

# how to chose trading coin-pairs

HERE ARE 5 STEPS FOR CHOOSING TRADING COIN-PAIRS

## 1.) TOP VOLUME TRADED COIN-PAIRS FIRST

The traded coin-pairs selected for trading must first have activity and a large traded volume at your exchange.

## 2.) UP-TREND COIN-PAIRS

Save time and capital by only going for coin-pairs that are in a Up-Trend / Bullish market.

Otherwise, prepare with Risk-Management strategies like a Stop-Loss or a DCA strategy to eliminate part of the losses from a Down-Trend market.

## 3.) CHECK THE COINS HISTORY AND REPUTATION

Do some research before trading a specific coin. Due diligence is important, with a lot of exit-scams lurking around.

## 4.) "CHART" THE COIN-PAIR WITH TRADINGVIEW.COM

**Get down to Technical Analysis!**

Use a Price Charting tool like **TradingView** to plot, estimate, back-test and optimize your trading strategy before starting trading.

## 5.) LOOK-OUT FOR PUMPS-AND-DUMPS

Regularly check your trading coin-pairs for out-of-place market movements, like high spikes in price in very short periods of times. Avoid losses by not trading pump-and-dump coin-pairs.
