	· Carry out Line Pressure Test. Refer to the procedure in this section. Follow pressure diagnosis and repair as necessary.
Main Control	
· Bolts not tightened to specification	· Tighten to specification.
· Separator plate damaged	· Inspect for damage. If damaged, install a new separator plate.
· Contamination	· Disassemble and clean.
· Valves and springs damaged, misassembled, missing, stuck, or bore damaged	· If damaged or parts are missing, install new main control assembly. If misassembled, reassemble correctly. DO NOT stone, file or sand valves. This removes the anodized finish and can result in further main control or transmission damage.
Fluid Pump Assembly	
· Bolts not tightened to specification	· Tighten to specification.
· Gasket damaged	· Inspect for damage. If damaged, install a new gasket.
· Porosity, cross leaks, misassembled, ball missing, plugged hole	· Inspect for damage. If damaged, repair as necessary.
· Pump gears cracked and/or siezed	· Inspect for damage. Install a new pump.
· Flow control valves, springs, or seal damaged, stuck or not assembled correctly	· Inspect for damage. Install a new seal or flow control valve.
Coast Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Center Support	
· Screw not tightened to specification	· Tighten to specification.
· Seal rings or bearings damaged	· Inspect for damage. Repair as necessary.
· Outside diameter of case bore damage	· Inspect for damage. Repair as necessary.

· Support damaged or leaking	· Inspect for damage. Repair as necessary.
Intermediate Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Intermediate Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
· Not adjusted correctly	· Inspect for damage. Repair as necessary.
Direct Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Forward Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Intermediate Clutch Assembly	
· Seals, piston damaged	· Inspect for damage. Repair as necessary.
· Check ball damaged, missing, not seating, off location	· Inspect for mislocation, poor seating, damage. Install a new cylinder.
· Feed tube or seal damaged	· Inspect for damage. Install a new feed tube.
· Friction elements damaged or worn	· Inspect for damage. Repair as necessary.
· Return springs damaged	· Inspect for damage. Repair as necessary.
Reverse Servo	
· Servo retaining ring damaged	· Inspect for damage. Repair as necessary.
· Seals (piston and cover) damaged	· Inspect for damage. Repair as necessary.
Reverse Band	
· Band damaged	· Inspect for damage. Repair as necessary.
· Servo worn or damaged	· Inspect for damage. Repair as necessary.
Case	
· Damaged	· Inspect for damage. Repair as necessary.

Shift Concern: Feel—Harsh (Some/All)

Possible Component	Reference/Action
214— ELECTRICAL ROUTINE	
Powertrain Control System	
· PCM, vehicle wiring harnesses, Shift Solenoids A, B, C, Pressure Control	· Carry out on-board diagnostic tests. Refer to the Powertrain Control/Emissions Diagnosis

Solenoids A, B, C, D, Intermediate Shaft Speed (ISS) sensor, digital TR sensor, Transmission Fluid Temperature (TFT) sensor, IAT sensor, VSS input	(PC/ED) manual for diagnosis and testing of the PCM, IAT, and VSS.
	<ul style="list-style-type: none"> • Go To Pinpoint Test A, Go To Pinpoint Test B, Go To Pinpoint Test D and Go To Pinpoint Test E.
	<ul style="list-style-type: none"> • Repair as necessary. Clear DTCs, road test and carry out on-board diagnostic test again.
314 — HYDRAULIC/MECHANICAL ROUTINE	
Only some Shifts Harsh	
	<ul style="list-style-type: none"> • If only some of the shifts are harsh, determine which shift(s) is missing.
	<ul style="list-style-type: none"> • Refer to the following routine(s) for further No Shift concerns: <ul style="list-style-type: none"> ■ Harsh 1-2 Shift, Routine 232/332 ■ Harsh 2-3 Shift, Routine 233/333 ■ Harsh 3-4 Shift, Routine 234/334 ■ Harsh 4-5 Shift, Routine 274/374 ■ Harsh 5-4 Shift, Routine 275/375 ■ Harsh 4-3 Shift, Routine 235/335 ■ Harsh 3-2 Shift, Routine 236/336 ■ Harsh 2-1 Shift, Routine 237/337
Incorrect Pressures	
<ul style="list-style-type: none"> • High/Low pressures 	<ul style="list-style-type: none"> • Check pressure at line and PC C taps.
	<ul style="list-style-type: none"> • Carry out Line Pressure Test, refer to procedure in this section. Follow pressure diagnosis and repair as required.
Main Control	
<ul style="list-style-type: none"> • Bolts not tightened to specification 	<ul style="list-style-type: none"> • Tighten to specification.
<ul style="list-style-type: none"> • Separator plate damaged 	<ul style="list-style-type: none"> • Inspect for damage. If damaged, install a new separator plate.

Transmission Fluid Level Check

Special Tool(s)

 ST2467-A	Rubber Tip Air Nozzle 100-D009 (D93L-7000-A)
 ST1269-A	Vacuum Pump Kit 416-D002 (D95L-7559-A)
 ST2715-A	Fluid Transporter / Evacuator / Injector 307-D465
 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224 New Generation Star (NGS) Tester 418-F205 or equivalent scan tool
 ST2581-A	Adapter, Fluid Level and Fill Plug 307-437

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

Fluid Fill Reference

NOTE: Left side of case is shown.

Item	Part Number	Description
1	—	Fluid level
2	7A010	Fluid level tube
3	W704999-S309	Fluid level and fill plug (small) (in-vehicle)
4	7A010	Fluid drain plug (large)

1. Using the scan tool (WDS), monitor the transmission fluid temperature (TFT) using PID: TFT.
2. Start the vehicle.
3. **NOTE:** Engine idle speed is approximately 650 rpm.

While proceeding with this procedure, run the engine until the transmission fluid temperature is between 27°C - 49°C (80°F - 120°F).

4. Move the range selector lever slowly through each gear, stopping in each position and allowing the transmission to engage.

5. Place the range selector lever in the PARK position.
6. With the engine running, position the vehicle on a hoist and set it as close to level as possible.

For additional information, refer to [Section 100-02](#).

7. Hold the larger drain plug with a wrench and remove the small (center) fluid level indicating plug using a 3/16-inch Allen key.

8. Install the special tool into the pan.

9. **NOTE:** Prior to filling the special tool with clean transmission fluid, make sure that the canister is clean.

Fill the special tool with clean automatic transmission fluid.

10. Hang the special tool under the vehicle. Position it upright and close to the transmission.

11. Connect the special tools.

- Connect the open end of the fluid hose from the Fluid Transporter/Evacuator/Injector to the Fluid Level and Fill Plug Adapter at the bottom of the transmission fluid pan.

12. Apply a maximum of 206.85 kPa (30 psi) to the open end of the vacuum/pressure hose from the special tool. Fluid will immediately start flowing out of the special tool into the transmission fluid pan.

13. Add one pint of transmission fluid into the fluid pan. Stop the process by releasing the air pressure and removing the air nozzle from the end of the hose.
14. Inspect the fluid level in the special tool. If the fluid drains back into the canister, the transmission is full. If no fluid drains back, more fluid will need to be added. Repeat steps 12 and 13.
15. Once the transmission is full, place a hand vacuum pump on the open end of the vacuum/pressure hose of the special tool and apply vacuum to the system. This will pull out any extra fluid trapped in the system and direct it into the container.

16. Allow the fluid to drain. Make sure that the fluid temperature is between 27°C - 49°C (80°F - 120°F). When the fluid comes out as a thin stream or drip, the fluid is at the correct level.

17. Reinstall the small (center) fluid level indicating plug using a 3/16-inch Allen key.

18. Check the operation of the transmission by moving the range selector lever slowly through each gear, stopping in each position and allowing the transmission to engage.

Transmission Fluid Cooler — Backflushing and Cleaning

For additional information, refer to [Section 307-02](#).

Transmission Fluid Drain and Refill —Automated Equipment

Special Tool(s)

 ST2654-A	Automatic Transmission Flush and Fill Machine 211-00018
---	--

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON®V

Draining

 **CAUTION:** Use only clean automatic transmission fluid. Do not use any supplemental transmission fluid additives, treatments or cleaning agents. The use of these materials can affect the operation of the transmission, resulting in internal component failure.

 **CAUTION:** Always refer to the instructions supplied with the flush and fill machine.

NOTE: This is a new procedure for draining and adding transmission fluid using a suitable transmission flush and fill machine.

1. Position the vehicle on a hoist. Place in PARK. For additional information, refer to [Section 100-02](#).
2. Use a suitable flush and fill machine to change the fluid.
3. When connecting the flush and fill machine, connect the machine to the fluid cooler tube after the fluid cooler on the cooler return tube. This will help remove any foreign material trapped in the fluid coolers.
4. Carry out the fluid exchange process.

Refill

1. Use only clean automatic transmission fluid.
2. Once the fluid exchange has been completed, disconnect the flush and fill machine. Reconnect any disconnected fluid cooler tubes.
3. **NOTE:** If the vehicle is equipped with an in-line fluid filter, install a new in-line fluid filter (XC3Z-7B155-BA).

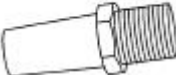

Install a new in-line transmission fluid filter.

4. Lower the vehicle. For additional information, refer to [Section 100-02](#).
 5. With the engine running and the transmission at normal operating temperature 66-77°C (150-170°F), check and adjust the transmission fluid level and check for any leaks. If fluid is needed, add fluid in increments of 0.24 liter (0.5 pint) until the correct level is achieved (fluid should be in the cross-hatched area of the fluid level indicator).
 6. Carry out the fluid level check. For additional information, refer to [Transmission Fluid Level Check](#) in this section.

Transmission Fluid Drain and Refill — Vehicles With Torque Converter Drain Plug

Special Tool(s)

 ST2467-A	Rubber Tip Air Nozzle 100-D009 (D93L-7000-A)
 ST1289-A	Vacuum Pump Kit 416-D002 (D95L-7559-A)
 ST2715-A	Fluid Transporter / Evacuator / Injector 307-D465
 ST2581-A	Adapter, Fluid Level and Fill Plug 307-437

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

Fluid Fill Reference

NOTE: Left side of case is shown.

Item	Part Number	Description
1	—	Fluid level
2	7A010	Fluid level tube
3	W704999-S309	Fluid level and fill plug (small) (in-vehicle)
4	7A010	Fluid drain plug (large)

Draining

1. With the vehicle in PARK, position it on a hoist. Set the vehicle as close to level as possible. For additional information, refer to [Section 100-02](#).
2. Remove the drain plug (large plug) and allow the fluid to drain.

3. Remove the converter housing plug.

4. Remove and discard the drain plug.

Refill

1. Install the fluid drain plug.

2. Hold the larger drain plug with a wrench and remove the small (center) fluid level indicating plug using a 3/16-inch Allen key.

3. Install the special tool into the pan.

4. **NOTE:** Prior to filling the special tool with clean transmission fluid, make sure that the canister is

clean.

Fill the special tool with clean automatic transmission fluid.

5. Hang the special tool under the vehicle, upright and close to the transmission.

6. Connect the special tools.

- Connect the open end of the fluid hose from the Fluid Transporter/Evacuator/Injector to the Fluid Level and Fill Plug Adapter at the bottom of the transmission fluid pan.

7. Apply a maximum of 206.85 kPa (30 psi) to the open end of the vacuum/pressure hose from the special tool. Fluid will immediately start flowing out of the special tool into the transmission fluid pan.

8. Add two or three quarts of transmission fluid into the fluid pan. Stop the process by releasing the air pressure and removing the air nozzle from the end of the hose.
9. Install a new torque converter drain plug to prevent any leakage.

10. Install the converter housing access plug.

11. **NOTE:** Engine idle speed is approximately 650 rpm.

Start and run the engine until the transmission fluid temperature is between 27°C - 49°C (80°F - 120°F).

12. Inspect the fluid level in the special tool. If the fluid drains back into the canister, the transmission is full. If no fluid drains back, more fluid will need to be added. Repeat steps 11 and 12.
13. Once the transmission is full, place a hand vacuum pump on the open end of the hose of the special tool and apply vacuum to the system. This will pull any extra fluid trapped in the system and direct it into the container.

14. Allow the fluid to drain. When the fluid comes out as a thin stream or drip, the fluid is at the correct level.

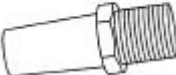

15. Reinstall the small (center) fluid level indicating plug using a 3/16-inch Allen key.

8. Add two or three quarts of transmission fluid into the fluid pan. Stop the process by releasing the air pressure and removing the air nozzle from the end of the hose.
9. **NOTE:** Engine idle speed is approximately 650 rpm.

Start and run the engine until the transmission fluid temperature is between 27°C - 49°C (80°F - 120°F).

10. Inspect the fluid level in the special tool. If the fluid drains back into the canister, the transmission is full. If no fluid drains back, more fluid will need to be added. Repeat steps 9 and 10.
11. Once the transmission is full, place a hand vacuum pump on the open end of the hose of the special tool and apply vacuum to the system. This will pull any extra fluid trapped in the system and direct it into the container.

12. Allow the fluid to drain. When the fluid comes out as a thin stream or drip, the fluid is at the correct level.

13. Reinstall the small (center) fluid level indicating plug using a 3/16-inch Allen key.

Transmission Range (TR) Sensor Adjustment

Special Tool(s)

 ST1633-A	Alignment Gauge, TR Sensor 307-351 (T97L-70010-A)
---	--

Material

Item	Specification
Threadlock 262 E2FZ-19554-B	WSK-M2G351-A6

1. Position the vehicle on a hoist. Place in NEUTRAL. For additional information, refer to [Section 100-02](#).
2. Remove the exhaust heat shield. For additional information, refer to [Section 309-00](#).
3.  **CAUTION:** Index-mark (color paint) the bolts, washers, nuts, and the flex coupling to the transmission flange and the pinion flange to assure assembly in the exact location from which they were removed. Components not assembled in their original locations can cause driveshaft imbalance.

 **CAUTION:** Do not remove the bolts retaining the flex coupling to the driveshaft.

Index-mark the front driveshaft pinion flange. Remove the three nuts, washers and bolts.

4. Slide the front shaft assembly rearward and support.

5.  **WARNING: Secure the transmission to the transmission jack with a safety chain. Failure to follow these instructions can result in personal injury.**

Support the transmission with a transmission jack.

6. Remove the transmission mount and lower the transmission enough to gain access to the digital TR sensor.

7. Disconnect the shift cable.

8. Loosen the digital TR sensor screws.

9.  **CAUTION:** Tightening one screw before tightening the other can cause the sensor to bind or become damaged.

NOTE: The manual lever must be in the NEUTRAL position.

Using the special tool, align the digital TR sensor and tighten the screws in an alternating sequence.

10. Connect the shift cable.

11. Install the rear transmission support and remove the transmission jack.

12.  **CAUTION: Align the index marks or driveshaft imbalance can occur.**

Align the index marks made during removal and position the driveshaft on the transmission flange.

13.  **CAUTION: Install the bolts, washers and nuts in their original positions or driveshaft imbalance can occur. Install the driveshaft flex coupling bolts with the head of the bolt seated against the flange, and the nuts seated against the flex coupling.**

Install the bolts, washers and nuts. Coat the nut and bolt threads with threadlock sealer.

14. Install the exhaust heat shield. For additional information, refer to [Section 309-00](#).
15. Lower the vehicle.
-

Fluid Pan, Gasket and Filter

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM, XT-5-DM	MERCON® V

Removal

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Place a drain pan under the transmission fluid pan.
3. Remove the drain plug and drain the fluid.

4. Remove the bracket.

5. **NOTE:** The transmission fluid pan gasket is reusable, clean and inspect for damage; if not damaged, the gasket should be reused.

Remove the fluid pan and gasket.

6. Remove and discard the transmission fluid filter.

7. Clean and inspect the transmission fluid pan and magnet.

8. Remove the converter housing plug.

9. Remove the drain plug.

Installation

1. **NOTE:** A new converter drain plug must be used to prevent leakage.

Install the drain plug.

2. Install the converter housing access plug.

3.  **CAUTION:** Lubricate the fluid filter O-ring seals with clean automatic transmission fluid or seals may be damaged.

NOTE: Make sure that the fluid filter O-ring seals are correctly seated on the filter.

Lubricate the seals and install the transmission fluid filter.

4. Install the oil pan magnet in the transmission fluid pan.

5. **NOTE:** The transmission fluid pan gasket is reusable, clean and inspect for damage; if not damaged, the gasket should be reused.

Install the transmission fluid pan and gasket and loosely install the screws.

6. Using a crisscross sequence, tighten the screws.

7. Install the shifter cable bracket.

8. Install the drain plug.

9. **NOTE:** It will be necessary to hold the drain plug (larger plug) with a wrench when removing the fluid level indicator plug.

NOTE: Use 3/16 inch Allen key to remove the fluid level indicator plug.

Remove the fluid level indicator plug.

10. Carry out fluid level check. For additional information, refer to [Transmission Fluid Level Check](#) in this section.
-

Main Control —Valve Body

Special Tool(s)

 ST1639-A	Aligner, Valve Body 307-334 (T95L-70010-C) (2 req'd)
---	--

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM, XT-5-DM	MERCON® V

Removal

1. **NOTE:** When the battery is disconnected or a new battery installed, certain transmission operating parameters can be lost. The powertrain control module (PCM) must relearn these parameters. During this learning process, you may experience slightly firm shifts, delayed, or early shifts. This operation is considered normal and will not affect the function of the transmission. Normal operation will return once these parameters are stored by the PCM.

Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).

2. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
3. Drain the transmission fluid.

4. Remove the converter housing plug.

5. Remove the drain plug.

6. Remove the shifter cable bracket.

7. **NOTE:** Clean the area around connector to prevent contamination of the solenoid body connector.

Disconnect the transmission connector.

8. Disconnect the digital transmission range (TR) sensor connector.

9. **NOTE:** The transmission fluid pan gasket is reusable. Clean and inspect for damage. If not damaged, the gasket should be reused.

Remove the transmission fluid pan and gasket.

10. Remove the transmission fluid filter.

11. Disconnect the reverse pressure switch connector.

12. Remove the reverse pressure switch and discard.

13. Remove the solenoid body.

14. Remove the valve body cover plate and gasket.

15. Remove the reverse servo.

16. Remove the manual control valve detent spring.

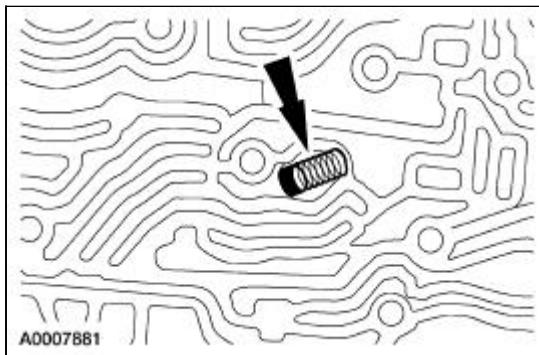

17. Remove the main control valve body, separator plate and gasket.

18. **NOTE:** The intermediate clutch spring and seal will fall out of the case.

Remove the intermediate clutch spring and seal.

Installation

1.  **CAUTION:** The intermediate clutch fluid inlet tube seal and spring must be correctly seated in the case. Failure to correctly seat the inlet tube seal and spring will cause an internal fluid leak and transmission damage.

Using a drift punch, correctly install and seat the intermediate clutch fluid inlet tube seal and spring into the case.

2. Install the special tools into the transmission case.

3. Refer to the following chart for bolt locations:

Item	Part Number	Part Name	Size
1	W702791-S300	Hex bolt	M6 X 27
2	W500103-S1300	Hex bolt	M6 X 45
3	W703133-S1300	Hex bolt	M6 X 52
4	W705559-S300	Hex bolt	M6 X 82.2
5	W500100-S300	Hex bolt	M6 X 30
6	W701099-S1430	Cap int lob screw	M6 X 20
7	W703135-S1300	Hex bolt	M6 X 70
8	W703189-S1430	Cap int lob 8	M6 X 63
9	W702921-S430	Cap int lob 8	M6 X 25

4. Install the main control valve body and loosely install the screws.

5. Remove the special tools and loosely install the screws.

6. Install the valve body cover plate and gasket and loosely install the screws.

7. Install the reverse pressure switch and loosely install the screws.

8. Tighten the screws in the sequence shown.

9. Install the reverse servo, using a crisscross pattern to tighten the bolts.

10. Install the manual control valve detent spring.

11. Install new O-ring seals on the solenoid body connector. Lubricate the O-ring seals with clean automatic transmission fluid.

12.  **CAUTION:** Inspect the transmission case bore to make sure it is free of foreign material and not damaged. If it is damaged, transmission leak may occur.

Install the solenoid body. Tighten the bolts in sequence shown.

13. Connect the reverse pressure switch connector.

14.  **CAUTION:** Lubricate the fluid filter O-ring seals with clean automatic transmission fluid or seals can be damaged.

NOTE: Make sure that the fluid filter O-ring seals are correctly seated on the filter.

Lubricate the seals and install the transmission fluid filter.

15. **NOTE:** The transmission fluid pan gasket is reusable. Clean and inspect for damage. If not damaged, the gasket should be reused.

Install the transmission fluid pan and gasket and loosely install the screws.

16. Using a crisscross sequence, tighten the screws.

17. **NOTE:** A new converter drain plug must be used to prevent leakage.

Install the drain plug.

18. Install the converter housing access plug.

19. Reconnect the digital TR sensor connector.

20.  **CAUTION:** Damage to the solenoid body assembly can result if the screw is tightened above specification.

NOTE: Always install new O-ring seals on vehicle harness connector.

NOTE: Clean the area around connector to prevent contamination of the solenoid body connector.

NOTE: Use petroleum jelly to lubricate the O-ring seals to aid in the installation process.

Install and lubricate new O-ring seals on the transmission connector and connect the connector.

21. Install the shift cable bracket.

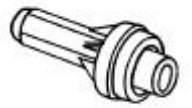

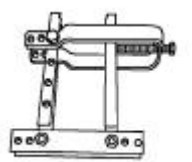

22. Lower the vehicle.
23. **NOTE:** When the battery is disconnected or a new battery installed, certain transmission operating parameters can be lost. The powertrain control module (PCM) must relearn these parameters. During this learning process, you may experience slightly firm shifts, delayed, or early shifts. This operation is considered normal and will not affect the function of the transmission. Normal operation will return once these parameters are stored by the PCM.

Connect the battery ground cable. For additional information, refer to [Section 414-01](#).

24. Fill the transmission to the correct fluid level and check for correct transmission operation. For additional information, refer to [Transmission Fluid Level Check](#) in this section.
-

Extension Housing Seal

Special Tool(s)

 ST2415-A	Remover, Output Flange 307-408
 ST1791-A	Installer, Transmission Extension Housing Fluid Seal 307-038 (T74P-77052-A)
 ST1185-A	Slide Hammer 100-001 (T50T-100-A)
 ST1758-A	Remover, Torque Converter Fluid Seal 307-309 (T94P-77001-BH)
 ST2416-A	Installer, Output Shaft Flange 307-404
 ST2440-A	Installer, Drive Pinion Flange 205-479

Removal

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Remove the exhaust. For additional information, refer to [Section 309-00](#).
3. Remove the driveshaft. For additional information, refer to [Section 205-01](#).

4. Remove the nut and discard.

5. Using the special tool, remove the output flange.

6. Using the special tools, remove the extension housing seal.

Installation

1. Using the special tool, install the extension housing seal.

2. Using the special tools, install the output flange.

3. Install a new nut.

4. Install the driveshaft. For additional information, refer to [Section 205-01](#).
 5. Install the exhaust. For additional information, refer to [Section 309-00](#).
 6. Fill the transmission to the correct fluid level and check for correct transmission operation. For additional information, refer to [Transmission Fluid Level Check](#) in this section.
-

Extension Housing Gasket

Special Tool(s)

 ST2415-A	Remover, Output Flange 307-408
 ST2416-A	Installer, Output Shaft Flange 307-404
 ST2440-A	Installer, Drive Pinion Flange 205-479

Removal

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Remove the exhaust heat shield. For additional information, refer to [Section 309-00](#).
3.  **CAUTION:** Index-mark (color paint) the bolts, washers, nuts, and the flex coupling to the transmission flange and the pinion flange to make sure they are installed in the same location. Components not assembled in their original locations can cause driveshaft imbalance.

Index-mark the front driveshaft pinion flange.

4.  **CAUTION:** Do not remove the bolts retaining the flex coupling to the driveshaft.

Remove the three nuts, washers and bolts.

5. Slide the front portion of the driveshaft toward the rear of the vehicle.

6. Support the transmission with a transmission jack.

7. Remove the bolt.

8. Remove the bolts.

9. Disconnect the shift cable.

10. Remove the nut and discard.

11. Using the special tool, remove the output flange.

12.  **CAUTION:** The parking pawl, parking pawl return spring and parking pawl shaft could fall out during removal of the extension housing.

Remove the extension housing.

13. Remove and discard the extension housing gasket.

Installation

1. Clean the extension housing and install new extension housing gasket. Make sure that the park pawl is installed correctly.

2.  **CAUTION:** Make sure the parking lever actuating rod is correctly seated into the case parking rod guide cup.

Install the extension housing.

3. Install the shift cable.

4. Install the rear mount.

5. Install the rear mount.

6. Using the special tools, install the output flange.

7. Install a new nut.

8.  **CAUTION: Align the index marks or driveshaft imbalance can occur.**

Align the index marks on the pinion flange made during removal and position the driveshaft in place.

9.  **CAUTION: Install the bolts, washers and nuts in their original positions or driveshaft imbalance can occur. Install the driveshaft flex coupling bolts with the head of the bolt seated against the flange, and the nuts seated against the flex coupling. Install the short bolts in the front and the long bolts in the rear.**

Install the bolts, washers and nuts.

- Coat the nut and bolt threads with threadlock sealer.

10. Install the exhaust heat shield. For additional information, refer to [Section 309-00](#).
11. Fill the transmission to the correct fluid level and check for correct transmission operation. For additional information, refer to [Transmission Fluid Level Check](#) in this section.
-

Solenoid Body Assembly

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

Removal

1. **NOTE:** When the battery is disconnected or a new battery installed, certain transmission operating parameters can be lost. The powertrain control module (PCM) must relearn these parameters. During this learning process, you may experience slightly firm shifts, delayed, or early shifts. This operation is considered normal and will not affect the function of the transmission. Normal operation will return once these parameters are stored by the PCM.

Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).

2. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
3. Drain the transmission fluid.

4. Remove the converter housing plug.

5. Remove the drain plug.

6. Remove the shift cable bracket.

7. **NOTE:** Clean the area around connector to prevent contamination of the solenoid body connector.

Disconnect the transmission connector.

8. Disconnect the digital transmission range (TR) sensor connector.

9. **NOTE:** The transmission fluid pan gasket is reusable. Clean and inspect for damage. If not

damaged, the gasket should be reused.

Remove the transmission fluid pan and gasket.

10. Remove the transmission fluid filter.

11. Disconnect the reverse pressure switch connector.

12. Remove the solenoid body.

Installation

1. Install new O-ring seals on the solenoid body connector. Lubricate the O-ring seals with clean automatic transmission fluid.

2.  **CAUTION:** Inspect the transmission case bore to make sure it is free of foreign material and not damaged. If damaged, a transmission leak can result.

Install the solenoid body. Tighten the bolts in sequence shown.

3. Connect the reverse pressure switch connector.

4.  **CAUTION:** Lubricate the fluid filter O-ring seals with clean automatic transmission fluid or seals may be damaged.

NOTE: Make sure that the fluid filter O-ring seals are correctly seated on the filter.

Lubricate the seals and install the transmission fluid filter.

5. **NOTE:** The transmission fluid pan gasket is reusable. Clean and inspect for damage. If not damaged, the gasket should be reused.

Install the transmission fluid pan and gasket and loosely install the screws.

6. Using a crisscross sequence, tighten the screws.

7. Reconnect the digital TR sensor connector.

8. **NOTE:** A new converter drain plug must be used to prevent leakage.

Install the drain plug.

9. Install the converter housing access plug.

10.  **CAUTION:** Damage to the solenoid body assembly can result if the screw is tightened above the specification.

NOTE: Always install new O-ring seals on vehicle harness connector.

NOTE: Clean the area around connector to prevent contamination of the solenoid body connector.

NOTE: Use petroleum jelly to lubricate the O-ring seals to aid in the installation process.

Install and lubricate new O-ring seals on the transmission connector and connect the connector.

11. Install the shift cable bracket.

12. **NOTE:** When the battery is disconnected or a new battery installed, certain transmission operating parameters can be lost. The powertrain control module (PCM) must relearn these parameters. During this learning process, you may experience slightly firm shifts, delayed, or early shifts. This operation is considered normal and will not affect the function of the transmission. Normal operation will return once these parameters are stored by the PCM.

Connect the battery ground cable. For additional information, refer to [Section 414-01](#).

13. Fill the transmission to the correct fluid level and check for correct transmission operation. For additional information, refer to [Transmission Fluid Level Check](#) in this section.
-

Digital Transmission Range (TR) Sensor

Special Tool(s)

 ST1633-A	Alignment Gauge, TR Sensor 307-351 (T97L-70010-A)
---	--

Material

Item	Specification
Premium Long Life Grease XG-1-C	ESA-M1C75-B
Threadlock and Sealer E2FZ-19554-B	WSK-M2G351-A6

Removal

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Remove the three-way catalytic converter. For additional information, refer to [Section 309-00](#).
3. Remove the eight retainers and the heat shield.

4.  **CAUTION:** Index-mark (color paint) the bolts, washers, nuts, and the flex coupling to the transmission flange and the pinion flange to assure assembly in the exact same location. Components not assembled in their original locations can cause driveshaft imbalance.

Index-mark the components.

- Using the special tools, loosen the nut.

-  **CAUTION:** Do not remove the bolts retaining the flex coupling to the driveshaft.

NOTE: The bolt heads are serrated. Hold the bolt and loosen the nut.

Remove the three nuts, washers and bolts.

- Slide the front shaft assembly rearward and support.
 - Tighten the nut to prevent separation of the front and rear shaft assemblies.

8.  **WARNING: Secure the transmission to the transmission jack with a safety chain.**
Failure to follow these instructions may result in personal injury.

Support the transmission with a transmission jack.

9. Remove the transmission mount and lower the transmission enough to gain access to the digital transmission range (TR) sensor.

10. Disconnect the shift cable.

11. Disconnect the digital TR sensor connector.

12. Remove the digital TR sensor.

Installation

1.  **CAUTION:** The digital transmission range sensor must fit flush against the boss on the case to prevent damage to the sensor.

Install the digital TR sensor and loosely install the screws.

2.  **CAUTION:** Tightening one screw before tightening the other may cause the sensor to bind or become damaged.

NOTE: The manual lever must be in the Neutral position.

Using the special tool, align the digital TR sensor and tighten the screws in an alternating sequence.

3. Reconnect the digital TR sensor connector.

4. Connect the shift cable.

5. Install the rear mount.

6. Verify that the shift cable is adjusted. For additional information, refer to [Section 307-05](#).
7. Add one gram of grease to both alignment bushing cavities.

- Loosen the nut and slide the front shaft assembly forward.

-  **CAUTION: Align the index marks or driveshaft imbalance can occur.**

Align index marks and position the alignment bushing on the transmission flange piloting system.

-  **CAUTION: Install the bolts, washers and nuts in their original positions or driveshaft imbalance can occur. Install the driveshaft flex coupling bolts with the head of the bolt seated against the flange, and the nuts seated against the flex coupling. Install the short bolts in the front and the long bolts in the rear.**

NOTE: The bolt heads are serrated. Hold the bolt and tighten the nut.

Install the bolts, washers and nuts. Coat the nut and bolt threads with threadlock sealer.

- Using the special tools, tighten the nut.

12. Install the heat shield.

13. Install the three-way catalytic converter. For additional information, refer to [Section 309-00](#).
 14. Lower the vehicle.
-

Reverse Servo Assembly

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM, XT-5-DM	MERCON® V

Removal

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Drain the transmission fluid.

3. Remove the converter housing plug.

4. Remove the drain plug.

5. Remove the shift cable bracket.

6. **NOTE:** The transmission fluid pan gasket is reusable, clean and inspect for damage; if not damaged, the gasket should be reused.

Remove the transmission fluid pan and gasket.

7. Remove the transmission fluid filter.

8. Remove the reverse servo.

Installation

1. Install the reverse servo.
 - Install the bolts in the sequence shown.

2.  **CAUTION:** Lubricate the fluid filter O-ring seals with clean automatic transmission fluid or seals may be damaged.

NOTE: Make sure that the fluid filter O-ring seals are correctly seated on the filter.

Lubricate the seals and install the transmission fluid filter.

3. **NOTE:** The transmission fluid pan gasket is reusable, clean and inspect for damage; if not damaged, the gasket should be reused.

Install the transmission fluid pan and gasket and loosely install the screws.

- Using a crisscross sequence, tighten the screws.

- NOTE:** A new converter drain plug must be used to prevent leakage.

Install the drain plug.

- Install the converter housing access plug.

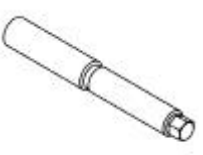

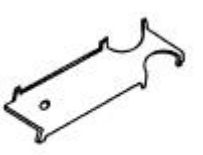

- Install the shift cable bracket.

8. Lower the vehicle.
 9. Fill the transmission to the correct fluid level and check for correct transmission operation. For additional information, refer to [Transmission Fluid Level Check](#) in this section.
-

Park System

Special Tool(s)

 <p>ST2415-A</p>	Remover, Output Flange 307-408
 <p>ST2416-A</p>	Installer, Output Shaft Flange 307-404
 <p>ST1633-A</p>	Alignment Gauge, TR Sensor 307-351 (T97L-70010-A)
 <p>ST2440-A</p>	Installer, Drive Pinion Flange 205-479

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM, XT-5-DM	MERCON® V

Removal

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Drain the transmission fluid.

3. Remove the converter housing plug.

4. Remove the drain plug.

5. Remove the exhaust heat shield. For additional information, refer to [Section 309-00](#).

6.  **CAUTION:** Index-mark (color paint) the bolts, washers, nuts, and the flex coupling to the transmission flange and the pinion flange to make sure they are installed in the same location. Components not assembled in their original locations can cause driveshaft imbalance.

 **CAUTION:** Do not remove the bolts retaining the flex coupling to the driveshaft.

Index-mark the front driveshaft pinion flange. Remove the three nuts, washers and bolts.

7. Slide the front portion of the driveshaft toward the rear of the vehicle.

8.  **WARNING:** Secure the transmission to the transmission jack with a safety chain. Failure to follow these instructions may result in personal injury.

Support the transmission with a transmission jack.

9. Remove the shift cable bracket.

10. Remove the transmission mount.

11. Disconnect the shift cable.

12. Disconnect the digital transmission range (TR) sensor connector.

13. **NOTE:** The transmission fluid pan gasket is reusable, clean and inspect for damage; if not damaged, the gasket should be reused.

Remove the transmission fluid pan and gasket.

14. Remove the transmission fluid filter.

15. Remove the digital TR sensor.

16. Remove the manual control valve detent spring.

17.  **CAUTION:** To avoid damage, make sure the wrench does not strike the manual valve inner lever pin.

Remove the nut.

18. Remove the manual lever shaft retaining pin.

19. Partially remove the manual control lever shaft.

20. Disconnect the manual valve inner lever from the parking lever actuating rod.

21. Remove the manual valve inner lever.

22. Remove the nut and discard.

23. Using the special tool, remove the output shaft flange.

24. **NOTE:** If damage is found to the parking gear, the transmission must be removed and disassembled.

NOTE: The parking pawl, parking pawl return spring and parking pawl shaft may fall out during removal of the extension housing.

Remove the extension housing.

25. Remove and discard the gasket. Inspect the parking pawl, parking pawl return spring, and the parking pawl shaft. Discard components if damaged or worn.

26. Remove the parking lever actuating rod.

Installation

1. Install the parking lever actuating rod.

2. Install the manual control lever.

3. Assemble the manual valve inner lever and parking lever actuating rod as shown.

4.  **CAUTION:** Align the flats on the manual valve inner lever with the flats on the manual control lever shaft.

Align the flats of the manual inner lever with the flats on the manual control lever shaft. Install the manual valve inner lever and parking lever actuating rod onto the manual control lever shaft.

5. Install the manual valve inner lever onto the manual shaft and loosely install the nut.

6.  **CAUTION:** Use care not to damage the fluid pan rail surface when installing the retaining pin.

NOTE: Align the manual control lever shaft alignment groove with the manual control lever shaft spring pin bore in the transmission case.

Install the manual control lever shaft spring pin.

- Tap the manual control lever shaft spring pin into the transmission case.

7.  **CAUTION:** To avoid damage, do not allow the wrench to strike the manual valve inner lever pin.

Tighten the nut.

8. Install the manual valve detent spring.

9. Clean the extension housing and install a new extension housing gasket. Make sure that the parking pawl is correctly installed.

10.  **CAUTION:** Make sure the parking lever actuating rod is correctly seated into the case parking rod guide cup.

Install the extension housing.

11.  **CAUTION:** Lubricate the fluid filter O-ring seals with clean automatic transmission fluid or seals may be damaged.

NOTE: Make sure that the fluid filter O-ring seals are correctly seated on the filter.

Lubricate the seals and install the transmission fluid filter.

12. **NOTE:** The transmission fluid pan gasket is reusable, clean and inspect for damage; if not damaged, the gasket should be reused.

Install the transmission fluid pan and gasket and loosely install the screws.

13. Using a crisscross sequence, tighten the screws.

14.  **CAUTION:** The digital transmission range sensor must fit flush against the boss on the case to prevent damage to the sensor.

Install the digital TR sensor and loosely install the screws.

15.  **CAUTION:** Tightening one screw before tightening the other may cause the sensor to bind or become damaged.

NOTE: The manual lever must be in the Neutral position.

Using the special tool, align the digital TR sensor and tighten the screws in an alternating sequence.

16. Reconnect the digital TR sensor connector.

17. **NOTE:** A new converter drain plug must be used to prevent leakage.

Install the drain plug.

18. Install the converter housing access plug.

19. Install the shift cable.

20. Install the rear mount.

21. Install the rear mount.

22. Install the shift cable bracket.

23. Using the special tools, install the output flange.

24. Install a new nut.

25.  **CAUTION: Align the index marks or driveshaft imbalance can occur.**

Align the index marks on the pinion flange made during removal and position the driveshaft in place.

26.  **CAUTION:** Install the bolts, washers and nuts in their original positions or driveshaft imbalance can occur. Install the driveshaft flex coupling bolts with the head of the bolt seated against the flange, and the nuts seated against the flex coupling. Install the short bolts in the front and the long bolts in the rear.

Install the bolts, washers and nuts.

- Coat the nut and bolt threads with threadlock sealer.

27. Install the exhaust heat shield. For additional information, refer to [Section 309-00](#).
28. Fill the transmission to the correct fluid level and check for correct transmission operation. For additional information, refer to [Transmission Fluid Level Check](#) in this section.
-

Transmission Support Insulator

Removal and Installation

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Support the transmission with a transmission jack.
3. Remove the bolts.

4. To install, reverse the removal procedure.
-

Transmission

Special Tool(s)

NOTE: If the transmission is to be removed for a period of time, support the engine with a safety stand and a wood block.

1. **NOTE:** When the battery is disconnected or a new battery installed, certain transmission operating parameters can be lost. The powertrain control module (PCM) must relearn these parameters. During this learning process, you may experience slightly firm shifts, delayed, or early shifts. This operation is considered normal and will not affect the function of the transmission. Normal operation will return once these parameters are stored by the PCM.

Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).

2. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
3. Remove the three-way catalytic converter. For additional information, refer to [Section 309-00](#).
4. Remove the eight retainers and the heat shield.

5. **CAUTION:** Index-mark (color paint) the bolts, washers, nuts, and the flex coupling to the transmission flange and the pinion flange to make sure they are installed in the same location. Components not assembled in their original locations can cause driveshaft imbalance.

Index-mark the components.

- Using the special tools, loosen the nut.

-  **CAUTION:** Do not remove the bolts retaining the flex coupling to the driveshaft.

NOTE: The bolt heads are serrated. Hold the bolt and loosen the nut.

Remove the three nuts, washers and bolts.

- Slide the front shaft assembly rearward and support.
 - Tighten the nut to prevent separation of the front and rear shaft assemblies.

9. If transmission disassembly is necessary, drain the transmission fluid. For additional information, refer to [Transmission Fluid Drain and Refill—Automated Equipment](#), [Transmission Fluid Drain and Refill—Vehicles With Torque Converter Drain Plug](#) or [Transmission Fluid Drain and Refill—Vehicles Without Torque Converter Drain Plug](#) in this section.

10.  **WARNING: Secure the transmission to the transmission jack with a safety chain. Failure to follow these instructions can result in personal injury.**

Support the transmission with a transmission jack.

11. Remove the transmission mount.

12. Remove the transmission mount.

13. Disconnect the shift cable.

14. Lower the transmission enough to gain access to the sensors. Disconnect the turbine shaft speed (TSS) sensor, output shaft speed (OSS) sensor and intermediate shaft speed (ISS) sensor electrical connectors.

15. Remove the screw from the harness.

16. **NOTE:** Clean the area around connector to prevent contamination of the solenoid body connector.

Disconnect the transmission connector.

17. Disconnect the harness retainer.

18. Disconnect the harness retainer.

19. Remove the heated oxygen sensor (HO2S) connector.

20. Remove the shifter cable bracket.

21. Disconnect the shifter cable from the manual lever.

22. Disconnect the digital transmission range (TR) sensor connector.

23. **NOTE:** V8 application shown; V6 application similar.

Disconnect the transmission cooler line bracket.

24.  **CAUTION: Do not damage the cooler tubes.**

Disconnect the transmission cooler tubes.

25. On 3.0L engines only, remove the starter motor. For additional information, refer to [Section 303-06](#).
26. Remove the access cover.

27. **NOTE:** Make an identifying mark on the nut, stud and adapter plate to allow for correct installation.

Remove the nuts.

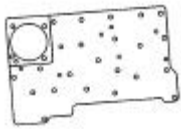

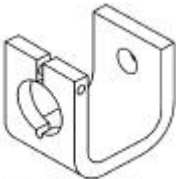

28. Remove the bolts.

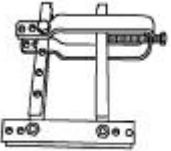

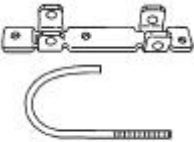

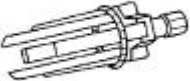

29. Lower the transmission from the vehicle.
 30. Backflush and clean the transmission fluid cooler. For additional information, refer to [Section 307-02](#).
-

Transmission

Special Tool(s)

 ST2408-A	Air Test Plate, Transmission 307-405
 ST2417-A	Remover, Input Shaft Oil Seal 308-375
 ST2418-A	Remover, Transmission Fluid Pump 307-397
 ST2424-A	Compressor, Cushion Spring 307-401
 ST1104-B	Retaining Ring Pliers 307-343 (T95P-77001-AHR)
 ST2415-A	Remover, Output Flange 307-408
 ST1186-A	Holding Fixture, Transmission 307-003 (T57L-500-B)
	Slide Hammer 100-001 (T50T-100-A)

 <p>ST1185-A</p>	
 <p>ST1758-A</p>	<p>Remover, Torque Converter Fluid Seal 307-309 (T94P-77001-BH)</p>
 <p>ST2393-A</p>	<p>Compressor, Servo Cover 307-402</p>
 <p>ST1631-A</p>	<p>Handle, Torque Converter 307-091 (T81P-7902-C)</p>
 <p>ST1213-A</p>	<p>Remover, Bushing 307-001 (TOOL-1175-AC) or equivalent</p>

1. Place the transmission on a workbench.

2. If vehicle is equipped, remove the torque converter adapter plate assembly.
3. **NOTE:** Make an identifying mark on the nut, stud, and adapter plate to allow for correct installation.

If the vehicle is equipped and installation of a new or remanufactured torque converter is necessary, remove the torque converter adapter plate.

4.  **WARNING:** The torque converter is heavy, especially when full of fluid.

Using the special tools, remove the torque converter.

5.  **WARNING:** The torque converter is heavy, especially when full of fluid.

NOTE: If not installing a new torque converter leave the adapter bolted to the torque.

Using the special tools, remove the torque converter and adapter plate as an assembly.

6. Remove the input shaft.

7. Remove the sensors.

8. Remove the digital transmission range (TR) sensor.

9. Remove and discard the nut.

10. Using the special tool, remove the output shaft flange.

11. Using the special tools, remove the extension housing seal.

12.  **CAUTION:** The parking pawl, parking pawl return spring and parking pawl shaft could fall out during removal of the extension housing.

Remove the extension housing.

13. Remove the parking pawl assembly and discard the gasket.
 1. Remove the parking pawl shaft.
 2. Remove the parking pawl.
 3. Remove the parking pawl return spring.
 4. Remove and discard the gasket.

14. **NOTE:** The transmission fluid pan gasket is reusable. Clean and inspect the gasket for damage. If not damaged, the gasket should be reused.

Remove the transmission fluid pan and gasket.

15. Remove the transmission fluid filter and discard.

16. Remove the manual control valve detent spring.

17. Disconnect the reverse pressure switch connector.

18. Remove the reverse pressure switch and discard.

19. Remove the valve body cover plate and gasket. Discard the gasket.

20. Remove the reverse servo assembly.

21.  **CAUTION: Do not damage solenoid body connector pins.**

Remove the solenoid body assembly by lifting on the body and pushing the connector from the other side of the case.

22. Remove the main control valve body, separator plate, and gasket.

23. Remove the intermediate clutch spring and seal.

24. Using the special tools, remove the converter hub seal.

25.  **CAUTION:** Failure to loosen the OD band adjusting screw prior to pump removal may cause damage to the pump and OD band.

 **CAUTION: Throw the locknuts away. The locknuts are not reusable for assembly.**

Remove the locknuts, and loosen the OD band adjusting screw.

26. Remove the OD anchor strut.

27.  **CAUTION: The screws are not reusable for assembly. Discard the screws. If the screws are reused the housing may become separated from the transmission.**

Remove and discard the screws.

28. Install the special tool.

29. Using the special tools, remove the pump.

30.  **CAUTION: Servo cover is under spring tension.**

Using the special tool, remove the intermediate servo cover retaining ring and cover.

31. Remove the intermediate band servo piston and spring.

32.  **CAUTION: Servo cover is under spring tension.**

Using the special tool, remove the overdrive servo cover retaining ring and cover.

33. Remove the front band servo piston and spring.

34. Remove the screw.

35. **NOTE:** Tag and identify parts for reassembly.

Compress the overdrive band and remove the apply strut.

36. Remove the overdrive band.

37. Remove the overdrive brake and coast clutch drum.

38.  **CAUTION: Do not bend trigger wheel.**

NOTE: The No. 2 thrust bearing is in this assembly.

Remove the planetary gear overdrive carrier.

39. Remove the overdrive planet thrust bearing (No. 2).

40. Remove the overdrive ring gear, overdrive one-way clutch assembly, and center shaft as an assembly.

41. **NOTE:** Tag and identify the center shaft thrust bearing (No. 3) for assembly.

Remove the No. 3 center shaft thrust bearing.

42.  **CAUTION:** The center support locknut could fall into the remaining assembly if not removed.

Remove the screw.

43. Remove the locknut and cage.

44. Remove the center support retaining ring.

45. **NOTE:** When removing the center support, pull evenly around the center support web.

Remove the center support.

46. **NOTE:** Tag and identify the No. 4 intermediate brake drum thrust bearing.

Remove the intermediate brake drum thrust bearing (No. 4).

47. Remove the intermediate band anchor strut.

48.  **CAUTION:** Identify the anchor and apply ends of the intermediate band.

Remove the intermediate band.

49. Remove the intermediate band apply strut.

50. Remove the screw.

51. **NOTE:** The No. 5 forward clutch cylinder thrust bearing may come out with the intermediate brake and direct clutch drum.

Remove the direct clutch drum.

52. Remove the No. 5 forward clutch cylinder thrust bearing, tag and identify.

53. **NOTE:** The No. 6A thrust bearing may come out with the cylinder. Tag for reassembly.

Remove the forward clutch cylinder.

54. **NOTE:** The No. 6A forward ring gear hub thrust bearing may have come out with the forward clutch cylinder.

Remove the No. 6A forward ring gear hub thrust bearing.

55. **NOTE:** The No. 7 forward planet thrust bearing may come out with the forward ring gear and hub assembly.

Remove the forward ring gear and hub as an assembly.

56. Remove the No. 6B forward clutch thrust washer from the forward ring gear hub.

57. **NOTE:** The No. 7 forward planet thrust bearing may come out with the forward ring gear and hub assembly.

Remove the No. 7 forward planet thrust bearing.

58. Remove the forward planetary assembly.

59. Remove the input shell and sun gear assembly.

60. Rotate the intermediate one-way clutch sprag and race to disassemble.

61. Install the special tool.

62. Install the special tool.

63. Using the special tools, remove the intermediate clutch retaining ring.

64. Remove the intermediate clutch housing and piston assembly.

65. Remove the intermediate clutch piston spring, clutch plates, and cylinder as an assembly.

66. Remove the low and reverse gear spacer.

67. **NOTE:** Tag and identify the No. 8 low/reverse planetary carrier thrust bearing.

Remove the thrust bearing.

68. Remove the retaining ring.

69. Remove low/reverse planetary assembly.

70. **NOTE:** Tag and identify the No. 9 low/reverse planetary carrier thrust bearing.

Remove the thrust bearing.

71. **NOTE:** Use slots located around the outside of the sleeve.

Using a small pick, remove the output shaft sleeve.

72. **⚠ WARNING:** The output shaft may fall out after removing the snap ring. Failure to follow these instructions may result in personal injury.

⚠ CAUTION: Discard the output shaft retaining ring. A new retaining ring must be used for assembly.

While holding the output shaft remove and discard the output shaft retaining ring.

73. Remove the output shaft ring gear and hub.

74. Remove the No. 10 low intermediate sun gear bearing.

75. Remove the reverse band actuating lever shaft.

76. Remove the reverse band actuating lever assembly.

77. **NOTE:** The inner race of the rear one-way clutch is not removable. It is repaired in the case.

Remove the low/reverse brake drum and one-way clutch assembly by rotating it clockwise.

78. Remove the reverse band.

79. Remove the output shaft and park gear.

80. **NOTE:** Tag and identify the No. 11 output shaft thrust washer.

Remove the output shaft thrust washer.

81.  **CAUTION:** To avoid damage, make sure the wrench does not strike the manual valve inner lever pin.

Remove the nut.

82. Remove the manual lever shaft retaining pin.

83. Remove the manual control lever shaft.

84. Disconnect the manual valve inner lever from the parking lever actuating rod.

85. Remove the manual valve inner lever.

86. Remove the parking lever actuating rod.

87.  **CAUTION: Do not damage the bore.**

Remove the manual control lever seal.

Main Control Valve Body

Special Tool(s)

	Aligner, Valve Body 307-334 (T95L-70010-C) (2 req'd.)
ST1639-A	

Item	Part Number	Description
1	7F445	Clip — retainer
2	7D374	Plug — retainer
3	7M094	Valve assembly— thermo

4	7L367	Valve — fluid cooler bypass
5	7M116	Spring — fluid cooler bypass
6	7E336	Plate
7	7G489	Spring — coast clutch control
8	7G490	Valve — coast clutch control
9	7G490	Valve — coast clutch control
10	7E336	Plate
11	7M189	Valve — overdrive servo control
12	7M193	Spring — overdrive servo control valve
13	7M445	Clip — retainer
14	7D374	Plug — retainer
15	7M095	Valve — modulator
16	7M104	Spring — modulator valve
17	7F445	Plug — retainer
18	7D374	Clip — retainer
19	7F259	Valve — 4-3 ISR downshift control
20	7F260	Spring — 4-3 ISR control valve
21	7F445	Plug — retainer
22	7D374	Clip — retainer
23	7M188	Valve — 4-3 pre-stroke intermediate band control
24	7G289	Spring — 4-3 pre-stroke intermediate band control valve
25	7F445	Clip — retainer
26	7D374	Plug — retainer
27	7G317	Valve — reverse engagement
28	7D312	Spring — reverse engagement valve
29	7D374	Plug — retainer
30	7D335	Retainer — wire
31	7M187	Valve — high clutch control
32	7M192	Spring — high clutch control valve
33	7F445	Clip — retainer
34	7D374	Plug — retainer
35	7M095	Valve — reverse modulator
36	7M104	Spring — reverse modulator valve
37	7E336	Plate
38	7M191	Spring — rear servo control valve
39	7M098	Valve — rear servo control
40	7E336	Plate
41	7D002	Sleeve
42	7D003	Valve — booster
43	7D003	Valve — booster

44	7A270	Spring — outer
45	7H149	Spring and retainer assembly
46	7C388	Valve — main regulator
47	7F445	Retainer — clip
48	7D374	Retainer — plug
49	7L317	Spring — reverse inhibition valve
50	7L316	Valve — reverse inhibition
51	7E445	Retainer — clip
52	7D374	Retainer — plug
53	7G411	Spring — solenoid regulator valve
54	7G473	Valve — solenoid regulator
55	7340	Valve — manual
56	7F445	Retainer — clip
57	7D374	Retainer — plug
58	7M099	Spring — select valve
59	7M186	Spring — select
60	7F445	Retainer — clip
61	7D374	Retainer — plug
62	7M095	Valve — modulator
63	7M104	Spring — modulator valve
64	7F445	Retainer — clip
65	7D374	Retainer — plug
66	7G312	Spring — forward engagement control valve
67	7D317	Valve — forward engagement control
68	7E335	Retainer — wire
69	7D374	Retainer — plug
70	7M190	Spring — back pressure
71	7M185	Valve — converter clutch back pressure
72	7E335	Retainer — wire
73	7D002	Sleeve — converter clutch modulator control
74	7M184	Valve — converter clutch modulator control
75	7G307	Valve — converter clutch modulator
76	7G316	Spring — converter clutch modulator control
77	7F445	Retainer — clip
78	7D374	Retainer — plug
79	7L318	Valve — converter clutch control
80	7L490	Spring — converter clutch control valve
81	7Z490	Plate assembly — main control valve body separator
82	7E195	Ball — lubrication check
83	7E195	Ball — shuttle valve
84	7E368	Valve — limit

85	7E340	Spring — limit valve
86	7A101	Body — control valve lower
87	7H173	Gasket — valve body cover plate
88	7C034	Plate — valve body cover
89	W701099-S1430	Screw — separator plate

Disassembly

1. **NOTE:** The valve body separator plate has a bonded gasket.

Remove the valve body separator plate.

2. Remove the pressure control limit relief valve and spring.

3. **NOTE:** Some early production transmissions will have three check balls and some late production transmissions will only have two check balls.

Remove the check balls.

4. **NOTE:** Refer to the disassembled view.

Disassemble the main control valve body.

Assembly

1.  **CAUTION: Do not lose parts when cleaning or repairing.**

Thoroughly clean all parts in solvent and blow dry with moisture-free compressed air.

2.  **CAUTION: Do not stone, file, or sand the valves. This will remove the anodized finish and may result in further main control or transmission damage.**

After cleaning the main control valve body, carry out the following.

- Inspect all valve and plug bores for scoring or burrs.
 - Check all fluid passages for obstructions.
 - Inspect all valves and plugs for burrs.
 - Inspect all mating surfaces for burrs or distortion.
 - Inspect all springs for distortion.
 - Check all valves and plugs for free movement in their respective bores.
 - Valves and plugs, when dry, must fall from their own weight into their respective bores.
 - Roll the manual valve on a flat surface to check for a bent condition.
3. Assemble the main control valve body.
 4. **NOTE:** Some early production transmissions will have three check balls and some late production transmissions will only have two check balls.

Install the main control valve body check balls.

5. Install the pressure control limit relief valve and spring.

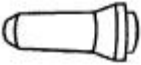

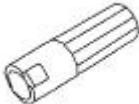

6. **NOTE:** Use a new valve body separator plate for main control valve body installation.

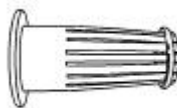

Using the special tools, install the main control valve body separator plate.

Fluid Pump

Special Tool(s)

 <p>ST1833-A</p>	<p>Installer, Torque Converter Fluid Seal 307-349 (T97T-77000-A)</p>
 <p>ST1817-A</p>	<p>Alignment Set, Fluid Pump 307-S039 (T74P-77103-X)</p>
 <p>ST2532-A</p>	<p>Alignment Gauge, Transmission Fluid Pump 307-431</p>
 <p>ST2533-A</p>	<p>Alignment Gauge, Transmission Fluid Pump 307-432</p>
 <p>ST1826-A</p>	<p>Sizer, Piston Seal 307-338 (T95L-70010-G)</p>
 <p>ST2419-A</p>	<p>Alignment Pins, Transmission Fluid Pump 307-398</p>
 <p>ST2684-A</p>	<p>Transmission Fluid Pump Seal Aligner 307-451/1</p>
	<p>Transmission Fluid Pump Seal Sizer 307-451/2</p>

 ST2685-A	
 ST2686-A	Transmission Fluid Pump Seal Installer 307-451/3

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM	MERCON® V

Disassembly

1. Remove the fluid pump gasket, fluid pump seal ring, and the No.1 thrust washer.
 1. Remove and discard the fluid pump gasket.
 2. Remove and discard the fluid pump seal ring (square cut).
 3. Remove and tag the No.1 thrust washer.

2. Remove the fluid pump support seal ring.

3. Remove the seal rings.

4. Remove the fluid pump housing.

5. **NOTE:** A rough casting on the pump surface crescent is not a flaw.

NOTE: The fluid pump gears are part of the pump assembly and are not repaired separately.

Remove the fluid pump gears.

6. Remove the drive gear O-ring seal and discard. Inspect the fluid pump gears for cracks and scoring.

7. Inspect the overdrive pump.

- Inspect the overdrive pump support gear pockets for scoring and wear.
- Clean and inspect the overdrive and rear input shaft bushings.

8. Inspect the fluid pump adapter plate for scoring and wear.

9. Remove the valve.

10. Inspect the fluid pump to converter housing bushing.

Assembly

1. **NOTE:** Minor burrs and scoring may be removed with crocus cloth. If damage is found, install a new assembly.

Inspect the fluid pump components for the following:

- Pump body and case for burrs.
- Fluid passages for obstructions.

2. **NOTE:** Check and make sure that the garter spring in the seal has not popped off of the converter hub seal.

Install a new seal onto the special tool.

3. Using the special tool, install the converter hub seal.

4. Install a new O-ring seal in fluid pump drive gear.

5.  **CAUTION:** Lubricate the special tool with multi-purpose grease.

Using the special tool, seat the O-ring seal in the pump gear.

6.  **CAUTION:** The chamber on the inside edge of the small gear must be up when in the pump housing gear pocket. The dimple on the larger gear must be down when in the pump housing gear pocket.

Install the pump gears into the fluid pump housing. Apply multi-purpose grease to pump gear to prevent scoring at start-up.

7. Install a new seal on the valve.

8. Install the valve.

9. First install the fluid pump adapter plate and then the alignment pins in their correct locations.

10. **⚠ CAUTION: The special tools must be used to correctly align the pump with the adapter plate to reduce gear noise, bushing failure and leakage.**

Using the special tool, align the fluid pump to the adapter plate.

11. Using the special tools, assemble the pump.

12. Loosely install the fluid pump housing screws in their correct locations and remove the special

tools.

13. Install the two remaining screws.

14. Tighten all of the fluid pump screws in a star pattern.

15. Install a new fluid pump seal ring.

16. Install new seal rings.

17. **⚠ CAUTION: Be careful not to overstretch the seal ring past the seal ring groove. Damage to the seal will occur.**

Using the special tools, install the fluid pump seal ring.

18. **⚠ CAUTION: Failure to correctly size the seal will damage the seal when the torque converter is installed.**

Using the special tool, size the seal to the correct size. Leave the special tool on the seal for two minutes to obtain the correct seal size.

19. **⚠ CAUTION: Verify correct seal installation. Make sure seal grooves are clean and free of burrs.**

Install the seal.

Overdrive Brake and Coast Clutch Drum Assembly

Special Tool(s)

 <p>ST1190-A</p>	Compressor, Clutch Spring 307-015 (T65L-77515-A)
 <p>ST2431-A</p>	Protector, Piston Seal 307-049 (T74P-77404-A)

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM, XT-5-DM	MERCON® V

Overdrive Brake and Coast Clutch Drum Assembly

Item	Part Number	Description
1	7L669	Overdrive brake and coast clutch drum
2	7A548	Direct and overdrive piston outer seal ring
3	7D404	Direct and overdrive piston inner seal ring
4	7A262	Direct and overdrive clutch piston
5	7A480	Direct and overdrive piston spring (20 req'd)

6	7A527	Direct/coast clutch piston spring retainer
7	E860125-S	Retaining ring
8	7B442	Coast clutch external plate — steel (2 Req'd)
9	7B164	Coast clutch internal plate — friction (2 Req'd)
10	7B066	Direct/coast clutch pressure plate
11	E860126S/129S	Retaining ring (select fit)

Disassembly

1. Remove the coast clutch pressure plate.
 1. Remove the coast clutch retaining ring.
 2. Remove the coast clutch pressure plate.

2. Remove the coast clutch disc pack.
 - Inspect for wear, install a new pack as necessary.

3.  **WARNING:** Use caution when releasing tool pressure on the rear clutch piston spring. Failure to follow these instructions may result in personal injury.

 **CAUTION:** Do not fully compress the special tool or damage to the spring retainer may occur.

Using the special tool, remove the coast clutch piston retaining ring.

4. Relieve the coast clutch spring tension and remove the special tool.
5. Remove the coast clutch piston springs.
 1. Remove the coast clutch piston retainer.
 2. Remove the clutch piston springs.

6.  **WARNING: Air pressure must not exceed 138 kPa (20 psi). Wear safety glasses when using compressed air, and make sure the drum is facing down as shown. Failure to follow these instructions may result in personal injury.**

Remove the coast clutch piston.

- Apply air pressure to the hole in the drum to remove the coast clutch piston while blocking the other hole with a finger.

7. Remove the coast clutch piston inner seal and the coast clutch piston outer seal.
 - Clean and install a new seal as necessary.

Assembly

1. Inspect the coast clutch components for damage or wear. Install new components as necessary.
 - Inspect the drum band surface, bushing, and thrust surfaces for damage.
 - Inspect the clutch piston bore, and piston.
 - Check the fluid passages for obstructions. All fluid passages must be clean and free of obstructions.
 - Inspect the clutch plates for damage.
 - Inspect the clutch springs.

2.  **CAUTION: The lip seals must be positioned as shown. Care must be taken to prevent rollover of the lip seal.**

Install the new coast clutch piston inner and outer seal.

3. Verify the check ball is free to move.

4.  **CAUTION: Care must be taken to prevent damage to the seals during installation.**

Using the special tool, install the coast clutch piston.

5. Install the coast clutch piston springs.
 1. Install the coast clutch piston springs.
 2. Install the coast clutch spring retainer.

6.  **CAUTION: Do not fully compress the special tool or damage to the coast clutch piston spring retainer may occur.**

Using the special tool, install the coast clutch piston spring retainer ring.

7.  **CAUTION: Coast clutch friction plates are directional and must be installed with grooves clockwise (I.D. to O.D.). The word "TOP" should face up.**

 **CAUTION: If new clutch plates are being used, they should be soaked in clean automatic transmission fluid for at least 30 minutes before assembly.**

When installing friction plates, the word "TOP" should face up. If reusing plates, grooves must be installed clockwise. Install the coast clutch disc pack.

8. Install the two steel clutch plates and two friction clutch plates in alternating order starting with a steel clutch plate.

9.  **CAUTION: The retaining ring is select fit.**

Install the coast clutch pressure plate.

1. Install the coast clutch pressure plate.
2. Install the original coast clutch retaining ring.

10.  **WARNING: Air pressure must not exceed 138 kPa (20 psi). Wear safety glasses when using compressed air, and make sure drum is facing down as shown. Failure to follow these instructions may result in personal injury.**

Air check the assembly.

- Apply air pressure to the hole in the drum while blocking the other hole with a finger.

11. Check the coast clutch disc pack free play.
 1. Push down on the coast pressure plate.
 2. Check clearance between the coast clutch retaining ring and coast pressure plate. Clearance should be 1.3-2.0 mm (.051-.079 in). If clearance is not within the specification, install a correct coast clutch retaining ring that will provide the correct free play adjustment.

Part Number	Thickness		Diameter	
	mm	In	mm	In

Direct Clutch Drum Assembly

Item	Part Number	Description
1	7D044	Intermediate brake drum assembly
2	7A548	Direct and overdrive piston outer seal ring
3	7D404	Direct and overdrive piston inner seal ring
4	7A262	Direct and overdrive clutch piston
5	7A480	Direct and overdrive piston spring (20 req'd)

6	7A527	Direct/coast clutch piston spring retainer
7	E860125-S	Retaining ring
8	7B442	Direct clutch external spline plate
9	7B164	Direct clutch internal spline plate
10	7B066	Direct/coast clutch pressure plate
11	E860126S/129S	Retaining ring (select fit)

Disassembly

1. Remove the direct clutch retaining ring and the direct clutch pressure plate.
 1. Remove the direct clutch retaining ring.
 2. Remove the direct clutch pressure plate.

2. Remove the direct clutch disc pack.
 - Inspect and install new friction plates if worn, damaged, or overheated.

3.  **WARNING:** After removing the retaining ring, use care when releasing the pressure on the springs. Failure to follow these instructions may result in personal injury.

⚠ CAUTION: Do not fully compress the special tool or damage to the spring retainer may occur.

Using the special tool, remove the direct clutch piston retaining ring.

4. Relieve the direct clutch spring tension and remove the special tool.
5. Remove the direct clutch piston spring retainer and the direct clutch piston springs.
 1. Remove the direct clutch piston spring retainer.
 2. Remove the direct clutch piston springs.

6. **⚠ WARNING: Air pressure must not exceed 138 kPa (20 psi). Wear safety glasses when using compressed air, and make sure the drum is facing down as shown. Failure to follow these instructions may result in personal injury.**

Using compressed air, remove the direct clutch piston from the direct clutch drum.

- Apply air pressure to the hole in the drum while blocking the other hole with a finger.

7. Remove the direct clutch piston inner and outer seal.
 1. Remove the direct clutch piston inner seal.
 2. Remove the direct clutch piston outer seal.

- Clean and install new components as necessary.

Assembly

1. Inspect the clutch components for damage or wear. Install new components as necessary.
 - Inspect the drum surface for damage.
 - Inspect the clutch piston bore, and piston.
 - Check the fluid passages for obstructions. All fluid passages must be clean and free of obstructions.
 - Inspect the clutch plates for damage.
 - Inspect the clutch springs.

2.  **CAUTION: The lip seals must be positioned as shown. Care must be taken to prevent rollover of the lip seal.**

NOTE: Use new seals to help prevent seal failures.

Install the new direct clutch piston inner seal and the direct clutch piston outer seal.

3. Verify the check ball is free to move.

4.  **CAUTION:** Care must be taken to prevent damage to the seals during installation.

Using the special tool, install the direct clutch piston.

5. Install the direct clutch piston springs and the retainer.

6. Relieve the direct clutch spring tension and remove the special tool.

7.  **WARNING:** After removing the retaining ring, use care when releasing the pressure on the springs. Failure to follow these instructions may result in personal injury.

 **CAUTION:** Do not fully compress the special tool or damage to the spring retainer may occur.

Using the special tool, install the direct clutch piston retaining ring.

8.  **CAUTION:** The direct clutch friction plates are directional and must be installed correctly. Alternate the internally splined (clockwise) and the externally splined (counterclockwise) clutch plates.

 **CAUTION:** If new plates are used, they should be soaked in clean automatic transmission fluid for at least 30 minutes before assembly.

When installing friction plates, alternate the internally splined (clockwise) and the externally splined (counterclockwise) clutch plates. Install the direct clutch disc pack.

9. Install the friction plates alternating the internally splined (clockwise) and the externally splined (counterclockwise) clutch plates starting with an externally splined (counterclockwise) clutch plate.

10.  **CAUTION:** The retaining ring is a select fit.

Install the direct clutch pressure plate using the original direct clutch retaining ring.

11.  **WARNING:** Air pressure must not exceed 138 kPa (20 psi). Wear safety glasses when using compressed air, and make sure drum is facing down as shown. Failure to follow these instructions may result in personal injury.

Air check the assembly.

- Apply air pressure to the hole in the drum while blocking the other hole with a finger.

12. Push down on direct clutch disc pack and check gap between the direct clutch retaining ring and the direct clutch pressure plate with a feeler gauge.
 - If specifications do not match use a select fit direct clutch retaining ring to match specifications and verify with a feeler gauge.

Direct Clutch

Part Number	Thickness		Diameter	
	mm	In	mm	In
E860126-S	1.37	0.0539	130.1	5.122
E860127-S	1.73	0.0681	130.1	5.122

 <p>ST1812-A</p>	Protector, Piston Seal 307-052 (T74P-77548-B)

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM, XT-5-DM	MERCON® V

Forward Clutch Assembly

Part	
------	--

Item	Number	Description
1	7M153	Forward clutch cylinder thrust bearing (no. 5)
2	7A360	Forward clutch cylinder assembly
3	7A548	Forward clutch piston inner seal ring
4	7A548	Forward clutch piston outer seal ring
5	7A262	Forward clutch piston
6	7B070	Forward clutch cushion spring
7	7C151	Forward clutch piston spring (15 req'd)
8	7A527	Forward clutch piston spring retainer
9	E860109-S	Forward clutch retaining ring
10	7B442	Forward clutch external plate-steel (vehicle-dependent)
11	7B164	Forward clutch internal plate- friction (vehicle-dependent)
12	7B066	Forward clutch pressure plate
13	7D483	Forward clutch retaining ring (select fit)

Disassembly

1. Remove the pressure plate.
 1. Remove the forward clutch retaining ring.
 2. Remove the pressure plate.

2. Remove the forward clutch disc pack.
 - Inspect the forward clutch plates for wear, damage or overheating.

3.  **WARNING:** Use caution when releasing tool pressure on the clutch piston springs. Failure to follow these instructions may result in personal injury.

 **CAUTION:** Do not fully depress the special tool or damage to the spring retainer may occur.

Using the special tool, remove the forward clutch piston retaining ring.

4. Relieve the forward clutch spring tension and remove the tool.
5. Remove the forward clutch piston spring retainer, springs, and cushion spring.
1. Remove the forward clutch piston spring retainer.
 2. Remove the forward clutch piston springs.
 - Inspect the forward clutch piston springs for distortion.

6. **⚠ WARNING:** Air pressure must not exceed 138 kPa (20 psi). Wear safety glasses when using compressed air. Make sure the cylinder is facing down as shown. Failure to follow these instructions may result in personal injury.

Remove the forward clutch piston.

1. Place the forward clutch cylinder with forward clutch piston facing down.
2. Install the center support on the forward clutch cylinder.
3. Apply air pressure to the left port of the center support.

7. Remove the cushion spring.

8. Remove and discard the forward clutch piston seals.
- Inspect the forward clutch piston for cracks.

9. Inspect the forward clutch drum assembly.
 1. Inspect the forward clutch cylinder surfaces for scores or burrs.
 2. Inspect forward clutch piston for scores or burrs.
 3. Verify the check ball is free to move in the piston.

Assembly

1. Inspect the clutch components for damage or wear. Install new components as necessary.
 - Check the fluid passages for obstructions. All fluid passages must be clean and free of obstructions.
 - Inspect the clutch plates for damage.
 - Inspect the clutch springs.
 - Inspect the needle bearing and seal rings for damage.
 - Check clutch hub thrust surfaces for damage.
 - Check clutch plates for flatness and fit on the clutch hub serrations.
2. Install new forward clutch piston seals.

3.  **CAUTION: Care must be taken to prevent damage to the seals.**

NOTE: Lubricate the forward clutch piston inner and outer seal with clean automatic transmission fluid.

Using the special tool, install the forward clutch piston into the forward clutch cylinder.

4. Install the forward clutch piston spring retainer.
 1. Install the forward clutch piston spring.
 2. Install the forward clutch piston spring retainer.

5.  **CAUTION:** Do not fully depress the clutch spring compressor or damage to the spring retainer may occur.

Using the special tool, install the forward clutch piston spring retaining ring.

6.  **CAUTION:** If there is evidence of clutch plate burning, install a new forward clutch cushion.

Install the forward clutch cushion spring.

7.  **CAUTION:** The forward clutch friction plates are directional and must be installed with grooves pointing counterclockwise.

 **CAUTION:** If new plates are used, they should be soaked in clean automatic transmission fluid for at least 30 minutes before assembly.

If reusing plates, grooves must be installed counterclockwise. Install the direct clutch disc pack.

8. Install the steel clutch plates and friction clutch plates in alternating order starting with a steel clutch plate.

9.  **CAUTION: The retaining ring is a select fit.**

Install the original selective retaining ring.

1. Install the forward clutch pressure plate.
2. Install the original selective retaining ring.

10.  **WARNING: Air pressure must not exceed 138 kPa (20 psi). Wear safety glasses when using compressed air. Make sure the cylinder is facing down as shown. Failure to follow these instructions may result in personal injury.**

Air check the forward clutch piston.

1. Place the forward clutch cylinder with forward clutch piston facing down.
2. Install the transmission center support on the forward clutch cylinder.
3. Apply air pressure to the left port of the center support.

11. Check forward clutch disc pack free play.
1. Press down on forward clutch disc pack.
 2. Using a feeler gauge, check the gap between the forward clutch retaining ring and the forward clutch pressure plate.
- If the clearance is not within specifications, install the correct size retaining ring.

Part Number	Thickness		Diameter	
	mm	In	mm	In
XW4Z-7D483-AB	1.73	.0681	141.45	5.65 in
XW4Z-7D483-AC	2.08	.0819	141.45	5.65 in
XW4Z-7D483-AD	2.44	.0961	141.45	5.65 in

Overdrive Planetary and One-Way Clutch Assembly

A0002637

Item	Part Number	Description
1	W702037-S300	Retaining ring
2	7A658	Center shaft
3	7653	Overdrive ring gear
4	7L495	No. 2 overdrive planetary thrust bearing
5	7B446	Overdrive planetary gear carrier assembly
6	7D063	Overdrive sun gear
7	7660	Coast clutch adapter

Disassembly

- NOTE:** The overdrive one-way clutch is serviced with the center shaft assembly.

Remove the center shaft from the overdrive ring gear.

- Remove the overdrive center shaft retaining ring.
- While rotating counterclockwise remove the center shaft from the ring gear.

A0002559

- CAUTION:** Do not remove the overdrive one-way clutch. Damage to the clutch may occur if it is removed.

Clean and inspect the overdrive one-way clutch and center shaft.

- Inspect for cracks in the roller cage and wear on the roller clutch, and the press fit of the one-way clutch to the center shaft.

3. Inspect the one-way clutch.

- Temporarily insert the overdrive planetary gear carrier assembly into the one-way clutch rollers for verification of the one-way clutch.
- The planetary gear must rotate counterclockwise and hold when rotated clockwise.
- Remove the planetary gear carrier assembly.

Assembly

1. Install the center shaft and one-way clutch.
 1. Install the center shaft and one-way clutch.
 2. Install the center shaft retaining ring.

Overdrive Planetary Gears

Disassembly

1.  **CAUTION: New planetary gears must be installed. Do not restake the originals.**

NOTE: Individual parts of the planetary carriers are not serviceable.

Before installing a planetary assembly, the shaft retaining pins should be checked for adequate staking. Check the pins and shafts in the planetary assemblies for loose fit and/or complete disengagement. Install a new planetary assembly if necessary.

2. Inspect the pinion gears for damaged or excessively worn teeth, and for free rotation.

3. Inspect the overdrive one-way clutch inner race, and the inner and outer races for scored or damaged surface areas where the rollers contact the races.

4. Remove and inspect the No. 2 overdrive planetary thrust bearing on the nose of the overdrive planetary gear carrier assembly.

5. **NOTE:** Inspect the sun gear for damaged or worn teeth.

Remove the coast clutch-to-overdrive carrier adapter.

6. Remove the overdrive sun gear.

7.  **CAUTION:** Do not attempt to remove the No. 12 bearing from behind the pinion gears.

Inspect the No. 12 bearing for damage.

