition which is always protected from the Multilateral union as a way military alliance like NATO similarities, or Military strength continental organization. Military strategy for us to create colony's ability to fully activate a global power, the most important source of power than today's military organizations, as well as a greater guarantee of world security than the warranty policy at the UN.

Forms of military colonies always guarantees full security and a major strength of the global military alliance because our strength is based on a constantly active colonies, military forces and the activity of self-development. Guarantee for global military cooperation immediately active military force, and that means more advanced and

**better safeguards than just the principle of the UN Charter as the legal provisions and without any legal affect.**

**Today is the first strategy to ensure expansion of military colonies mainly in the threatened states conflict as designated zone position of the first colonies in Syria, Iraq, Afghanistan, Yemen, Oman, Libya, Venezuela, DR Congo, Nigeria, Kashmir, Albania, Pakistan, Palestine & Israel, South Korea, China sea States, and other countries that may be at risk of conflict and terrorist attacks. Danger that can be suppressed by an international force and the act that provides a full safety and immediate response. One of the first countries which will be built military colony, the state ID's Diamond Oasis, as the center of the beginning of the colony and the political circles of the joint communication on matters of planet Earth, in imterests of Common Colonial Military.**

**The first provider bilateral relationship is becoming federal government Imperium of Diamonds, and so with the intention of steps to develop our cooperation in the multilateral dimension range. At the same time, each state who will seek to maintain a bilateral relationship that is always inherent equal rights for such use and maintain a bilateral or limited multilateral cooperation. Diamond Oasis is Colony right's, open for every state all around the world, International Military & Industrial Colony Center with interests for support safety in all countries around the world.**

**Above all, the strategy for cooperation for development of military colony and thus ensure the stability of the joint forces and modern development always pops up and the Government of the Islamic Kingdom of Saudi Arabia, the Islamic State of Iran, together with the countries of South Korea, and in the period following the lifting of sanctions and for North Korea Republic, the States of the Russian Federation, India, the Republic of Kazakhstan, states in the Confederation of Independent States, the Brazilian Federation, South African Republic, the Republic of Nigeria, Republic of Angola, Republic of Ethiopia, the Empire of Japan, USA, China & China, and other countries from around the world. This can ensure the interoperability of global forces, meaning the global activities of military security missions without risk to world peace and security.**

**Other countries like Singapore, Monaco, Vatican, San Marino, Micronesia can be together strategically functioning as states with the function of political and logistical cooperation, cooperation also on the foundations of a common organization of legal activities, and also in order for the development of international political and medical schools and education as well as to feed the soldiers as the growth of global power. Many of these states can promote the construction of a military colony on the surface with the base water level in the territorial waters or underwater center for submarines or special colonies.**

**Subsequent cooperation for the expansion of military colonies in the territory of spacecraft, Mars, Free Space solar system planets positions Alpha Centauri, the other constellations and other places in other galaxies, network functions such as military infrastructure as well as each colony with its own network of industrial centers and material resources.**

**Each colony is based on his own systematic operational functions and capabilities by developing autonomous economic resources. Colonies are economically challenging, and their construction and operation is the basis of a simple principle of its own**

development strength, the strategy of its own mineral resources, its own industrial zone as well as its own form of business cooperation with the central bank of the local jurisdiction. Military colonies are based on a form of economic power base of the state that provides territorial area for the provision of the colony. Other economic and business principles are based on the strategy of joint agreements with investors for the development of the first colonies, and thus possibly the design group of traders who provide their own commercial rights for the manufacture of certain types of weapons and military technology.

Each Military and Industrial colonies, however, can be a function of trade and economic management as well as the State Arms Trading Corporation and it is right to set up production of its own weapons and types of technology, as well as subsequently expand their own patent and copyright, meaning the ability to equally significantly expand on international market with the hiring of patent and copyright sale of military technology or, for example, the strategy of cooperative multilateral trading powers such as the management of joint action.

Each Military and Industrial colony's economic function based upon the principles state local jurisdiction, and thus by such a designation is entitled to use the economic development in the structure of markets and government interests.

Each colony is the foundation of a mature entity that is not of their own economic production to develop again and again the power of advanced military base which increased the performance of its own military forces and technology, capacity and capability security strategy, as well as industrial maturity. Each colony is based upon the first simple structure of the military authority and the first industrial zone in the form of mobile lines for the production of building materials from our own simple chemical production as an autonomous source of raw materials. This will built building materials for the construction of large sheds from which subsequently develop other industrial buildings. In the first structure of the industry they are also the basis for machining and foundry technology with an electric generator and the ability to really high industrial production. This will produce more industrial machinery to ensure the functioning of the entire military dimension dynamic industry.

Industrial zones are based on the strategy of multy industry with the ability to manufacture machine components and their design, manufacture basic chemicals and electronics, as well as production of explosives and other military industry standard sessions. Constant and high-capacity production mostly autonomous with its own digital technology and really advanced intelligence that can replace many times the result of intelligence and military team.

Production autonomous tanks, missile systems, mobile machine gun nests and rocket center, special guns for shooting positions up to the level of other stars in the universe, as well as transporting large military aircraft or fighter warplanes country air and air to air, space fighters, and also Space stations and transports. One of the goals is to start production of cosmic civilization military ships that will be with capacity over several tens of kilometers and the ability to travel between the Galaxies. Standard production in the colonies to be there for the production of machine guns, support and tactical weapons, launchers, basic weaponry, ballistic missiles, and spacecraft radar or telecommunication equipment, many other forms of technology.

States of Micronesia and the states with their own marine shorelines may also be significant because of the functionality as an international center for the production of ships and submarines, or as the first strategic position for further expansion of military centers below the water surface.

The first industrial center ensures build a stable industrial center which equally ensure the full development of the entire military base colony on the first level. The financial cost of such a strategy can only be the economic power of just € 800 000 between the economies of developed countries, for the systematic creation of the whole dimension of military and industrial colonies on the first level.

Military and Industrial colony was founded over infrastructure that is composed of the first inherently small airport for utility aircraft, Hover Craft Station for high-capacity transport and expressway traffic. Transport centers use their own radar technology, as well as telecommunications intelligence that enables secure autonomous navigation capability of the transport operation using computers. The transport operation is always synchronized with the advanced features of interactivity with intelligence capacity and production colonies, and thus the operation of each zone colony, state or movement between colonies and raw material sources other stores assigned to a military colony.

Hover Craft Station owns the service line for repairs and ensure the operation function without any defects. Technical center can also serve to function as a small factory next Hover-Craft. Airport infrastructure based on their own hangars for large military aircraft hangars for autonomous fighter aircraft, radar and next to the city's center for helicopters. Mobility capability over territory is therefore highly dynamic, with the ability to truly take immediate action on the scale of one thousand kilometers away, while synchronizing interactivity with further classes of technology is our ability to respond immediately to the level of the continental area.

The ID's technology transport plans for development of the Aircrafts and Airplans is in possibilities to develop the transport power with speed 90 000 000 kilometers in One hour. Around the world, between small minute, and connection to the Orbital space open possibilities.

In the colony they are also hangars for large military aircraft such as mobile carrier ballistic missile launchers and large guns. Another hangar used for regular equipment, autonomous tanks, mobile and autonomous machine-gun nests, autonomous jeeps, small missile trucks, transport trucks, and other forms of mobile technology.

Missile technology carriers can provide the ability to function at the level of advanced centers to ensure immediate response to the level of one thousand kilometers, and because of the high mobility capabilities as well as dozens of one thousand kilometers of the protected area. Some types of advanced military technology can ensure the ability to expand the level of the protective range distances up over thousands of Light Years (1LY=9700000000000000 kilometers), and directly from one position our bilateral Military and Industrial Colonies.

Military and Industrial colonies own center is the basis for the function of the barracks as headquarters for military personnel, soldiers, medics and service. Barracks are at the center of the colony, next to the city water resources of the isolated underground centers that provide drinking water to the depths of the earth's

crust, the ability of a stable supply of drinking water in the desert, and on the frozen ground, all source in the our own isolation. Aquatic Centre ensures the operation and function of the industry, natural needs of the labor colony staff, as well as the ability to set up their own colonial agricultural center with its own autonomy functions to provide a source of food, as well as sources of food imports from the country. Right next to the city water resources center based electric power generators to ensure the functioning of the electrical infrastructure and operation of all machines. Colonies are based primarily on the function of electrical energy. Each block has its own power generator propulsion unit kinetic character who by interactive regulation affects the production of electrical energy, eco-friendly drive. Power is mobile technology and is therefore able to ensure the function of colonies and other centers at any other position. Another center in the engineering center are telecommunications tower as a center for digital communication in an indoor environment Colonies, and the ability to wire communication with the other radio and laser communications center which is based on a secret location a few kilometers from the colony, to ensure a stable security stable communication in special situation. Telecommunications infrastructure is therefore able to provide the ability to communicate with satellites and satellites in space, providing the ability to fully control the other autonomous technology in space and to determine their inter- active and synchronization with the need for colonies, as well as the ability to ensure high-capacity space combat level positions.

Another strategic technical center colony is based upon the ability to use a special infrastructure associated with air filters oxidizing substances from industrial activities. The filters use chemical reactions to spin dirt and ensure ecological operation without affecting the environment.

The Colonies are then based General Centres as official communications strategies and accommodations for logistics personnel. Subsequent center consists of a Military Hospital that provides treatment for the wounded and capability in the event of an emergency evacuation to provide medical support to wounded civilians. Feature a fully equipped hospital in the center guarded military camp is an important act that in case of conflict means the ability to help their own state, even if the worst of the crisis.

Another center is becoming a military prison under strong surveillance and fortifications, autonomous monitoring technology. Prison is for spies, military traitors and impostors terroristic group for questioning and then together with criminals.

Each format military colony of their own basic military training centers for developing power of soldiers and their ability to develop intelligence at the level of the war and the real act of defense responsibilities custom groups, and centralizing position stability.

