Login Server Setting

– Login Server

The login server will process the user's connection and exit, and the user's usage fee (billing).

(The login server is not directly connected to the user, but only has a connection with the gameserver.)

1) DB Generate

   Refer to the DB-generated folder that is sent together to create the DB in turn.

2) Control panel -> Set-> Go to ODBC and add a new ODBC driver to the system DNS.

- MuOnlineJoinDB -

Create a data source	SQL Server
Data source name	MuOnlineJoinDB
Document action	Mu Online Main DB Server
The server to connect to	Local
Login ID	MuOnlineAdmin
Login Password	Each time, it changes

- USELOG -

Create a data source	SQL Server
Data source name	USELOG
Document action	Mu Online Login Log
The server to connect to	Local
Login ID	MuOnlineAdmin
Login Password	Each time, it changes

3) 설 치 및 실 행

The login server can be created first by the DB and   then run. However, you should always create a subfolder called log in a folder with executables.