Assembly

1. **NOTE:** Thoroughly clean all parts and blow dry with moisture-free compressed air.

NOTE: Use petroleum jelly to hold the No. 2 overdrive planetary thrust bearing in place.

Install the No. 2 overdrive planetary thrust bearing.

2. Install the overdrive planetary gear carrier into the center shaft and overdrive.

3.  **CAUTION:** Make sure that the No. 12 bearing is in place in the overdrive planetary prior to installing the overdrive sun gear.

Install the front sun gear with the recessed gear teeth facing toward the adapter.

4. **NOTE:** Inspect the sun gear for damaged or worn teeth.

Install the coast clutch-to-overdrive carrier adapter.

Center Support

Disassembly and Assembly

Item	Part Number	Description
1	—	Bearing
2	—	Seal rings
3	7A130	Center support

NOTE: Thoroughly clean center support assembly and blow dry with compressed air.

NOTE: The center support is repaired as an assembly. Any damage requires installing a new component.

1. Inspect the center support assembly for wear or damage.
 1. Inspect the thrust surfaces for wear, scoring or damage.
 2. Inspect the center support sealing surface.
 3. Inspect the fluid passage for blockage or damage.

2. Inspect the seal rings for damage.

3. Inspect the bearing for missing rollers or damage.

4. Inspect the direct clutch feed hole for blockage or damage.
 1. Rotate center support bearing to locate the direct clutch feed hole.
 2. Inspect the direct clutch feed hole for blockage or damage.

Reverse Brake Drum

Check

1. **NOTE:** The reverse one-way clutch is part of the reverse brake drum assembly. Install a new reverse brake drum as an assembly only.

Inspect the reverse brake drum assembly and install a new reverse brake drum assembly if damaged.

1. Inspect the reverse brake drum sprags.
2. Inspect the reverse brake drum rollers.
3. Inspect the reverse brake drum.

Output Shaft Ring Gear and Hub Shaft Assembly

Disassembly

Item	Part Number	Description
1	7A153	Output shaft ring gear
2	7D164	Output shaft hub
3	7C122	Retaining ring

1. Inspect the output shaft ring gear and hub shaft assembly for damage. If repair is necessary use the following procedure.
2. Remove the seal.

3. Remove the output shaft ring gear from the output shaft hub.
 1. Remove the retaining ring.
 2. Remove the output shaft ring gear.

Assembly

1. Install the output shaft ring gear onto the output shaft hub.
 1. Install the output shaft ring gear.
 2. Install the retaining ring.

2. Install the seal.

Reverse Servo Assembly

Disassembly

1. Remove the control valve spring retainer.

2. Remove the reverse servo spring and check valve.

3.  **WARNING:** The upper and lower servo covers are under spring tension. Use care when separating the two halves. Failure to follow these instructions may result in personal injury.

NOTE: Tabs on servo plate mate with slots on cover every 120 degrees.

Remove the reverse servo plate by turning in either direction to release.

- Align arrow on servo plate with any slot on cover.

4. Remove the reverse servo spring.

5. Remove the reverse servo piston and seal assembly.

- Inspect the seal for damage, install new reverse servo piston if necessary.

6. Remove and discard the reverse servo piston seal.

Assembly

1. **NOTE:** Try not to roll the seal onto the housing when installing the seal or damage to the seal could occur.

Lubricate and install a new reverse servo piston seal.

2. Lubricate and install reverse servo piston and seal assembly.

3. Install the reverse servo spring.

4.  **CAUTION:** The arrow on the servo plate must be aligned evenly between any two slots on the cover.

Install the reverse servo plate.

5. Install the reverse servo spring and check valve.

6. Install the control valve spring retainer.

Torque Converter

1. A new torque converter must be installed if one or more of the following statements are true:
 - A torque converter failure has been determined based on complete diagnostic procedures.
 - Converter stud(s), impeller hub or bushing are damaged.
 - Discoloration of the torque converter (due to overheating).
 - The torque converter is found to be out of specification when carrying out one of the following torque converter checks:
 - One-Way Clutch Check
 - End Play Check
 - Stator to Turbine Interference Check
 - Stator to Impeller Interference Check
 - Torque Converter Leak Check
 - Evidence of transmission assembly or fluid contamination due to the following transmission or converter failure modes:
 - major metallic failure
 - multiple clutches or clutch plate failures
 - sufficient component wear which results in metallic contamination
-

Torque Converter Cleaning And Inspection

1. If a new torque converter is being installed, continue with Substep 2 of Step 2.
2.  **CAUTION: The torque converter drain plug and seal are not reusable. Discard the drain plug and seal, install a new drain plug assembly.**

If a new torque converter is not being installed, the following procedures must be carried out:

1. The torque converter must be thoroughly cleaned.
 - Torque converter with drain plugs can be cleaned by using a suitable torque converter/fluid cooler cleaner.
 -  **CAUTION: Do not use water based cleaners or transmission damage will occur.**

A torque converter without drain plugs can be cleaned by hand. Partially fill the torque converter using only recommended transmission fluid for the applicable transmission. Hand-agitate the torque converter and then thoroughly drain the fluid. Fill the torque converter with new fluid specified for the transmission, and install.

2. All in-tank and auxiliary coolers must be thoroughly cleaned by forward and backward flushing. For additional information, refer to [Transmission Fluid Cooler — Backflushing and Cleaning](#) in this section.
 3. All cooler tubes must be thoroughly cleaned by backward and forward flushing. For additional information, refer to [Transmission Fluid Cooler — Backflushing and Cleaning](#) in this section.
 4. All cooler bypass valves (CBV), if equipped, must be thoroughly cleaned.
 5. Carry out the Transmission Fluid Cooler Flow Test. For additional information, refer to [Section 307-02](#).
 6. If the transmission cooling system fails the Transmission Fluid Cooler Flow Test, install new components as necessary. For additional information, refer to [Section 307-02](#).
 7. If new coolers are to be installed, use only factory-approved repair parts. For additional information, refer to [Section 303-03](#).
-

Torque Converter Flushing

Material

Item	Specification
MERCON® V Automatic Transmission Fluid XT-5-QM, XT-5-DM	MERCON® V

1.  **CAUTION:** The torque converter drain plug and seal are not reusable. Discard the drain plug and seal, install a new drain plug and seal assembly.

 **CAUTION:** Mineral spirits used to clean the torque converter must be fresh, non-water based, non-chlorinated and non-halogenated.

Using a suitable torque converter/fluid cooler cleaner, flush the torque converter.

2. After flushing, remove the drain plug and drain the remainder of the solvent.

3. Add 1.9 liter (2 qt.) of clean automatic transmission fluid into the converter fluid filler tube and agitate by hand.
4. Thoroughly drain the solution.
5. Install a new torque converter drain plug.

Torque Converter Leak Check

Special Tool(s)

1. Clean the outside surface of the torque converter.
2. Install the special tools into converter hub.

3.  **WARNING:** Always follow correct safety procedures while using the press. Failure to follow these instructions may result in personal injury.

Install the torque converter with the special tool installed into the arbor press.
Secure the press. Apply enough force from the press to seal the tool into the torque converter.

4. **NOTE:** Use clean, dry shop air.

Apply air pressure to valve on the special tool.

5. With air pressure applied to the valve, inspect for leaks at the converter hub, the seams, drain plug, and the studs. A soap bubble solution can be applied around those areas to aid in the diagnosis. If a leak is found around the drain plug install a new drain plug and recheck the torque converter. If any other leaks are present, install a new or remanufactured converter.

6. Remove the air hose. Release the pressure, and then slowly release the press. Remove the converter. Remove the tool.

Torque Converter Impeller to Pump Stator Interference Check

1. Remove the drain plug and drain the fluid from the torque converter.

2. Install fluid pump support into torque converter. Engage splines of the one-way clutch inner race with the mating splines of the overdrive pump support.

3. While holding the fluid pump support stationary, rotate the torque converter clockwise and counterclockwise. The torque converter should rotate freely with no signs of scraping. If there are signs of scraping, install a new or remanufactured torque converter.

End Play Check

Special Tool(s)

 ST1214-A	Dial Indicator with Holding Fixture 100-002 (TOOL-4201-C) or equivalent
 ST2128-A	End Play Gauge, Torque Converter 307-360

1. Install the special tool into the torque converter until it bottoms out.
 - Tighten the inner post until the tool is securely locked.

2. Install the special tool on the converter impeller housing and zero the dial.

3. Lift up on the special tool and note the dial indicator reading. If the reading exceeds end play limits, install new or rebuilt torque converter.

Torque Converter End Play

--	--

New or Rebuilt Torque Converter	Used Torque Converter
0.44 mm (0.017 in)	Max. 0.80 mm (0.031 in)

Torque Converter One-Way Clutch Check

Special Tool(s)

A long, thin metal tool with a hook-shaped end. ST1195-A	Holding Tool, Torque Converter Clutch 307-067 (T77L-7902-R)
A metal adapter with a square end and a cylindrical end. ST2383-A	Torque Adapter, Torque Converter Clutch 307-066 (T77L-7902-B)

1. Insert the special tool in one of the grooves in the stator bearing retainer.

2. Install the special tools in the converter one-way clutch inner race spline.

3. Use the special tool to hold the stator bearing retainer while using the special tool to turn the converter one-way clutch inner race spline.
 - The torque converter one-way clutch should lock up and hold torque in the counter clockwise direction.
 - The torque converter one-way clutch should rotate freely in the clockwise direction.

- Try the clutch for lockup and hold in at least five positions.
- If the converter fails the lockup test torque, install a new or rebuilt torque converter.

Torque Converter Turbine to Pump Stator Interference Check

1. **NOTE:** The pump support may remain in the pump assembly during this test.

Position the torque converter with the pump drive up.

2. Install the pump support into the torque converter. Engage the splines of the one-way clutch inner race with the mating splines of the front pump support.

3. Install the input shaft engaging the splines with the turbine hub.

4. Check for stator to turbine interference.
 1. Hold the front pump support stationary.
 2. Attempt to rotate the input shaft.
 - The turbine and damper assemblies should rotate in both directions not exceeding maximum torque of 7 Nm (62 lb-in) without any signs of metallic interference or scraping noise.

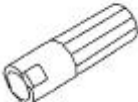

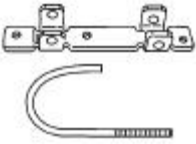

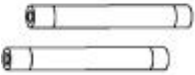

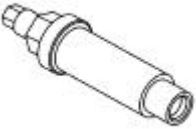

5. If interference exists, the stator front thrust washer may be worn, allowing the stator to hit the turbine. In such cases, a new or remanufactured torque converter must be installed.
 - The converter crankshaft pilot should be checked for nicks or damaged surfaces that could cause interference when installing the torque converter into the crankshaft. Check the converter front impeller hub for nicks or sharp edges that would damage the pump seal.
-

Material

Item	Specification
<p>MERCON® V Automatic Transmission Fluid XT-5-QM</p>	<p>MERCON® V</p>
<p>Multi-Purpose Grease DOAZ-19584-AA</p>	<p>ESB-M1C93- B</p>

1. Thoroughly clean the transmission case and extension housing in solvent and blow dry with compressed air.
2. Inspect the transmission case for the following:
 - stripped bolt hole threads
 - gasket and mating surfaces for burrs or nicks
 - obstructed vent and fluid passages
 - cracks or warpage

3. Inspect the extension housing for cracks, burrs or warpage.

4. Inspect case bearing for damage. Install a new component as necessary. Follow Steps 5-8 if replacing the case bearing. If not replacing the case bearing, proceed to Step 9.

5. Using the special tool, remove the case bearing.
 - Use an oil stone to remove any nicks or burrs in the bearing case bore.

6. Assemble the special tools.

7.  **CAUTION:** Make sure bearing seal ring is facing the drive handle.

Install the bearing on the special tools.

8. Using the special tool, tap case bearing into case bearing bore.

9.  **WARNING: Make sure the lock pin on bench-mounted holding fixture is secure. Failure to follow these instructions can result in personal injury.**

Using the special tool, install the transmission into the bench with the converter housing facing up.

10. Using the special tool, install the manual control lever shaft seal and lubricate it with petroleum jelly.

11. Install the intermediate servo piston and spring.
 - Lubricate the servo bore with clean automatic transmission fluid.

12. Using the special tool, install the retaining ring.

13. Install the overdrive band servo piston and spring.
 - Lubricate the servo bore with clean automatic transmission fluid.

14. Using the special tools, install the retaining ring.

15. Install the parking lever rod.

16. Install the manual control lever.

17. Assemble the manual valve inner lever and parking lever actuating rod as shown.

18.  **CAUTION:** Align the flats on the manual valve inner lever with the flats on the manual control lever shaft.

Install the manual control lever shaft.

19. Install the manual valve inner lever onto the manual shaft and loosely install the nut.

20.  **CAUTION:** Use care not to damage the fluid pan rail surface when installing the retaining pin.

NOTE: Align the manual control lever shaft alignment groove with the manual control lever shaft spring pin bore in the transmission case.

Install the manual control lever shaft spring pin.

- Tap the manual control lever shaft spring pin into the transmission case.

21.  **CAUTION:** To avoid damage, do not allow the wrench to strike the manual valve inner lever pin.

Tighten the nut.

22.  **CAUTION:** The tabs on the output shaft thrust washer (No. 11) point into the case. Make sure the thrust washer is correctly seated.

Install the output shaft thrust washer (No. 11).

- Coat the output shaft thrust washer with petroleum jelly.

23. Install the park gear on the output shaft.

24. Install the output shaft and park gear.

25.  **CAUTION:** Make sure band is resting on the two anchor pins in the case.

Install the low/reverse band.

26. Install the low/reverse brake drum.

- Rotate the low/reverse brake drum clockwise to install.

27. **NOTE:** The reverse band actuating lever must fit into the notches in the band.

Install the reverse band actuating lever into the reverse band.

28. Install the reverse band actuating lever shaft into the case and into the reverse band actuating lever.

29. Install the No.10 needle bearing into the case.

30.  **CAUTION: Do not damage the seal against the case during assembly.**

Install the output shaft ring gear, hub and seal.

31.  **CAUTION: Always install a new output shaft retaining ring.**

Install a new output shaft retaining ring.

32. **NOTE:** Install the output shaft sleeve with the cone facing up. This sleeve will snap into place when correctly installed.

Install the output shaft sleeve.

33. Install low/reverse planetary carrier needle bearing (No. 9) onto the output shaft ring gear and hub assembly.

34.  **CAUTION:** Make sure the needle bearings stay in place.

Install the low/reverse planetary assembly.

35.  **CAUTION:** The low/reverse brake drum must be pulled forward to install the low/reverse planet retaining ring.

Install the retaining ring.

36. Install the No. 8 thrust bearing.

37. Install the low and reverse gear spacer.

38.  **CAUTION:** If new clutch plates are being used, they should be soaked in clean automatic transmission fluid 30 minutes prior to installation. The friction side of the plates must face down toward cylinder.

Install the new clutch plates in an alternating order, starting with an internally splined clutch plate into the clutch cylinder.

39. Install the clutch plate retaining ring.

40. Install the intermediate clutch assembly.

41. Install the intermediate clutch housing and piston assembly.

42. Install the special tools.

43. Install the special tools.

44.  **CAUTION:** Do not use the original intermediate clutch retaining ring that was removed during disassembly.

Using the special tools, install a new service intermediate clutch retaining ring.

45. **NOTE:** The recess portion of the sprag must face down during installation.

Install the sprag and race assembly.

46. Install the input shell and sun gear assembly.

47. **NOTE:** The No. 13 bearing must be properly seated in the forward planet assembly so the sun gear can be installed correctly.

Install the forward planetary assembly.

48. Install the No. 7 forward planet thrust bearing into the forward ring gear and hub assembly. Use petroleum jelly to hold the bearing in place.

49. Install the No. 6B forward clutch thrust washer onto the forward ring gear hub.

50. Install the forward ring gear and hub as an assembly.

51. Install the No. 6A forward ring gear hub thrust bearing into the forward clutch. Use petroleum jelly to hold the bearing in place.

52. Install the forward clutch cylinder.

53. Install the No. 5 thrust bearing.

54. Install the direct clutch drum.

55. Using a depth micrometer with an 8-inch extension, measure from the top of the gauge bar to center support ledge in case at four places 90 degrees apart.

- Add the four measurements, divide by four, and record as dimension A.

56.  **CAUTION:** The torque specifications are critical for this procedure. Failure to use the correct torque specifications may cause transmission damage.

Install the special tool.

1. Install the special tool and the bolts using the two pump screw locations at approximately 6 and 12 o'clock positions.
2. Tighten the center screw.

57. **NOTE:** Align the disc holes on special tool with the slot in gauge bar for correct measurement.

Measure the distance from the top of the gauge bar to the drum bearing surface through the hole in the disc and record as dimension B. Repeat measurement 180 degrees opposite side of the special tool and record as dimension C.

58. Add dimension B to C, divide by two and record as dimension D.
59. Subtract A from D, and record as dimension E.
60. Select bearing from the following chart, using dimension E.

Dimension E	Service Part Number (7D014)	Bearing Thickness	Identification (Notches)
-------------	-----------------------------	-------------------	--------------------------

1.69-1.87 mm (0.066-0.073 in)	XW4Z-CA	2.65-2.80 mm (0.104-0.110 in)	None
1.88-2.05mm (0.073-0.080 in)	XW4X-DA	2.83-2.98mm (0.111-0.116 in)	One
2.05-2.22 mm (0.081- 0.088 in)	XW4Z-EA	3.01-3.16mm (0.118-0.124 in)	Two
2.33-2.43 mm (0.089-0.096 in)	XW4Z-FA	3.21-3.36 mm (0.126-0.132 in)	Three

61. **NOTE:** Make sure that the intermediate apply strut is aligned with the band notch.

Install the intermediate band.

62. Install the intermediate band anchor strut.

63.  **CAUTION:** If the strut is installed incorrectly, transmission damage will occur.

Check to make sure that the intermediate band anchor strut is installed in the correct orientation to the case and adjustment screw.

64. Loosely install the screw.

65. Install the intermediate band apply strut.

66.  **CAUTION: If the strut is installed incorrectly, transmission damage will occur.**

Check to make sure that the intermediate band apply strut is installed in the correct orientation to the case and piston rod.

67. Install the selected No. 4 thrust washer on the direct clutch drum.

- Coat the thrust washer with petroleum jelly.

68. **NOTE:** Align the center support screw hole with correct case hole.

Install the center support.

69. Install the center support locknut and cage.

70. Loosely install the screw.

71.  **CAUTION:** Install the center support retaining ring with the tapered side facing up.

 **CAUTION:** Make sure the center support retaining ring does not obstruct the notch opening.

Install the center support retaining ring.

72. Install the center shaft thrust bearing (No. 3).

73. Install the overdrive ring gear, overdrive one-way clutch and center shaft assembly.

74.  **CAUTION:** Do not bend the trigger wheel. Make sure that the No. 2 thrust bearing is in this assembly.

Install the planetary gear overdrive carrier.

75. Install the overdrive brake drum and coast clutch drum assembly.

76. **NOTE:** If the overdrive band is reused, it must be installed in the same position from which it was removed.

Install the overdrive band.

77. Install the overdrive anchor strut.

78.  **CAUTION: If the strut is installed incorrectly, transmission damage will occur.**

Check to make sure that the overdrive band anchor strut is installed in the correct orientation to the case and adjustment screw.

79. Loosely install the screw.

80. Install the overdrive apply strut.

81.  **CAUTION:** If the strut is installed incorrectly, transmission damage will occur.

Check to make sure that the overdrive band apply strut is installed in the correct orientation to the case and piston rod.

82.  **CAUTION:** The torque specifications are critical for this procedure. Failure to use the correct torque specifications can cause transmission damage.

Install the special tool.

1. Install the special tool and the bolts, using the two pump screw locations at approximately 6 and 12 o'clock positions.
2. Tighten the center screw.

83. **NOTE:** Align the disc holes on special tool with the slot in gauge bar for correct measurement.

Measure the distance from the top of the gauge bar to the drum bearing surface through the hole in the disc and record as dimension A. Repeat measurement 180 degrees opposite side of the special tool and record as dimension B.

84. Add dimension A to B, divide by two and record as dimension C.

85. Subtract the thickness of the gauge bar (17.78 mm or 0.700 in) from dimension C, and record as dimension D.
86. Select the No.1 thrust bearing from the following chart, using dimension D.

Dimension D	Service Part Number (7D014)	Bearing Thickness	Identification (Color/ID)
38.04-38.28 mm (1.50-1.51 in)	XW4Z-XA	1.70-1.75 mm (0.06 in)	Brown/8
38.29-38.43 mm (1.51 in)	XW4Z-NA	1.85-1.90 mm (0.07 in)	Red/4
38.44-38.63 mm (1.51-1.52 in)	XW4Z-RA	2.05-2.10 mm (0.08 in)	Black/6
38.64-38.78 mm (1.52-1.53 in)	XW4Z-YA	2.20-2.25 mm (0.09 in)	Orange/9
38.79-38.97 mm (1.53 in)	XW4Z-ZA	2.40-2.45 mm (0.10 in)	Purple/10

87. Install the selected No. 1 fluid pump input thrust washer.
- Coat the fluid pump input thrust washer with petroleum jelly.

88. Install the special tools into the transmission case.

89. Install the pump gasket.

90. **⚠ CAUTION:** Make sure that the fluid pump inlet thrust washer (No. 1), selective thrust washer, fluid pump gasket, and the fluid pump-to-case O-ring seal remain in the correct position throughout this step.

Install the fluid pump.

91. **⚠ CAUTION:** The special tools must be used to correctly align the pump with the adapter plate to reduce gear noise, bushing failure and leakage.

Using the special tool, align the fluid pump to the adapter plate.

92. Install screws. Tighten the screws in a star pattern.

93. Remove the special tools and install the two remaining screws.

94.  **CAUTION:** Do not allow overdrive band adjustment screw to back out. Band strut could fall out of position.

 **CAUTION:** Install, but do not tighten, a new locknut on the band adjustment screw. Apply petroleum jelly to the locknut seal.

Install a new locknut on the band adjustment screw.

95.  **CAUTION:** The overdrive servo must be installed prior to band adjustment.

Using the special tool, tighten the overdrive band adjustment screw then back off the screw exactly (2) turns and hold that position.

96. Tighten the overdrive band locknut.
1. Hold the overdrive band adjustment screw stationary.
 2. Tighten the overdrive band locknut.

97.  **CAUTION: Do not allow the intermediate band adjusting screw to back out. Band strut could fall out of position.**

 **CAUTION: Install, but do not tighten, a new locknut on the band adjustment screw. Apply petroleum jelly to the locknut seal.**

Install new nut on the band adjustment screw.

98.  **CAUTION: The intermediate servo must be installed prior to band adjustment.**

Tighten the intermediate band adjustment screw then back off the screw exactly (2) turns and hold that position.

99. Tighten the intermediate band locknut.
1. Hold the intermediate band adjustment screw stationary.
 2. Tighten the intermediate band locknut.

100. Tighten the center support screw.

101.  **CAUTION: The intermediate clutch fluid inlet tube seal and spring must be correctly seated in the case. Failure to correctly seat the inlet tube seal and spring will cause an internal fluid leak and transmission damage.**

Using a drift punch, correctly install and seat the intermediate clutch fluid inlet tube seal and spring into the case.

102. Install the special tools into the transmission case.

103. Refer to the following chart for bolt locations.

Item	Part No.	Part Name	Size
1	W702791-S300	Hex Bolt	M6X27
2	W500103-S1300	Hex Bolt	M6X45
3	W703133-S1300	Hex Bolt	M6X52
4	W705559-S300	Hex Bolt	M6X82.2
5	W500100-S300	Hex Bolt	M6X30
6	W701099-S1430	Cap Int Lob Screw	M6X20
7	W703135-S1300	Hex Bolt	M6X70
8	W703189-S1430	Cap Int Lob 8	M6X63
9	W702921-S430	Cap Int Lob 8	M6X25

104. Install the main control valve body and loosely install the screws.

105. Remove the special tools and loosely install the screws.

106. Install the valve body cover plate and gasket and loosely install the screws.

107. Install a new reverse pressure switch and loosely install the screws.

108. Tighten the screws in the sequence shown.

109. Install new O-ring seals on the solenoid body connector. Lubricate the O-ring seals with clean automatic transmission fluid.

110.  **CAUTION: Inspect the transmission case bore to make sure it is free of debris and not damaged. If damaged, transmission leak can result.**

Install the solenoid body. Tighten bolts in sequence shown.

111. Install the reverse servo. Tighten the bolts in sequence shown in two stages.

- Stage 1: Tighten bolts to 5 Nm (44 lb-in)
- Stage 2: Tighten bolts to 11 Nm (8 lb-ft)

112. Connect the reverse pressure switch connector.

113. Install the manual valve detent spring.

114.  **CAUTION:** Lubricate the fluid filter O-ring seals with clean automatic transmission fluid or they can be damaged.

NOTE: Make sure that the fluid filter O-ring seals are correctly seated on the filter.

Lubricate the seals and install the transmission fluid filter.

115. **NOTE:** The transmission fluid pan gasket is reusable. Clean and inspect for damage. If not damaged, the gasket should be reused.

Install the transmission fluid pan and gasket.

116. Tighten the screws in a crisscross sequence.

117. Install the parking pawl assembly and gasket.
1. Install the parking pawl shaft.
 2. Install the parking pawl.
 3. Install the parking pawl return spring.
 4. Install the gasket.

118. Install the extension housing.

119. Using the special tool, install the extension housing seal.

120. Using the special tools, install the output shaft flange.

121. Install a new nut.

122.  **CAUTION:** The digital transmission range sensor must fit flush against the boss on the case to prevent damage to the sensor.

Install the digital transmission range (TR) sensor and loosely install the screws.

123.  **CAUTION:** Tightening one screw before tightening the other can cause the sensor to bind or become damaged.

NOTE: The manual lever must be in the NEUTRAL position.

Using the special tool, align the digital TR sensor and tighten the screws in an alternating sequence.

124. **NOTE:** Inspect O-ring seal for damage. Install new if damaged. Lubricate the O-ring seals with petroleum jelly to prevent damage to the O-ring seals.

Install the sensors.

125. **CAUTION:** The splines of the input shaft are not the same length on both ends. The shaft end with the shorter splines goes into the fluid pump.

Install the input shaft.

126. Using the special tool, make sure that the fluid pump gear seal ring is fully seated.

127. Remove the special tool.

128.  **CAUTION:** Do not damage the fluid pump gear O-ring seal when installing torque converter.

 **CAUTION:** Make sure the converter hub is fully engaged in the pump support and gear and rotates freely. Do not damage the hub seal.

 **CAUTION:** If the torque converter slides out, the hub seal can be damaged.

Lubricate the converter hub with clean automatic transmission fluid.

129. **NOTE:** A new converter drain plug must be used to prevent leakage.

Install the drain plug.

130. Install the converter housing access plug.

131.  **WARNING: The torque converter can fall out if the transmission is tipped. Failure to follow these instructions may cause personal injury.**

Using the special tools, install the torque converter by pushing and rotating.

132. Lubricate the torque converter pilot hub with multi-purpose grease.

133.  **CAUTION:** The special tool must be used to correctly align the adapter plate to the converter or transmission damage can occur.

In order to correctly install the special service tool, it must be installed using one round and one oblong hole. Using two oblong holes will cause damage to the transmission.

If the vehicle is equipped, use the special tool to install the torque converter flex plate adapter assembly and eight nuts.

134. Install two torque converter flex plate adapter nuts.

135. **NOTE:** Use the 5/16 inch Allen key to remove the fill plug.

Remove the fill plug.

136. Fill the transmission with 8.5L (9 quarts) of clean automatic transmission fluid.

137.  **CAUTION:** When installing the fill plug, make sure not to cross thread the plug to prevent damage.

NOTE: Use a 5/16 inch Allen key to install the fill plug.

Install the fill plug.

138. Before installing transmission, make sure that the transmission cooling system (tube and cooler [s]) have been thoroughly flushed. If contamination cannot be removed or correct flow cannot be obtained, install a new cooler(s) and/or tubes. For additional information, refer to [Section 307-02](#).
-

Transmission

Special Tool(s)

 ST2455-A	Torquing Wrenches, Driveshaft Coupler 205-474
--------------	--

Material

Item	Specification
Premium Long Life Grease XG-1-C	ESA-M1C75-B
Threadlock and Sealer E2FZ-19554-B	WSK-M2G351-A6

- WARNING:** Secure the transmission to the transmission jack with a safety chain. Failure to follow these instructions can result in personal injury.

Raise and position the transmission.

- NOTE:** Align the flexplate to converter marks made at removal.

Install the bolts.

- NOTE:** Align the flexplate to converter marks made at removal.

Align the marks made during removal, and install the nuts.

4. Install the access cover.

5. On 3.0L engines only, install the starter motor. For additional information, refer to [Section 303-06](#).

6.  **CAUTION:** Use care not to bend or force the cooler tubes otherwise damage to the cooler tubes and the transmission may result.

Install the transmission cooler tubes.

7. **NOTE:** V6 application shown, V8 application similar. The torque specification for the V8 is 18Nm (13 lb-ft).

Install the transmission cooler line bracket.

8. Reconnect the digital transmission range (TR) sensor connector.

9.  **CAUTION:** Damage will occur to the solenoid body assembly if the screw is tightened above the specification.

NOTE: Always install new O-ring seals on vehicle harness connector.

NOTE: Clean the area around connector to prevent contamination of the solenoid body connector.

NOTE: Use petroleum jelly to lubricate the O-ring seals to aid in the installation process.

Install and lubricate new O-ring seals on the transmission connector and connect the connector.

10. Install the shift cable bracket.

11. Connect the shifter cable.

12. Install the heated oxygen sensor (HO2S) connector.

13. Connect the harness retainer.

14. Connect the harness retainer.

15. Install the harness screw.

16. Connect the turbine shaft speed (TSS) sensor, output shaft speed (OSS) sensor, and intermediate shaft speed (ISS) sensor electrical connectors.

17. Install the rear transmission mount.

18. Install the shift cable.

19. Install the rear transmission mount.

20. Remove the transmission jack.
21. Add one gram of grease to both alignment bushing cavities.
22. Loosen the nut and slide the front shaft assembly forward.

23.  **CAUTION: Align the index marks or driveshaft imbalance can occur.**

Align index marks and position the alignment bushing on the transmission flange piloting system.

24. Using the special tools, tighten the nut.

25. Install the heat shield.

26. Lower the vehicle.
27. **NOTE:** When the battery is disconnected or a new battery installed, certain transmission operating parameters can be lost. The powertrain control module (PCM) must relearn these parameters. During this learning process, you may experience slightly firm shifts, delayed, or early shifts. This operation is considered normal and will not affect the function of the transmission. Normal operation will return once these parameters are stored by the PCM.

Connect the battery ground cable. For additional information, refer to [Section 414-01](#).

28. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
29. Carry out the fluid level check. For additional information, refer to [Transmission Fluid Level Check](#) in this section.
30. Verify that the shift cable is correctly adjusted. For additional information, refer to [Section 307-05](#).
31. Check the operation of the transmission and inspect for leaks.

General Specifications

Item	Specification
MERCON V Automatic Transmission Fluid XT-5-QM	MERCON V

Torque Specifications

Description	Nm	lb-ft	lb-in
Bolt retaining the transmission fluid cooler to the radiator	10	—	89
Nut retaining the fluid cooler tube bracket to the stud (V8 engine)	18	13	—
Nut retaining the fluid cooler tube bracket to the stud (V6 engine)	10	—	89
Nut retaining the fluid cooler tube to the transmission	35	26	—
Hose clamp retaining the transmission fluid cooler hose to the transmission fluid cooler tube	5	—	44

Transmission Cooling

The transmission fluid cooler is an oil-to-air (OTA) fluid cooler. The fluid cooler is mounted between the radiator and the A/C condenser.

- When the transmission fluid is cold and the thermostatic valve is closed, the transmission fluid does not circulate through the fluid cooler.
 - As the transmission fluid temperature increases, the thermostatic bypass valve opens and allows the transmission fluid to circulate through the fluid cooler.
-

Transmission Cooling

CAUTION: Whenever a transmission has been disassembled to install new parts, the transmission fluid cooler must be replaced and the transmission fluid cooler tubes must be cleaned and backflushed.

NOTE: Cleaning and backflushing the transmission fluid cooling system, along with normal cleaning and inspection procedures as outlined in this section during disassembly and reassembly, will keep contamination from reentering the transmission and causing a repeat repair.

When internal wear or damage has occurred in the transmission, metal particles, clutch plate material, or band material may have been carried into the torque converter and transmission fluid cooler. These contaminants are a major cause of recurring transmission troubles and must be removed from the system before the transmission is put back in use.

Inspection and Verification

When fluid leakage is found in the fluid cooler, install a new fluid cooler.

When there is evidence of transmission assembly or fluid contamination due to the following transmission failure modes, install a new fluid cooler.

- major metallic failure
- multiple clutches or clutch plate failure
- sufficient component wear which results in metallic contamination

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
<ul style="list-style-type: none"> ● Transmission overheating 	<ul style="list-style-type: none"> ● Damaged OTA fluid cooler. ● System leaks. ● Incorrect fluid level. ● Fluid condition. ● Damaged, blocked, reversed, leaking, or restricted cooler tubes. ● Incorrect idle or performance. 	<ul style="list-style-type: none"> ● INSTALL a new OTA cooler. ● INSPECT for leaks. REPAIR as necessary. ● ADJUST to correct level. ● INSPECT according to instructions under Fluid Level Condition Check. REFER to Section 307-01. ● INSPECT cooler tubes. REPAIR as necessary. ● REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Transmission Fluid Cooler Flow Test

NOTE: The transmission linkage/cable adjustment, fluid level and line pressure must be within specification before carrying out this test. Refer to [Section 307-05](#) for adjustments.

1. Refer to [Section 307-01](#) for fluid level check procedures and line pressure specifications.
2. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
3. Remove the cooler return line (upper fitting) from the fitting on the transmission case.

4. Connect one end of a hose to the cooler return line and route other end of the hose up to a point where it can be inserted into the hole at the extension housing.

5. Start the engine and run it at idle with the transmission in NEUTRAL position.
6. Raise the vehicle.
7. Once a steady flow of fluid (without air bubbles) is observed, remove the hose from the fluid fill hole and place the hose in a measuring container for 15 seconds. After 15 seconds place the hose back into the fluid fill hole and turn the engine off. Measure the amount of fluid in the container. If adequate flow was observed, approximately 615 ml (20.8 oz) will be in the measuring container; the test is now complete.
8. If the flow is not liberal, stop the engine. Disconnect the hose from the cooler return line (upper line) and connect it to the transmission outline fitting on the transmission case.

9. Repeat Steps 6 and 8. If flow is now approximately 615 ml (20.8 oz) in 15 seconds, refer to [Transmission Fluid Cooler — Backflushing and Cleaning](#). For cleaning of the cooler, refer to [Transmission Cooling](#) for fluid cooler diagnosis. If the flow is still not approximately 615 ml (20.8 oz) in 15 seconds, repair the pump, main control and converter as necessary.
-

Transmission Fluid Cooler — Backflushing and Cleaning

Special Tool(s)

⚠ CAUTION: Whenever a transmission has been disassembled to install new parts or because the valve body sticks from foreign material, the transmission fluid cooler must be cleaned using the Torque Converter/Oil Cooler Cleaner. Under no circumstances should torque converters be cleaned by hand agitation with solvent.

When internal wear or damage has occurred in the transmission, metal particles, clutch plate material, or band material may have been carried into the transmission cooler. These contaminants are a major cause of recurring transmission concerns.

1. Using the special tool, backflush the torque converter. Test the equipment to make sure that a vigorous fluid flow is present before proceeding. Install a new system filter if flow is weak or contaminated.
2. To aid in attaching the cleaner to the transmission steel cooler tubes, connect two additional rubber hoses to the transmission end of the steel transmission cooler tubes.
 1. Connect the cleaner tank pressure line to the steel transmission inlet tube.
 2. Connect a tank return hose to the steel transmission outlet tube. Place the outlet end of this hose in the solvent.

3. Turn on solvent pump and allow the solvent to circulate a minimum of 5 minutes (cycling switch on and off will help dislodge contaminants in cooler system).
4. Switch off the solvent pump and disconnect the solvent pressure hose from the transmission cooler return line.
5. Use compressed air to blow out the cooler(s) and tubes (blow air into the transmission cooler return line) until all solvent is removed.
6. Remove the rubber return hose from the remaining steel cooler line.

Combination Fluid Cooler

Special Tool(s)

Removal

1. Remove the A/C condenser core. For additional information, refer to [Section 412-03](#).
2. Remove and discard the six hose clamps.

3. **NOTE:** Position a drain pan under the vehicle to catch any fluid that may spill.

Disconnect the six hoses from the cooler. Plug the hoses and the cooler.

4. Remove the cooler.
 1. Remove the two bolts.
 2. Lift the cooler from the retainers and remove the cooler.

Installation

1. Install the cooler.

1. Position the cooler on the retainers.
2. Install the two bolts.

2. Position new hose clamps on the six hoses.
3. Remove the plugs from the six hoses and the cooler. Connect the six hoses to the cooler.

4. Using the special tool, tighten the six hose clamps.

5. Install the A/C condenser. For additional information, refer to [Section 412-03](#).
 6. Fill and leak check the power steering system. For additional information, refer to [Section 211-00](#).
 7. Fill and leak check the cooling fan system. For additional information, refer to [Section 303-03](#).
 8. Fill the automatic transmission and leak check the cooling system. For additional information, refer to [Section 307-01](#).
-

Transmission Fluid Cooler Tubes

Special Tool(s)

Removal

NOTE: This procedure describes the removal and installation of all the transmission cooling system tubes and hoses. Only disconnect those that require removal from the vehicle.

Hose removal

NOTE: Proceed to Disconnecting the tubes in this section if only removing the transmission fluid cooler tubes from the vehicle.

1. Remove the A/C condenser core. For additional information, refer to [Section 412-03](#).
2. Disconnect the transmission fluid cooler hose from the cooler.
 1. Cut and discard the clamp.
 2. Disconnect the transmission fluid cooler hose from the cooler.

3. Disconnect the transmission fluid cooler hose from the transmission fluid cooler tube.
 1. Loosen and position the clamp aside.
 2. Disconnect the transmission fluid cooler hose from the transmission fluid cooler tube.
 - Proceed to Hose installation in this section if not removing the transmission fluid cooler tubes from the vehicle. Otherwise, proceed as follows.

Disconnecting the tubes

4. If not done previously, raise and support the vehicle. For additional information, refer to [Section 100-02](#).
5. If not done previously, remove the LH splash shield pushpin.

6. If not done previously, remove the bolts and the LH splash shield.

7. Disconnect the transmission fluid cooler tubes from the transmission.

8. If not done previously, disconnect the transmission fluid cooler hoses from the transmission fluid cooler tubes.
 1. Loosen and position the clamps aside.
 2. Disconnect the transmission fluid cooler hoses from the transmission fluid cooler tubes.

Tube removal, vehicle with V6 engine

9. Remove the nut, the fluid cooler tube bracket, and the fluid cooler tubes.

Tube removal, vehicle with V8 engine

10. Remove the nut, the fluid cooler tube bracket, and the fluid cooler tubes.

Routing bracket removal

11. Remove the fluid cooler tube routing bracket from the fluid cooler tubes.

Installation

Tube installation, vehicle with V8 engine

NOTE: Proceed to Hose installation in this section if the transmission fluid cooler tubes were not removed from the vehicle.

1. Position the transmission fluid cooler tubes and the fluid cooler tube bracket, and install the nut.

Tube installation, vehicle with V6 engine

NOTE: Proceed to Hose installation in this section if the transmission fluid cooler tubes were not removed from the vehicle.

2. Position the transmission fluid cooler tubes and the fluid cooler tube bracket, and install the nut.

Connecting the tubes

3. Connect the transmission fluid cooler tubes to the transmission.
 - Proceed to Connecting the hose(s) in this section if the transmission fluid cooler hoses were not removed from the vehicle. Otherwise, proceed as follows.

Hose installation

4. Connect the transmission fluid cooler hose(s) to the cooler.
 1. Position the clamp on the transmission fluid cooler hose.
 2. Connect the transmission fluid cooler hose to the cooler.

5. Using the special tool, tighten the clamp.
 - Repeat this step for the other hose clamp, if removed.

Connecting the hose(s)

6. Connect the transmission fluid cooler hose to the transmission fluid cooler tube.
 1. Position the clamp.
 2. Push the transmission fluid cooler hose onto the transmission fluid cooler tube until bottomed against the stop.
 3. Tighten the clamp.

Final assembly

7. If removed, install the fluid cooler tube routing bracket.

8. If removed, install the A/C condenser core. For additional information, refer to [Section 412-03](#).
9. Install the LH splash shield and the bolts.

10. Install LH splash shield pushpin.

11. Lower the vehicle.

12. Fill the automatic transmission and leak check the cooling system. For additional information, refer to [Section 307-01](#).

Torque Specifications

Description	Nm	lb-ft	lb-in
Shifter assembly bolts	7	—	62
Shift lock actuator bolts	9	—	80
Transmission shift cable and bracket bolts	27	20	—
Screw retaining the lower instrument panel steering column opening cover to the instrument panel	2-3	—	19-26
Bolt retaining the instrument panel steering column opening cover reinforcement to the instrument panel	3-5	—	31-45

DESCRIPTION AND OPERATION

External Controls

The transmission shift cable transfers the transmission operating mode from the transmission range selector lever to the automatic transmission. The indicated position of the lever is transferred to the transmission through the cable and down to the manual control lever on the transmission.

Depending on the vehicle options selected the lever may have different range positions.

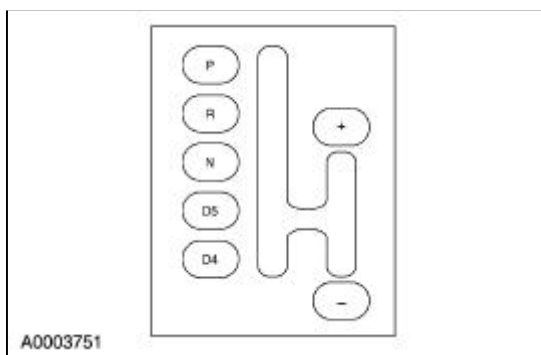

The standard lever has eight positions: P, R, N, D5, D4, 3, 2, and 1.

Base Range Shifter

The optional select shift transmission (SST) range selector lever has seven positions P, R, N, D5, or D4, + and -. The + and - option will allow the driver to manually upshift and downshift into any gear range.

Optional Range Shifter

Brake Shift Interlock System

The shift interlock system prevents shifting the transmission out of the PARK position unless the brake pedal is depressed. The shift interlock system consists of a shift lock actuator mounted on the ignition switch. The actuator is energized when the ignition switch is turned to RUN, locking the transmission range selector lever in the PARK position. When the brake pedal is applied and the brake pedal position (BPP) switch activated, the shift lock actuator is deactivated, allowing the selector lever to move out of the PARK position.

The ignition shift interlock cable locks the selector lever in the PARK position when the ignition switch

is in the lock position. It also requires the selector lever to be in the PARK position in order to turn the ignition switch to the lock position.

Select Shift Transmission (SST) Switches (+ and -)

The positions indicated by a (+) or a (-) allow the driver to manually select the appropriate upshift (+) or downshift (-) and gear range.

The SST switches are located within the transmission range selector assembly and are momentary contact switches that send a signal to the powertrain control module (PCM) each time the driver moves the selector lever into the upshift or downshift gear range.

The PCM uses the input signals from the SST+ and the SST- switches, along with other vehicle inputs, to determine which gear should be commanded.

Transmission Control Switch (TCS)

The TCS is a momentary contact switch that sends a signal to the PCM when the driver selects the D4 position, canceling operation of 5th (overdrive) gear.

The TCS is located within the range selector assembly for the base shifter only.

The PCM uses this signal to control the shift solenoids to disengage/disable 5th gear operation and activates coast clutch for the base shifter only. At the same time the PCM changes the instrument panel indicator to display D4.

When the driver moves the selector lever back to the D5 position, 5th gear operation is enabled, the coast clutch is released and the instrument panel indicator displays D5.

Park Sense Switch

The park sense switch prevents the redundant PRNDL from displaying "P" until the shifter is in the PARK position.

Electronic Transmission Error Indicator

The vehicle is equipped with a redundant electronic gearshift indicator. This character appears with the key in the RUN position and displays the same gear selection as shown on the selector lever floor console next to the range selector lever. If an "E" character flashes or remains on this indicates that a transmission malfunction has occurred.

External Controls

Refer to Wiring Diagrams Section [307-05](#) for schematic and connector information.

Special Tool(s)

 ST1137-A	73III Automotive Meter 105-R0057 or equivalent
---	---

Inspection and Verification

1. Verify the customer concern by operating the transmission external control.
2. Visually inspect for obvious signs of mechanical and electrical damage; refer to the following charts:

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Shift lock actuator ● Transmission control switch ● SST (+/-) switches ● Shift cable and bracket ● Park sense switch 	<ul style="list-style-type: none"> ● Central junction box (CJB) Fuse: <ul style="list-style-type: none"> ■ 204 (5A) ■ 205 (5A) ● Damaged wiring harness ● Loose or corroded connections ● Powertrain control module (PCM)

Diagnostic Trouble Code Chart

Five Digit DTC	Component	Description	Condition	Symptom	Action
P0815	SST +/-	SST +/- circuit input signal failed.	PCM has detected an incorrect voltage SST input.	May not be able to shift in manual mode.	Go To Pinpoint Test C.
P1780	TCS	TCS input incorrect per selected position.	TCS voltage incorrect.	No overdrive cancel when range selector is moved.	Go To Pinpoint Test A.

3. If the concern is not visually evident, determine the symptom and proceed to the Symptom Chart.

GO to [D4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

D4 CHECK CIRCUIT 7S-TA33 (YE/VT) FOR OPEN

1

1

Measure the resistance between brake shift interlock C322 pin 2, circuit 7S-TA33 (YE/VT), harness side and FEM C201f pin 15, circuit 7S-TA33 (YE/VT), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new FEM; REFER to [Section 419-10](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

D5 CHECK CIRCUIT 31-TA33 (BK) FOR AN OPEN

1

1

Measure the resistance between brake shift interlock C322 pin 1, circuit 31-TA33 (BK), harness side and ground.

A0005951

- Is the resistance less than 5 ohms?

→ **Yes**

INSTALL a new brake shift interlock actuator; REFER to [Brake Shift Interlock Actuator](#). TEST the system for normal operation.

→ **No**

REPAIR the circuit. TEST the system for normal operation.

Cable Adjustment

Shift Cable

1. Place the gearshift lever (7210) in the D5 position.
2. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
3. Disconnect the transmission shift cable from the manual control lever (7A256).

4. Place the manual control lever in the D5 position. This is three positions from the most rearward position.

5. Disconnect the transmission shift cable from the selector lever.

6. Connect the transmission shift cable to the manual control lever.

7. Unlock the adjuster at the end of the cable.

8. Connect the shift cable to the shifter and lock the end of the adjuster.

9. Lower the vehicle.
 10. Carefully move the manual control lever from detent to detent and compare with transmission settings. Verify that the vehicle will start in PARK or NEUTRAL and backup lamps illuminate in REVERSE. If not, Steps 1-5 must be repeated and include digital transmission range (TR) sensor adjustment in NEUTRAL. For additional information, refer to [Section 307-01](#).
 - Adjust as necessary.
-

Brake Shift Interlock Actuator

Removal and Installation

1. **NOTE:** If equipped with the traction control switch, the switch will need to be disconnected prior to removing the center console.

Remove the center console. For additional information, refer to [Section 501-12](#).

2. Remove the PRNDL indicator bulb.

3. Remove the rear A/C air duct.

4. Rotate the shifter bezel.

5. Disconnect the cable from the lever.
 1. Remove the shift interlock cable from the bracket.

2. Disconnect the cable from the lever.

6. Remove the lower steering column cover screws.

7. Remove the instrument panel steering column cover.

8. Disconnect the electrical connector.

9. Position the hood release cable and bracket aside.
 1. Remove the screws.
 2. Position the hood release cable and bracket aside.

10. Remove the floor heat duct screw.

11. Remove the lower reinforcement panel.

12. Remove the inner instrument panel finish panel.

13. Remove the outer instrument panel finish panel.

14. Disconnect the power mirror switch.

15. Remove the inner trim support panel.

16. Remove the ignition switch.

- Remove the screws.
- Remove the ignition switch.

17. Remove two screws for the shift lock actuator cable.

18. Disconnect the electrical connector.

19. Remove the cable from the bracket and remove the cable.

20. To install, reverse the removal procedure.

Cable

Removal and Installation

1. Position the gearshift lever in the D-5 position.
2. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
3. Disconnect the transmission shift cable from the selector lever.

4. Disconnect the transmission shift cable from the bracket.

5. **NOTE:** It is not necessary to remove the exhaust.

Remove the bolts from the heat shield and allow the shield to rest on the exhaust.

6. Remove the bolt at the shift cable bracket.

7. Remove the transmission shift cable.
 1. Disconnect the shift cable from the transmission manual control lever.
 2. Depress the tab and slide the shift cable out of the shift cable bracket.
 3. Remove the shift cable.

8. **NOTE:** A cable adjustment must be performed after the installation procedure.

To install, reverse the removal procedure.

- Adjust the shifter cable. For additional information, refer to [Cable Adjustment](#) in this section.
-

Selector Lever

Removal and Installation

1. Remove the center console. For additional information, refer to [Section 501-12](#).
2. Remove the handle and the cover.
 1. Slide the cover down.
 2. Remove the two screws.
 3. Remove the handle and the cover.

3. Remove the shift bezel.

4. Remove the PRNDL indicator bulb.

5. Remove the rear A/C air duct.

6. Disconnect the cable from the lever.
 1. Remove the shift interlock cable from the bracket.
 2. Disconnect the cable from the lever.

7. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
8. Disconnect the transmission shift cable from the selector lever.

9. Lower the vehicle.
10. Disconnect the two electrical connectors.

11. Remove the shifter assembly.
 - Remove the bolts.
 - Remove the shifter assembly.

12. **NOTE:** A cable adjustment must be performed after the installation procedure.

To install, reverse the removal procedure.

- Adjust the shifter cable. For additional information, refer to [Cable Adjustment](#) in this section.
-

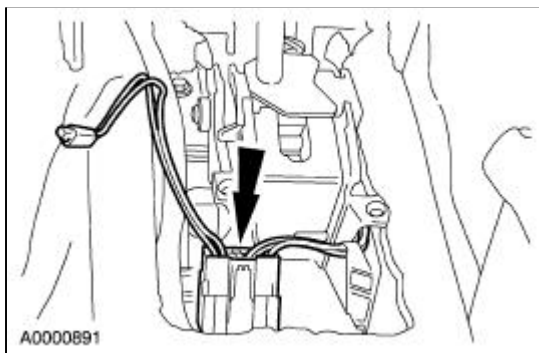

Transmission Control Switch

Removal and Installation

1. Remove the center console. For additional information, refer to [Section 501-12](#).
2. Remove the PRNDL indicator bulb.

3. Disconnect the electrical connector.

4. Disconnect the switches and remove the harness.

5. To install, reverse the removal procedure.

SPECIFICATIONS

Lubricants, Fluids, Sealers and Adhesives

Item	Specification
High Performance DOT 3 Motor Vehicle Brake Fluid C6AZ-19542-AB	ESA-M6C25-A, DOT 3

DESCRIPTION AND OPERATION

Manual Transmission and Clutch

The clutch system consists of the following components:

- a flywheel
- a clutch disc
- a clutch pressure plate
- a clutch master cylinder
- a clutch slave cylinder
- a clutch release hub and bearing

The clutch master cylinder transmits fluid pressure to the slave cylinder, which in turn moves the clutch release hub and bearing.

The clutch master cylinder uses brake fluid and shares a common reservoir with the brake master cylinder.

The clutch is a single plate, dry-friction disc with a diaphragm-style spring clutch pressure plate. The clutch disc has a hub which is splined to the input shaft. The clutch disc has friction material where it contacts the flywheel and the pressure plate. The clutch pressure plate applies pressure to the clutch disc, holding it tightly against the surface of the flywheel.

In the engaged position, the diaphragm spring holds the clutch pressure plate against the clutch disc so that engine torque is transmitted to the input shaft. When the clutch pedal is depressed, the clutch release hub and bearing pushes the diaphragm spring center toward the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted to the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission and enabling the gears to be changed.

Manual Transmission and Clutch

Inspection and Verification - Clutch

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical damage.

Visual Inspection Chart

Mechanical
<ul style="list-style-type: none"> ● Transmission oil leak ● Loose or missing screws or nuts

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the concern is not visually evident, verify the symptom and refer to the Symptom Chart.

Inspection and Verification - Manual Transmission

The following checks should be carried out before repairing or installing a new transmission:

Transmission Noise

If transmission noises are reported, check the transmission fluid level. If damage has occurred due to a lack of fluid, install a new transmission. For additional information, refer to [Section 308-03](#).

Oil Leakage

- Check that the leaking fluid is actually transmission fluid and not hydraulic fluid (from the hydraulically operated clutch) or engine oil.
- Check the transmission fluid level and, as necessary, drain off any excess fluid.
- Clean the transmission and the adjacent areas carefully before the road test.

Symptom Chart - Poor Gear Shifting

Symptom Chart

Condition	Possible Sources	Action
<ul style="list-style-type: none"> ● Significant effort required when downshifting or synchronizer clashing 	<ul style="list-style-type: none"> ● Inadequate gear synchronization . 	<ul style="list-style-type: none"> ● INSTALL a new transmission. REFER to Section 308-03.
<ul style="list-style-type: none"> ● Gear jumps out of engagement while 	<ul style="list-style-type: none"> ● Transmission assembly error (missing snap rings 	<ul style="list-style-type: none"> ● INSTALL a new transmission. REFER

driving	or circlips synchronizer components). ● Manufacturing error (incorrect gear wheel tooting or synchronizer ring).	to Section 308-03 .
● Gearshift problems in different gears (stiff or partially seized)	● Linkage.	● REPAIR the transmission accordingly. CHECK the transmission for any resulting damage.
● Brief scratching noise during gear shifting	● Inadequate gear synchronization.	● INSTALL a new transmission. REFER to Section 308-03 .

Symptom Chart - Oil Leakage

Symptom Chart

Condition	Possible Sources	Action
● Leak from transmission housing	<ul style="list-style-type: none"> ● Leak from crankshaft rear seal. ● Leak from clutch hydraulics. ● Sealing lip on input shaft damaged. 	<ul style="list-style-type: none"> ● INSTALL a new crankshaft seal. ● For additional information, REFER to Pinpoint Test H . ● INSTALL a new input shaft seal.

Symptom Chart - General Concerns

Symptom Chart

Condition	Possible Sources	Action
● Clicking noises in reverse gear	● Gear wheels.	● RUN the vehicle on a hoist to establish that the noise is coming from the transmission. If the noise is coming from the transmission, INSTALL a new transmission.
● Gear wheels banging when shifting	<ul style="list-style-type: none"> ● Damaged clutch. ● Selector forks or synchronizer rings. 	<ul style="list-style-type: none"> ● CHECK the clutch is clearing correctly. <ul style="list-style-type: none"> ■ No-For additional information, REFER to Pinpoint Test A . ■ Yes-CHECK transmission oil level. If transmission oil level is okay INSTALL a new transmission. REFER to Section 308-03 . ● INSTALL a new transmission. REFER to Section 308-03 .
● Noises in the forward gears	● Transmission fluid level low.	● FILL the transmission with correct amount of fluid.

	<ul style="list-style-type: none"> ● The engine/transmission assembly is in contact with the chassis/body. ● Engine/transmission flange bolts. ● Input and output shaft bearings. 	<ul style="list-style-type: none"> ● INSPECT for points of contact for damaged engine/transmission isolator, support insulator. ● TIGHTEN the transmission flange bolts. For additional information, REFER to Section 308-03. ● INSTALL a new transmission. REFER to Section 308-03.
<ul style="list-style-type: none"> ● Gears jump out of engagement 	<ul style="list-style-type: none"> ● Engine/transmission support insulator. ● Internal components. 	<ul style="list-style-type: none"> ● REPAIR or INSTALL new components as necessary. ● INSTALL a new transmission. PINPOINT TEST A: CLUTCH SLIPPAGE

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 TEST CLUTCH SLIPPAGE	
	<ol style="list-style-type: none"> 1 Lock wheels and apply the parking brake. 2 Start the engine and engage 4th gear. 3 Run the engine at approximately 2,000 rpm. 4 Release the clutch pedal slowly.

● Does the engine stall when the clutch pedal is fully released?

→ **Yes**
Clutch is OK.

→ **No**
GO to [A2](#).

A2 TEST CLUTCH FOR CLEARING

1 Start engine, fully depress the clutch pedal, partially engage reverse gear, slowly engage clutch until a grating noise is heard, depress the clutch slowly until grating stops.

2 Measure pedal travel from the pedal to the floor.

● Is the measurement between 25 mm and 40 mm (0.98 in and 1.57 in)?

→ **Yes**
GO to [A3](#).

→ **No**
GO to [A5](#).

A3 TEST FULL PEDAL TRAVEL

1 Measure the clutch pedal travel from fully up to the fully compressed position.

● Is the measurement between 133 mm and 143 mm (5.23 in and 5.62 in)?

→ **Yes**
GO to [A4](#).

→ **No**
CHECK clutch pedal for obstructions. TEST the system for normal operation.

A4 CHECK CLUTCH PEDAL SHAFT LUBRICATION

1 Check the clutch pedal shaft lubrication.

● Is the clutch pedal shaft sufficiently lubricated?

→ **Yes**
GO to [A5](#).

→ **No**
LUBRICATE the clutch pedal shaft.

A5 TEST CLUTCH PRESSURE PLATE

1 Remove clutch pressure plate. For additional information, refer to [Section 308-01](#).

● Does the clutch pressure plate have signs of wear or damage?

→ **Yes**
INSTALL a new clutch pressure plate.

	→ No GO to A6 .
A6 TEST CLUTCH FRICTION DISC	
	<p>1 Visually check the clutch friction disc.</p> <ul style="list-style-type: none"> ● Is the clutch friction disc oil-fouled or does it have burn marks? <p>→ Yes INSTALL a new clutch friction disc. TEST the system for normal operation.</p> <p>→ No CHECK the flywheel.</p>

PINPOINT TEST B: CLUTCH CHATTER OR SHUDDER

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 TEST CLUTCH CHATTER OR SHUDDER	
	<p>1 Start the engine and engage 1st gear.</p> <p>2 Run the engine between 1,200 rpm and 1,500 rpm.</p> <p>3 Release clutch pedal slowly.</p> <ul style="list-style-type: none"> ● Does the vehicle shudder when it begins to move? <p>→ Yes GO to B2.</p> <p>→ No Clutch is OK.</p>
B2 TEST ENGINE/TRANSMISSION SUPPORT INSULATOR	
	<p>1 Check engine/transmission mountings and support insulator for damage or loose bolts.</p> <ul style="list-style-type: none"> ● Are the engine/transmission mountings or support insulator loose or damaged? <p>→ Yes TIGHTEN the bolts or INSTALL new bolts as necessary. TEST the system for normal operation.</p> <p>→ No GO to B3.</p>
B3 TEST CLUTCH PRESSURE PLATE	
	<p>1 Remove the clutch pressure plate. For additional information, refer to Section 308-01.</p> <ul style="list-style-type: none"> ● Does the clutch pressure plate have signs of wear or damage? <p>→ Yes</p>

	<p>INSTALL a new clutch pressure plate.</p> <p>→ No GO to B4.</p>
B4 TEST CLUTCH FRICTION DISC	
	<p>1 Visually check the clutch friction disc.</p> <ul style="list-style-type: none"> ● Is the clutch friction disc oil-fouled or does it have burn marks? <p>→ Yes INSTALL a new clutch friction disc. TEST the system for normal operation.</p> <p>→ No CHECK the flywheel.</p>

PINPOINT TEST C: CLUTCH DRAG

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK BRAKE FLUID LEVEL	
NOTE: The hydraulic clutch fluid is supplied from the brake master cylinder.	
	<p>1 Check the brake fluid level.</p> <ul style="list-style-type: none"> ● Is the brake fluid level between the MAX and MIN marks on the brake fluid reservoir? <p>→ Yes GO to C2.</p> <p>→ No FILL brake fluid, and CHECK the brake and clutch system for leaks. TEST system for normal operation.</p>
C2 TEST CLUTCH PEDAL FREE TRAVEL	
	<p>1 Operate clutch pedal manually to the point of resistance and release.</p> <p>2 Measure pedal travel.</p> <ul style="list-style-type: none"> ● Is the measured dimension within 10 mm (0.39 in)? <p>→ Yes GO to C3.</p> <p>→ No GO to C5.</p>
C3 TEST FULL PEDAL TRAVEL	
	<p>1 Measure the clutch pedal travel from fully up to the fully compressed position.</p> <ul style="list-style-type: none"> ● Is the measurement between 133 mm and 143 mm (5.23 in and 5.62 in)?

	<p>→ Yes GO to C4.</p> <p>→ No CHECK clutch pedal for obstructions. TEST the system for normal operation.</p>
C4 CHECK CLUTCH PEDAL SHAFT LUBRICATION	
	<p>1 Check the clutch pedal shaft lubrication.</p> <p>● Is the clutch pedal shaft sufficiently lubricated?</p> <p>→ Yes GO to C5.</p> <p>→ No LUBRICATE the clutch pedal shaft.</p>
C5 TEST CLUTCH PRESSURE PLATE	
	<p>1 Remove clutch pressure plate. For additional information, refer to Section 308-01.</p> <p>● Does the clutch pressure plate have signs of wear or damage?</p> <p>→ Yes INSTALL a new clutch pressure plate.</p> <p>→ No GO to C6.</p>
C6 TEST CLUTCH FRICTION DISC	
	<p>1 Visually check the clutch friction disc.</p> <p>● Is the clutch friction disc oil-fouled or does it have burn marks?</p> <p>→ Yes INSTALL a new clutch friction disc. TEST the system for normal operation.</p> <p>→ No CHECK the flywheel.</p>

PINPOINT TEST D: CLUTCH PEDAL PULSATION

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 CHECK CLUTCH PEDAL SHAFT LUBRICATION	
	<p>1 Check the clutch pedal shaft lubrication.</p> <p>● Is the clutch pedal shaft sufficiently lubricated?</p> <p>→ Yes CHECK the flywheel.</p> <p>→ No</p>

LUBRICATE the clutch pedal shaft. TEST the system for normal operation.

PINPOINT TEST E: CLUTCH RELATED VIBRATIONS

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 CHECK FOR ENGINE COMPONENT GROUNDING	
	<ol style="list-style-type: none">1 Raise and support the vehicle. For additional information, refer to Section 100-02.2 Check the engine mountings for grounding on the body frame.3 Check the exhaust manifold or other engine component grounding on the body or frame. <ul style="list-style-type: none">● Is there evidence of grounding on body or frame? <p>→ Yes REPAIR or INSTALL a new component as necessary. TEST the system for normal operation.</p> <p>→ No GO to E2.</p>
E2 CHECK FOR ACCESSORY DRIVE VIBRATIONS	
	<ol style="list-style-type: none">1 Feel accessory vibration at clutch engage/disengage when engine torque changes.2 Disconnect the accessory drive belt and check for vibration. <ul style="list-style-type: none">● Does the vibration stop when the drive belt is removed from the engine? <p>→ Yes REPAIR or INSTALL new accessory drive belt components. For additional information, REFER to Section 303-05.</p> <p>→ No GO to E3.</p>
E3 CHECK FOR RELEASE BEARING NOISE	
	<ol style="list-style-type: none">1 Start the engine.2 Depress and hold clutch pedal. <ul style="list-style-type: none">● Is a whirring, grating or grinding noise present? <p>→ Yes INSTALL a new clutch slave cylinder. For additional information, REFER to Section 308-02. TEST the system for normal operation.</p> <p>→ No GO to E4.</p>
E4 INSPECT FLYWHEEL	
	<ol style="list-style-type: none">1 Remove the transmission. For additional information, refer to Section 308-

[03.](#)

Inspect for loose flywheel bolts.

Carry out flywheel runout check. For additional information, refer to [Section 303-00](#).

● **Is the flywheel OK?**

→ **Yes**
DIAGNOSE engine vibration concern. For additional information, REFER to [Section 303-00](#).

→ **No**
TIGHTEN flywheel bolts or INSTALL a new flywheel. For additional information, REFER to [Section 308-01](#). TEST the system for normal operation.

PINPOINT TEST F: HARD SHIFTING

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK FLUID LEVEL	
NOTE: The hydraulic clutch fluid is supplied from the brake master cylinder.	
	<input type="checkbox"/> Inspect the fluid level in the brake master cylinder reservoir. ● Is the fluid within the MAX and MIN level marks? → Yes GO to F2 . → No FILL brake fluid, CHECK for leaks in the clutch and brake system. TEST the system for normal operation.
F2 TEST CLUTCH PEDAL FREE TRAVEL	
	<input type="checkbox"/> Operate clutch pedal manually to the point of resistance and release. <input type="checkbox"/> Measure pedal travel. ● Is the measured dimension within 10 mm (0.39 in)? → Yes GO to F3 . → No GO to F5 .
F3 TEST FULL PEDAL TRAVEL	
	<input type="checkbox"/> Measure the clutch pedal travel from fully up to the fully compressed position. ● Is the measurement between 133 mm and 143 mm (5.23 in and 5.62 in)?

	<p>→ Yes GO to F4.</p> <p>→ No CHECK clutch pedal for obstructions. TEST the system for normal operation.</p>
F4 CHECK CLUTCH PEDAL SHAFT LUBRICATION	
	<p>1 Check the clutch pedal shaft lubrication.</p> <p>● Is the clutch pedal shaft sufficiently lubricated?</p> <p>→ Yes GO to F5.</p> <p>→ No LUBRICATE the clutch pedal shaft.</p>
F5 TEST CLUTCH PRESSURE PLATE	
	<p>1 Remove clutch pressure plate. For additional information, refer to Section 308-01.</p> <p>● Does the clutch pressure plate have signs of wear or damage?</p> <p>→ Yes INSTALL a new clutch pressure plate.</p> <p>→ No GO to F6.</p>
F6 TEST CLUTCH FRICTION DISC	
	<p>1 Visually check the clutch friction disc.</p> <p>● Is the clutch friction disc oil-fouled or does it have burn marks?</p> <p>→ Yes INSTALL a new clutch friction disc. TEST the system for normal operation.</p> <p>→ No CHECK the flywheel.</p>

PINPOINT TEST G: EXCESSIVE NOISE

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 CHECK TRANSMISSION NEUTRAL POSITION	
	<p>1 Start the engine and run it in Neutral.</p> <p>2 Depress clutch pedal fully.</p> <p>● Are there noises when the clutch is operated?</p> <p>→ Yes GO to G2.</p>

	<p>→ No System is OK.</p>
G2 TEST CLUTCH PEDAL FREE TRAVEL	
	<p>1 Press the clutch down manually until resistance is felt, then release it again.</p> <p>2 Measure pedal travel.</p> <p>● Is the measured dimension within 10 mm (0.39 in)?</p> <p>→ Yes GO to G3.</p> <p>→ No INSTALL a new clutch master cylinder. For additional information, REFER to Section 308-02. TEST the system for normal operation.</p>
G3 TEST CLUTCH SLAVE CYLINDER WITH RELEASE BEARING	
	<p>1 Remove the transmission. For additional information, refer to Section 308-03.</p> <p>2 Check the clutch slave cylinder bolts.</p> <p>3 Check the release bearing for wear and rust.</p> <p>● Are the bolts loose or are there signs of wear or rust?</p> <p>→ Yes TIGHTEN the bolts or INSTALL a new clutch slave cylinder with the release bearing. TEST the system for normal operation.</p> <p>→ No GO to G4.</p>
G4 CHECK CLUTCH FRICTION DISC TORSION SPRINGS	
	<p>1 Check torsion springs for wear.</p> <p>● Do the torsion springs have signs of wear?</p> <p>→ Yes INSTALL a new clutch friction disc. TEST the system for normal operation.</p> <p>→ No CHECK crankshaft end play. For additional information, REFER to Section 303-00. TEST the system for normal operation.</p>

PINPOINT TEST H: FLUID LEAKAGE

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 INSPECT CLUTCH MASTER CYLINDER	
	<p>1 Inspect the clutch master cylinder for leakage.</p> <p>● Is the clutch master cylinder OK?</p>

→ **Yes**
GO to [H2](#).

→ **No**
INSTALL a new clutch master cylinder as necessary. For additional information, REFER to [Section 308-02](#). TEST the system for normal operation.

H2 INSPECT CLUTCH SLAVE CYLINDER

1 Inspect the clutch slave cylinder for leaks.

- **Is the clutch slave cylinder OK?**

→ **Yes**
GO to [H3](#).

→ **No**
INSTALL a new clutch slave cylinder as necessary. For additional information, REFER to [Section 308-02](#). TEST the system for normal operation.

H3 INSPECT SYSTEM HYDRAULIC TUBES

1 Inspect the clutch hydraulic tubes for loose or damaged fittings causing leakage.

- **Are the clutch hydraulic tubes OK?**

→ **Yes**
CARRY OUT road test to verify customer complaint.

→ **No**
INSTALL new components as necessary. TEST the system for normal operation.

GENERAL PROCEDURES

Bleed Procedure

1.  **WARNING:** Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with eyes. Wash hands thoroughly after handling. If brake fluid contacts eyes, flush eyes with running water for 15 minutes. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately.

 **CAUTION:** Brake fluid is harmful to painted or plastic surfaces. If the brake fluid is spilled onto a painted or plastic surface, wash it immediately with water.

NOTE: Make sure of absolute cleanliness when filling the brake fluid reservoir.

NOTE: Do not re-use brake fluid.

Fill the brake fluid reservoir with High Performance DOT3 Motor Vehicle Brake Fluid C6AZ-19542-AB or equivalent meeting Ford specification ESA-M6C25-A, DOT3.

2. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
3. Remove the dust cover.

4. Remove the bleed nipple cover.

5. Bleed the clutch system.
 - Attach a proprietary bleed jar to the bleed nipple and open the bleed nipple one turn.
 - Depress the clutch pedal repeatedly until the emerging fluid is free of bubbles; always

make sure that there is sufficient fluid (5 mm [0.2 in] above the MAX) in the reservoir.

- After bleeding, tighten the bleed nipple.
- Install the bleed nipple cover.
- Install the dust cover.
- After bleeding, lower the vehicle and depress the clutch 10 times and check that it is functioning correctly.

6. **NOTE:** Make sure of absolute cleanliness when filling the brake fluid reservoir.

Check the brake fluid level.

- The fluid level should be between the MIN and MAX marks. If the level drops below the MIN mark, the brake warning indicator will light up.
- As necessary, fill the brake fluid reservoir with High Performance DOT3 Motor Vehicle Brake Fluid C6AZ-19542-AB or equivalent meeting Ford specification ESA-M6C25-A, DOT3.

GENERAL PROCEDURES

Release Hub and Bearing Check

1. Turn the clutch release hub and bearing in both directions and check for any binding or abnormal noise.

2.  **CAUTION: The clutch release hub and bearing is sealed and must not be immersed in any type of cleaning fluid.**

Check for worn or damaged clutch release hub and bearing fork contact surfaces.

3. Install the clutch release hub and bearing on the input shaft and check for a smooth sliding condition.
 4. Check driveshaft splines for rust, scoring, or damage.
-

Torque Specifications

Description	Nm	lb-ft	lb-in
Flywheel bolts	80	59	—
Pressure plate bolts	23	17	—

Clutch

The clutch transfers the engine torque to the transmission.

The clutch consists of a disc and a pressure plate with a diaphragm spring, bolted to the flywheel.

When the clutch pedal is operated the power transmission from the engine to the transmission is interrupted. The clutch is therefore engaged when the pedal is not depressed. Pressing down the pedal disengages the clutch.

Clutch

Refer to [Section 308-00](#) .

Flywheel

Removal

1. Remove the manual transmission. For additional information, refer to [Section 308-03](#).
2. Remove the clutch disc and pressure plate. For additional information, refer to [Disc and Pressure Plate](#).
3. Remove the flywheel.
 1. Remove the bolts.
 2. Remove the flywheel.

Installation

1. **NOTE:** One of the flywheel holes is offset for installation.

To install, reverse the removal procedure.

Bearing —Pilot

Special Tool(s)

Removal

1. Remove the manual transmission. For additional information, refer to [Section 308-03](#).
2. Remove the clutch disc and the clutch pressure plate. For additional information, refer to [Disc and Pressure Plate](#) in this section.
3. Remove the pilot bearing from the flywheel.

Installation

1. Using the special tool, install the pilot bearing into the flywheel.

2. Install the clutch disc and the clutch pressure plate. For additional information, refer to [Disc and Pressure Plate](#) in this section.
3. Install the manual transmission.

Disc and Pressure Plate

Special Tool(s)

Removal

1. Remove the manual transmission. For additional information, refer to [Section 308-03](#).
2. Remove the clutch disc and pressure plate.
 1. Remove the pressure plate bolts in a uniform sequence.
 2. Remove the clutch disc and pressure plate.

Installation

1. **NOTE:** The clutch disc is marked "Flywheel side" for correct installation.

Using the special tool, align the clutch assembly.

2. Locate the clutch pressure plate on the flywheel dowels and tighten the bolts in a diagonal sequence.

3. Remove the special tool.
4. **NOTE:** Make sure that the input shaft of the transmission is moved squarely into the hub of clutch disc. Do not bend in any direction.

Install the manual transmission. For additional information, refer to [Section 308-03](#).

General Specifications

Clutch master cylinder nuts	10	—	89
Hydraulic tube bracket nut	10	—	89
Clutch pedal position (CPP) switch bracket bolts.	10	—	89

Clutch Controls

The clutch control system consists of the following components:

- clutch master cylinder reservoir and tubing
- clutch master cylinder
- clutch hydraulic tube

For removal and installation procedures, refer to [Section 206-06](#).

The clutch control system disengages the clutch when the clutch pedal is depressed and engages the clutch when released. When the clutch pedal is depressed it pushes the clutch master cylinder plunger. This develops hydraulic pressure and applies the clutch slave cylinder which engages the clutch release hub and bearing. The clutch release hub and bearing and clutch pressure plate diaphragm springs release the pressure on the clutch disc. This in turn disengages the transmission from the engine.

The hydraulic clutch system adjusts automatically to compensate for clutch disc wear. The clutch linkage is not adjustable.

Clutch Controls

Refer to [Section 308-00](#) .

Clutch Pedal

Removal and Installation

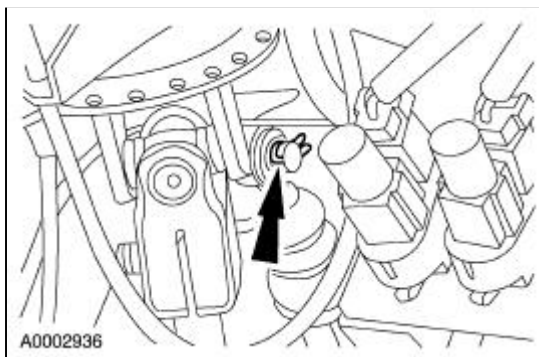

1. **NOTE:** Disconnect the footwell lamp electrical connector.

Remove the instrument panel insulator.

2. Remove the clutch pedal position (CPP) switch bracket bolts and position the bracket out of the way.

3. Remove the snap ring and disconnect the clutch master cylinder push rod.

4. **NOTE:** When the clutch pedal shaft is removed from the bracket, the brake pedal, brake and clutch pedal bushings and the spring washer become accessible.

Remove the clutch pedal snap ring and the clutch pedal shaft.

5. Remove the clutch pedal return spring and the clutch pedal.

6. **NOTE:** Position the return spring in the "V" at the top of the pedal arm.

NOTE: Before the installation of the clutch pedal shaft or clutch pedal, remove and inspect the brake and clutch pedal bushings. Clean and lubricate with a light film of Super Premium SAE 5W-30 Motor Oil or equivalent meeting Ford specification WSS-M2C153-G and install a new brake and clutch pedal bushing if excessive wear is evident.

To install, reverse the removal procedure.