Other networks colonies are security towers around the campus and also in the center of the colonies, and colonies on important buildings and infrastructure. The towers are equipped with heavy machine guns, spotlights, thermal and night vision optics, telescopes, or programmed for autonomous tracking technology. One of the strategic part of the radar centers, secret underground radars and too orbital radars which are also the ability to scan the underground structure and movement. The system of antimissile shields favoritism based upon a systematic technology terrestrial fixed

and mobile missile and cannon units synchronized with a radar-terrestrial intelligence, according to a strategy of decentralization position but in a joint interactive communication, the ability to control mobile missile technology expanded the circle fifty, a hundred and a thousand kilometers from the camp, in collaboration with the telecom infrastructure space probes and orbital cannons, military aircraft, space centers as military aircraft radar operated global infrastructure for security monitoring cosmic, orbital and airspace.

We can monitored and defend of a space in dymension of another galaxies periode cycle.

Underground infrastructure technology extends system of concrete corridors between nuclear bunkers and escape routs a little secret air bases for the evacuation of units, or back infiltration in situations of foreign occupation act. Underground nuclear bunkers own technology air production, recycling, manufacturing medicines fist foods, electric generators, insulated water supplies, telecommunication lines, the ability to function for a period of several hundred years, as well as basic industrial center for the ability to re-generate a stable center of military and industrial colonies after a post apocalyptic time.

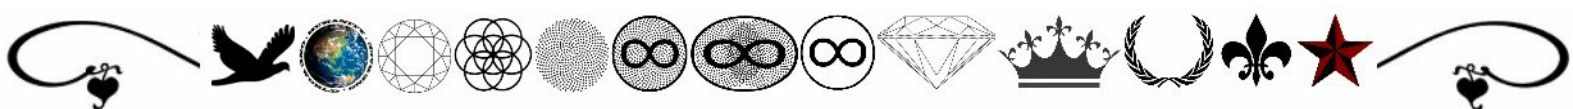

Aims to develop a colony on the version of the second-level military and industrial colonies is based on the use of industrial centers and its own sources of raw materials for autonomous development of the colony to power based on solid building material of steel structures and concrete with anti-radio technology, a building with a height of several dozen floors, hundreds floors and special technologies for invisibility optics and removing abilities recording functions radars.

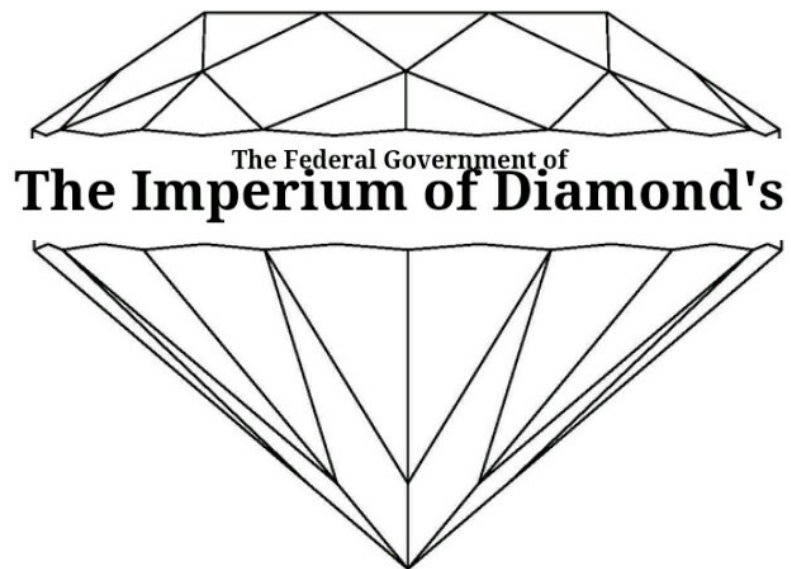

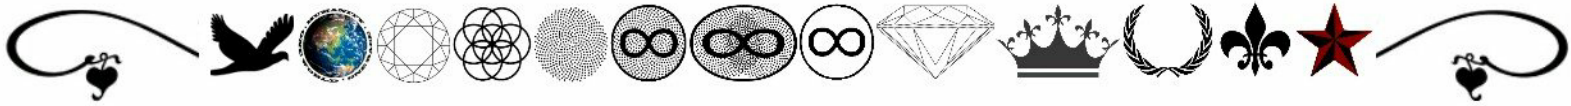

Each center will be expanded into a skyscraper and more than a hundred strengthen industrial production in sphere, as well as at military warehouses and operational centers. Telecommunications and radar infrastructure base grows to the level of cosmic scale and the ability to fully connect data centers and centers against cyber terrorism.

One of the main part of the second level military and industrial development of the colony's transport stations for space transports and thus ensuring synchronization of military infrastructure on the level of cosmic forces on the scope of free space in the universe, and with the same base at colonies on other planets.

Our colony thus becoming centers for galactic military structures and security cooperation with the ability to dynamic growth, even without limit their consumption of raw materials from cosmic sources and down raw material over which subsequently based form of other industrial infrastructure around the Universe.

Multilateral military centers can be the basis for public policy interest, as well as with the foundation on a bilateral basis as a secret alliance of the armed forces for the purpose of peace strategy and legal defense.

## Imperium of Diamonds form of the Colonies Legal function

- International Bilateral
- International Multilateral
- Federal form

## Financial start of development

### International Bilateral

ID's Investment pay with agreement of Industrial use into the investment norm. Agreement of parties in investment company bilateral or multilateral form according accept be the parties of Mean Agreement about M&I Colonies. ID's Federal government can pay every source and immediately be the transaction.

