CBD Oil

DOES IT REALLY WORKS?

Short Answer? **Yes! It does.**

CB1

CB2

How Does CBD Work to Produce Health Benefits?

Our brains have cannabinoid receptors, called **CBs**. These get activated when they detect cannabinoids. **CBs** receptors help regulate sensations like pain, emotions, cognition, and sleep. Our immune system also has cannabinoid receptors, or **CB2** receptors. They exist with the greatest density in the spleen, an organ that handles filtering old red blood cells for the body's immunity abilities. Current evidence confirms, that CBD is an anti-inflammatory and antioxidant. It also has been shown that it increases serotonin and anandamide. The latter two are neurotransmitters that are known to reduce the feelings of pain and anxiety.

What does current research show about CBD's health benefits?

- ✓ Protection against neurodegenerative diseases like Parkinson's and Alzheimer's
- ✓ Fight against breast cancer
- ✓ Shrink tumor cells in children
- ✓ Treating insomnia
- ✓ Lessen psychosis
- ✓ Decreasing the self harm symptoms that can result from autism

Of course, researchers will need to conduct additional studies in order to scientifically confirm CBD's benefits. Still, many doctors continue to prescribe CBD hemp oil to their patients because of the apparent positive results. Though the results are anecdotal at this point, the oil might be able to help a lot of people. Many medical marijuana dispensaries across the U.S. also carry various CBD hemp oil strains. This is because patients have increasingly taken interest in treating their ailments with it.