Clutch Master Cylinder

Material

Item	Specification
High Performance DOT 3 Motor Vehicle Brake Fluid C6AZ-19542-AB	ESA-M6C25-A, DOT 3

Removal and Installation

-  **WARNING:** Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with eyes. Wash hands thoroughly after handling. If brake fluid contacts eyes, flush eyes with running water for 15 minutes. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately.

 **CAUTION:** Brake fluid is harmful to painted or plastic surfaces. If the brake fluid is spilled onto a painted or plastic surface, wash it immediately with water.

Remove the hose at the clutch master cylinder reservoir.

- Remove the degas bottle. For additional information, refer to [Section 303-03](#).
 - Only partially drain the coolant system.

- Partially drain the brake master cylinder.
 - Drain to just below the clutch reservoir nipple.
- Remove the clutch hydraulic lines.
 - Disconnect the reservoir line from the brake master cylinder.
 - Plug the reservoir line. Discard the hose clamp.
 - Disconnect the clutch master cylinder hydraulic line.

5. Remove the two retainers and lower the instrument panel insulator. Disconnect the footwell lamp electrical connector, then remove from the vehicle.

6. Remove the instrument panel finish panel.
7. Remove the two bolts.

8. Remove the clip and washer from the clutch pedal arm.

9. Disengage the clutch master cylinder from the clutch arm, then remove the clutch master

cylinder.

10. Remove the reservoir line from the clutch master cylinder

11. To install, reverse the removal procedure.

- Install new hose clamps on the reservoir line.
 - Refill the brake master cylinder with the specified fluid.
 - Refill the coolant system.
 - Bleed the clutch hydraulic system. For additional information, refer to [Section 308-00](#) .
-

Slave Cylinder

Removal and Installation

1. Remove the transmission. For additional information, refer to [Section 308-03](#).
2. Remove the hydraulic tube connector.

3. Remove the bolts and the slave cylinder.

4. Remove the drain tube.

5.  **CAUTION:** The clutch release hub and bearing is pre-lubricated and should not be cleaned with solvent. The clutch release hub and bearing are installed as an assembly. Do not disassemble for inspection.

Wipe oil and dirt off the clutch release hub and bearing.

6. Inspect the clutch release hub and bearing as follows:

- Rotate outer race while applying pressure. If bearing rotation is rough, install a new clutch release hub and bearing.
- Inspect for any surface scoring or burrs that may impede the sliding motion of the clutch release hub and bearing. Any scoring or burrs should be polished off with a fine grade of emery paper.

7. To install, reverse the removal procedure.

- Bleed the clutch hydraulic system. For additional information, refer to [Section 308-00](#).
-

Hydraulic Tubes

⚠ WARNING: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with eyes. Wash hands thoroughly after handling. If brake fluid contacts eyes, flush eyes with running water for 15 minutes. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately.

⚠ CAUTION: Brake fluid is harmful to painted and plastic surfaces. If brake fluid is spilled into a painted or plastic surface, immediately wash it with water.

1. Remove the snap ring and tube from the clutch master cylinder connector.

2. Disconnect the clutch slave cylinder hydraulic line.

3. Remove the nut, bracket and hydraulic tube from the vehicle.

4. **NOTE:** Check the clutch slave cylinder port to make sure the old O-ring seal has been removed. Install a new O-ring seal.

To install, reverse the removal procedure.

- Bleed the system. For additional information, refer to [Section 308-00](#).
-

Manual Transmission

The transmission consists of the following:

- A two part die cast aluminum housing
- Bevel cut gears that rotate on needle roller bearings
- An input shaft and output shaft that rotate on ball bearings
- A layshaft that rotates on roller bearings
- Selector shaft assemblies

The engine rotational torque is transmitted from the crankshaft through the clutch to the transmission input shaft, which then transmits drive to a layshaft and then the output shaft by utilizing an arrangement of gears. When reverse gear is selected, the direction of the output shaft is changed by an idler gear assembly.

In neutral, none of the gears are connected to the input or output shaft through the relevant synchronizer unit. No torque is transmitted to the driveline.

Manual Transmission

Refer to [Section 308-00](#) .

Fill Procedure

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Remove the fill plug.

3. Fill the transmission to 0.5 mm (0.02 in) below the lower edge of the fill plug bore.

4. Install the fill plug.

5. Lower the vehicle.

Drain Procedure

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Remove the fill plug.

3. Remove the drain plug and drain fluid into a suitable container.

4. Install the drain plug.

5. Fill the transmission as necessary. For additional information, refer to [Fill Procedure](#) in this section.

Vehicle Speed Sensor (VSS)

Removal and Installation

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Disconnect the vehicle speed sensor (VSS) electrical connector.

3. Remove the bolt and the VSS.

4. To install, reverse the removal procedure.
-

Seal —Selector Shaft

Special Tool(s)

Removal

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Disconnect the selector rod.
 - Remove the selector rod locating pin.

3. Disconnect the stabilizer rod.
 - Remove the stabilizer rod locating pin.

4. Remove the intermediate muffler. For additional information, refer to [Section 309-00](#).
5. Remove the bolts and the center heat shield.

6. **⚠ CAUTION:** The transmission flange bolts, nuts, and washers must be removed as matched sets and installed in the original location. The system balance add-on nuts (if equipped) must be installed in the original location.

⚠ CAUTION: Under no circumstances must the flexible coupling (or its fixings) be loosened or removed from the driveshaft.

NOTE: Support the front section of the driveshaft.

Disconnect the transmission flexible joint.

- Mark the position of the driveshaft in relation to the transmission flange.
- Mark the position of each nut and bolt in relation to the transmission flexible joint.

7. Shorten the length of the driveshaft.
- Using the special tool, loosen the driveshaft locknut and move the driveshaft front section towards the center bearing.

8. Remove the selector rod link.

9. Install a second oil seal over the existing seal.

Installation

1. Install the selector rod link.
2. **NOTE:** Install one gram of Premium Long Life Grease, XG-1-K or equivalent meeting Ford specifications ESA-M1C75-B, in the alignment bushing prior to installation.

Slide the driveshaft forward until the flexible coupling engages with the transmission flange.

3. **⚠ CAUTION:** Make sure to match the transmission flange attaching bolts, nuts, washers, and balance add-on nuts (if equipped) in their original locations.

⚠ CAUTION: Tighten the transmission flange bolts and nuts with hand tools only.

NOTE: Align the driveshaft index matchmarks.

Install the flex coupling bolts, washers and attaching nuts.

4. Using the special tools, tighten the driveshaft yoke locking nuts.

5. Install the bolts and the center heat shield.

6. Install the intermediate muffler.
 7. Install the stabilizer rod and stabilizer rod pin.
 8. Install the selector rod and the selector rod pin.
 9. Lower the vehicle.
-

Seal —Input Shaft

Removal and Installation

1. Remove the manual transmission. For additional information, refer to [Transmission](#) in this section.
 2. Remove the clutch slave cylinder. For additional information, refer to [Section 308-02](#).
 3. Remove the input shaft seal.
 4. To install, reverse the removal procedure.
-

Seal —Output Shaft

Special Tool(s)

Removal

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Remove the intermediate muffler. For additional information, refer to [Section 309-00](#).
3. Remove the bolts and the center heat shield.

4.  **CAUTION:** The transmission flange bolts, nuts, and washers must be removed as matched sets and installed in the original locations. The system balance add-on nuts must be installed in the original locations.

 **CAUTION:** Under no circumstances must the flexible coupling (or its fixings) be loosened or removed from the driveshaft.

NOTE: Make sure to disconnect the coupling from the transmission flange only.

Detach the transmission flexible joint.

- Using different color paint markers, place index matchmarks on the transmission flange, driveshaft flexible coupling and the transmission bolts, nuts, washers and add-on nuts, so the driveshaft and the transmission flange can be aligned correctly during installation.

5. **NOTE:** Support the front section of the driveshaft.

Shorten the length of the driveshaft.

- Using the special tool, loosen the driveshaft locknut and move the driveshaft front section towards the center bearing.

6. Remove the output shaft flange nut.
7. Remove the output shaft flange.
8. Remove the output shaft oil seal.

Installation

1. Install the output shaft oil seal.

2. Install the output shaft flange.
 - Stage 1: tighten the nut to 170 Nm (125 lb-ft).
 - Stage 2: loosen the nut by 1/2 turn.
 - Stage 3: tighten the nut to 120 Nm (89 lb-ft).
3. Install the output shaft nut.
4. **NOTE:** Install one gram of Premium Long Life Grease, XG-1-K or equivalent meeting Ford specifications ESA-M1C75-B, in the alignment bushing prior to installation.

Slide the driveshaft forward until the flexible coupling engages the transmission flange.

5.  **CAUTION: Make sure to match the bolts, washers, attaching nuts and balance nuts (if equipped) to their original locations.**

 **CAUTION: Tighten the transmission flange bolts and nuts with hand tools only.**

NOTE: Align the driveshaft index matchmarks.

Install the flex coupling bolts, washers and attaching nuts.

6. Using the special tools, tighten the driveshaft yoke nuts.

7. Install the bolts and the center heat shield.

8. Lower the vehicle.
-

Support Insulator

Removal and Installation

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Position the transmission jack and install a holding strap around the transmission.

3. Remove the transmission support insulator.

4. Remove the transmission support.

5. To install, reverse the removal procedure.

Transmission

Special Tool(s)

Removal

1. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
2. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
3. Remove the starter motor. For additional information, refer to [Section 303-06](#).
4. Disconnect the selector rod.
 - Remove the selector rod locating pin.

5. Disconnect the stabilizer rod.
 - Remove the stabilizer rod locating pin.

6. Remove the intermediate muffler. For additional information, refer to [Section 309-00](#).

7. Remove the bolts and the center heat shield.

8.  **CAUTION:** The transmission flange bolts, nuts and washers must be removed as matched sets and installed in their original location. The system balance add-on nuts (if equipped) must be installed in their original location.

 **CAUTION:** Under no circumstances must the flexible coupling (or its fixings) be loosened or removed from the driveshaft.

 **CAUTION:** Support the front section of the driveshaft.

Disconnect the transmission flexible joint.

- Using different color paint markers, place index matchmarks on the transmission flange, driveshaft flexible coupling and the transmission bolts, nuts, washer and system balance and on nuts so the driveshaft and transmission flange may be correctly aligned during installation.

9. Shorten the length of the driveshaft.

- Using the special tools, loosen the driveshaft yoke locknut and move the driveshaft front section towards the center bearing.

10. Disconnect the right-hand bank catalyst monitor sensor electrical connector.

11. Remove the electrical wiring harness from the transmission.

12. Disconnect the vehicle speed sensor electrical connector.

13. Disconnect the left-hand bank catalyst monitor sensor electrical connector.

14. Disconnect the reverse light switch electrical connector.

15. Detach the electrical wiring harness from the transmission.

16. Position the transmission jack and install a holding strap around the transmission.

17. Remove the support insulator.

18. Remove the transmission support.
1. Remove the bolts.
 2. Remove the support.

19. Partially lower the transmission.
20. Disconnect the slave cylinder supply tube.
 - Remove the slave cylinder supply tube retaining clip.
 - Plug the hose to prevent loss of fluid.

21. Remove the transmission wiring electrical harness from the transmission.

22. Remove the bellhousing bolts.

23. Remove the bellhousing bolts.

24. Remove the transmission.

- Remove the remaining bellhousing bolts.

Transmission

Special Tool(s)

1. Position the transmission to the engine using the transmission jack.

2. Install the bellhousing bolts.

3. Install the bellhousing bolts.

4. Install the remaining bellhousing bolts.

5. Attach the transmission wiring harness to the transmission.

6. **NOTE:** Install a new O-ring seal and clip to the supply tube.

Connect the slave cylinder supply tube.

7. Loosely install the transmission support insulator.

8. Install the transmission support.

9. Tighten the transmission support insulator center bolt.

10. Remove the transmission jack.
11. Attach the electrical wiring harness to the transmission.

12. Connect the reverse switch electrical connector.

13. Connect the left-hand catalyst monitor sensor electrical connector.

14. Connect the speed sensor electrical connector.

15. Attach the right-hand electrical wiring harness to the transmission.

16. Connect the right-hand catalyst sensor electrical connector.

17. **NOTE:** Install one gram of Premium Long Life Grease, XG-1-K or equivalent meeting Ford specifications ESA-M1C75-B, in the alignment bushing prior to installation.

Slide the driveshaft forward until the flexible coupling engages with the transmission flange.

18.  **CAUTION:** Make sure to match the bolts, washers, attaching nuts and balance add-on nuts (if equipped) to their original location.

 **CAUTION:** Tighten the transmission flange bolts and nuts with hand tools only.

NOTE: Align the driveshaft index matchmarks.

Install the transmission flex coupling bolts, washers and attaching nuts.

19. Using the special tools, tighten the driveshaft yoke locknuts.

20. Install the stabilizer rod and stabilizer rod pin

21. Install the selector rod and selector rod pin.

22. Install the bolts and the center heat shield.

23. Install the intermediate muffler.

24. Install the starter motor. For additional information, refer to [Section 303-06](#).
 25. Bleed the clutch slave cylinder hydraulic system. For addition information, refer to [Section 308-00](#).
 26. Lower the vehicle.
 27. Reconnect the battery ground cable.
-

General Specifications

Item	Specification
Silicone Lubricant F5AZ-19553	ESR-M13P4-A

Torque Specifications

Description	Nm	lb-ft	lb-in
Three way catalytic converter to exhaust manifold nuts	40	30	—
Muffler and resonator assembly nuts	47	35	—
Heat shield bolts and nuts	10	—	89
Worm Clamp	7	—	62
Muffler brace bolts	25	18	—62

Exhaust System

WARNING: The normal operating temperature of the exhaust system is very high. Never attempt to repair any part of the system until it has cooled. Be especially careful when working around the three way catalytic converter. The temperature of the three way catalytic converter rises to a high level after only a few minutes of engine operation. Failure to follow these instructions may result in personal injury.

CAUTION: When repairing the exhaust system or removing exhaust components, disconnect all heated oxygen sensors (HO2S) at the wiring connectors to prevent damage to the heated oxygen sensors and wiring harness. For additional information, refer to [Section 303-14](#) for the location of the heated oxygen sensors.

The exhaust system:

- contains dual three way catalytic converters.
 - has a crossover pipe downstream of the three way catalytic converters.
 - has two upstream heated oxygen sensors mounted before the three way catalytic converters.
 - the production muffler and tailpipe assembly is a one-piece design.
-

Exhaust System

Inspection and Verification

1. Verify the customer concern by running the engine at 2000 rpm or by road testing the vehicle.
2. Visually inspect the components of the exhaust system and the related controls that may affect exhaust gas quality or cause a loss of power.
3. Visually inspect for obvious signs of mechanical and electrical damage. For additional information, refer to the following chart:

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Leaking fuel injector tips ● Damaged air inlet passages ● Inoperative exhaust gas recirculation (EGR) valve ● Exhaust pipe pinched, crushed ● Damaged, loose vacuum hoses ● Incorrect idle speed ● Dirty engine air cleaner ● Damaged catalytic converter 	<ul style="list-style-type: none"> ● Loose heated oxygen sensors ● Misrouted, damaged wiring ● Damaged, loose connectors ● Damaged ignition system

4. Exercise the wiring and connectors of the components for obvious problems due to looseness, corrosion, or other damage. This must be done while the engine is fully warmed and the system controls are activated.
5. Check the vacuum lines and connections for looseness, pinching, leakage, splitting, blockage, or other damage.
6. If a vacuum line or orifice (restrictor) blockage is suspected, correct the cause before proceeding to the next step.
7. If the concern is not visually evident, determine the symptom and proceed to the Symptom Chart.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
<ul style="list-style-type: none"> ● Noisy or Leaking Exhaust 	<ul style="list-style-type: none"> ● Exhaust leak. ● Misaligned exhaust. ● Loose clamps. ● Restricted exhaust. ● Loose or missing heated oxygen sensors (HO2S). 	<ul style="list-style-type: none"> ● GO to Pinpoint Test A.

Pinpoint Tests

PINPOINT TEST A: NOISY OR LEAKING EXHAUST

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK THE CLAMPS AND BRACKETS	
<div style="border: 1px solid black; padding: 5px; width: 40px; height: 40px; display: flex; align-items: center; justify-content: center;"> 1 </div> 	<div style="border: 1px solid black; padding: 5px; width: 40px; height: 40px; display: flex; align-items: center; justify-content: center;"> 2 </div> Inspect the exhaust system for loose or broken clamps and brackets. <ul style="list-style-type: none"> ● Are the clamps and brackets OK? <p>→ Yes GO to A2.</p> <p>→ No REPAIR or INSTALL new clamps or brackets. TEST the system for normal operation.</p>
A2 CHECK THE EXHAUST COMPONENTS	
	<div style="border: 1px solid black; padding: 5px; width: 40px; height: 40px; display: flex; align-items: center; justify-content: center;"> 1 </div> Inspect the exhaust components for punctures, split seams, or incorrect welds. <ul style="list-style-type: none"> ● Are the exhaust components OK? <p>→ Yes GO to A3.</p> <p>→ No INSTALL new exhaust components. TEST the system for normal operation.</p>
A3 CHECK THE EXHAUST MANIFOLD	
	<div style="border: 1px solid black; padding: 5px; width: 40px; height: 40px; display: flex; align-items: center; justify-content: center;"> 1 </div> Inspect the exhaust manifold for loose fasteners or cracks. <ul style="list-style-type: none"> ● Is the exhaust manifold OK? <p>→ Yes GO to Pinpoint Test B.</p> <p>→ No TIGHTEN loose fasteners or INSTALL a new exhaust manifold. Refer to Section 303-01A or Section 303-01B. TEST the system for normal operation.</p>

PINPOINT TEST B: LOSS OF POWER

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CARRY OUT A VACUUM TEST	
<p>1</p> 	<p>2 Carry out an intake manifold vacuum test. Refer to Component Tests in Section 303-00.</p> <ul style="list-style-type: none"> ● Is the exhaust system OK? <p>→ Yes REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the engine.</p> <p>→ No GO to B2.</p>
B2 CARRY OUT A VACUUM TEST - EXHAUST SYSTEM DISCONNECTED AT THE EXHAUST MANIFOLD	
<p>1</p>  <p>3</p> 	<p>2 Disconnect the exhaust system at the exhaust manifold.</p> <p>4 Carry out an intake manifold vacuum test. Refer to Component Tests in Section 303-00.</p> <ul style="list-style-type: none"> ● Is the exhaust system OK? <p>→ Yes GO to B3.</p> <p>→ No GO to B4.</p>
B3 CARRY OUT A VACUUM TEST - EXHAUST SYSTEM DISCONNECTED AT THE MUFFLER	
<p>1</p> 	<p>2 Reconnect the exhaust system at the exhaust manifold.</p> <p>3 Disconnect the exhaust system at the muffler.</p>

4

5 Carry out an intake manifold vacuum test. Refer to Component Tests in [Section 303-00](#).

● **Is the exhaust system OK?**

→ **Yes**
INSTALL a new muffler and tailpipe. Refer to [Muffler](#) in this section. TEST the system for normal operation.

→ **No**
INSTALL a new three way catalytic converter. For additional information, refer to [Three Way Catalytic Converter \(TWC\)](#) in this section. TEST the system for normal operation.

B4 CHECK THE EXHAUST MANIFOLD

1

2 Connect the exhaust system at the muffler. Refer to [Muffler](#) in this section.

3 Remove the exhaust manifold. Refer to [Section 303-01A](#) or [Section 303-01B](#).

4 Inspect the ports for casting flash.

● **Is there casting flash present?**

→ **Yes**
REMOVE the casting flash or INSTALL a new exhaust manifold. Refer to [Section 303-01A](#) or [Section 303-01B](#). TEST the system for normal operation.

→ **No**
REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the engine.

Muffler

Removal and Installation

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Support the exhaust pipes at the rear of the resonators.

3. **NOTE:** The exhaust hanger bracket insulators can be reused if they show no signs of damage. Lubricate before removal with Silicone Lubricant F5AZ-19553-AA meeting Ford specification ESR-M13P4-A or equivalent.

Remove the exhaust hanger insulators (5F262).

4. Remove the nuts.

5. Remove the bolts, the brace and the mufflers (5230).

6. To install, reverse the removal procedure.

Three Way Catalytic Converter (TWC)

Removal and Installation

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Disconnect the two HO2S connectors.

3. Disconnect the two catalyst monitor connectors.

4. Remove the four nuts.

5. Remove the nuts and the three way catalytic converter.

6. Transfer the two HO2S sensors and the two catalyst monitors if a new TWC is being installed.
 - Apply High Temperature Nickel Anti-Seize Lubricant F6AZ-9L494-AA or equivalent meeting Ford specification ESE-M12A4-A to the HO2S sensor and catalyst monitor threads.

 7. To install, reverse the removal procedure.
-

Heat Shield —Front

Removal and Installation

1. Raise the vehicle. For additional information, refer to [Section 100-02](#).
2. Remove the bolts and the LH heat shield.

3. Remove the bolts and the RH heat shield.

4. To install, reverse the removal procedure.

Heat Shield —Underbody

Removal and Installation

1. Remove the muffler (5230). For additional information, refer to [Muffler](#) in this section.
2. Remove the bolts, the nuts and the heat shield.

3. To install, reverse the removal procedure.
-

Heat Shield —Three Way Catalytic Converter

Removal

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Inspect the catalytic converters for loose or missing heat shields.

3. Install worm clamps for heat shields that are loose.

4. If the heat shields are missing, install new heat shields. If new heat shields are not available, install a new catalytic converter. For additional information, refer to [Three Way Catalytic Converter \(TWC\)](#).
5. Lower the vehicle.

General Specifications

Item	Specification
Fuel tank capacity	68 liters (18 gal.)
Engine running fuel pressure	207-308 kPa (30-65 psi)
Key on, engine off fuel pressure	207-380 kPa (30-65 psi)
SAE 5W30 Motor Oil XO-5W30-QSP	WSS-M2C153-G

Fuel System

The vehicle:

- is equipped with a multiport fuel injection (MFI) system.
 - uses separately controlled fuel injectors (9F593) mounted to the intake manifold for each cylinder.
 - fuel injectors are supplied with pressurized fuel from the fuel delivery module (9H307) through the jet pump transfer module, through the fuel injection supply manifold (9D280).
 - fuel injection supply manifold is controlled by the electronic fuel delivery module which is enabled by the powertrain control module (PCM) (12A650).
 - uses an electronic returnless fuel system.
 - has a dual-container (saddle type) fuel tank (9002), each half equipped with a fuel level sensor (9275).
 - has a jet pump transfer module (9275) in the left fuel tank half to supply fuel to the right, which contains the fuel delivery module (9H307) that supplies fuel under pressure to the fuel injection supply manifold.
 - has an inertia fuel shutoff (IFS) switch (9341), located behind the driver side left foot kick panel, which shuts off the fuel in the event of collision.
 - has a fuel system filter (9155), located behind the left front wheel well splash shield.
-

Fuel System

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Pressure Relief

Special Tool(s)

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before repairing or disconnecting any of the fuel lines or fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel, causing personal injury or a fire hazard.

1. **NOTE:** 3.0L shown, 3.9L similar.

Remove the Schrader valve cap and install the special tool.

2. Slowly open the manual valve on the special tool and relieve the fuel pressure.
 - This will drain some fuel out of the system.

Draining

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

NOTE: It will be necessary to adapt fuel line connector, part number XW4Z-9B376-AA, to the Fuel Storage Tanker hose to accomplish this draining procedure.

1. **NOTE:** When the battery is disconnected and reconnected, some abnormal drive symptoms may occur while the vehicle relearns its adaptive strategy. The vehicle may need to be driven 16 km (10 miles) or more to relearn the strategy.

Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).

2. Relieve the fuel pressure. For additional information, refer to [Pressure Relief](#) in this section.
3. Remove the rear seat bottom and any insulation padding covering the fuel module access cover. For additional information, refer to [Section 501-10](#).
4. Remove the fuel delivery module (FDM) and jet pump module access covers.

5. **⚠ CAUTION:** To disconnect the fuel line connector from the outlet fitting on the module, carefully press down on the fuel line connector while pressing the release tabs. Pull straight up to remove. Failure to follow this procedure could result in damage to the fitting or fuel line.

NOTE: Both sides of the tank must be drained individually to make sure all possible fuel is removed from the tank.

Remove the black connector elbow on the fuel tank crossover lines (jet pump module, LH side).

6. Press the release tabs on the module fitting, turn the fuel line slightly, pull straight up to remove the black fuel line connector elbow.

7. Attach the fuel line draining connector to the fuel storage tanker hose and the outlet fitting on the jet pump module. Siphon the fuel until the tank side is empty.
8. Attach the fuel draining connector to the fuel delivery module (FDM) (LH side) and repeat the procedure until the tank is empty. Remove the fuel delivery module and siphon any remaining fuel out of the tank. For additional information, refer to [Section 310-01](#) for fuel delivery module flange removal.

Coupling — Spring Lock

Special Tool(s)

 ST1146-A	Spring Lock Coupler Tool (3/8 inch) 310-D004 (D87L-9280-A) or equivalent
 ST1147-A	Spring Lock Coupler Tool (1/2 inch) 310-D005 (D87L-9280-B) or equivalent

Disconnect

 **WARNING:** Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

 **WARNING:** Fuel in the fuel system remains under high pressure even when the engine is not running. Before repairing or disconnecting any of the fuel lines or fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel, causing personal injury or a fire hazard.

1. Relieve the fuel pressure. For additional information, refer to [Pressure Relief](#) in this section.
2. Remove the fuel tube clip.

3. Install the special tool.

4. Close and push the special tool into the open side of the cage.

5. Separate the fitting.

6. Remove the special tool.

Connect

1. Connect the fitting.
 - Inspect and clean both the coupling ends.

- Lubricate the O-ring seals with clean SAE 5W30 Motor Oil XO-5W30-QSP meeting Ford specification WSS-M2C153-G.
- Connect the fitting.
- Pull on the fitting to make sure it is fully engaged.
- Install the safety clip.

Fittings —R-Clip

Removal

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before replacing or disconnecting any of the fuel lines or fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel, causing personal injury or a fire hazard.

⚠ CAUTION: Do not use any tools. The use of tools may cause a deformity in the clip components which may cause fuel leaks.

1. Remove the shipping tab by bending it downward.

2. Spread the R-clip legs and push the clip into the fitting.

3. Separate the fitting from the tube.

Installation

1. Inspect the fitting and the tube for damage. Remove any dirt or obstructions.
2. Apply a light coat of clean SAE 5W30 Motor Oil XO-5W30-QSP meeting Ford specification WSS-M2C153-G to the male tube end.
3. Insert the R-clip into the fitting.

4. Align the tube and the fitting.

5. Insert the tube into the fitting and push together until a click is heard.

6. Pull on the connection to make sure it is fully engaged.

Fittings — Vapor Tube

Disconnect

1. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
2.  **WARNING:** The evaporative emission system contains fuel vapor and condensed fuel vapor. Although not present in large quantities, it still presents the danger of explosion or fire.

Disconnect the vapor tube from the fitting.

1. Squeeze the fitting.
2. Disconnect the vapor tube from the fitting.

Connect

1. Inspect the fitting and the tube for damage.
2. Remove any dirt or obstructions.
3. Push the tube into the fitting until it snaps in place.

4. Pull on the connection to make sure the fitting is secure.

A0001952

General Specifications

Item	Specification
Capacity	
Fuel tank	68 liters (18 gallons)
Fuel pressure	
Engine running	207-447 kPa (30-65 psi)
Key on engine off	207-447 kPa (30-65 psi)
Lubricants	
Surfactant (Merpol)	ESE-M99B144-B
Petroleum	ESW-M1C115-A or ESB-M1C99-A

Torque Specifications

Description	Nm	lb-ft	lb-in

Fuel Tank and Lines

The fuel system consists of:

- the fuel tank (9002).
- the fuel tank filler pipe (9034) which contains a restrictor plate to permit only unleaded fuel to be pumped into the fuel tank.
- a 1/8 turn type fuel tank filler cap (9030).
- a fuel filter (9155) providing filtration to protect the fuel injectors.
- an electronic returnless fuel system.
- a single fuel line accommodating the returnless system.
- a jet pump module which maintains the fuel levels in both tank sides and contains a fuel level sensor.
 - a check valve which maintains system pressure after the pump is shut off.
- a fuel delivery module (9H307) which provides pressurized fuel to the engine and contains:
 - a fuel level sensor (9275).
 - an inlet filter.

The fuel pump is controlled by the powertrain control module (PCM) (12A650) which energizes the fuel pump relay. Electrical power to the pump is provided through the inertia fuel shutoff (IFS) switch (9341), which is located in the passenger compartment behind the lower A-pillar trim panel.

Fuel Tank and Lines

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Tank

Removal

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before repairing or disconnecting any of the fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel causing personal injury or a fire hazard.

1. Drain the fuel tank (9002). For additional information, refer to [Section 310-00](#).
2. Remove the driveshaft. For additional information, refer to [Section 205-01](#).
3. **⚠ CAUTION:** Some fuel will remain in filler pipe after draining the fuel tank. Carefully drain the filler pipe into an approved container.

Loosen the hose clamp at the fuel tank filler pipe and disconnect the filler pipe.

4. Disconnect the fuel tank electrical connector.

5. Position the fuel line shield aside.
 1. Remove the pin-type retainers.
 2. Remove the bolt.

6. Disconnect the fuel delivery line and vapor tube located forward of the fuel tank on the left side.
 - Disconnect the ground strap.

7. Position a suitable lifting device to support the fuel tank.

8. Remove the right fuel tank support strap bolt and position the fuel tank support strap aside.

9. Remove the left fuel tank support strap bolt and position the fuel tank support strap aside.

10. Partially lower the fuel tank and disconnect the vapor tube at the top rear of the fuel tank.

11. Lower the fuel tank.

Installation

1. Raise the fuel tank slightly below the fully installed position.

2. Connect the vapor tube at the top rear of the fuel tank.

3. Connect the fuel delivery line and vapor tube.
 - Connect the ground strap.

4. Install the fuel line shield.
 1. Install the pin-type retainers.
 2. Install the bolt.

5. Raise the tank into position and install the right support strap and bolt.

6. Install the left support strap and bolt. Remove the lifting device.

7. Connect the fuel tank electrical connector.

8. Connect the fuel tank filler pipe hose and tighten clamp.

9. Install the driveshaft. For additional information, refer to [Section 205-01](#).
10. **NOTE:** When the battery is disconnected and reconnected, some abnormal drive symptoms may occur while the vehicle relearns its adaptive strategy. The vehicle may need to be driven 16 km (10 miles) or more to relearn the strategy.

Connect the battery negative cable.

11. Turn the ignition key to the ON position to pressurize the fuel system.
 12. Visually inspect the fuel system for leaks.
-

Support Straps

Removal and Installation

1. Position a suitable lifting device to support the fuel tank.

2. **NOTE:** Left support strap and pin shown, right side similar.

Remove the fuel tank support strap bolt.

3. Push the strap upward and align the retaining pin with the access hole. Remove the pin and the support strap.

4. To install, reverse the removal procedure.

Module —Fuel Delivery

Special Tool(s)

 ST2376-A	Fuel Sender Wrench 310-069
---	-------------------------------

Removal and Installation

 **WARNING:** Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

 **WARNING:** Fuel in the fuel system remains under high pressure even when the engine is not running. Before repairing or disconnecting any of the fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel, causing personal injury or a fire hazard.

1. **NOTE:** It is not necessary to remove the fuel tank to carry out this procedure. The Fuel Delivery Module can be accessed under the rear seat bottom.

Drain the fuel tank (9002). For additional information, refer to [Section 310-00](#).

2. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
3. Remove the bolts and the nuts and position the exhaust heat shield on the exhaust system.

4. Loosen the right support strap approximately one inch.

5. Loosen the left support strap approximately one inch.

6. Lower the hoist.
7. **NOTE:** Make sure the fuel line connector is fully seated prior to compressing the release tabs.

Disconnect the module fuel line connectors.

1. Press the release tabs on the module fitting.
2. Turn the fuel line slightly.
3. Pull straight up to remove the fuel line connector.

8. Disconnect the electrical connector.

9. Install the special tool and loosen the locking retainer nut.

10. Continue removing the locking retainer nut by hand.

11. Separate the fuel filter.

- Lift up on the module top flange and position it aside.
- Cut the tie strap securing the in tank filter to the locking tab of the module.

12.  **CAUTION: The fuel module must be handled carefully to avoid damage to the float arm and the filter during removal.**

NOTE: The module will contain some residual fuel. Lift straight up and out of the retainer cup and tilt while in tank (float side down) to drain some fuel out of the reservoir. Then straighten and lift straight up and out of the tank. Drain excess fuel into suitable container.

Remove the fuel delivery module.

1. Press the lock tabs and release the module from the tank mounting flange.
2. Remove the module from the tank.

13. **NOTE:** New module assembly flange gaskets must be used. Gently position the module seal by hand and make sure it remains in position during installation. Align the module with the in-tank

retaining bracket and push down on the module until the latches snap into position onto bracket. Make sure the fuel line tube connectors are fully seated into the outlet connector fittings.

To install, reverse the removal procedure.

- Loosely install a new tie strap to secure the in tank filter to the locking tab of the module. Tighten the tie strap after the module is placed in the fuel tank.

Fuel Transfer Pump

Special Tool(s)

 ST2376-A	Fuel Sender Wrench 310-069
---	-------------------------------

Removal and Installation

 **WARNING:** Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

 **WARNING:** Fuel in the fuel system remains under high pressure even when the engine is not running. Before repairing or disconnecting any of the fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel, causing personal injury or a fire hazard.

1. **NOTE:** It is not necessary to remove the fuel tank to carry out this procedure. The Fuel Transfer Pump can be accessed under the rear seat bottom.

Drain the fuel tank (9002). For additional information, refer to [Section 310-00](#).

2. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
3. Remove the bolts and the nuts and position the exhaust heat shield on the exhaust system.

4. Loosen the right support strap approximately one inch.

5. Loosen the left support strap approximately one inch.

6. Lower the hoist.
7. **NOTE:** Make sure the fuel line connector is fully seated prior to compressing the the release tabs.

Disconnect the module fuel line connectors.

1. Press the release tabs on the module fitting.
2. Turn the fuel line slightly.
3. Pull straight up to remove the fuel line connector.

8. Disconnect the electrical connector.

9. Install the special tool and loosen the locking retainer nut.

10. Continue removing the locking retainer nut by hand.

11.  **CAUTION:** The fuel module must be handled carefully to avoid damage to the float arm and the filter during removal.

Remove the fuel delivery module.

12. **NOTE:** New module assembly flange gaskets must be used. Gently position the module seal by hand and make sure it remains in position during installation. Make sure the fuel line tube connectors are fully seated into the outlet connector fittings.

To install, reverse the removal procedure.

Filler Pipe

Removal and Installation

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before repairing or disconnecting any of the fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel, causing personal injury or a fire hazard.

1. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
2. Relieve the fuel system pressure. For additional information, refer to [Section 310-00](#).
3. Drain the fuel tank (9002) until it is less than half full. For additional information, refer to [Section 310-00](#).
4. Remove the fuel filler cap.
5. Remove the bolts at the fuel filler neck housing.

6. Raise the vehicle. For additional information, refer to [Section 100-02](#).
7. Remove the right rear inner wheel well pin-type retainers securing the splash shield.

8. Remove the right wheel well screws securing the splash shield.

9. Remove the bolt at the filler pipe.

10.  **CAUTION:** Some fuel will remain in filler pipe after draining the fuel tank. Carefully drain the filler pipe into an approved container.

Loosen the hose clamp at the fuel tank filler pipe and disconnect the filler pipe.

11. Remove the filler pipe through the wheel well opening.
12. **NOTE:** Lubricate the fuel tank filler pipe end with a lubricant meeting Ford specification ESE-M99B144B for ease of installation.

NOTE: When the battery is disconnected and reconnected, some abnormal drive symptoms may occur while the vehicle relearns its adaptive strategy. The vehicle may need to be driven 16 km (10 miles) or more to relearn the strategy.

To install, reverse the removal procedure.

Filter

Removal and Installation

⚠ WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited, resulting in possible personal injury.

⚠ WARNING: Fuel in the fuel system remains under high pressure even when the engine is not running. Before repairing or disconnecting any of the fuel system components, the fuel system pressure must be relieved to prevent accidental spraying of fuel, causing personal injury or a fire hazard.

1. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
2. Relieve the fuel system pressure. For additional information, refer to [Section 310-00](#).
3. Raise the vehicle. For additional information, refer to [Section 100-02](#).
4. Remove the left front wheel and tire assembly. For additional information, refer to [Section 204-04](#).
5. Remove the left wheel well splash shield screws and pin-type fasteners.

6. Disconnect the fuel line R-clip fittings.

7. Remove the bolt at the fuel filter (9155) bracket and remove the filter.

8. If necessary, separate the filter from the bracket for reuse.
9. **NOTE:** When the battery is disconnected and reconnected, some abnormal drive symptoms may occur while the vehicle relearns its adaptive strategy. The vehicle may need to be driven 16 km (10 miles) or more to relearn the strategy.

To install, reverse the removal procedure.

Inertia Fuel Shutoff (IFS) Switch

Removal and Installation

1. Remove the left hand lower A-pillar trim panel. For additional information, refer to [Section 501-05](#).
2. Disconnect the connector from the inertia fuel shutoff (IFS) switch (9341).

3. Remove the screws from the IFS switch and remove the switch.

4. To install, reverse the removal procedure.
-

Torque Specifications

Description	Nm	lb-in
Accelerator pedal and shaft-to-dash panel bolt and nut	9	80
Accelerator cable bracket bolts	9	80
Accelerator cable housing-to-dash panel bolts	9	80

Acceleration Control

The throttle is controlled by the accelerator cable (9A758) which is connected to the accelerator pedal and shaft (9726).

- The accelerator pedal and shaft should travel smoothly from the idle to the wide-open throttle (WOT) positions. Hesitation on return or prevention of return to the idle position must not occur.
 - Surrounding components such as wiring, hoses, sound insulator and floor covering must not contact the sliding inner member of the accelerator cable or the accelerator pedal and shaft.
 - The sliding inner member accelerator cable should not be lubricated and is not repairable.
-

Acceleration Control

Inspection and Verification

NOTE: Care should be exercised when carrying out a repair on or around the accelerator pedal and shaft or controls.

1. Inspect the accelerator pedal and shaft (9726) and the attached accelerator cable for damage or distortion which would bind or limit accelerator travel.
2. Inspect the accelerator cable (9A758) for kinks or fraying which may cause binding.
3. Inspect the engine idle speed adjustment to make sure of correct idle speed specification after any adjustment or repair.
4. Inspect the throttle body (9E926) for excessive wear or damage.

Symptom Chart

SYMPTOM CHART

	<p>caught in accelerator pedal.</p> <ul style="list-style-type: none">● Incorrect engine idle speed.	<ul style="list-style-type: none">● REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual for diagnosis and testing of the idle control system.
--	--	--

Accelerator Pedal and Shaft

Removal and Installation

NOTE: LH drive shown, RH drive similar.

1. Remove the hush panel.
 1. Remove the nut.
 2. Remove the pin-type retainers.
 3. Disconnect the lamp from the hush panel.
 4. Remove the hush panel.

2. Remove the accelerator pedal and shaft.
 1. Disconnect the accelerator cable from the accelerator pedal and shaft.
 2. Remove the bolt and nut.
 3. Remove the accelerator pedal and shaft.

3. To install, reverse the removal procedure.

Accelerator Cable

Removal and Installation

NOTE: 3.0L shown, 3.9L accelerator cable bracket is molded into the manifold. LH drive shown, RH drive similar.

1. Using a trim tool, disconnect the accelerator cable from the throttle body lever and accelerator cable bracket.
 1. Disconnect the accelerator cable from the throttle body lever.
 2. Depress the lock tab and rotate the fitting 90 degrees counterclockwise.
 3. Slide the cable up and out of the bracket.

2. Disconnect the accelerator cable from the retaining clip.

3. Remove the hush panel.
 1. Remove the nut.
 2. Remove the pin-type retainers.
 3. Disconnect the lamp from the hush panel.
 4. Remove the hush panel.

4.  **CAUTION: Be careful not to kink or nick the cable core wire.**

Remove the accelerator cable.

1. Remove the bolts.
2. Disconnect the accelerator cable and remove.

5.  **CAUTION: If the accelerator cable is to be reused, inspect the locking tabs of the cable end ball stud fitting. If the locking tabs are damaged or broken, a new accelerator cable must be installed.**

NOTE: The accelerator cable assembly may be supplied in two pieces. It will be necessary to snap the pieces together prior to installation.

To install, reverse the removal procedure.

Accelerator Cable Bracket —3.0L

Removal and Installation

1. Disconnect the accelerator cable and speed control cable from the bracket.
 1. Disconnect the accelerator cable and speed control cable from the throttle levers.
 2. Depress the lock tab and rotate the fitting 90 degrees counter clockwise.
 3. Slide the cable up and out of the bracket.
 4. Depress the lock tabs and disconnect the speed control cable from the bracket.

2. Remove the bolts and the accelerator cable bracket.

3. To install, reverse the removal procedure.

Torque Specifications

Description	Nm	lb-in
Bracket to speed control servo bolts	9	80
Bracket mounting bolts	9	80

Speed Control

The vehicle speed control consists of the following components:

- powertrain control module (PCM)
 - speed control servo
 - speed control set telltale
 - speed control actuator switches
 - deactivator switch
 - brake pedal position (BPP) switch
 - clutch pedal position (CPP) switch (manual transmission only)
 - digital transmission range (DTR) sensor (automatic transmission only)
 - speed control actuator cable
-

Speed Control

Special Tool(s)

 ST1137-A	73III Automotive Meter 105-R0057 or equivalent
 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052, or equivalent diagnostic tool

Refer to Wiring Diagrams Section 310-03-00, Vehicle Speed Control for schematic and electrical information.

Principles of Operation

The speed control system is designed to maintain a selected vehicle speed between approximately 48 and 200 km/h (30 and 125 mph).

The electronic stepper motor (internal to the speed control servo) is controlled by turning the three phases of the motor ON and OFF in sequence. The sequence determines the motor direction (open throttle or closed throttle based on vehicle speed).

The speed control module is fully integrated into the powertrain control module (PCM). The PCM strategy uses engine control to accelerate smoothly. In instances where the vehicle tends to want to exceed set speed, the PCM will invoke an engine braking strategy to help maintain the desired vehicle speed.

Whenever the system is engaged and active, a speed control set indicator will be illuminated in the instrument cluster.

The brake pedal position (BPP) switch is normally closed to ground. When the brake pedal is applied with the speed control system engaged, the BPP switch closes to battery voltage, putting the vehicle speed control in stand-by mode.

NOTE: The deactivator switch is provided as an additional safety feature.

Normally, when the brake pedal is depressed, the PCM will deactivate the speed control system. Under increased brake pedal effort, the deactivator switch, a normally closed switch, will open and remove power to the speed control servo clutch, releasing the throttle independently of the PCM.

The clutch pedal position (CPP) switch is incorporated on vehicles equipped with manual transmissions. When the clutch pedal is applied with the vehicle speed control system engaged, the

normally closed switch opens and signals the PCM to deactivate the speed control.

The air bag sliding contact provides the electrical interface between the steering column wiring and the speed control actuator switches in the steering wheel.

The PCM sends an standard corporate protocol (SCP) output message to the instrument cluster to indicate when the vehicle speed control system is active.

Inspection and Verification

1. Verify the customer concern by operating the speed control to duplicate the condition.
2. Verify the speedometer operates correctly without speed control by test driving the vehicle. If the speedometer does not operate correctly, refer to [Section 413-01](#).
3. Verify the stoplamps operate correctly with the ignition switch in the OFF position. If the stoplamps do not operate correctly, refer to [Section 417-01](#).
4. Verify the parking brake is not applied and is operating correctly. If the parking brake is not operating correctly, refer to [Section 206-05](#).
5. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none">● Speed control actuator cable● Throttle lever● Speed control servo	<ul style="list-style-type: none">● Central junction box (CJB) fuse 235 (5A)● Underhood auxiliary junction box (AJB) fuse 106 (15A)● Underhood AJB fuse 118 (40A)● Connections● Pins● Circuitry

6. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel, and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
7. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.
8. Carry out the DATA LINK DIAGNOSTIC TEST. If the diagnostic tool responds with:
 - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for PCM, go to Pinpoint Test A.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out the KOEO Test.

9. If the DTCs retrieved are related to the concern, go to PCM Diagnostic Trouble Code (DTC) Index to continue diagnostics.
10. If no DTCs related to the concern are retrieved, proceed to the Symptom Chart to continue diagnostics.

PCM Diagnostic Trouble Code (DTC) Index

NOTE: DTC P0703 and DTC P1572 must be repaired before any other DTC.

DTCs	Description	Source	Action
P0500	Vehicle Speed Error	PCM	REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1565	Speed Control Command Switches High/Out of Range	PCM	GO to Pinpoint Test C .
P1566	Speed Control Command Switches Low/Out of Range	PCM	GO to Pinpoint Test D .
P1567	NGSC Drive Fault	PCM	GO to Pinpoint Test E .
P1568	NGSC Servo Self-Test Failure	PCM	GO to Pinpoint Test F .
P1572	Brake On/Off Failure	PCM	GO to Pinpoint Test G .
P0703	Brake Switch Input Malfunction	PCM	GO to Pinpoint Test G .

C175a pin 57, circuit 7PG-24 (YE/BU), harness side, and PCM C175a pin 56, circuit 31S-PG24, (BK/OG), harness side.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [C3](#).

→ **No**
INSTALL a new PCM. REFER to [Section 303-14](#). CLEAR the DTCs. REPEAT the self-test.

C3 CHECK CIRCUIT 31S-PG24 (BK/OG) FOR OPEN

1

Air Bag Sliding Contact C218a

2

A0003410

2

Measure the resistance between PCM C175a pin 56, circuit 31S-PG24 (BK/OG), harness side and air bag sliding contact C218a pin 8, circuit 31S-PG24 (BK/OG), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [C4](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

C4 CHECK THE AIR BAG SLIDING CONTACT

2

1

Remove the driver side air bag. Refer to [Section 501-20B](#).

Horn Switch C217

3

3

Measure the resistance between air bag sliding contact C218a pin 8, circuit 31S-PG24 (BK/OG), (component side), and horn switch C217 pin 3, harness side (top of the air bag sliding contact).

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [C5](#).

→ **No**
INSTALL a new air bag sliding contact. REFER to [Section 501-20B](#). CLEAR the DTCs. REPEAT the self-test.

C5 CHECK THE SPEED CONTROL ACTUATOR SWITCHES

1

Speed Control Actuator Switch C203

2

2

Measure the resistance between speed control actuator switch pin 2 (component side), and speed control actuator switch pin 4 (component side).

● Is the resistance approximately 4.3k ohms?

→ **Yes**
INSTALL a new horn switch. REFER to [Section 413-06](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
INSTALL a new speed control actuator

switch. REFER to [Switch—Speed Control Actuator](#) in this section. CLEAR the DTCs. REPEAT the self-test.

C6 CHECK THE AIR BAG SLIDING CONTACT

1

Air Bag Sliding Contact C218a

2

A0023264

2

Measure the resistance between PCM C175a pin 57, circuit 7PG-24 (YE/BU), harness side, and air bag sliding contact C218a pin 7, circuit 7PG-24 (YE/BU), harness side.

● Is the resistance less than 5 ohms?

→ Yes

INSTALL a new air bag sliding contact. REFER to [Section 501-20B](#). CLEAR the DTCs. REPEAT the self-test.

→ No

REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST D: DTC P1566—SPEED CONTROL COMMAND SWITCHES LOW/OUT OF RANGE

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 CHECK FOR SHORT TO GROUND OR STUCK ACTUATOR SWITCH	
<p>1</p> 	<p>2</p> <p>Monitor the PCM PIDs SET/ACL, COAST, RESUME, CANCEL, and SC_ON without depressing any speed control actuator switch.</p> <p>● Do any of the PCM PIDs indicate YES?</p> <p>→ Yes INSTALL a new speed control actuator</p>

switch. REFER to [Switch—Speed Control Actuator](#) in this section. CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [D2](#).

D2 CHECK CIRCUIT 7-PG24 (YE/BU) AND 31S-PG24 (BK/OG)

1

2

PCM C175a

3

A0005465

3 Measure the resistance between PCM C175a pin 57, circuit 7PG-24 (YE/BU), harness side, and ground; and between PCM C175a pin 56, circuit 31S-PG24 (BK/OG), harness side, and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
GO to [D5](#).

→ **No**
GO to [D3](#).

D3 CHECK THE HORN SWITCH FOR A SHORT

2

Horn Switch C217

3

1 Remove the driver side air bag. Refer to [Section 501-20B](#).

3 Measure the resistance between PCM C175a pin 57, circuit 7PG-24 (YE/BU), harness side, and ground; and between PCM C175a pin 56, circuit 31S-PG24 (BK/OG), harness side, and ground.

A0005465

- Are the resistances greater than 10,000 ohms?

→ **Yes**
 INSTALL a new horn switch. REFER to [Section 413-06](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 GO to [D4](#).

D4 CHECK THE AIR BAG SLIDING CONTACT

1

Air Bag Sliding Contact C218a

2

A0005465

- 2 Measure the resistance between PCM C175a pin 57, circuit 7PG-24 (YE/BU), harness side, and ground; and between PCM C175a pin 56, circuit 31S-PG24 (BK/OG), harness side, and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
 INSTALL a new air bag sliding contact. REFER to [Section 501-20B](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 REPAIR circuit 7-PG24 (YE/BU) and circuit 31S-PG24 (BK/OG) as necessary. CLEAR the DTCs. REPEAT the self-test.

D5 CHECK FOR A SHORT CIRCUIT

1

2

PCM C175a

3

3

Measure the resistance between PCM C175a pin 57, circuit 7-PG24 (YE/BU), harness side, and PCM C175a pin 56, circuit 31S-PG24 (BK/OG), harness side.

- Is the resistance greater than 10,000 ohms?

→ Yes

INSTALL a new PCM. REFER to [Section 303-14](#). CLEAR the DTCs. REPEAT the self-test.

→ No

GO to [D6](#).

D6 CHECK THE SPEED CONTROL ACTUATOR SWITCH

1

Speed Control Actuator Switch C203

2

A0003411

2

Measure the resistance between speed control actuator switch pin 2 (component side), and speed control actuator switch pin 4 (component side).

- Is the resistance approximately 4.3k ohms?

→ Yes

GO to [D7](#).

→ **No**
INSTALL a new speed control actuator switch. REFER to [Switch—Speed Control Actuator](#) in this section. CLEAR the DTCs. REPEAT the self-test.

D7 CHECK THE HORN SWITCH

2

Horn Switch C217

3

A0031616

1 Remove the driver side air bag. Refer to [Section 501-20B](#).

3 Measure the resistance between horn switch C217 pin 1, harness side, and horn switch C217 pin 3, harness side.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [D8](#).

→ **No**
INSTALL a new horn switch. REFER to [Section 413-06](#). CLEAR the DTCs. REPEAT the self-test.

D8 CHECK THE AIR BAG SLIDING CONTACT FOR A SHORT

1

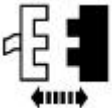

A0031617

1 Measure the resistance between horn switch C217 pin 1 (component side), and horn switch C217 pin 3 (component side).

- Is the resistance greater than 10,000 ohms?

	<p>→ Yes REPAIR circuit 7-PG24 (YE/BU) and circuit 31S-PG24 (BK/OG) as necessary. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No INSTALL a new air bag sliding contact. REFER to Section 501-20B. CLEAR the DTCs. REPEAT the self-test.</p>
--	--

PINPOINT TEST E: DTC P1567—NGSC DRIVER FAULT

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 CHECK THE PCM PIDS	
	<p>1 Test drive the vehicle above 48 km/h (30 mph) with and without the speed control engaged, while monitoring the PCM PID SCINT_F and SC_HW_F.</p> <ul style="list-style-type: none"> • Does either PCM PID SCINT_F or SC_HW_F indicate YES? <p>→ Yes If the PCM PID SCINT_F indicates YES, INSTALL a new PCM. REFER to Section 303-14. CLEAR the DTCs. REPEAT the self-test.</p> <p>If the PCM PID SC_HW_F indicates YES, GO to E2.</p> <p>→ No GO to E7.</p>
E2 CHECK CIRCUIT 15S-PG12 (GN/WH) FOR AN OPEN	
<p>1</p>  <p>2</p>  <p style="text-align: center;">Speed Control Servo C122</p> <p>3</p>  <p>4</p>	<p>4 Measure the voltage between speed control servo C122 pin 1, circuit 15S-PG12 (GN/WH), harness side, and ground.</p>

A0005468

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [E3](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

E3 CHECK THE SPEED CONTROL SERVO

1

2

A0006460

2 Measure the resistance between speed control servo pins (component side), as follows:

Speed Control Servo	Speed Control Servo
Pin 1	Pin 2
Pin 1	Pin 3
Pin 1	Pin 4

- Are the resistances between 2 and 3 ohms?

→ **Yes**
GO to [E4](#).

→ **No**
INSTALL a new speed control servo.
REFER to [Actuator—Speed Control Servo](#) in this section. CLEAR the DTCs.
REPEAT the self-test.

E4 CHECK THE SPEED CONTROL SERVO CIRCUITRY FOR SHORT TO POWER

1

PCM C175a

2

3

3 Measure the voltage between PCM C175a, harness side and ground, as follows:

PCM C175a	Circuit
Pin 29	10-PG12 (GY/WH)
Pin 36	8-PG21 (WH/GN)
Pin 46	10-PG21 (GY/OG)

• Is any voltage present?

→ **Yes**
REPAIR the circuit(s). CLEAR the DTCs.
REPEAT the self-test.

→ **No**
GO to [E5](#).

E5 CHECK THE SPEED CONTROL SERVO CIRCUITRY FOR AN OPEN

1

2 Measure the resistance between PCM C175a, harness side, and speed control servo C122, harness side, as follows:

PCM C175a	Speed Control Servo C122	Circuit
Pin 29	Pin 4	10-PG12 (GY/WH)
Pin 36	Pin 3	8-PG21 (WH/GN)
Pin 46	Pin 2	10-PG21 (GY/OG)

• Are the resistances less than 5 ohms?

→ **Yes**
GO to [E6](#).

→ **No**

REPAIR the circuit(s). CLEAR the DTCs.
REPEAT the self-test.

E6 CHECK THE SPEED CONTROL SERVO CIRCUITRY FOR SHORT TO GROUND

1

1

Measure the resistance between PCM C175a, harness side, and ground, as follows:

PCM C175a	Circuit
Pin 29	10-PG12 (GY/WH)
Pin 36	8-PG21 (WH/GN)
Pin 46	10-PG21 (GY/OG)

• Are the resistances greater than 10,000 ohms?

→ **Yes**
GO to [E7](#).

→ **No**
REPAIR the circuit(s). CLEAR the DTCs.
REPEAT the self-test.

E7 CHECK THE DEACTIVATOR SWITCH CIRCUITRY FOR AN OPEN

1

2

Speed Control Servo C122

3

3

Measure the voltage between speed control servo C122 pin 6, circuit 29S-PG16 (OG/YE), harness side, and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [E8](#).

→ **No**
REPAIR circuit 29S-PG16 (OG/YE) or circuit 29S-PG1 (OG/YE). CLEAR the DTCs. REPEAT the self-test.

E8 CHECK THE SPEED CONTROL SERVO

1

A0005473

1 Measure the resistance between speed control servo pin 5 (component side), and speed control servo pin 6 (component side).

- Is the resistance between 20 and 30 ohms?

→ **Yes**
GO to [E9](#).

→ **No**
INSTALL a new speed control servo. REFER to [Actuator—Speed Control Servo](#) in this section. CLEAR the DTCs. REPEAT the self-test.

E9 CHECK CIRCUIT 8-PG12 (WH/VT) FOR SHORT TO POWER

1

PCM C175a

2

3

A0005474

3 Measure the voltage between speed control servo C122 pin 5, circuit 8-PG12 (WH/VT), harness side, and ground.

- Is any voltage present?

- **Yes**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.
- **No**
GO to [E10](#).

E10 CHECK CIRCUIT 8-PG12 (WH/VT) FOR AN OPEN

1

2

- 2 Measure the resistance between speed control servo C122 pin 5, circuit 8-PG12 (WH/VT), harness side, and PCM C175a pin 45, circuit 8-PG12 (WH/VT), harness side.

● **Is the resistance less than 5 ohms?**

- **Yes**
GO to [E11](#).
- **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

E11 CHECK CIRCUIT 8-PG12 (WH/VT) FOR SHORT TO GROUND

1

- 1 Measure the resistance between speed control servo C122 pin 5, circuit 8-PG12 (WH/VT), harness side, and ground.

● **Is the resistance greater than 10,000 ohms?**

- **Yes**
INSTALL a new PCM. REFER to [Section 303-14](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 REPAIR the circuit. CLEAR the DTCs.
 REPEAT the self-test.

PINPOINT TEST F: DTC P1568—NGSC SERVO SELF-TEST FAILURE

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK THE SPEED CONTROL ACTUATOR CABLE	
	<p>1 Disconnect the speed control actuator cable at the throttle body.</p> <p>2 Check the speed control actuator cable slack by pulling the speed control cable end taut from within the speed control cable housing.</p> <p>● Is the speed control actuator cable slack greater than 0 mm (0 in) and less than 6 mm (0.24 in)?</p> <p>→ Yes GO to F2.</p> <p>→ No INSTALL a new speed control actuator cable. REFER to Actuator—Speed Control Servo in this section. CLEAR the DTCs. REPEAT the self-test.</p>
F2 CHECK FOR DAMAGE, STICKING OR BINDING SPEED CONTROL ACTUATOR CABLE	
	<p>1 Disconnect the speed control actuator cable from the speed control servo.</p> <p>2 Check the speed control actuator cable for damage, sticking or binding.</p> <p>● Is the speed control actuator cable OK?</p> <p>→ Yes GO to F3.</p> <p>→ No INSTALL a new speed control actuator cable. REFER to Actuator—Speed Control Servo in this section. CLEAR the DTCs. REPEAT the self-test.</p>
F3 CHECK THE SPEED CONTROL SERVO OUTPUT	
	<p>1 Check the speed control servo pulley for movement while triggering the on-demand self-test.</p> <p>● Does the speed control servo pulley move?</p>

- **Yes**
REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
- **No**
GO to [F4](#).

F4 CHECK THE SPEED CONTROL SERVO

1

2

Speed Control Servo C122

- 3 Measure the resistance between speed control servo pins (component side), as follows:

Speed Control Servo	Speed Control Servo	Expected Value
Pin 1	Pin 2	Between 2 and 3 ohms
Pin 1	Pin 3	Between 2 and 3 ohms
Pin 1	Pin 4	Between 2 and 3 ohms
Pin 5	Pin 6	Between 20 and 30 ohms

- Are the resistances OK?

- **Yes**
GO to [F5](#).
- **No**
INSTALL a new speed control servo.
REFER to [Actuator—Speed Control Servo](#) in this section. CLEAR the DTCs.
REPEAT the self-test.

F5 CHECK THE SPEED CONTROL SERVO CIRCUITRY FOR SHORT TO POWER

1

2

PCM C175a

3

4

A0005477

4 Measure the voltage between speed control servo C122, harness side and ground, as follows:

Speed Control Servo C122	Circuit
Pin 5	8-PG12 (WH/VT)
Pin 4	10-PG12 (GY/WH)
Pin 3	8-PG21 (WH/GN)
Pin 2	10-PG21 (GY/OG)

• Is any voltage present?

→ **Yes**
REPAIR the circuit(s). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [F6](#).

F6 CHECK THE SPEED CONTROL SERVO CIRCUITRY FOR AN OPEN CIRCUIT

1

2 Measure the resistance between PCM C175a, harness side and speed control servo C122, harness side, as follows:

PCM C175a	Speed control servo C122	Circuit
Pin 45	Pin 5	8-PG12 (WH/VT)
Pin 29	Pin 4	10-PG12 (GY/WH)
Pin 36	Pin 3	8-PG21 (WH/GN)
Pin 46	Pin 2	10-PG21

(GY/OG)

- Are the resistances less than 5 ohms?

→ **Yes**
GO to [F7](#).

→ **No**
REPAIR the circuit(s). CLEAR the DTCs.
REPEAT the self-test.

F7 CHECK THE SPEED CONTROL SERVO CIRCUITRY FOR SHORT TO GROUND

1

1 Measure the resistances between PCM C175a, harness side, and ground, as follows:

PCM C175a	Circuit
Pin 45	8-PG12 (WH/VT)
Pin 29	10-PG12 (GY/WH)
Pin 36	8-PG21 (WH/GN)
Pin 46	10-PG21 (GY/OG)

- Are the resistances greater than 10,000 ohms?

→ **Yes**
GO to [F8](#).

→ **No**
REPAIR the circuit(s). CLEAR the DTCs.
REPEAT the self-test.

F8 CHECK CIRCUIT 15S-PG12 (GN/WH) FOR AN OPEN

1

2

2 Measure the voltage between speed control servo C122 pin 1, circuit 15S-PG12 (GN/WH), harness side and ground.

- Is the voltage greater than 10 volts?

- **Yes**
GO to [F9](#).
- **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

F9 CHECK THE DEACTIVATOR SWITCH CIRCUITRY FOR AN OPEN

- 2 Measure the voltage between speed control servo C122 pin 6, circuit 29S-PG16 (OG/YE), harness side and ground.
- **Is the voltage greater than 10 volts?**
- **Yes**
INSTALL a new speed control servo.
REFER to [Actuator—Speed Control Servo](#) in this section. CLEAR the DTCs.
REPEAT the self-test.
 - **No**
REPAIR circuit 29S-PG16 (OG/YE) or circuit 29S-PG1 (OG/YE) as necessary.
CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST G: DTC P1572, DTC P0703—BRAKE ON/OFF FAILURE

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: Make sure the deactivator switch is correctly adjusted before proceeding.	
G1 MONITOR THE PCM PID BPA_SW	
<ul style="list-style-type: none"> 1  	<ul style="list-style-type: none"> 2 Monitor the PCM PID BPA_SW without depressing the brake pedal. <ul style="list-style-type: none"> • Does the PCM BPA_SW PID

indicate ON?

→ **Yes**
GO to [G2](#).

→ **No**
GO to [G5](#).

G2 CHECK FOR AN OPEN CIRCUIT

1

PCM C175a

2

2 Measure the voltage between PCM C175a pin 28, circuit 29S-RE21 (OG/GN), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
INSTALL a new PCM. REFER to [Section 303-14](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [G3](#).

G3 CHECK CIRCUIT 29S-PG1 (OG/YE)

1

Deactivator Switch C277

2

2 Measure the resistance between PCM C175a pin 28, circuit 29S-RE21 (OG/GN), harness side, and deactivator switch C277 pin 2, circuit 29S-PG1 (OG/YE), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [G4](#).

→ **No**
REPAIR circuit 29S-RE21 (OG/GN) and circuit 29S-PG1 (OG/YE) as necessary. CLEAR the DTCs. REPEAT the self-test.

G4 CHECK THE DEACTIVATOR SWITCH

1

A0005482

1

Measure the resistance between deactivator switch pins, (component side) while depressing and releasing the brake pedal.

● Is the resistance less than 5 ohms with the brake pedal released and greater than 10,000 ohms with the brake pedal depressed?

→ **Yes**
REPAIR circuit 29-PG6 (OG/YE). CLEAR the DTCs. REPEAT the self-test.

→ **No**
INSTALL a new deactivator switch. REFER to [Switch—Deactivator](#) in this section. CLEAR the DTCs. REPEAT the self-test.

G5 CHECK THE BRAKE PEDAL POSITION (BPP) INPUT TO PCM

1

2

PCM C175a

3

4

4

Measure the voltage between PCM C175a pin 40, circuit 29S-RE13 (OG), harness side and ground, while

A0005483

depressing the brake pedal.

- Is the voltage greater than 10 volts?

→ **Yes**

INSTALL a new PCM. REFER to [Section 303-14](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST H: THE SPEED CONTROL IS INOPERATIVE—NO DTCs

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 CHECK THE PCM PID IDBRKSW	
	<p>1 Monitor the PCM PID IDBRKSW.</p> <ul style="list-style-type: none"> ● Does the PCM PID IDBRKSW indicate OFF? <p>→ Yes GO to H3.</p> <p>→ No GO to H2.</p>
H2 CHECK THE BPP INPUT TO THE PCM	
<p>1</p>  <p>2</p>  <p>PCM C175a</p> <p>3</p>	<p>3 Measure the voltage between PCM C175a pin 40, circuit 29S-RE13 (OG), harness side and ground.</p>

A0005483

- Is any voltage present?

→ Yes

REFER to [Section 417-01](#).

→ No

INSTALL a new PCM. REFER to [Section 303-14](#). CLEAR the DTCs. REPEAT the self-test.

H3 CHECK THE PCM PID PBA_SW

1 Monitor the PCM PID PBA_SW.

- Does the PCM PID PBA_SW indicate OFF with the parking brake released?

→ Yes

If equipped with a manual transmission, GO to [H4](#).

If equipped with an automatic transmission, GO to [H8](#).

→ No

REFER to [Section 413-01](#).

H4 CHECK THE PCM PID CPP

1 Monitor the PCM PID CPP.

- Does the PCM PID CPP indicate NO?

→ Yes

GO to [H11](#).

→ No

GO to [H5](#).

H5 CHECK THE CPP SWITCH

1

2

CPP Switch C258

3

A0005484

3

Measure the resistance between CPP switch pins 1 (component side), and CPP switch pin 3 (component side), while depressing and releasing the switch.

- Is the resistance less than 5 ohms in one direction and greater than 10,000 ohms in the other?

→ Yes
GO to [H6](#).

→ No
INSTALL a new CPP switch. REFER to [Section 303-14](#). CLEAR the DTCs. REPEAT the self-test.

H6 CHECK CIRCUIT 8-TC18 (WH) FOR AN OPEN

1

PCM C175b

2

A0005485

2

Measure the resistance between CPP switch C258 pin 1, circuit 8-TC18 (WH), harness side, and PCM C175b pin 22, circuit 8-TC18 (WH), harness side; and between CPP switch C258 pin 1, circuit 8-TC18 (WH), harness side and ground.

- Is the resistance less than 5 ohms between the CPP switch and PCM; and greater than 10,000 ohms between the CPP switch and ground?

→ Yes
GO to [H7](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

H7 CHECK CIRCUIT 9-RE8 (BN) AND CIRCUIT 9S-TC18

1

1

Measure the resistance between CPP switch C258 pin 3, circuit 9S-TC18 (BN), harness side, and PCM C175a pin 17, circuit 9-RE8 (BN), harness side; and between CPP switch C258 pin 3, circuit 9S-TC18 (BN), harness side, and ground.

- **Is the resistance less than 5 ohms between the CPP switch and PCM; and greater than 10,000 ohms between the CPP switch and ground?**

→ **Yes**
INSTALL a new PCM. REFER to [Section 303-14](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

H8 CHECK THE DTR SENSOR

1

2

DTR Sensor C167

3

A0005487

3

Measure the resistance between DTR sensor pin 2 (component side), and DTR sensor pin 4 (component side), while placing the transmission selector in P and D5.

- Is the resistance less than 5 ohms when the transmission selector is in P and greater than 10,000 ohms when the transmission selector is in D5?

→ **Yes**
GO to [H9](#).

→ **No**
INSTALL a new DTR sensor. REFER to [Section 307-01](#). CLEAR the DTCs. REPEAT the self-test.

H9 CHECK CIRCUIT 8-TA40 (WH/GN) FOR AN OPEN

1

PCM C175b

2

2

Measure the resistance between DTR sensor C167 pin 4, circuit 8-TA40 (WH/GN), harness side, and PCM C175b pin 22, circuit 8-TA40 (WH/GN), harness side; and between DTR sensor C167 pin 4, circuit 8-TA40 (WH/GN), harness side and ground.

- Is the resistance less than 5 ohms between the DTR sensor and PCM; and greater than 10,000 ohms between the DTR sensor and ground?

→ **Yes**
GO to [H10](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

H10 CHECK CIRCUIT 9-TA1 (BN) AND CIRCUIT 9-TA18 (BN/YE)

1

1

Measure the resistance between DTR sensor C167 pin 2, circuit 9-TA18 (BN/YE), harness side, and PCM C175b pin 17, circuit 9-TA1 (BN/YE), harness side; and between DTR sensor C167 pin 2, circuit 9-TA18 (BN/YE), harness side, and ground.

- Is the resistance less than 5 ohms between the DTR sensor and PCM; and greater than 10,000 ohms between the DTR sensor and ground?

→ **Yes**
GO to [H11](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

H11 CHECK THE PCM PID SCCS

1 Monitor the PCM PID SCCS, while depressing and releasing the speed control actuator switches. Refer to the PCM Parameter Identification (PID) Index.

- Does the PCM PID SCCS operate correctly?

→ **Yes**
GO to [H12](#).

→ **No**
INSTALL a new speed control actuator switch. REFER to [Switch—Speed Control Actuator](#) in this section. CLEAR the DTCs. REPEAT the self-test.

H12 CHECK THE PCM PID VBAT

1 Monitor the PCM PID VBAT.

- Does the PCM PID VBAT indicate greater than 10 volts with the engine running?

→ **Yes**
REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.

→ **No**
REFER to [Section 414-00](#).

Actuator Cable

Removal and Installation

1. Remove the speed control servo. Refer to [Actuator—Speed Control Servo](#).
2. Remove the speed control actuator cable from the throttle lever.
 1. Detach the speed control actuator cable end from the throttle nail head by pushing forward.
 2. Remove the speed control actuator cable from the throttle bracket by squeezing locking ears and pulling forward.

3. To install, reverse the removal procedure.
-

Actuator —Speed Control Servo

Removal

1. If equipped, remove the engine cover.
2. Detach the speed control actuator cable end from the throttle nailhead by pushing forward.

3. Remove the LF wheel and tire. For additional information, refer to [Section 204-04](#).
4. Remove the LF inner splash shield.
5. Position the speed control servo aside.
 1. Remove the bolts.
 2. Disconnect the electrical connector.
 3. Position the speed control servo aside.

6. Depress the locking tab and rotate the speed control actuator cable cap to remove.

7. Disconnect the speed control actuator cable from the speed control servo pulley.
 1. Gently push the retaining spring.
 2. Disconnect the speed control cable slug from the speed control servo pulley.

Installation

1. Insert the speed control cable slug into the speed control servo pulley slot.
 1. Gently push the retaining spring.
 2. Insert the speed control cable slug completely into the speed control servo pulley slot.

2.  **CAUTION:** It is necessary to squarely seat the speed control actuator cable cap and seal around the speed control servo pulley.

 **CAUTION:** Incorrect wrapping of the speed control actuator cable around the speed control servo pulley may result in high idle conditions.

NOTE: Make sure the rubber seal is fully seated onto the speed control actuator cable cap.

Align the speed control actuator cable cap tabs with the slots in the speed control servo housing.

3. Rotate the speed control actuator cable cap until the locking tab engages.

4. Install the speed control servo.
 1. Install the bolts.
 2. Connect the electrical connector.

5. Install the LF inner splash shield.
6. Install the wheel and tire. For additional information, refer to [Section 204-04](#).
7. Attach the speed control actuator cable end to the throttle nailhead.

8. If equipped, install the engine cover.
-

Switch —Deactivator

Removal

1. **NOTE:** Disconnect the footwell lamp electrical connector.

Remove the instrument panel insulator.

2. Remove the deactivator switch.
 1. Disconnect the electrical connector.
 2. Rotate and remove the deactivator switch.

Installation

⚠ CAUTION: Initial installation of a deactivator switch allows for one adjustment. If additional adjustments are necessary, install a new switch.

1. Rotate the lock knob counterclockwise to the stop to unlock.

2. With the engine running, fully depress and hold the brake pedal.
3. Install the deactivator switch.
 1. Position the deactivator switch in the bracket and rotate clockwise.
 2. Connect the electrical connector.

4. Slowly release the brake pedal.
-

Switch —Speed Control Actuator

Removal and Installation

1. Remove the driver side air bag; refer to [Section 501-20B](#).
2. Remove the speed control actuator switch.
 1. Remove the screws.
 2. Disconnect the electrical connector.

3. To install, reverse the removal procedure.
-

Item	Specification
A/C Compressor	
A/C compressor type	SC90V variable scroll
A/C compressor displacement	90 cc (5.5 cu in)
A/C compressor rotation	Clockwise
Magnetic Clutch	
Air gap between pulley and clutch plate	0.35-0.75 mm (0.014-0.030 in)
Coolant Hose Lubricant	
MERPOL®	ESE-M99B144-B
Refrigerant Lubricant	
PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C)	WSH-M1C231-B
Capacity	207 ml (7 oz)
Refrigerant	
R-134a Refrigerant YN-19	WSH-M17B19-A
Capacity	0.79 kg (28 oz)
Refrigerant System Cleaner	
A/C Systems Flushing Solvent F4AZ-19579-A	—
Evaporator Core Orifice	
	Thermostatic expansion valve (TXV) system
Color	N/A
Diameter	N/A
A/C Pressure Relief Valve ^a	
Open	3,792-4,137 kPa (550-600 psi)
A/C Cycling Switch	N/A
Pressure Cutoff Switch	N/A
A/C Pressure Sensor	Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

^a Manifold gauge set pressures may vary slightly depending on the distance between the service gauge port valve and the A/C pressure relief valve locations.

Torque Specifications

Description	Nm	lb-in
Peanut fitting nut	8	71

Climate Control System

 **WARNING:** To avoid accidental deployment and possible injury, the air bag system backup power supply must be depleted before repairing any climate control components. To deplete the backup power supply, disconnect the battery ground cable and wait one minute.

 **WARNING:** Carbon monoxide is colorless, odorless and dangerous. If it is necessary to operate the engine with vehicle in a closed area such as a garage, always use an exhaust collector to vent the exhaust gases outside the closed area.

 **WARNING:** R-134a is classified as a safe refrigerant, but misuse can make it dangerous. The following precautions must be observed:

- Always wear safety goggles when repairing an air conditioning system.
- Avoid contact with liquid refrigerant R-134a. R-134a vaporizes at approximately -25°C (-13°F) under atmospheric pressure and it will freeze skin tissue.
- Never allow refrigerant R-134a gas to escape in quantity in an occupied space. R-134a is non-toxic, but it will displace the oxygen needed to support life.
- Never use a torch in an atmosphere containing R-134a gas. R-134a is non-toxic at all normal conditions, but when it is exposed to high temperatures, such as a torch flame, it decomposes. During decomposition it releases irritating and toxic gases (as described in the MSDS sheet from the manufacturer). Decomposition products are hydrofluoric acid, carbon dioxide and water.
- Do not allow any portion of the charged air conditioning system to become too hot. The pressure in an air conditioning system rises as the temperature rises and temperatures of approximately 85°C (185°F) can be dangerous.
- Allow the engine to cool sufficiently prior to carrying out maintenance or serious burns and injury can occur.

 **CAUTION:** To avoid damaging the vehicle or A/C components, the following precautions must be observed:

- The A/C refrigerant of all vehicles must be identified and analyzed prior to refrigerant charging. Failure to do so can contaminate the shop bulk refrigerant and other vehicles.
- Do not add R-12 refrigerant to an A/C system that requires the use of R-134a refrigerant. These two types of refrigerant must never be mixed. Doing so can damage the A/C system.
- Charge the A/C system with the engine running. Use the low-pressure side of the A/C system when charging to prevent refrigerant slugging from damaging the A/C compressor.
- Use only R-134a refrigerant. Due to environmental concerns, when the air conditioning system is drained, the refrigerant must be collected using refrigerant recovery/recycling equipment. Federal law **REQUIRES** that R-134a be recovered into appropriate recovery equipment and the process be conducted by qualified technicians who have been certified by an approved organization, such as MACS, ASI, etc. Use of a recovery machine dedicated to R-134a is necessary to reduce the possibility of oil and refrigerant incompatibility concerns. Refer to the instructions provided by the equipment manufacturer when removing refrigerant from or charging the air conditioning system.

- Refrigerant R-134a must not be mixed with air for leak testing or used with air for any other purpose above atmospheric pressure. R-134a is combustible when mixed with high concentrations of air and higher pressures.
- A number of manufacturers are producing refrigerant products that are described as direct substitutes for refrigerant R-134a. The use of any unauthorized substitute refrigerant can severely damage the A/C components. If repair is required, use only new or recycled refrigerant R-134a.