### International Multilateral

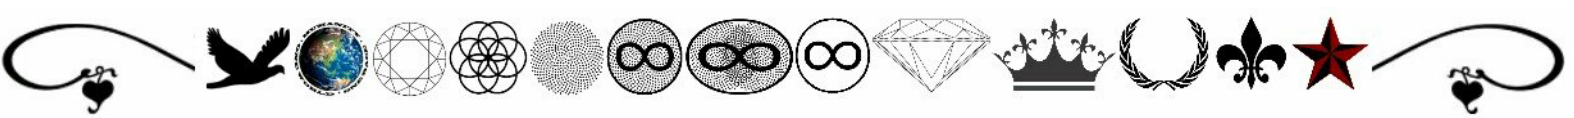

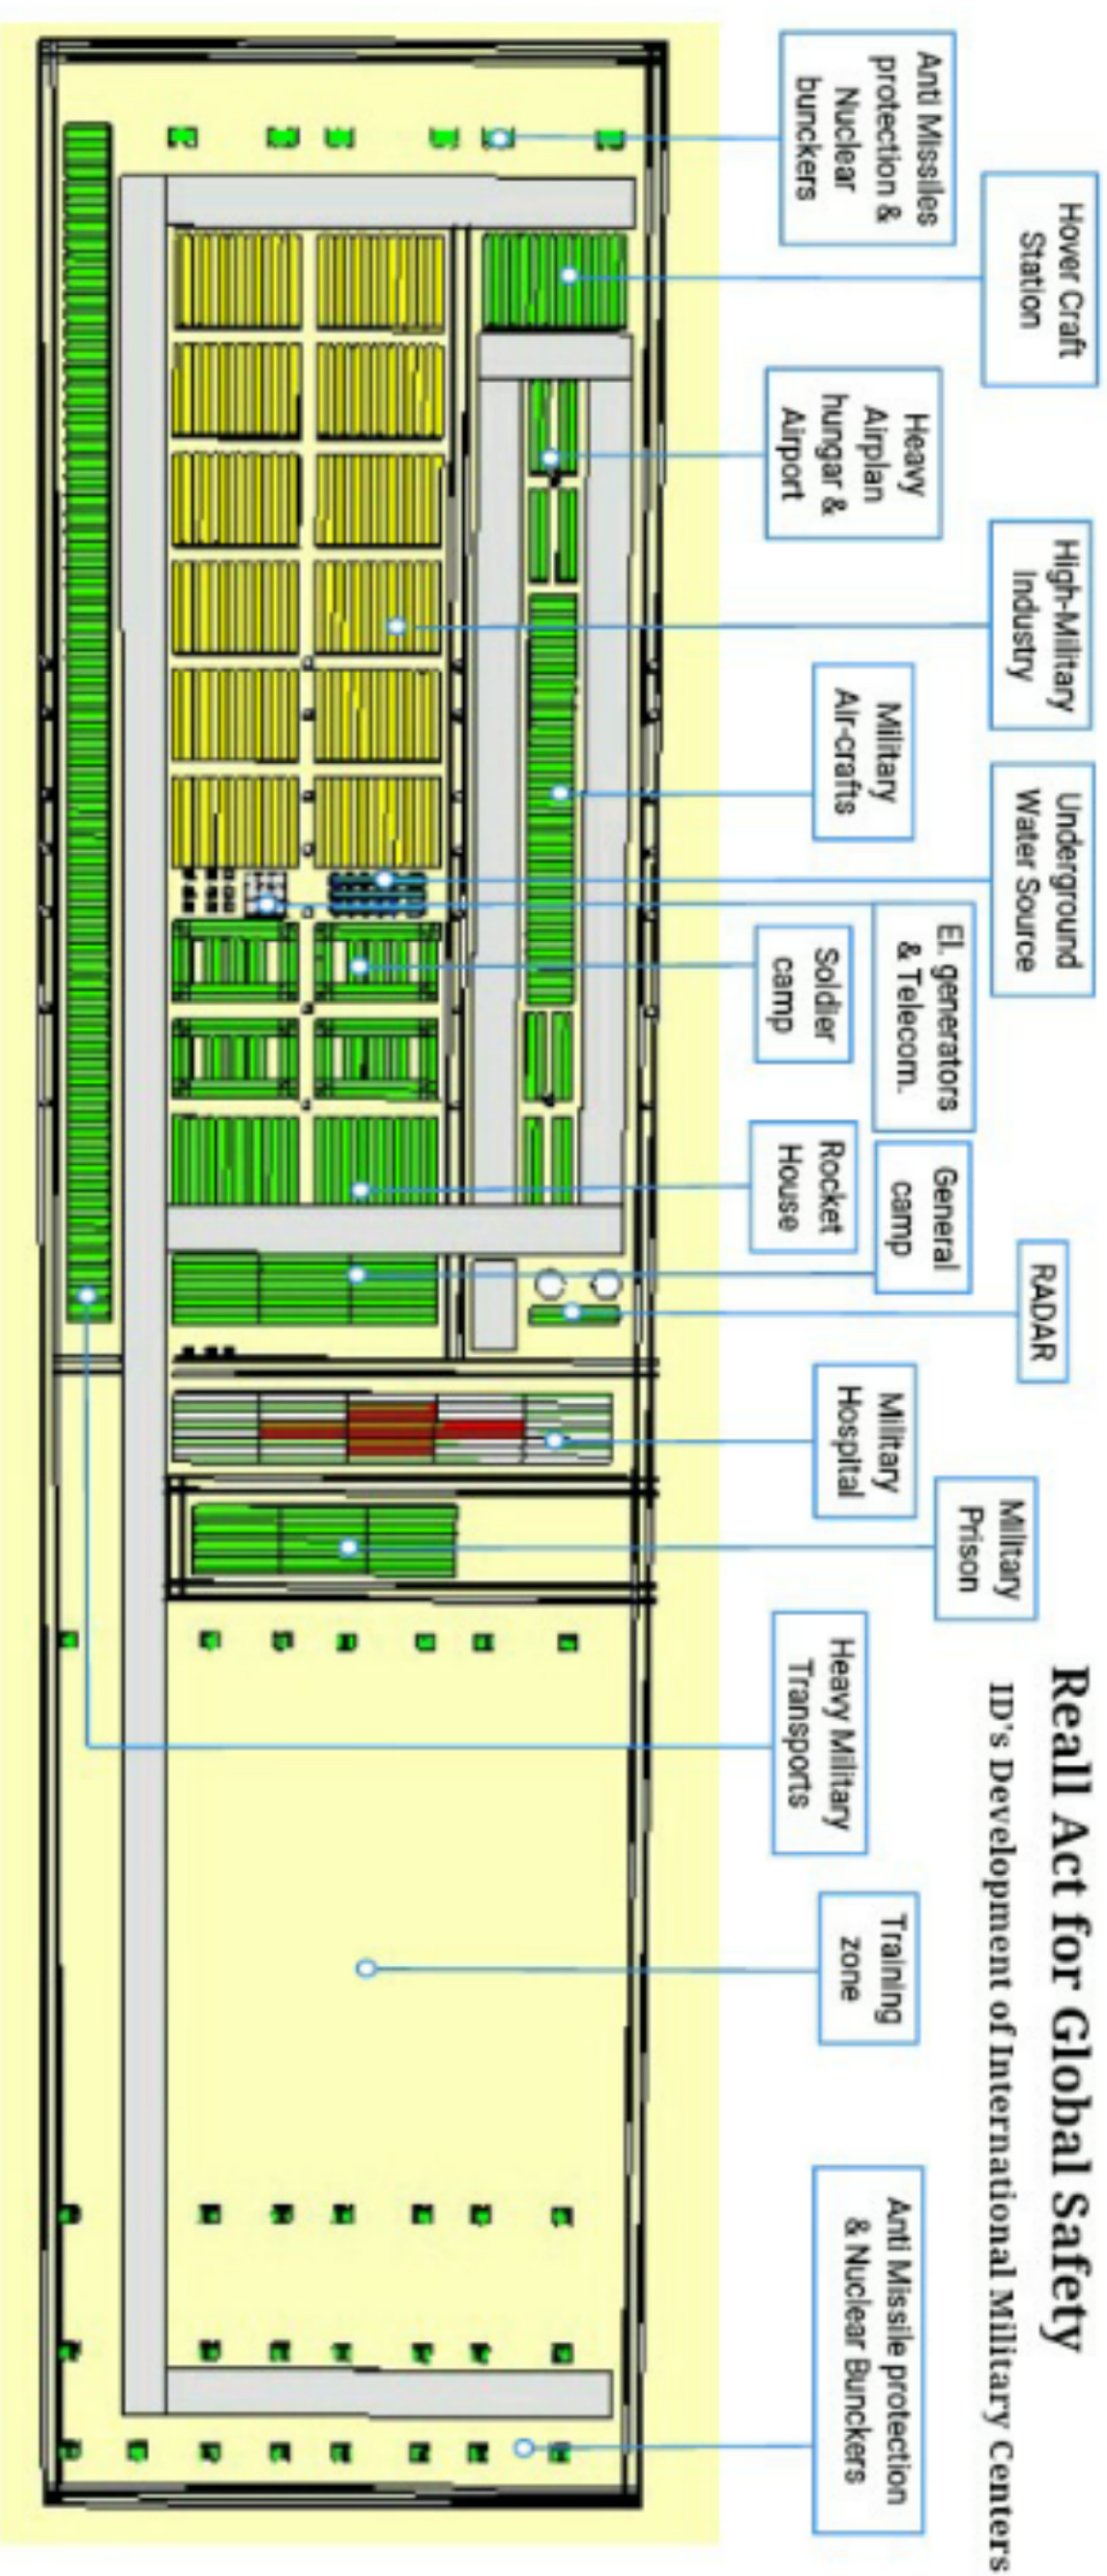

ID's Investment pay with agreement of Industrial use into the investment norm. Agreement of parties in investment company bilateral or multilateral form according accept be the parties of Mean Agreement about M&I Colonies. ID's Federal government can pay every source and immediately be the transaction.

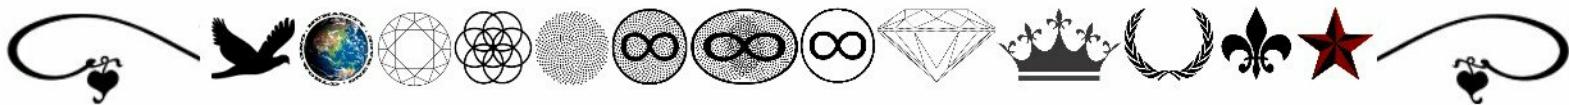

### Federal form

According ID's Federal sources and capacities, strategy of security and normalization

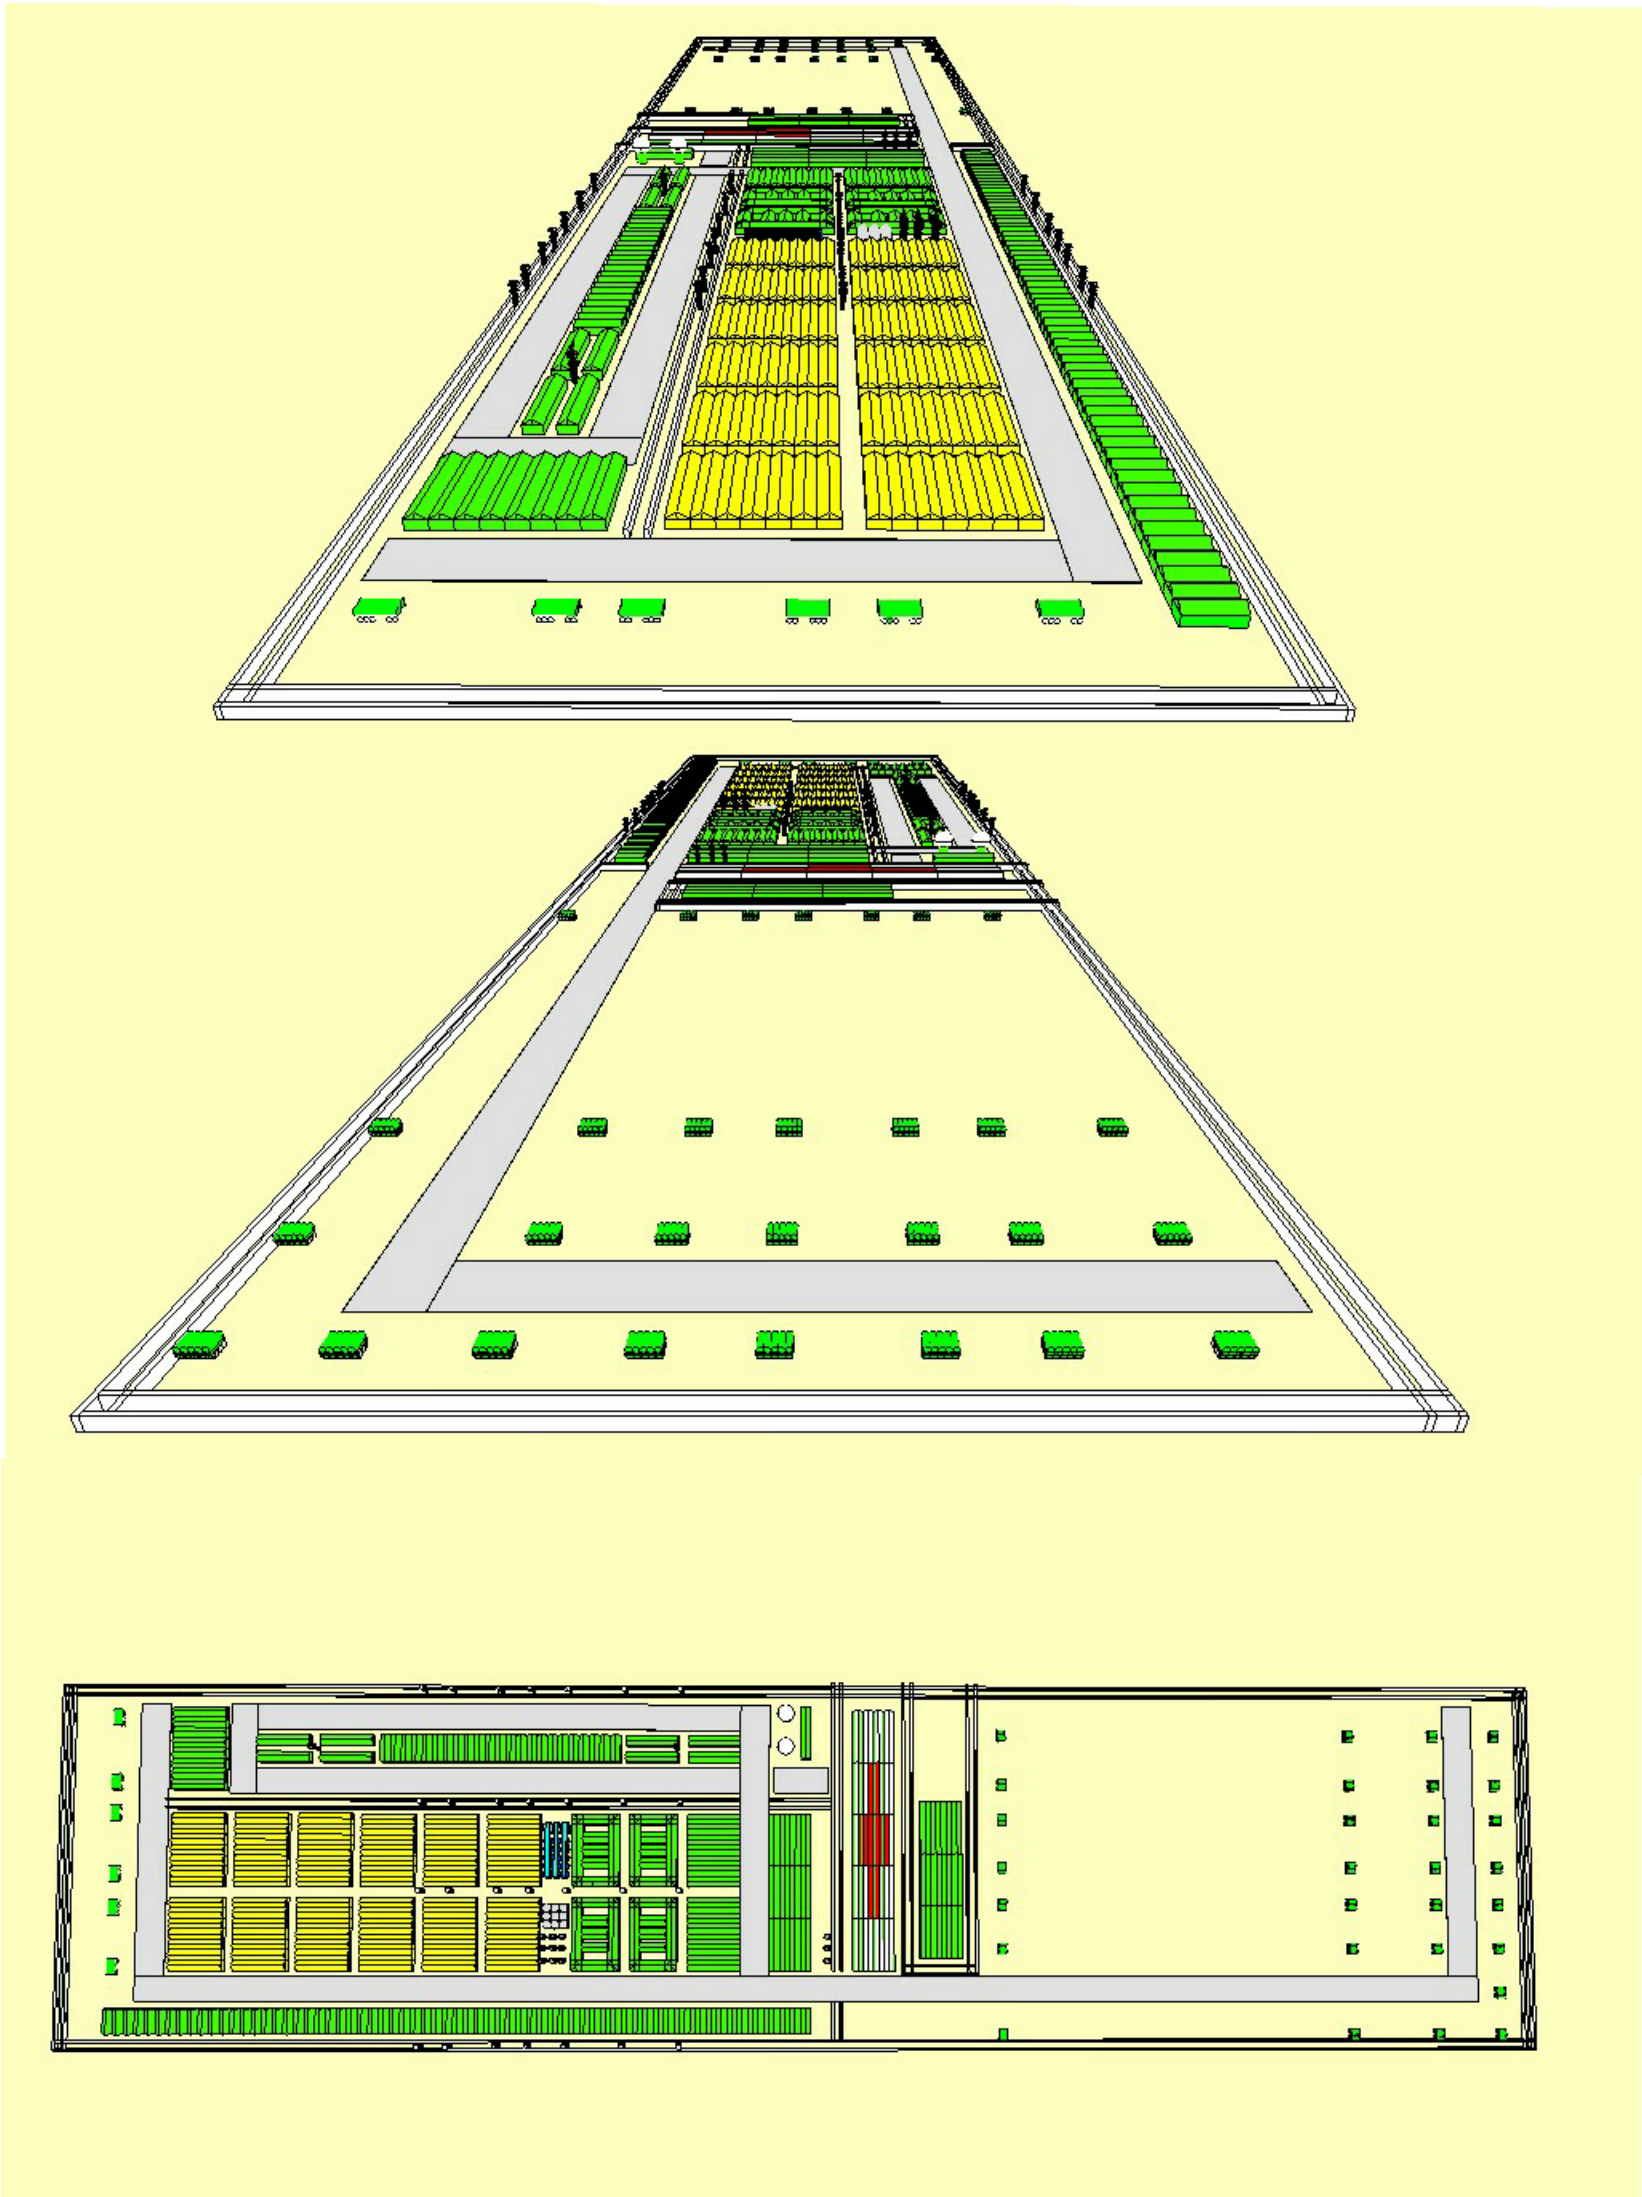

# The ID's International Military & Industrial Colony I.

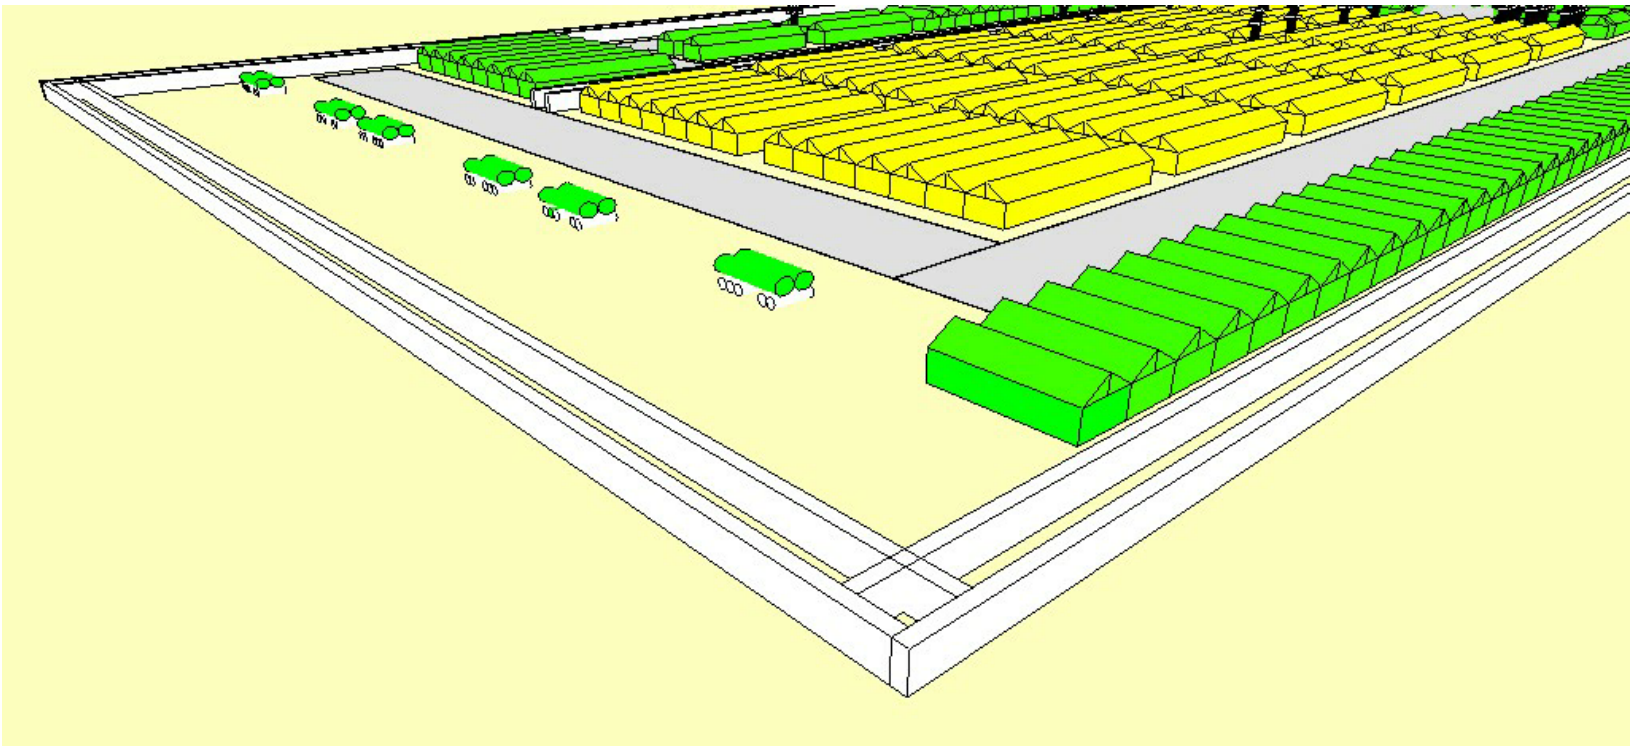

Principle of digital detail:

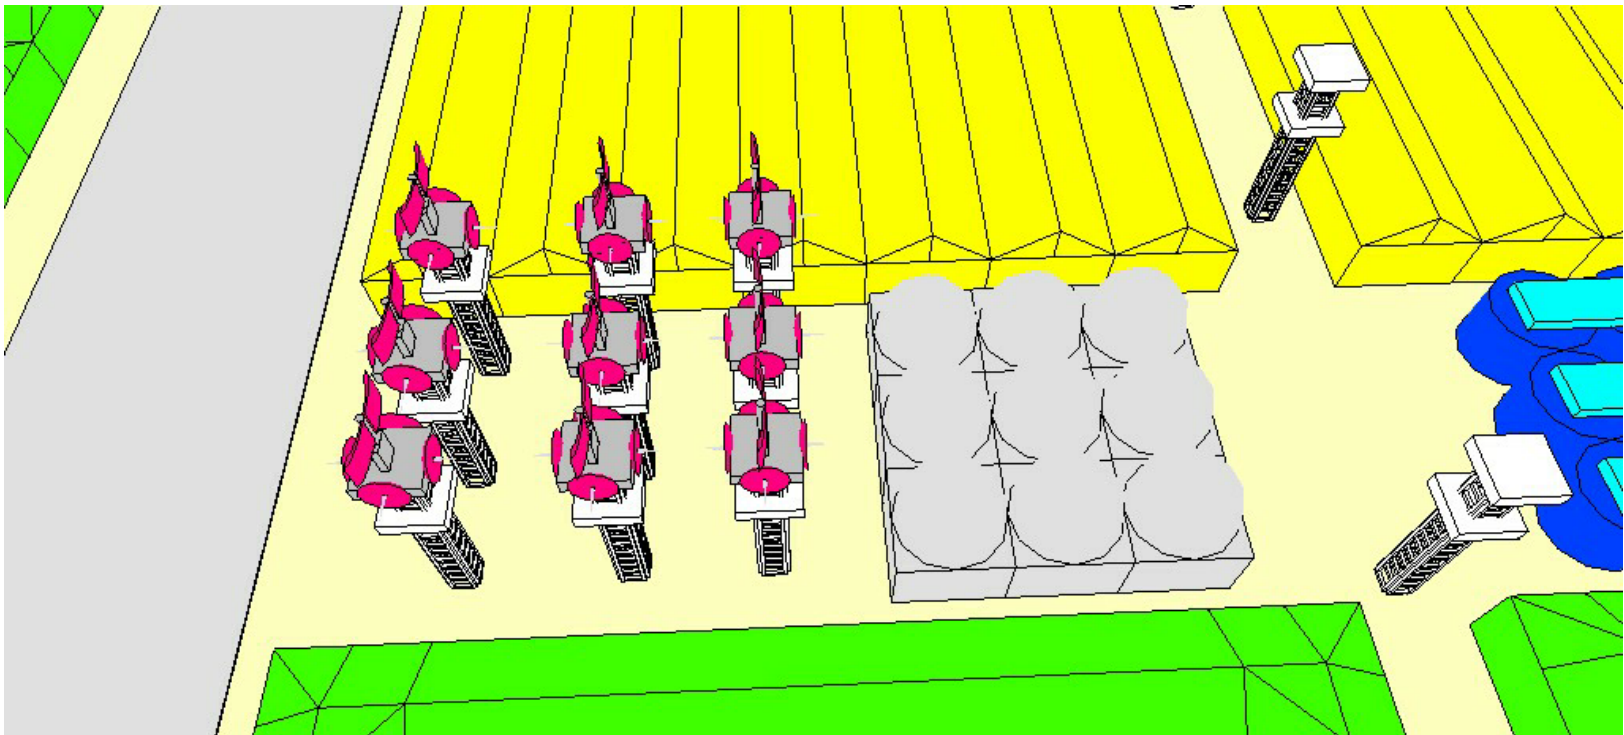

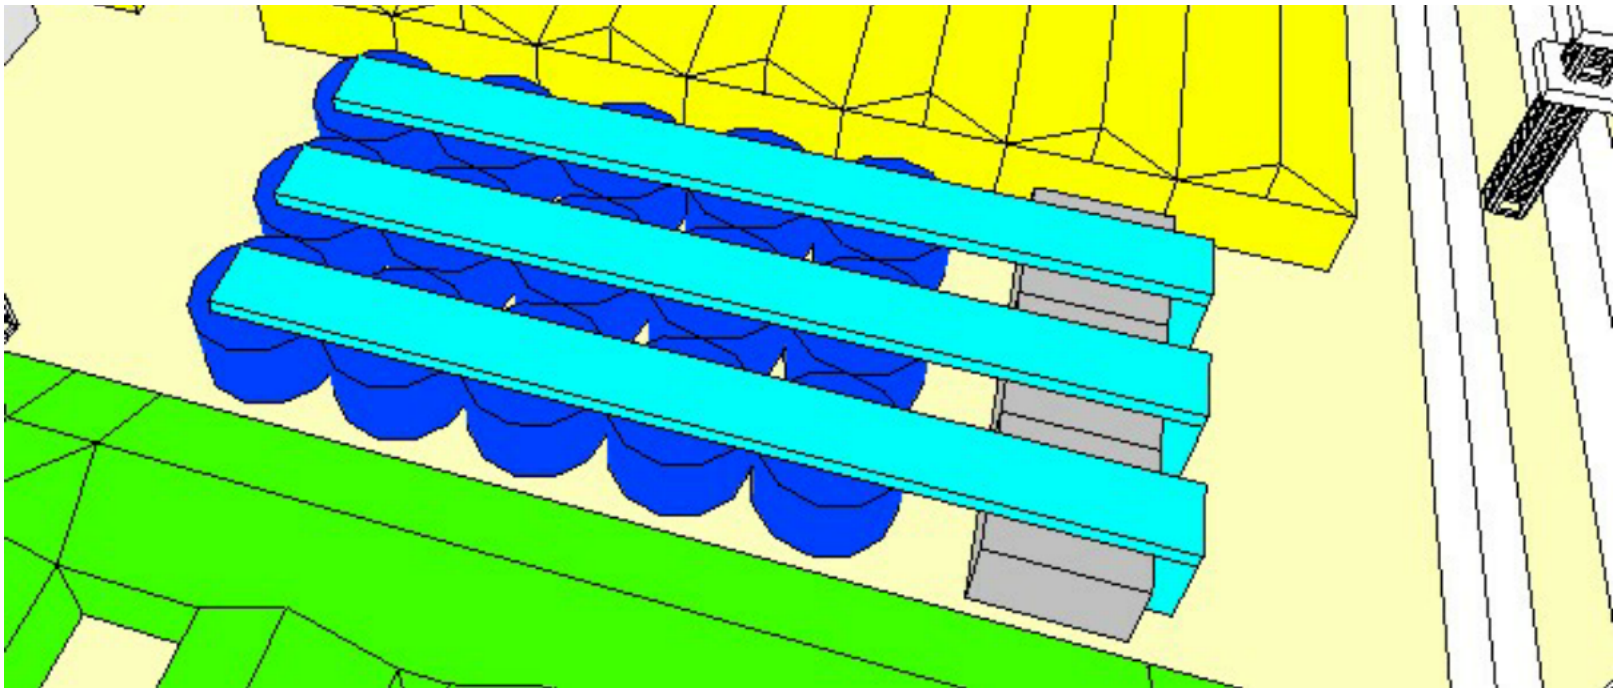

**Anti Missile protection and Nuclear bunckers**

**Telecommunication towers and Electro power plant**

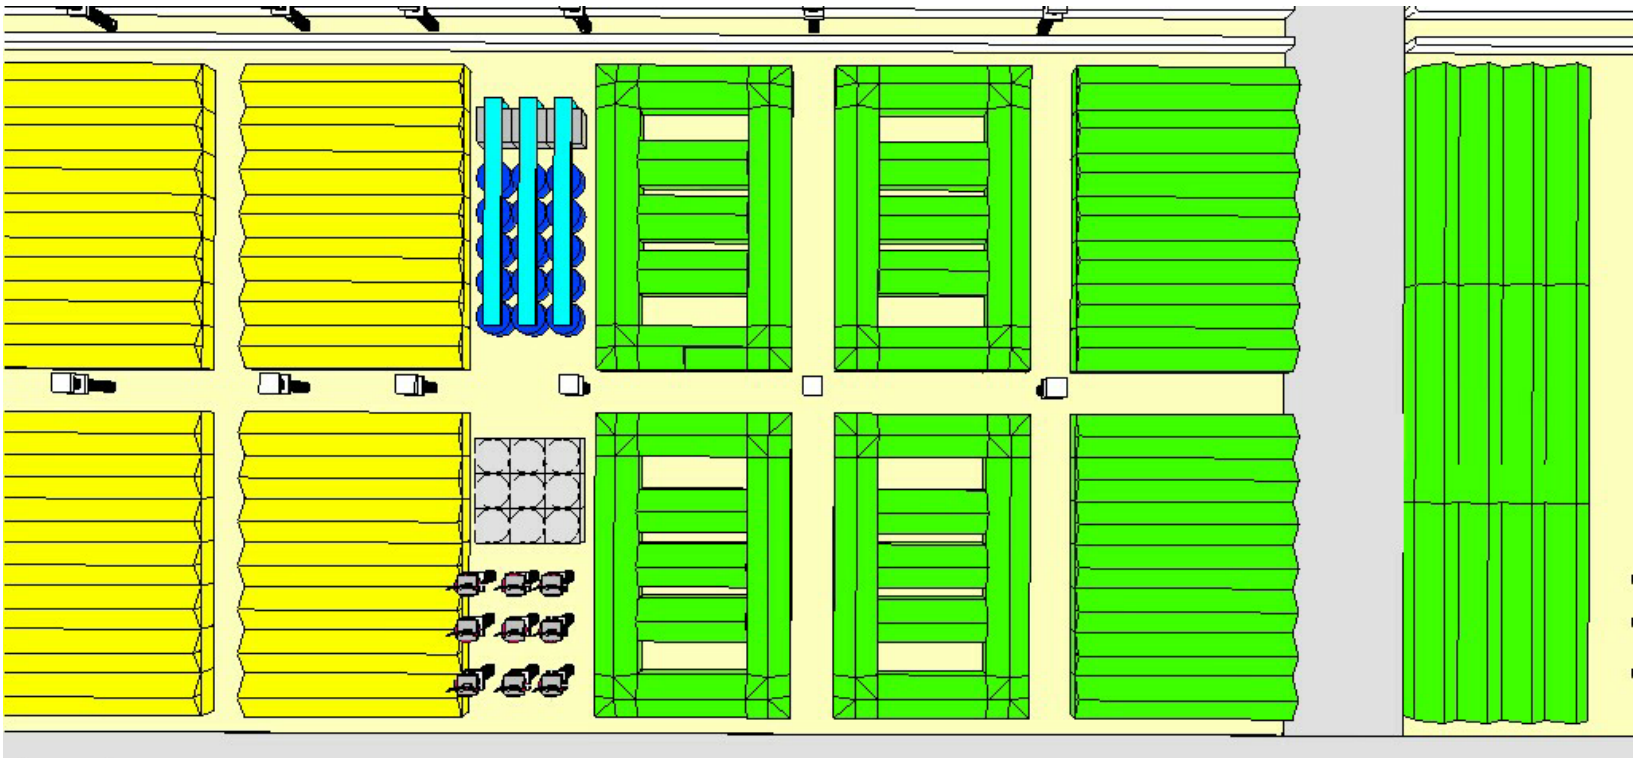