CAUTION: To avoid contamination of the A/C system:

- Never open or loosen a connection before discharging the system.
- When loosening a connection, if any residual pressure is evident, allow it to leak out before opening the fitting.
- Before charging, evacuate a system that has been opened to install a new component or a system that has discharged through leakage.
- Seal open fittings with a cap or plug immediately after disconnecting a component from the system.
- Clean the outside of the fittings thoroughly before disconnecting a component from the system.
- Do not remove the sealing caps from a new component until ready to install.
- Refrigerant oil will absorb moisture from the atmosphere if left uncapped. Do not open an oil container until ready to use, and install the cap immediately after using. Store the oil in a clean, moisture-free container.
- Install a new O-ring seal before connecting an open fitting. Coat the fitting and the O-ring seal with refrigerant oil before connecting.
- When installing a refrigerant line, avoid sharp bends. Position the line away from the exhaust or any sharp edges that can chafe the line.
- Tighten threaded fittings only to specifications. The steel and aluminum fittings used in the refrigerant system will not tolerate overtightening.
- When disconnecting a fitting, use a wrench on both halves of the fitting to prevent twisting of the refrigerant lines or tubes.
- Do not open a refrigerant system or uncap a new component unless it is as close as possible to room temperature. This will prevent condensation from forming inside a component that is cooler than the surrounding air.

The electronic automatic temperature control system maintains the selected vehicle interior temperature by heating and/or cooling the air.

- During A/C operation the system also reduces the relative humidity of the air.
- The driver may override the automatic mode of operation.

Principles of Operation

There are four main principles involved with the basic theory of operation:

- heat transfer
- latent heat of vaporization
- relative humidity
- effect of pressure on boiling or condensation

Heat Transfer

If two substances of different temperature are placed near each other, the heat in the warmer substance will transfer to the colder substance.

Latent Heat of Vaporization

When a liquid boils (converts to gas) it absorbs heat without raising the temperature of the resulting gas. When the gas condenses (converts back to a liquid), it gives off heat without lowering the temperature of the resulting liquid.

Relative Humidity

The amount of moisture (water vapor content) that the air can hold is directly related to the air temperature. The more heat there is in the air, the more moisture the air can hold. The lower the moisture content in the air, the more comfortable you feel. Removing moisture from the air lowers its relative humidity and improves personal comfort.

Effects of Pressure on Boiling or Condensation

As the pressure is increased on a liquid, the temperature at which the liquid boils (converts to gas) also increases. Conversely, when the pressure on a liquid is reduced, its boiling point is also reduced. When in the gas state, an increase in pressure causes an increase in temperature, while a decrease in pressure will decrease the temperature of the gas.

The Refrigerant Cycle

During stabilized conditions (air conditioning system shutdown), the refrigerant is in a vaporized state and pressures are equal throughout the system. When the A/C compressor is in operation it increases pressure on the refrigerant vapor, raising its temperature. The high-pressure and high-temperature vapor is then released into the top of the A/C condenser core.

The A/C condenser, being close to ambient temperature, causes the refrigerant vapor to condense into a liquid when heat is removed from the refrigerant by ambient air passing over the fins and tubing. The now liquid refrigerant, still at high pressure, exits from the bottom of the A/C condenser and enters the inlet side of the A/C receiver/drier. The receiver/drier is designed to remove moisture from the refrigerant.

The outlet of the receiver/drier is connected to the thermostatic expansion valve (TXV). The TXV provides the orifice which is the restriction in the refrigerant system and separates the high and low pressure sides of the A/C system. As the liquid refrigerant passes across this restriction, its pressure and boiling point are reduced.

The liquid refrigerant is now at its lowest pressure and temperature. As it passes through the A/C evaporator, it absorbs heat from the airflow passing over the plate/fin sections of the A/C evaporator. This addition of heat causes the refrigerant to boil (convert to gas). The now cooler air can no longer support the same humidity level of the warmer air and this excess moisture condenses on the exterior of the evaporator coils and fins and drains outside the vehicle.

The refrigerant cycle is now repeated with the A/C compressor again increasing the pressure and temperature of the refrigerant.

A thermistor which monitors the temperature of the air that has passed through the evaporator core controls A/C clutch cycling. If the temperature of the evaporator core discharge air is low enough to cause the condensed water vapor to freeze, the A/C clutch is disengaged by the vehicle powertrain control module (PCM).

The high-side line pressure is also monitored so that A/C compressor operation will be interrupted if the system pressure becomes too high or is determined to be too low (low charge condition).

The A/C compressor thermal protection switch will interrupt compressor operation if the compressor housing exceeds temperature limits.

The A/C compressor relief valve will open and vent refrigerant to relieve unusually high system pressure.

Clutch Cycling Thermostatic Expansion Valve Type Refrigerant System

Item	Part Number	Description
1	19860	A/C evaporator core

2	19C734	A/C evaporator core outlet temperature thermistor
3	19849	Thermostatic expansion valve
4	19835	Manifold and tube assembly—thermostatic expansion valve
5	19D701	A/C charge valve port (low side)
6	19D734	Manifold and tube assembly—A/C compressor
7	19703	A/C compressor
8	19D644	A/C pressure relief valve
9	19D594	A/C pressure transducer
10	—	Low pressure vapor
11	—	High pressure vapor
12	—	Low pressure liquid

Dual Automatic Temperature Control (DATC) Module Description

The DATC system automatically maintains a selected temperature for vehicle interior comfort and regulates the volume of airflow between the instrument panel registers, floor ducts, windshield defroster nozzle, and side window demisters. The system will automatically select between fresh and recirculated air with an optional manual override. The DATC system will also include a manual A/C override, blower speed override, and airflow direction overrides.

The dual temperature zone feature provides the driver and the front seat passenger with their own independent temperature set points. The DATC system provides both the driver and front seat passenger with their selected temperature for interior comfort. In situations where the difference between the driver and the front seat passenger set points are very large, the DATC will tend to favor the driver's setting and make the front seat passenger as comfortable as possible.

The driver and front seat passenger will not have independent air distribution mode or fan controls so the system is dual temperature only. In some cases the passenger temperature set point may influence the air distribution mode or blower speed in automatic mode.

System Air Flow

AUTO

When AUTO is selected:

- The temperature control setting(s) are manually set to the desired setting(s).
- The air inlet door actuator is automatically controlled by the DATC module, based on the temperature setting(s), but can be manually overridden by selecting the recirculation button.
- The panel door, floor door, defrost door and cold air bypass door actuators are automatically controlled by the DATC module based on the temperature setting(s), but can be manually overridden by selecting any of the air distribution buttons.
- The dual coolant control valve is automatically controlled by the DATC module based on the temperature setting(s).
- The A/C compressor is automatically controlled by the DATC module based on the temperature setting(s), but can be manually overridden by selecting the A/C button. The A/C compressor will not operate if the outside temperature is lower than approximately 2°C (35°F).
- The blower motor is on. The blower motor speed is automatically controlled by the DATC module based on the temperature setting(s), but can be manually overridden by adjusting the blower speed rocker button.

OFF

When OFF is selected:

- The air inlet door actuator positions the air inlet door to close off outside air from entering the passenger compartment.
- The floor door actuator positions the floor door in the open position, and the panel door actuator, defrost door actuator, and cold air bypass door actuator position the panel door, defrost door, and cold air bypass door in the closed positions. This closes off airflow to the defrost duct, the side window demisters, the floor duct and the instrument panel A/C registers.
- The dual coolant control valve is in the closed position, preventing the flow of hot coolant to the heater core.
- The blower motor is off.

PANEL

When PANEL is selected:

- The Recirc request button is enabled. If the Recirc request button is selected (indicator on), the air inlet door actuator positions the air inlet door to close off outside air from entering the passenger compartment. If the Recirc request button is not selected (indicator off), the air inlet door actuator positions the air inlet door to admit only outside air into the passenger compartment.
- The panel door actuator positions the panel door in the open position and the floor door and defrost door actuators position the floor door and defrost door in the closed position, directing airflow to the instrument panel A/C registers. The cold air bypass door actuator is automatically controlled by the DATC module based on the temperature setting(s).
- The dual coolant control valve is automatically controlled by the DATC module based on the temperature setting(s).
- The A/C request button is enabled. When the A/C request button is selected (indicator on), the A/C compressor will operate if the outside air temperature is above approximately 2°C (35°F). When the A/C request button is not selected (indicator off), the A/C compressor will not operate and the air cannot be cooled below the outside temperature.

- The blower motor is on.

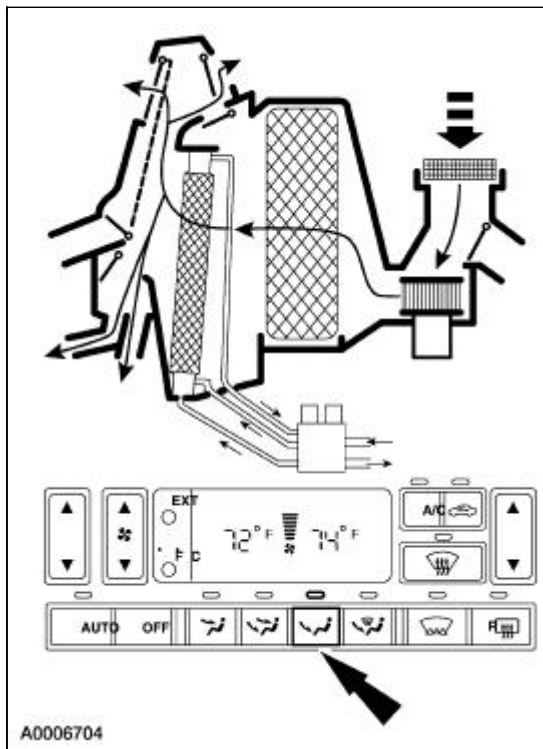

PANEL/FLOOR

When PANEL/FLOOR is selected:

- The Recirc request button is enabled. If the Recirc request button is selected (indicator on), the air inlet door actuator positions the air inlet door as to close off outside air from entering the passenger compartment. If the Recirc request button is not selected (indicator off), the air inlet door actuator positions the air inlet door to admit only outside air into the passenger compartment.
- The panel door and floor door actuators position the panel door and floor door in the open position and the defrost door actuator positions the defrost door in the closed position, directing airflow to the instrument panel A/C registers and the floor duct. The cold air bypass door actuator is automatically controlled by the DATC module based on the temperature setting(s).
- The dual coolant control valve is automatically controlled by the DATC module based on the temperature setting(s).
- The A/C request button is enabled. When the A/C request button is selected (indicator on), the A/C compressor will operate if the outside air temperature is above approximately 2°C (35°F). When the A/C request button is not selected (indicator off), the A/C compressor will not operate and the air cannot be cooled below the outside temperature.
- The blower motor is on.

FLOOR

When FLOOR is selected:

- The Recirc request button is enabled. If the Recirc request button is selected (indicator on), the air inlet door actuator positions the air inlet door to close off outside air from entering the passenger compartment. If the Recirc request button is not selected (indicator off), the air inlet door actuator positions the air inlet door as to admit only outside air into the passenger compartment. The DATC will automatically revert to the outside air position after approximately 1 to 4 minutes to prevent window fogging.
- The floor door actuator positions the floor door in the open position and the panel door and defrost door actuators position the panel door and defrost door in the closed position, directing airflow to the floor duct. A small amount of airflow from the outboard instrument panel A/C registers will be present. The cold air bypass door actuator is automatically controlled by the DATC module based on the temperature setting(s).
- The dual coolant control valve is automatically controlled by the DATC module based on the temperature settings.
- The A/C request button is enabled. When the A/C request button is selected (indicator on), the A/C compressor will operate if the outside air temperature is above approximately 2°C (35°F). When the A/C request button is not selected (indicator off), the A/C compressor will not operate and the air cannot be cooled below the outside temperature.
- The blower motor is on.

FLOOR/DEFROST

When FLOOR/DEFROST is selected:

- The Recirc request button is enabled. If the Recirc request button is selected (indicator on), the air inlet door actuator positions the air inlet door to close off outside air from entering the passenger compartment. If the Recirc request button is not selected (indicator off), the air inlet door actuator positions the air inlet door as to admit only outside air into the passenger compartment. The DATC will automatically revert to the outside air position after approximately 1 to 4 minutes to prevent window fogging.
- The floor door and defrost door actuators position the floor door and defrost door in the open position and the panel door actuator positions the panel door in the closed position, directing airflow to the floor duct, the windshield defroster ducts, and the side window demisters. A small amount of airflow from the outboard instrument panel A/C registers will be present. The cold air bypass door actuator is automatically controlled by the DATC module based on the temperature setting(s).
- The dual coolant control valve is automatically controlled by the DATC module based on the temperature settings.
- The A/C request button is enabled. When the A/C request button is selected (indicator on), the A/C compressor will operate if the outside air temperature is above approximately 2°C (35°F). When the A/C request button is not selected (indicator off), the A/C compressor will not operate and the air cannot be cooled below the outside temperature.
- The blower motor is on.

DEFROST

When DEFROST is selected:

- The Recirc request button is disabled. The air inlet door actuator positions the air inlet door to admit only outside air into the passenger compartment.
- The defrost door actuator positions the defrost door in the open position and the panel door, floor door, and cold air bypass door actuators position the panel door, floor door, and cold air bypass door in the closed position, directing airflow to the windshield defroster ducts and the side window demisters. A small amount of airflow from the outboard instrument panel A/C registers will be present.
- The dual coolant control valve is automatically controlled by the DATC module based on the temperature settings.
- The A/C request button is disabled. To reduce fogging, the A/C compressor will operate if the outside air temperature is above approximately 2°C (35°F).
- The blower motor is on.

Climate Control System Electrical Components—Directly Linked to DATC Module

A0004773

Item	Part Number	Description
1	12A647	Ambient air temperature sensor
2	19C734	In-vehicle temperature control sensor
3	19E663	Dual sunload sensor
4	19E616	Panel door actuator
5	14N089	Blower motor ignition relay
6	19E624	Blower motor speed control
7	19805	Blower motor
7	18504	Blower wheel (not serviced with motor)
8	19E616	Air inlet door actuator
9	19E616	Cold air bypass door actuator
10	19C734	Passenger air discharge temperature sensor
11	19C734	Evaporator discharge air temperature sensor
12	19E616	Floor door actuator
13	14N089	Heated wiper park relay
14	19E616	Defrost door actuator

15	19C734	Driver air discharge temperature sensor
16	14N089	Electric water pump relay
17	18495	Dual coolant control valve
18	19980	Dual automatic temperature control module

Climate Control System Components — J1850 Communications Network (SCP) Linked

Climate Control System

Refer to Wiring Diagrams Section [412-00](#) for schematic and connector information.

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-224, New Generation STAR (NGS) Tester 418-F052, or equivalent scan tool
 ST1137-A	Fluke 77 III Automotive Meter 105-R0056 or equivalent
 ST1928-A	R-134a Manifold Gauge Set 176-R032A or equivalent
 ST1501-A	A/C Pressure Test Adapter 412-093 (T94P-19623-E)
 ST1252-A	Set, A/C Fittings 412-DS028 (014-00333, D93L-19703B) or equivalent
 ST2351-A	Refrigerant Leak Detector 216-00001 or equivalent
	Pressure Test Kit 014-R1072 or equivalent

Inspection and Verification

1. Verify the customer's concern by operating the climate control system to duplicate the condition.
2. Inspect to determine if one of the following mechanical or electrical concerns apply:

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Loose, missing or damaged A/C compressor drive belt ● Loose or disconnected A/C clutch ● Broken or leaking refrigerant lines ● Obstructed in-vehicle temperature sensor ● Disconnected in-vehicle temperature aspirator hose ● A/C registers are not working (open/close) ● Front floor ducts not in place ● Incorrectly installed in-vehicle temperature sensor ● Incorrectly installed ambient air temperature sensor 	<ul style="list-style-type: none"> ● Fuse(s) ● Blower motor inoperative ● A/C compressor inoperative ● Circuit short/open. ● Disconnected, loose fitting, or incorrectly installed electrical connectors and pins ● Cooling fan inoperative ● Relays not functional or not installed

3. As pinpoint tests and measurements are being performed, be sure to inspect for any disconnected, loose fitting, or incorrectly installed component, module and in-line electrical connectors and pins.
4. If the inspection reveals obvious concerns that can be readily identified, repair as necessary.
5. If the concern remains after the inspection, connect the scan tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the scan tool menu. If the vehicle selection cannot be entered:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
 - check that the battery voltage is greater than 9V.

If the scan tool still does not allow the vehicle selection to be entered, refer to the scan tool manual.

6. Carry out the Data Link Diagnostic Test using the scan tool. If the scan tool responds with:
 - CKT 914 and CKT 915 = ALL MODULE NO RESPONSE/NOT EQUIPPED, go to Module Communication Network Diagnostics in [Section 418-00](#) to diagnose the network concern.
 - If the powertrain control module (PCM) is not listed for a communication concern, turn the A/C controls to OFF and execute the self-test diagnostics for the PCM.
 - If the DATC module is not listed for a communication concern, execute the self-test diagnostics for the DATC module.
7. If any PCM or DATC DTCs are retrieved, and are related to the concern, go to the Powertrain Control Module Diagnostic Trouble Code (DTC) Index or the Dual Automatic Temperature Control (DATC) Module Diagnostic Trouble Code (DTC) Index in this section to continue the diagnostics.
8. If no DTCs related to the concern are retrieved, GO to [Symptom Chart](#) to continue the diagnostics.
9. If the DATC module cannot be accessed by the scan tool, [Go To Pinpoint Test A](#).

Dual Electronic Automatic Temperature Control (DATC) Module Diagnostic Trouble Codes—DTCs

If using the scan tool or front panel diagnostics to check for DATC DTCs:

1. Check continuous DTCs.
2. Run DATC self-test. Refer to Front Panel DATC Self-Test (On-demand Diagnostic Trouble Codes — DTCs).

General information:

- If the DTC is continuous only and does not appear in the self-test, this indicates an intermittent fault condition, such as a poor wiring connection or a loose terminal. If the DATC does not appear after running the self-test it may also indicate that the DTC may no longer exist.
- If the DTC is continuous and appears in the self-test, this indicates a hard fault. A hard fault suggests a permanent wiring failure, disconnected connector or component failure.

Front Panel DATC Module Self-Test (On-demand Diagnostic Trouble Codes—DTCs)

On-demand DTCs are those that are reported by an ECU when a failure is detected while executing a diagnostic test. For the DATC module this means that all faults (hard) that occur while the module is conducting a self-test shall be reported as an on-demand DTC.

- The DATC module self-test will not detect concerns associated with data link messages such as engine coolant temperature or vehicle speed signals. The scan tool must be used to retrieve these concerns.
- The vehicle interior temperature should be between 0-32°C (32-90°F) when carrying out the self-test. If the temperatures are not within the specified ranges, false temperature sensor DTCs may be displayed.

The DATC module self-test through the front panel display:

- can be initiated at any time. Normal operation of the system stops when the self-test is activated.
- is entered by pressing the OFF and FLOOR buttons simultaneously and then pressing the AUTO button within two seconds. The display will show counts of 1 to 25 in the center of the

display window. Record all DTCs displayed.

- concludes by reporting all on-demand DTCs. Follow the diagnostics procedure given under ACTION in the DTC index for each DTC given.
- reports individual on-demand DTCs as four-digit DTCs (less the alpha character).
- will calibrate all the mode doors and check all analog inputs. The DATC module will only report on-demand (hard) faults that occurred while the DATC module was conducting its self-test.
- will light all control panel display segments if no faults are detected.
- will report individual on-demand DTCs without the °C symbol lit.

To exit the self-test, press any button. This will clear all on-demand codes from the DATC module memory. If no button is pushed DTCs will continue to be displayed.

Upon exit from the self-test the DATC module returns to operational status. The DATC module executes a hard (cold boot) reset which places the DATC system in the OFF mode.

If a condition exists but no DTCs appear during the self-test, GO to [Symptom Chart](#) Condition: The DATC System Is Inoperative, Intermittent or Incorrect Operation.

Always exit the self-test before powering the system down (system turned OFF).

Front Panel DATC Module Display—Retrieve Continuous Diagnostic Trouble Codes (DTCs)

Continuous DTCs are fault codes recorded by the DATC module which have occurred during normal operation. For the DATC module this means that all faults (intermittent or hard) that occur while the module is in an operational state shall be reported as a continuous DTC.

- To retrieve continuous DTCs, press the OFF and PANEL buttons simultaneously, followed by pressing the AUTO button within two seconds.
- The DATC module will report all continuous DTCs to the vacuum fluorescent (VF) display.
- The DATC module will not carry out a self-test; it will only display continuous faults codes which are stored in memory.
- All VF display segments will light if no faults are detected.
- Individual continuous DTCs will be reported with the °C symbol lit.
- DTCs shall be reported as a four-digit DTC (less the alpha character).
- Pressing the front defrost button will exit the retrieve continuous DTCs mode and clear all continuous DTCs from DATC module memory.
- Pressing any other button (other than DEFROST) will exit the retrieve continuous DTCs mode and maintain all continuous DTCs in DATC module memory.
- Upon exit from the retrieve continuous DTCs mode the DATC module returns to operational status. The DATC module executes a hard (cold boot) reset which places the DATC system in the OFF mode.

Diagnostic Trouble Code Index

Powertrain Control Module (PCM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Action
P1460	WOT A/C cutout internal driver malfunction	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1461	A/C pressure sensor circuit high input	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

P1462	A/C pressure sensor circuit low input	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1463	A/C pressure sensor insufficient pressure variation	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1469	Low A/C cycling period	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1474	Low speed fan internal driver failure	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1479	High speed fan internal driver failure	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1464	A/C demand out of self-test range	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Dual Electronic Automatic Temperature Control (DATC) Module Diagnostic Trouble Code (DTC) Index

DTC	Run-Time (Intermittent) Faults or Self-Test (Hard) Faults	Description	Action to Take

B2428	2428	Passenger heater core discharge temperature sensor open circuit	Go To Pinpoint Test E .
B2429	2429	Passenger heater core discharge temperature sensor short circuit	Go To Pinpoint Test E .
B2477	2477	Module configuration failure	RECONFIGURE the DATC module. REFER to Section 418-01 .
U1041	5041	SCP invalid or missing data for function read vehicle speed	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
U1073	5073	SCP invalid or missing data for engine coolant	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
U1027	5027	SCP invalid or missing data for engine rpm	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
U1178	5178	SCP invalid or missing data for voice command	This code will only appear if the vehicle is equipped with voice command.
U1222	5222	SCP invalid or missing data for interior lamps	REFER to Section 417-02 .

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
<ul style="list-style-type: none"> No communication with the dual automatic temperature control (DATC) module 	<ul style="list-style-type: none"> Fuse. Circuitry. DATC module communication network. DATC module not connected. 	<ul style="list-style-type: none"> Go To Pinpoint Test A .

Pinpoint Tests

PINPOINT TEST A: NO COMMUNICATION WITH THE DUAL AUTOMATIC TEMPERATURE CONTROL (DATC) MODULE

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK THE CJB FUSE 220 (10A)	
<p>1</p> 	<p>2 Turn the headlights on.</p>

● Does the DATC backlighting come on?

→ Yes
GO to [A2](#).

→ No
INSTALL a new fuse. TEST the system for normal operation.

A2 CHECK THE CJB FUSE 214 (10A)

1

● Does the vacuum fluorescent (VF) display and indicators come on when DATC buttons are pushed?

→ Yes
GO to [A3](#).

→ No
INSTALL a new fuse. TEST the system for normal operation.

A3 CHECK CIRCUIT 31-FA10 (BK) FOR AN OPEN

1

DATC Module C228a

2

A0002036

2 Measure the resistance between DATC module C228a pin 2, circuit 31-FA10 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ Yes
GO to [A4](#).

→ No
REPAIR circuit 31-FA10 (BK). TEST the system for normal operation.

A4 CHECK CIRCUIT 29-FA10 (OG/GN) FOR VOLTAGE

1

2

2 Measure the voltage between DATC module C228a pin 14, circuit 29-FA10 (OG/GN), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [A5](#).

→ **No**
REPAIR circuit 29-FA10 (OG/GN). TEST the system for normal operation.

A5 CHECK CIRCUIT 20-FA10 (PK/OG) FOR VOLTAGE

1

2

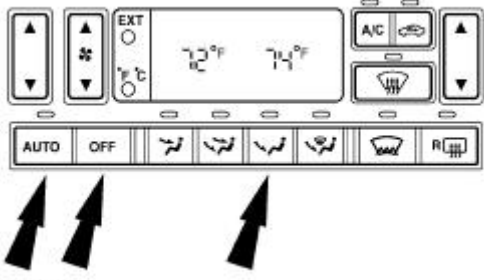

2 Measure the voltage between DATC module C228a pin 3, circuit 20-FA10 (PK/OG), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
REFER to [Section 418-00](#) to diagnose the network concern.

→ **No**
REPAIR circuit 20-FA10 (PK/OG). TEST the system for normal operation.

PINPOINT TEST B: THE DATC SYSTEM IS INOPERATIVE, INTERMITTENT OR INCORRECT OPERATION

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 REQUEST CONTINUOUS CODES AND CARRY OUT THE DATC MODULE SELF-TEST	
<p>1</p>  <p>2</p>  <p>A0002319</p>	<p>2</p> <p>Carry out the DATC module self-test and retrieve continuous DTCs. Record the DTCs displayed, if any.</p> <ul style="list-style-type: none"> • Are any DTCs displayed? <p>→ Yes REFER to the DATC Module Diagnostic Trouble Code (DTC) Index. CARRY OUT the necessary diagnosis and REPAIR as necessary.</p> <p>→ No GO to B2.</p>
B2 CHECK THE DISPLAY	
NOTE: If after the self-test there are no DTCs, the DATC will display ALL segments.	
<p>1</p>  <p>A0002401</p>	<p>1</p> <p>Observe the function symbols displayed.</p> <ul style="list-style-type: none"> • Is the display correct and complete without any missing elements? <p>→ Yes EXIT the self-test by pressing any button. GO to B3.</p>

→ **No**
INSTALL a new DATC module. REFER to [Section 412-04](#) . TEST the system for normal operation.

B3 VERIFY AUTOMATIC OPERATION

1

2

A0002320

2 Press the AUTO button.

- Does the indicator above the AUTO button illuminate and the selected temperature for both the driver and passenger appear in the display window?

→ **Yes**
GO to [B4](#) .

→ **No**
INSTALL a new DATC module. REFER to [Section 412-04](#) . TEST the system for normal operation.

B4 CHECK THE OFF POSITION

2

A0003980

1 Make sure the A/C system is operating and the blower motor is running.

2 Press the OFF button.

- Does the temperature set point display turn off or revert to the external temperature, do all indicator lights turn off, and the

blower motor turn off?

- **Yes**
GO to [B5](#).
- **No**
If the indicator lights do not turn off, INSTALL a new DATC module. REFER to [Section 412-04](#). If the blower motor does not turn off, [Go To Pinpoint Test Q](#).

B5 CHECK THE BLOWER SPEED MANUAL OVERRIDE OPERATION

1

1

Press the blower motor speed override control fully up and down.

- **Does the blower motor vary from high to low speed and does the bar graph display vary with the blower speed?**

- **Yes**
GO to [B6](#).
- **No**
[Go To Pinpoint Test O](#).

B6 CHECK THE TEMPERATURE SET SWITCHES

NOTE: When carrying out this pinpoint test step, allow time for the system to respond.

NOTE: The passenger temperature select is inoperative when the driver setpoint is 16°C (60°F) or 32°C (90°F).

1

1

With the engine at operating temperature, select PANEL mode. Press the driver and passenger temperature set buttons for warmer and cooler temperatures.

- **Does each temperature display vary and does each air temperature vary as higher and lower temperatures are selected?**

→ **Yes**
GO to [B7](#).

→ **No**
[Go To Pinpoint Test H.](#)

B7 VERIFY THE PANEL FLOOR MODE SWITCH.

1

A0002402

1 Press the panel floor override button.

- Does the indicator light above the button illuminate and is air discharged from both the panel and floor ducts?

→ **Yes**
GO to [B8](#).

→ **No**
If indicator does not turn on, INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation. If airflow is not correct, [Go To Pinpoint Test C.](#)

B8 VERIFY THE FRONT DEFROST OVERRIDE OPERATION

1

A0002322

1 Press the override button for front defrost operation.

- Does the indicator light above the button illuminate and is air being discharged from the windshield defroster nozzle and the side window demisters?

→ **Yes**
GO to [B9](#).

→ **No**
If indicator does not turn on, INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation. If airflow is not correct, [Go To Pinpoint Test C](#).

B9 VERIFY THE FLOOR OVERRIDE OPERATION

1

A0002323

1 Press the override button for floor operation.

- Does the indicator light above the button illuminate and is air being discharged from the floor duct?

→ **Yes**
GO to [B10](#).

→ **No**
If indicator does not turn on, INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation. If airflow is not correct, [Go To Pinpoint Test C](#).

B10 VERIFY THE PANEL OVERRIDE OPERATION

1

A0002324

1 Press the override button for panel operation.

- Does the indicator light above the button illuminate and is air being discharged from the instrument panel registers and the rear seat A/C register?

→ **Yes**
GO to [B11](#).

→ **No**

If indicator does not turn on, INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation. If airflow is not correct, [Go To Pinpoint Test C](#).

B11 VERIFY RECIRC OPERATION

NOTE: Recirc does not operate in floor/defrost or defrost modes.

1

A0003981

1

With panel override selected, press the override button for recirc operation.

- Does the indicator light above the button illuminate and does the recirc door move to the alternate position?

→ **Yes**
GO to [B12](#).

→ **No**
If the indicator does not turn on, INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation. If airflow is not correct, [Go To Pinpoint Test C](#).

B12 VERIFY A/C CLUTCH ENGAGEMENT AND DISENGAGEMENT IN THE A/C MODE

1

A0002325

1

With the engine running and panel override selected, press the override button for A/C operation.

- Does the indicator light above the button turn on or off and does the A/C clutch engage or disengage when the A/C override button is pressed?

→ **Yes**
GO to [B13](#).

→ **No**
[Go To Pinpoint Test L.](#)

B13 VERIFY HEATED WIPER PARK OPERATION

1

A0003962

1 With the engine running, press the heated wiper park button.

- Does the indicator light above the button illuminate and does the wiper rest relay engage?

→ **Yes**
GO to [B14.](#)

→ **No**
REFER to [Section 501-11.](#)

B14 VERIFY REAR DEFROST OPERATION

1

A0002326

1 With the engine running, press the rear defrost button.

- Does the indicator illuminate and does the rear window defrost?

→ **Yes**
GO to [B15.](#)

→ **No**
REFER to [Section 501-11.](#)

B15 VERIFY °F °C OPERATION

1

1 Repeatedly press the °F °C button.

A0003983

- Does the display alternate between °F to °C or °C to °F as the button is pressed?

- **Yes**
GO to [B16](#).
- **No**
INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation.

B16 VERIFY EXT BUTTON OPERATION

1

A0006071

- 1 Press the EXT button.

- Does the display alternate between external air temperature and the set point displays?

- **Yes**
GO to [B17](#).
- **No**
[Go To Pinpoint Test Q](#).

B17 RECHECK DATC MODULE CONFIGURATION

2

PID CNFG Data

- 1 Enter Module Identification mode.
- 2 Read PID CNFG data 1.

	<ul style="list-style-type: none"> ● Does the data read 4N_3N_2Y? <p>→ Yes The test is complete. The system is functioning normally.</p> <p>→ No RECONFIGURE the DATC module. REFER to Section 418-01.</p>
--	--

PINPOINT TEST C: INCORRECT/ERRATIC DIRECTION OF AIRFLOW FROM OUTLETS

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 REQUEST CONTINUOUS DTCs AND CARRY OUT THE DATC SELF-TEST	
<p>1</p> 	<p>2 Request Continuous DTCs and carry out the DATC Module Self-Test. Record the DTCs displayed, if any.</p> <ul style="list-style-type: none"> ● Were any DTCs displayed? <p>→ Yes Record any DTCs displayed. GO to C3.</p> <p>→ No GO to C2.</p>
C2 CHECK THE ACTUATOR DOOR AND LINKAGE	
	<p>1 Inspect the actuator door and linkage for a binding or sticking condition.</p> <ul style="list-style-type: none"> ● Was a condition found? <p>→ Yes REPAIR the door or linkage. REFER to Section 412-02. TEST the system for normal operation.</p> <p>→ No INSTALL a new DATC module. REFER to Section 412-04. TEST the system for normal operation.</p>
C3 CHECK THE DOOR ACTUATOR OPEN OPERATION	
<p>1</p> 	

2

DATC Module C228a

3

DATC Module C228b

4

A0038613

5

A0038614

4

Connect a fused jumper wire between DATC module C228a pin 14, circuit 29-FA10 (OG/GN), harness side and harness side of the connector/pin indicated below that corresponds to the recorded DTC(s).

DTC	Pin	Circuit	Actuator/ Door
B1265	C228b-11	32-FB2 (WH/RD)	Cold Air Bypass
B1242	C228b-10	32-FB8 (WH/RD)	Air Recirculation
B1262	C228b-13	32-FB5 (WH/BK)	Defrost
B1263	C228b-24	32-FB7 (WH)	Panel Mode
B1264	C228b-22	32-FB6 (WH/VT)	Floor Mode

5

Connect a fused jumper wire between DATC module C228a pin 2, circuit 31-FA10 (BK), harness side and harness side of the connector/pin indicated below that corresponds to the recorded DTC(s).

DTC	Pin	Circuit	Actuator/ Door
B1265	C228b-12	33-FB2 (YE/RD)	Cold Air Bypass
B1242	C228b-9	33-FB8 (YE/RD)	Air Recirculation
B1262	C228b-26	33-FB5 (YE/BK)	Defrost
B1263	C228b-25	33-FB7 (YE)	Panel Mode
B1264	C228b-23	33-FB6 (YE/VT)	Floor Mode

- Does the actuator motor move in the open direction?

→ Yes

GO to [C4](#).

→ **No**
GO to [C5](#).

C4 CHECK THE DOOR ACTUATOR CLOSE OPERATION

1

A0038615

1

Connect a fused jumper wire between DATC module C228a pin 14, circuit 29-FA10 (OG/GN), harness side and harness side of the connector/pin indicated below that corresponds to the recorded DTC(s).

DTC	Pin	Circuit	Actuator/Door
B1265	C228b-12	33-FB2 (YE/RD)	Cold Air Bypass
B1242	C228b-9	33-FB8 (YE/RD)	Air Recirculation
B1262	C228b-26	33-FB5 (YE/BK)	Defrost
B1263	C228b-25	33-FB7 (YE)	Panel Mode
B1264	C228b-23	33-FB6 (YE/VT)	Floor Mode

2

A0038616

2

Connect a fused jumper wire between DATC module C228a pin 2, circuit 31-FA10 (BK), harness side and harness side of the connector/pin indicated below that corresponds to the recorded DTC(s).

DTC	Pin	Circuit	Actuator/Door
B1265	C228b-11	32-FB2 (WH/RD)	Cold Air Bypass
B1242	C228b-10	32-FB8 (WH/RD)	Air Recirculation
B1262	C228b-13	32-FB5 (WH/BK)	Defrost
B1263	C228b-24	32-FB7 (WH)	Panel Mode
B1264	C228b-22	32-FB6 (WH/VT)	Floor Mode

- Does the actuator motor move in the closed direction?

→ **Yes**
GO to [C11](#).

→ **No**
GO to [C5](#).

C5 CHECK ACTUATOR MOTOR OPEN CIRCUIT FOR A SHORT TO GROUND

1

Affected Actuator

2

2

Measure the resistance between the harness side of the connector/pin indicated below that corresponds to the recorded DTC(s) and ground.

DTC	Pin	Circuit
B1265	C228b-11	32-FB2 (WH/RD)
B1242	C228b-10	32-FB8 (WH/RD)
B1262	C228b-13	32-FB5 (WH/BK)
B1263	C228b-24	32-FB7 (WH)
B1264	C228b-22	32-FB6 (WH/VT)

● Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [C6](#).

→ **No**
REPAIR the affected circuit for a short to ground. TEST the system for normal operation.

C6 CHECK ACTUATOR MOTOR CLOSE CIRCUIT FOR A SHORT TO GROUND

1

1

Measure the resistance between the harness side of the connector/pin indicated below that corresponds to the recorded DTC(s) and ground.

DTC	Pin	Circuit
B1265	C228b-12	33-FB2 (YE/RD)
B1242	C228b-9	33-FB8 (YE/RD)
B1262	C228b-26	33-FB5 (YE/BK)
B1263	C228b-25	33-FB7 (YE)
B1264	C228b-23	33-FB6 (YE/VT)

● Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [C7](#).

→ **No**
REPAIR the affected circuit for a short to ground. TEST the system for normal operation.

C7 CHECK ACTUATOR MOTOR OPEN CIRCUIT FOR A SHORT TO POWER

1

2

A0038618

2 Measure the voltage between the harness side of the connector/pin indicated below that corresponds to the recorded DTC(s) and ground.

DTC	Pin	Circuit
B1265	C228b-11	32-FB2 (WH/RD)
B1242	C228b-10	32-FB8 (WH/RD)
B1262	C228b-13	32-FB5 (WH/BK)
B1263	C228b-24	32-FB7 (WH)
B1264	C228b-22	32-FB6 (WH/VT)

● Is voltage present?

→ Yes

REPAIR the affected circuit for a short to power. TEST the system for normal operation.

→ No

GO to [C8](#).

C8 CHECK ACTUATOR MOTOR CLOSE CIRCUIT FOR A SHORT TO POWER

1

A0038620

1 Measure the voltage between the harness side of the connector/pin indicated below that corresponds to the recorded DTC(s) and ground.

DTC	Pin	Circuit
B1265	C228b-12	33-FB2 (YE/RD)
B1242	C228b-9	33-FB8 (YE/RD)
B1262	C228b-26	33-FB5 (YE/BK)
B1263	C228b-25	33-FB7 (YE)
B1264	C228b-23	33-FB6 (YE/VT)

● Is voltage present?

→ Yes

REPAIR the affected circuit for a short to power. TEST the system for normal operation.

→ No

GO to [C9](#).

C9 CHECK ACTUATOR MOTOR OPEN CIRCUIT FOR AN OPEN

1

2

A0038621

2

Measure the resistance between the harness side of the connectors/pins indicated below that corresponds to the recorded DTC(s).

DTC	Pin	Circuit	Pin
B1265	C228b-11	32-FB2 (WH/RD)	C295-1
B1242	C228b-10	32-FB8 (WH/RD)	C289-6
B1262	C228b-13	32-FB5 (WH/BK)	C232-6
B1263	C228b-24	32-FB7 (WH)	C236-6
B1264	C228b-22	32-FB6 (WH/VT)	C234-1

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [C10](#).

→ **No**
REPAIR the affected circuit for an open.
TEST the system for normal operation.

C10 CHECK ACTUATOR MOTOR CLOSE CIRCUIT FOR AN OPEN

1

A0038622

1

Measure the resistance between the harness side of the connectors/pins indicated below that corresponds to the recorded DTC(s).

DTC	Pin	Circuit	Pin
B1265	C228b-12	33-FB2 (YE/RD)	C295-6
B1242	C228b-9	33-FB8 (YE/RD)	C289-1
B1262	C228b-26	33-FB5 (YE/BK)	C232-1
B1263	C228b-25	33-FB7 (YE)	C236-1
B1264	C228b-23	33-FB6 (YE/VT)	C234-6

● Is the resistance less than 5 ohms?

→ **Yes**
INSPECT for binding or stuck linkage/door. If no condition is found, INSTALL a new door

actuator. REFER to [Section 412-04](#). TEST the system for normal operation.

→ **No**
REPAIR the affected circuit for an open.
TEST the system for normal operation.

C11 CHECK THE FEEDBACK POTENTIOMETER TOTAL RESISTANCE

1

Affected Actuator

2

Actuators Not Affected

3

A0038623

3 Measure the resistance between the harness side of the connectors/pins indicated below that corresponds to the recorded DTC(s).

DTC	Pin	Circuit	Pin	Circuit
B1265	C228a-11	9-FA1 (BN)	C228a-22	7-FA1 (YE)
B1242	C228a-11	9-FA1 (BN)	C228a-22	7-FA1 (YE)
B1262	C228b-17	9-FA2 (BN/RD)	C228a-22	7-FA1 (YE)
B1263	C228b-17	9-FA2 (BN/RD)	C228a-22	7-FA1 (YE)
B1264	C228b-17	9-FA2 (BN/RD)	C228a-22	7-FA1 (YE)

● Is the resistance between 5,000 and 6,000 ohms?

→ **Yes**
GO to [C12](#).

→ **No**
If the resistance is greater than 6,000 ohms, GO to [C14](#).
If the resistance is less than 5,000 ohms, GO to [C22](#).

C12 CHECK POTENTIOMETER LOW SIDE RESISTANCE

1

1 Measure the resistance between the harness side of the connectors/pins indicated below that corresponds to the recorded DTC(s).

A0038624

DTC	Pin	Circuit	Pin	Circuit
B1265	C228a-11	9-FA1 (BN)	C228b-2	8-FB2 (WH/RD)
B1242	C228a-11	9-FA1 (BN)	C228b-15	8-FB8 (WH/RD)
B1262	C228b-17	9-FA2 (BN/RD)	C228a-1	8-FB5 (WH/BK)
B1263	C228b-17	9-FA2 (BN/RD)	C228b-3	8-FB7 (WH)
B1264	C228b-17	9-FA2 (BN/RD)	C228b-16	8-FB6 (WH/VT)

● Is the resistance between 250 and 5,250 ohms?

→ **Yes**
GO to [C13](#).

→ **No**
If the resistance is greater than 5,250 ohms, GO to [C15](#).
If the resistance is less than 250 ohms, GO to [C23](#).

C13 CHECK POTENTIOMETER HIGH SIDE RESISTANCE

1

A0038625

1

Measure the resistance between the harness side of the connectors/pins indicated below that corresponds to the recorded DTC(s).

DTC	Pin	Circuit	Pin	Circuit
B1265	C228a-22	7-FA1 (YE)	C228b-2	8-FB2 (WH/RD)
B1242	C228a-22	7-FA1 (YE)	C228b-15	8-FB8 (WH/RD)
B1262	C228b-22	7-FA1 (YE)	C228b-1	8-FB5 (WH/BK)
B1263	C228b-22	7-FA1 (YE)	C228b-3	8-FB7 (WH)
B1264	C228b-22	7-FA1 (YE)	C228b-16	8-FB6 (WH/VT)

● Is the resistance between 250 and 5,250 ohms?

→ **Yes**
GO to [C17](#).

→ **No**
If the resistance is greater than 5,250 ohms,
GO to [C14](#).
If the resistance is less than 250 ohms, GO to
[C24](#).

C14 CHECK THE ACTUATOR REFERENCE CIRCUIT FOR AN OPEN

1

Affected Actuator

2

2 Measure the resistance between the harness side of the connectors/pins indicated below that corresponds to the recorded DTC(s).

DTC	Pin	Circuit	Pin	Circuit
B1265	C228a-22	7-FA1 (YE)	C295-5	7-FB2 (YE/RD)
B1242	C228a-22	7-FA1 (YE)	C289-4	7-FB8 (YE/RD)
B1262	C228b-22	7-FA1 (YE)	C232-4	7-FB5 (YE/BK)
B1263	C228b-22	7-FA1 (YE)	C236-4	7-FB7 (YE)
B1264	C228b-22	7-FA1 (YE)	C234-5	7-FB6 (YE/VT)

● **Is the resistance less than 5 ohms?**

→ **Yes**
GO to [C15](#).

→ **No**
REPAIR the affected circuit for an open.
TEST the system for normal operation.

C15 CHECK THE ACTUATOR RETURN CIRCUIT FOR AN OPEN

1

Affected Actuator

2

2 Measure the resistance between the harness side of the connectors/pins indicated below that corresponds to the recorded DTC(s).

A0038627

DTC	Pin	Circuit	Pin	Circuit
B1265	C228a-11	9-FA1 (BN)	C295-4	9-FB2 (BN/RD)
B1242	C228a-11	9-FA1 (BN)	C289-5	9-FB8 (BN/RD)
B1262	C228b-17	9-FA2 (BN/RD)	C232-5	9-FB5 (BN/YE)
B1263	C228b-17	9-FA2 (BN/RD)	C236-5	9-FB7 (BN)
B1264	C228b-17	9-FA2 (BN/RD)	C234-4	9-FB6 (BN/WH)

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [C16](#).

→ **No**
REPAIR the affected circuit for an open.
TEST the system for normal operation.

C16 CHECK THE ACTUATOR FEEDBACK CIRCUIT FOR AN OPEN

1

Affected Actuator

2

A0038628

2 Measure the resistance between the harness side of the connectors/pins indicated below that corresponds to the recorded DTC(s).

DTC	Pin	Circuit	Pin
B1265	C228b-2	8-FB2 (WH/RD)	C295-3
B1242	C228b-15	8-FB8 (WH/RD)	C289-3
B1262	C228b-1	8-FB5 (WH/BK)	C232-3
B1263	C228b-3	8-FB7 (WH)	C236-3
B1264	C228b-16	8-FB6 (WH/VT)	C234-3

● Is the resistance less than 5 ohms?

→ **Yes**

INSTALL a new door actuator. REFER to [Section 412-04](#). TEST the system for normal operation.

→ **No**
REPAIR the affected circuit for an open. TEST the system for normal operation.

C17 CHECK THE ACTUATOR REFERENCE CIRCUIT FOR A SHORT TO GROUND

1

1

Measure the resistance between DATC module C228a pin 22, circuit 7-FA1 (YE), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [C18](#).

→ **No**
REPAIR the affected circuit for a short to ground. TEST the system for normal operation.

C18 CHECK THE ACTUATOR FEEDBACK CIRCUIT FOR A SHORT TO GROUND

1

1

Measure the resistance between the harness side of the connector/pin indicated below that corresponds to the recorded DTC(s) and ground.

DTC	Pin	Circuit
B1265	C228b-2	8-FB2 (WH/RD)
B1242	C228b-15	8-FB8 (WH/RD)
B1262	C228b-1	8-FB5 (WH/BK)
B1263	C228b-3	8-FB7 (WH)
B1264	C228b-16	8-FB6 (WH/VT)

● Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [C19](#).

→ **No**
REPAIR the affected circuit for a short to ground. TEST the system for normal operation.

operation.

C19 CHECK THE ACTUATOR REFERENCE CIRCUIT FOR A SHORT TO POWER

1

A0038630

1 Measure the voltage between DATC module C228a pin 22, circuit 7-FA1 (YE), harness side and ground.

● Is voltage present?

→ **Yes**
REPAIR the affected circuit for a short to power. TEST the system for normal operation.

→ **No**
GO to [C20](#).

C20 CHECK THE ACTUATOR FEEDBACK CIRCUIT FOR A SHORT TO POWER

1

A0038631

1 Measure the voltage between the harness side of the connector/pin indicated below that corresponds to the recorded DTC(s) and ground.

DTC	Pin	Circuit
B1265	C228b-2	8-FB2 (WH/RD)
B1242	C228b-15	8-FB8 (WH/RD)
B1262	C228b-1	8-FB5 (WH/BK)
B1263	C228b-3	8-FB7 (WH)
B1264	C228b-16	8-FB6 (WH/VT)

● Is voltage present?

→ **Yes**
REPAIR the affected circuit for a short to power. TEST the system for normal operation.

→ **No**
GO to [C21](#).

C21 CHECK THE ACTUATOR RETURN CIRCUIT FOR A SHORT TO POWER

1

1 Measure the voltage between the harness side of the connector/pin indicated below that corresponds to the recorded DTC(s) and ground.

A0038632

DTC	Pin	Circuit
B1265	C228a-11	9-FA1 (BN)
B1242	C228a-11	9-FA1 (BN)
B1262	C228b-17	9-FA2 (BN/RD)
B1263	C228b-17	9-FA2 (BN/RD)
B1264	C228b-17	9-FA2 (BN/RD)

● **Is voltage present?**

→ **Yes**

REPAIR the affected circuit for a short to power. TEST the system for normal operation.

→ **No**

INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation.

C22 CHECK THE FEEDBACK POTENTIOMETER TOTAL RESISTANCE SHORT TOGETHER

1

Affected Actuator

2

A0038623

2

Measure the resistance between the harness side of the connectors/pins indicated below that corresponds to the recorded DTC(s).

DTC	Pin	Circuit	Pin	Circuit
B1265	C228a-11	9-FA1 (BN)	C228a-22	7-FA1 (YE)
B1242	C228a-11	9-FA1 (BN)	C228a-22	7-FA1 (YE)
B1262	C228b-17	9-FA2 (BN/RD)	C228a-22	7-FA1 (YE)
B1263	C228b-17	9-FA2 (BN/RD)	C228a-22	7-FA1 (YE)
B1264	C228b-17	9-FA2 (BN/RD)	C228a-22	7-FA1 (YE)

● **Is the resistance less than 5 ohms?**

→ **Yes**

REPAIR the affected circuits for a short together. TEST the system for normal

operation.

→ **No**
 INSTALL a new door actuator. REFER to [Section 412-04](#). TEST the system for normal operation.

C23 CHECK POTENTIOMETER LOW SIDE RESISTANCE SHORT TOGETHER

1

1 Measure the resistance between the harness side of the connectors/pins indicated below that corresponds to the recorded DTC(s).

DTC	Pin	Circuit	Pin	Circuit
B1265	C228a-11	9-FA1 (BN)	C228b-2	8-FB2 (WH/RD)
B1242	C228a-11	9-FA1 (BN)	C228b-15	8-FB8 (WH/RD)
B1262	C228b-17	9-FA2 (BN/RD)	C228b-1	8-FB5 (WH/BK)
B1263	C228b-17	9-FA2 (BN/RD)	C228b-3	8-FB7 (WH)
B1264	C228b-17	9-FA2 (BN/RD)	C228b-16	8-FB6 (WH/VT)

● Is the resistance less than 5 ohms?

→ **Yes**
 REPAIR the affected circuits for a short together. TEST the system for normal operation.

→ **No**
 INSTALL a new door actuator. REFER to [Section 412-04](#). TEST the system for normal operation.

C24 CHECK POTENTIOMETER HIGH SIDE RESISTANCE SHORT TOGETHER

1

1 Measure the resistance between the harness side of the connectors/pins indicated below that corresponds to the recorded DTC(s).

DTC	Pin	Circuit	Pin	Circuit
B1265	C228a-22	7-FA1 (YE)	C228b-2	8-FB2 (WH/RD)
B1242	C228a-22	7-FA1 (YE)	C228b-15	8-FB8 (WH/RD)
B1262	C228b-22	7-FA1 (YE)	C228b-	8-FB5 (WH/

			1	BK)
B1263	C228b-22	7-FA1 (YE)	C228b-3	8-FB7 (WH)
B1264	C228b-22	7-FA1 (YE)	C228b-16	8-FB6 (WH/VT)

● Is the resistance less than 5 ohms?

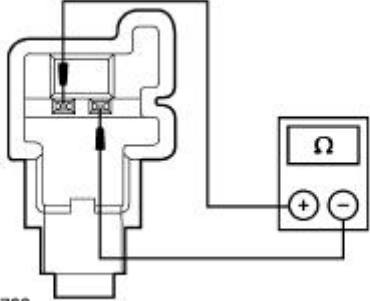

→ **Yes**

REPAIR the affected circuits for a short together. TEST the system for normal operation.

→ **No**

INSTALL a new door actuator. REFER to [Section 412-04](#). TEST the system for normal operation.

PINPOINT TEST D: DTC B1251: DTC B1253 IN-VEHICLE TEMPERATURE SENSOR NOT OPERATING CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 CHECK THE SENSOR RESISTANCE	
<p>1 </p> <p>2  In-Vehicle Temperature Sensor C233</p> <p>3  A0004766</p>	<p>3 Measure the resistance between in-vehicle temperature sensor terminals.</p> <p>● Is the resistance within the specified values for these temperature ranges: 10-20°C (50-68°F) 37,000-58,000 ohms; 20-30°C (68-86°F) 24,000-37,000 ohms; 30-</p>

40°C (86-104°F) 16,000-24,000 ohms?

→ **Yes**
GO to [D2](#).

→ **No**
INSTALL a new in-vehicle temperature sensor. REFER to [Section 412-04](#). TEST the system for normal operation.

D2 CHECK THE DATC SENSOR OUTPUT VOLTAGE

1

2

A0001977

2 Measure the voltage between in-vehicle temperature sensor C233, circuits 9-FA48 (BN/GN), harness side and 8-FA48 (WH/GN), harness side.

● **Is the voltage between 4.7 and 5.1 volts?**

→ **Yes**
GO to [D6](#).

→ **No**
If DTC B1253 is present, GO to [D3](#).

If DTC B1251 is present, GO to [D4](#).

D3 CHECK CIRCUIT 8-FA48 (WH/GN) FOR A SHORT

1

2

DATC Module C228a

3

3 Measure the resistance between DATC module C228a pin 9, circuit 8-FA48 (WH/GN), harness side and ground.

A0001979

- Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [D6](#).

→ **No**
REPAIR circuit 8-FA48 (WH/GN). TEST the system for normal operation.

D4 CHECK CIRCUIT 8-FA48 (WH/GN) FOR AN OPEN

1

2

DATC Module C228b

3

A0001978

- 3 Measure the resistance between DATC module C228b pin 9, circuit 8-FA48 (WH/GN), harness side and the in-vehicle temperature sensor C233 circuit 8-FA48 (WH/GN), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [D5](#).

→ **No**
REPAIR circuit 8-FA48 (WH/GN). TEST the system for normal operation.

D5 CHECK CIRCUIT 9-FA48 (BN/GN) FOR AN OPEN

1

DATC Module C228b

2

2

Measure the resistance between DATC pin C228b pin 14, circuit 9-FA48 (BN/GN), harness side and the in-vehicle temperature sensor C233 circuit 9-FA48 (BN/GN), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
GO to [D6](#).

→ **No**
REPAIR circuit 9-FA48 (BN/GN). TEST the system for normal operation.

D6 INSPECT THE CONNECTIONS

1

DATC Module C228a

2

DATC Module C228b

3

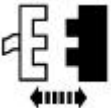

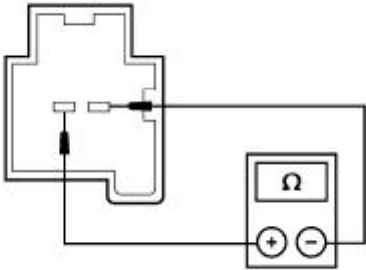

Inspect the in-vehicle temperature sensor connector pins and DATC module C228b pin 14, circuit 9-FA48 (BN/GN), harness side and DATC module C228a pin 9, circuit 8-FA48 (WH/GN), harness side for signs of damage, loose fits or incorrect installation.

● **Are the connector pins undamaged and installed correctly?**

→ **Yes**
RECONNECT the sensor and rerun self-test. If DTC is still present, INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation.

→ **No**
 REPAIR the damaged or loose connector pins. TEST the system for normal operation.

PINPOINT TEST E: EVAPORATOR OR HEATER CORE DISCHARGE AIR TEMPERATURE SENSORS NOT OPERATING CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS																												
<p>NOTE: Evaporator core, driver side heater core and passenger side heater core discharge air temperature sensors have the same diagnostic procedure.</p>																													
<p>E1 CHECK THE SENSOR RESISTANCE</p>																													
<p>1</p>  <p>2</p>  <p>Sensor</p> <p>3</p>  <p>A0004761</p>	<p>2</p> <p>Refer to the table and disconnect the sensor associated with the DTCs recorded from the DATC module self-test:</p> <table border="1" data-bbox="885 980 1404 1455"> <thead> <tr> <th>Sensor</th> <th>Condition</th> <th>DTC</th> <th>Connector</th> </tr> </thead> <tbody> <tr> <td>Evap air discharge</td> <td>Open</td> <td>B1946</td> <td>C296</td> </tr> <tr> <td>Evap air discharge</td> <td>Short</td> <td>B1947</td> <td>C296</td> </tr> <tr> <td>Driver air</td> <td>Open</td> <td>B1966</td> <td>C255</td> </tr> <tr> <td>Driver air</td> <td>Short</td> <td>B1967</td> <td>C255</td> </tr> <tr> <td>Passenger air</td> <td>Open</td> <td>B2428</td> <td>C235</td> </tr> <tr> <td>Passenger air</td> <td>Short</td> <td>B2429</td> <td>C235</td> </tr> </tbody> </table> <p>3</p> <p>Measure the resistance between sensor terminals.</p> <ul style="list-style-type: none"> Is the resistance within the specified values for these temperature ranges: 10-20°C (50-68°F) 37,000-58,000 ohms; 20-30°C (68-86°F) 24,000-37,000 ohms; 30-40°C (86-104°F) 16,000-24,000 ohms? 	Sensor	Condition	DTC	Connector	Evap air discharge	Open	B1946	C296	Evap air discharge	Short	B1947	C296	Driver air	Open	B1966	C255	Driver air	Short	B1967	C255	Passenger air	Open	B2428	C235	Passenger air	Short	B2429	C235
Sensor	Condition	DTC	Connector																										
Evap air discharge	Open	B1946	C296																										
Evap air discharge	Short	B1947	C296																										
Driver air	Open	B1966	C255																										
Driver air	Short	B1967	C255																										
Passenger air	Open	B2428	C235																										
Passenger air	Short	B2429	C235																										

- **Yes**
GO to [E2](#).
- **No**
INSTALL a new sensor. TEST the system for normal operation.

E2 CHECK THE DATC SENSOR OUTPUT VOLTAGE

1

2

A0004762

2 Refer to the following chart and measure the voltage between temperature sensor harness side circuits.

Connector	Circuit	Circuit
C296	8-FA44 (WH/RD)	9-FA44 (BN/RD)
C255	8-FA51 (WH/BK)	9-FA51 (BN/YE)
C235	8-FA47 (WH/GN)	9-FA47 (BN/GN)

● Is the voltage between 4.7 and 5.1 volts?

- **Yes**
GO to [E6](#).
- **No**
If DTC B1946, B1966 or B2428 is present, GO to [E3](#).

If DTC B1947, B1967 or B2429 is present, GO to [E4](#).

E3 CHECK THE REFERENCE CIRCUIT FOR AN OPEN

1

2

DATC Module C228a

3

3 Refer to the following chart and measure the resistance of the reference circuit between DATC module C228a and the sensor connector.

				DATC
--	--	--	--	-------------

A0004763

Sensor	Connector	Circuit	C228b Pin
Evap Discharge	C296	8-FA44 (WH/RD)	10
Passenger Side	C255	8-FA51 (WH/BK)	6
Driver	C235	8-FA47 (WH/GN)	18

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [E5](#).

→ **No**
REPAIR the affected circuit. TEST the system for normal operation.

E4 CHECK THE REFERENCE CIRCUIT FOR A SHORT TO GROUND

1

2

DATC Module C228a

3

A0004764

3 Refer to the following chart and measure the resistance of the sensor reference circuit between DATC module C228b and ground.

Temperature Sensor	DATC Module C228b Pin	Circuit
Evaporator Core	10	8-FA44 (WH/RD)
Passenger	6	8-FA51 (WH/BK)
Driver	18	8-FA47 (WH/GN)

● Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [E6](#).

→ **No**
REPAIR the affected circuit. TEST the system for normal operation.

E5 CHECK RETURN CIRCUIT FOR AN OPEN

1

1

Refer to the following chart and measure the resistance of the return circuit between sensor and DATC module C228a for an open.

Sensor Connector	DATC Module C228b Pin	Circuit
Evap/C296	16	9-FA44 (BN/RD)
Passenger/C255	19	9-FA51 (BN/YE)
Driver/C235	19	9-FA47 (BN/GN)

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [E6](#).

→ **No**
REPAIR the affected circuit. TEST the system for normal operation.

E6 INSPECT THE CONNECTIONS

1

NOTE: If inspecting the evaporator core discharge air temperature sensor, also inspect the in-line connector C260 for correct installation or damaged pins.

Refer to the following chart and inspect the temperature sensor pins and DATC module pins for signs of damage, loose fits or incorrect installation.

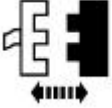

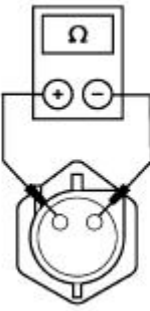

Temperature Sensor	Connector
Evaporator Core	C296 and C260
Heater Core RH	C255
Heater Core LH	C235

- Are the connector pins undamaged and installed correctly?

→ **Yes**
RECONNECT the connectors and RERUN the self-test. If the DTCs are still present, INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation.

→ **No**
REPAIR the damaged or loose connector pins. TEST the system for normal operation.

PINPOINT TEST F: DTC B1255 OR B1257 — AMBIENT AIR TEMPERATURE SENSOR CIRCUIT OPEN OR SHORT TO GROUND

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK THE AMBIENT TEMPERATURE SENSOR RESISTANCE	
<p>1 </p> <p>2  Ambient Temperature Sensor C132</p> <p>3  A0002817</p>	<p>3 Measure the resistance between ambient temperature sensor terminals.</p> <ul style="list-style-type: none"> ● Is the resistance within the specified values for these temperature ranges: 10-20°C (50-68°F) 37,000-58,000 ohms; 20-30°C (68-86°F) 24,000-37,000 ohms; 30-40°C (86-104°F) 16,000-24,000 ohms? <p>→ Yes GO to F2.</p> <p>→ No INSTALL a new A/C ambient air temperature sensor. REFER to Section 412-04. TEST the system for normal operation.</p>
F2 CHECK THE DATC SENSOR OUTPUT VOLTAGE	
<p>1 </p> <p>2</p>	<p>2 Measure the voltage between ambient temperature sensor C132, circuits 8-FA49 (WH/VT), harness side and 9-FA49 (BN/WH), harness side.</p>

A0002818

● Is the voltage between 4.7 and 5.1 volts?

→ **Yes**
GO to [F6](#).

→ **No**
If DTC B1255, GO to [F3](#).
If DTC B1257, GO to [F4](#).

F3 CHECK CIRCUIT 8-FA49 (WH/VT) FOR AN OPEN

1

2

DATC Module C228a

3

A0006706

3 Measure the resistance between DATC module C228a pin 17, circuit 8-FA49 (WH/VT), harness side and ambient temperature sensor connector C132 circuit 8-FA49 (WH/VT), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [F5](#).

→ **No**
REPAIR circuit 8-FA49 (WH/VT). TEST the system for normal operation.

F4 CHECK CIRCUIT 8-FA49 (WH/VT) FOR A SHORT

1

2

DATC Module C228a

3

A0001983

3

Measure the resistance between DATC module C228a pin 17, circuit 8-FA49 (WH/VT), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [F6](#).

→ **No**
REPAIR circuit 8-FA49 (WH/VT). TEST the system for normal operation.

F5 CHECK CIRCUIT 9-FA49 (BN/WH) FOR AN OPEN

1

A0006705

1

Measure the resistance between DATC module C228a pin 8, circuit 9-FA49 (BN/WH), harness side and the ambient temperature sensor connector C132 circuit 9-FA49 (BN/WH), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [F6](#).

→ **No**
REPAIR circuit 9-FA49 (BN/WH). TEST the system for normal operation.

F6 INSPECT THE CONNECTIONS

1

DATC Module C228a

2

Inspect the A/C ambient temperature sensor connector pins, in-line connector C264 pin 8, circuit 8-FA49 (WH/VT) and pin 7, circuit 9-FA49 (BN/WH) and DATC module C228a pin 17, circuit 8-FA49 (WH/VT), harness side and pin 8, circuit 9-FA49 (BN/WH), harness side for signs of damage, loose fits or incorrect installation.

- **Are the connector pins undamaged and installed correctly?**

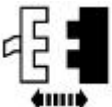

→ **Yes**

RECONNECT the connector and RERUN the self-test. If the DTCs are still present, INSTALL a new DATC module. REFER to [Section 412-04](#) . TEST the system for normal operation.

→ **No**

REPAIR the damaged or loose connector pins. TEST the system for normal operation.

PINPOINT TEST G: DTC B1259 OR B1261 — SOLAR RADIATION SENSOR CIRCUIT OPEN OR SHORT TO GROUND

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 CHECK THE SOLAR RADIATION SENSOR RESISTANCE	
<p>1</p>  <p>2</p>  <p>Solar Radiation Sensor C286</p> <p>3</p>	<p>3 NOTE: Connect the ground lead of the multimeter to the sensor ground terminal.</p> <p>Measure the resistance between each solar radiation sensor terminal and the ground terminal.</p>

A0003985

- Are the resistances between 39,000 and 41,000 ohms?

→ **Yes**
GO to [G2](#).

→ **No**
INSTALL a new A/C solar radiation sensor. TEST the system for normal operation.

G2 CHECK THE DATC OUTPUT VOLTAGE

1

2

A0002819

- 2 Measure the voltage between solar radiation C286, circuits 8-FA53 (WH/BU), harness side and 9-FA53 (BN/BU), harness side and between circuits 10-FA53 (GY/VT), harness side and 9-FA53 (BN/BU), harness side.

- Are the voltages between 4.7 and 5.1 volts?

→ **Yes**
GO to [G8](#).

→ **No**
If DTC B1259 is present, GO to [G5](#).

If DTC B1261 is present, GO to [G3](#).

G3 CHECK CIRCUIT 10-FA53 (GY/VT) FOR A SHORT TO GROUND

1

2

DATC Module C228a

3

A0001987

3 Measure the resistance between DATC module C228a pin 20, circuit 10-FA53 (GY/VT), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ Yes
GO to [G4](#).

→ No
REPAIR circuit 10-FA53 (GY/VT). TEST the system for normal operation.

G4 CHECK CIRCUIT 8-FA53 (WH/BU) FOR A SHORT TO GROUND

1

A0003986

1 Measure the resistance between DATC module C228a pin 7, circuit 8-FA53 (WH/BU), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ Yes
GO to [G8](#).

→ No
REPAIR circuit 8-FA53 (WH/BU). TEST the system for normal operation.

G5 CHECK CIRCUIT 10-FA53 (GY/VT) FOR AN OPEN

1

2

DATC Module C228a

3

A0003987

3

Measure the resistance between DATC module C228a pin 20, circuit 10-FA53 (GY/VT), harness side and solar radiation sensor C286 circuit 10-FA53 (GY/VT), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [G6](#).

→ **No**
REPAIR circuit 10-FA53 (GY/VT). TEST the system for normal operation.

G6 CHECK CIRCUIT 8-FA53 (WH/BU) FOR AN OPEN

1

A0003988

1

Measure the resistance between DATC module C228a pin 7, circuit 8-FA53 (WH/BU), harness side and the solar radiation sensor C286 circuit 8-FA53 (WH/BU), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [G7](#).

→ **No**
REPAIR circuit 8-FA53 (WH/BU). TEST the system for normal operation.

G7 CHECK THE RETURN CIRCUIT FOR AN OPEN

1

1 Measure the resistance between DATC module C228a pin 19, circuit 9-FA3 (BN/RD), harness side and solar radiation C286, circuit 9-FA53 (BN/BU), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [G8](#).

→ **No**
REPAIR the affected circuit. TEST the system for normal operation.

G8 INSPECT THE CONNECTIONS

1

DATC Module C228a

2 Inspect the solar radiation sensor C286, in-line connector C219 pin 1, circuit 8-FA53 (WH/BU) and pin 3, circuit 10-FA53 (GY/VT) and DATC module C228a pin 20, circuit 10-FA53 (GY/VT), harness side, pin 7, circuit 8-FA53 (WH/BU), harness side, and pin 19, circuit 9-FA3 (BN/RD), harness side for signs of damage, loose fits or incorrect installation.

● Are the connector pins undamaged and installed correctly?

→ **Yes**
RECONNECT the connectors and RERUN the self-test. If the DTC is still present, INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation.

→ **No**
REPAIR the damaged or loose connector pins. TEST the system for normal operation.

PINPOINT TEST H: INSUFFICIENT, ERRATIC, OR NO HEAT

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>⚠ CAUTION: The coolant control valve jumper harness-to-engine compartment wiring harness connector halves are identified as C134. Make sure to carefully identify the correct half of the connector before carrying out any electrical measurements. Failure to do so can result in damage to the DATC module.</p>	
<p>H1 CHECK FOR CORRECT COOLANT LEVEL</p>	
<p>1</p> 	<p>2 Check the engine coolant level with the engine at cold and hot temperatures.</p> <ul style="list-style-type: none"> ● Is the engine coolant at the correct level (both cold and hot)? <p>→ Yes GO to H4.</p> <p>→ No GO to H2.</p>
<p>H2 CHECK THE ENGINE COOLING SYSTEM FOR LEAKS</p>	
<p>⚠ WARNING: Never remove the pressure relief cap under any condition while the engine is operating. Failure to follow these instructions can result in damage to the cooling system or engine, or can result in personal injury. To avoid having scalding hot coolant or steam blow out of the cooling system, use extreme care when removing the pressure relief cap from a hot degas bottle. Wait until the engine has cooled, then wrap a thick cloth around the pressure relief cap and turn it slowly one turn (counterclockwise). Step back while the pressure is released from the cooling system. When certain all the pressure has been released, use the cloth to remove the pressure relief cap.</p>	
	<p>1 Fill and bleed the engine cooling system. Refer to Section 303-03.</p> <p>2 Pressure check the engine cooling system, including the pressure relief cap. Refer to Section 303-03.</p> <ul style="list-style-type: none"> ● Does the engine cooling system, including the pressure relief cap, hold pressure? <p>→ Yes GO to H3.</p> <p>→ No REPAIR the engine cooling system leak. TEST the system for normal operation.</p>
<p>H3 VERIFY THE FAULT WAS A LOW ENGINE COOLANT LEVEL</p>	
<p>NOTE: When carrying out this test step, allow time for the system to respond.</p>	

1

2 With the engine at normal operating temperature, set the DATC module driver and passenger side temperature settings to full hot (32°C [90°F]) and note the discharge air temperature.

● Is the discharge air temperature at full hot?

→ **Yes**
Test is complete.

→ **No**
GO to [H4](#).

H4 BLEED THE ENGINE COOLING SYSTEM

 **WARNING:** Never remove the pressure relief cap under any condition while the engine is operating. Failure to follow these instructions can result in damage to the cooling system or engine, or can result in personal injury. To avoid having scalding hot coolant or steam blow out of the cooling system, use extreme care when removing the pressure relief cap from a hot degas bottle. Wait until the engine has cooled, then wrap a thick cloth around the pressure relief cap and turn it slowly one turn (counterclockwise). Step back while the pressure is released from the cooling system. When certain all the pressure has been released, use the cloth to remove the pressure relief cap.

NOTE: When carrying out this test step, allow time for the system to respond.

1 Bleed the engine cooling system. Refer to [Section 303-03](#).

2 With the engine at normal operating temperature, set the DATC module driver and passenger side temperature settings to full hot (32°C [90°F]) and note the discharge air temperature.

● Is the discharge air temperature at full hot?

→ **Yes**
Test is complete.

→ **No**
GO to [H5](#).

H5 CHECK FOR HOT COOLANT AT THE HEATER CORE INLET HOSES

 **WARNING:** The heater core inlet hoses will become too hot to handle and can cause serious burns if the system is working correctly. Failure to follow these instructions can result in personal injury.

1

2

2 Carefully feel both heater core inlet hoses.

● Are both heater core inlet hoses too hot to handle?

→ **Yes**
CARRY OUT the heater core component test. REFER to Heater Core under Component Tests in this section to determine whether a plugged or partially plugged condition exists.

→ **No**
GO to [H6](#).

H6 CHECK THE COOLANT CONTROL VALVE

NOTE: Disconnecting the coolant control valve defaults the DATC system to full hot.

NOTE: When carrying out this test step, allow time for the system to respond.

1

Coolant Control Valve Jumper Harness and Engine Compartment Wiring Harness C134

2

3 **NOTE:** For 3.9L engines, run the engine at 3,000 rpm to compensate for the disconnected auxiliary coolant pump.

With the engine at normal operating temperature, set the DATC module driver and passenger side settings to full hot (32°C [90°F]) and note the discharge air temperature.

● Is the discharge air temperature at full hot?

→ **Yes**
GO to [H8](#).

→ **No**
GO to [H7](#).

H7 CHECK THE THERMOSTAT

1

2 Carry out the thermostat component test. Refer to [Section 303-03](#).

● Is the thermostat operating correctly?

→ **Yes**
INSTALL a new coolant control valve.
TEST the system for normal operation.

→ **No**
INSTALL a new thermostat. TEST the system for normal operation.

H8 CHECK SOURCE VOLTAGE FOR TESTING

1

1 Measure the voltage between the underhood auxiliary junction box (UAJB) fuse terminal F124, circuit 30-KA23 (RD/OG) and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [H9](#).

→ **No**
REPAIR circuit 30-KA23 (RD/OG). GO to [H9](#).

H9 CHECK THE DATC GROUND SIGNAL CIRCUIT 91S-FB4 (BN/GN)

1

1  **CAUTION:** Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1

A0024802

or 4. Damage to the DATC module can result if this occurs.

Measure the voltage between the UAJB fuse terminal F124, circuit 30-KA23 (RD/OG) and the engine compartment wiring harness C134 pin 6, circuit 91S-FB4 (BN/GN).

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [H11](#).

→ **No**
GO to [H10](#).

H10 CHECK THE DATC GROUND SIGNAL CIRCUIT 91S-FB3 (BN/BU)

1

A0024803

- 1  **CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.**

Measure the voltage between the UAJB fuse terminal F124, circuit 30-KA23 (RD/OG) and the engine compartment wiring harness C134 pin 3, circuit 91S-FB3 (BN/BU).

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [H12](#).

→ **No**
GO to [H13](#).

H11 CHECK CIRCUIT 91S-FB4 (BN/GN) FOR A SHORT TO GROUND

1

2

DATC Module C228b

3

- 3  **CAUTION: Do not short the**

A0024804

engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.

Measure the resistance between the engine compartment wiring harness C134 pin 6, circuit 91S-FB4 (BN/GN) and ground.

- **Is the resistance greater than 10,000 ohms?**

- **Yes**
INSTALL a new DATC module. TEST the system for normal operation.
- **No**
REPAIR circuit 91S-FB4 (BN/GN). TEST the system for normal operation.

H12 CHECK CIRCUIT 91S-FB3 (BN/BU) FOR A SHORT TO GROUND

1

2

DATC Module C228b

3

A0024805

- 3  **CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.**

Measure the resistance between the engine compartment wiring harness C134 pin 3, circuit 91S-FB3 (BN/BU) and ground.

- **Is the resistance greater than 10,000 ohms?**

- **Yes**
INSTALL a new DATC module. TEST the system for normal operation.
- **No**
REPAIR circuit 91S-FB3 (BN/BU). TEST the system for normal operation.

H13 CHECK THE COOLANT CONTROL VALVE SOLENOID RESISTANCE

1

2

A0007541

3

A0024806

2

Measure the resistance between the coolant control valve jumper harness C134 pin 4, circuit 30-FB3 (RD/OG) and pin 6, circuit 91S-FB4 (BN/GN).

3

Measure the resistance between the coolant control valve jumper harness C134 pin 4, circuit 30-FB3 (RD/OG) and pin 3, circuit 91S-FB3 (BN/BU).

- **Do both resistances measure between 10-23 ohms?**

→ **Yes**

INSTALL a new coolant control valve.
TEST the system for normal operation.

→ **No**

If the resistance is greater than 23 ohms, GO to [H14](#).

If the resistance is less than 10 ohms, GO to [H15](#).

H14 CHECK THE COOLANT CONTROL VALVE JUMPER HARNESS

1

A0024807

1

Measure the resistance between the coolant control valve jumper harness C134 pin 4, circuit 30-FB3 (RD/OG) and the coolant control valve C1034 pin 2, circuit 30-FB3 (RD/OG).

2

3

2

Measure the resistance between the coolant control valve jumper harness C134 pin 3, circuit 91S-FB3 (BN/BU) and the coolant control valve C1034 pin 3, circuit 91S-FB3 (BN/BU).

3

Measure the resistance between the coolant control valve jumper harness C134 pin 6, circuit 91S-FB4 (BN/GN) and the coolant control valve C1034 pin 1, circuit 91S-FB4 (BN/GN).