**Water center, water source in underground**

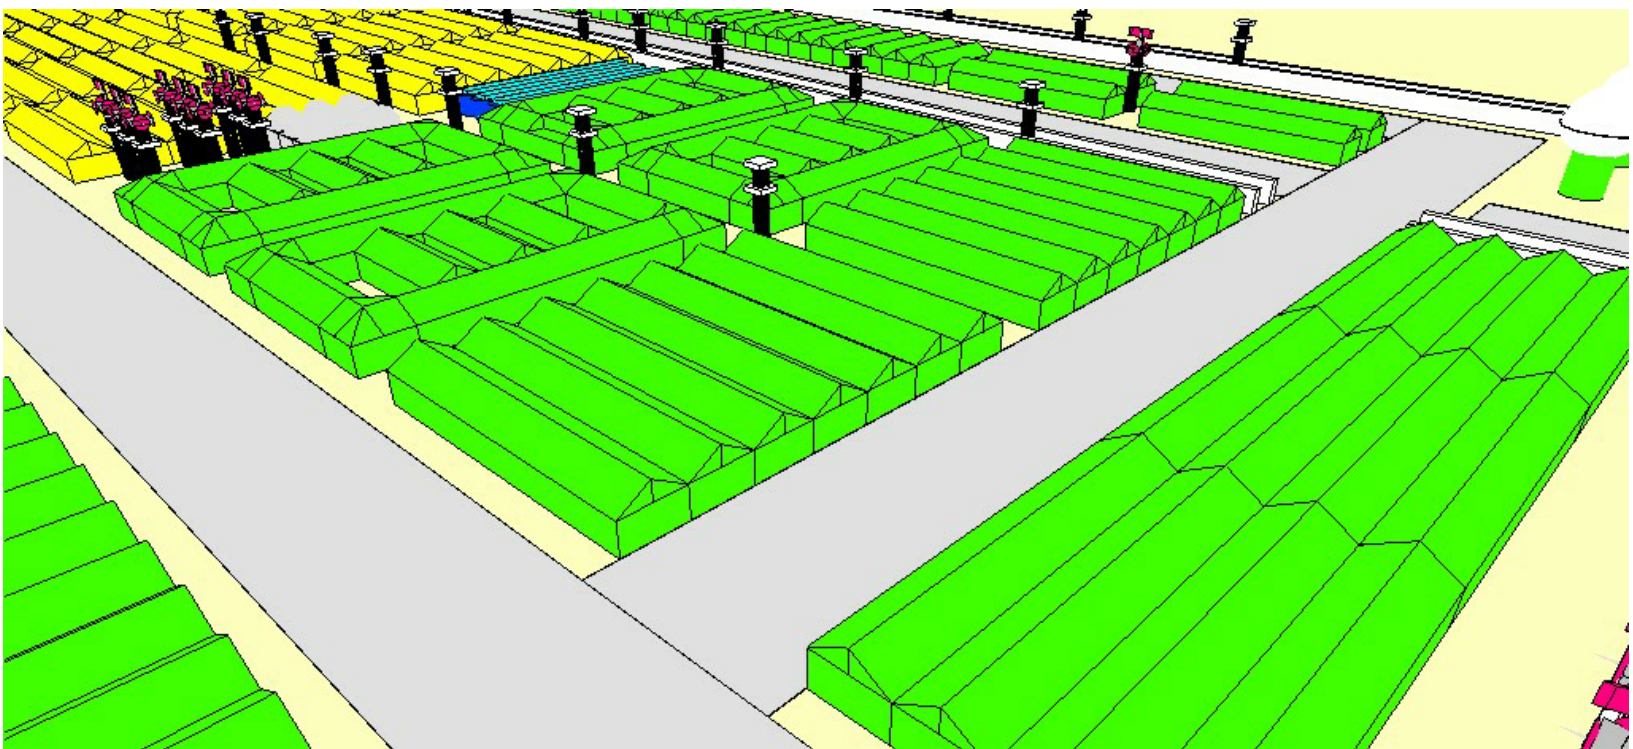

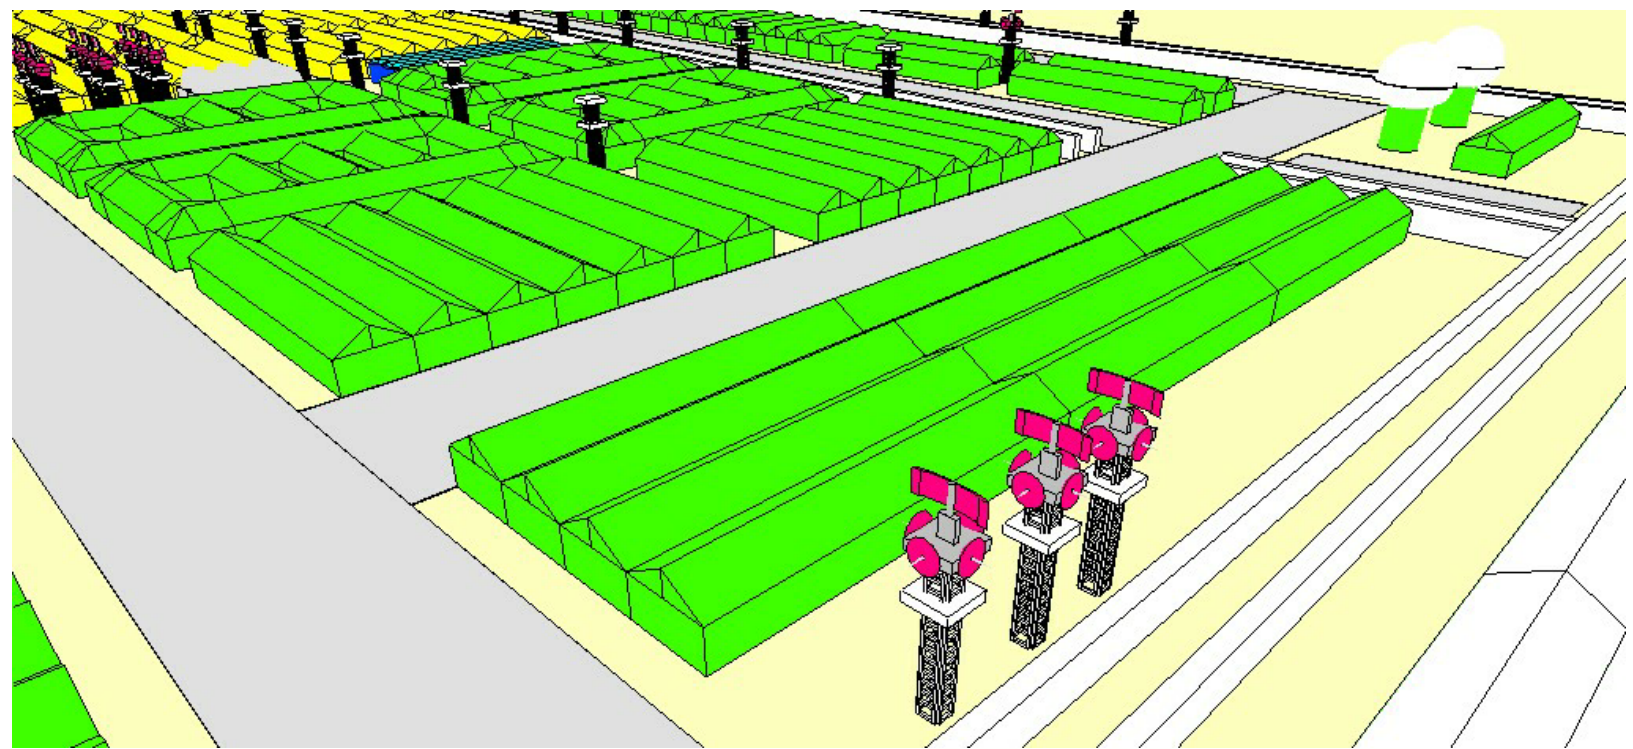

**Military Barracks as headquarters for soldiers and military