• **Are the resistances less than 5 ohms?**

→ **Yes**

INSTALL a new coolant control valve.
TEST the system for normal operation.
If system operation is still not correct,
INSTALL a new DATC module.

→ **No**

REPAIR the affected circuit(s) of the coolant control valve jumper harness.
TEST the system for normal operation.

H15 CHECK THE COOLANT CONTROL VALVE JUMPER HARNESS CIRCUITS 91S-FB3 (BN/BU) AND 91S-FB4 (BN/GN) FOR A SHORT TO VOLTAGE

1

2

1

Measure the resistance between the coolant control valve jumper harness C134 pin 3, circuit 91S-FB3 (BN/BU) and pin 4, circuit 30-FB3 (RD/OG).

2

Measure the resistance between the coolant control valve jumper harness C134 pin 6, circuit 91S-FB4 (BN/GN) and pin 4, circuit 30-FB3 (RD/OG).

A0007541

- Are the resistances greater than 10,000 ohms?

→ **Yes**
 INSTALL a new coolant control valve.
 TEST the system for normal operation.

→ **No**
 REPAIR the affected circuit(s) of the coolant control valve jumper harness.
 TEST the system for normal operation.
 If system operation is still not correct,
 INSTALL a new DATC module.

PINPOINT TEST I: INSUFFICIENT HEAT DURING ENGINE IDLE— 3.9L ENGINE

CONDITIONS	DETAILS/RESULTS/ACTIONS
I1 CARRY OUT THE DATC MODULE SELF-TEST	
<p>1</p> 	<p>2 Carry out the DATC module self-test and retrieve continuous DTCs. Refer to Climate Control System. Record the DTCs displayed, if any.</p> <ul style="list-style-type: none"> ● Are any DTCs displayed? <p>→ Yes REFER to the DATC Module Diagnostic Trouble Code (DTC) Index. CARRY OUT the necessary diagnosis and REPAIR as necessary.</p> <p>→ No GO to I2.</p>
I2 RECHECK DATC MODULE CONFIGURATION	
	<p>1 Enter Module Identification mode.</p>

2

PID CNFG Data

2

Read PID CNFG data 1.

- Does the data read 4N_3N_2Y?

→ Yes

GO to [13](#).

→ No

RECONFIGURE the DATC module.
REFER to [Section 418-01](#).

13 CHECK THE COOLANT LEVEL

1

Check the coolant level with the engine at hot and cold temperatures.

- Is the engine coolant at the correct level (hot and cold)?

→ Yes

GO to [14](#).

→ No

REFILL the system and PRESSURE TEST for leaks. REFER to [Section 303-03](#). In addition, if the coolant level had dropped below the "MIN" level, SET the system to MAX heat and RUN the engine at 3,000 rpm for 3 to 5 minutes until hot air blows from the outlets. RECHECK coolant level. GO to [14](#).

14 CHECK FOR AUXILIARY COOLANT PUMP OPERATION

1

2

3

In the active command mode, request Climate Control System and select Pump/VCB or set driver side temperature to 32°C (90°F).

- Can the auxiliary cooling pump be heard running or be felt running?

→ Yes

System is operating correctly.

→ **No**
GO to [15](#).

15 CHECK THE AUXILIARY PUMP MOTOR

1

2

Auxiliary Coolant Pump C163

3

5

A0002330

4 Make sure the active command Pump/VBC is still selected or the driver side temperature is set to 32°C (90°F).

5 Measure the voltage between auxiliary coolant pump C163, circuit 30S-FB1 (RD/YE), harness side and circuit 31-FB1 (BK), harness side.

● **Is the voltage greater than 10 volts?**

→ **Yes**
INSPECT terminals for damage and correct installation. If pins are installed correctly, INSTALL a new auxiliary coolant pump. REFER to [Section 412-02](#). TEST the system for normal operation.

→ **No**
GO to [16](#).

16 CHECK CIRCUIT 31-FB1 (BK) FOR AN OPEN

1

1 Measure the resistance between auxiliary coolant pump C163, circuit 31-FB1 (BK), harness side and ground.

A0002331

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [17](#).

→ **No**
REPAIR circuit 31-FB1 (BK). TEST the system for normal operation.

17 CHECK THE AUXILIARY COOLANT PUMP RELAY

1

2

Auxiliary Coolant Pump Relay C1005

3

A0006707

3 Measure the voltage between CJB auxiliary coolant pump relay pins 2 and 5, circuit 30-FA74A (RD), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [18](#).

→ **No**
REPAIR circuit 30-FA74A (RD). TEST the system for normal operation.

18 CARRY OUT THE RELAY COMPONENT TEST

1 Carry out the relay component test.

Refer to Wiring Diagrams Section [700-09](#) for schematic and connector information.

● **Is the relay OK?**

→ **Yes**
GO to [I9](#).

→ **No**
INSTALL a new auxiliary coolant pump relay. REFER to [Section 412-04](#). TEST the system for normal operation.

I9 CHECK CIRCUIT 30S-FB1 (RD/YE) FOR AN OPEN

1

Auxiliary Coolant Pump Relay C1005

2

A0002334

2

Measure the resistance between auxiliary coolant pump C163, circuit 30S-FB1 (RD/YE), harness side and auxiliary coolant pump relay pin 3, circuit 30S-FB1 (RD/YE), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
GO to [I10](#).

→ **No**
REPAIR circuit 30S-FB1 (RD/YE). TEST the system for normal operation.

I10 CHECK THE DATC MODULE

1

2

Auxiliary Coolant Pump Relay C1005

3

Auxiliary Coolant Pump C163

4

DATC Module C228b

5

DATC Module C228a

6

A0002332

6

Connect a fused jumper wire between DATC module C228b pin 18, circuit 91S-FA76 (BN/BU), harness side and DATC module C228a pin 2, circuit 31-FA10 (BK), harness side.

• Does the auxiliary coolant pump motor operate?

→ Yes

INSPECT all connectors and terminals, RECONNECT the connectors, and TEST the system for normal operation. If condition still exists, INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation.

→ No

GO to [I11](#).

I11 CHECK CIRCUIT 91S-FA76 (BK/OG) FOR A SHORT TO POWER

NOTE: If a short to power is found, it is necessary to install a new DATC module.

1

Auxiliary Coolant Pump Relay C1005

2

2

Measure the voltage between auxiliary coolant pump relay pin 2, circuit 91S-FA76 (BK/OG), harness side and ground.

A0002333

- Is any voltage present?

→ **Yes**
REPAIR circuit 91S-FA76 (BK/OG).
INSTALL a new DATC module. REFER to [Section 412-04](#) . TEST the system for normal operation.

→ **No**
GO to [I12](#) .

I12 CHECK CIRCUIT 91S-FA76 (BK/OG) FOR AN OPEN

1

A0003989

1

Measure the resistance between auxiliary coolant pump relay circuit 91S-FA76 (BK/OG), harness side and DATC module C228b pin 18, circuit 91S-FA76 (BK/OG), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
INSPECT all connectors and terminals,
RECONNECT the connectors and TEST the system. If condition still exists,
INSTALL a new DATC module. REFER to [Section 412-04](#) . TEST the system for normal operation.

→ **No**
REPAIR circuit 91S-FA76 (BK/OG). TEST the system for normal operation.

PINPOINT TEST J: FULL HEAT ONLY IN ALL MODES

CONDITIONS	DETAILS/RESULTS/ACTIONS
	CAUTION: The coolant control valve jumper harness-to-engine compartment wiring

harness connector halves are identified as C134. Make sure to carefully identify the correct half of the connector before carrying out any electrical measurements. Failure to do so can result in damage to the DATC module.

J1 CHECK CIRCUIT 30-FB3 (RD/OG)

1

2

Coolant Control Valve Jumper Harness and Engine Compartment Wiring Harness C134

3

A0007536

3  **CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.**

Measure the voltage between the engine compartment wiring harness C134 pin 4, circuit 30-FB3 (RD/OG) and ground.

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [J2](#).

→ **No**
REPAIR circuit 30-FB3 (RD/OG) or circuit 30-FA1 (RD). TEST the system for normal operation.

J2 CHECK THE COOLANT CONTROL VALVE DRIVER SIDE SOLENOID RESISTANCE

1

A0007541

1 Measure the resistance between the coolant control valve jumper harness C134 pin 4, circuit 30-FB3 (RD/OG) and pin 6, circuit 91S-FB4 (BN/GN).

- Does the resistance measure between 10-23 ohms?

→ **Yes**
GO to [J3](#).

→ **No**
If the resistance is greater than 23 ohms, GO to [J7](#).

If the resistance is less than 10 ohms,
GO to [J9](#).

J3 CHECK THE COOLANT CONTROL VALVE PASSENGER SIDE SOLENOID RESISTANCE

1

A0024806

1

Measure the resistance between the coolant control valve jumper harness C134 pin 4, circuit 30-FB3 (RD/OG) and pin 3, circuit 91S-FB3 (BN/BU).

● **Does the resistance measure between 10-23 ohms?**

→ **Yes**
GO to [J4](#).

→ **No**
If the resistance is greater than 23 ohms, GO to [J8](#).

If the resistance is less than 10 ohms,
GO to [J10](#).

J4 CHECK SOURCE VOLTAGE FOR TESTING

1

A0024801

1

Measure the voltage between the underhood auxiliary junction box (UJAB) fuse terminal F124, circuit 30-KA23 (RD/OG) and ground.

● **Is the voltage greater than 10 volts?**

→ **Yes**
GO to [J5](#).

→ **No**

REPAIR circuit 30-KA23 (RD/OG). GO to [J5](#).

J5 CHECK THE DATC GROUND SIGNAL CIRCUIT 91S-FB4 (BN/GN)

1

3

A0024802

2 Press the PANEL button and set the driver and passenger side temperature settings to full cool on the DATC module.

3  **CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.**

Measure the voltage between the UAJB fuse terminal F124, circuit 30-KA23 (RD/OG) and the engine compartment wiring harness C134 pin 6, circuit 91S-FB4 (BN/GN).

● Is the voltage greater than 10 volts?

→ Yes
GO to [J6](#).

→ No
GO to [J11](#).

J6 CHECK THE DATC GROUND SIGNAL CIRCUIT 91S-FB3 (BN/BU)

1

A0024803

1  **CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.**

Measure the voltage between the UAJB fuse terminal F124, circuit 30-KA23 (RD/OG) and the engine compartment wiring harness C134 pin 3, circuit 91S-FB3 (BN/BU).

● Is the voltage greater than 10 volts?

→ Yes
INSTALL a new coolant control valve.
TEST the system for normal operation.

→ No

GO to [J12](#).

J7 CHECK THE COOLANT CONTROL VALVE JUMPER HARNESS CIRCUITS 30-FB3 (RD/OG) AND 91S-FB3 (BN/BU)

1

Coolant Control Valve C1034

2

A0024807

3

A0024808

2

Measure the resistance between the coolant control valve jumper harness C134 pin 4, circuit 30-FB3 (RD/OG) and the coolant control valve C1034 pin 2, circuit 30-FB3 (RD/OG).

3

Measure the resistance between the coolant control valve jumper harness C134 pin 6, circuit 91S-FB4 (BN/GN) and the coolant control valve C1034 pin 1, circuit 91S-FB4 (BN/GN).

● **Are the resistances less than 5 ohms?**

→ **Yes**
INSTALL a new coolant control valve.
TEST the system for normal operation.

→ **No**
REPAIR the affected circuit(s) of the coolant control valve jumper harness.
TEST the system for normal operation.

J8 CHECK THE COOLANT CONTROL VALVE JUMPER HARNESS CIRCUITS 30-FB3 (RD/OG) AND 91S-FB3 (BN/BU)

1

Coolant Control Valve C1034

2

2

Measure the resistance between the coolant control valve jumper harness C134 pin 4, circuit 30-FB3 (RD/OG)

A0024807

3

A0024809

and the coolant control valve C1034 pin 2, circuit 30-FB3 (RD/OG).

3 Measure the resistance between the coolant control valve jumper harness C134 pin 3, circuit 91S-FB3 (BN/BU) and the coolant control valve C1034 pin 3, circuit 91S-FB3 (BN/BU).

- Are the resistances less than 5 ohms?

→ **Yes**
INSTALL a new coolant control valve.
TEST the system for normal operation.

→ **No**
REPAIR the affected circuit(s) of the coolant control valve jumper harness.
TEST the system for normal operation.

J9 CHECK THE COOLANT CONTROL VALVE JUMPER HARNESS CIRCUIT 91S-FB4 (BN/GN) FOR A SHORT

1

Coolant Control Valve C1034

2

A0007541

2 Measure the resistance between the coolant control valve jumper harness C134 pin 6, circuit 91S-FB4 (BN/GN) and pin 4, circuit 30-FB3 (RD/OG).

- Is the resistance greater than

10,000 ohms?

→ **Yes**
INSTALL a new coolant control valve.
TEST the system for normal operation.

→ **No**
REPAIR the affected circuit(s). TEST
the system for normal operation.

J10 CHECK THE COOLANT CONTROL VALVE JUMPER HARNESS CIRCUIT 91S-FB3 (BN/BU) FOR A SHORT

1

Coolant Control Valve C1034

2

A0007541

2 Measure the resistance between the coolant control valve jumper harness C134 pin 3, circuit 91S-FB3 (BN/BU) and pin 4, circuit 30-FB3 (RD/OG).

• **Is the resistance greater than 10,000 ohms?**

→ **Yes**
INSTALL a new coolant control valve.
TEST the system for normal operation.

→ **No**
REPAIR the affected circuit(s). TEST
the system for normal operation.

J11 CHECK CIRCUIT 91S-FB4 (BN/GN) FOR AN OPEN

1

2

DATC Module C228b

3

3 Measure the resistance between the engine compartment wiring harness C134 pin 6, circuit 91S-FB4 (BN/GN) and the DATC module C228b pin 6,

A0007542

circuit 91S-FB4 (BN/GN).

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [J13](#).

→ **No**
REPAIR circuit 91S-FB4 (BN/GN).
TEST the system for normal operation.

J12 CHECK CIRCUIT 91S-FB3 (BN/BU) FOR AN OPEN

1

2

DATC Module C228b

3

A0007544

- 3 Measure the resistance between the engine compartment wiring harness C134 pin 3, circuit 91S-FB3 (BN/BU) and the DATC module C228b pin 5, circuit 91S-FB3 (BN/BU).

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [J14](#).

→ **No**
REPAIR circuit 91S-FB3 (BN/BU).
TEST the system for normal operation.

J13 CHECK CIRCUIT 91S-FB4 (BN/GN) FOR A SHORT TO VOLTAGE

1

2

A0007543

2

⚠ CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.

Measure the voltage between the engine compartment wiring harness C134 pin 6, circuit 91S-FB4 (BN/GN) and ground.

● **Is voltage present?**

→ **Yes**
REPAIR circuit 91S-FB4 (BN/GN). If system operation is still not correct, INSTALL a new DATC module. TEST the system for normal operation.

→ **No**
GO to [J15](#).

J14 CHECK CIRCUIT 91S-FB3 (BN/BU) FOR A SHORT TO VOLTAGE

1

2

A0007545

2

⚠ CAUTION: Do not short the engine compartment wiring harness C134 pins 3 or 6 to pins 1 or 4. Damage to the DATC module can result if this occurs.

Measure the voltage between the engine compartment wiring harness C134 pin 3, circuit 91S-FB3 (BN/BU) and ground.

● **Is voltage present?**

→ **Yes**
REPAIR circuit 91S-FB3 (BN/BU). If system operation is still not correct, INSTALL a new DATC module. TEST the system for normal operation.

→ **No**
GO to [J16](#).

J15 CHECK THE COOLANT CONTROL VALVE JUMPER HARNESS CIRCUIT 91S-FB4 (BN/GN) FOR A SHORT TO VOLTAGE

1

2

Coolant Control Valve C1034

3

A0007541

4

A0006758

3 Measure the resistance between the coolant control valve jumper harness C134 pin 6, circuit 91S-FB4 (BN/GN) and pin 4, circuit 30-FB3 (RD/OG).

4 **NOTE:** Carry out this step only on vehicles equipped with a 3.9L engine.

Measure the resistance between the coolant control valve jumper harness C134 pin 6, circuit 91S-FB4 (BN/GN) and pin 1, circuit 30S-FB1 (RD/YE).

● Are the resistances greater than 10,000 ohms?

→ **Yes**
INSTALL a new DATC module. TEST the system for normal operation.

→ **No**
REPAIR the affected circuit(s) of the coolant control valve jumper harness. If system operation is still not correct, INSTALL a new DATC module. TEST the system for normal operation.

J16 CHECK THE COOLANT CONTROL VALVE JUMPER HARNESS CIRCUIT 91S-FB3 (BN/BU) FOR A SHORT TO VOLTAGE

1

2

Coolant Control Valve C1034

3

A0024806

4

A0024812

3

Measure the resistance between the coolant control valve jumper harness C134 pin 3, circuit 91S-FB3 (BN/BU) and pin 4, circuit 30-FB3 (RD/OG).

4

NOTE: Carry out this step only on vehicles equipped with a 3.9L engine.

Measure the resistance between the coolant control valve jumper harness C134 pin 3, circuit 91S-FB3 (BN/BU) and pin 1, circuit 30S-FB1 (RD/YE).

- Are the resistances greater than 10,000 ohms?

→ **Yes**

INSTALL a new DATC module. TEST the system for normal operation.

→ **No**

REPAIR the affected circuit(s) of the coolant control valve jumper harness. If system operation is still not correct, INSTALL a new DATC module. TEST the system for normal operation.

PINPOINT TEST K: THE DUAL TEMPERATURE CONTROL IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
	CAUTION: The coolant control valve jumper harness-to-engine compartment wiring

harness connector halves are identified as C134. Make sure to carefully identify the correct half of the connector before carrying out any electrical measurements. Failure to do so can result in damage to the DATC module.

K1 CHECK COOLANT SYSTEM

- 1 Check the coolant level with the engine at hot and cold temperatures.
- **Is the engine coolant at the correct level (hot and cold)?**
- **Yes**
GO to [K2](#).
- **No**
REFILL the cooling system and PRESSURE TEST for leaks. REFER to [Section 303-03](#). In addition, if the coolant level has dropped below the "MIN" level, SET the system to MAX heat and RUN the engine at 3,000 rpm for 3 to 5 minutes to remove air from the system. RECHECK coolant level.

K2 VERIFY A/C OPERATION

1

- 2 Press the OFF button then press the A/C button on the DATC panel.
- **Does the A/C clutch engage?**
- **Yes**
GO to [K3](#).
- **No**
[Go To Pinpoint Test L](#).

K3 VERIFY THE CONCERN

NOTE: When carrying out this test step, allow time for the system to respond.

- 1 With the engine at normal operating temperature, select PANEL mode and A/C on the DATC module.
- 2 Using the driver side temperature control, set the driver side temperature to 16°C (60° F) and then set to 32°C (90° F).
- **Do both the driver side and passenger side air temperatures go to full cool then to full heat?**
- **Yes**

GO to [K4](#).

→ **No**

If driver side only does not go to full cool and then full heat, GO to [K9](#). If passenger side only does not go to full cool and then full heat, GO to [K12](#). If both sides have only full heat, [Go To Pinpoint Test J](#). If both sides have only full cool, [Go To Pinpoint Test H](#).

K4 CHECK MODULE CONFIGURATION

2

PID CNFG Data

1 Enter Module Identification mode.

2 Read PID CNFG data 1.

- Does PID CNFG data read ON and 4N_3N_2Y?

→ **Yes**

GO to [K5](#).

→ **No**

RECONFIGURE the DATC module. REFER to [Section 418-01](#).

K5 REQUEST CONTINUOUS CODES AND CARRY OUT THE DATC SELF-TEST

1 Request Continuous DTCs and carry out the DATC Module Self-Test. Refer to [Climate Control System](#). Record the DTCs displayed, if any.

- Are any DTCs displayed?

→ **Yes**

REFER to the DATC Module Diagnostic Trouble Code (DTC) Index. CARRY OUT the necessary diagnosis and REPAIR as necessary.

→ **No**

GO to [K6](#).

K6 CHECK THE TEMPERATURE SENSORS FOR CORRECT INSTALLATION

1

2 Check the driver side, passenger side, evaporator core, and ambient air temperature sensors for correct installation.

3 Check the in-vehicle temperature sensor and venturi hose for correct installation.

● Are the sensors installed correctly?

→ Yes
GO to [K7](#).

→ No
CORRECT the sensor installation. TEST the system for normal operation.

K7 CHECK FOR CORRECT HEATER HOSE CONNECTIONS

NOTE: The hose assembly that connects to the inboard port on the coolant control valve connects to the inboard port (driver side) on the heater core.

1 Check the heater hose connections for correct installation. Refer to [Section 412-02](#).

● Are the heater hoses installed correctly?

→ Yes
GO to [K8](#).

→ No
CORRECT the heater hose installation. TEST the system for normal operation.

K8 CHECK THE DRIVER SIDE TEMPERATURE CONTROL

NOTE: When carrying out this test step, allow time for the system to respond.

1 Select panel and A/C modes.

2 Set the passenger side temperature to 24° C (75° F).

3 Using the driver side temperature control buttons, set the temperature to 19° C (65° F) and then to 29° C (85° F).

● Does the driver side temperature decrease and then increase?

→ Yes
GO to [K9](#).

→ No
If the driver side air temperature has full cool only, GO to [K10](#).

If the driver side air temperature has full heat only, GO to [K11](#).

K9 CHECK THE PASSENGER SIDE TEMPERATURE CONTROL

NOTE: When carrying out this test step, allow time for the system to respond.

1 Select PANEL and A/C modes.

2 Set the driver side temperature to 24° C (75° F).

3 Using the passenger side temperature control buttons, set the temperature to 19° C (65° F) and then to 29° C (85° F).

- **Does the passenger side air temperature decrease and then increase?**

→ **Yes**
The system is operating correctly.

→ **No**
If the passenger side air temperature has full cool only, GO to [K10](#).

If the passenger side air temperature has full heat only, GO to [K11](#).

K10 CHECK FOR CORRECT COOLANT FLOW TO THE HEATER CORE

2

1 Remove the passenger side cowl cover.

3 With the engine running at normal operating temperature and the DATC module set to 32° C (90° F), see if both inlet heater hoses are too hot to handle.

- **Are both inlet heater hoses too hot to handle?**

→ **Yes**
GO to [K12](#).

→ **No**
[Go To Pinpoint Test H](#).

K11 CHECK CORRECT COOLANT CONTROL VALVE OPERATION

WARNING: The heater core inlet hoses will become too hot to handle and can cause serious burns if the system is working correctly. Failure to follow these instructions can result in personal injury.

2

1 Remove the passenger side cowl cover.

2 Clamp off the three heater hoses going to the heater core, as close to the heater core as possible.

A0000938

3

4 Set the DATC module to 16° C (60° F).

● Is cooling restored?

→ Yes

Concern is with coolant control valve operation. [Go To Pinpoint Test J](#).

→ No

GO to [K12](#).

K12 CHECK CIRCUITS 8-FA51 (WH/BK) AND 8-FA47 (WH/GN)

1

2

Passenger Side Discharge Air Temperature Sensor C255

3

Driver Side Discharge Air Temperature Sensor C235

4

DATC Module C228a

5

5 Measure the resistance between the passenger side discharge air temperature sensor C255, circuit 8-FA51 (WH/BK) and the DATC module C228a pin 18, circuit 8-FA51 (WH/BK).

A0004987

6

A0004988

6

Measure the resistance between the driver side discharge air temperature sensor C235, circuit 8-FA47 (WH/GN) and the DATC module C228a pin 6, circuit 8-FA47 (WH/GN).

- Are the resistances less than 5 ohms?

→ Yes

RECHECK all connections, RECONNECT and RETEST the system. If the condition still exists, INSTALL a new DATC module. TEST the system for normal operation.

→ No

CHECK to make sure that circuit 8-FA47 (WH/GN) is connected to DATC module C228a pin 6 and that circuit 8-FA51 (WH/BK) is connected to DATC module C228a pin 18. REPAIR as required. TEST the system for normal operation.

PINPOINT TEST L: THE AIR CONDITIONING (A/C) IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ambient temperature must be above 0° C (32° F) to permit the A/C compressor to operate.	
L1 VERIFY CUSTOMER COMPLAINT	
	<ol style="list-style-type: none"> 1 Make sure the engine is at operating temperature. 2 Select panel and A/C modes. <ul style="list-style-type: none"> • Is full heat present in all

temperature settings?

→ **Yes**
[Go To Pinpoint Test J.](#)

→ **No**
GO to [L2.](#)

L2 CARRY OUT THE PCM AND DATC MODULE SELF-TESTS

1

2

3 Carry out the PCM self-test. Record any DTCs displayed.

4 Carry out the DATC module self-test and retrieve continuous DTCs. Refer to [Climate Control System](#). Record the DTCs displayed, if any.

● **Were any DTCs displayed?**

→ **Yes**
REFER to the PCM or DATC Module Diagnostic Trouble Code (DTC) Index. CARRY OUT the necessary diagnosis and REPAIR as necessary.

→ **No**
GO to [L3.](#)

L3 CHECK THE PID WACF WITH THE A/C OFF

NOTE: When PCM PID WACF is YES, this is the same fault as DTC P1460.

1

3

PCM PID WACF

2 Press the OFF button on the DATC module.

● **Does the PCM PID WACF read YES?**

- **Yes**
REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual to continue the diagnosis.
- **No**
GO to [L4](#).

L4 CHECK PID WACF WITH THE A/C ON

NOTE: When PCM PID WACF is YES, this is the same fault as DTC P1460.

1

3

PCM PID WACF

- 2 Press the DATC PANEL and A/C override button. Make sure the A/C indicator LED is on.

● **Does the PCM PID WACF read YES?**

- **Yes**
REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual to continue the diagnosis.
- **No**
GO to [L5](#).

L5 CHECK PID ACCS WITH THE A/C ON

1

PID EXT_FT2

2

PID ACPEVAP

5

- 1 Make sure PID EXT_FT2 reading is greater than 0°C (32°F).
- 2 Make sure that the PID ACPEVAP reading is greater than 2°C (35°F).
- 3 Make sure the engine is at idle.
- 4 Press the DATC PANEL and the A/C override buttons. Make sure the A/C indicator LED is on.

PCM PID ACCS

- Does the PCM PID ACCS read ON?

→ **Yes**
GO to [L6](#).

→ **No**
INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation.

L6 CHECK PID WAC WITH THE A/C ON

2

PCM PID WAC

1 Press the DATC PANEL and the A/C override button. Make sure the A/C indicator LED is on.

- Does the PID WAC read ON?

→ **Yes**
GO to [L7](#).

→ **No**
REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual to continue the diagnosis.

L7 CHECK THE REFRIGERANT SYSTEM PRESSURE

1

2 Connect the manifold set to the service ports. Refer to [Manifold Gauge Set Connection](#) in this section.

- Is the pressure between 345 kPa (50 psi) and 1,724 kPa (250 psi)?

→ **Yes**
GO to [L8](#).

→ **No**
CHECK the system for refrigerant system leaks. REPAIR as necessary.

TEST the system for normal operation.

L8 CHECK FOR POWER TO THE A/C RELAY

1

2

A/C Clutch Relay

3

4

4 Measure the voltage between A/C clutch relay C1008 pin 3, circuit 30-FA79 (RD/OG), harness side and ground.

● Is the voltage greater than 10 volts?

→ Yes
GO to [L13](#).

→ No
GO to [L9](#).

L9 CHECK UAJB FUSE 101 (10A)

1

2

UAJB Fuse 101 (10A)

● Is UAJB fuse 101 (10A) OK?

→ Yes
REPAIR circuit 30-FA79 (RD) for an

open. TEST the system for normal operation.

→ **No**
GO to [L10](#).

L10 CHECK CIRCUIT 30-FA79 (RD) FOR A SHORT TO GROUND

1

A/C Clutch Relay C1008

2

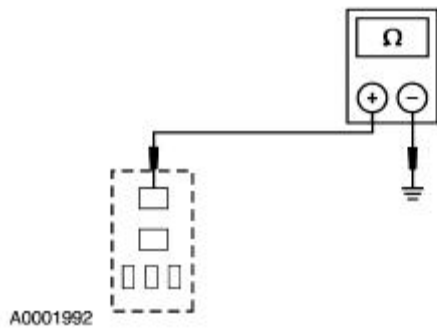

Auxiliary Coolant Pump C1005 (3.9L only)

3

Coolant Control Valve Jumper Harness and Engine Compartment Wiring Harness C134

4

4 Measure the resistance between at A/C clutch relay pin 3, circuit 30-FA79 (RD), harness side and ground.

● **Is the resistance greater than 10,000 ohms?**

→ **Yes**
GO to [L11](#).

→ **No**
REPAIR circuit 30-FA79 (RD) or circuit 30-FA74 (RD). TEST the system for normal operation.

L11 CHECK A/C CLUTCH RELAY

1 Carry out the relay component test. Refer to

Refer to Wiring Diagrams Section [700-09](#) for schematic and connector information.

● Is the relay OK?

→ **Yes**
GO to [L12](#).

→ **No**
INSTALL a new relay. TEST the system for normal operation.

L12 CHECK CIRCUIT 15S-FA6 (GN/YE) FOR A SHORT TO GROUND

1

A/C Clutch Relay C1008

2

UAJB Fuse 101 (10A)

3

A/C Clutch C100

4

5 Push the A/C button.

● Does UAJB fuse 101 (10A) open?

→ **Yes**
REPAIR circuit 15S-FA6 (GN/YE).
TEST the system for normal operation.

→ **No**
If V6 engine, REPAIR circuit 30-FA74/30-FBB3 for a short to ground.
TEST the system for normal operation.
If V8 engine, [Go To Pinpoint Test I](#).

L13 CHECK A/C CLUTCH RELAY C1008

1 Carry out the relay component test.
Refer to

Refer to Wiring Diagrams Section [700-09](#) for schematic and connector information.

● IS the relay OK?

→ **Yes**
GO to [L14](#).

→ **No**
INSTALL a new relay. TEST the system for normal operation.

L14 CHECK THE A/C CLUTCH INPUT

1

2

A/C Clutch Relay

3

A/C Clutch Field Coil C100

4

5

A0001957

5 With the engine running measure the voltage between A/C clutch field coil C100, circuit 15S-FA6 (GN/YE), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [L15](#).

→ **No**
REPAIR circuit 15S-FA6 (GN/YE).
TEST the system for normal operation.

L15 CHECK THE A/C CLUTCH GROUND CIRCUIT FOR AN OPEN

1

2

A0001959

2 Measure the resistance between A/C clutch C100, circuit 31-FA6 (BK), harness side and ground.

● Is the resistance 5 ohms or less?

→ **Yes**
GO to [L16](#).

→ **No**
REPAIR circuit 31-FA6 (BK). TEST the system for normal operation.

L16 CHECK THE A/C CLUTCH FIELD COIL RESISTANCE

1

A0003990

1 Measure the resistance between A/C clutch field coil terminals.

● Is the resistance greater than 6 ohms?

→ **Yes**
INSTALL a new A/C clutch field coil. REFER to [Section 412-03](#).

→ **No**
GO to [L17](#).

L17 CHECK THE CLUTCH AIR GAP

1 Check the A/C clutch air gap. Refer to [A/C Clutch Air Gap Adjustment](#) in this section.

● Is the air gap within specifications?

	<p>→ Yes RECONNECT all connectors. START vehicle and select A/C and PANEL modes. If UAJB fuse 101 opens, install a new A/C clutch field. REFER to Section 412-03.</p> <p>→ No ADJUST the air gap. TEST the system for normal operation.</p>
--	---

PINPOINT TEST M: THE AIR CONDITIONING (A/C) IS ALWAYS ON

CONDITIONS	DETAILS/RESULTS/ACTIONS
M1 CARRY OUT THE PCM AND DATC MODULE SELF-TESTS	
<p>1 </p> <p>2 </p>	<p>3 Carry out the PCM self-test. Record any DTCs.</p> <p>4 Carry out the DATC module self-test and retrieve continuous DTCs. Refer to Climate Control System under Diagnosis and Testing in this section. Record the DTCs displayed, if any.</p> <ul style="list-style-type: none"> • Are any PCM or DATC DTCs displayed? <p>→ Yes REFER to the PCM or DATC Module Diagnostic Trouble Code (DTC) Index. CARRY OUT the necessary diagnosis and REPAIR as necessary.</p> <p>→ No GO to M2.</p>
M2 CHECK DATC BUTTONS	
	<p>1 With the engine running, toggle between DATC OFF button and the A/C button.</p> <ul style="list-style-type: none"> • DOES the A/C indicator light turn on when the A/C button is pushed and off when the OFF button is pushed?

→ **Yes**
GO to [M3](#).

→ **No**
INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation.

M3 CHECK PCM PID ACCS

1

PCM PID ACCS

2

3 Push the DATC OFF button, then push the A/C button.

- **Does the A/C indicator light turn off and on and the PCM PID ACCS continue to read ON?**

→ **Yes**
RERUN the Data Link Diagnostic Test.

→ **No**
GO to [M4](#).

M4 CHECK PID WACF WITH THE A/C OFF

1

3

PCM PID WACF

2 Push the DATC OFF button.

- **Does PCM PID WACF read YES?**

→ **Yes**
REPAIR circuit 91S-FA79 (BK/OG) for a short to ground. TEST the system for normal operation.

→ **No**
GO to [M5](#).

M5 CHECK FOR POWER ALWAYS ON CIRCUIT 15S-FA6 (GN/YE)

1

2

A/C Clutch C100

3

5

A0001957

4 Make sure the DATC is in the OFF position.

5 Measure the voltage between A/C clutch field coil C100, circuit 15S-FA6 (GN/YE), harness side and ground.

• Is the voltage greater than 10 volts?

→ Yes
GO to [M6](#).

→ No
CHECK the A/C clutch air gap. REFER to [A/C Clutch Air Gap Adjustment](#) in this section.

M6 CHECK THE A/C CLUTCH RELAY

1

2

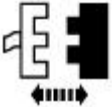

A/C Clutch Relay

3

	<p>4 Carry out the relay component test. Refer to the Wiring Diagram Manual.</p> <ul style="list-style-type: none"> ● Is the relay OK? <p>→ Yes REPAIR circuit 15S-FA6 (GN/YE) for a short to the power. TEST the system for normal operation.</p> <p>→ No INSTALL a new A/C clutch relay. TEST the system for normal operation.</p>
--	--

PINPOINT TEST N: THE BLOWER MOTOR IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
N1 VERIFY THE BLOWER MOTOR OPERATION	
<p>1</p> 	<p>2 Press the PANEL button on the DATC module. Adjust the blower motor setting to LO and then to HI.</p> <ul style="list-style-type: none"> ● Is the blower motor inoperative in all settings? <p>→ Yes GO to N2.</p> <p>→ No Go To Pinpoint Test O.</p>
N2 CHECK FOR VOLTAGE TO THE BLOWER MOTOR	
<p>1</p>  <p>2</p>  <p style="text-align: center;">Blower Motor C288</p> <p>3</p>  <p>4</p>	<p>4 Measure the voltage between the blower</p>

AM0416-A

motor C288, circuit 30S-FA18 (RD/BK) and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [N3](#).

→ **No**
GO to [N8](#).

N3 CHECK CIRCUIT 31-FA45 (BK)

1

2

Blower Motor Speed Control C297

3

A0032576

3 Measure the resistance between the blower motor speed control C297 pin 5, circuit 31-FA45 (BK) and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [N4](#).

→ **No**
REPAIR circuit 31-FA45 (BK). TEST the system for normal operation.

N4 CHECK CIRCUIT 31S-FA18 (BK/RD)

1

1 Measure the resistance between the blower motor C288, circuit 31S-FA18

A0032577

(BK/RD) and the blower motor speed control C297 pin 4, circuit 31S-FA18 (BK/RD).

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [N5](#).

→ **No**
REPAIR circuit 31S-FA18 (BK/RD). TEST the system for normal operation.

N5 CHECK THE BLOWER MOTOR

1

Blower Motor C288

2

A0032579

3

2 Connect a fused jumper lead between the blower motor speed control C297 pin 4, circuit 31S-FA18 (BK/RD) and pin 5, circuit 31-FA45 (BK).

● Does the blower motor operate?

→ **Yes**
GO to [N6](#).

→ **No**
INSTALL a new blower motor. TEST the system for normal operation.

N6 CHECK CIRCUIT 10-FA45 (GY/VT) FOR AN OPEN OR SHORT TO GROUND

1

3

DATC Module C228b

4

2 Removed the fused jumper lead from the blower motor speed control C297.

4 Measure the resistance between the DATC module C228b pin 8, circuit 10-FA45 (GY/VT) and the blower motor speed control C297 pin 3, circuit 10-FA45 (GY/VT), and measure the resistance between the DATC module C228b pin 8, circuit 10-FA45 (GY/VT) and ground.

- Is the resistance less than 5 ohms between the DATC module and the blower motor speed control and greater than 10,000 ohms between the DATC module and ground?

→ Yes
GO to [N7](#).

→ No
REPAIR circuit 10-FA45 (GY/VT). TEST the system for normal operation.

N7 CHECK THE DATC MODULE OUTPUT

1

DATC Module C228b

2

Blower Motor Speed Control C297

3

4

3 Adjust the blower motor speed to HI (7 bars).

4 Measure the voltage between the DATC module C228b pin 8, circuit 10-FA45

(GY/VT) and ground by back-probing the DATC module C228b.

- Is the voltage within 2 volts of battery voltage?

→ **Yes**
 INSTALL a new blower motor speed control. TEST the system for normal operation.

→ **No**
 INSTALL a new DATC module. TEST the system for normal operation.

N8 CHECK CIRCUIT 30S-FA18 (RD/BK)

1

2

Blower Motor Relay C1011

3

A0032572

3 Measure the resistance between the blower motor relay C1011 socket pin 87, circuit 30S-FA18 (RD/BK) and the blower motor C288, circuit 30S-FA18 (RD/BK).

- Is the resistance less than 5 ohms?

→ **Yes**
 GO to [N9](#).

→ **No**
 REPAIR circuit 30S-FA18 (RD/BK). TEST the system for normal operation.

N9 CHECK CIRCUIT 30-FA24A (RD/OG)

1

A0020210

1

Measure the voltage between the blower motor relay C1011 socket pin 86, circuit 30-FA24A (RD/OG) and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [N10](#).

→ **No**
REPAIR circuit 30-FA24A (RD/OG).
TEST the system for normal operation.

N10 CHECK CIRCUIT 30-FA24 (RD/OG)

1

A0032581

1

Measure the voltage between the blower motor relay C1011 socket pin 30, circuit 30-FA24 (RD/OG) and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [N11](#).

→ **No**
REPAIR circuit 30-FA24 (RD/OG). TEST
the system for normal operation.

N11 CHECK THE DATC MODULE OUTPUT

1

2

2

Measure the voltage between the blower motor relay C1011 socket pin 86, circuit 30-FA24A (RD/OG) and socket pin 85, circuit 31S-FA23 (BK/BU).

A0034149

● Is the voltage greater than 10 volts?

→ **Yes**
 INSTALL a new blower motor relay. TEST the system for normal operation.

→ **No**
 GO to [N12](#).

N12 CHECK CIRCUIT 31S-FA23 (BK/BU) FOR SHORT TO VOLTAGE

1

2

DATC Module C228b

3

4

A0013862

4 Measure the voltage between the blower motor relay C1011 socket pin 85, circuit 31S-FA23 (BK/BU) and ground.

● Is voltage present?

→ **Yes**
 REPAIR circuit 31S-FA23 (BK/BU). TEST the system for normal operation.

→ **No**

GO to [N13](#).

N13 CHECK CIRCUIT 31S-FA23 (BK/BU)

1

1

Measure the resistance between the DATC module C228b pin 19, circuit 31S-FA23 (BK/BU) and the blower motor relay C1011 socket pin 85, circuit 31S-FA23 (BK/BU).

● **Is the resistance less than 5 ohms?**

→ **Yes**

INSTALL a new DATC module. TEST the system for normal operation.

→ **No**

REPAIR circuit 31S-FA23 (BK/BU). TEST the system for normal operation.

PINPOINT TEST O: THE BLOWER MOTOR DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
O1 VERIFY THE BLOWER MOTOR OPERATION	
<p>1</p> 	<p>2</p> <p>Press the PANEL button on the DATC module. Adjust the blower motor setting to LO and then to HI.</p> <p>● Does the blower motor operate at any setting?</p> <p>→ Yes GO to O2.</p> <p>→ No Go To Pinpoint Test N.</p>
O2 CHECK CIRCUIT 31S-FA18 (BK/RD)	
<p>1</p> 	

2

Blower Motor Speed Control C297

3

● Does the blower motor operate?

→ **Yes**
REPAIR circuit 31S-FA18 (BK/RD). TEST the system for normal operation.

→ **No**
GO to [O3](#).

O3 CHECK THE BLOWER MOTOR SPEED CONTROL

1

2

Blower Motor Speed Control C297

3

DATC Module C228a and C228b

4

Blower Motor Relay C1011

5

5 Connect a fused jumper lead between the blower motor relay C1011 socket pin 30, circuit 30-FA24 (RD/OG) and socket pin 87, circuit 30S-FA18 (RD/BK).

● **Does the blower motor operate?**

→ **Yes**
 INSTALL a new blower motor speed control. TEST the system for normal operation.

→ **No**
 GO to [O4](#).

O4 CHECK THE BLOWER MOTOR SPEED CONTROL CIRCUITS FOR AN OPEN

1

2

Blower Motor Relay C1011

3

Blower Motor Speed Control C297

4

A0033861

4 Measure the resistance between the blower motor speed control C297 :

- pin 1, circuit 8-FA45 (WH/BU) and the DATC module C228a pin 5, circuit 8-FA45 (WH/BU).
- pin 2, circuit 9-FA45 (BN/BU) and the DATC module C228a pin 15, circuit 9-FA45 (BN/BU).
- pin 3, circuit 10-FA45 (GY/VT) and the DATC module C228b pin 8, circuit 10-FA45 (GY/VT).

● **Are the resistances less than 5 ohms?**

→ **Yes**
 GO to [O5](#).

→ **No**
REPAIR the affected circuit. TEST the system for normal operation.

O5 CHECK THE BLOWER MOTOR SPEED CONTROL CIRCUITS FOR A SHORT TO VOLTAGE

1

2

A0033862

2 Measure the voltage between the blower motor speed control C297:

- pin 1, circuit 8-FA45 (WH/BU) and ground.
- pin 2, circuit 9-FA45 (BN/BU) and ground.
- pin 3, circuit 10-FA45 (GY/VT) and ground.

● **Is voltage present?**

→ **Yes**
REPAIR the affected circuit. TEST the system for normal operation.

→ **No**
GO to [O6](#).

O6 CHECK THE BLOWER MOTOR SPEED CONTROL CIRCUITS FOR A SHORT TO GROUND

1

2

A0033863

2 Measure the resistance between the blower motor speed control C297:

- pin 1, circuit 8-FA45 (WH/BU) and ground.
- pin 2, circuit 9-FA45 (BN/BU) and ground.
- pin 3, circuit 10-FA45 (GY/VT) and ground.

● **Are the resistances greater than 10,000 ohms?**

→ **Yes**

GO to [07](#).

→ **No**
REPAIR the affected circuit. TEST the system for normal operation.

07 CHECK THE BLOWER MOTOR SPEED CONTROL CIRCUITS FOR SHORTS

1

1 Measure the resistance between the blower motor speed control C297:

- pin 1, circuit 8-FA45 (WH/BU) and pin 2, circuit 9-FA45 (BN/BU).
- pin 1, circuit 8-FA45 (WH/BU) and pin 3, circuit 10-FA45 (GY/VT).
- pin 2, circuit 9-FA45 (BN/BU) and pin 3, circuit 10-FA45 (GY/VT).

● **Are the resistances greater than 10,000 ohms?**

→ **Yes**
GO to [08](#).

→ **No**
REPAIR the affected circuits. TEST the system for normal operation.

08 CHECK THE DATC MODULE HIGH BLOWER OUTPUT

1

DATC Module C228a and C228b

2

Blower Motor Speed Control C297

3

4

3 Adjust the blower motor speed to HI (7 bars).

4 Measure the voltage between the DATC module C228b pin 8, circuit 10-FA45 (GY/VT) and ground by back-probing the DATC module C228b.

- Is the voltage within 2 volts of battery voltage?

→ **Yes**
GO to [O9](#).

→ **No**
INSTALL a new DATC module. TEST the system for normal operation.

O9 CHECK THE DATC MODULE BLOWER CONTROL OUTPUT

2

1 Adjust the blower motor speed to LO (1 bar).

2 Measure the voltage between the DATC module C228a pin 15, circuit 9-FA45 (BN/BU) and ground by back-probing the DATC module C228a.

- Is the voltage greater than 1 volt?

→ **Yes**
INSTALL a new blower motor speed control. TEST the system for normal operation.

→ **No**
INSTALL a new DATC module. TEST the system for normal operation.

PINPOINT TEST P: THE TEMPERATURE SET POINT DOES NOT REPEAT AFTER TURNING THE IGNITION SWITCH OFF

CONDITIONS	DETAILS/RESULTS/ACTIONS
P1 DUPLICATE THE PROBLEM	

NOTE: Some vehicles are shipped with a transit relay. Make sure the transit relay packaged in the trunk is not installed.

2

4

1 Set the driver side temperature to 72° F and the passenger side temperature to 74°F.

3 Wait 5 seconds.

• Do the set points repeat?

→ **Yes**
The system is operating correctly.

→ **No**
GO to [P2](#).

P2 CHECK THE MEMORY BACKUP SUPPLY TO THE DATC MODULE

1

2

DATC Module C228a

3

A0002317

3 Measure the voltage between DATC module C228a pin 14, circuit 29-FA10 (OG/GN), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation.

→ **No**
GO to [P3](#).

P3 CHECK CIRCUIT 29-FA10 (OG/GN) FOR AN OPEN

1

CJB Fuse 220 (10A)

2

A0002328

2

Measure the resistance between CJB fuse 214 (10A) socket at circuit 29-FA10 (OG/GN), harness side and DATC module C228b pin 14, circuit 29-FA10 (OG/GN), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**

REPAIR circuit 20-DD6 (PK/WH) for an open. TEST the system for normal operation.

→ **No**

REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST Q: THE EXTERIOR TEMPERATURE DISPLAY DOES NOT FUNCTION CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
Q1 CARRY OUT THE DATC MODULE SELF-TEST	
1	

2

A0002319

2 Carry out the DATC module self-test and retrieve continuous DTCs. Refer to [Climate Control System](#) . Record the DTCs displayed, if any.

• Are any DTCs displayed?

→ **Yes**
REFER to the DATC Module Diagnostic Trouble Code (DTC) Index. CARRY OUT the necessary diagnosis and REPAIR as necessary.

→ **No**
GO to [Q2](#) .

Q2 CHECK THE EXTERIOR TEMPERATURE DISPLAY

1

2

A0002320

2 Press the AUTO button.

3

A0002425

3 Press and repress the EXT button.

	<ul style="list-style-type: none"> ● Did the display alternate between interior set temperatures and exterior temperatures? <p>→ Yes GO to Q3.</p> <p>→ No INSTALL a new DATC module. REFER to Section 412-04. TEST the system for normal operation.</p>
Q3 VERIFY ACCURACY OF AMBIENT AIR TEMPERATURE SENSOR	
	<p>1 Check the mounting of the sensor and note the ambient temperature.</p> <ul style="list-style-type: none"> ● Does the temperature displayed match the ambient temperature? <p>→ Yes System is working correctly.</p> <p>→ No INSTALL a new sensor. REFER to Section 412-04. TEST the system for normal operation.</p>

Component Tests

Heater Core

WARNING: Carbon monoxide is colorless, odorless and dangerous. If it is necessary to operate the engine with the vehicle in a closed area such as a garage, always use an exhaust collector to vent the exhaust gases outside the closed area.

1. **NOTE:** Testing of returned heater cores reveals that a large percentage of heater cores are good and did not require the installation of a new heater core. If a heater core leak is suspected, the heater core must be tested by following the plugged heater core component test before the heater core pressure test. Carry out a system inspection by checking the heater system thoroughly as follows:

Inspect for evidence of coolant leakage at the heater hose to heater core attachments. A coolant leak in the heater hose could follow the heater core tube to the heater core and appear as a leak in the heater core.

2. **NOTE:** Spring-type clamps are installed as original equipment. Installation and overtightening of non-specification clamps can cause leakage at the heater hose connection and damage the heater core.

Check the integrity of the heater hose clamps.

Heater Core—Plugged

WARNING: The heater core inlet hose will become too hot to handle if the system is working correctly.

1. Check to see that the engine coolant is at the correct level.
2. Start the engine and turn on the heater.
3. When the engine coolant reaches operating temperature, feel the heater core outlet hose to see if it is hot.
If it is not hot:
 - the heater core may have an air pocket.
 - the heater core may be plugged.
 - the thermostat may not be working correctly.

Heater Core—Pressure Test

Use the Pressure Test Kit to carry out the pressure test.

1. **NOTE:** Due to space limitations, a bench test may be necessary for pressure testing.

Drain the coolant from the cooling system.

2. Disconnect the heater hoses from the heater core. For additional information, refer to [Section 412-02](#).
3. Install a short piece of heater hose, approximately 101 mm (4 inches) long on each heater core tube.
4. Fill the heater core and heater hoses with water and install the two plugs BT-7422-B and the adapter BT-7422-A from the Pressure Test Kit. Secure the heater hoses, plug and adapter with hose clamps.

5. Attach the pump and gauge assembly from the Pressure Test Kit to the adapter.
6. Close the bleed valve at the base of the gauge. Pump 241 kPa (35 psi) of air pressure into the heater core.
7. Observe the pressure gauge for a minimum of three minutes.
8. If the pressure drops, check the heater hose connections to the core tubes for leaks. If the

heater hoses do not leak, remove the heater core from the vehicle and carry out the bench test.

Heater Core—Bench Test

1. Remove the heater core from the vehicle. For additional information, refer to [Section 412-02](#).
2. Drain all of the coolant from the heater core.
3. Connect the 101 mm (4 inch) test heater hoses with plug and adapter to the core tubes. Then connect the Pressure Test Kit to the adapter.
4. Apply 241 kPa (35 psi) of air pressure to the heater core. Submerge the heater core in water.
5. If a leak is observed, install a new heater core.

Evaporator/Condenser Core—On-Vehicle Leak Test

1. Discharge and recover the refrigerant. For additional information, refer to [Air Conditioning \(A/C\) System Recovery, Evacuation and Charging](#) in this section.
2. Disconnect the suspect evaporator core or condenser core from the A/C system. For additional information, refer to [Section 412-03](#).
3. Clean the manifold fittings.
4. Connect the appropriate test fittings from the Set, A/C Fittings to the condenser core tube connections.
5. Connect the Vacuum Check Fitting, TXV to the thermostatic expansion valve.
6. **NOTE:** The automatic shut-off valves on some gauge set hoses do not open when connected to the test fittings. If available, use hoses without shut-off valves. If hoses with shut-off valves are used, make sure the valve opens when attached to the test fittings or install an adapter which will activate the valve. The test is not valid if the shut-off valve does not open.

Connect the red and blue hoses from the R-134a Manifold Gauge Set to the test fittings on the evaporator core or condenser core. Connect the yellow hose to a known good vacuum pump.

7. Open both gauge set valves and start the vacuum pump. Allow the vacuum pump to operate for a minimum of 45 minutes after the gauge set low pressure gauge indicates 101 kPa (30 in-Hg). The 45 minute evacuation is necessary to remove any refrigerant from oil left in the evaporator core or condenser core. If the refrigerant is not completely removed from the oil, outgassing will degrade the vacuum and appear as a refrigerant leak.

8. If the low pressure gauge reading will not drop to 101 kPa (30 in-Hg) when the valves on the gauge and manifold set are open and the vacuum pump is operating, close the gauge set valves and observe the low pressure gauge. If the pressure rises rapidly to zero, a large leak is indicated. Recheck the test fitting connections and gauge set connections before installing a new evaporator core or condenser core.
9. After evacuating for 45 minutes, close the gauge set valves and stop the vacuum pump. Observe the low pressure gauge; it should remain at the 101 kPa (30 in-Hg) mark.
 - If the low pressure gauge reading rises 34 or more kPa (10 or more in-Hg) of vacuum from the 101 kPa (30 in-Hg) position in 10 minutes, a leak is indicated.
 - If a very small leak is suspected, wait 30 minutes and observe the vacuum gauge.
 - If a small amount of vacuum is lost, operate the vacuum pump with gauge valves open for an additional 30 minutes to remove any remaining refrigerant from the oil in the evaporator core or condenser core. Then recheck for loss of vacuum.
 - If a very small leak is suspected, allow the system to sit overnight with vacuum applied and check for vacuum loss.
10. If the evaporator core or condenser core does leak, as verified by the above procedure, install a new evaporator core or condenser core. For additional information, refer to [Section 412-03](#).

A/C Compressor—External Leak Test

1. Install the A/C Pressure Test Adapter on the port of the A/C compressor using the existing manifold retaining bolt.
 2. Connect the high and low pressure lines of a manifold gauge set or a refrigerant recovery/recycling station such as the R-134a A/C service center to the corresponding fittings on the A/C Pressure Test Adapter.
 3. Attach the center hose of a manifold gauge set to a refrigerant container standing in an upright position.
 4. Hand-rotate the compressor shaft 10 complete revolutions to distribute the oil inside the A/C compressor.
 5. Open the low pressure gauge valve, the high pressure gauge valve and the valve on the refrigerant container to allow the refrigerant vapor to flow into the A/C compressor.
 6. Using the Refrigerant Leak Detector, check for leaks at the compressor shaft.
 7. If a shaft or external leak is found, install a new A/C compressor. For additional information, refer to [Section 412-03](#).
 8. When the leak test is complete, recover the refrigerant from the compressor.
-

Air Conditioning (A/C) System Check — Retail Procedure

NOTE: This Retail Procedure is not eligible for claiming on Ford paid repairs (warranty and ESP).

NOTE: The engine should be run at idle for 10 minutes with the air conditioning on and set to MAX A/C before carrying out this retail procedure.

NOTE: Read and follow all of the Warnings, Cautions and Notes at the beginning of this section before continuing.

1. Visual inspection

Open the hood and visually inspect the heating and air conditioning systems for the following:

- Coolant reservoir for correct coolant level
- Heater hoses for deterioration or loose connections
- Radiator and condenser for debris or damaged fins restricting airflow, loose mounting or connections
- Accessory drive belt(s) and cooling fan(s) for wear or physical damage
- Refrigerant lines and connections for physical damage or loose connections
- Compressor for physical damage or loose connections
- Suction accumulator/drier for physical damage or loose connections
- Wiring and connectors for excessive wear, loose or damaged connections, or incorrect routing

2. A/C refrigerant analysis

- Carry out air conditioning refrigerant analysis. For additional information, refer to [Refrigerant Identification Testing](#) in this section.
- If the refrigerant fails the analysis, discontinue diagnosis and make recommendations for repairs.
- If the refrigerant passes the analysis, carry out the air conditioning system check.

3. Air conditioning system check

- Connect manifold gauge set or charging station with gauges to refrigerant system.
- With the vehicle in park, parking brake set, thermometer installed in center panel vent, and air conditioning system on and set to MAX A/C, start the engine.
- Record air refrigerant system pressures while running the engine at 1,500 rpm and allow engine to return to idle.
- Operate the blower motor in all control positions and check for correct blower speed changes.
- With the blower motor on HI, operate air discharge mode selector in all positions and check for correct airflow in each position.
- Operate the temperature blend selector in all positions and check for correct change in discharge temperature. Check the air discharge temperature with the selector in the coolest position and the air conditioning on and set to MAX A/C to determine if the air discharge temperature is acceptable for the current ambient air temperature.
- Carry out the EATC self-test (if applicable).
If the refrigerant system pressures were low, carry out the refrigerant system leak test.

4. Refrigerant system leak test

- Use either an ultraviolet (UV) or an electronic leak detector to check for leaks at all refrigerant lines, connections, and components.
After all tests have been completed, report all findings and recommended repairs to your service advisor before carrying out further diagnostic procedures.
-

Spring Lock Coupling

Special Tool(s)

Disconnect

1. Remove the A/C tube lock coupling clip (19E746), if equipped.

2. Fit the special tool to the spring lock coupling.

3. Push the tool into the cage opening to release the female fitting from the A/C tube lock coupling spring (19E576).

4. Pull the spring lock coupling fittings apart.

5.  **CAUTION:** Do not use metal tools to remove the O-ring seals. They can cause axial scratches across the O-ring seal grooves, resulting in refrigerant leaks.

Remove the O-ring seals with a non-metallic tool.

6.  **CAUTION:** Do not use a screwdriver or similar tool to remove the A/C tube lock coupling spring; this can cause axial scratches across the O-ring seal grooves resulting in refrigerant leaks.

Remove the A/C tube lock coupling spring with a small hooked wire.

Cleaning

1. Fabricate a cleaning tool from a 1/8 inch diameter brazing rod.

2. Cut an abrasive pad from maroon colored 3M Scotch Brite® with the dimensions corresponding to the coupling size.

Coupling Size	Pad Size
3/8 inch	25 x 50 mm (1 x 2 inch)
1/2 inch	25 x 50 mm (1 x 2 inch)
5/8 inch	25 x 76 mm (1 x 3 inch)
3/4 inch	25 x 102 mm (1 x 4 inch)

3. Assemble the pad to the tool.

4. Coat the abrasive pad with PAG Refrigerant Compressor Oil (R-134a Systems) or equivalent.
5. Roll the pad on the tool and install it in a variable speed drill motor.
6.  **CAUTION: Maintain low speed drill rotation when inserting or removing the cleaning**

tool to prevent axial scratches which may cause future leaks.

Polish for one minute at moderate speed (less than 1,500 rpm) or until the surface is clean and free of scratches or foreign material.

7. Clean the fitting with a lint-free cloth.
8. Inspect the surface for grooves or scratches. If grooves and scratches are still present, install a new component.
9. Clean the O-ring seal grooves with a 300 mm (12 inch) length of natural fiber string.
 - Loop the string around the grooves and pull the string back and forth.

10. Remove any foreign material from the grooves with a lint-free cloth.

Connect

1. Install the A/C tube lock coupling spring.

2. Lubricate the inside of the coupling with PAG Refrigerant Compressor Oil (R-134a Systems) or equivalent.

3.  **CAUTION:** Use only the new O-ring seals. The use of any O-ring seals other than those specified in the Ford Master Parts Catalog may result in intermittent leakage during vehicle operation.

Install the O-ring seals.

- Lubricate the O-ring seals with PAG Refrigerant Compressor Oil (R-134a Systems) or equivalent.

4. Connect the spring lock coupling fittings with a twisting motion until the A/C tube lock coupling spring snaps over the flared end of the female fitting.

5. Install the A/C tube lock coupling clip.

A0002007

Air Conditioning Line (Peanut) Fitting

Disconnect

1.  **CAUTION:** Support the female fitting with a wrench to prevent the tubes from twisting.

Remove the nut from the peanut fitting.

2. Pull the peanut fitting apart.

3.  **CAUTION:** Do not use metal tools to remove the O-ring seal. They can cause axial scratches across the O-ring seal groove, resulting in refrigerant leaks.

Remove the O-ring seal with a non-metallic tool.

Connect

1. Clean all dirt or foreign material from the fittings.
2.  **CAUTION:** Use only the new O-ring seals. The use of any O-ring seals other than those specified in the Ford Master Parts Catalog may result in intermittent leakage during vehicle operation.

Install the O-ring seal.

- Lubricate the O-ring seal with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.

3. Lubricate the inside of the fittings with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.
4. **NOTE:** When correctly assembled, the male and female fittings should be flush.

Assemble the male and female fittings together.

Heater Hose Coupling

Special Tool(s)

 ST1648-A	Remover, Heater Hose Inlet Tube 412-042 (T85T-18539-AH)
 ST2589-A	Disconnect Tool, Heater Hose 412-127

Material

Item	Specification
MERPOL® —	ESE-M99B144-B

Disconnect

 **CAUTION:** Do not attempt to install a new bushing, spacer or O-rings in the heater hose coupling; damage to the heater hose coupling can result. If the heater hose coupling is the cause of a coolant leak, the affected heater hose must be replaced as an assembly.

-  **WARNING:** The engine must be off, fully cool and the cooling system fully depressurized before attempting to disconnect any heater water hoses. Failure to comply with this warning can result in serious injury or burns from hot liquid escaping out of the engine cooling system.

Depressurize the engine cooling system.

- Push the heater hose toward the tube to fully expose the locking tabs.

- NOTE:** When compressing the white coupling retainer with the special tool, the special tool must be perpendicular to and on the highest point of the coupling.

NOTE: If the heater hose coupling is accessible, the retainer tabs can be compressed by hand to disconnect the heater hose.

Push the special tool over the coupling retainer windows to compress the retainer locking tabs.

4. **NOTE:** A slight twisting motion while pulling on the heater water hose may be necessary to assist in the removal.

Pull the heater hose away from the heater core tube.

5. Spread the retainer tabs apart and slide the retainer off the tube.
 - Discard the retainer.

Connect

1. Clean the tubes and lubricate with coolant hose lubricant or plain water.
2. Install a new coupling retainer (18D434) into the heater hose coupling housing.

3. Push the heater hose coupling onto the tube.

4. Make sure the heater hose coupling is fully engaged by lightly pulling on the heater hose.
-

Refrigerant System Tests

Special Tool(s)

1. Connect the R-134a Manifold Gauge Set. For additional information, refer to [Manifold Gauge Set Connection](#) in this section.
2. Adjust the climate controls for maximum cooling.
 - Start the engine.
 - Select MAX A/C operation.
 - Set the blower motor speed to maximum.
3. Stabilize the in-vehicle temperature at 21-27°C (70-80°F).
4. **NOTE:** When the ambient temperatures exceed 38°C (100°F), do not run the engine above normal idle speed.

Maintain the engine speed at 1,500 rpm.

5. Determine the compressor discharge (high) pressure.
 1. Record the ambient temperature.
 2. Record the discharge (high) pressure.
 3. **NOTE:** In ambient temperatures between 38-43°C (100-110°F), the system performance pressures will be the same as those for ambient temperatures shown on the chart in the 32-38°C (90-100°F) range.

The system performance is acceptable when the pressure reading falls between the upper and lower limits shown.

6. Determine the compressor suction (low) pressure.
 1. Record the ambient temperature.
 2. Record the suction (low) pressure.
 3. **NOTE:** In ambient temperatures between 38-43°C (100-110°F), the system performance pressures will be the same as those for ambient temperatures shown on the chart in the 32-38°C (90-100°F) range.

The system performance is acceptable when the pressure reading falls between the upper and lower limits shown.

7. Determine the A/C clutch ON time.
 1. Record the ambient temperature.
 2. Record the A/C clutch ON time in seconds.
 3. **NOTE:** When the ambient temperature is above 26°C (80°F), the A/C clutch may not cycle.

The system performance is acceptable when the recorded time falls between the upper and lower limits shown.

8. Determine the A/C clutch OFF time.
 1. Record the ambient temperature.
 2. Record the A/C clutch OFF time in seconds.
 3. **NOTE:** When the ambient temperature is above 26°C (80°F), the A/C clutch may not cycle.

The system performance is acceptable when the recorded time falls between the upper and lower limits shown.

9. Determine the total A/C clutch cycle time.
 1. Record the ambient temperature.
 2. Record the time the A/C clutch is engaged plus the time it is disengaged (time ON plus time OFF).
 3. **NOTE:** When the ambient temperature is above 26°C (80°F), the A/C clutch may not cycle.

The system performance is acceptable when the recorded time falls between the upper and lower limits shown.

10. Determine the A/C clutch cycle rate per minute.
 1. Record the ambient temperature.
 2. Record the number of A/C clutch cycles occurring in one minute.
 3. **NOTE:** When the ambient temperature is above 26°C (80°F), the A/C clutch may not cycle.

The system performance is acceptable when the recorded number of cycles falls between the upper and lower limits shown.

11. Determine the center A/C register discharge temperature.
 1. Record the ambient temperature.

2. Record the center A/C register discharge temperature.
3. **NOTE:** In ambient temperatures between 38-43°C (100-110°F), the A/C register discharge temperatures will be the same as those for ambient temperatures shown on the chart in the 32-38°C (90-100°F) range.

The system performance is acceptable when the center A/C register discharge temperature falls between the upper and lower limits shown.

A/C Clutch Air Gap Adjustment

1. Check the A/C clutch air gap at three equally spaced places between the clutch hub and the A/C clutch pulley.

2. Remove the A/C clutch. Add or remove spacers between the A/C clutch and the compressor shaft until clearance is within specifications. For additional information, refer to [Section 412-03](#).
-

Manifold Gauge Set Connection

Special Tool(s)

1. Turn both valves on the R-134a Manifold Gauge Set clockwise to close the low- and high-pressure hoses to the center manifold and center hose.

2. Remove the A/C charging valve cap (19D702) from the low-pressure service gauge port valve.

3. Remove the A/C charging valve cap from the high-pressure service gauge port valve.

4. Connect the R-134a Manifold Gauge Set low-pressure hose and the R-134a low side quick disconnect to the low-pressure service gauge port valve.

5. Connect the R-134a Manifold Gauge Set high-pressure hose and the R-134a high side quick disconnect to the high-pressure service gauge port valve.

Electronic Leak Detection

Special Tool(s)

⚠ CAUTION: Good ventilation is necessary in the area where electronic A/C leak testing is to be carried out. If the surrounding air is contaminated with refrigerant gas, the leak detector will indicate this gas all the time. Odors from other chemicals such as antifreeze, diesel fuel, disc brake cleaner, or other cleaning solvents can cause the same problem. A fan, even in a well-ventilated area, is very helpful in removing small traces of contamination from the air that might affect the leak detector.

1. **NOTE:** The system pressure should be between 413-551 kPa (60-80 psi) at 24°C (75°F) with the engine off.

Leak test the refrigerant system using the Refrigerant Leak Detector. Follow the instructions included with the leak detector for handling and operation techniques.

2. If a leak is found, discharge and recover the refrigerant. For additional information, refer to [Air Conditioning \(A/C\) System Recovery, Evacuation and Charging](#) in this section.
 - Repair the system.
 - Test the system for normal operation.

Fluorescent Dye Leak Detection

Special Tool(s)

 ST1834-A	R-134a Refrigerant Service Center 023-00153 or equivalent
 ST1261-A	120 Watt UV Spot Lamp 164-R0721 or equivalent
 ST1705-B	R-134a Fluorescent Dye Injector 164-R0775 or equivalent
 ST2651-A	High Intensity UV Lamp — 12 Volt 164-R6000
 ST2650-A	R-134a Leak Detection Dye 164-R6060
 ST1928-A	R-134a Manifold Gauge Set 176-R032A
 ST2649-A	Deluxe Injector Loop Kit 219-00069

Fluorescent Dye Detection

NOTE: Ford Motor Company vehicles are produced with R-134a fluorescent dye installed in the refrigerant system from the factory. The location of leaks can be pinpointed by the bright yellow-green glow of the fluorescent dye under a UV lamp. Since more than one leak can exist, make sure to inspect each component, line, and fitting in the refrigerant system for a leak.

1. Check for leaks using the special tool.
 - Inspect all components, lines, and fittings of the refrigerant system.

2. If a leak is found, recover the refrigerant. For additional information, refer to Air Conditioning (A/C) System Recovery, Evacuation and Charging in this section.
3. Repair the refrigerant system leak(s).
4. Evacuate and charge the refrigerant system. For additional information, refer to Air Conditioning (A/C) System Recovery, Evacuation and Charging in this section.
5. After the leak(s) is/are repaired, remove any traces of fluorescent dye with a general purpose oil solvent.
6. Verify the repair by running the vehicle for a short period of time and rechecking the area of the leak with the special tool.

Fluorescent Dye Injection — Using an A/C Refrigerant Center and Dye Injector

NOTE: Before using the R-134a fluorescent dye injector for the first time, refer to the manufacturers instructions on evacuation of any non-condensable gasses from the hoses.

NOTE: Only connect the R-134a fluorescent dye injector to a manifold and gauge set or R-134a service center when fluorescent dye is to be injected. The R-134a fluorescent dye injector has a one way check valve that will prevent refrigerant system recovery and evacuation.

NOTE: Refrigerant system pressure should be between 413-551 kPa (60-80 psi) at 24°C (75°F) with the engine off.

1. Install an R-134a A/C refrigerant service center or a manifold and gauge set. For additional information, refer to Manifold and Gauge Set Connection in this section.
2. Verify that the valves on the special tool are closed.

3. Fill the special tool reservoir with 7 ml (0.25 oz) of fluorescent dye.

4. Install the special tool between the low-pressure service gauge port valve and the R-134a refrigerant service center or manifold gauge set.
5. Open all valves and inject the fluorescent dye into the refrigerant system.
6. When fluorescent dye injection is complete, close all valves.
7. Recover the refrigerant from the R-134a fluorescent dye injector.
8. Remove the fluorescent dye injector from the low-pressure service gauge port valve and the R-134a A/C refrigerant service center or manifold gauge set.

Fluorescent Dye Injection — Using a Dye Injector Loop Kit

NOTE: Before using the R-134a fluorescent dye injector for the first time, refer to the equipment manufacturers instructions on evacuation of non-condensable gasses from the hoses.

NOTE: Refrigerant system pressure should be between 413-551 kPa (60-80 psi) at 24°C.

1. Verify that the valves on the special tool are closed.

2. Fill the special tool reservoir with 7 ml (0.25 oz) of fluorescent dye.

3. Install the special tool between the high-pressure and low-pressure service gauge port valves.

4.  **CAUTION: Make sure all tools and hoses are clear of the engine cooling fan and drive belt before starting the engine.**

Start the engine.

5. Open the high-pressure service valve.

6. Open the special tool valves and inject the fluorescent dye into the refrigerant system.

7. Close the high-pressure service valve to allow the pressure inside the special tool to equalize with the suction side of the refrigerant system.

8. **NOTE:** Close the valves on the special tool while the A/C compressor is operating.

Close the valves on the special tool.

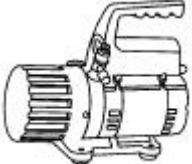

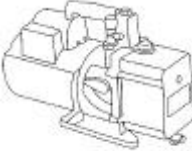

9. **NOTE:** Leave all valves on the special tool closed when not in use.

Disconnect the high-pressure and low-pressure service valves and remove the special tool from the vehicle.

Air Conditioning (A/C) System Recovery, Evacuation and Charging

Special Tool(s)

 <p>ST1228-A</p>	<p>R-134a A/C Refrigerant Center 176-00002 or equivalent</p>
 <p>ST1834-A</p>	<p>R-134a A/C Refrigerant Center 023-00153 or equivalent</p>
 <p>ST1928-A</p>	<p>R-134a Manifold Gauge Set 176-R032A or equivalent</p>
 <p>ST1685-A</p>	<p>1.2 CFM Vacuum Pump 023-00162 or equivalent</p>
 <p>ST1686-A</p>	<p>4.0 CFM Vacuum Pump 023-00163 or equivalent</p>

Refrigerant System Recovery

NOTE: Ford Motor Company recommends use of an A/C service center to carry out recovery, evacuation, and charging of the refrigerant system. If an A/C service center is not available, refrigerant system recovery, evacuation, and charging may be accomplished using a separate recovery station, vacuum pump, charging cylinder, and manifold gauge set.

1. Prior to recovering the refrigerant system, you must verify the purity of the refrigerant. For additional information, refer to [Refrigerant Identification Testing](#) in this section.
2. **NOTE:** Some R-134a service centers require the use of an A/C manifold gauge set. For additional information, refer to [Manifold Gauge Set Connection](#) in this section.

Connect an R-134a A/C service center to the low- and high-pressure service gauge port valves.

3. Recover the refrigerant from the system following the operating instructions provided by the equipment manufacturer.
4. Once the service center has recovered the vehicle A/C system refrigerant, close the service center inlet valve (if equipped). Then switch off the power supply.
5. Allow the vehicle A/C system to remain closed for about two minutes. Observe the system vacuum level as shown on the gauge. If the vacuum does not decrease, disconnect the refrigerant center hose(s).
6. If the system vacuum does decrease, repeat Steps 2 through 5 until the vacuum level remains stable for two minutes.
7. Carry out the required repairs.

Refrigerant System Evacuation

NOTE: Ford Motor Company recommends use of an A/C service center to carry out recovery, evacuation, and charging of the refrigerant system. If an A/C service center is not available, refrigerant system recovery, evacuation, and charging may be accomplished using a separate recovery station, vacuum pump, charging cylinder, and manifold gauge set.

1. Connect an R-134a service center to the low- and high-pressure service gauge port valves.
2. Evacuate the system until the low-pressure gauge reads at least 99.4 kPa (29.5 in-Hg) of vacuum and as close to 101.1 kPa (30 in-Hg) as possible. Continue to operate the vacuum pump for a minimum of 45 minutes.
3. Turn off the vacuum pump. Observe the low-pressure gauge for five minutes to make sure that the system vacuum is held. If vacuum is not held for five minutes, leak test the system, service the leak, and evacuate the system again.

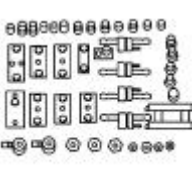

Refrigerant System Charging

NOTE: Ford Motor Company recommends use of an A/C service center to carry out recovery, evacuation, and charging of the refrigerant system. If an A/C service center is not available, refrigerant system recovery, evacuation, and charging may be accomplished using a separate recovery station, vacuum pump, charging cylinder, and manifold gauge set.

1. Correctly oil match the system to verify that the correct amount of refrigerant oil is present in the system. For additional information, refer to [Refrigerant Oil Adding](#) in this section.
 2. Charge the system with the specified amounts of refrigerant oil and refrigerant.
 3. When no more refrigerant is being drawn into the system, start the engine and select MAX A/C operation. Adjust the blower motor speed to the maximum and allow the remaining refrigerant to be drawn into the system. Continue to add refrigerant into the system until the specified weight of R-134a has been added. Close the charging cylinder valve and allow the system to pull any remaining refrigerant from the hose. When the low-pressure drops to approximately 207 kPa (30 psi), close the charging hose valve.
-

Air Conditioning (A/C) System Flushing

Special Tool(s)

 ST2466-A	A/C Flush and Purge Machine 219-00022 (part of 219-00023) or equivalent
 ST2469-A	A/C Flush and Purge Fitting Kit 219-00024 (part of 219-00023) or equivalent

 **WARNING:** Use extreme care and observe all safety and service precautions related to the use of refrigerants.

 **WARNING:** Due to refrigerant hazards, always wear safety goggles and non-penetrable gloves when working on or flushing A/C systems.

 **CAUTION:** An A/C refrigerant analyzer must be used before the recovery of any vehicle's A/C refrigerant. Failure to do so puts the shop's bulk refrigerant at risk of contamination. If the vehicle's A/C refrigerant is contaminated, refer the customer to the service facility that carried out the last A/C service. If the customer wishes to pay the additional cost, use the A/C recovery equipment that is designated for recovering contaminated A/C refrigerant. All contaminated A/C refrigerant must be disposed of as hazardous waste. For all equipment, follow the equipment manufacturer's procedures and instructions.

 **CAUTION:** Suction accumulator/drier, muffler, hoses, thermal expansion valve, and fixed orifice tube should be removed when flushing the A/C system. Internal plumbing of these devices makes it impossible to correctly remove any residual-flushing agent. Except for the hoses, these components are typically discarded after A/C system contamination. Hoses can normally be reused unless they are clogged with foreign material. The 3.785 liters (1 gallon) of A/C Systems Flushing Solvent F4AZ-19579-A and FL1-A filter used in A/C Flush and Purge Machine 219-00022 are intended for use on one vehicle only. They may be used to flush both the A/C condenser core and the A/C evaporator core on an individual vehicle, but under no circumstances should they be used on more than one vehicle.

1. **NOTE:** Prior to using the A/C Flush and Purge Machine 219-00022 for the first time, review the operating instructions.

NOTE: Only the A/C Flush and Purge Machine kit 219-00023, which includes A/C Flush and Purge Machine 219-00022, A/C Flush and Purge Fitting Kit 219-00024, and the Ford Part number F4AZ-19579-A A/C Systems Flushing Solvent, is approved for use on Ford vehicles. No other flushing device or solvent is approved for flushing heat exchangers. Use of any other flusher or solvent may cause damage to the A/C system and the flushing unit.