service**

**Center of Heavy Military Trucks**

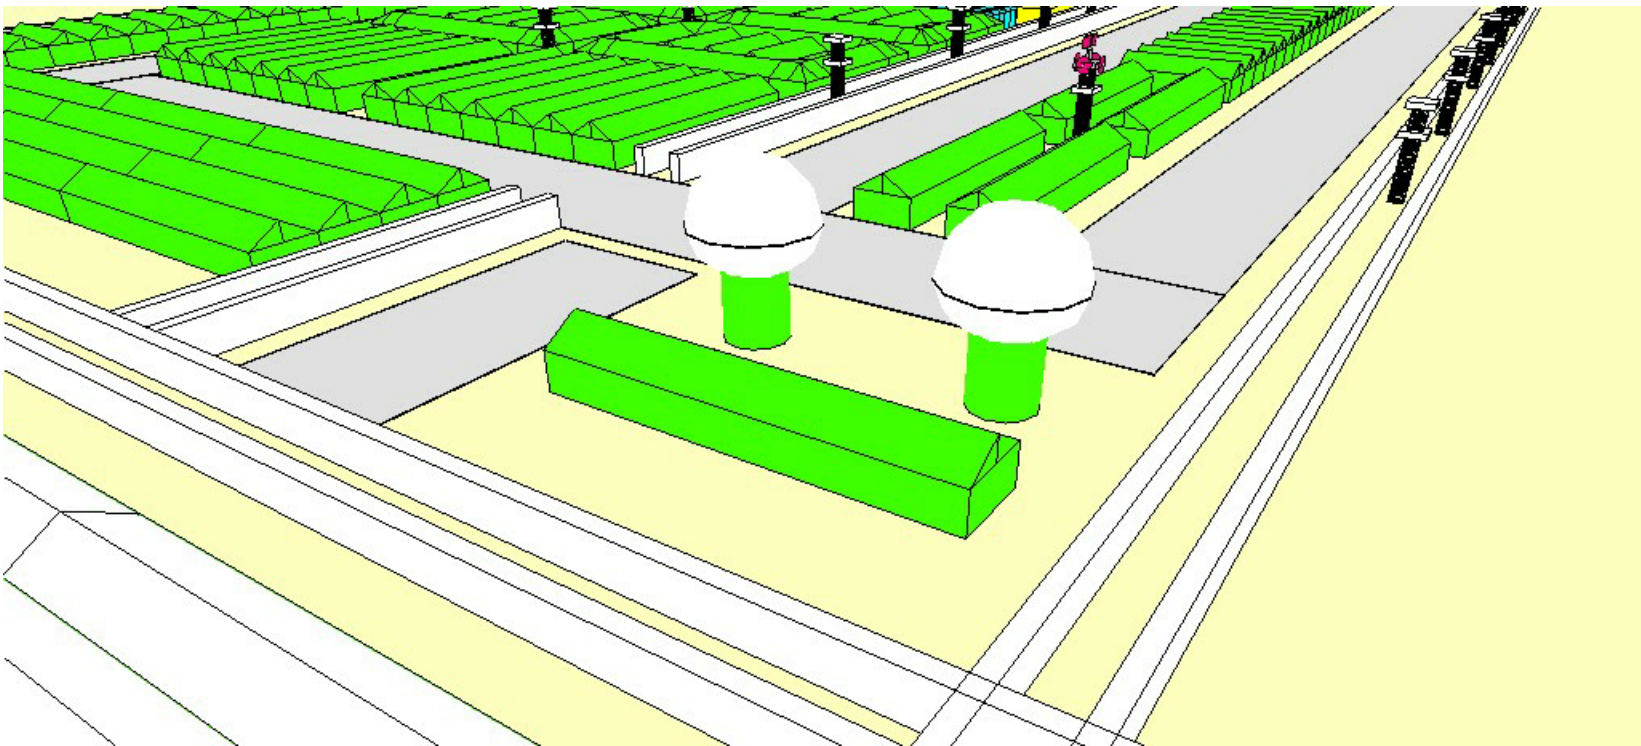

**General Council & Office**

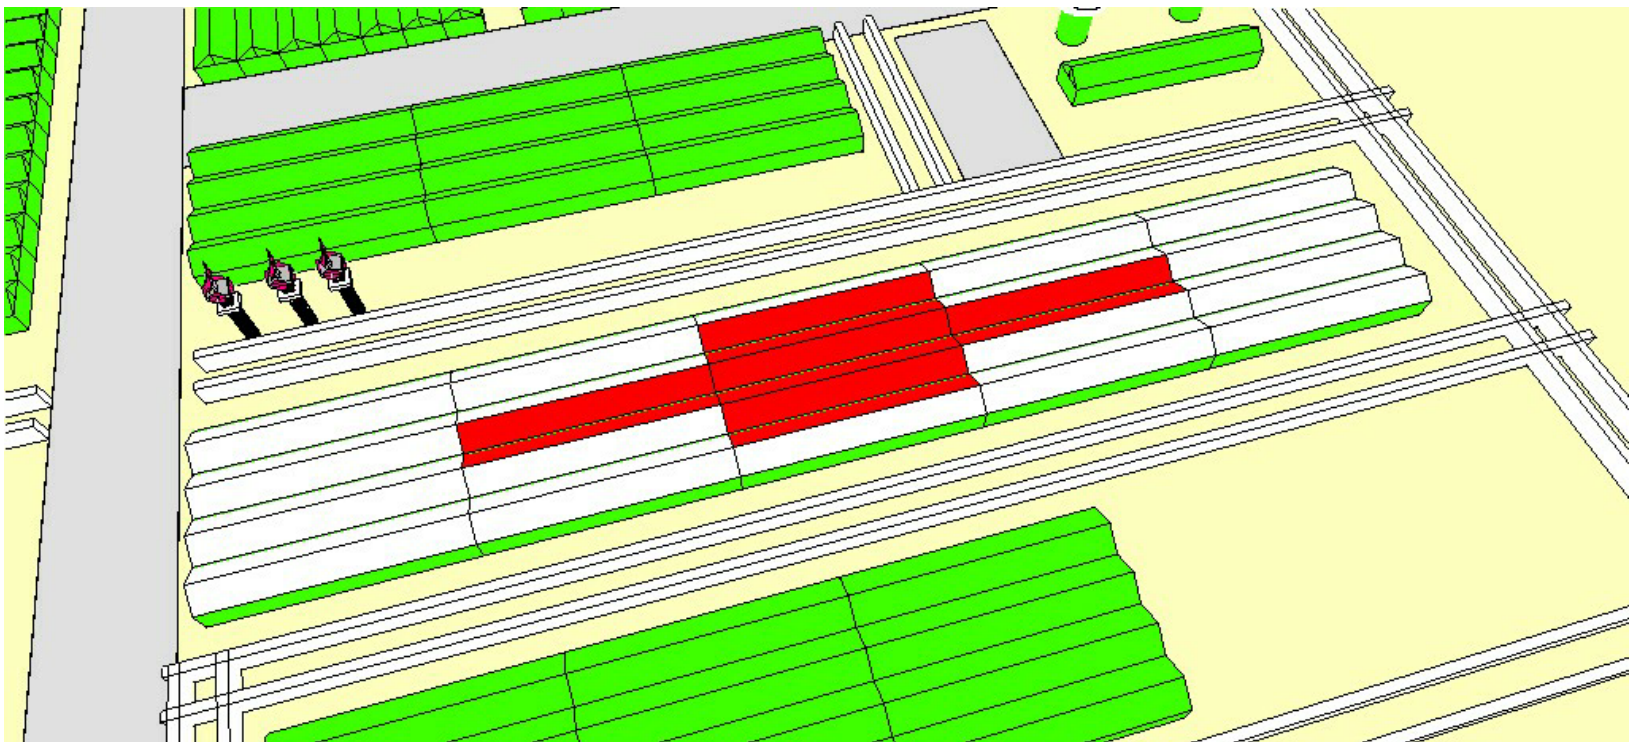

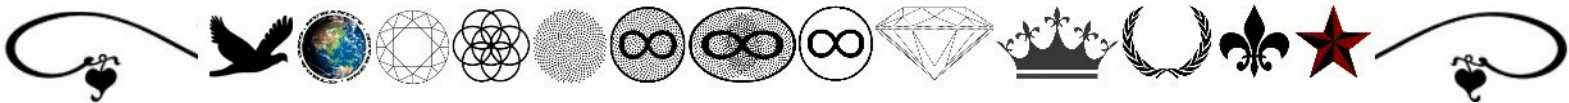