Ford Motor Company has approved a procedure to provide technicians with a non-CFC method of flushing contaminated A/C system heat exchangers, A/C evaporator core, and A/C condenser core. The procedure allows the specific components to be cleaned and flushed while installed in their normal in-vehicle location. The types of contamination flushed include particle matter that results from A/C compressor or desiccant failure within the suction accumulator/drier and gummy residue that can form when refrigerant oil is overheated during A/C compressor seizure. The flushing process is a two-step procedure that involves the use of an A/C Flush and Purge Machine 219-00022 to:

- Circulate the flushing solvent through the heat exchanger in the reverse direction of normal refrigerant flow (back-flushing). Particulate matter picked up during flushing is filtered from the returning solvent before the solvent is returned to the reservoir for continued circulation.
 - Remove the flushing solvent from the heat exchanger. In this step of the procedure, pressurized air 621-862 kPa (90-125 psi) is used to push and evaporate any remaining flush solvent from the heat exchanger.
2. Discharge the A/C system. Observe all safety precautions. For additional information, refer to the procedure in this section.
 3. Disconnect the refrigerant lines from the heat exchanger(s) to be flushed.
 4. Connect the A/C Flush and Purge Machine 219-00022 and A/C Flush and Purge Fitting Kit 219-00024 to the heat exchanger to be flushed. Do not flush through the A/C evaporator core orifice, mufflers or hoses. Internal plumbing and material make-up of these components make it impossible to correctly remove foreign material or residual flushing solvent.
 5. Use 3.785 liters (one gallon) of A/C Systems Flushing Solvent part number F4AZ-19579-A to flush the heat exchanger for a minimum of 15 minutes. The flush solvent may be used for one or both heat exchangers in the A/C system. However, the flush solvent is intended for one vehicle only. The filter used on the flushing unit is also intended for use on one vehicle only.
 6. Flush the component for a minimum of 15 minutes.
 7. Apply 621-862 kPa (90-125 psi) pressurized air to the component for a minimum of 30 minutes. The 30-minute purge time is required to force and evaporate all residual solvent from the A/C system component. Failure to successfully remove all residual solvent within the component can result in system damage when reconnected and operated. Dispose of the used flush solvent and filter in accordance with local, state and federal emissions.
 8. **NOTE:** A/C system filtering as described in this section is optional if system flushing is carried out. However, the filter kit use is recommended after flushing if the A/C system contamination is extensive.

Install a new A/C evaporator core orifice in any vehicle being serviced for A/C compressor or desiccant failure.
 9. Install new refrigerant hoses if clogged with foreign material.
 10. Reconnect the heat exchanger being serviced.
 11. Add additional refrigerant oil as required. For additional information, refer to the procedure in this section.
 12. Evacuate, leak test and charge the A/C system. For additional information, refer to the procedure in this section.
 13. Check the system for normal operation.

Refrigerant System Filtering After A/C Component Replacement

Special Tool(s)

1. Install the new A/C compressor. For additional information, refer to [Section 412-03](#).
2. Install the new receiver/drier. For additional information, refer to [Section 412-03](#).
3. Install the new thermostatic expansion valve. For additional information, refer to [Section 412-03](#).
4. Orient the filter inlet toward the A/C condenser core.

5. **NOTE:** The pancake filter is not permanently installed and will be removed at the end of this procedure.

Temporarily install the pancake filter between the A/C condenser core and the condenser to evaporator tube (19835).

1. Use flexible refrigerant hose of 17,238 kPa (2,500 psi) burst rating.
2. Make the connections using the R-12/R-134a Air Conditioning Test Fitting Set.

6. Correctly oil match the system. For additional information, refer to [Refrigerant Oil Adding](#) in this section.
 7. Evacuate and charge the system. For additional information, refer to [Air Conditioning \(A/C\) System Recovery, Evacuation and Charging](#) in this section.
 8. Check all refrigerant system hoses, lines and the position of the newly installed filters to be sure they do not interfere with other engine compartment components. If necessary, use tie straps to make adjustments.
 9. Provide adequate airflow to the front of the vehicle (with a fan, if necessary). Select A/C operation and set the blower motor speed to maximum. Start the engine and let it idle briefly. Make sure the A/C system is operating correctly.
 10. Gradually bring the engine up to 1,200 rpm by running it at lower rpms for short periods (first at 800 rpm, then at 1,000 rpm). Set the engine at 1,200 rpm and run it for one hour with the A/C system operating.
 11. Stop the engine.
 12. Recover the refrigerant from the system. For additional information, refer to [Air Conditioning \(A/C\) System Recovery, Evacuation and Charging](#) in this section.
 13. Remove the fittings, flexible hoses and pancake filter from between the A/C condenser core and the condenser to evaporator tube.
 14. Discard the pancake filter. It can be used one time only.
 15. Reconnect the condenser to evaporator tube to the A/C condenser core.
 16. Evacuate and charge the system. For additional information, refer to [Air Conditioning \(A/C\) System Recovery, Evacuation and Charging](#) in this section.
-

Refrigerant Oil Adding

CAUTION: During normal A/C operation, oil is circulated through the system with the refrigerant, and a small amount is retained in each component. If certain components of the system are removed, some of the refrigerant oil will go with the component. To maintain the original total oil charge, it is necessary to compensate for the oil lost by adding oil to the system with the new part.

NOTE: Installation of new components such as the A/C pressure transducer do not require additional oil.

1. **NOTE:** New A/C compressors are shipped without compressor oil.

Rotate the A/C compressor shaft six to eight revolutions while collecting the oil in a clean measuring device.

- If the amount of oil drained from the old A/C compressor is between 90-150 ml (3-5 ounces), pour the same amount plus 30 ml (1 ounce) of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B into the new A/C compressor.
 - If the amount of oil that was removed from the old A/C compressor is greater than 150 ml (5 ounces), pour the same amount drained of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B into the new A/C compressor.
 - If the amount of oil that was removed from the old A/C compressor is less than 90 ml (3 ounces), pour 90 ml (3 ounces) of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B into the new A/C compressor.
2. For the receiver/drier, drill one 12.7 mm (0.5 in) hole in the receiver/drier cylinder and drain the oil into a calibrated container.
 - Add a quantity of new oil to match that drained from the old receiver/drier plus 59 ml (2 ounces) of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.
 3. For the A/C evaporator core add 30 ml (1 ounce) of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B to the receiver/drier inlet tube.
 4. For the A/C condenser core, add 30 ml (1 ounce) of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B to the A/C condenser core or the receiver/drier inlet tube.
 5. Add 20 ml (.75 ounces) of clean PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B to the receiver/drier inlet tube when carrying out each of the following repairs:
 - installation of a new TXV
 - installation of a new A/C compressor pressure relief valve (19D644)
 - installation of a new refrigerant line
 - repair of an O-ring seal leak
 - repair of a charge port leak

Inspection and Assembly Requirements —Following An A/C Compressor Failure

CAUTION: To prevent refrigerant system contamination and possible failure of the new A/C compressor, carry out the following procedures:

1. Install a new thermostatic expansion valve (TXV). For additional information, refer to [Section 412-03](#).
2. Remove the A/C compressor. For additional information, refer to [Section 412-03](#).
 - Drain the residual refrigerant oil from the A/C compressor and measure the volume for correct system oil matching. For additional information, refer to [Refrigerant Oil Adding](#) in this section.
3. **NOTE:** The thermostatic expansion valve cannot be cleaned and a new thermostatic expansion valve must be installed.

Remove the receiver/drier. For additional information, refer to [Section 412-03](#).

- Drain the residual refrigerant oil from the receiver/drier and measure the volume for correct oil system matching. For additional information, refer to [Refrigerant Oil Adding](#) in this section.
4. **NOTE:** System flushing is the preferred method of cleaning. However, if flushing equipment is not available, carry out system filtering.

Carry out an A/C system flushing or filtering procedure:

- If A/C system flushing equipment is available, clean the A/C condenser core by flushing. For additional information, refer to [Air Conditioning \(A/C\) System Flushing](#) in this section.
 - If A/C system flushing equipment is not available, carry out a system filtering procedure. For additional information, refer to [Refrigerant System Filtering After A/C Component Replacement](#) in this section.
5. Install the new A/C compressor. For additional information, refer to [Section 412-03](#).
 6. Install the new receiver/drier, if necessary. For additional information, refer to [Section 412-03](#).
 7. Install the new TXV. For additional information, refer to [Section 412-03](#).
 8. Correctly oil match the system. For additional information, refer to [Refrigerant Oil Adding](#) in this section.
 9. Evacuate and charge the system. For additional information, refer to [Air Conditioning \(A/C\) System Recovery, Evacuation and Charging](#) in this section.
-

Refrigerant Identification Testing

Special Tool(s)

1. **NOTE:** An A/C refrigerant analyzer must be used to identify gas samples taken directly from the refrigeration system or storage containers prior to recovering or charging the refrigerant system.

Follow the instructions included with the Deluxe Refrigerant Diagnostic Tool to obtain the sample for testing.

2. The diagnostic tool will display one of the following:
 - If the purity level of R-134a or R-12 is 98% or greater by weight, the green "PASS" light emitting diode (LED) will light. The weight concentrations of R-134a, R-12, R-22, hydrocarbons, and air will be displayed on the digital display.
 - If refrigerants R-134a or R-12 do not meet the 98% purity levels, the red "FAIL" LED will light and a horn will sound alerting the user of potential hazards. The weight concentrations of R-134a, R-12, R-22, and hydrocarbons will be displayed on the digital display.
 - If hydrocarbon concentrations are 2% or greater by weight, the red "FAIL" LED will light, "Hydrocarbon High" will be displayed on the digital display, and a horn will sound alerting the user of potential hazards. The weight concentrations of R-134a, R-12, R-22, and hydrocarbons will also be displayed on the digital display.
3. The percentage of air contained in the sample will be displayed if the R-134a or R-12 content is 98% or greater. The diagnostic tool eliminates the effect of air when determining the refrigerant sample content because air is not considered a contaminant, although air can affect A/C system performance. When the diagnostic tool has determined that a refrigerant source is pure (R-134a or R-12 is 98% or greater by weight) and air concentration levels are 2% or greater by weight, the diagnostic tool will prompt the user if an air purge is desired.
4. If contaminated refrigerant is detected, repeat the refrigerant identification test to verify that the refrigerant is indeed contaminated.
5.  **CAUTION: If contaminated refrigerant is detected, DO NOT recover the refrigerant into R-134a or R-12 recovery/recycling equipment.**

Recover any contaminated refrigerant using suitable recovery-only equipment designed for capturing and storing contaminated refrigerant. For additional information, refer to [Contaminated Refrigerant Handling](#) in this section.

Contaminated Refrigerant Handling

1.  **CAUTION:** If contaminated refrigerant is detected, DO NOT recover the refrigerant into your recovery/recycling equipment.

Recover the contaminated refrigerant using suitable recovery-only equipment designed for capturing and storing contaminated refrigerant.

- This equipment must only be used to recover contaminated refrigerant to prevent the spread to other vehicles.
- If this equipment is not available, contact an A/C repair facility in your area with the correct equipment to carry out this repair.

2. Determine and correct the cause of the customer's initial concern.
3. **NOTE:** Residual refrigerant oil in the receiver/drier must be drained and measured for correct oil system matching. For additional information, refer to [Refrigerant Oil Adding](#) in this section.

The receiver/drier cannot be cleaned and a new receiver/drier must be installed. Remove the receiver/drier. For additional information, refer to [Section 412-03](#).

4. Clean the A/C evaporator core and the A/C condenser core by flushing. For additional information, refer to [Air Conditioning \(A/C\) System Flushing](#) in this section.
 5. Install the new receiver/drier. For additional information, refer to [Section 412-03](#).
 6. Correctly oil match the system. For additional information, refer to [Refrigerant Oil Adding](#) in this section.
 7. Evacuate and charge the system. For additional information, refer to [Air Conditioning \(A/C\) System Recovery, Evacuation and Charging](#) in this section.
 8. Dispose of contaminated refrigerant according to all federal, state and local regulations.
-

Torque Specifications

Description	Nm	lb-ft	lb-in
Cross-vehicle support bolts	25	18	—
Cabin air filter plenum bolts	6	—	53
Plenum chamber center screws to cross-vehicle beam	6	—	53
Plenum chamber lower screw to cross-vehicle beam	6	—	53

Air Distribution And Filtering

There are two sources of air available to the air distribution system:

- outside air
- recirculated air

Air distribution within the vehicle is controlled by the dual electronic automatic temperature control (DATC) system in the AUTOMATIC mode, but it can be overridden by the driver if desired. Airflow control doors are used to direct airflow within the evaporator and blower assembly (19B555) and within the plenum chamber (19740). Electrically powered actuators (19E616) are used to position the airflow control doors. For additional information, refer to [Section 412-00](#) for description and operation of each of the system functions.

Recirculated air can be selected by pushing the recirculating air button on the dual automatic temperature control panel. It may also be commanded by the DATC during AUTOMATIC and OFF modes. If the recirculating mode is selected in floor mode, the DATC module will automatically discontinue the recirculating air mode in floor mode, to reduce fogging of the windows.

Air enters the passenger compartment from the:

- instrument panel A/C registers (19893).
- heater outlet floor duct.
- windshield defroster hose nozzle (18490).
- side window demisters.
- center console rear A/C registers.
- rear seat floor ducts (18C464).

Passenger compartment air is exhausted from the vehicle through open windows or luggage compartment air vents.

Component Locations

A0005003

Item	Part Number	Description
1	19N619	Cabin air filter
2	19850	A/C evaporator housing
3	19740	Plenum chamber
4	19B680	LH register duct
5	18C433	Defroster duct
6	19A843	RH register duct
7	—	RH floor duct
8	18C464	RH rear seat duct

9	19E766	Center console duct
10	—	Center console register
11	18C464	LH rear seat duct
12	—	LH floor duct

Cabin Air Filter

Removal and Installation

1. **NOTE:** The fasteners are reusable.

Remove the right side of the cowl vent screen.

1. Remove the two-part pin-type retainers and separate the Velcro® attachment of the rubber hinge cover to the rear outboard corner of the cowl vent screen.
2. Pull up on the cowl vent screen to release the lower clips.

2. Push on the RH corner of the filter to release the clip. Release the LH clip and remove the cabin air filter.

3. To install, reverse the removal procedure.

Fresh Air Inlet Duct

Removal and Installation

1. Remove the cowl vent screen. For additional information, refer to [Section 501-02](#).
2. Push on the RH corner of the filter to release the clip. Release the LH clip and remove the cabin air filter.

3. Remove the seven bolts and remove the cross-vehicle support.

4. Remove the bolts.

5. Remove the cabin air filter housing by lifting the outboard side then removing the housing.

6. Remove the three bolts and remove the plenum panel.

7. To install, reverse the removal procedure.

Center Registers

Removal

1. **NOTE:** The center register has pockets in the lower RH and LH corners to assist in removal.

Insert a mini-pick in the pocket and pull the register from the instrument panel.

- Disconnect the message center connector, if equipped.

Installation

1. To install, connect the message center connector, if equipped, position the register and press into place.
-

Floor Console Register

Removal and Installation

1. Lift the center console cover and pull the register from the center console.

2. To install, reverse the removal procedure.
-

Footwell Duct

Removal and Installation

1. Remove the lower instrument panel insulator.
 - Disconnect the electrical connector.
2. **NOTE:** RH shown, LH similar.

Remove the screw and remove the duct.

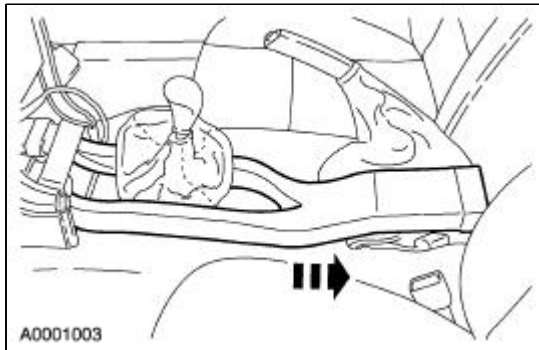

3. To install, reverse the removal procedure.
-

Duct —Floor Console

Removal and Installation

1. Remove the floor console. For additional information, refer to [Section 501-12](#).
2. Remove the duct.

3. Remove the screw and remove the front portion of the duct.

4. To install, reverse the removal procedure.
-

Rear Footwell Duct

Removal and Installation

1. **NOTE:** RH shown, LH similar.

Remove the front seat. For additional information, refer to [Section 501-10](#).

2. Remove the carpet.
3. Remove the pin-type retainers.

4. Remove the pin-type retainer. Move the duct outboard and remove the duct.

5. To install, reverse the removal procedure.
-

Plenum Chamber

Removal and Installation

1. Remove the instrument panel. For additional information, refer to [Section 501-12](#).
2. **NOTE:** Passenger side duct shown, driver side similar.

Remove the screws and remove the floor ducts.

3. Remove the screws and detach the transmission shift lockout bracket from the plenum chamber.

4. Detach the venturi assembly from the plenum chamber.

5. **NOTE:** Panel door actuator shown, defrost door and floor door actuators similar.

Disconnect the electrical connectors from the panel door, defrost door and floor door actuators.

6. Disconnect the two air discharge temperature sensors from the plenum chamber.

7. Remove the screws.

8. Remove the screws.

9. Remove the screw.

10. Remove the plenum chamber.
 11. If a new plenum chamber is to be installed, transfer the mode door actuators from the old unit to the new unit. For additional information, refer to [Section 412-04](#).
 12. If a new plenum chamber is to be installed, transfer the venturi cap from the old unit to the new unit.
 13. To install, reverse the removal procedure.
-

Instrument Panel Air Distribution Ducts

Disassembly and Assembly

1. **NOTE:** RH register shown LH similar.

Remove the LH and RH panel registers.

- Depress the inboard side tab with a flat blade tool. Pull the register rearward, depress the outboard tab and remove the register.

2. Remove the plenum chamber. For additional information, refer to [Plenum Chamber](#) in this section.
3. Remove the screws and remove the defroster duct.

4. Remove the screws and remove the driver side support brace.

5. Remove the screw and position the driver side panel duct away from the driver side demister duct screw.

6. Remove the driver side demister duct screw and remove the driver side demister duct.

7. Remove the passenger side demister duct screw and remove the passenger side demister duct.

8. Remove the passenger side panel duct inner screw.

9. Remove the passenger side panel duct outer screw.

10. Remove the screws and remove the center panel duct.

11. Remove the driver side panel duct.

12. Rotate and pull the panel duct through the opening in the side of the instrument panel.

13. To assemble, reverse the disassembly procedure.

Heating and Defrosting

The heating and defrosting system:

- controls the vehicle air temperature and, during A/C operation, reduces the relative humidity of the air inside the vehicle.
- delivers heated or cooled air to maintain the vehicle interior temperature and comfort level.
- controls the A/C blower motor speed.
- allows temperature to be adjusted individually by the driver and the passenger to maintain comfort.
- uses a reheat method to provide conditioned air to the passenger compartment. All airflow from the blower motor passes through the A/C evaporator core (19860) and the heater core (18476). Temperature is regulated by reheating the air out of the evaporator core to achieve the desired temperature.
- controls the air temperature by regulating the flow of engine coolant to separate halves of the heater core. A dual solenoid actuated valve is used to control the flow of coolant.

The blower motor (19805) draws outside air through the air inlet filter and duct or draws recirculated air through the recirculated air duct.

Component Locations

A0005006

Item	Part Number	Description
1	18476	Heater core
2	19850	A/C evaporator housing
3	19805	Blower motor
4	18D473	Auxiliary coolant flow pump—3.9L only
5	18495	Dual coolant flow valve
6	18C553	Heater water hose assembly — (consists of 18663 and two 18696 hose assemblies)

Heater Core

The heater core consists of fins and tubes arranged to extract heat from the engine coolant and transfer it to air passing through the heater core. The heater core is separated into two sections. Air passing through one section is directed to the driver side of the vehicle, while air passing through the other section is directed to the passenger side of the vehicle. The heater core has separate inlet ports with a common outlet port.

Blower Motor

The A/C blower motor (19805) pulls air from the air inlet and forces it into the evaporator housing and plenum assembly (which is attached to the instrument panel) where it is distributed.

Dual Coolant Control Valve

The dual coolant valves regulates the flow of engine coolant to each half of the heater core. Two electric solenoids, which are individually actuated by the DATC module, are the control elements. The valve contains five ports:

Port	Function	Location
1	Inlet—coolant from engine	front face
2	Outlet to heater core, driver side	rear face
3	Outlet to heater core, passenger side	rear face
4	Return coolant from heater core	rear face
5	Outlet—return to engine	front face

Auxiliary Water Pump—3.9L Engine

The auxiliary water pump is electrically driven and provides increased coolant flow during low engine speed operation. The pump is also used to circulate coolant after the engine is turned off under certain conditions.

Port	Description
1	Inlet from engine
2	Outlet to coolant valve

Heater Hose

Removal

1. Drain the radiator. For additional information, refer to [Section 303-03](#).
2. Remove the throttle body air intake tube. For additional information, refer to [Section 303-12](#).
3. Remove the RH cowl cover.

4. Push on the RH corner of the filter to release the clip. Release the LH clip and remove the cabin air filter.

5. Remove the seven bolts and remove the cross-vehicle support.

6. Remove the bolts.

7. Remove the cabin air filter housing by lifting the outboard side then removing the housing.

8. Remove the three bolts and remove the plenum panel.

9. Disconnect the heater hoses from the heater core.

10. **NOTE:** The top heater hose has a green identifying mark to match the hose on the dual coolant flow valve. If the marking is not visible, make sure to mark the hoses for location prior to disconnecting the couplings. This will aid in the correct installation of the hose assemblies.

NOTE: Hose connections shown with components removed for clarity.

Disconnect the three quick-disconnect couplings from the coolant control valve hoses. For additional information, refer to [Section 412-00](#).

11. Disconnect the coolant recovery line.

12. Remove the forward heater hose mounting bolt at the RH shock tower.

13. Raise the vehicle. For additional information, refer to [Section 100-02](#).

14. **NOTE:** View shown with components removed for clarity.

Remove the rear heater hose mounting bolt from the body side.

15. Position the hydraulic cooling fan reservoir aside.

16. Position the PCM wiring harness bracket aside.

17. Lower the vehicle and remove the heater hose assembly.
18. **NOTE:** Steps 18 and 19 are required only if the heater hose assembly is being separated.

If necessary, remove the crimps and remove the bracket.

19. If necessary, remove the rivet and remove the bracket.

Installation

1. Install heater hose assembly.
2. Install the hydraulic cooling fan reservoir.

3. Install the PCM wiring harness bracket.

4. **NOTE:** If the hose assembly has been separated, install the bracket removed using a new rivet.
Install the bracket using a new rivet.

5. Install the rear heater hose mounting bolt.

6. **NOTE:** If the hose assembly has been separated, a new bracket must be installed.

Install the forward heater hose mounting bolt.

7. Connect the coolant recovery line.

8. Install the couplings.

- Make sure that the heater hoses are installed in the correct position.

- Lubricate the coolant hoses with MERPOL® meeting Ford specification ESE-M99B144-B or plain water only, if needed.

9. Install the heater hoses at the heater core.
 - Make sure that the heater hoses are installed in the correct position.
 - Lubricate the coolant hoses with MERPOL® meeting Ford specification ESE-M99B144-B or plain water only, if needed.
 - Check for correct hose installation by verifying DATC system operation.

10. Install the cabin air intake plenum.
 11. Install the cabin air filter.
 12. Install the RH cowl cover.
 13. Install the throttle body intake tube.
 14. Fill the cooling system.
-

Blower Motor

Removal and Installation

1. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
2. Remove the passenger side floor duct. For additional information, refer to [Section 412-01](#).
3. Remove the screws and remove the cover.

4. Disconnect the connector and remove the blower motor.

5.  **CAUTION:** Prior to removing a wheel that is to be reused, clean any corrosion from the blower motor shaft to prevent damage to the wheel mounting diameter.

Remove the wheel from the blower motor.

1. Remove the push clip.
2. Remove the wheel from the blower motor.

6. **NOTE:** Make sure to install the blower motor cover. It is necessary for correct cooling.

To install, reverse the removal procedure.

Heater Core And Evaporator Core Housing

Material

Item	Specification
PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C)	WSH-M1C231-B
MERPOL®	ESE-M99B144-B

Removal and Installation

1. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
2. Recover the refrigerant. For additional information, refer to [Section 412-00](#).
3. Partially drain the cooling system. For additional information, refer to [Section 303-03](#).
4. Remove the fresh air inlet duct. For additional information, refer to [Section 412-01](#).
5. Disconnect the heater hose assembly from the heater core.

6. Disconnect the differential pressure feedback (DFPE) sensor.
 1. Disconnect the vacuum hoses.
 2. Disconnect the electrical connector.

7. Remove the wire harness retaining nuts and position the wiring harness aside.

8. Remove the two harness bracket retaining bolts from the RH cylinder head and position the bracket aside.

9. Remove the bolt and disconnect the manifold and tube assembly from the thermostatic expansion valve.
 - Discard the O-ring seals.

10. Remove the instrument panel. For additional information, refer to [Section 501-12](#).
11. Disconnect the connector located on the top of the evaporator core housing.

12. Detach and position the wiring harness aside.

13. Remove the cowl top attachment bolt.

14. Remove the evaporator housing attachment bolt.

15. **NOTE:** Nut and washer assemblies removed in steps 15 and 16 are located in the engine compartment.

Remove the nut and washer assembly retaining the evaporator housing to the bulkhead.

16. Remove the nut and washer assembly retaining the evaporator housing to the bulkhead.

17. Remove the nut and washer assembly retaining the evaporator housing to the bulkhead.

18. Remove the evaporator core housing.
19. To install, reverse the removal procedure.
- Install new O-ring seals lubricated in clean PAG oil.
 - Clean and lubricate the coolant hoses with coolant hose lubricant or plain water only if needed.
20. Fill the engine coolant level. For additional information, refer to [Section 303-03](#).
21. Evacuate, leak test and charge the refrigerant system. For additional information, refer to [Section 412-00](#).
-

Heater Core

Removal and Installation

1. **NOTE:** If a leak is suspected, the heater core must be leak tested in the vehicle before removal. For additional information, refer to [Section 412-00](#).

Remove the evaporator core housing. For additional information, refer to [Heater Core And Evaporator Core Housing](#) in this section.

2. Remove the evaporator core housing to air inlet housing screws.

3. Disengage the clip and separate the evaporator core housing from the air inlet housing.

4. Disconnect the evaporator core housing electrical connectors and position the wire harness aside.

5. Remove the gasket.

6. Remove the nine screws, disengage the clip and separate the heater core and evaporator core housing.

7. Remove the screws.

8. Remove the heater core.

9. Remove the heater core tube gasket.
10. To install, reverse the removal procedure.

Dual Coolant Flow Valve

Removal and Installation

1. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
2. Drain the radiator. For additional information, refer to [Section 303-03](#).
3. If equipped with 3.9L engine, remove the auxiliary coolant pump. For additional information, refer to [Auxiliary Coolant Flow Pump](#) in this section.
4. Disconnect the connector located at the end of the coolant valve harness pigtail.

5. **NOTE:** The top heater hose has a green identifying mark to match the hose on the dual coolant flow valve. If mark is not visible, identify the hoses for location. This will aid in the correct installation of the hose assemblies.

NOTE: Hose assemblies shown with components removed for clarity.

Disconnect the three quick-disconnect couplings from the coolant control valve hoses. For additional information, refer to [Section 412-00](#).

6. Raise the vehicle. For additional information, refer to [Section 100-02](#).
7. Remove the coolant valve assembly mounting bolt and the nut.

8. Raise the valve and disconnect the coolant supply and return lines.
9. Remove the bolts and remove the coolant valve mounting bracket.

10. To install, reverse the removal procedure.
 - Make sure that the heater hoses are installed in the correct position.
 - Lubricate the coolant hoses with MERPOL® meeting Ford specification ESE-M99B144-B or plain water only, if needed.
 - Check for correct hose installation by verifying DATC system operation.
-

Auxiliary Coolant Flow Pump

Removal and Installation

1. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
2. Drain the radiator. For additional information, refer to [Section 303-03](#).
3. Disconnect the connector.

4. Remove the two auxiliary coolant pump to fan shroud bolts.

5. Disconnect the hoses and remove the pump.

6. To install, reverse the removal procedure.
 - Make sure that the heater hoses are installed in the correct position.
 - Lubricate the coolant hoses with MERPOL® meeting Ford specification ESE-M99B144-B

or plain water only, if needed.

- Check for correct hose installation by verifying DATC system operation.
-

Heater Core And Evaporator Core Housing

Disassembly and Assembly

1. Remove the evaporator core housing. For additional information, refer to [Heater Core And Evaporator Core Housing](#) in this section.
2. Remove the evaporator core housing to air inlet housing screws.

3. Disengage the clip and separate the evaporator core housing from the air inlet housing.

4. Remove the screw and remove the blower motor speed control.

5. Remove the gasket.

6. Remove the nine screws, disengage the clip and separate the housing.

7. If necessary, remove the cold air bypass door actuator. For additional information, refer to [Section 412-04](#).
8. If necessary, remove the evaporator core air discharge temperature sensor. For additional information, refer to [Section 412-04](#).
9. Remove the evaporator core.

10. Disconnect the air bypass door actuator connector and position the harness aside.
11. Remove the screws.

12. Remove the heater core.

13. Remove the blower motor. For additional information, refer to [Blower Motor](#) in this section.
 14. If necessary, remove the air inlet door actuator. For additional information, refer to [Section 412-04](#).
 15. To assemble, reverse the disassembly procedure.
-

Air Conditioning

The A/C refrigerant system is a clutch cycling, thermostatic expansion valve type. The system components are:

- A/C compressor
- A/C clutch
- A/C condenser core
- A/C evaporator core
- thermostatic expansion valve
- receiver drier
- connecting refrigerant lines

The refrigeration system operation is controlled by the:

- thermostatic expansion valve.
- evaporator discharge temperature sensor.
- A/C compressor pressure relief valve.
- A/C pressure transducer.
- powertrain control module (PCM).
- DATC module.
- ambient temperature sensor.

The refrigerant system incorporates a variable capacity A/C compressor. The A/C compressor clutch engagement is controlled by the vehicle PCM.

The evaporator discharge temperature sensor senses evaporator discharge temperature. The DATC module monitors the evaporator discharge temperature sensor and communicates with the PCM to control clutch cycling. The DATC also monitors the ambient air temperature sensor and disables A/C operation when the ambient air temperature is below 0°C (32°F).

The A/C pressure transducer is located in the compressor discharge line and is monitored by the PCM. If high or low refrigerant pressures are experienced, the PCM will interrupt A/C compressor operation.

The pressure relief valve is installed in the compressor manifold and tube assembly and protects the system from excessively high refrigerant pressure.

The thermostatic expansion valve, which is mounted to the evaporator core inlet and outlet tubes, contains an adjustable orifice which provides the restriction that separates the high and low pressure liquid phases in the refrigeration system.

A/C Compressor and Clutch Assembly

NOTE: Internal A/C compressor components are not serviced separately. The A/C scroll compressor is serviced only as an assembly. The A/C clutch, A/C clutch pulley and the A/C clutch field coil are serviceable.

The Ford Variable Scroll A/C compressor (SC90V) has the following characteristics:

- A variable capacity function controlled by a suction pressure sensing device.
- A fixed and orbiting scroll to provide refrigerant compression.
- A non-serviceable shaft seal.
- The A/C compressor uses PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B. This oil contains special additives necessary for the A/C compressor.

The A/C compressor contains a thermal cutout switch which senses the compressor housing temperature. The switch will disengage the A/C compressor clutch if the housing temperature exceeds 120°C (247°F).

SC90V A/C compressors used on the six and eight cylinder engines are not interchangeable.

Item	Part Number	Description
1	19D798	A/C clutch field coil
2	W704579-S301	Field coil snap ring
3	19D784	A/C clutch pulley
4	W701742-S301	Pulley snap ring
5	19D648	A/C clutch hub spacer
6	19D786	A/C clutch
7	W704577-S301	A/C clutch nut

The SC90V magnetic A/C clutch has the following characteristics:

- It drives the compressor shaft.
- When battery positive voltage (B+) is applied to the A/C clutch field coil, the clutch disc and hub assembly is drawn toward the A/C clutch pulley.
- The magnetic force locks the clutch disc and hub assembly and the A/C clutch pulley together as one unit, causing the compressor shaft to rotate.
- When B+ is removed from the A/C clutch field coil, springs in the clutch disc and hub assembly move the clutch disc away from the A/C clutch pulley.

A/C Compressor Pressure Relief Valve

An A/C compressor pressure relief valve is incorporated into the compressor A/C manifold and tube to:

- relieve unusually high refrigerant system discharge pressure buildups. For specifications regarding operating pressure(s), refer to [Section 412-00](#).
- prevent damage to the A/C compressor and other system components.
- avoid total refrigerant loss by closing after the excessive pressure has been relieved.

A/C Condenser Core

The A/C condenser core has the following characteristics:

- It is an aluminum fin and tube design heat exchanger located in front of the vehicle radiator (8005).
- It cools compressed refrigerant gas by allowing air to pass over fins and tubes to extract heat and by condensing gas to liquid refrigerant as it is cooled.

Refrigerant Lines

The manifold and tube assembly-receiver drier carries the high pressure liquid from the condenser core to the receiver drier, and from the receiver drier to the manifold and tube assembly-thermostatic expansion valve. It attaches to the A/C receiver drier, uses O-ring seals, and also contains the high pressure service port.

The manifold and tube assembly-thermostatic expansion valve carries high pressure liquid to the thermostatic expansion valve and low pressure gas from the thermostatic expansion valve to the manifold and tube assembly-A/C compressor.

The manifold and tube assembly-A/C compressor carries the high pressure gas from the A/C compressor to the condenser core. It also carries the low pressure gas received from the manifold and tube assembly-thermostatic expansion valve to the A/C compressor. The A/C manifold and tube assembly is attached to the A/C compressor, uses O-ring seals, and has:

- a Schrader-type valve stem core fitting used to mount the A/C pressure transducer so that the A/C pressure transducer can be removed without discharging the A/C system.
- a serviceable high pressure relief valve.

The manifold and tube assembly-A/C compressor used on the V6 and V8 engines are not interchangeable.

A/C Evaporator Core

The A/C evaporator core is the plate/fin type with a unique refrigerant flow path.

- A mixture of refrigerant and oil exits the thermostatic expansion valve (TXV) and enters the evaporator tank area through the 1/2 inch (12.7 mm) tube.
- The tank area is divided into three sections: front inlet, front outlet and rear tank.
- The refrigerant enters the evaporator core tank area at the front inlet, flows down through the core and up the back side in a "U-flow" pattern.
- The refrigerant moves into the rear tank area and across to the other half of the core. The refrigerant moves down through the core and back up the front side of the core to the front outlet tank area.
- The refrigerant at this point is in a gaseous state. It exits the evaporator through the 5/8 inch (15.9 mm) tube then passes through the TXV.

A/C Thermostatic Expansion Valve

Item	Description
1	Sensing bulb
2	Insulator
3	Hollow core pin-type retainer
4	Outlet port—low pressure liquid
5	Metering orifice
6	Inlet port—high pressure liquid
7	Spring
8	Evaporator inlet port—low pressure liquid
9	Pin
10	Evaporator outlet port—low pressure gas
11	Housing

The thermostatic expansion valve has the following characteristics:

- It is mounted on the A/C evaporator core inlet and outlet tubes.
- It is a block-type valve.
- It contains an internal sensing bulb to increase the effectiveness of temperature sensing.
- It is not serviceable. A new thermostatic expansion valve must be installed as a unit.

Receiver Drier

The receiver drier is mounted to the engine fan shroud to the right of the vehicle center. The inlet tube of the receiver drier attaches directly to the A/C condenser core and the outlet tube of the receiver drier attaches to the thermostatic expansion valve inlet line.

The receiver drier stores high pressure liquid after it leaves the condenser core. A desiccant bag mounted in the receiver drier removes any retained moisture.

The manifold and tube assembly that mounts to the top of the receiver drier contains the high pressure service port for the refrigerant system.

A/C Pressure Transducer

The A/C pressure transducer monitors the compressor discharge pressure and communicates with the powertrain control module (PCM). The PCM will interrupt A/C compressor operation in the event that the A/C pressure transducer indicates high system discharge pressures. It is also used to sense no or low charge conditions. If the pressure is below a predetermined value for a given ambient temperature, the PCM will not allow the clutch to engage.

- The A/C pressure transducer is mounted on a Schrader valve-type fitting on the A/C compressor to condenser discharge line.
- A valve depressor, located inside the threaded end of the A/C pressure transducer, presses on the Schrader valve stem and allows the A/C pressure transducer to monitor the compressor discharge pressure.
- When the compressor discharge pressure rises, the PCM will interrupt the A/C compressor clutch coil circuit and disengage the A/C compressor. When the pressure drops, the PCM will enable the A/C compressor circuit. For specifications regarding operating pressure(s), refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
- It is not necessary to discharge the refrigerant system to remove the A/C pressure cut-off switch.

Spring Lock Coupling

Item	Part Number	Description
1	—	Female fitting
2	19E746	A/C tube lock coupling clip
3	19E576	A/C tube lock coupling spring
4	—	Cage
5	—	O-ring seals
6	—	Male fitting

The spring lock coupling is a refrigerant line coupling held together by a garter spring inside a circular cage. The spring lock coupling is used to connect the A/C compressor manifold and tube assembly (inlet) to the TXV manifold and tube assembly (outlet).

- When the coupling is connected together, the flared end of the female fitting slips behind the garter spring inside the cage of the male fitting.
- The garter spring and cage then prevent the flared end of the female fitting from pulling out of the cage.
- Three O-ring seals are used to seal between the thermostatic expansion valve outlet tube and the compressor inlet tube. All other couplings have two O-ring seals.
- Use only the O-ring seals listed in the Ford Master Parts Catalog for the spring lock coupling.
- An A/C tube lock coupling clip is used to secure the coupling.

Peanut Fitting

The A/C condenser core and the connection between the receiver drier manifold assembly (outlet) and the TXV manifold and tube assembly (inlet) use the peanut-shaped refrigerant fittings instead of spring lock couplings.

- The male and female blocks of the peanut fitting are retained with a nut.
- An O-ring seal is installed around the tube on the male block.
- When correctly assembled, the male and female fittings should be flush.
- Use only the O-ring seals listed in the Ford Master Parts Catalog for the peanut fitting.

Item	Part Number	Description
1	—	Female block (part of tube assembly)
2	W701890-S426	Stud (part of female block)
3	—	Male block (part of 19712)
4	W520413-S301	Nut
5	—	O-ring seal

Service Gauge Port Valves

The high-pressure service gauge port valve is located on the A/C receiver drier manifold and tube assembly.

The low pressure service gauge port valve is located on the manifold of the A/C compressor manifold and tube assembly at the A/C compressor.

Item	Part Number	Description
1	19D702	A/C charging valve cap
2	—	Low pressure service gauge port valve
3	19D701	Schrader-type valve
4	—	O-ring seal (part of 19D701)
5	—	High pressure service gauge port valve
6	19D702	A/C charging valve cap

The fitting is an integral part of the refrigeration line or component.

- Special couplings are necessary for both the high side and low side service gauge ports.
 - A new Schrader-type valve core can be installed if the seal leaks.
 - Always install the A/C charging valve cap on the service gauge port valves after repairing the refrigerant system.
-

Air Conditioning (A/C) Compressor —3.0L

Removal and Installation

⚠ CAUTION: If installing a new air conditioning compressor due to an internal failure of the old unit, you must carry out the following procedures to remove contamination from the air conditioning system.

- If A/C flushing equipment is available, carry out the flushing of the air conditioning system prior to installing a new air conditioning compressor. For additional information, refer to [Section 412-00](#).
- If A/C flushing equipment is not available, carry out filtering of the air conditioning system after a new air conditioning compressor has been installed. For additional information, refer to [Section 412-00](#).
- Install a new thermostatic expansion valve, as directed by the A/C flushing or filtering procedure.
- Install a new receiver/drier, as directed by the A/C flushing or filtering procedure.

NOTE: Installation of a new receiver/drier is not required when repairing the air conditioning system except when there is physical evidence of system contamination from a failed A/C compressor or damage to the suction accumulator.

1. If flushing of the air conditioning system has not been performed, recover the refrigerant. For additional information, refer to [Section 412-00](#).
2. Remove the drive belt from the A/C clutch pulley.
3. Raise the vehicle. For additional information, refer to [Section 100-02](#).
4. Remove the screws and remove the sight shield.

5. Remove the bolt and reposition the A/C manifold and tube assembly.

6. Disconnect the connector.

7. Remove the bolts and lower the A/C compressor.

8. To install, reverse the removal procedure.
 - If filtering of the refrigerant system is not to be performed, add the correct amount of PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B to the new A/C compressor. For additional information, refer to [Section 412-00](#).
 - Lubricate the O-ring seal with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.

9. If filtering of the refrigerant system is not to be performed, evacuate, charge and leak test the refrigerant system. For additional information, refer to [Section 412-00](#).
-

Air Conditioning (A/C) Compressor —3.9L

Removal and Installation

⚠ CAUTION: If installing a new air conditioning compressor due to an internal failure of the old unit, you must carry out the following procedures to remove contamination from the air conditioning system.

- If A/C flushing equipment is available, carry out the flushing of the air conditioning system prior to installing a new air conditioning compressor. For additional information, refer to [Section 412-00](#).
- If A/C flushing equipment is not available, carry out filtering of the air conditioning system after a new air conditioning compressor has been installed. For additional information, refer to [Section 412-00](#).
- Install a new thermostatic expansion valve, as directed by the A/C flushing or filtering procedure.
- Install a new receiver/drier, as directed by the A/C flushing or filtering procedure.

NOTE: Installation of a new receiver/drier is not required when repairing the air conditioning system except when there is physical evidence of system contamination from a failed A/C compressor or damage to the suction accumulator.

1. If flushing of the air conditioning system has not been performed, recover the refrigerant. For additional information, refer to [Section 412-00](#).
2. Remove the air cleaner outlet tube. For additional information, refer to [Section 303-12](#).
3. Remove the drive belt from the A/C clutch pulley.
4. Raise the vehicle. For additional information, refer to [Section 100-02](#).
5. Remove the screws and remove the sight shield.

6. Remove the screw and position the power steering hose aside.

7. Remove the bolt and reposition the A/C manifold and tube assembly.

8. Disconnect the connector.

9. Remove the three bolts and lower the A/C compressor.

10. To install, reverse the removal procedure.

- If filtering of the refrigerant system is not to be performed, add the correct amount of PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B to the new A/C compressor. For

additional information, refer to [Section 412-00](#).

- Lubricate the O-ring seal with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.

Air Conditioning (A/C) Compressor Bracket —3.0L

Removal and Installation

1. Remove the A/C compressor. For additional information, refer to [Air Conditioning \(A/C\) Compressor—3.0L](#) in this section.
2. Disengage the wire harness pin-type retainer.

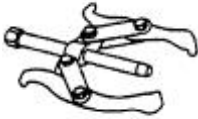

3. Remove the bolts and remove the bracket.

4. To install, reverse the removal procedure.
-

Clutch and Clutch Field Coil

Special Tool(s)

 <p>ST1233-A</p>	Installer, A/C Compressor Clutch Pulley 412-109 (T97P-19D786-A)
 <p>ST1220-A</p>	Remover, Differential Bearing 205-116 (T77F-4220-B1)

Removal

1. Remove the A/C compressor. For additional information, refer to [Air Conditioning \(A/C\) Compressor—3.0L](#) or [Air Conditioning \(A/C\) Compressor—3.9L](#) in this section.
2. Remove the A/C clutch.
 1. Hold the A/C clutch hub.
 2. Remove the nut.
 3. Remove the A/C disk and hub.

3. Remove the spacer.

4. Remove the pulley snap ring.

5. Using the special tool, remove the A/C clutch pulley.

6. Remove the sensor.
 1. Remove the bolt and the hold-down bracket.
 2. Lift out the sensor while lightly twisting and pulling up on the sensor.
 - It may be necessary to pry up lightly with a small screwdriver.

7. Remove the field coil snap ring.

8. Remove the A/C clutch field coil.

Installation

1. Clean the A/C clutch field coil and pulley mounting surfaces.
2. Install the A/C clutch field coil.

3. Install the snap ring with the bevel side out.

4. **NOTE:** The A/C clutch bearing and pulley is a slip fit on the compressor. If correctly aligned it should slip on easily. If difficulty is encountered, install using the special tool.

Using the special tool, install the clutch bearing and pulley.

1. Position the clutch bearing and pulley.
2. Install the special tool. If required, gently tap and install the clutch bearing and pulley.

5. Install the snap ring with the bevel side out.

6. Install the spacer.

7. **NOTE:** Make sure to align the block tooth on the shaft with the missing tooth on the disc and hub.

Install the A/C clutch.

8. Install the sensor.
 1. Push the sensor into position.
 2. Install the bolt and the hold-down bracket.

9. Install the bolt.
 1. Hold the A/C clutch.
 2. Install the bolt.

10. Measure and adjust the clutch air gap by removing or adding A/C clutch hub spacers.

11. Install the A/C compressor. For additional information, refer to [Air Conditioning \(A/C\)](#)

[Compressor—3.0L](#) or [Air Conditioning \(A/C\) Compressor—3.9L](#) in this section.

Evaporator Core

Removal and Installation

NOTE: If an A/C evaporator core leak is suspected the A/C evaporator core must be leak tested before it is removed from the vehicle. For additional information, refer to [Section 412-00](#).

1. Remove the evaporator core housing. For additional information, refer to [Section 412-02](#).
2. Remove the screws which connect the air inlet housing to the evaporator housing.

3. Disengage the clip and separate the housings.

4. Disconnect the evaporator core housing wire harness connectors and position the wire harness aside.

5. Remove the gasket.

6. Remove the nine screws, disengage the clip and separate the heater/evaporator core housing.

7. Remove the evaporator core.

8. Disconnect the fittings and remove the thermostatic expansion valve.

9. To install, reverse the removal procedure.

- Lubricate the O-ring seal with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.

- Add the correct amount of PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B to the new A/C evaporator core. For additional information, refer to [Section 412-00](#).
-

Receiver Drier

Removal and Installation

1. Recover the refrigerant. For additional information, refer to [Section 412-00](#).
2. Raise the vehicle. For additional information, refer to [Section 100-02](#).
3. Remove the screws and remove the LH sight shield.

4. Remove the screws and remove the air deflector.

5. Remove the nut and disconnect the peanut fitting. For additional information, refer to [Section 412-00](#).

6. Lower the vehicle.

7. Disconnect the air outlet tube. For additional information, refer to [Section 303-12](#).
8. Remove the nut.

9. Remove the bolt. Position the receiver drier away from the radiator shroud and disconnect the receiver drier from the manifold.

10. To install, reverse the removal procedure.
 - Lubricate the O-ring seal with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.
-

Air Conditioning (A/C) Pressure Transducer

Removal and Installation

1. Disconnect the battery. For additional information, refer to [Section 414-01](#).
2. Disconnect the connector.

3. Remove the pressure transducer.

4. To install, reverse the removal procedure.
 - Lubricate the O-ring seal with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.

Air Conditioning (A/C) Pressure Relief Valve

Removal and Installation

1. Recover the refrigerant. For additional information, refer to [Section 412-00](#).
2. Remove the A/C compressor pressure relief valve (3.0L shown, 3.9L similar).

3. To install, reverse the removal procedure.
 - Lubricate the O-ring seal with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.
-

Condenser Core

Material

Item	Specification
PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C)	WSH-M1C231-B

Removal and Installation

NOTE: If an A/C condenser core leak is suspected, the A/C condenser core must be leak tested before it is removed from the vehicle. For additional information, refer to [Section 412-00](#).

NOTE: Installation of a new receiver/drier is not required when repairing the air conditioning system except when there is physical evidence of contamination from a failed A/C compressor or damage to the receiver drier.

1. Recover the refrigerant. For additional information, refer to [Section 412-00](#).
2. Remove the air cleaner outlet tube. For additional information, refer to [Section 303-12](#).
3. Remove the upper radiator sight shield.
4. Remove the nut and disconnect the condenser inlet fitting.

5. **NOTE:** LH condenser bracket pin-type retainer shown, RH similar.

Remove the RH and LH upper condenser bracket pin-type retainers.

6. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
7. Remove the screws and remove the air deflector.

8. Remove the air deflector.
 1. Remove the pin-type retainers.
 2. Remove the side-clip retainers.

9. Remove the nut and disconnect the condenser outlet fitting.

10.  **CAUTION:** To avoid damage to the condenser core, correctly support the condenser when removing the lower mounting bolts.

Remove the LH bolt.

11. Remove the RH bolt and lower the condenser core.

12. To install, reverse the removal procedure.

- Install new O-ring seals lubricated in clean PAG oil.
 - Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to [Section 412-00](#).
-

Receiver Drier Manifold and Tube Assembly —3.0L

Removal and Installation

1. Recover the refrigerant. For additional information, refer to [Section 412-00](#).
2. Disconnect the peanut fitting. For additional information, refer to [Section 412-00](#).

3. Disconnect the peanut fitting. For additional information, refer to [Section 412-00](#).

4. Remove the nut.

5. Remove the receiver drier mounting bracket clamp bolt. Move the receiver drier away from the fan shroud and remove the receiver drier.

6. Remove the receiver drier manifold assembly.
 7. To install, reverse the removal procedure.
 - Lubricate the O-ring seal with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.
-

Receiver Drier Manifold and Tube Assembly —3.9L

Removal and Installation

1. Recover the refrigerant. For additional information, refer to [Section 412-00](#).
2. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
3. Disconnect the peanut fitting. For additional information, refer to [Section 412-00](#).

4. Remove the screws and remove the air deflector.

5. Remove the air deflector.
 1. Remove the push-pin retainers.
 2. Remove the side-clip retainers.

6. Disconnect the peanut fitting. For additional information, refer to [Section 412-00](#).

7. Lower the vehicle.
8. Remove the air cleaner outlet tube. For additional information, refer to [Section 303-12](#).
9. Remove the nut.

10. Remove the receiver drier mounting bracket clamp bolt. Move the receiver drier away from the fan shroud and remove the receiver drier.

11. Remove the receiver drier manifold assembly.
 12. To install, reverse the removal procedure.
 - Lubricate the O-ring seal with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.
-

Compressor Manifold and Tube Assembly

Removal and Installation

1. Disconnect the battery. For additional information, refer to [Section 414-01](#).
2. Recover the refrigerant. For additional information, refer to [Section 412-00](#).
3. Disconnect the air outlet tube and position aside. For additional information, refer to [Section 303-12](#).
4. Disconnect the connector.

5. Remove the nut and disconnect the peanut fitting. For additional information, refer to [Section 412-00](#).

6. Raise the vehicle. For additional information, refer to [Section 100-02](#).
7. Remove the screws and remove the LH and RH sight shields (LH shown, RH similar).

8. Remove the screws and remove the air deflector.

9. Remove the refrigerant line bracket bolt.

10. Disconnect the spring lock coupling. For additional information, refer to [Section 412-00](#).

11. Loosen the bolt and remove the A/C compressor manifold and tube assembly.

12. To install, reverse the removal procedure.

- Lubricate the O-ring seal with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.

Thermostatic Expansion Valve Manifold and Tube Assembly —3.0L

Removal and Installation

1. Recover the refrigerant. For additional information, refer to [Section 412-00](#).
2. Remove the cabin air filter plenum. For additional information refer to [Section 412-01](#).
3. Disconnect the heater hoses from the heater core.

4. Disconnect the coolant recovery line.

5. Remove the forward heater hose mounting bolt at the RH shock tower.

6. Raise the vehicle. For additional information refer to [Section 100-02](#).

7. **NOTE:** Shown with components removed for clarity.

Remove the rear heater hose mounting bolt from the body side and position the heater hose assembly aside.

8. Disconnect the spring lock coupling. For additional information, refer to [Section 412-00](#).

9. Remove the nut and disconnect the peanut fitting. For additional information, refer to [Section 412-00](#).

10. Remove the refrigerant line bracket bolt.

11. Remove the refrigerant line bracket bolt.

12. Remove the refrigerant line bracket bolts and position the bracket aside.

13. Loosen the bolt and remove the thermostatic expansion valve manifold and tube assembly.

14. To install, reverse the removal procedure.

- Lubricate the O-ring seal with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.

- Make sure that the heater hoses are connected correctly to the heater core. For additional information refer to [Section 412-02](#).
- Lubricate the coolant hoses with MERPOL® or plain water, if needed.

Thermostatic Expansion Valve Manifold and Tube Assembly —3.9L

Removal and Installation

1. Recover the refrigerant. For additional information, refer to [Section 412-00](#).
2. Remove the cabin air filter plenum. For additional information, refer to [Section 412-01](#).
3. Disconnect the heater hoses from the heater core.

4. Remove the forward heater hose mounting bolt at the RH shock tower.

5. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
6. **NOTE:** Shown with components removed for clarity.

Remove the rear heater hose mounting bolt from the body side and position the heater hose assembly aside.

7. Disconnect the spring lock coupling. For additional information, refer to [Section 412-00](#).

8. Remove the nut and disconnect the peanut fitting. For additional information, refer to [Section 412-00](#).

9. Remove the refrigerant line bracket bolt.

10. Lower the vehicle.
11. Loosen the two mounting bolts. Lift off and set aside the power steering reservoir.

12. Remove the refrigerant line bracket bolts and position the bracket aside.

13. Remove the refrigerant line bracket bolt.

14. Disconnect the coolant recovery line.

15. Disconnect the differential pressure feedback EGR (DFPE) sensor.
1. Disconnect vacuum hoses.
 2. Disconnect electrical connector.

16. Remove wire harness retaining nuts and position wire harness aside.

17. **NOTE:** Engine removed for clarity.

Remove the two harness bracket retaining bolts and remove the harness bracket.

18. Loosen the bolt and remove the thermostatic expansion valve manifold and tube assembly.

19. To install, reverse the removal procedure.

- Lubricate the O-ring seal with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-

19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.

- Make sure that the heater hoses are connected correctly to the heater core. For additional information, refer to [Section 412-02](#).
- Lubricate the coolant hoses with MERPOL® or plain water, if needed.

Thermostatic Expansion Valve

Removal and Installation

1. Disconnect the battery. For additional information, refer to [Section 414-01](#).
2. Recover the refrigerant. For additional information, refer to [Section 412-00](#).
3. Remove the evaporator core. For additional information, refer to [Evaporator Core](#) in this section.
4. Disconnect the thermostatic expansion valve fittings.

5. To install, reverse the removal procedure.
 - Lubricate the O-ring seals with PAG Refrigerant Compressor Oil (R-134a Systems) F7AZ-19589-DA (Motorcraft YN-12-C) or equivalent meeting Ford specification WSH-M1C231-B.
-

Control Components

Dual Electronic Automatic Temperature Control

With the use of a microcontroller, the dual automatic temperature control (DATC) module analyzes input from the following major sources:

- temperature, function and blower selection (made by the vehicle occupants)
- in-vehicle temperature sensor
- ambient temperature sensor
- dual sunload sensor
- vehicle speed
- engine rpm
- engine coolant temperature
- actuator door position controls
- driver and passenger heater core air discharge temperature sensors
- evaporator discharge temperature

Using these inputs, the microcontroller determines the correct conditions for the following outputs:

- A/C clutch engagement
- blower speed
- cold air bypass door position
- panel door position
- defrost door position
- floor door position
- air inlet duct door position
- driver coolant control valve
- passenger driver coolant control valve
- electric water pump (3.9L engine)
- heater wiper rest or heated windshield
- heated rear window rear defog
- external temperature (outside temperature display)

Component Locations

A0005009

Item	Part Number	Description
1	19C734	Sensor—evaporator discharge air temperature
2	19E616	Actuator—defrost duct door
3	19E663	A/C dual sunload sensor
4	19E616	Actuator—panel, center console
5	19E616	Actuator—air inlet
6	19E624	A/C blower motor speed control
7	19C734	Sensor—passenger air discharge temperature
8	19E616	Actuator—floor duct door

9	12A648	Sensor—ambient air temperature
10	19C734	Sensor—driver air discharge temperature
11	19E616	Actuator—cold air bypass door
12	19C734	Sensor—in-vehicle temperature

Control System Inputs

Climate Control Assembly

The dual automatic temperature control (DATC) module, located in the instrument panel, has the following features:

- a blower speed override control for manual input
- individual temperature set controls for driver and passenger
- an A/C request control for manual input
- a recirculated air control for manual input
- a vacuum fluorescent display for displaying set temperatures for both the driver and passenger, external or ambient temperature, blower speed setting and diagnostic trouble codes (DTCs)
- an on-board diagnostic (OBD) feature to supply the technician with diagnostic trouble codes (DTCs). These DTCs direct the technician to the inoperative component.
- air distribution mode overrides
- rear defog control
- heated wiper rest or heated windshield
- EXT temperature control to display external or outside temperature
- F/C control to toggle between English or metric settings

A/C Ambient Air Temperature Sensor

The A/C ambient air temperature sensor:

- is located in front of the A/C condenser core near the center of the vehicle.
- contains a thermistor which measures the temperature of outside air as a resistance and sends that reading to the dual automatic temperature control assembly.

In-Vehicle Temperature Sensor

The in-vehicle temperature sensor is located in the instrument cluster finish panel. The sensor operates in the following manner:

- A thermistor in the in-vehicle temperature sensor measures air temperature inside the passenger compartment.
- An automatic temperature control sensor hose is connected between the A/C plenum housing and the in-vehicle temperature sensor.
- The automatic temperature control sensor hose and venturi takes air from the A/C plenum housing to create a suction across the in-vehicle temperature sensor.
- The suction draws in-vehicle air into the in-vehicle temperature sensor and across the thermistor.

Dual A/C Sunload Sensor

The dual A/C sunload sensor:

- is located on the top center of the instrument panel in the defroster grille.
- contains photovoltaic diodes that are sensitive to sunlight.
- generates small amounts of current across the terminals depending upon the amount of light reaching the photovoltaic diode; therefore the only test that can be carried out is for an internal short circuit, an open circuit or sensor value out-of-range.
- contains an internal diagnostic resistor to allow the DATC module to detect a difference between an open circuit and no sunlight.

Control System Outputs

A/C Blower Motor Speed Control

The A/C blower motor speed control is located on the A/C evaporator housing.

- The function of the A/C blower motor speed control is to convert low power signals from the dual electronic automatic temperature control module to a high current, variable ground feed for the blower motor.
- Blower motor speed is infinitely variable and is controlled by the dual electronic automatic temperature control module software.
- A delay function provides a gradual increase or decrease in blower motor speed under all conditions.
- Controls the integral high blower relay which is engaged when maximum fan speed is selected.

A/C Electronic Air Inlet Door Actuator

The A/C electronic air inlet door actuator is located on the evaporator housing. The air inlet door position determines whether outside or recirculated air is being used.

- The actuator positions the air inlet door on command from the control assembly.
- The air inlet door actuator contains a reversible electric motor and a potentiometer.
- A 5 volt signal and ground reference is applied to the ends of the potentiometer. The voltage available at the wiper indicates the position of the potentiometer. The target position of the actuator is calculated by the DATC module and is matched with the wiper voltage of the actuator. The control module will drive the actuator motor in the direction necessary to make the actuator wiper voltage agree with the control module target position.

Cold Air Bypass Door Actuator

The cold air bypass door actuator is located on the evaporator core housing. During automatic operation the control module can position the door fully open so that some of the airflow will not pass through the heater core. This will provide for maximum cooling. The door is closed or partially closed during modes other than maximum cooling.

- The cold air bypass door actuator positions the cold air bypass door on command from the DATC module.
- Operation of the cold air bypass door actuator is the same as the air inlet door.

Defrost Door Actuator

The defrost door actuator is located on the plenum chamber. The actuator will position the defrost door fully open during defrost operation, partially open during floor/defrost and floor mode operation and fully closed during all other operations.

- The defrost door actuator positions the defrost door on command from the DATC module.
- Operation of the defrost door actuator is the same as the air inlet door.

Panel, Floor Console Door Actuator

The panel, floor console door actuator is located on the plenum chamber. The actuator operates the panel door which is mechanically linked to the floor console door. The actuator positions the panel door and floor console door fully open during panel mode and partially open during floor/panel operation. The doors are closed during other operations.

- The panel, floor console door actuator positions the panel and floor console doors on command from the DATC module.
- Operation of the panel door actuator is the same as the air inlet door.

Floor Outlet Door Actuator

The floor outlet door actuator positions the floor outlet door fully open during floor and floor/panel and floor/defrost operations. The door is closed during other operations.

- The floor outlet door actuator positions the floor outlet door on command from the DATC module.
 - Operation of the floor door actuator is the same as the air inlet door.
 - The floor outlet door actuator is in the full open position in OFF mode.
-

Climate Control Assembly

Removal and Installation

NOTE: If installing a new climate control assembly, dual automatic temperature control (DATC module), the new module must be configured. For additional information, refer to [Section 418-01](#).

1. Disconnect the battery. For additional information, refer to [Section 414-01](#).
2. Remove the ashtray finish panel.
 - Disconnect the connector.

3. Insert a mini-pick in the center register and pull the center register from the instrument panel.
 - If equipped, disconnect the connector.

4. Remove the screws and pull the DATC and radio assembly away from the instrument panel.

5. Disconnect the two connectors.

6. **NOTE:** The control assembly has three pins at the top of the bezel assembly which pilot in the bottom of the radio bezel. Use care when removing the control assembly.

Remove the four screws (two on each side of the control assembly) and remove the dual automatic temperature control assembly.

7. To install, reverse the removal procedure.
-

Ambient Air Temperature Sensor

Removal and Installation

1. Remove the wire harness connector and sensor.

2. Disconnect the wire harness connector.

3. To install, reverse the removal procedure.
-

Sunload Sensor

Removal and Installation

1. Remove the instrument panel upper finish panel.
 1. Raise the upper finish panel.
 2. Disconnect the connector and remove the instrument panel finish panel.

2. Remove the dual sunload sensor.
 1. Disconnect the connector.
 2. Remove the dual sunload sensor.

3. To install, reverse the removal procedure.

In-Vehicle Temperature Sensor

Removal and Installation

1. Remove the instrument cluster finish panel bezel. For additional information, refer to [Section 501-12](#).
2. Remove the in-car air temperature sensor.
 1. Disconnect the connector.
 2. Disconnect the aspirator hose and remove the in-car air temperature sensor.

3. To install, reverse the removal procedure.
-

Air Discharge Temperature Sensor

Removal and Installation

NOTE: RH shown, LH similar

1. Disconnect the connector.

2.  **CAUTION:** Do not twist the sensor during the removal process. Twisting may damage the sensor or the housing.

Remove the sensor using a rocking motion.

3. To install, reverse the removal procedure.

Blend Door Actuator —Air Inlet Door

Removal and Installation

1. Disconnect the battery. Refer to [Section 414-01](#).
2. Remove the RH instrument panel insulator.
3. Remove the RH floor duct. For additional information, refer to [Section 412-01](#).
4. Remove the actuator.
 1. Disconnect the connector.
 2. Remove the coupling connector.
 3. Remove the screws and remove the actuator.

5. **NOTE:** New door actuator assemblies are shipped with the actuator in the mid-position. If reinstalling an actuator removed from the vehicle, use fused jumper wires to electrically drive the actuator to the mid-position to assist in assembly.

To install, reverse the removal procedure.

- If reinstalling an actuator removed from the vehicle, align the arrow (1) on the actuator housing with the line on the actuator coupling (2).

Blend Door Actuator —Floor Duct Door

Removal and Installation

1. Disconnect the battery. For additional information, refer to [Section 414-01](#).
2. Remove the driver side instrument panel insulator.
3. Remove the LH floor duct. For additional information, refer to [Section 412-01](#).
4. Remove the actuator.
 1. Disconnect the connector.
 2. Remove the three screws and remove the actuator.

5. **NOTE:** New door actuator assemblies are shipped with the actuator in the mid-position. If reinstalling an actuator removed from the vehicle, use jumper wires to electrically drive the actuator to the mid-position to assist in assembly.

To install, reverse the removal procedure.

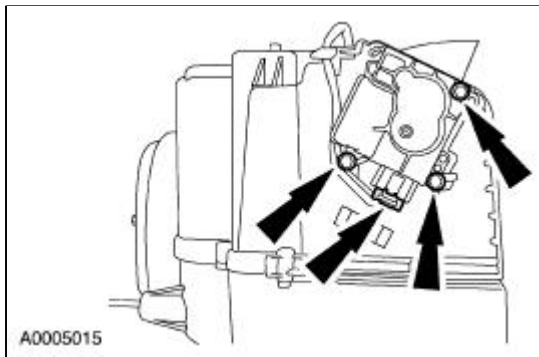

- If reinstalling an actuator removed from the vehicle, align the arrow (1) on the actuator housing with the line on the actuator coupling (2).

Blend Door Actuator —Cold Air Bypass Door

Removal and Installation

1. Disconnect the battery. For additional information, refer to [Section 414-01](#).
2. Remove the LH instrument panel insulator.
 - Disconnect the electrical connector.
3. Remove the LH floor duct. For additional information, refer to [Section 412-01](#).
4. Remove the actuator.
 - Disconnect the connector.
 - Remove the screws and remove the actuator.

5. **NOTE:** New door actuator assemblies are shipped with the actuator in the mid-position. If reinstalling an actuator removed from the vehicle, use jumper wires to electrically drive the actuator to the mid-position to assist in assembly.

To install, reverse the removal procedure.

- If reinstalling an actuator removed from the vehicle, align the arrow (1) on the actuator housing with the line on the actuator coupling (2).

Blend Door Actuator —Defrost Door

Removal and Installation

1. Remove the instrument panel. For additional information, refer to [Section 501-12](#).
2. Remove the actuator.
 - Disconnect the connector.
 - Remove the three screws and remove the actuator.

3. **NOTE:** New door actuator assemblies are shipped with the actuator in the mid-position. If reinstalling an actuator removed from the vehicle, use jumper wires to electrically drive the actuator to the mid-position to assist in assembly.

To install, reverse the removal procedure.

- If reinstalling an actuator removed from the vehicle, align the arrow (1) on the actuator housing with the line on the actuator coupling (2).

Blend Door Actuator —Panel, Floor Console Door

Removal and Installation

1. Disconnect the battery. For additional information, refer to [Section 414-01](#).
2. Remove the instrument panel. For additional information, refer to [Section 501-12](#).
3. Remove the panel, floor console door actuator.
 1. Disconnect the link end from the center console door.
 2. Remove the screws.
 3. Remove the panel, floor console door actuator.

4. **NOTE:** New door actuator assemblies are shipped with the actuator in mid-position. If reinstalling an actuator removed from the vehicle, use jumper wires to electrically drive the actuator to the mid-position to assist in assembly.

To install, reverse the removal procedure.

- If reinstalling an actuator removed from the vehicle, align arrow (1) on the actuator housing with the line on the actuator coupling (2).
- Position the actuator and the door fully open or fully closed.
- Manually position the floor console door fully open or fully closed and then install the link.
- Following installation, verify the door position by checking the airflow to the panel and floor console.

Blower Motor Speed Control

Removal and Installation

1. Remove the evaporator core housing. For additional information, refer to [Section 412-02](#).
2. Disconnect the connector.

3. Remove the screws which attach the air inlet housing to the evaporator core housing.

4. Remove the blower motor speed control mounting screw.

5. Disengage the clip, separate the air inlet and evaporator housings and remove the blower motor speed control.

6. To install, reverse the removal procedure.

Instrument Cluster and Panel Lighting

The instrument cluster and panel lighting system provides dimmable backlighting to the following:

- instrument cluster (10849)
 - headlamp switch (11654)
 - panel dimmer switch
 - climate control assembly
 - audio unit
 - ash tray
 - power door lock switches
 - power window switches
 - memory set switch
 - heated seat switch
 - steering wheel switches
 - shift lever indicator bezel
 - vehicle emergency monitoring system (VEMS) switch
 - power mirror switch
 - message center
-

Instrument Cluster and Panel Lighting

Refer to Wiring Diagrams Section [413-00](#), Instrument Illumination for schematic and connector information.

Special Tool(s)

 ST1137-A	73III Automotive Meter or equivalent 105-R0051
 ST1217-A	New Generation STAR (NGS) Tester or equivalent 418-F048 (007-00500)

Principles of Operation

Instrument Cluster and Panel Lighting — Dimmable

The panel dimmer switch allows the brightness level of backlights and displays to be adjusted dependent upon the headlamp switch position and the dimmer switch position. The panel dimmer switch sends a signal to the instrument panel which then sends a backlighting intensity and dimming curve command over the standard corporate protocol (SCP) link to the front electronic module (FEM), the audio unit, and the dual automatic temperature control (DATC) module. The FEM then sends a pulse width modulated (PWM) dimming signal to the instrument cluster, the dimmable LEDs, and the dimmable incandescents.

When the headlamp switch is in the parking lamps ON, headlamps ON, or the autolamps ON position and the autolamp feature is active, synchronized dimming of the dimmable components can be controlled with the panel dimmer switch.

With the ignition switch in the RUN position and the headlamp switch in the OFF position, the audio unit, DATC module, tripometer, odometer, and selector lever indicator bezel will be at 100% brightness.

All backlighting will be disabled when the battery saver function has been activated.

Fault Management

The dimmable backlighting will default to 100% intensity if a panel dimmer switch failure occurs.

Inspection and Verification

NOTE: The instrument cluster and FEM must be reconfigured upon replacement. Refer to [Section 418-01](#).

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Binding or damaged panel dimmer switch 	<ul style="list-style-type: none"> ● Battery junction box (BJB) fuse(s) <ul style="list-style-type: none"> ■ 425 (40A) ■ 422 (20A) ■ 432 (30A) ● Central junction box (CJB) fuse(s) <ul style="list-style-type: none"> ■ 202 (5A) ■ 207 (5A) ■ 213 (5A) ■ 217 (5A) ■ 220 (10A) ■ 233 (10A) ● Damaged bulb(s) ● Damaged/corroded wiring harness ● Damaged interior auxiliary junction box (IAJB) ● LH instrument panel junction box ● Damaged instrument cluster ● Damaged front electronic module (FEM) ● Damaged switches

3. If the concern remains after the inspection, connect the New Generation STAR (NGS) Tester to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the NGS menu. If the NGS does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
4. If the NGS still does not communicate with the vehicle, refer to the New Generation STAR Tester manual.
5. Carry out the DATA LINK DIAGNOSTIC TEST. If the NGS responds with:
 - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for front electronic module (FEM), go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for instrument cluster (ICM), go to Pinpoint Test B.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the ICM or FEM.
6. If the DTCs retrieved are related to the concern, go to the Instrument Cluster or FEM Diagnostic Trouble Code (DTC) Index to continue diagnostics.
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

FEM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1319	Driver Door Ajar Circuit Failure	FEM	REFER to Section 417-02 .

Pinpoint Tests

PINPOINT TEST A: NO COMMUNICATION WITH THE FRONT ELECTRONIC MODULE

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK CIRCUITS 29-DK20 (OG/GN) AND 29SW-DK22 (OG/YE) FOR VOLTAGE	

NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.

1

2

FEM C201c

3

FEM C201f

4

5

A0006297

5

Measure the voltage between FEM C201c pin 6, circuit 29-DK20 (OF/GN), harness side and ground; and between FEM C201f pin 1, circuit 29S-DK22 (OG/YE), harness side and ground.

• Are the voltages greater than 10 volts?

→ **Yes**
GO to [A2](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

A2 CHECK CIRCUITS 31-DK20 (BK/RD), 31-DK20A (BK/RD), 31-DK20B (BK/RD), 31-DK20C (BK/RD) AND 31-DK20D (BK/RD) FOR OPENS

1

2

FEM C201a

3

3

Using the following table, measure the resistance between FEM connectors, harness side and ground:

FEM	Pin	Circuit
C201c	12	31-DK20 (BK/RD)
C201a	11	31-DK20A (BK/RD)
C201a	13	31-DK20B (BK/RD)
C201a	14	31-DK20C (BK/RD)
C201a	15	31-DK20D (BK/RD)

● Is the resistance less than 5 ohms?

→ Yes

REFER to [Section 418-00](#).

→ No

REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST B: NO COMMUNICATION WITH THE INSTRUMENT CLUSTER MODULE

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK HOT AT ALL TIMES POWER SUPPLY CIRCUIT	
<p>1</p> <p>2</p> <p>Instrument Cluster C2208</p> <p>3</p> <p>A0002792</p>	<p>3</p> <p>Measure the voltage between instrument cluster C220b pin 3, circuit 29-GG11 (OG/BU), harness side and ground.</p> <p>● Is the voltage greater than 10 volts?</p>

- **Yes**
GO to [B2](#).
- **No**
REPAIR the circuit. TEST the system for normal operation.

B2 CHECK HOT IN RUN POWER SUPPLY CIRCUITS

1

2

- 2 Measure the voltage between the instrument cluster and ground as follows:

Connector Pin	Circuit
C220a pin 11	15-JA14 (GN/BK)
C220b pin 6	15-GG14 (GN/RD)
C220b pin 17	75-GG15 (YE/GN)

- Are the voltages greater than 10 volts?

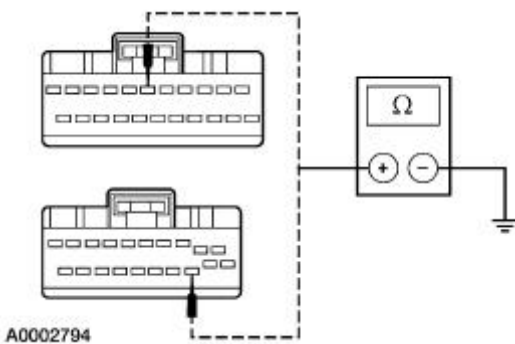

- **Yes**
GO to [B3](#).
- **No**
REPAIR the circuit(s). TEST the system for normal operation.

B3 CHECK GROUND CIRCUITS

1

2

- 2 Measure the resistance between the instrument cluster and ground as follows:

Connector Pin	Circuit
C220a pin 6	31-AL11 (BK)
C220b pin 13	91-GG11 (BN/RD)

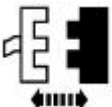

- Are the resistances less than 5 ohms?

	<p>→ Yes REFER to Section 418-00.</p> <p>→ No REPAIR the circuit(s). TEST the system for normal operation.</p>

<p>1</p>  <p>FEM C201f</p> <p>2</p>	

4

A0004436

3 Turn the headlamp switch to the ON position.

4 Measure the voltage between FEM C201f pin 1, circuit 29S-DK22 (OG/YE), harness side and ground.

• Is the voltage greater than 10 volts?

→ Yes
GO to [D2](#).

→ No
REPAIR the circuit. TEST the system for normal operation.

D2 CHECK CIRCUIT 64S-LH2 (BU/RD) FOR A SHORT TO GROUND

1

2

IAJB C283a

3

A0004437

1 Turn the headlamp switch to the OFF position.

3 Measure the resistance between IAJB C283a pin 13, circuit 64S-LH2 (BU/RD), harness side and ground.

• Is the resistance greater than 10,000 ohms?

→ Yes
GO to [D3](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

D3 CHECK THE OPERATION OF THE FEM

1

FEM C201f

2

5

A0004788

- 3 Turn the headlamps switch to the ON position.
- 4 Turn the panel dimmer switch to the MAX position.
- 5 Measure the voltage between IAJB C283a pin 13, circuit 64S-LH2 (BU/RD), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [D4](#).

→ **No**
GO to [D8](#).

D4 CHECK THE FEED CIRCUITS FOR A SHORT TO GROUND

1

2

IAJB C283d

3

- 3 Connect a fused (5A) jumper wire between IAJB C283d pin 13, circuit 64S-LK1 (BU), harness side and the positive battery terminal.

A0004778

- Did the headlamp, panel dimmer, mirror, and steering wheel switches along with the message center and instrument cluster illuminate?

→ **Yes**
GO to [D7](#).

→ **No**
GO to [D5](#).

D5 CHECK CIRCUIT 64S-LK1 (BU) FOR A SHORT TO GROUND

1

LH Instrument Panel Junction Box C224

2

A0004779

- 2 Measure the resistance between IAJB C224 pin 13, circuit 64S-LK1 (BU), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [D6](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

D6 CHECK THE FEED CIRCUITS FOR A SHORT TO GROUND

1

Steering Wheel Switch C217

2

Mirror Switch C204

3

Panel Dimmer Switch C206

4

Headlamp Switch C205

5

Message Center C253

6

Instrument Cluster C220a

7 Measure the resistance between the following circuits (using the chart below) and ground:

Connector and Pin	Circuit
Steering Wheel Switch C217 pin 5	Circuit 64-LK18 (BU/RD)
Mirror Switch C204 pin 5	Circuit 64S-LH50 (BU/YE)
Panel Dimmer Switch C206 pin 1	Circuit 64S-LE10 (BU/YE)
Headlamp Switch C205 pin 5	Circuit 64S-LH26 (BU/BK)
Message Center C253 pin 1	Circuit 64S-GG25 (BU/OG)
Instrument Cluster C220a pin 7	Circuit 64S-LK29 (BU/RD)

● Are the resistances greater than

10,000 ohms?

- **Yes**
REPAIR or INSTALL a new LH instrument panel junction box. CLEAR the DTCs. REPEAT the self-test.
- **No**
REPAIR the circuit in question. TEST the system for normal operation.

D7 CHECK THE IAJB FOR A SHORT TO GROUND

1

IAJB C283a

2

- 2 Connect a fused (5A) jumper wire between the IAJB C283a pin 5, harness side and the positive battery terminal.

- Do the selector lever indicator bezel, heated seat, TC disable, and vehicle emergency monitoring system (VEMS) switches along with the cigar lighter illuminate?

- **Yes**
REPAIR or INSTALL a new IAJB. CLEAR the DTCs. REPEAT the self-test.

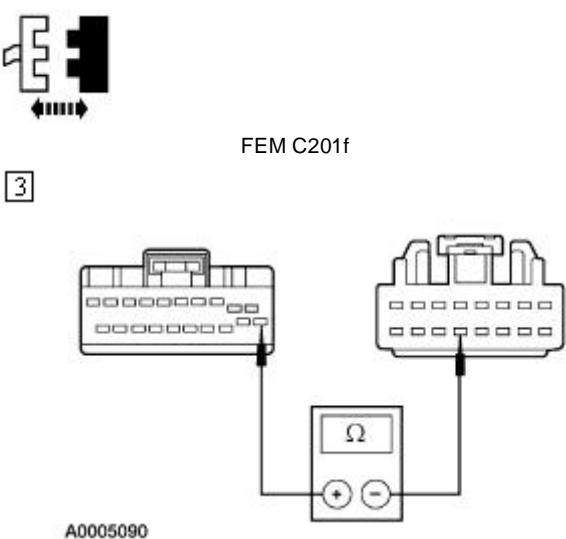

- **No**
REPAIR circuit 64S-LK21 (BU/BK), circuit 64S-HC6 (BU), circuit 64S-HC9 (BU/BK), circuit 64S-LH45 (BU/OG), circuit 64S-LK11 (BU), circuit 64S-GP6 (BU/RD), or circuit 64S-LK9 (BU) for a short to ground. TEST the system for normal operation.

D8 CHECK CIRCUIT 64S-LH2 (BU/RD) FOR AN OPEN

1

2

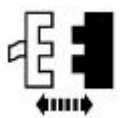

3 Measure the resistance between the FEM C201f pin 11, circuit 64S-LH2 (BU/RD), harness side and the IAJB C283a pin 13, circuit 64S-LH2 (BU/RD), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST E: THE CONTROL ILLUMINATION IS INOPERATIVE — ALL LEDS OR INCANDESCENTS

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 VERIFY WHICH ILLUMINATION IS INOPERATIVE	
	<p>1 Verify which switch or component illumination is inoperative.</p> <p>● Are the power window, power door lock, and memory switches inoperative?</p> <p>→ Yes GO to E2.</p> <p>→ No GO to E4.</p>
E2 CHECK THE FEM	
<p>1</p>  <p>FEM C201e</p>	

2

A0004781

2

Connect a fused (5A) jumper wire between the FEM C201e pin 1, circuit 64S-LH1 (BU), harness side and the positive battery terminal.

- Do the power window, power door lock, and memory switches illuminate?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [E3](#).

E3 CHECK THE IAJB

1

IAJB C283a

2

A0004782

2

Measure the resistance between FEM C201e pin 1, circuit 64S-LH1 (BU/RD), harness side and IAJB C283a pin 9, circuit 64S-LH1 (BU/RD), harness side; and between FEM C201e pin 1, circuit 64S-LH1 (BU/RD), harness side and ground.

- Is the resistance between the FEM and the IAJB less than 5 ohms and the resistance between the FEM and ground greater than 10,000 ohms?

→ **Yes**
REPAIR or INSTALL a new IAJB. CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

E4 CHECK THE OPERATION OF THE FEM

1

FEM C201f

2

A0005091

2

Connect a fused (5A) jumper wire between FEM C201f pin 11, circuit 64S-LH2 (BU/RD), harness side and the positive battery terminal.

- Do the selector lever indicator bezel, heated seat, TC disable, vehicle emergency monitoring system (VEMS), steering wheel, mirror, panel dimmer, and headlamp switches along with the cigar lighter, message center, and instrument cluster illuminate?

→ Yes

INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No

GO to [E5](#).

E5 CHECK CIRCUIT 64S-LH2 (BU/RD) FOR AN OPEN

1

IAJB C283a

2

A0005090

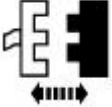

2

Measure the resistance between FEM C201f pin 11, circuit 64S-LH2 (BU/RD), harness side and the IAJB C283a pin 13, circuit 64S-LH2 (BU/RD), harness side.

- Is the resistance less than 5 ohms?

	<p>→ Yes REPAIR or INSTALL a new IAJB. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No REPAIR the circuit. TEST the system for normal operation.</p>
--	--

PINPOINT TEST F: THE CONTROL ILLUMINATION IS ALWAYS ON — ALL LEDS OR INCANDESCENTS

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 ISOLATE THE SYMPTOM	
<p>1</p> 	<p>2 Identify the symptom.</p> <ul style="list-style-type: none"> • Are only the power window, power door lock, and memory set switches always illuminated? <p>→ Yes GO to F2.</p> <p>→ No If both the LEDs and incandescents are always illuminated, GO to Pinpoint Test G. If only the selector lever indicator bezel, heated seat, TC disable, VEMS, steering wheel, mirror, panel dimmer, and headlamp switch along with the cigar lighter, message center, and instrument cluster illumination are always illuminated, GO to F7.</p>
F2 CHECK THE POWER SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE	
<p>1</p>  <p>2</p>  <p>FEM C201e</p> <p>3</p> 	

- Do the power window, power door lock, and memory set switch illumination turn off?

→ **Yes**
 INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 GO to [F3](#).

F3 ISOLATE THE SHORT TO VOLTAGE

1

2

IAJB C283a

3

4 Verify if any switches are still illuminated.

- Are any switches still illuminated?

→ **Yes**
 GO to [F4](#).

→ **No**
 REPAIR circuit 64S-LH1 (BU) for a short to voltage. TEST the system for normal operation.

F4 CHECK THE IAJB FOR A SHORT TO VOLTAGE

1

2

IAJB C283b

3

4 Verify if any switches are still illuminated.

● **Are any switches still illuminated?**

→ **Yes**

If the LF power door lock, power window, and memory set switch are illuminated, REPAIR circuit 29S-LH1 (OG/YE), circuit 29S-LH28 (OG/YG), circuit 29S-AH27 (OG/YE), or circuit 29S-LH14 (OG/YE) for a short to voltage; if the LR power window switch is illuminated, REPAIR circuit 29S-LH16 (OG) for a short to voltage; if any of the RF power door lock and power window, or RR power window switches are illuminated, GO to [F5](#).

→ **No**

REPAIR or INSTALL a new IAJB. CLEAR the DTCs. REPEAT the self-test.

F5 CHECK THE CJB FOR A SHORT TO VOLTAGE

1

2

CJB C270d

3

4 Verify if any switches are illuminated.

● **Are any switches illuminated?**

→ **Yes**

If the RF power door lock and power window switches are illuminated, REPAIR circuit 29S-LH2 (OG/BU), circuit 29S-LH42 (OG/BU), or circuit 29S-LH31 (OG/BU) for a short to power; if the RR power window switch is illuminated, REPAIR circuit 29S-LH33 (OG/BK) for a short to power. TEST the system for normal operation.

→ **No**

GO to [F6](#).

F6 CHECK CIRCUIT 29S-AD2 (OG/BU) FOR A SHORT TO VOLTAGE

1

1

Measure the voltage between IABJ C283b pin 11, circuit 29S-AD2 (OG/BU), harness side and ground.

● **Is any voltage present?**

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
REPAIR or INSTALL a new CJB. CLEAR the DTCs. REPEAT the self-test.

F7 CHECK THE FEED CIRCUIT FOR A SHORT TO VOLTAGE

1

2

FEM C210f

3

● **Do the selector lever indicator bezel, heated seat, TC disable, VEMS, steering wheel, mirror, panel dimmer, and headlamp switch along with the cigar lighter, message center, and instrument cluster illumination turn off?**

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [F8](#).

F8 ISOLATE THE SHORT TO VOLTAGE

1

2

IAJB C283d

3

IAJB C283a

4

5 Verify if any illumination sources are illuminated.

- **Are any illumination sources illuminated?**

→ **Yes**

If the selector lever indicator bezel, heated seat, TC disable, and vehicle emergency monitoring system (VEMS) switches along with the cigar lighter are illuminated REPAIR circuit 64S-LK9 (BU/WH), circuit 64S-LK21 (BU/BK), circuit 64S-HC6 (BU), circuit 64S-HC9 (BU/BK), circuit 64S-LH45 (BU/OG), circuit 64S-LK11 (BU), or circuit 64S-GP6 (BU/RD) for a short to voltage. If the steering wheel, mirror, panel dimmer, headlamp switch, along with the message center, and instrument cluster illumination are illuminated GO to [F10](#). TEST the system for normal operation.

→ **No**
GO to [F9](#).

F9 CHECK CIRCUIT 64S-LH2 (BU/RD) FOR A SHORT TO VOLTAGE

1

1 Measure the voltage between IAJB C283a pin 13, circuit 64S-LH2 (BU/RD), harness side and ground.

A0005093

● **Is any voltage present?**

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
REPAIR or INSTALL a new IAJB. CLEAR the DTCs. REPEAT the self-test.

F10 ISOLATE THE SHORT

1

2

LH Instrument Panel Junction Box C224

3

4 Verify which illumination source is illuminated.

● **Are any illumination sources illuminated?**

→ **Yes**
If the steering wheel switches are illuminated REPAIR circuit 64-LK18 (BU/RD) for a short to voltage; if the mirror switch is illuminated REPAIR circuit 64S-LH50 (BU/YE) for a short to voltage; if the panel dimmer switch is illuminated REPAIR circuit 64S-LE10 (BU/YE) for a short to voltage; if the headlamp switch is illuminated REPAIR circuit 64S-LH26 (BU/BK) for a short to voltage; if the message center is illuminated REPAIR circuit 64S-GG25 (BU/OG) for a short to

voltage; if the instrument cluster is illuminated REPAIR circuit 64S-LK29 (BU/RD) for a short to voltage. TEST the system for normal operation.

→ **No**
GO to [F11](#).

F11 CHECK CIRCUIT 64S-LK1 (BU) FOR A SHORT TO VOLTAGE

1

1

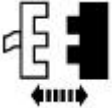

Measure the voltage between LH instrument panel junction box C224 pin 13, circuit 64S-LK1 (BU), harness side and ground.

● **Is any voltage present?**

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
REPAIR or INSTALL a new LH instrument panel junction box. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST G: THE CONTROL ILLUMINATION IS ALWAYS ON — ALL LEDS AND INCANDESCENTS

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 CHECK THE IAJB FOR A SHORT TO VOLTAGE	
<p>1</p>  <p>FEM C201f</p> <p>2</p>  <p>FEM C201e</p> <p>3</p> 	

- Do all the LEDs and incandescents turn off?

→ **Yes**

INSTALL a new FEM. CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR or INSTALL a new IAJB. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST H: A SINGLE ILLUMINATION SOURCE IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS																				
H1 CHECK THE POWER CIRCUIT TO THE LED OR INCANDESCENT IN QUESTION																					
<p>1</p>  <p>Inoperative Illumination Source</p> <p>2</p> 	<p>3 Turn the headlamps on.</p> <p>4 Turn the panel dimmer switch to the MAX position.</p> <p>5 Measure the voltage between the circuit in question and ground as follows.</p> <table border="1" data-bbox="539 1302 1342 2035"> <thead> <tr> <th data-bbox="539 1302 1091 1347">Connector and Pin</th> <th data-bbox="1091 1302 1342 1347">Circuit</th> </tr> </thead> <tbody> <tr> <td data-bbox="539 1347 1091 1425">LF Power Window Switch C504 pin 11</td> <td data-bbox="1091 1347 1342 1425">circuit 29S-LH14 (OG/YE)</td> </tr> <tr> <td data-bbox="539 1425 1091 1502">RF Power Window Switch C604 pin 6</td> <td data-bbox="1091 1425 1342 1502">circuit 29S-LH31 (OG/BU)</td> </tr> <tr> <td data-bbox="539 1502 1091 1580">RR Power Window Switch C801 pin 6</td> <td data-bbox="1091 1502 1342 1580">circuit 29S-LH33 (OG/BK)</td> </tr> <tr> <td data-bbox="539 1580 1091 1657">LR Power Window Switch C701 pin 6</td> <td data-bbox="1091 1580 1342 1657">circuit 29S-LH16 (OG)</td> </tr> <tr> <td data-bbox="539 1657 1091 1735">LF Power Door Switch C505 pin 6</td> <td data-bbox="1091 1657 1342 1735">circuit 29S-LH28 (OG/YE)</td> </tr> <tr> <td data-bbox="539 1735 1091 1813">RF Power Door Switch C605 pin 6</td> <td data-bbox="1091 1735 1342 1813">circuit 29S-LH42 (OG/BU)</td> </tr> <tr> <td data-bbox="539 1813 1091 1890">Memory Set Switch C503 pin 3</td> <td data-bbox="1091 1813 1342 1890">circuit 29S-AH27 (OG/YE)</td> </tr> <tr> <td data-bbox="539 1890 1091 1968">Selector Lever Indicator Bezel C307 pin 1</td> <td data-bbox="1091 1890 1342 1968">circuit 64S-LK21 (BU/RD)</td> </tr> <tr> <td data-bbox="539 1968 1091 2035">Left Heated Seat Switch C344 pin 6</td> <td data-bbox="1091 1968 1342 2035">circuit 64S-HC6 (BU)</td> </tr> </tbody> </table>	Connector and Pin	Circuit	LF Power Window Switch C504 pin 11	circuit 29S-LH14 (OG/YE)	RF Power Window Switch C604 pin 6	circuit 29S-LH31 (OG/BU)	RR Power Window Switch C801 pin 6	circuit 29S-LH33 (OG/BK)	LR Power Window Switch C701 pin 6	circuit 29S-LH16 (OG)	LF Power Door Switch C505 pin 6	circuit 29S-LH28 (OG/YE)	RF Power Door Switch C605 pin 6	circuit 29S-LH42 (OG/BU)	Memory Set Switch C503 pin 3	circuit 29S-AH27 (OG/YE)	Selector Lever Indicator Bezel C307 pin 1	circuit 64S-LK21 (BU/RD)	Left Heated Seat Switch C344 pin 6	circuit 64S-HC6 (BU)
Connector and Pin	Circuit																				
LF Power Window Switch C504 pin 11	circuit 29S-LH14 (OG/YE)

Mirror Switch C204 pin 5	circuit 64S-LH50 (BU/YE)
Panel Dimmer Switch C206 pin 1	circuit 64S-LE10 (BU/YE)
Headlamp Switch C205 pin 5	circuit 64S-LH26 (BU/BK)
Message Center C253 pin 1	circuit 64S-GG25 (BU/OG)

● **Is the voltage greater than 10 volts?**

→ **Yes**

GO to [H2](#).

→ **No**

REPAIR the circuit in question. TEST the system for normal operation.

H2 CHECK THE GROUND CIRCUIT TO THE LED OR INCANDESCENT IN QUESTION

1

2 Turn the headlamps off.

3 Measure the resistance between the circuit in question (using the chart below) and ground.

Connector and Pin	Circuit
LF Power Window Switch C504 pin 14	circuit 31-AJ80 (BK)
RF Power Window Switch C604 pin 4	circuit 31-LH31 (BK)
RR Power Window Switch C801 pin 4	circuit 31-LH33 (BK/GN)
LR Power Window Switch C701 pin 4	circuit 31-LH16 (BK/OG)
LF Power Door Switch C505 pin 4	circuit 31-LH28 (BK)
RF Power Door Switch C605 pin 4	circuit 31-LH42 (BK)
Memory Set Switch C503 pin 4	circuit 31-AH27 (BK)
Selector Lever Indicator Bezel C307 pin 2	circuit 31-LK21 (BK/GN)
Left Heated Seat Switch C344 pin 4	circuit 31-HC6 (BK/YE)

Right Heated Seat Switch C342 pin 4	circuit 31-HC9 (BK/GN)
TC Disable Switch C308 pin 5	circuit 31-LH45 (BK/WH)
Cigar Lighter C319 pin 4	circuit 31-LK11 (BK/YE)
VEMS Switch C915 pin 4	circuit 31-GP6 (BK)
Steering Wheel Switch Connector C217 pin 5	circuit 10-GJ9
Mirror Switch C204 pin 6	circuit 31-LH50 (BK)
Panel Dimmer Switch C206 pin 2	circuit 31-LE10 (BK)
Headlamp Switch C205 pin 4	circuit 31-LH26 (BK)
Message Center C253 pin 2	circuit 31-GG25 (BK)

● **Is the resistance greater than 10,000 ohms?**

→ **Yes**

INSTALL a new switch or illuminated component. CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST I: THE INSTRUMENT PANEL ILLUMINATION DOES NOT DIM

CONDITIONS	DETAILS/RESULTS/ACTIONS
I1 RETRIEVE DTCs FROM THE INSTRUMENT CLUSTER	
	<p>1 Use the recorded results from the instrument cluster self-test.</p> <p>● Are any DTCs retrieved?</p> <p>→ Yes If DTC B1246, GO to I3.</p> <p>If DTC B1342, CLEAR and DOCUMENT the DTCs. CARRY OUT the instrument cluster self-test. INSTALL a new instrument cluster if DTC B1342 is retrieved again. REFER to Section 413-01. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No GO to I2.</p>
I2 CHECK THE PANEL DIMMER SWITCH — MONITOR THE INSTRUMENT CLUSTER PID	
1	

- 2 Turn the headlamps on.
- 3 Select and monitor the instrument cluster PID DSWSTAT while rotating the panel dimmer switch from the lowest position to the highest position.

● **Does the PID value agree with the panel dimmer switch position?**

→ **Yes**
INSTALL a new instrument cluster.
REFER to [Section 413-01](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [I3](#).

I3 CHECK THE POWER CIRCUIT TO THE PANEL DIMMER SWITCH

Panel Dimmer Switch C206

A0004783

- 4 Measure the voltage between panel dimmer switch C206 pin 1, circuit 64S-LE10 (BU/YE), harness side and ground.

● **Is the voltage greater than 10 volts?**

→ **Yes**
GO to [I4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

I4 CHECK THE GROUND CIRCUIT TO THE PANEL DIMMER SWITCH

1

2

A0004784

2 Measure the resistance between panel dimmer switch C206 pin 2, circuit 31-LE10 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [15](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

I5 CHECK CIRCUIT 9-LE10 (BN/YE) FOR AN OPEN OR SHORT TO GROUND

1

Instrument Cluster C220c

2

A0004785

2 Measure the resistance between panel dimmer switch C206 pin 4, circuit 9-LE10 (BN/YE), harness side and instrument cluster C220c pin 4, circuit 9-LE10 (BN/YE), harness side; and between panel dimmer switch C206 pin 4, circuit 9-LE10 (BN/YE), harness side and ground.

● Is the resistance less than 5 ohms between the panel dimmer switch and instrument cluster; and greater than 10,000 ohms between the panel dimmer switch and ground?

→ **Yes**
GO to [16](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

I6 CHECK CIRCUIT 8-LE10 (WH/BK) FOR AN OPEN OR A SHORT TO GROUND

1

1 Measure the resistance between panel dimmer switch C206 pin 3, circuit 8-LE10 (WH/BK), harness side and instrument cluster C220c pin 16, circuit 8-LE10 (WH/BK), harness side; and between panel dimmer switch C206 pin 3, circuit 8-LE10 (WH/BK), harness side and ground.

- Is the resistance less than 5 ohms between the panel dimmer switch and instrument cluster; and greater than 10,000 ohms between the panel dimmer switch and ground?

→ **Yes**
INSTALL a new panel dimmer switch.
REFER to [Switch—Panel Dimmer](#).
CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

Switch —Panel Dimmer

Removal and Installation

1. Disconnect the battery ground cable. Refer to [Section 414-01](#).
2. Remove the lower instrument panel finish panel.
 1. Remove the bolts.
 2. Remove the lower instrument panel finish panel.

3. Remove the instrument panel finish panel.
 - Disconnect the electrical connectors.

4. Remove the panel dimmer switch.
 1. Release the four retaining clips.
 2. Remove the panel dimmer switch.

5. **NOTE:** When the battery is disconnected and reconnected, some abnormal drive symptoms

may occur while the vehicle relearns its adaptive strategy. The vehicle may need to be driven 16 km (10 miles) or more to relearn the strategy.

To install, reverse the removal procedure.

Torque Specifications

Description	Nm	lb-ft	lb-in
Battery ground cable bolt	10	—	89
Steering column reinforcement bolts	9	—	80
Instrument panel tunnel reinforcement bolts	20	15	—

Instrument Cluster

NOTE: Miles per hour (mph) instrument cluster shown, kilometers per hour (km/h) instrument cluster similar.

The standard instrument cluster consists of the following:

Instrument Cluster (Standard)

A0005647

Item	Part Number	Description
1	—	Engine coolant temperature gauge
2	—	Engine over-temperature indicator
3	—	Malfunction indicator lamp (MIL) indicator
4	—	Tachometer
5	—	High beam indicator
6	—	Anti-lock brake system (ABS)
7	—	Traction control indicator
8	—	Advance traction control indicator (if equipped)
9	—	Safety belt indicator
10	—	Speedometer
11	—	Air bag indicator
12	—	Steering column lock indicator (if equipped)
13	—	Fuel gauge
14	—	Door ajar indicator
15	—	Lamp outage indicator
16	—	Low washer fluid indicator
17	—	Low fuel indicator
18	—	Speed control indicator
19	—	Right turn signal indicator

20	—	Low oil pressure indicator
21	—	Charging system indicator
22	—	Brake system warning indicator (BRAKE)
23	—	Left turn signal indicator
24	—	A/B trip odometer button
25	—	Trip odometer button (reset)
26	—	Shift indicator
27	—	Odometer
28	—	Trip odometer

NOTE: Miles per hour (mph) instrument cluster shown, kilometers per hour (km/h) instrument cluster similar.

The optional instrument cluster consists of the following:

Instrument Cluster (Optional)

Item	Part Number	Description
1	—	Engine coolant temperature gauge
2	—	Engine over-temperature indicator
3	—	Malfunction indicator lamp (MIL)
4	—	Tachometer
5	—	High beam indicator
6	—	Anti-lock brake system (ABS)
7	—	Traction control indicator
8	—	Advance traction control indicator
9	—	Safety belt indicator
10	—	Speedometer
11	—	Air bag indicator
12	—	Fuel gauge
13	—	Message center display
14	—	Speed control indicator

15	—	Right turn signal indicator
16	—	Low oil pressure indicator
17	—	Charging system indicator
18	—	Brake system warning indicator (BRAKE)
19	—	Left turn signal indicator
20	—	A/B trip odometer button
21	—	Trip odometer button (reset)
22	—	Shift indicator
23	—	Odometer
24	—	Trip odometer

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052, or equivalent diagnostic tool
 ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

NOTE: The instrument cluster, front electronic module (FEM), and the rear electronic module (REM) must be reconfigured upon replacement. Refer to [Section 418-01](#).

NOTE: The diagnostic tool may display ICM for the instrument cluster.

NOTE: For any concerns with the restraint control module (RCM), refer to [Section 501-20B](#).

The instrument cluster is a hybrid electronic instrument cluster (HEC). The vehicle electronic functions are divided into zones. The instrument cluster, FEM, and REM use the standard corporate protocol (SCP) communication network to transmit and receive information. As a technician, it is very important to understand:

- where the input (command) originates from
- all information (messages) necessary in order for a feature to operate
- which module(s) receive(s) the input or command message
- does the module which received the input (message), control the output of the feature, or does it output a message over the SCP communication network to another module
- which module controls the output of the feature

The instrument cluster communicates with the FEM, REM, anti-lock brake system/traction control/interactive vehicle dynamics (ABS/TC/IVD), powertrain control module (PCM), steering column lock (SCL), message center (MC) module, and the restraint control module (RCM) over the SCP to control the gauges, indicators, and chimes.

Warning Indicator Functionality

Low Oil Pressure Indication

The low oil pressure switch is hardwired to the FEM. The status of the oil pressure is sent from the FEM to the instrument cluster via the standard corporate protocol (SCP) communication network.

Safety Belt Warning Indication

The safety belt switch is hardwired directly to the instrument cluster. The instrument cluster uses the input from the switch to determine whether or not the safety belt is fastened.

Door Ajar Warning Indication (If equipped)

The door switches for the rear of the vehicle are directly hardwired to the REM. The REM uses the multiple inputs from the door switches to determine whether the doors are in the opened or closed position. This information is then relayed from the REM to the instrument cluster via the SCP communication network. The door switches for the front of the vehicle are directly hardwired to the FEM. The FEM uses the multiple inputs from the door switches to determine whether the doors are in the opened or closed position. This information is then relayed to the instrument cluster via the SCP communication network.

Charging System Warning Indication

The charging system is hardwired to the PCM. The status of the charging system is then relayed from the PCM to the instrument cluster via the SCP communication network.

Brake Warning Indication

The brake warning indicator supports three separate functions. Those functions are brake system failure, low brake fluid level, and engagement of the parking brake control. These functions are controlled by the parking brake control switch, the brake fluid level switch and the brake system itself. The brake fluid level switch and the parking brake control switch are hardwired directly to the FEM. The status of both the fluid and parking brake control switches is sent from the FEM to the instrument cluster via the SCP communication network. The brake system status is sent from the ABS/TC/IVD to the instrument cluster via the SCP communication network.

High Beam Indication

The multifunction switch is hardwired directly to the FEM. The headlamp status is then sent from the FEM to the instrument cluster via the SCP communication network.

Low Washer Fluid Warning Indication (If equipped)

The low washer fluid level switch is hardwired directly to the FEM. The FEM monitors the washer fluid level status and sends it to the instrument cluster via the SCP communication network.

Air Bag Warning Indication

The AIR BAG warning indicator will be illuminated when the electronic crash sensor (ECS) sends a ground signal to the instrument cluster. The prove out of the AIR BAG warning indicator is controlled by the ECS.

ABS Warning Indication

The status of the ABS/TC/IVD system is sent to the instrument cluster via the SCP communication network. The instrument cluster uses this input to determine whether or not there is a fault with the ABS/TC/IVD system.

Traction Control Warning Indication

The status of the traction control is communicated to the instrument cluster from the TC/IVD module via the SCP communication network.

Advance Traction Warning Indication

The status of the system is communicated to the instrument cluster from the IVD module via the SCP communication network.

Lamp Outage Warning Indication (If equipped)

The FEM and REM both control the exterior illumination. If the exterior lamps are the cause of the fault, these two modules will notify the instrument cluster via the SCP communication network and cause the lamp outage warning indicator to illuminate.

Malfunction Indicator Lamp (MIL)

After the engine is started, the MIL will prove out for a duration of three seconds. If the instrument cluster does not receive a message from the PCM within five seconds, it will send two messages to the PCM and attempt to reestablish communication. If the instrument cluster is unable to reestablish communication, the instrument cluster will illuminate the MIL and log a diagnostic trouble code (DTC).

Turn/Hazard Indication

The multifunction switch is hardwired directly to the instrument cluster. The instrument cluster sends the signal from the multifunction switch to both the FEM and REM via the SCP communication network while simultaneously illuminating the turn/hazard indicators. The FEM and the REM use these inputs from the instrument cluster to illuminate the exterior lighting as necessary.

Speed Control Indication

The speed control status is monitored by the PCM and then relayed to the instrument cluster via the SCP communication network. The speed control indicator illuminates when the speed control is set.

Low Fuel Warning Indication (If equipped)

There are two fuel tank senders, and they are hardwired directly to the REM. The status of the fuel level from both senders is sent from the REM over the SCP communication network to the instrument cluster. The instrument cluster uses these inputs to determine the overall fuel level in the tank and illuminates the low fuel warning indicator if the fuel level is low.

Engine Over-Temperature Indicator

The cylinder head temperature sending unit is hardwired directly to the PCM. The status of the cylinder head temperature is sent from the PCM over the SCP communication network to the instrument cluster. The instrument cluster then determines whether or not the cylinder head temperature is above the over-temperature threshold.

Steering Column Lock Indication

The steering column lock status is monitored by the instrument cluster from the input of the steering column lock (SCL) module via the standard corporate protocol (SCP) communication network.

Gauge Functionality

Temperature Gauge

The cylinder head temperature sending unit is hardwired directly to the PCM. The status of the cylinder head temperature is sent from the PCM over the SCP communication network to the instrument cluster. Normal operating temperature is 140° F (60° C) to 248° F (120° C). Redline starts at 249.8° F (121° C).

Tachometer Gauge

The crankshaft position sensor is hardwired directly to the PCM. The status of the crankshaft position sensor is sent from the PCM to the instrument cluster via the SCP communication network.

Speedometer Gauge

The vehicle speed signal (VSS) from all four wheels are hardwired directly to the ABS/TC/IVD. The speed status is then sent to the instrument cluster by the ABS/TC/IVD via the SCP communication network.

Fuel Gauge

The fuel gauge system has a saddle-type fuel tank with two integrated fuel senders: the fuel delivery module (FDM) and the jet pump module (JPM). The FDM is located in the right side of the fuel tank and the JPM is located in the left side of the fuel tank. Fuel level status is sent directly to the rear electronic module (REM), which is hardwired to the fuel senders. The REM sends the fuel data to the instrument cluster via the standard corporate protocol (SCP) line. Normal operating range of the FDM is from 16 ± 2 ohms at empty (E) to 155 ± 4 ohms at full (F). Normal operating range of the JPM sender is from 19 ± 2 ohms at empty (E) to 160 ± 2 ohms at full (F). If either the REM or JPM fuel sender has an open or shorted signal, the instrument cluster will log diagnostic trouble code (DTC) B1201. If the JPM sender is open, the fuel gauge will default to the FDM sender value only and the fuel gauge will indicate E to 1/2 tank (depending on the fuel level on the FDM side of the tank). If the FDM is open, the fuel gauge will default to the empty position.

Digital Segment Displays

Trip A/B And Odometer Displays

The vehicle speed signal (VSS) from all four wheels are hardwired directly to the ABS/TC/IVD. The speed status is then sent to the instrument cluster by the ABS/TC/IVD via the SCP communication network to establish a rolling count.

PRNDL Display

The digital transmission range (DTR) sensor is hardwired directly to the PCM. The status of the gear selection is sent to the instrument cluster from the PCM via the SCP communication network.

Parameter Reset and Key Programming

NOTE: The instrument cluster parameters must be reset upon installation of a new instrument cluster.

NOTE: Both passive anti-theft system (PATS) keys are needed to carry out this procedure.

To reset the instrument cluster parameters and program the keys, complete the following procedure:

1. Connect the diagnostic tool.
2. Select the instrument cluster.

3. Select ENTER SECURITY ACCESS. Wait 10 minutes for security access to be granted.
4. Select PARAMETER RESET.
5. Disconnect the diagnostic tool.
6. Place the first PATS key in the OFF position.
7. Place the key in the ON position.
8. Remove the key.
9. Place the second PATS key in the ON position.
10. Place the key in the OFF position (the programming sequence is complete).

NOTE: If the vehicle fails to start following completion of the parameter reset and key programming sequence, clear the keep alive memory (KAM) by disconnecting the battery for five minutes. For additional information about the battery disconnect procedure, refer to [Section 414-00](#).

Inspection and Verification

NOTE: The instrument cluster, REM and FEM must be reconfigured upon replacement. Refer to [Section 418-01](#).

NOTE: For any concerns with the restraint control module (RCM), refer to [Section 501-20B](#).

1. Verify the customer concern by operating the instrument cluster to duplicate the condition by observing the indicators, warning displays, and gauges to determine if they are operating correctly with the ignition switch:
 - in RUN with the engine off
 - in START before the ignition switch is released
 - in RUN with the engine running
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Low washer fluid level ● Damaged fuel tank ● Low engine coolant level ● Damaged accessory drive belt ● Low engine oil level ● Low brake fluid level 	<ul style="list-style-type: none"> ● Central junction box (CJB) fuse(s): <ul style="list-style-type: none"> ■ 204 (5A) ■ 205 (5A) ■ 207 (5A) ■ 213 (5A) ■ 217 (5A) ■ 219 (15A) ■ 220 (10A) ■ 224 (5A) ■ 229 (5A) ■ 230 (5A) ■ 235 (5A)

- Battery junction box (BJB) fuse(s):
 - 422 (20A)
 - 425 (40A)
 - 427 (30A)
 - 430 (30A)
- Damaged circuitry
- Damaged connectors
- Damaged switches or sensors

3. If the inspection reveals obvious concern(s) that can be readily identified, repair as necessary.
4. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.
6. Carry out the DATA LINK DIAGNOSTIC TEST. If the diagnostic tool responds with:
 - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for instrument cluster, GO to Pinpoint Test A.
 - NO RESP/NOT EQUIP for FEM, GO to Pinpoint Test B.
 - NO RESP/NOT EQUIP for REM, GO to Pinpoint Test C.
 - NO RESP/NOT EQUIP for RCM, REFER to [Section 501-20B](#).
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the instrument cluster.
7. If the DTCs retrieved are related to the concern, go to the Instrument Cluster Diagnostic Trouble Code (DTC) Index to continue diagnostics.
8. If no DTCs related to the concern are retrieved, proceed to the Symptom Chart to continue diagnostics.

Instrument Cluster Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1201	Fuel Sender Circuit Failure	Instrument Cluster	GO to Pinpoint Test D .
B1205	EIC Switch-1 Assembly Circuit Failure	Instrument Cluster	INSTALL a new instrument cluster; REFER to Instrument Cluster . TEST the system for normal operation.
B1209	EIC Switch-2 Assembly Circuit Failure	Instrument Cluster	INSTALL a new instrument cluster; REFER to Instrument Cluster . TEST the system for normal operation.
B1213	Anti-Theft Number of Programmed Keys Is Below	Instrument Cluster	REFER to Section 419-01B .

	Minimum		
B1246	Dim Panel Potentiometer Switch Circuit Failure	Instrument Cluster	REFER to Section 413-00 .
B1342	ECU Is Defective	Instrument Cluster	CLEAR and DOCUMENT the DTCs. CARRY OUT the instrument cluster self-test. INSTALL a new instrument cluster if DTC B1342 is retrieved again. REFER to Instrument Cluster .
B1352	Ignition Key-In Circuit Failure	Instrument Cluster	REFER to Section 413-09 .
B1470	Lamp Headlamp Input Circuit Failure	Instrument Cluster	REFER to Section 417-01 .
B1567	Lamp Headlamp High Beam Circuit Failure	Instrument Cluster	REFER to Section 417-01 .
B1600	PATS Ignition Key Transponder Signal Is Not Received	Instrument Cluster	REFER to Section 419-01B .
B1601	PATS Received Incorrect Key-Code From Ignition Key Transponder	Instrument Cluster	REFER to Section 419-01B .
B1602	PATS Received Invalid Format of Key-Code From Ignition Key Transponder	Instrument Cluster	REFER to Section 419-01B .
B1676	Battery Pack Voltage Out of Range	Instrument Cluster	GO to Pinpoint Test J .
B1681	PATS Transceiver Module Signal Is Not Received	Instrument Cluster	REFER to Section 419-01B .
B1689	Autolamp Delay Circuit Failure	Instrument Cluster	REFER to Section 417-01 .
B1875	Turn Signal / Hazard Switch Signal Circuit Failure	Instrument Cluster	REFER to Section 417-01 .
B2103	Antenna Not Connected	Instrument Cluster	REFER to Section 419-01B .
B2139	Security Data Mismatch (Receive Data Does Not Match What Was Expected)	Instrument Cluster	REFER to Section 419-01B .
B2141	NVM Configuration Failure	Instrument Cluster	REFER to Section 419-01B .
B2143	NVM Memory Failure	Instrument Cluster	GO to Pinpoint Test Z .
B2162	Security Data Mismatch #2 (Receive Data Does Not Match What Was Expected)	Instrument Cluster	REFER to Section 419-01B .

Pinpoint Tests

PINPOINT TEST A: NO COMMUNICATION WITH THE INSTRUMENT CLUSTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK HOT AT ALL TIMES POWER SUPPLY CIRCUIT	
<p>1</p>  <p>2</p>  <p>Instrument Cluster C220b</p> <p>3</p>  <p>A0002792</p>	<p>3</p> <p>Measure the voltage between instrument cluster C220b pin 3, circuit 29-GG11 (OG/BU), harness side and ground.</p> <ul style="list-style-type: none"> ● Is the voltage greater than 10 volts? <p>→ Yes GO to A2.</p> <p>→ No REPAIR the circuit. TEST the system for normal operation.</p>
A2 CHECK HOT IN RUN POWER SUPPLY CIRCUITS	
1	

2

2 Measure the voltage between the instrument cluster and ground as follows:

Connector Pin	Circuit
C220a pin 11	15-JA14 (GN/BK)
C220b pin 6	15-GG14 (GN/RD)
C220b pin 17	75-GG15 (YE/GN)

• Are the voltages greater than 10 volts?

→ **Yes**
GO to [A3](#).

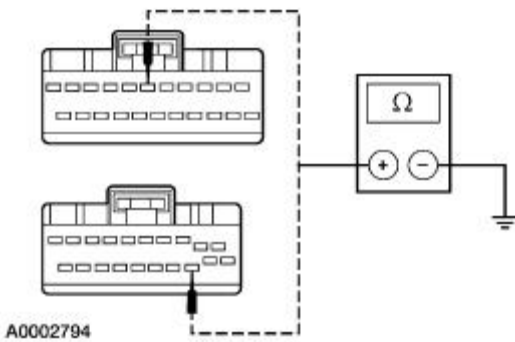

→ **No**
REPAIR the circuit(s). TEST the system for normal operation.

A3 CHECK GROUND CIRCUITS

1

2

2 Measure the resistance between the instrument cluster and ground as follows:

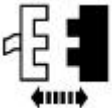

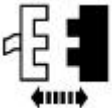

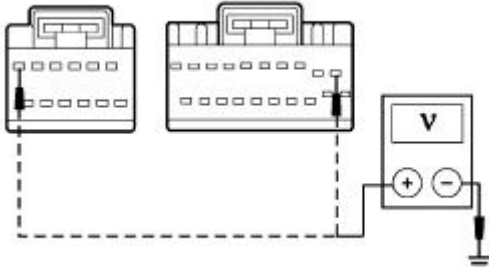

Connector Pin	Circuit
C220a pin 6	31-AL11 (BK)
C220b pin 13	91-GG11 (BN/RD)

• Are the resistances less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s). TEST the system for normal operation.

PINPOINT TEST B: NO COMMUNICATION WITH THE FRONT ELECTRONIC MODULE

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK CIRCUITS 29-DK20 (OG/GN) AND 29S-DK22 (OG/YE) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1 </p> <p>2  FEM C201c</p> <p>3  FEM C201f</p> <p>4 </p> <p>5 </p> <p>A0006297</p>	<p>5 Measure the voltage between FEM C201c pin 6, circuit 29-DK20 (OG/GN), harness side and ground; and between FEM C201f pin 1, circuit 29S-DK22 (OG/YE) harness side and ground.</p> <p>● Are the voltages greater than 10 volts?</p> <p>→ Yes GO to B2.</p> <p>→ No REPAIR the circuit(s) in question. TEST the system for normal operation.</p>
B2 CHECK CIRCUITS 31-DK20 (BK/RD), 31-DK20A (BK/RD), 31-DK20B (BK/RD), 31-DK20C (BK/RD) AND 31-DK20D (BK/RD) FOR OPENS	
<p>1</p>	

2

FEM C201a

3

A0006298

3 Measure the resistance between FEM connectors, harness side and ground as follows:

FEM	Pin	Circuit
C201c	12	31-DK20 (BK/RD)
C201a	11	31-DK20A (BK/RD)
C201a	13	31-DK20B (BK/RD)
C201a	14	31-DK20C (BK/RD)
C201a	15	31-DK20D (BK/RD)

• Are the resistances less than 5 ohms?

→ Yes
REFER to [Section 418-00](#).

→ No
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST C: NO COMMUNICATION WITH THE REAR ELECTRONIC MODULE

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK CIRCUIT 29-DK31 (OG/BK) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p> <p>2</p> <p>REM C420d</p> <p>3</p>	

REM C420c

4

5

A0006299

5

Measure the voltage between REM C420d pin 3, circuit 29-DK31 (OG/BK), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [C2](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

C2 CHECK CIRCUITS 29S-DK31 (OG/BK), 31-DK30D (BK), 31-DK30E (BK), 31-DK30F (BK), 31-DK30G (BK) AND 31-DK30H (BK/OG), FOR OPENS

1

2

REM C420b

3

A0006300

3

Measure the resistance between REM connectors, harness side and ground as follows:

REM	Pin	Circuit
C420c	13	29S-DK31 (OG/BK)
C420c	12	31-DK30E (BK)
C420c	11	31-DK30D (BK)
C420c	26	31-DK30G (BK)
C420c	25	31-DK30F (BK)

C420b | 12 | 31-DK30H (BK/OG)

- Are the resistances less than 5 ohms?

- **Yes**
REFER to [Section 418-00](#).
- **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST D: INCORRECT FUEL GAUGE INDICATION

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — REM AND INSTRUMENT CLUSTER	
NOTE: The fuel gauge does not change indication unless there has been at least eleven liters (three gallons) of fuel added or removed between ignition switch cycle.	
	<p>1 Use recorded REM and instrument cluster DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes If REM DTC B1201, or instrument cluster DTC U1131 is retrieved, GO to D7.</p> <p>→ No GO to D2.</p>
D2 CARRY OUT THE INSTRUMENT CLUSTER FUEL GAUGE ACTIVE COMMAND	
<p>1</p>  <p>Instrument Cluster Active Command</p>	<p>1 Select the instrument cluster FUEL GAUGE CONTROL active command.</p> <p>2 Trigger FUELLEVEL active command. Toggle and monitor the fuel gauge while adjusting the FUELLEVEL active command to read 50% and 100%.</p> <ul style="list-style-type: none"> ● Did the fuel gauge needle start at empty (E), move to half at 50%, and full (F) at 100%? <p>→ Yes GO to D3.</p> <p>→ No INSTALL a new instrument cluster;</p>

REFER to [Instrument Cluster](#). CLEAR the DTC. REPEAT the instrument cluster self-test.

D3 CHECK THE FUEL DELIVERY MODULE (FDM) RESISTANCE READING

NOTE: The fuel delivery module (FDM) sender resistance varies from 16 ± 2 ohms when empty (E) to 155 ± 4 ohms when full (F).

1

2

(RH) Fuel Delivery Module (FDM)

3

A0006000

3 Measure the resistance between the RH fuel delivery module (FDM) C433 pin 2, circuit 8-GA7 (WH/RD), component side and the FDM C433 pin 3, circuit 9-GA7 (BN/RD), component side.

● Is the resistance within specifications?

→ Yes
GO to [D4](#).

→ No
INSTALL a new FDM. REFER to [Section 310-01](#). TEST the system for normal operation. GO to [D5](#).

D4 CHECK THE JET PUMP MODULE (JPM) RESISTANCE READING

NOTE: The jet pump module (JPM) sender resistance varies from 19 ± 2 ohms when empty (E) to 160 ± 4 ohms when full (F).

1

2

(LH) Jet Pump Module (JPM)

3

3 Measure the resistance between the LH jet pump module (JPM) C434 pin 2,

A0006000

circuit 8-GA25 (WH/BU), component side and JPM C434 pin 3, circuit 9-GA25 (BN/WH), component side.

● **Is the resistance within specifications?**

→ **Yes**
GO to [D6](#).

→ **No**
INSTALL a new JPM. REFER to [Section 310-01](#). TEST the system for normal operation. GO to [D5](#).

D5 INSPECT THE FUEL TANK

1 Visually inspect the fuel tank for any damage or deformation.

● **Is the fuel tank OK?**

→ **Yes**
GO to [D6](#).

→ **No**
INSTALL a new fuel tank. REFER to [Section 310-01](#). TEST the system for normal operation.

D6 INSPECT THE FUEL LEVEL SENSOR AND PUMP ASSEMBLY

1 Visually inspect the float and float rod for damage or obstruction.

● **Are the fuel pump and wiring OK?**

→ **Yes**
INSTALL a new fuel level sender. REFER to [Section 310-01](#). TEST the system for normal operation.

→ **No**
REPAIR as necessary. REFER to [Section 310-01](#). TEST the system for normal operation.

D7 CHECK CIRCUIT 8-GA7 (WH/RD), CIRCUIT 9-GA1 (BN) AND CIRCUIT 8-GA25 (WH/BU) FOR SHORT TO GROUND WITH REM DISCONNECTED

1

REM

2

A0004796

3

A0004797

2

Measure the resistance between REM C420d pin 15, circuit 8-GA7 (WH/RD), harness side and ground; and between REM C420d pin 16, circuit 8-GA25 (WH/BU), harness side and ground.

3

Measure the resistance between REM C420c pin 23, circuit 9-GA1 (BN), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ Yes
GO to [D9](#).

→ No
GO to [D8](#).

D8 CHECK CIRCUIT 8-GA7 (WH/RD), CIRCUIT 9-GA1 (BN) AND CIRCUIT 8-GA25 (WH/BU) FOR SHORT TO GROUND WITH FUEL PUMP MOTOR AND FUEL SENDER DISCONNECTED

1

Fuel Pump Motor C433

2

Fuel Sender C434

3

3

Measure the resistance between REM C420d pin 15, circuit 8-GA7 (WH/RD), harness side and ground; and between

A0004796

4

A0004797

REM C420d pin 16, circuit 8-GA25 (WH/BU), harness side and ground.

4 Measure the resistance between REM C420c pin 23, circuit 9-GA1 (BN), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
REPAIR the fuel sender circuit in question. TEST the system for normal operation.

→ **No**
REPAIR the circuit in question. TEST the system for normal operation.

D9 CHECK CIRCUIT 8-GA7 (WH/RD), CIRCUIT 9-GA1 (BN) AND CIRCUIT 8-GA25 (WH/BU) FOR OPEN

1

Fuel Pump Motor C433

2

Fuel Sender C434

3

REM

4

4 Measure the resistance between REM

A0004800

5

A0004801

6

A0004802

C420d pin 15, circuit 8-GA7 (WH/RD), harness side and fuel pump motor C433 pin 1, circuit 8-GA7 (WH/RD), harness side.

5 Measure the resistance between REM C420d pin 16, circuit 8-GA25 (WH/BU), harness side and fuel sender C434 pin 1, circuit 8-GA25 (WH/BU), harness side.

6 Measure the resistance between REM C420c pin 23, circuit 9-GA1 (BN), harness side and fuel pump motor C433 pin 3, circuit 9-GA7 (BN/RD), harness side.

• Are the resistances less than 5 ohms?

→ **Yes**
GO to [D10](#).

→ **No**
REPAIR the circuit in question. TEST the system for normal operation.

D10 CHECK CIRCUIT 8-GA7 (WH/RD), CIRCUIT 9-GA1 (BN) AND CIRCUIT 8-GA25 (WH/BU) FOR SHORT TO BATTERY

1

1 Measure the voltage between REM C420d pin 15, circuit 8-GA7 (WH/RD), harness side and REM C420d pin 16, circuit 8-GA25 (WH/BU), harness side and ground.

A0004803

2

A0004804

2 Measure the voltage between REM C420c pin 23, circuit 9-GA1 (BN), harness side and ground

• Is any voltage indicated?

→ **Yes**
REPAIR the circuit in question. TEST the system for normal operation.

→ **No**
GO to [D11](#).

D11 CHECK FUEL PUMP MOTOR CIRCUITS FOR SHORT

1

A0060345

1 Measure the resistance between fuel pump motor C433 pin 1, circuit 15S-RG2A (GN/BU), component side and fuel pump motor C433 pin 2, circuit 8-GA7 (WH/RD), component side, and between fuel pump motor C433 pin 1, circuit 15S-RG2A (GN/BU), component side and fuel pump motor C433 pin 3, circuit 9-GA7 (BN/RD), component side.

• Is the resistance greater than 10,000 ohms?

→ **Yes**
REPAIR in-tank fuel pump module, and fuel sender circuit(s) as necessary. REFER to [Section 310-01](#). TEST the system for normal operation.

→ **No**

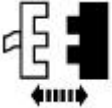

INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test. INSTALL a new instrument cluster. If incorrect fuel gauge indication is still present REFER to [Instrument Cluster](#). CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST E: INCORRECT TEMPERATURE GAUGE INDICATION

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — INSTRUMENT CLUSTER	
	<p>1 Use recorded instrument cluster DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any instrument cluster DTCs recorded? <p>→ Yes If instrument cluster DTC U1073 is retrieved, REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.</p> <p>All other DTCs, refer to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to E2.</p>
E2 CARRY OUT THE INSTRUMENT CLUSTER ENGINE COOLANT TEMPERATURE GAUGE ACTIVE COMMAND	
<p>1</p>  <p>Instrument Cluster Active Command</p>	<p>1 Select the instrument cluster ENGINE COOLANT CONTROL active command.</p> <p>2 Trigger the ENGCOOLNT active command. Toggle and monitor the engine coolant temperature gauge while adjusting the ENGCOOLNT active command to read 50% and 100%.</p> <ul style="list-style-type: none"> ● Did the temperature gauge needle start at cold, move to half at 50%, and full hot at 100%? <p>→ Yes REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.</p> <p>→ No INSTALL a new instrument cluster; REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the self-test.</p>

PINPOINT TEST F: AN INDICATOR IS INOPERATIVE/ALWAYS ON —

LOW OIL PRESSURE

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK THE INSTRUMENT CLUSTER LOW OIL PRESSURE WARNING INDICATOR ILLUMINATION	
NOTE: Verify that the oil level is at or near the FULL level.	
<p>1  Instrument Cluster Active Command</p> <p>2  Instrument Cluster Active Command</p>	<p>1 Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command ON.</p> <p>2 Trigger OFF the active command ALL LAMPS.</p> <ul style="list-style-type: none"> • Does the low oil pressure warning indicator illuminate when triggered ON, and go off when triggered OFF? <p>→ Yes GO to F2.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the self-test.</p>
F2 MONITOR FEM LOW OIL LEVEL PRESSURE PID OILWRN	
<p>1 </p> <p>2  Oil Pressure Switch C103</p> <p>3 </p> <p>4 </p> <p>5</p>	<p>4 Monitor the FEM PID OILWRN.</p> <p>5 Connect a 10A fused jumper wire between oil pressure switch C103 pin 1, circuit 8-GC21 (WH/GN), harness side</p>

A0004821

and ground.

- Does the FEM PID read ON and OFF alternately?

→ **Yes**

INSTALL a new oil pressure switch. REFER to [Section 303-01A](#) or [Section 303-01B](#). TEST the system for normal operation.

→ **No**

REMOVE the jumper wire, EXIT the FEM PID, GO to [F3](#).

If the fused jumper wire fails, REMOVE the jumper and GO to [F5](#).

F3 CHECK CIRCUIT 8-GC21 (WH/GN) FOR OPEN

1

FEM 201c

2

A0004822

2

Measure the resistance between FEM C201c pin 9, circuit 8-GC21 (WH/GN), harness side and oil pressure switch C103, circuit 8-GC21 (WH/GN), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**

GO to [F4](#).

→ **No**

REPAIR the circuit. TEST the system for normal operation.

F4 CHECK CIRCUIT 8-GC21 (GN/WH) FOR SHORT TO GROUND

1

FEM C201c

2

3 Measure the resistance between FEM C201c pin 9, circuit 8-GC21 (WH/GN), harness side and ground.

• Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

F5 CHECK CIRCUIT 8-GC21 (WH/GN) FOR SHORT TO BATTERY

1

1 Measure the voltage between FEM C201c pin 9, circuit 8-GC21 (WH/GN), harness side and ground.

• Is any voltage present?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST G: THE SPEEDOMETER IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — INSTRUMENT CLUSTER	<p>1 Use recorded instrument cluster DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes If instrument cluster DTC U1041 is recorded, REFER to Section 206-09A with ABS, REFER to Section 206-09B with ABS/TC, or REFER to Section 206-09C with ABS/TC/IVD.</p> <p>All other instrument cluster DTCs, REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to G2.</p>
G2 CARRY OUT THE INSTRUMENT CLUSTER SPEEDOMETER AND DIGITAL SEGMENT DISPLAY ACTIVE COMMANDS	<p>1  Instrument Cluster Active Command</p> <p>1 Select the instrument cluster SPEEDOMETER COMMAND active command.</p> <p>2 Trigger SPDOMETER and scroll in increments of 10%. Monitor the speedometer gauge. The speedometer should be increasing in increments of 16 mph for every 10%.</p> <p>3  Instrument Cluster Active Command</p> <p>3 Select the instrument cluster DISPLAY SEGMENT CONTROL II active command.</p> <p>4 Trigger the SEGMENTS active command.</p> <ul style="list-style-type: none"> ● Does the speedometer increase within specification and do all segments illuminate? <p>→ Yes REFER to Section 206-09A with ABS, REFER to Section 206-09B with ABS/TC, or REFER to Section 206-09C with stability assist.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the instrument cluster self-test. TEST the system for normal operation.</p>

PINPOINT TEST H: THE SAFETY BELT WARNING INDICATOR IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 MONITOR THE INSTRUMENT CLUSTER SAFETY BELT PID D_SBELT	
<p>1 </p> <p>2  Instrument Cluster PID</p>	<p>2 Select and monitor the instrument cluster PID D_SBELT while fastening and unfastening the safety belt.</p> <ul style="list-style-type: none"> • Does the PID agree with the safety belt position? <p>→ Yes GO to H2.</p> <p>→ No GO to H3.</p>
H2 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND	
<p>1  Instrument Cluster Active Command</p>	<p>1 Select the instrument cluster WARNING LAMPS AND CHIME active command ALL LAMPS. Trigger the ALL LAMPS active command.</p> <ul style="list-style-type: none"> • Does the safety belt warning indicator illuminate? <p>→ Yes The system is OK. REFER to the Principles of Operation for the safety belt warning indicator.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the self-test.</p>
H3 CHECK THE SAFETY BELT SWITCH	
<p>1 </p> <p>2</p>	

Safety Belt Switch C381

3

4

A0004824

5

Instrument Cluster PID

4 Connect a 10A fused jumper wire between safety belt switch C381, circuit 8-GE52 (WH/BK), harness side and ground.

5 Select and monitor the instrument cluster PID D_SBELT.

6 DISCONNECT the jumper wire. Monitor the instrument cluster PID D_SBELT.

- Does the PID value alternate between IN and OUT?

→ Yes
GO to [H4](#).

→ No
REMOVE the jumper wire and GO to [H5](#).

If the fused jumper wire fails, REMOVE the jumper wire and GO to [H6](#).

H4 CHECK THE SAFETY BELT SWITCH CIRCUIT 31-GE52 (BK) FOR OPEN

1

A0004835

1 Measure the resistance between safety belt switch C381, circuit 31-GE52 (BK), component side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new buckle end. TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

H5 CHECK SAFETY BELT WARNING INDICATOR CIRCUIT 8-GE52 (WH/BK)

1

2

Instrument Cluster C220a

3

A0004836

3 Measure the resistance between instrument cluster C220a pin 18, circuit 8-GE52 (WH/BK), harness side and safety belt switch C381, circuit 8-GE52 (WH/BK), harness side; and between instrument cluster C220a pin 18, circuit 8-GE52 (WH/BK), harness side and ground.

● Is the resistance between the instrument cluster and the safety belt switch less than 5 ohms, and greater than 10,000 ohms between the instrument cluster and ground?

→ **Yes**
GO to [H6](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

H6 CHECK CIRCUIT 8-GE52 (WH/BK) FOR SHORT TO BATTERY

1

1 Measure the voltage between instrument cluster C220a pin 18, circuit 8-GE52 (WH/BK), harness side and ground.

A0004837

● Is any voltage present?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
GO to [H2](#).

PINPOINT TEST I: THE DOOR AJAR INDICATOR IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
I1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — FEM AND REM	<p>1 Use recorded FEM and REM DTCs from the continuous and on-demand self-test.</p> <p>● Are any FEM or REM DTCs recorded?</p> <p>→ Yes REFER to FEM Diagnostic Trouble Code (DTC) Index or REM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to I2.</p>
I2 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND	<p>1 Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command. Observe the door ajar warning indicator.</p> <p>● Does the door ajar warning indicator illuminate?</p> <p>→ Yes REFER to Section 417-02.</p>

1

Instrument Cluster
Active Command

→ **No**
 INSTALL a new instrument cluster. REFER to [Instrument Cluster](#) .
 CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST J: THE CHARGE SYSTEM WARNING INDICATOR IS NEVER/ALWAYS ON

CONDITIONS	DETAILS/RESULTS/ACTIONS
J1 CHECK CHARGING SYSTEM	
	<p>1 Check the charging system operation. Refer to Section 414-00 .</p> <ul style="list-style-type: none"> ● Is the charging system operating correctly? <p>→ Yes GO to J2 .</p> <p>→ No REFER to Section 414-00 .</p>
J2 CHECK THE CHARGE SYSTEM WARNING INDICATOR	
<p>1</p>  <p>Instrument Cluster Active Command</p> <p>2</p>  <p>Instrument Cluster Active Command</p>	<p>1 Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command ON.</p> <p>2 Trigger OFF the active command ALL LAMPS.</p> <ul style="list-style-type: none"> ● Does the charge system warning indicator illuminate when triggered ON, and go off when triggered OFF? <p>→ Yes REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster . CLEAR the DTCs. REPEAT the self-test.</p>

PINPOINT TEST K: THE BRAKE WARNING INDICATOR IS ALWAYS ON

CONDITIONS	DETAILS/RESULTS/ACTIONS
K1 CHECK THE INSTRUMENT CLUSTER BRAKE WARNING INDICATOR ILLUMINATION	
1	1 Select the instrument cluster WARNING

Instrument Cluster Active Command

2

Instrument Cluster Active Command

LAMPS AND CHIME active command.
Trigger the ALL LAMPS active command ON.

2

Select the instrument cluster WARNING LAMPS AND CHIME active command.
Trigger the ALL LAMPS active command OFF.

- Does the BRAKE warning indicator illuminate when triggered ON, and go off when triggered OFF?

→ Yes
GO to [K2](#).

→ No
INSTALL a new instrument cluster.
REFER to [Instrument Cluster](#) . CLEAR the DTCs. REPEAT the self-test.

K2 CHECK BRAKE FLUID LEVEL SWITCH

1

Brake Fluid Level Switch C124

- Does the BRAKE warning indicator continue to illuminate?

→ Yes
GO to [K3](#).

→ No
INSTALL a new brake fluid level switch.
REFER to [Section 206-06](#) . TEST the system for normal operation.

K3 CHECK PARKING BRAKE CONTROL SWITCH

1

Parking Brake Control Switch C306

- Does the BRAKE warning indicator continue to illuminate?

→ Yes
GO to [K4](#).

→ No

INSTALL a new parking brake control switch. REFER to [Section 206-05](#). TEST the system for normal operation.

K4 CHECK BRAKE FLUID LEVEL FEM PID FLUID_1

1

2

FEM PID

3

A0004838

2

Select and monitor FEM PID FLUID_1.

3

Connect a 10A fused jumper wire between brake fluid warning switch C124, circuit 8-GC7 (WH/RD), harness side and ground.

- Does the PID read OFF when the jumper wire is not connected and ON when the jumper wire is connected?

→ Yes

GO to [K5](#).

→ No

GO to [K6](#).

K5 CHECK PARKING BRAKE CONTROL SWITCH CIRCUIT 31S-RP9 (BK/GN) FOR SHORT TO GROUND

1

2

FEM C281

3

4

4

Measure the resistance between parking brake switch C306 pin 1, circuit 31S-RP9 (BK/GN), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

K6 CHECK BRAKE WARNING INDICATOR INPUT CIRCUIT 8-GC7 (WH/RD) FOR SHORT TO GROUND

1

FEM C201c

2

2

Measure the resistance between FEM C201c pin 11, circuit 8-GC7 (WH/RD), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

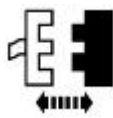

PINPOINT TEST L: AN INDICATOR IS INOPERATIVE/ALWAYS ON — HIGH BEAM

CONDITIONS	DETAILS/RESULTS/ACTIONS
L1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — INSTRUMENT CLUSTER	
	<p>1 Use recorded instrument cluster DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any instrument cluster DTCs recorded? <p>→ Yes If DTC B1567, REFER to Section 417-01. All other DTCs, REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to L2.</p>
L2 MONITOR THE INSTRUMENT CLUSTER PID LSWMODE	
<p>1</p>  <p>4</p>  <p>Instrument Cluster PID</p>	<p>2 Place headlamp switch in the ON position.</p> <p>3 Verify that the multifunction switch is in the high beam position.</p> <p>4 Select and monitor the instrument cluster PID HIBEAM with the multifunction switch in the high beam position.</p> <ul style="list-style-type: none"> ● Does the PID read HIGH? <p>→ Yes GO to L3.</p> <p>→ No REFER to Section 417-01.</p>
L3 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND	
<p>1</p>  <p>Instrument Cluster Active Command</p>	<p>1 Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command.</p> <ul style="list-style-type: none"> ● Does the high beam indicator turn on?

→ **Yes**
REFER to [Section 417-01](#).

→ **No**
INSTALL a new instrument cluster. REFER to [Instrument Cluster](#).
CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST M: AN INDICATOR IS INOPERATIVE/ALWAYS ON — LOW WASHER FLUID WARNING

CONDITIONS	DETAILS/RESULTS/ACTIONS
M1 CHECK THE LOW WASHER FLUID WARNING INDICATOR	
<p>1  Instrument Cluster Active Command</p> <p>2  Instrument Cluster Active Command</p>	<p>1 Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command ON.</p> <p>2 Trigger OFF the active command ALL LAMPS.</p> <ul style="list-style-type: none"> • Does the low washer fluid warning indicator illuminate when triggered ON, and go off when triggered OFF? <p>→ Yes GO to M2.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the self-test.</p>
M2 MONITOR FEM PID WFLUID	
<p>1 </p> <p>2  Washer Fluid Level Switch C138</p> <p>3 </p>	

4

5

A0004841

4

Monitor the FEM PID WFLUID.

5

Connect a 10A fused jumper wire between washer fluid level switch C138, circuit 8-GC8 (WH/GN), harness side and ground.

● Does the FEM PID read ON and OFF alternately?

→ **Yes**
GO to [M3](#).

→ **No**
REMOVE the jumper wire, EXIT the FEM PID, GO to [M4](#).

If the fused jumper wire blows, REMOVE the jumper and GO to [M5](#).

M3 CHECK WASHER FLUID LEVEL SWITCH GROUND CIRCUIT 31-GC8 (BK) FOR OPEN

1

A0004810

1

Measure the resistance between washer fluid level switch C138, circuit 31-GC8 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new washer fluid level switch. REFER to [Section 501-16](#). TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

M4 CHECK CIRCUIT 8-GC8 (WH/BU) FOR SHORT TO GROUND

1

2

FEM C201b

3

A0004806

3 Measure the resistance between washer fluid level switch C138, circuit 8-GC8 (WH/BU), harness side and ground.

• Is the resistance greater than 10,000 ohms?

→ Yes
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No
REPAIR the circuit. TEST the system for normal operation.

M5 CHECK THE LOW WASHER FLUID SWITCH CIRCUIT 8-GC8 (WH/BU) FOR SHORT TO BATTERY

1

2

A0004807

2 Measure the voltage between FEM C201b pin 15, circuit 8-GC8 (WH/BU), harness side and ground.

• Is any voltage present?

→ Yes

	REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. → No INSTALL a new FEM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
--	--

PINPOINT TEST N: AN INDICATOR IS INOPERATIVE/ALWAYS ON — ABS WARNING

CONDITIONS	DETAILS/RESULTS/ACTIONS
N1 CARRY OUT THE INSTRUMENT CLUSTER ABS WARNING INDICATOR ACTIVE COMMAND USING THE DIAGNOSTIC TOOL	
<div style="border: 1px solid black; padding: 5px; width: fit-content;"> <div style="border: 1px solid black; width: 40px; height: 20px; margin: 0 auto;"></div> <div style="text-align: center; margin: 5px 0;">  </div> <p style="text-align: center; margin: 0;">Instrument Cluster Active Command</p> </div>	<div style="border: 1px solid black; padding: 5px;"> <p>1 Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command. Observe the ABS warning indicator.</p> <p style="text-align: center;">● Does the ABS warning indicator illuminate?</p> <p>→ Yes REFER to Section 206-09A with ABS, REFER to Section 206-09B with ABS/TC, or REFER to Section 206-09C with ABS/TC/IVD.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the self-test.</p> </div>

PINPOINT TEST O: AN INDICATOR IS INOPERATIVE / ALWAYS ON — TRACTION CONTROL AND ADVANCE TRACTION

CONDITIONS	DETAILS/RESULTS/ACTIONS
O1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — INSTRUMENT CLUSTER	
	<div style="border: 1px solid black; padding: 5px;"> <p>1 Use recorded instrument cluster DTCs from the continuous and on-demand self-test.</p> <p style="text-align: center;">● Are any DTCs recorded?</p> <p>→ Yes If DTC U1041, REFER to Section 206-09A with ABS, REFER to Section 206-09B with ABS/TC, or REFER to Section 206-09C with ABS/TC/IVD.</p> <p>All other instrument cluster DTCs, REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to O2.</p> </div>

02 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL

<p>1</p>  <p>Instrument Cluster Active Command</p>	<p>1</p> <p>Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command ON and OFF. Observe the traction control and advance traction indicators.</p> <ul style="list-style-type: none"> ● Do both indicators illuminate and turn off? <p>→ Yes REFER to Section 206-09A with ABS, REFER to Section 206-09B with ABS/TC, or REFER to Section 206-09C with ABS/TC/IVD.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the self-test.</p>
---	---

PINPOINT TEST P: AN INDICATOR IS INOPERATIVE / ALWAYS ON — LAMP OUTAGE

CONDITIONS	DETAILS/RESULTS/ACTIONS
P1 CHECK EXTERIOR LIGHTING OPERATION	
<p>1</p>  <p>Instrument Cluster Active Command</p>	<p>1</p> <p>Verify that the exterior lighting operates correctly.</p> <ul style="list-style-type: none"> ● Do all of the exterior lights operate correctly? <p>→ Yes GO to P2.</p> <p>→ No REFER to Section 417-01.</p>
P2 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL	
<p>1</p>  <p>Instrument Cluster Active Command</p>	<p>1</p> <p>Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command ON. Observe the lamp outage indicator.</p> <p>2</p> <p>Trigger the ALL LAMPS active command OFF. Observe the lamp outage indicator.</p> <ul style="list-style-type: none"> ● Does the lamp outage indicator illuminate, then turn off? <p>→ Yes GO to P3.</p> <p>→ No</p>

	INSTALL a new instrument cluster. REFER to Instrument Cluster . CLEAR the DTCs. REPEAT the self-test.
P3 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — FEM AND REM	
	<p>1 Use recorded REM and FEM DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any FEM or REM DTCs recorded? <p>→ Yes REFER to the FEM or REM DTC indices.</p> <p>→ No REFER to Section 417-01.</p>

PINPOINT TEST Q: AN INDICATOR IS INOPERATIVE/ALWAYS ON — MALFUNCTION INDICATOR LAMP (MIL)

CONDITIONS	DETAILS/RESULTS/ACTIONS
Q1 CHECK THE INSTRUMENT CLUSTER ILLUMINATION	
<p>1</p>  <p>Instrument Cluster Active Command</p>	<p>1 Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command ON and OFF. Observe the MIL warning indicator.</p> <ul style="list-style-type: none"> ● Does the MIL warning indicator illuminate and turn off? <p>→ Yes REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the self-test.</p>

PINPOINT TEST R: AN INDICATOR IS INOPERATIVE/ALWAYS ON — TURN / HAZARD

CONDITIONS	DETAILS/RESULTS/ACTIONS
R1 CHECK THE TURN SIGNAL AND HAZARD LAMPS OPERATION	
<p>1</p> 	<p>2 Operate the turn signal on the left and right sides.</p> <p>3 Operate the hazard lamps.</p>

	<ul style="list-style-type: none"> ● Do the turn signals and hazard lamps operate correctly? <p>→ Yes GO to R2.</p> <p>→ No REFER to Section 417-01.</p>
<p>R2 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL</p>	
<p>1</p>  <p>Instrument Cluster Active Command</p>	<p>1 Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command ON and OFF. Observe the LH turn and RH turn indicators.</p> <ul style="list-style-type: none"> ● Do the indicators illuminate and turn off? <p>→ Yes REFER to Section 417-01.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the self-test.</p>

PINPOINT TEST S: AN INDICATOR IS INOPERATIVE / ALWAYS ON — STEERING COLUMN LOCK WARNING

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>S1 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND</p>	
<p>1</p>  <p>Instrument Cluster Active Command</p> <p>2</p>  <p>Instrument Cluster Active Command</p>	<p>1 Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command ON.</p> <p>2 Trigger the ALL LAMPS active command OFF.</p> <ul style="list-style-type: none"> ● Did the steering column lock indicator turn on and off with the active command? <p>→ Yes REFER to Section 211-05.</p>

→ **No**
 INSTALL a new instrument cluster. REFER to [Instrument Cluster](#).
 CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST T: THE TACHOMETER IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
T1 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL	
<p>1</p>  <p>Instrument Cluster Active Command</p> <p>2</p>  <p>Instrument Cluster Active Command</p>	<p>1</p> <p>Select the instrument cluster TACHOMETER CONTROL active command. Trigger the TCHOMETER active command. Adjust the scroll knob until TCHOMETER reads 50%. Note the tachometer gauge reading.</p> <p>2</p> <p>Adjust the scroll knob until TCHOMETER reads 100%. Note the tachometer gauge reading.</p> <ul style="list-style-type: none"> • Does the tachometer gauge needle start at 0 rpm, move to approximately 3500 rpm at 50% and 7000 rpm at 100%? <p>→ Yes REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the self-test.</p>

PINPOINT TEST U: AN INDICATOR IS INOPERATIVE/ALWAYS ON — SPEED CONTROL

CONDITIONS	DETAILS/RESULTS/ACTIONS
U1 VERIFY THAT THE SPEED CONTROL AND SPEEDOMETER OPERATE CORRECTLY	
	<p>1</p> <p>Verify that the speed control and the speedometer operate correctly.</p> <ul style="list-style-type: none"> • Do the speed control and speedometer operate correctly? <p>→ Yes GO to U2.</p> <p>→ No If the speed control does not operate correctly, REFER to Section 310-03. If the speedometer does not operate correctly, GO to Pinpoint Test G.</p>

U2 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND

<p>1</p>  <p>Instrument Cluster Active Command</p>	<p>1 Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command. Observe the speed control indicator.</p> <p>• Does the speed control indicator illuminate?</p> <p>→ Yes REFER to Section 310-03.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the self-test.</p>
---	---

PINPOINT TEST V: AN INDICATOR IS INOPERATIVE/ALWAYS ON — PRNDL DISPLAY

CONDITIONS	DETAILS/RESULTS/ACTIONS
V1 VERIFY THAT THE PRNDL DISPLAY OPERATES CORRECTLY	
<p>1</p>  <p>Instrument Cluster Active Command</p>	<p>1 Select the instrument cluster DISPLAY SEGMENT CONTROL II active command.</p> <p>2 Trigger the SEGMENTS active command.</p> <p>• Do ALL of the segments illuminate?</p> <p>→ Yes REFER to Section 310-03.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the instrument cluster self-test. TEST the system for normal operation.</p>

PINPOINT TEST W: AN INDICATOR IS INOPERATIVE / ALWAYS ON — LOW FUEL WARNING

CONDITIONS	DETAILS/RESULTS/ACTIONS
W1 RETRIEVE THE RECORDED DTCs FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — REM AND INSTRUMENT CLUSTER	
	<p>1 Use recorded REM and instrument cluster DTCs from the continuous and on-demand self-test.</p>

	<ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes If REM DTC B1201, or instrument cluster DTC U1131 is retrieved, GO to Pinpoint Test D.</p> <p>→ No GO to W2.</p>
<p>W2 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL</p>	
<p>1</p>  <p>Instrument Cluster Active Command</p>	<p>1</p> <p>Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger ALL LAMPS active command ON and OFF. Observe the low fuel warning indicator.</p> <ul style="list-style-type: none"> ● Does the low fuel indicator illuminate and turn off? <p>→ Yes GO to Pinpoint Test D.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the self-test.</p>

PINPOINT TEST X: AN INDICATOR IS INOPERATIVE / ALWAYS ON — ENGINE OVER-TEMPERATURE

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>X1 RETRIEVE THE RECORDED DTCs FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — INSTRUMENT CLUSTER</p>	
	<p>1</p> <p>Use recorded instrument cluster DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes If instrument cluster DTC U1073 is retrieved, REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.</p> <p>All other instrument cluster DTCs, REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to X2.</p>
<p>X2 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL</p>	
<p>1</p>	<p>1</p> <p>Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command ON and OFF. Observe the engine over-temperature indicator.</p>

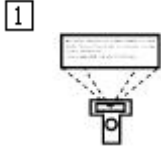

Instrument Cluster
Active Command

- Does the engine over-temperature indicator illuminate and turn off?

→ **Yes**
GO to [Pinpoint Test E](#).

→ **No**
INSTALL a new instrument cluster. REFER to [Instrument Cluster](#).
CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST Y: AN INDICATOR IS INOPERATIVE/ALWAYS ON — AIR BAG WARNING

CONDITIONS	DETAILS/RESULTS/ACTIONS
Y1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — RCM	<p>1 Use the recorded RCM DTCs from the continuous and on-demand self-tests.</p> <ul style="list-style-type: none"> ● Are any RCM DTCs recorded? <p>→ Yes REFER to Section 501-20B.</p> <p>→ No GO to Y2.</p>
Y2 CARRY OUT THE INSTRUMENT CLUSTER WARNING LAMPS AND CHIME ACTIVE COMMAND USING THE DIAGNOSTIC TOOL	<p>1  Select the instrument cluster WARNING LAMPS AND CHIME active command. Trigger the ALL LAMPS active command ON and OFF. Observe the air bag warning indicator.</p> <ul style="list-style-type: none"> ● Does the air bag warning indicator illuminate and turn off? <p>→ Yes The system is operating correctly at this time.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. CLEAR the DTCs. REPEAT the self-test.</p>

PINPOINT TEST Z: THE ODOMETER IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>Z1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — INSTRUMENT CLUSTER</p>	<p>1 Use recorded instrument cluster DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are there any DTCs recorded? <p>→ Yes If the instrument cluster DTC U1123 is recorded, REFER to Section 206-09A with ABS, Section 206-09B with ABS/TC, or Section 206-09C with ABS/TC/IVD.</p> <p>If DTC B2143, GO to Z2.</p> <p>All other instrument cluster DTCs, REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to Z3.</p>
<p>Z2 VERIFY THE ODOMETER ILLUMINATES</p>	<p>1 Verify that the odometer does illuminate with the ignition in the RUN position.</p> <ul style="list-style-type: none"> ● Does the odometer illuminate? <p>→ Yes GO to Z3.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. TEST the system for normal operation.</p>
<p>Z3 CHECK THE SPEEDOMETER OPERATION</p>	<p>1 Operate the vehicle to verify that the speedometer operates correctly.</p> <ul style="list-style-type: none"> ● Does the speedometer operate correctly? <p>→ Yes The system is OK.</p> <p>→ No INSTALL a new instrument cluster. REFER to Instrument Cluster. TEST the system for normal operation.</p>

Instrument Cluster

Removal and Installation

1.  **CAUTION:** Prior to removal of the module, it is necessary to upload module configuration information to the diagnostic tool. This information needs to be downloaded into the new module once installed. For additional information, refer to [Section 418-01](#).