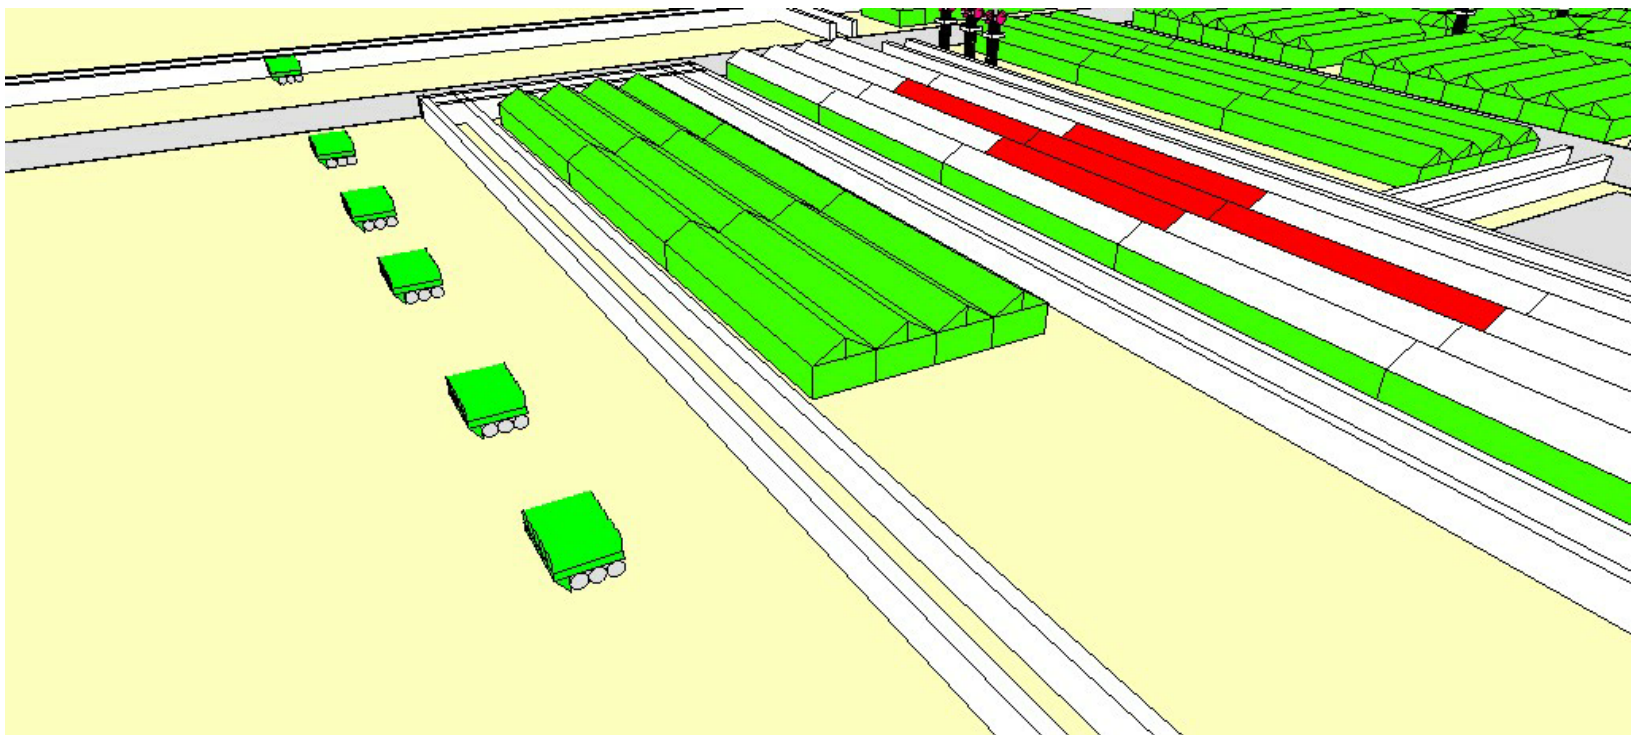

**Radar center Intelligence and Heliport**

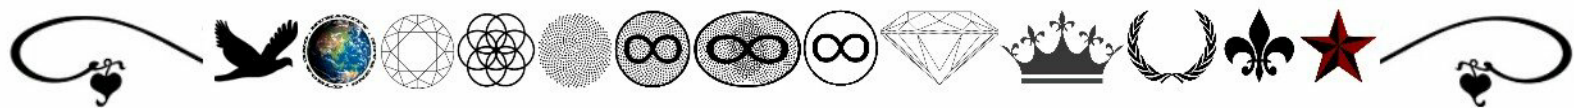

**Military Hospital**

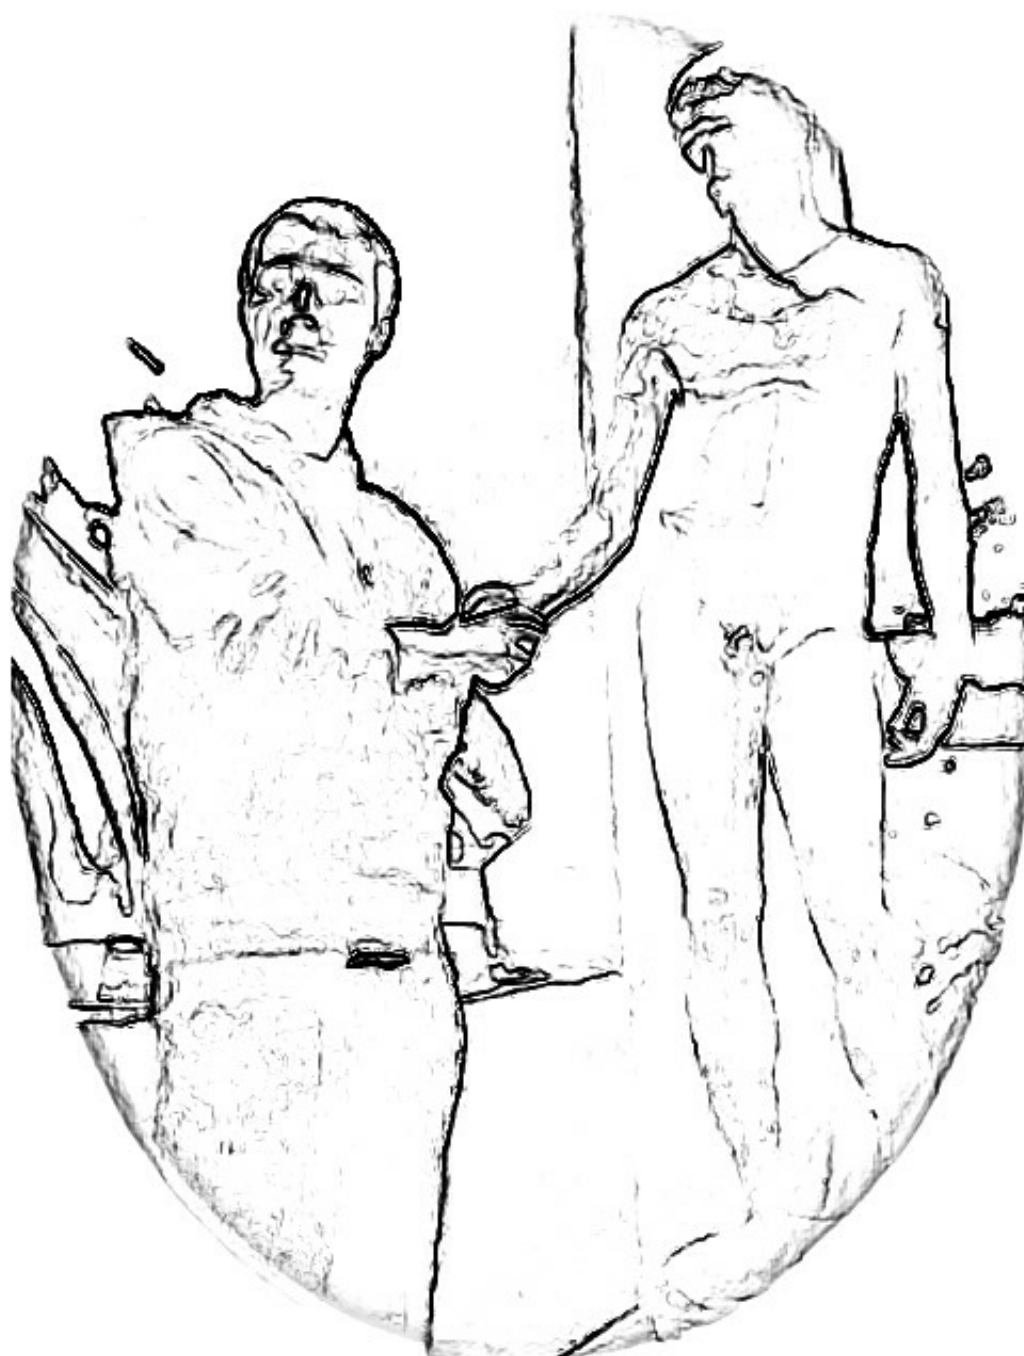

**Military Prison zone**