 **CAUTION:** Electronic modules are sensitive to electrical charges. If exposed to these charges, damage may result.

 **CAUTION:** To avoid damaging the instrument cluster lens, place a protective cloth over the upper steering column cover before removing the instrument cluster.

NOTE: The instrument cluster is not repairable at the dealership. Do not disassemble the instrument cluster.

Remove the instrument panel cluster finish panel. For additional information, refer to [Section 501-12](#).

2. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
3. Remove the hood latch release handle.
 1. Remove the bolts.
 2. Remove the handle.

4. Remove the instrument panel steering column cover.
 1. Remove the bolts.
 2. Remove the cover.

5. Remove the floor heat duct.
 1. Remove the bolt.
 2. Remove the duct.

6. Loosen the two LH instrument panel tunnel brace bolts.

7. Remove the steering column reinforcement.
 1. Remove the bolts.
 2. Remove the reinforcement.

8. Lower the steering column.

1. Loosen, but do not remove, the four nuts.
2. Lower the column.

9. Disconnect the passive anti-theft system (PATS) transceiver electrical connector. For additional information, refer to [Section 419-01B](#).
10. Remove the instrument cluster.
 1. Remove the bolts.
 2. Remove the instrument cluster.
 - Disconnect the electrical connectors.

11. **⚠ CAUTION:** Once the new module is installed, it is necessary to download the module configuration information from the diagnostic tool into the new module. For additional information, refer to [Section 418-01](#).

⚠ CAUTION: To avoid damaging the instrument cluster lens, place a protective cloth over the upper steering column cover before installing the instrument cluster.

NOTE: Following the installation of a new instrument cluster, carry out the Parameter Reset and Key Programming procedure in this section.

To install, reverse the removal procedure.

Cluster Lens

Removal and Installation

1. Remove the instrument cluster. For additional information, refer to [Instrument Cluster](#) in this section.
2. Remove the cluster lens.
 1. Remove the screws.
 2. Remove the cluster lens.

3. To install, reverse the removal procedure.

Torque Specifications

Description	Nm	lb-ft	lb-in
Horn bolt	20	15	—
Horn switch pad bolt	6	—	53

Horn

The horn system includes the following:

- Horn relay.
 - Horn (13832).
 - Air bag sliding contact (14A664).
 - Steering wheel switch harness.
 - Horn switch.
-

Horn

Refer to Wiring Diagrams Section [413-06](#), Horn for schematic and connector information.

Special Tool(s)

 ST1137-A	73III Automotive Meter 105-R0057 or equivalent
 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052, or equivalent diagnostic tool

Principles of Operation

When the horn switch is depressed, a message is sent from the instrument cluster via the network communication link to the front electronic module (FEM). The FEM acknowledges the message and energizes the horn relay by grounding the horn relay coil which allows the dual note horn to sound.

Inspection and Verification

NOTE: The FEM and instrument cluster must be reconfigured upon replacement. Refer to [Section 418-01](#).

1. Verify the customer concern by operating the horn.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Damaged horn ● Damaged horn switch ● Damaged horn relay ● Damaged air bag sliding contact (14A664) C2 	<ul style="list-style-type: none"> ● Battery junction box (BJB) Fuses: <ul style="list-style-type: none"> ■ 425 (40A) ■ 422 (20A) ● Central junction box (CJB) Fuses: <ul style="list-style-type: none"> ■ 202 (5A) ■ 213 (5A) ■ 217 (5A) ■ 220 (10A)

- Auxiliary junction box (AJB) Fuse(s):
 - 104 (15A)
- Damaged circuitry
- Damaged horn relay
- Loose or corroded connections
- Damaged air bag sliding contact (14A664)

3. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
4. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.
5. Carry out the DATA LINK DIAGNOSTIC TEST. If the diagnostic tool responds with:
 - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for instrument cluster, GO to Pinpoint Test B.
 - NO RESP/NOT EQUIP for FEM, GO to Pinpoint Test A.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the instrument cluster and FEM.
6. If the DTCs retrieved are related to the concern, go to the Instrument Cluster Diagnostic Trouble Code (DTC) Index or go to the FEM Diagnostic Trouble Code (DTC) Index to continue diagnostics.
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

Pinpoint Tests

PINPOINT TEST A: NO COMMUNICATION WITH THE FRONT ELECTRONIC MODULE (FEM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK CIRCUITS 29-DK20 (OG/GN) AND 29S-DK22 (OG/YE) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p> 	

2

FEM C201c

3

FEM C201f

4

5

A0006297

5

Measure the voltage between FEM C201c pin 6, circuit 29-DK20 (OG/GN), harness side and ground; and between FEM C201f pin 1, circuit 29S-DK22 (OG/YE) harness side and ground.

• Are the voltages greater than 10 volts?

→ **Yes**
GO to [A2](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

A2 CHECK CIRCUITS 31-DK20 (BK/RD), 31-DK20A (BK/RD), 31-DK20B (BK/RD), 31-DK20C (BK/RD) AND 31-DK20D (BK/RD) FOR OPENS

1

2

FEM C201a

3

3

Using the following table, measure the resistance between FEM connectors, harness side and ground:

FEM	Pin	Circuit
-----	-----	---------

A0006298

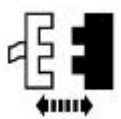

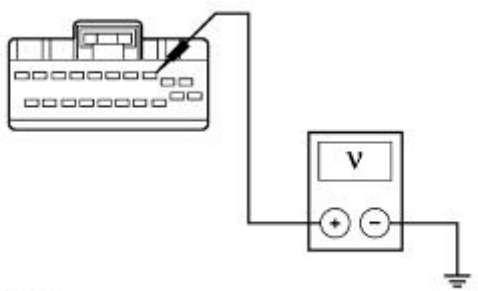

C201c	12	31-DK20 (BK/RD)
C201a	11	31-DK20A (BK/RD)
C201a	13	31-DK20B (BK/RD)
C201a	14	31-DK20C (BK/RD)
C201a	15	31-DK20D (BK/RD)

● Is the resistance less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST B: NO COMMUNICATION WITH THE INSTRUMENT CLUSTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK HOT AT ALL TIMES POWER SUPPLY CIRCUIT	
<p>1 </p> <p>2  Instrument Cluster</p> <p>3 </p> <p>A0002792</p>	<p>3 Measure the voltage between instrument cluster C220b pin 3, circuit 29-GG11 (OG/BU), harness side and ground.</p> <p>● Is the voltage greater than 10 volts?</p> <p>→ Yes GO to B2.</p>

→ **No**
REPAIR the circuit. TEST the system for normal operation.

B2 CHECK HOT IN RUN POWER SUPPLY CIRCUITS

1

2

2 Measure the voltage between the instrument cluster and ground as follows:

Connector Pin	Circuit
C220a pin 11	15-JA14 (GN/BK)
C220b pin 6	15-GG14 (GN/RD)
C220b pin 17	75-GG15 (YE/GN)

- Are the voltages greater than 10 volts?

→ **Yes**
GO to [B3](#).

→ **No**
REPAIR the circuit(s). TEST the system for normal operation.

B3 CHECK GROUND CIRCUITS

1

2

2 Measure the resistance between the instrument cluster and ground as follows:

Connector Pin	Circuit
C220a pin 6	31-AL11 (BK)
C220b pin 13	91-GG11 (BN/RD)

- Are the resistances less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s). TEST the system for normal operation.

PINPOINT TEST C: THE HORN DOES NOT SOUND

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK HORN INPUT PID FROM THE INSTRUMENT CLUSTER	
<p>1 </p> <p>Diagnostic Tool</p> <p>2 </p> <p>3 </p>	<p>4 Monitor the ICM PID HORN_SW while depressing and releasing the horn switch.</p> <ul style="list-style-type: none"> • Does the PID indicate ON with the horn switch depressed and OFF with the horn switch released? <p>→ Yes GO to C6.</p> <p>→ No GO to C2.</p>
C2 INITIATE THE HORN CONTROL ACTIVE COMMAND	
	<p>1 Trigger the ICM active command HORN CONTROL.</p> <ul style="list-style-type: none"> • Does the horn sound? <p>→ Yes GO to C3.</p> <p>→ No INSTALL a new instrument cluster. REFER to Section 413-01 . CLEAR the DTCs. REPEAT the self-test.</p>
C3 CHECK THE OPERATION OF THE HORN SWITCH	

1

3

Horn Switch Connector

4

A0003816

2

Deactivate the air bag system; refer to [Section 501-20B](#).

4

Connect a fused (5A) jumper wire between the horn switch connector pin 2, harness side and the horn switch connector pin 5, harness side.

● Does the horn sound?

→ Yes

INSTALL a new horn switch. REFER to [Horn—Switch](#). CLEAR the DTCs. REPEAT the self-test.

→ No

GO to [C4](#).

C4 CHECK THE OPERATION OF THE AIR BAG SLIDING CONTACT

1

Air Bag Sliding Contact C218

2

A0003817

2

Connect a fused (5A) jumper wire between air bag sliding contact C218 pin 9, circuit 10-GJ9 (GY/OG), harness side and air bag sliding contact C218 pin 10, circuit 64-LK18 (BU/RD), harness side.

● Does the horn sound?

- **Yes**
INSTALL a new air bag sliding contact.
REFER to [Section 501-20B](#) . CLEAR the DTCs. REPEAT the self-test.
- **No**
GO to [C5](#) .

C5 CHECK CIRCUIT 10-GJ9 (GY/OG) FOR AN OPEN

1

Instrument Cluster C220b

2

Air Bag Sliding Contact C218

3

- 3 Measure the resistance between instrument cluster C220b pin 10, circuit 10-GJ9 (GY/OG), harness side and air bag sliding contact C218 pin 9, circuit 10-GJ9 (GY/OG), harness side; and between air bag sliding contact C218 pin 9, circuit 10-GJ9 (GY/OG), harness side and ground.

- **Is the resistance less than 5 ohms between the instrument cluster and the air bag sliding contact; and greater than 10,000 ohms between the air bag sliding contact and ground?**

- **Yes**
REPAIR circuit 64-LK18 for a short to ground or an open. CLEAR the DTCs. REPEAT the self-test.

- **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

C6 CHECK THE OPERATION OF THE HORN RELAY

1

2

Horn Relay C1006

3 Carry out the relay component test. Refer to Wiring Diagrams Section 700-09, Component Testing.

• Is the relay OK?

→ Yes
GO to C7.

→ No
INSTALL a new horn relay. CLEAR the DTCs. REPEAT the self-test.

C7 CHECK CIRCUITS 30-GJ7A (RD/BU) AND 30-GJ7B (RD/BU) FOR AN OPEN

1

2

A0003390

2 Measure the voltage between horn relay C1006 pin 3, circuit 30-GJ7A, harness side and ground; and between horn relay C1006 pin 2, circuit 30-GJ7B (RD/BU), harness side and ground.

• Are the voltages greater than 10 volts?

→ Yes
GO to C8.

→ No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

C8 CHECK THE HORN OPERATION

1

2

2 Connect a fused (5A) jumper wire between horn relay C1006 pin 5, circuit 30S-GJ6 (RD/YE), harness side and the horn relay C1006 pin 3, circuit 30-GJ7A (RD/BU), harness side.

A0003391

3

● Does the horn sound?

→ **Yes**
GO to [C9](#).

→ **No**
GO to [C10](#).

C9 CHECK CIRCUIT 91S-GJ7 (BN/RD) FOR AN OPEN

1

2

FEM C201c

3

A0003392

3 Measure the resistance between horn relay C1006 pin 1, circuit 91S-GJ7 (BN/RD), harness side and FEM C201c pin 8, circuit 91S-GJ7 (BN/RD), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

C10 CHECK CIRCUIT 30S-GJ6 (RD/YE) FOR AN OPEN

1

2

Horn C131

3

3 Measure the resistance between horn relay C1006 pin 5, circuit 30S-GJ6 (RD/YE), harness side and horn C131 pin 1, circuit 30S-GJ6 (RD/YE), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [C11](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

C11 CHECK CIRCUIT 31-GJ6 (BK/YE) FOR AN OPEN

1

1 Measure the resistance between horn C131 pin 2, circuit 31-GJ6 (BK/YE), harness side and ground.

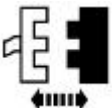

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new horn. REFER to [Horn](#).
CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

PINPOINT TEST D: THE HORN SOUNDS CONTINUOUSLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 CHECK HORN INPUT PID FROM THE INSTRUMENT CLUSTER	
<p>1 </p> <p>Diagnostic Tool</p> <p>2 </p> <p>3 </p> <p>PID HORN_SW</p>	<p>4 Monitor the ICM PID HORN_SW.</p> <ul style="list-style-type: none"> ● Does the PID always indicate ON? <p>→ Yes GO to D2.</p> <p>→ No GO to D5.</p>
D2 CHECK THE HORN SWITCH OPERATION	
<p>1 </p> <p>3 </p> <p>Horn Switch</p>	<p>2 Deactivate the air bag system; refer to Section 501-20B.</p> <ul style="list-style-type: none"> ● Does the horn stop? <p>→ Yes INSTALL a new horn switch. REFER to Horn—Switch. CLEAR the DTCs.</p>

REPEAT the self-test.

→ **No**
GO to [D3](#).

D3 CHECK THE AIR BAG SLIDING CONTACT OPERATION

1

Air Bag Sliding Contact C218

● **Does the horn stop?**

→ **Yes**
INSTALL a new air bag sliding contact.
REFER to [Section 501-20B](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [D4](#).

D4 CHECK THE INSTRUMENT CLUSTER OPERATION

1

Instrument Cluster C220b

● **Does the horn stop?**

→ **Yes**
INSTALL a new instrument cluster.
REFER to [Section 413-01](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR circuit 10-GJ9 (GY/OG) for a short to power. CLEAR the DTCs. REPEAT the self-test.

D5 CHECK CIRCUIT 30S-GJ6 (RD/YE) FOR A SHORT TO POWER

1

Horn Relay C1006

● **Does the horn stop?**

→ **Yes**
GO to [D6](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.

REPEAT the self-test.

D6 CHECK CIRCUIT 91S-GJ7 (BK/BU) FOR A SHORT TO GROUND

1

1

Measure the resistance between horn relay C1006 pin 2, circuit 91S-GJ7 (BK/BU), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new horn relay. CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [D7](#).

D7 CHECK CIRCUIT 91S-GJ7 (BK/BU) AND THE FEM FOR A SHORT TO GROUND

1

FEM C201c

2

2

Measure the resistance between horn relay C1006 pin 2, circuit 91S-GJ7 (BK/BU), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

Horn

Removal and Installation

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Remove the front splash shield.
 1. Remove the bolts.
 2. Remove the front splash shield.

3. Remove the air deflector shield.

4. Remove the horn.
 1. Disconnect the electrical connector.
 2. Remove the bolt.

5. To install, reverse the removal procedure.

Horn —Switch

Removal and Installation

1. Remove the driver air bag module. Refer to [Section 501-20B](#).
2. **NOTE:** The diagnostic tool has been removed from the art for clarity.

NOTE: The four horn switch springs are not attached. To avoid losing the springs use caution when removing the horn switch.

Remove the horn switch pad.

1. Remove the bolts.
2. Remove the horn switch pad.

3. Remove the horn switch.
 1. Remove the springs.
 2. Disconnect the steering wheel controls.
 3. Remove the horn switch.

4. **NOTE:** To provide correct tension between the horn pad and horn switch, install the yellow horn switch springs at the bottom and the silver horn switch springs at the top.

To install, reverse the removal procedure.

Information And Message Center

The message center display is a green vacuum fluorescent, fixed format display. The message center display is integrated within the instrument cluster (10849) and cannot be replaced separately, refer to [Section 413-01](#). The message center is controlled by the four message center switches (FUEL, RESET, STATUS, and SETUP). Refer to the owner literature for more information.

Information And Message Center

Refer to Wiring Diagrams Section [413-08](#), Message Center for schematic and connector information.

Special Tool(s)

 ST1137-A	73 III Automotive Meter or equivalent 105-R0057
 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052, or equivalent diagnostic tool

Principles of Operation

NOTE: The instrument cluster (IC), message center (MC), front electronic module (FEM), rear electronic module (REM), remote emergency satellite cellular unit (RESCU), anti-lock braking system/traction control/stability assist module (ABS/TC), and the driver door module (DDM) must be reconfigured upon replacement. Refer to [Section 418-01](#).

The message center is part of the instrument cluster (10849). It uses a vacuum fluorescent display. The message center communicates with the PCM, FEM, REM, IC, ABS/TC/stability assist module, DDM, and the RESCU module over the SCP network. As a technician it is important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message) control the output of the feature, or does it output a message over the SCP communication network to another module?
- which module controls the output of the feature.

Display Information

The display modes are:

- fuel (average fuel economy, distance to empty)
- setup
- system status
- warning

- temporary alert

The message center information can be selected by depressing any of the following four buttons:

- FUEL
- RESET
- SETUP
- STATUS

The setup display and the status display will time-out and default to the fuel blank display function. The temporary alert display will interrupt the current display to show the status of an event that has just happened. The warning display interrupts the current display until cleared or reset by the driver.

Status Displays

The status displays are timed modes and default back to the fuel blank display function. The status display modes are:

- oil life %
- AC air filter life %
- charging system
- engine temperature
- brake fluid level
- washer fluid level
- driver door
- passenger door
- driver rear door
- passenger rear door
- luggage compartment lid
- front turn lamps
- rear turn lamps
- stoplamps
- tail lamps
- traction control
- advance trac

Setup Displays

The setup displays are timed modes and default back to the fuel blank display function. The setup display modes are:

- language
- English/metric units
- autolocks on, autolocks off
- lock chirp on, lock chirp off

- easy entry on, easy entry off

Warning Messages

The warning messages can interrupt the display until cleared or reset by the driver. The warning messages are:

- engine temperature
- oil life
- check charging system
- transmission errors
- low washer fluid level
- low brake fluid
- low fuel
- driver door
- passenger door
- driver rear door
- passenger rear door
- luggage compartment lid
- stoplamps
- front turn lamps
- rear turn lamps
- rear tail lamps

The warning messages will display when the ignition switch is turned to ON and a fault occurs in a system. The message can be cleared by pressing the RESET button.

Temporary Alert Messages

The temporary alert display will interrupt the current display to show the status of an event that has just happened. The temporary alert messages are:

- autolamp delay
- memory recall/save
- traction control
- advance trac
- RESCU message

Inspection and Verification

NOTE: The IC, MC, REM, and FEM must be reconfigured upon replacement. Refer to [Section 418-01](#).

1. Verify the customer concern by operating the instrument cluster and message center to duplicate the condition by observing the indicators, warning displays, and gauges to determine if they are operating correctly with the ignition switch:

- in RUN with the engine off
- in START before the ignition switch is released
- in RUN with the engine running

2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Low washer fluid level ● Damaged fuel tank ● Low engine coolant level ● Damaged accessory drive belt ● Low engine oil level ● Low brake fluid level 	<ul style="list-style-type: none"> ● Central junction box (CJB) Fuse(s): <ul style="list-style-type: none"> ■ 204 (5A) ■ 205 (5A) ■ 207 (5A) ■ 213 (5A) ■ 217 (5A) ■ 219 (15A) ■ 220 (10A) ■ 224 (5A) ■ 229 (5A) ■ 230 (5A) ● Battery junction box (BJB) Fuse(s): <ul style="list-style-type: none"> ■ 422 (20A) ■ 425 (40A) ■ 430 (30A) ● Damaged circuitry ● Damaged connectors ● Damaged switches or sensors

3. If the inspection reveals obvious concern(s) that can be readily identified, repair as necessary.
4. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
5. If the diagnostic tool still does not communicate with the vehicle, refer to the New Generation STAR Tester manual.
6. Carry out the DATA LINK DIAGNOSTIC TEST. If the diagnostic tool responds with:
 - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for instrument cluster (IC) or message center (MCM), go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for FEM, go to Pinpoint Test B.
 - NO RESP/NOT EQUIP for REM, go to Pinpoint Test C.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the instrument cluster.
7. If the DTCs retrieved are related to the concern, go to the Message Center Module Diagnostic

Trouble Code (DTC) Index, Instrument Cluster Diagnostic Trouble Code (DTC) Index, FEM Diagnostic Trouble Code (DTC) Index, REM Diagnostic Trouble Code (DTC) Index or RESCU Diagnostic Trouble Code (DTC) Index to continue diagnostics.

8. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

Message Center Module Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1205	Message Center Switch Assembly Circuit Failure	MCM	Go To Pinpoint Test F.
B1342	ECU Defective	MCM	<p>NOTE: The message center is part of the instrument cluster.</p> <p>CLEAR and DOCUMENT the DTCs. CARRY OUT the message center self-test. INSTALL a new instrument cluster if the DTC B1342 is retrieved again. REFER to Section 413-01.</p>
B1676	Battery Voltage Out of Range	MCM	GO to Pinpoint Test A.
B2477	Module Configuration Failure	MCM	REFER to Section 418-01.
U1020	SCP (J1850) Invalid or Missing Data for Engine Air Conditioning Clutch	FEM	CARRY OUT the FEM self-test.
U1027	SCP (J1850) Invalid or Missing Data for Engine RPM	PCM	CARRY OUT the PCM self-test.
U1041	SCP (J1850) Invalid or Missing Data for Vehicle Speed	ICM	CARRY OUT the instrument cluster self-test.
U1053	SCP (J1850) Invalid or Missing Data for Steering / Steering Wheel	PCM	CARRY OUT the PCM self-test.
U1059	SCP (J1850) Invalid or Missing Data for Transmission / Transaxle / PRNDL	PCM	CARRY OUT the PCM self-test.
U1065	SCP (J1850) Invalid or Missing Data for Primary Id \$41	ABS	CARRY OUT the ABS self-test.
U1073	SCP (J1850) Invalid or Missing Data for Engine Coolant	PCM	CARRY OUT the PCM self-test.
U1075	SCP (J1850) Invalid or Missing Data for Engine Oil	FEM	REFER to Section 413-01.
U1083	SCP (J1850) Invalid or Missing Data for Engine Systems Other	PCM	CARRY OUT the PCM self-test.
U1098	SCP (J1850) Invalid or Missing Data for Vehicle	PCM	CARRY OUT the PCM self-test.

	Speed Control		
U1117	SCP (J1850) Invalid or Missing Data for Electrical Energy Management	FEM	CARRY OUT the FEM self-test.
U1123	SCP (J1850) Invalid or Missing Data for Odometer	ABS, stability assist module, TC	CARRY OUT the ABS, stability assist module, and TC self-test.
U1135	SCP (J1850) Invalid or Missing Data for Ignition Switch / Starter	ICM	CARRY OUT the instrument cluster self-test.
U1136	SCP (J1850) Invalid or Missing Data for Telltales	FEM, PCM	CARRY OUT the FEM and PCM self-test.
U1180	SCP (J1850) Invalid or Missing Data for Personalization (Memory) Features	DDM	CARRY OUT the DDM self-test.
U1181	SCP (J1850) Invalid or Missing Data for Personalization (Memory) Features	DDM	CARRY OUT the DDM self-test.
U1199	SCP (J1850) Invalid or Missing Data for External Access (Doors)	REM, FEM, DDM	CARRY OUT the REM, FEM, and DDM self-test.
U1217	SCP (J1850) Invalid or Missing Data for External Lamp Outage	FEM, REM	CARRY OUT the FEM and REM self-test.
U1218	SCP (J1850) Invalid or Missing Data for External Lamps	ICM	CARRY OUT the instrument cluster self-test.
U1222	SCP (J1850) Invalid or Missing Data for Interior Lamps	ICM	CARRY OUT the instrument cluster self-test.

Pinpoint Tests

PINPOINT TEST A: NO COMMUNICATION WITH THE INSTRUMENT CLUSTER MODULE/MESSAGE CENTER MODULE

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK HOT AT ALL TIMES POWER SUPPLY CIRCUIT	
<p>1 </p> <p>2  Instrument Cluster C220b</p> <p>3  A0002792</p>	<p>3 Measure the voltage between instrument cluster C220b pin 3, circuit 29-GG11 (OG/BU), harness side and ground.</p> <p>● Is the voltage greater than 10 volts?</p> <p>→ Yes GO to A2 .</p> <p>→ No REPAIR the circuit. TEST the system for normal operation.</p>
A2 CHECK HOT IN RUN POWER SUPPLY CIRCUITS	
<p>1  Instrument Cluster C220a</p> <p>2 </p> <p>3</p>	<p>3 Measure the voltage between the instrument cluster connectors, harness</p>

side and ground as follows:

Connector Pin	Circuit
C220a pin 11	15-JA14 (GN/BK)
C220b pin 6	15-GG14 (GN/RD)
C220b pin 17	75-GG15 (YE/GN)

- Are the voltages greater than 10 volts?

→ **Yes**
GO to [A3](#).

→ **No**
REPAIR the circuit(s). TEST the system for normal operation.

A3 CHECK GROUND CIRCUITS

1

2

- 2 Measure the resistance between the instrument cluster and ground as follows:

Connector Pin	Circuit
C220a pin 6	31-AL11 (BK)
C220b pin 13	91-GG11 (BN/RD)

- Are the resistances less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s). TEST the system for normal operation.

PINPOINT TEST B: NO COMMUNICATION WITH THE FRONT ELECTRONIC MODULE

CONDITIONS	DETAILS/RESULTS/ACTIONS
------------	-------------------------

B1 CHECK CIRCUITS 29-DK20 (OG/GN) AND 29S-DK22 (OG/YE) FOR VOLTAGE

NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.

1

2

FEM C201c

3

FEM C201f

4

5

A0006297

5

Measure the voltage between FEM C201c pin 6, circuit 29-DK20 (OG/GN), harness side and ground; and between FEM C201f pin 1, circuit 29S-DK22 (OG/YE) harness side and ground.

- Are the voltages greater than 10 volts?

→ **Yes**
GO to [B2](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

B2 CHECK CIRCUIT S 31-DK20 (BK/RD), 31-DK20A (BK/RD), 31-DK20B (BK/RD), 31-DK20C (BK/RD) AND 31-DK20D (BK/RD) FOR OPENS

1

2

FEM C201a

3

3

Measure the resistance between FEM connectors, harness side and ground as follows:

FEM	Pin	Circuit
C201c	12	31-DK20 (BK/RD)
C201a	11	31-DK20A (BK/RD)
C201a	13	31-DK20B (BK/RD)
C201a	14	31-DK20C (BK/RD)
C201a	15	31-DK20D (BK/RD)

- Are the resistances less than 5 ohms?

→ Yes

REFER to [Section 418-00](#).

→ No

REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST C: NO COMMUNICATION WITH REAR ELECTRONIC MODULE

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK CIRCUIT 29-DK31 (OG/BK) FOR VOLTAGE	
<p>1</p>	
<p>2</p> <p>REM C420d</p>	
<p>3</p> <p>REM C420c</p>	
<p>4</p>	

5

A0006299

5

Measure the voltage between REM C420d pin 3, circuit 29-DK31 (OG/BK), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [C2](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

C2 CHECK CIRCUITS 29S-DK31 (OG/BK), 31-DK30D (BK), 31-DK30E (BK), 31-DK30F (BK), 31-DK30G (BK) AND 31-DK30H (BK/OG) FOR OPENS

1

2

REM C420b

3

A0006300

3

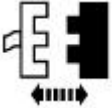

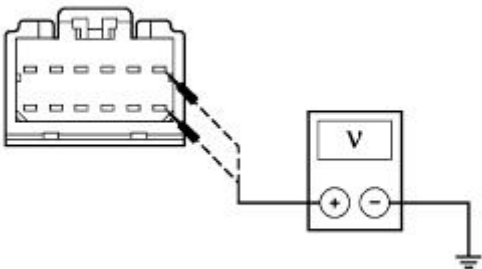

Measure the resistance between REM connectors, harness side and ground as follows:

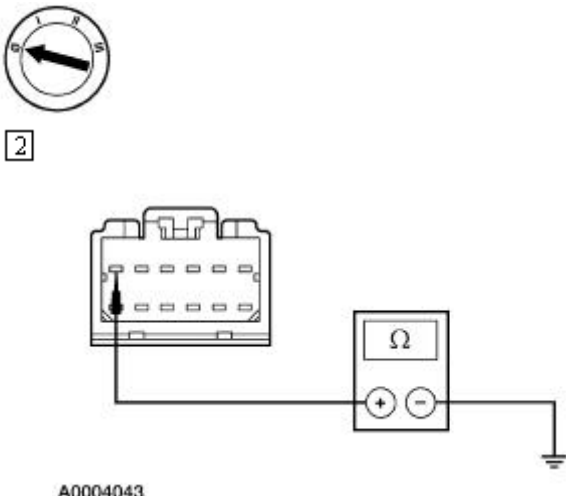

REM	Pin	Circuit
C420c	13	29-DK31 (OG/BK)
C420c	12	31-DK30E (BK)
C420c	11	31-DK30D (BK)
C420c	26	31-DK30G (BK)
C420c	25	31-DK30F (BK)
C420b	12	31-DK30H (BK/OG)

• Are the resistances less than 5 ohms?

- **Yes**
REFER to [Section 418-00](#).
- **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST D: NO COMMUNICATION WITH THE REMOTE EMERGENCY SATELLITE CELLULAR UNIT (RESCU)

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 CHECK THE RESCU MODULE FOR VOLTAGE — CIRCUITS 30-GP8 (RD/BK) AND 20-GP8 (PK/OG)	
<p>1 </p> <p>2  RESCU Module C401a</p> <p>3 </p> <p>4  A0004042</p>	<p>4 Measure the voltage between RESCU Module C401a pin 1, circuit 30-GP8 (RD/BK), harness side and ground; and between RESCU Module C401a pin 7, circuit 20-GP8 (PK/OG), harness side and ground.</p> <ul style="list-style-type: none"> ● Are the voltages greater than 10 volts? <p>→ Yes GO to D2.</p> <p>→ No REPAIR the circuit in question. TEST the system for normal operation.</p>
D2 CHECK THE RESCU MODULE GROUND — CIRCUIT 31-GP8 (BK/RD)	
<p>1</p>	

A0004043

2 Measure the resistance between RESCU module C401a pin 6, circuit 31-GP8 (BK/RD), harness side and ground.

● **Is the resistance less than 5 ohms?**

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST E: THE MESSAGE CENTER IS NOT OPERATING CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 CHECK THE MESSAGE CENTER DISPLAY OPERATION	
<p>1</p>  <p>2</p>  <p>MCM Active Command</p>	<p>2 Select the MCM MESSAGE CENTER DISPLAY CHARACTER active command. Trigger SEGMENTS active command ON.</p> <p>3 Observe the message center display.</p> <p style="margin-left: 20px;">● Does the message center display illuminate all segments?</p> <p>→ Yes The system is OK. If the FUEL, RESET, SETUP or STATUS buttons are inoperative, GO to Pinpoint Test F.</p> <p>→ No INSTALL a new instrument cluster. REFER to Section 413-01. TEST the system for normal operation.</p>

PINPOINT TEST F: THE MESSAGE CENTER SWITCH IS NOT OPERATING CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 RETRIEVE THE RECORDED DTC FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — MESSAGE CENTER MODULE (MCM)	
	<p>1 Use recorded message center DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any message center DTCs recorded? <p>→ Yes If message center DTC B1205, GO to F3.</p> <p>All other message center DTCs, REFER to the Message Center Module Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to F2.</p>
F2 CHECK THE MCM PID FOR THE MESSAGE CENTER SWITCH	
<p>1</p>  <p>MCM PID</p>	<p>1 Select and monitor the MCM PIDs FUELSW, RESETSW, SETUPSW and STATUSSW while pressing each message center button (FUEL, RESET, SETUP and STATUS).</p> <ul style="list-style-type: none"> ● Does each PID agree with each button position? <p>→ Yes INSTALL a new instrument cluster. REFER to Section 413-01. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No GO to F3.</p>
F3 CHECK THE MESSAGE CENTER SWITCH CIRCUIT 9-GG25 (BN/WH) FOR OPEN AND SHORT TO GROUND	
<p>1</p>  <p>2</p> 	

Instrument Cluster C220a

3

Message Center Switch C253

4

4

Measure the resistance between instrument cluster C220a pin 12, circuit 9-GG25 (BN/WH), harness side and message center switch C253 pin 6, circuit 9-GG25 (BN/WH), harness side; and between instrument cluster C220a pin 12, circuit 9-GG25 (BN/WH), harness side and ground.

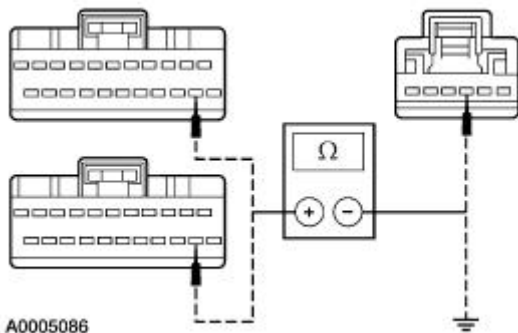

- Is the resistance less than 5 ohms between the instrument cluster and the message center switch; and greater than 10,000 ohms between the instrument cluster and ground?

→ **Yes**
GO to [F4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

F4 CHECK THE MESSAGE CENTER SWITCH CIRCUIT 7-GG25 (YE/VT)

1

1

Measure the resistance between instrument cluster C220a pin 13, circuit 7-GG25 (YE/VT), harness side and message center switch C253 pin 3, circuit 7-GG25 (YE/VT), harness side; and between instrument cluster C220a pin 13, circuit 7-GG25 (YE/VT), harness side and ground.

- Is the resistance less than 5 ohms between the instrument cluster and the message center switch; and greater than 10,000 ohms between the instrument cluster and ground?

→ **Yes**
INSTALL a new message center switch. REFER to [Switch—Message Center](#). TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST G: THE INDICATOR DOES NOT OPERATE CORRECTLY — LOW FUEL LEVEL DISPLAY

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 RETRIEVE THE RECORDED DTC FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — REM AND INSTRUMENT CLUSTER	
NOTE: The fuel gauge does not change indication unless there have been at least 11 liters (three gallons) of fuel added or removed between ignition switch cycles.	
	<p>1 Use recorded REM and instrument cluster DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes If REM DTC B1201, or instrument cluster DTC U1131 is retrieved, REFER to Section 413-01.</p> <p>→ No GO to G2.</p>
G2 CHECK THE FUEL GAUGE OPERATION	
<p>1</p> 	<p>2 NOTE: The fuel gauge does not change indication unless there have been at least 11 liters (three gallons) of fuel added or removed between ignition switch cycles.</p> <p>Observe the fuel gauge operation.</p> <ul style="list-style-type: none"> ● Does the fuel gauge operate correctly? <p>→ Yes GO to G3.</p> <p>→ No REFER to Section 413-01.</p>
G3 CHECK THE MESSAGE CENTER DISPLAY ILLUMINATION	
<p>1</p>  <p>MCM Active Command</p> <p>2</p>	<p>1 Select MCM MESSAGE CENTER DISPLAY CHARACTER and trigger ON the active command SEGMENTS.</p> <p>2 Trigger OFF the active command SEGMENTS.</p>

MCM Active Command

- Does the message center display illuminate when triggered ON, and go off when triggered OFF?

→ **Yes**
REFER to the Symptom Chart.

→ **No**
INSTALL a new instrument cluster. REFER to [Section 413-01](#). CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST H: THE INDICATOR IS INOPERATIVE — OIL LIFE STATUS, AC FILTER LIFE

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 CHECK THE ODOMETER OPERATION	
	<p>1 Observe the odometer operation.</p> <ul style="list-style-type: none"> ● Does the odometer operate correctly? <p>→ Yes GO to H2.</p> <p>→ No REFER to Section 413-01.</p>
H2 CHECK THE LOW OIL PRESSURE INDICATOR	
<p>1</p>  <p>3</p> 	<p>2 Observe the low oil pressure indicator.</p> <p>4 Observe the low oil pressure indicator.</p> <ul style="list-style-type: none"> ● Does the low oil pressure indicator operate correctly? <p>→ Yes INSTALL a new instrument cluster. REFER to Section 413-01. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No</p>

REFER to [Section 413-01](#).

PINPOINT TEST I: LAMPOUT WARNING INDICATOR IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: Verify that the FEM and REM operate correctly and communicate with the instrument cluster and message center.	
I1 CHECK THE EXTERIOR LIGHTS OPERATION	
	<p>1 Operate each exterior light. Observe the operation.</p> <ul style="list-style-type: none"> ● Do all exterior lights operate correctly? <p>→ Yes INSTALL a new instrument cluster. REFER to Section 413-01. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No REFER to Section 417-01.</p>

PINPOINT TEST J: THE INDICATOR DOES NOT OPERATE CORRECTLY — WASHER FLUID LEVEL DISPLAY

CONDITIONS	DETAILS/RESULTS/ACTIONS
J1 CHECK THE MESSAGE CENTER DISPLAY ILLUMINATION	
<p>1  MCM Active Command</p> <p>2  MCM Active Command</p>	<p>1 Select MCM MESSAGE CENTER DISPLAY CHARACTER and trigger ON the active command SEGMENTS.</p> <p>2 Trigger OFF the active command SEGMENTS.</p> <ul style="list-style-type: none"> ● Does the message center display illuminate when triggered ON, and go off when triggered OFF? <p>→ Yes GO to J2.</p> <p>→ No INSTALL a new instrument cluster. REFER to Section 413-01. CLEAR the DTCs. REPEAT the self-test.</p>
J2 MONITOR FEM PID WFLUID	

1

2

Washer Fluid Level Switch C138

3

4

5

A0004841

4 Monitor the FEM PID WFLUID.

5 Connect a 10A fused jumper wire between washer fluid level switch C138, circuit 8-GC8 (WH/GN), harness side and ground.

• Does the FEM PID read ON and OFF alternately?

→ Yes
GO to [J3](#).

→ No
REMOVE the jumper wire, EXIT the FEM PID, and GO to [J4](#).

If the fused jumper wire fails, REMOVE the jumper and GO to [J5](#).

J3 CHECK WASHER FLUID LEVEL SWITCH GROUND CIRCUIT 31-GC8 (BK) FOR OPEN

1

1 Measure the resistance between washer fluid level switch C138, circuit 31-GC8 (BK), harness side and ground.

A0004810

● Is the resistance less than 5 ohms?

→ **Yes**
 INSTALL a new washer fluid level switch. REFER to [Section 501-16](#). TEST the system for normal operation.

→ **No**
 REPAIR the circuit. TEST the system for normal operation.

J4 CHECK CIRCUIT 8-GC8 (WH/BU) FOR SHORT TO GROUND

1

2

FEM C201b

3

A0004806

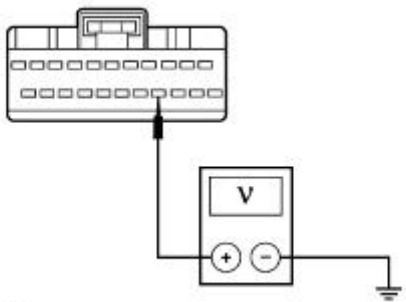

3 Measure the resistance between washer fluid level switch C138, circuit 8-GC8 (WH/BU), harness side and ground.

● Is the resistance less greater than 10,000 ohms?

→ **Yes**
 INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 REPAIR the circuit. TEST the system for normal operation.

J5 CHECK THE LOW WASHER FLUID SWITCH CIRCUIT 8-GC8 (WH/BU) FOR SHORT TO BATTERY

<p>1</p>  <p>2</p>  <p>A0004807</p>	<p>2</p> <p>Measure the voltage between FEM C201b pin 15, circuit 8-GC8 (WH/BU), harness side and ground.</p> <ul style="list-style-type: none"> ● Is any voltage present? <p>→ Yes REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No INSTALL a new FEM. REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p>
---	---

PINPOINT TEST K: THE INDICATOR DOES NOT OPERATE CORRECTLY — LOW BRAKE FLUID LEVEL DISPLAY

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>K1 CHECK THE INSTRUMENT CLUSTER BRAKE WARNING INDICATOR ILLUMINATION</p>	
<p>1</p>  <p>ICM Active Command</p> <p>2</p>  <p>ICM Active Command</p>	<p>1</p> <p>Select ICM warning lamps and chime and trigger ON the active command ALL LAMPS.</p> <p>2</p> <p>Select ICM warning lamps and chime and trigger OFF the activate command ALL LAMPS.</p> <ul style="list-style-type: none"> ● Does the BRAKE warning indicator illuminate when triggered ON, and go off when triggered OFF? <p>→ Yes</p>

GO to [K2](#).

→ **No**
INSTALL a new instrument cluster.
REFER to [Section 413-01](#). CLEAR the DTCs. REPEAT the self-test.

K2 CHECK BRAKE FLUID LEVEL SWITCH

1

Brake Fluid Level Switch C124

● Does the BRAKE warning indicator continue to illuminate?

→ **Yes**
GO to [K3](#).

→ **No**
INSTALL a new brake fluid level switch.
REFER to [Section 206-06](#). TEST the system for normal operation.

K3 CHECK BRAKE FLUID LEVEL FEM PID FLUID_1

1

2

FEM PID

3

A0004838

2 Select and monitor FEM PID FLUID_1.

3 Connect a 10A fused jumper wire between brake fluid warning switch C124, circuit 8-GC7 (WH/RD), harness side and ground.

● Does the PID read OFF when the jumper wire is not connected and ON when the jumper wire is connected?

→ **Yes**
INSTALL a new FEM. REFER to [Section](#)

[419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [K4](#).

K4 CHECK BRAKE WARNING INDICATOR INPUT CIRCUIT 8-GC7 (WH/RD) FOR SHORT TO GROUND

1

FEM C201c

2

2

Measure the resistance between FEM C201c pin 11, circuit 8-GC7 (WH/RD), harness side and ground.

● **Is the resistance greater than 10,000 ohms?**

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST L: DATA STATUS MESSAGE IS DISPLAYED — DOOR AJAR DISPLAY

CONDITIONS	DETAILS/RESULTS/ACTIONS
L1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — FEM AND REM	<p>1 Use recorded FEM and REM DTCs from the continuous and on-demand self-test.</p> <p>● Are any FEM or REM DTCs recorded?</p> <p>→ Yes REFER to FEM Diagnostic Trouble Code (DTC) Index or REM Diagnostic Trouble Code (DTC) Index.</p>

→ **No**
GO to [L2](#).

L2 CHECK THE MESSAGE CENTER DISPLAY ILLUMINATION

1

1 Select MCM MESSAGE CENTER DISPLAY CHARACTER and trigger ON the active command SEGMENTS.

2

2 Trigger OFF the active command SEGMENTS.

- Does the message center display illuminate when triggered ON, and go off when triggered OFF?

→ **Yes**
REFER to [Section 417-02](#).

→ **No**
INSTALL a new instrument cluster. REFER to [Section 413-01](#). CLEAR the DTCs. REPEAT the self-test.

Switch —Message Center

Removal and Installation

1. Disconnect the battery ground cable. Refer to [Section 414-01](#)
2. Remove the center A/C register finish panel.
 - Disconnect the electrical connector.

3. Remove the message center switch.
 1. Remove the screws.
 2. Remove the message center switch.
 - Install a new bulb if necessary.

4. **NOTE:** When the battery is disconnected and then reconnected, some abnormal drive symptoms may occur while the vehicle relearns its adaptive strategy. The vehicle may need to be driven 16 km (10 miles) or more to relearn the strategy.

To install, reverse the removal procedure.

Warning Devices

NOTE: The key-in-ignition warning switch is an integral part of the ignition switch. For additional information, refer to [Section 211-04](#).

The warning device system consists of the following:

- key-in-ignition warning switch
- door ajar switch
- instrument cluster
- front electronic module (FEM)
- rear electronic module (REM)
- safety belt warning switch
- headlamp switch

Belt Minder

NOTE: The belt minder feature is configurable. For additional information, refer to [Section 418-01](#). To configure without using a scan tool, refer to [Belt Minder Deactivating/Activating](#) in this section.

The belt minder feature supplements the current safety belt warning function. The belt minder feature is enabled after the current safety belt warning is complete. The belt minder reminds the driver that their safety belt is unbuckled by intermittently sounding a chime and illuminating the safety belt warning lamp in the instrument cluster once the vehicle speed has exceeded 3 mph (5 kph). While activated, the belt minder alternates the chime and indicator from ON for 6 seconds to OFF for 30 seconds.

The belt minder stops when:

- the driver safety belt is buckled.
 - the ignition is turned to OFF or ACC.
 - five minutes have elapsed since belt minder has started.
-

Warning Devices

Refer to Wiring Diagrams Section [413-09](#), Warning Devices for schematic and connector information.

Special Tool(s)

 <p>ST2332-A</p>	<p>Worldwide Diagnostic System WDS 418-F224 New Generation STAR (NGS) Tester 418-F048 or equivalent</p>
 <p>ST1137-A</p>	<p>73III Automotive Meter or equivalent 105-R0057</p>

Inspection and Verification

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Door ajar switches. ● Key-in-ignition switch. ● Headlamp switch. 	<ul style="list-style-type: none"> ● Central junction box (CJB) Fuses: <ul style="list-style-type: none"> ■ 204 (5A) ■ 213 (5A) ■ 217 (5A) ■ 219 (20A) ■ 220 (10A) ● Battery junction box (BJB) Fuses: <ul style="list-style-type: none"> ■ 422 (20A) ■ 425 (40A) ● Circuitry. ● Instrument cluster.

3. If the concern remains after the inspection, connect the New Generation STAR (NGS) Tester to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the NGS menu. If the NGS does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.

4. If the NGS tester does not power up, refer to the New Generation STAR Tester manual.
5. Carry out the DATA LINK DIAGNOSTICS test. If the NGS responds with:
 - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for instrument cluster module (ICM), go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for restraint control module (RCM), refer to [Section 501-20B](#).
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the ICM and RCM.
6. If the DTCs retrieved from the RCM are related to the concern, refer to [Section 501-20B](#). If the DTCs retrieved from the ICM are related to the concern, go to the Instrument Cluster Diagnostic Trouble Code (DTC) Index to continue diagnostics.
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

Instrument Cluster Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1201	Fuel Sender Circuit Failure	ICM	REFER to Section 413-01 .
B1205	EIC Switch-1 Assembly Circuit Failure	ICM	REFER to Section 413-01 .
B1209	EIC Switch-2 Assembly Circuit Failure	ICM	REFER to Section 413-01 .
B1213	Anti-Theft Number of Programmed Keys Is Below Minimum	ICM	REFER to Section 419-01A .
B1246	Dim Panel Potentiometer Switch Circuit Failure	ICM	REFER to Section 413-00 .
B1342	ECU Is Defective	ICM	CLEAR the DTCs. CARRY OUT the instrument cluster self-test. If DTC B1342 is retrieved again, install a new instrument cluster. REFER to Section 413-01 .
B1352	Ignition Key-In Circuit Failure	ICM	Go to Pinpoint Test D .
B1470	Lamp Headlamp Input Circuit Failure	ICM	REFER to Section 417-01 .
B1567	Lamp Headlamp High Beam Circuit Failure	ICM	REFER to Section 417-01 .
B1600	PATS Ignition Key Transponder Signal Is Not Received	ICM	REFER to Section 419-01B .
B1601	PATS Received Incorrect Key-Code From Ignition Key Transponder	ICM	REFER to Section 419-01B .
B1602	PATS Received Invalid Format of Key-Code From Ignition Key Transponder	ICM	REFER to Section 419-01B .
B1676	Battery Pack Voltage Out of Range	ICM	REFER to Section 414-00 .

B1681	PATS Transceiver Module Signal Is Not Received	ICM	REFER to Section 419-01B .
B1689	Autolamp Delay Circuit Failure	ICM	REFER to Section 417-01 .
B1875	Turn Signal / Hazard Switch Signal Circuit Failure	ICM	REFER to Section 417-01 .
B2103	Antenna Not Connected	ICM	REFER to Section 419-01B .
B2139	Security Data Mismatch (received PCM ID does not match what was expected)	ICM	REFER to Section 419-01B .
B2141	NVM Configuration Failure	ICM	REFER to Section 419-01B .
B2143	NVM Memory Failure	ICM	REFER to Section 419-01B .
B2162	Security Data Mismatch #2 (received data does not match what was expected)	ICM	REFER to Section 419-01B .
B2328	Column Reach Feedback Potentiometer Circuit Failure	ICM	REFER to Section 211-04 .
B2332	Column Tilt Feedback Potentiometer Circuit Failure	ICM	REFER to Section 211-04 .
B2351	Steering Column Switch Circuit Failure	ICM	REFER to Section 211-04 .
B2431	Transponder Programming Failed	ICM	REFER to Section 419-01B .
B2472	Fog Lamp Switch Failure	ICM	REFER to Section 417-01 .
B2477	Module Configuration Failure	ICM	REFER to Section 418-01 .
U1041	SCP (J1850) Invalid or Missing Data for Vehicle Speed	ABS, ABS/TC, IVD	CARRY OUT the ABS self-test. REFER to Section 206-09A , Section 206-09B , or Section 206-09C .
U1059	SCP (J1850) Invalid or Missing Data for Transmission/ Transaxle/PRNDL	PCM	CARRY OUT the PCM self-test. REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
U1073	SCP (J1850) Invalid or Missing Data for Engine Coolant Fluid Temperature	PCM	CARRY OUT the PCM self-test. REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
U1123	SCP (J1850) Invalid or Missing Data for Odometer Rolling Count	ABS, ABS/TC, IVD	CARRY OUT the ABS self-test. REFER to Section 206-09A , Section 206-09B , or Section 206-09C .
U1147	SCP (J1850) Invalid or Missing Data for Vehicle Security System	PCM	CARRY OUT the PCM self-test. REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Instrument Cluster Parameter Identification (PID) Index

PID	Description	Expected Value
ABCHIME	Air Bag Chime	OFF, ON
ANTISCN	Anti-Scan Function	DISABL, ENABLE
ASWSTAT	Autolamp Switch Input Status	OFF, DELAY7, DELAY6, DELAY5, DELAY4, DELAY3, DELAY2, DELAY1, INVLD

CCNT	Number Of Continuous DTCs In Module	one count per bit
D_SBELT	Driver Seat Belt	OUT, IN
DSWSTAT	Dimmer Switch Input Status	ON, LVL1, LVL2, LVL3, LVL4, LVL5, LVL6, LVL7, LVL8, LVL9, LVL10, LVL11, LVL12, LVL13, LVL14, LVL15, LVL16, LVL17, LVL18, LVL19, LVL20, LVL21, INVALID
ENABL_S	Vehicle Enable Status	DISABL, ENABLE
FOG_SW HA2_SW	Fog Lamp Switch Hazard Switch	OFF, ON OFF, ON
HEAD_L	Headlamp Switch Input Status	OFF, PARK, HEADLP, R_FOG, INVLD
HIBEAM	High Beam Switch Input Status	OFF, HIGH, PASS, INVLD
HORN_SW	Horn Input Switch	OFF, ON
IGN_A	Ignition Switch -ACCY Position	NO, YES
IGN_KEY	Ignition Key In / Out	OUT, IN
IGN_O/U	Ignition Switch - OFF/Unlock Position	NO, YES
IGN_R	Ignition Switch -RUN Position	NO, YES
IGN_S	Ignition Switch -START Position	NO, YES
LIGHTSN	Night(True) / Day(False)	NO, YES
LTURN	Left Turn Switch	OFF, ON
M_KEY	Master Key Present	notPRE, PRESNT
NUMKEYS	Number Of Keys Stored In Module	one count per bit
PCM_ID	PCM ID Status	notSTR, STORED
PCM_VFY	PCM Verify OK	NO, YES
RESETSW	Reset Switch	OFF, ON
RTURN	Right Turn Switch	OFF, ON
SELECT	Select/Mode Switch	OFF, ON
SERVMOD	Service Module: 0=No, Y=Yes	0-25 0-14
SPAREKY	Spare Key Programming: 0=Enabled, 1=Disabled	
TILT	Steering Column Tilt Switch	SHORT, UP, DOWN, OFF
TELEPOS	Telescope Position Sensor	notSEN, SENSED
TELESCP	Steering Column Telescope Switch	SHORT, IN, OUT, OFF
TILTPOS	Tilt Position Sensor	notSEN, SENSED
TR_PARK	Transmission Select Lever In Park Pos	NO, YES

Instrument Cluster Active Command Index

Active Command	Display	Action

Pinpoint Tests

PINPOINT TEST A: NO COMMUNICATION WITH THE INSTRUMENT CLUSTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK CONSTANT POWER SUPPLY CIRCUIT	
<p>1</p> 	
<p>2</p> 	

Instrument Cluster C220b

3

A0002792

3

Measure the voltage between instrument cluster C220b pin 3, circuit 29-GG11 (OG/BU), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [A2](#).

→ **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

A2 CHECK IGNITION POWER SUPPLY CIRCUITS

1

2

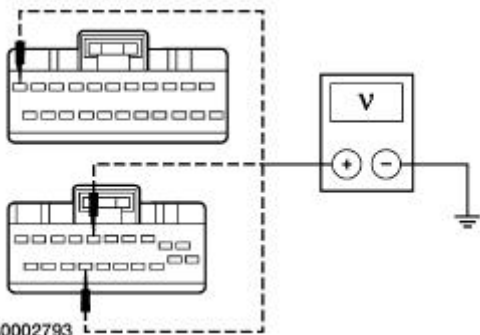

Instrument Cluster C220a

3

4

A0002793

4

Using the following table, measure the voltage between the instrument cluster connectors, harness side and ground.

Connector Pin	Circuit
C220a pin 11	15-JA14 (GN/BK)
C220b pin 6	15-GG14 (GN/RD)
C220b pin 17	75-GG15 (YE/GN)

• Are the voltages greater than 10 volts?

→ **Yes**
GO to [A3](#).

→ **No**
REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs.

A3 CHECK GROUND CIRCUITS

1

2

2 Using the following table, measure the resistance between the instrument cluster connectors, harness side and ground.

Connector Pin	Circuit
C220a pin 6	31-AL11 (BK)
C220b pin 13	91-GG11 (BN/RD)

- Are the resistances less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST B: THE CHIME SOUNDS WHEN THE DRIVER DOOR IS AJAR (NO KEY IN IGNITION AND HEADLAMPS OFF)

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 MONITOR ICM PID IGN_KEY	
<p>1</p> <p>3</p> <p>NGS</p> <p>4</p>	<p>2 Remove the ignition key.</p> <p>4 Monitor ICM PID IGN_KEY.</p>

● Does the ICM PID indicate IN?

→ **Yes**
GO to [B2](#).

→ **No**
INSTALL a new instrument cluster.
REFER to [Section 413-01](#). REPEAT the self-test. CLEAR the DTCs.

B2 CHECK CIRCUIT 30S-GM7 (RD/WH) FOR A SHORT TO VOLTAGE

1

1

Measure the voltage between instrument cluster C220a, pin 21, circuit 30S-GM7 (RD/WH), harness side and ground.

● Is any voltage present?

→ **Yes**
INSTALL a new ignition switch. REFER to [Section 211-04](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [Pinpoint Test D](#).

PINPOINT TEST C: THE SAFETY BELT WARNING CHIME DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK THE SEAT BELT WARNING SWITCH — MONITOR THE ICM PID D_SBELT	
<p>1</p>  <p>2</p>  <p>3</p>	

4

4

Monitor the ICM PID D_SBEL , while inserting and removing the safety belt.

- **Does the ICM PID D_SBELT indicate IN with the safety belt inserted and OUT with the safety belt out?**

→ **Yes**

INSTALL a new instrument cluster. REFER to [Section 413-01](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**

If the ICM PID D_SBELT indicates IN, GO to [C5](#). If the ICM PID D_SBELT indicates OUT GO to [C2](#).

C2 CHECK CIRCUIT 31-GE52 (BK) FOR OPEN

1

2

Safety Belt Warning Switch C381

3

A0003906

3

Measure the resistance between safety belt warning switch C381, circuit 31-GE52 (BK), harness side and ground.

- **Is the resistance less than 5 ohms?**

→ **Yes**

GO to [C3](#).

→ **No**

REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

C3 CHECK SAFETY BELT WARNING SWITCH FOR SOURCE OF CONCERN

1 Connect a jumper wire between safety belt warning switch C381, circuit 8-GE52, harness side and ground.

2 Monitor the ICM PID D_SBELT.

● Does the ICM PID indicate IN?

→ **Yes**
INSTALL a new safety belt buckle.
REFER to [Section 501-20A](#).

→ **No**
GO to [C4](#).

C4 CHECK CIRCUIT 8-GE52 (WH/BK) FOR OPEN

1

A0003907

1 Measure the resistance between instrument cluster C220a pin 18, circuit 8-GE52 (WH/BK), harness side and safety belt warning switch C381, circuit 8-GE52 (WH/BK), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new instrument cluster.
REFER to [Section 413-01](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

C5 MONITOR THE PID D_SBELT

1

Safety Belt Warning Switch C381

2 Monitor the ICM PID D_SBELT

● Does the PID say OUT?

→ **Yes**
INSTALL a new safety belt buckle.
REFER to [Section 501-20A](#).

→ **No**

GO to [C6](#).

C6 CHECK CIRCUIT 8-GE52 (WH/BK) FOR SHORT TO GROUND

1

Instrument Cluster C220a

2

A0003908

2

Measure the resistance between instrument cluster C220a pin 18, circuit 8-GE52 (WH/BK), harness side and ground.

- Is the resistance greater than 10,000 ohms?

- **Yes**
INSTALL a new instrument cluster. REFER to [Section 413-01](#) . REPEAT the self-test. CLEAR the DTCs.
- **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST D: THE KEY-IN-IGNITION CHIME DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 RETRIEVE THE RECORDED DTCs FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST—ICM	<p>1 Use the recorded ICM DTCs from the continuous and on-demand self-tests.</p> <ul style="list-style-type: none"> ● Are there any DTCs recorded? <p>→ Yes If DTC B1352, GO to D3 .</p> <p>→ No GO to D2 .</p>
D2 CHECK THE COURTESY LAMPS	<p>1 Open the driver front door.</p>

- Do the courtesy lamps illuminate?

→ **Yes**
GO to [D3](#).

→ **No**
REFER to [Section 417-02](#).

D3 MONITOR THE ICM PID IGN_KEY

1

2

3

4 Monitor the ICM PID IGN_KEY.

5 With the key in the ignition, the ICM PID IGN_KEY should indicate IN. With the key out of the ignition, the ICM PID IGN_KEY should indicate OUT.

- Does the ICM PID IGN_KEY indicate correctly?

→ **Yes**
INSTALL a new instrument cluster.
REFER to [Section 413-01](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [D4](#).

D4 CHECK THE KEY-IN-IGNITION WARNING SWITCH—MONITOR THE PID IGN_KEY

1

Ignition Switch C250

2

3

3 Monitor the PID IGN_KEY.

4

A0003909

4

Connect a 10A fused jumper wire between ignition switch C250 pin 8, circuit 30S-GM7 (RD/WH), harness side and battery positive.

- Does the ICM PID IGN_KEY indicate IN with the jumper wire connected and OUT with the jumper wire removed?

→ **Yes**
INSTALL a new ignition switch. REFER to [Section 211-04](#) . REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [D5](#) .

D5 CHECK CIRCUIT 30S-GM7 (RD/WH) FOR OPEN

1

2

Instrument Cluster C220a

3

A0003910

3

Measure the resistance between the instrument cluster C220a pin 21, circuit 30S-GM7 (RD/WH), harness side and ignition switch C250 pin 8, circuit 30S-GM7 (RD/WH).

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [D6](#) .

→ **No**
REPAIR the circuit. REPEAT the self-test.

CLEAR the DTCs.

D6 CHECK CIRCUIT 30S-GM7 (RD/WH) FOR SHORT TO GROUND

1

A0003911

1

Measure the resistance between the instrument cluster C220a pin 21, circuit 30S-GM7 (RD/WH), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ Yes

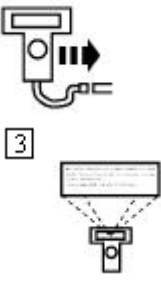

INSTALL a new instrument cluster, REFER to [Section 413-01](#). REPEAT the self-test. CLEAR the DTCs.

→ No

REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST E: THE HEADLAMP ON REMINDER CHIME DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — ICM	<p>1 Use the recorded ICM DTCs from the continuous and on-demand self-tests.</p> <ul style="list-style-type: none">● Are any DTCs recorded? <p>→ Yes For DTC B1470, REFER to Section 417-01.</p> <p>For all other ICM DTCs, REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to E2.</p>
E2 MONITOR THE ICM PID IGN_KEY	<p>1 </p> <p>2</p>

 <p>3</p>	<p>3 Monitor the ICM PID IGN_KEY.</p> <ul style="list-style-type: none"> • Does the ICM PID IGN_KEY indicate IN with the key in the ignition and indicate OUT with the key out of the ignition? <p>→ Yes GO to E3.</p> <p>→ No GO to Pinpoint Test D.</p>
<p>E3 CHECK FOR COURTESY LAMP OPERATION</p>	
	<p>1 Monitor the courtesy lamps while opening and closing the driver door.</p> <ul style="list-style-type: none"> • Do the courtesy lamps illuminate with the driver door open, and go out with the driver door closed after a 20 second delay? <p>→ Yes INSTALL a new instrument cluster, REFER to Section 413-01. REPEAT the self-test. CLEAR the DTCs.</p> <p>→ No REFER to Section 417-02.</p>

PINPOINT TEST F: A CHIME DOES NOT OPERATE CORRECTLY — AIR BAG WARNING CHIME

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>F1 RETRIEVE THE RECORDED DTCs FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — RCM</p>	<p>1 Use the recorded RCM DTCs from the continuous and on-demand self-tests.</p> <ul style="list-style-type: none"> • Are any RCM DTCs recorded? <p>→ Yes REFER to Section 501-20B.</p> <p>→ No GO to F2.</p>
<p>F2 CHECK CIRCUIT 8-JA13 (BK/WH) FOR SHORT TO GROUND</p>	
<p>1</p>	

3

RCM C310a

4

Instrument Cluster C220b

5

A0003912

2 Deactivate the air bag system. REFER to [Section 501-20B](#).

5 Measure the resistance between RCM C310a pin 26, circuit 8-JA13 (WH/BK), harness side and ground.

• Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [F3](#).

→ **No**
REPAIR the circuit. REPEAT the self-test, CLEAR the DTCs .

F3 CHECK CIRCUIT 8-JA13 (WH/BK) FOR SHORT TO VOLTAGE

1

2

2 Measure the voltage between RCM C310a pin 26, circuit 8-JA13 (WH/BK), harness side and ground.

A0003913

● Is any voltage indicated?

- **Yes**
REPAIR the circuit. REPEAT the self-test, CLEAR the DTCs.
- **No**
GO to [F4](#).

F4 CHECK CIRCUIT 8-JA13 (WH/BK) FOR OPEN

1

2

A0003914

- 2 Measure the resistance between RCM C310a pin 26, circuit 8-JA13 (WH/BK), harness side and instrument cluster C220b pin 14, circuit 8-JA13 (WH/BK), harness side.

● Is the resistance less than 5 ohms?

- **Yes**
INSTALL a new instrument cluster, REFER to [Section 413-01](#). REPEAT the self-test, CLEAR the DTCs.
- **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST G: A CHIME DOES NOT OPERATE CORRECTLY — FAIL SAFE COOLING CHIME IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS

G1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF TESTS—ICM

	<p>1 Use the recorded ICM DTCs from the continuous and on-demand self-tests.</p> <ul style="list-style-type: none"> ● Are there any DTCs recorded? <p>→ Yes For DTC U1073, REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.</p> <p>→ No INSTALL a new instrument cluster, REFER to Section 413-01. REPEAT the self-test. CLEAR the DTCs.</p>
--	---

PINPOINT TEST H: A CHIME DOES NOT OPERATE CORRECTLY — TURN SIGNAL WARNING TONE

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>H1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS — ICM</p>	
	<p>1 Use the recorded ICM DTCs from the continuous and on-demand self-tests.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes For ICM DTC U1123, REFER to Section 206-09A, Section 206-09B, or Section 206-09C.</p> <p>For all other ICM DTCs, REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to H2.</p>
<p>H2 CHECK OPERATION OF THE TURN SIGNALS</p>	
<p>1</p> 	<p>2 Operate the turn signals.</p> <ul style="list-style-type: none"> ● Do the turn signal lamps operate? <p>→ Yes INSTALL a new instrument cluster, REFER to Section 413-01. REPEAT the self-test. CLEAR the DTCs.</p> <p>→ No REFER to Section 417-01.</p>

Belt Minder Deactivating/Activating

Preparation

1. Before deactivating/activating the belt minder, set the parking brake.
2. Place the transmission range selector lever in P (PARK) (automatic transmission) or the NEUTRAL position (manual transmission).
3. Place the ignition switch in the OFF position.
4. Close all the vehicle doors.
5. Unbuckle the driver safety belt.
6. Place the parking lamps/headlamps switch in the OFF position.

Deactivating/Activating

1. Start with the ignition OFF and the driver and passenger safety belts unbuckled.
2. Turn the ignition to RUN (it is not required to start the vehicle.)
3. Wait until the seatbelt warning lamp turns off (approximately one minute.)
4. Buckle then unbuckle the driver or passenger seatbelt three times, ending in the unbuckled state. Step 4 must be completed within 60 seconds.
5. After Step 4 is complete the airbag warning lamp will be turned on for three seconds.
6. After the airbag warning lamp turns off, buckle/then unbuckle the safety belt again. This will enable the belt minder if it is currently disabled, or will disable the belt minder if it is currently enabled.
7. Confirmation of enabling the belt minder is provided to the customer by the airbag warning lamp flashing four times per second for three seconds, followed by three seconds again.
8. Confirmation of disabling the belt minder is provided to the customer by the airbag warning lamp flashing four times per second for three seconds.
9. Customer programming of the belt minder is automatically exited after completion of the customer confirmation.
10. The belt minder will automatically exit the programming mode without changing its enable status if Step 6 does not occur within 10 seconds of the end of Step 4.
11. Performing Steps 1-12 using only the driver safety belt will permanently enable/ disable the driver belt minder feature.

12. Performing Steps 1-12 using only the passenger safety belt will permanently enable/disable the passenger belminder feature.
 13. Only one side (driver or passenger) can be enabled/disabled per key cycle. While programming the driver side, any activity on the passenger safety belt will abort the programming sequence. While programming the passenger side, any activity on the driver safety belt will terminate the programming sequence.
 14. The programming sequence will abort if a system fault occurs that requires the illumination of the restraints indicator lamp (RIL) at any time during programming or confirmation.
-

General Specifications

Item	Specification
Battery	
Manufacturer	Motorcraft
Voltage	12 volts
Amps at -17.7°C (0°F) cold crank	650
Minutes-reserve capacity	130
Amps/hrs. -20 hour rate	72
Generator	
Current output	105 amps @ 6,000 gen rpm
Type	6G with internal voltage regulator
Pulley ratio	2.65:1 (3.0L); 2.78:1 (3.9L)

Charging System

This vehicle is equipped with a powertrain control module (PCM) controlled charging system. The PCM-controlled charging system is a system whereby the PCM determines the optimal voltage setpoint for the charging system and communicates this information to the voltage regulator. The PCM-controlled charging system is unique in that it has two unidirectional communication lines between the PCM and the generator/regulator. Both of these communication lines are pulse-width modulated. The generator communication (GEN COM) line communicates the desired setpoint from the PCM to the voltage regulator and the generator monitor (GEN MON) line communicates the generator load and error conditions to the PCM. The third pin on the voltage regulator, the A circuit pin, is a dedicated battery voltage sense line.

Circuit Description

B+ Output Terminal Circuit 30-BA6 (RD)

Generator output voltage is supplied through the battery positive (B+) output terminal on the rear of the generator to the battery and the electrical system.

Circuit 30-BA25 (RD)

This is the A terminal battery voltage sense circuit and is used to sense battery voltage. The circuit is used to supply current to the generator field (rotor) and to turn on the voltage regulator which determines generator output. This circuit is also used to turn the charging system warning indicator on if there is a fault in the charging system operation.

Circuit 10-BA25 (GY/RD)

This is the generator communication (GEN COM) circuit. The PCM determines the optimal voltage setpoint for the charging system and communicates this information to the voltage regulator via the GEN COM circuit.

Circuit 8-BA25 (WH/RD)

The generator monitor (GEN MON) circuit communicates the generator load and error conditions to the PCM.

Charging System

Refer to Wiring Diagrams Section [414-00](#) for schematic and connector information.

Special Tool(s)

 ST1137-A	73III Automotive Meter 105-R0057 or equivalent
 ST2173-A	SABRE Premium Electrical System Tester 010-00736 or equivalent

Inspection and Verification

 **WARNING:** Batteries normally produce explosive gases. Therefore, do not allow flames, sparks or lighted substances to come near the battery. When charging or working near a battery, always shield your face and protect your eyes. Always provide ventilation. Failure to follow these instructions may result in personal injury.

 **WARNING:** When lifting a plastic-cased battery, excessive pressure on the end walls could cause acid to spew through the vent caps, resulting in personal injury, damage to the vehicle or battery. Lift with a battery carrier or with your hands on opposite corners. Failure to follow these instructions may result in personal injury.

 **WARNING:** Keep batteries out of the reach of children. Batteries contain sulfuric acid. Avoid contact with skin, eyes, or clothing. Also, shield your eyes when working near the battery to protect against possible splashing of the acid solution. In case of acid contact with skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If acid is swallowed, call a physician immediately. Failure to follow these instructions may result in personal injury.

1. Verify the customer concern by operating the engine to duplicate the concern.
2. Inspect to determine if one of the following mechanical or electrical concerns apply:

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Battery ● Generator drive belt ● Generator pulley 	<ul style="list-style-type: none"> ● Battery junction box (BJB) fuse: <ul style="list-style-type: none"> ■ F415 (5A) ● Central junction box (CJB) fuse: <ul style="list-style-type: none"> ■ F217 (5A) ● Circuitry ● Charging warning indicator ● Cables

3. If the inspection reveals obvious concerns that can be readily identified, repair as necessary. Check the generator sense Fuse F415 located in the battery junction box.
4. Measure the open circuit battery voltage. (Battery is located in the luggage compartment on the RH side). If the battery voltage is less than 12.0 volts, test and recharge the battery before continuing with diagnosis. Refer to [Section 414-01](#).
5. Check the operation of the charging system warning indicator lamp (instrument cluster). Normal operation is as follows:
 - With the ignition switch OFF, the charging system warning indicator should be OFF.
 - With the ignition switch in RUN and the engine off, the charging system warning indicator light should be on.
 - With the engine running, the charging system warning indicator light should be off.
6. Check the battery voltage before and after starting the engine to determine if the battery voltage increases. Refer to the Normal Charging System Voltages chart.

Normal Charging System Voltages and Charging System Warning Indicator Operation

Key Position	30-BA25 (RD)	10-BA25 (GY/RD)	Generator B+ 30-BA6 (RD)	Battery	Engine to Battery Ground	Charging System Warning Indicator Operation
Key OFF	12 volts	0 volts	12 volts	12 volts	0 volts	Off
RUN-engine OFF	12 volts	1-3 volts	12 volts	12 volts	0 volts	Illuminated
RUN-engine running	13- 15V	13- 15V	13- 15V	13- 15V	0V	Off

7. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located under the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the vehicle selection cannot be entered:
 - check that the program card is correctly installed.
 - Check the connections to the vehicle.
 - check the ignition switch position. If the diagnostic tool still does not allow the vehicle selection to be entered, refer to the diagnostic tool manual.
8. If any PCM DTCs are retrieved, go to the PCM Index below to check if the codes retrieved are related to the charging system and continue diagnosis.
9. If no DTCs related to the charging system are retrieved, go to the Symptom Chart to continue

diagnosis.

NOTE: DTC P1246 can be set by the loss of the communication lines, GEN COM Circuit 8-BA25 (WH/RD) and/or GEN MON Circuit 10-BA25 (GY/RD). However, the generator warning indicator lamp will not illuminate since the generator is self-regulating and will function normally.

Powertrain Control Module Diagnostic Trouble Code (DTC) Index

DTC	Description	Action
P1246	System voltage failure	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

[Pinpoint Test H.](#)

Pinpoint Tests

CAUTION: Do not make jumper connections except as directed. Incorrect connections may damage the voltage regulator test terminals, fuses or fuse links.

CAUTION: Do not allow any metal object to come in contact with the generator housing and internal diode cooling fins.

NOTE: While carrying out any pinpoint test, disregard any DTCs set while following any specific pinpoint test. After the completion of any test, be sure to clear all codes in the PCM.

NOTE: All voltage measurements are referenced to the negative (-) battery post unless otherwise specified.

NOTE: When the battery has been disconnected and reconnected, some abnormal drive symptoms may occur while the powertrain control module (PCM) relearns its fuel trim. The vehicle may need to be driven to relearn the strategy.

PINPOINT TEST A: BATTERY IS DISCHARGED OR VOLTAGE IS LOW

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK THE GENERATOR OUTPUT	
	<p>1 Carry out the On-Vehicle Generator Load/No Load Tests. Refer to Component Tests in this section.</p> <ul style="list-style-type: none"> ● Is the generator OK? <p>→ Yes GO to A2.</p> <p>→ No GO to Pinpoint Test B.</p>
A2 CHECK FOR CURRENT DRAINS	
	<p>1 Carry out the Battery — Drain Test. Refer to Component Tests in this section.</p> <ul style="list-style-type: none"> ● Are there any excessive current drains? <p>→ Yes REPAIR as necessary. TEST the system for normal operation.</p> <p>→ No GO to A3.</p>
A3 CHECK FOR CURRENT DRAINS WHICH SHUT OFF WHEN THE BATTERY IS	

DISCONNECTED

	<p>1 Carry out the Battery — Electronic Drains Which Shut Off When the Battery Cable is Disconnected Test. Refer to Component Tests in this section.</p> <ul style="list-style-type: none"> ● Are there any current drains which shut off when the battery is disconnected? <p>→ Yes REPAIR as necessary. TEST the system for normal operation.</p> <p>→ No GO to Pinpoint Test B.</p>
--	---

PINPOINT TEST B: CHARGING SYSTEM WARNING INDICATOR IS ON WITH THE ENGINE RUNNING (THE SYSTEM VOLTAGE DOES NOT INCREASE)

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK THE FAULT CODES IN THE PCM	
<p>1 </p> <p>2 </p> <p>3 </p>	<p>3 Use the recorded PCM DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes REFER to PCM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to B2.</p>
B2 CHECK CIRCUIT 10-BA25 (GY/RD)	
<p>1 </p> <p>2</p>	

3

Generator C175c

4

5 Measure the voltage between the generator C175c pin 2, circuit 10-BA25 (GY/RD), harness side and ground.

• Is the voltage 0 volts?

→ Yes
GO to [B4](#).

→ No
GO to [B3](#).

B3 CHECK CIRCUIT 10-BA25 (GY/RD) FOR AN OPEN

1

2

PCM C175c

3

A0016592

3 Measure the resistance between the PCM C175c pin 28, circuit 10-BA25 (GY/RD), harness side and the generator C102a pin 2, circuit 10-BA25 (GY/RD), harness side.

• Is the resistance less than 5 ohms?

→ Yes
GO to [B4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

B4 CHECK THE GENERATOR OUTPUT

1

A0005524

2

PCM C175c

3 Carry out the generator load test. Refer to Component Tests, Generator On-Vehicle Tests in this section.

● **Is the generator OK?**

→ **Yes**
GO to [B5](#).

→ **No**
INSTALL a new generator. REFER to [Section 414-02](#). TEST the system for normal operation.

B5 CHECK FOR CORRECT MODULE OPERATION

1 Check:

- for corrosion
- for pushed-out pins
- connector seated correctly

2 Connect any disconnected connectors.

3 Make sure all other system connectors are fully seated.

4 Operate the system and verify the concern is still present.

● **Is the concern still present?**

→ **Yes**
INSTALL a new PCM. REFER to [Section 303-14](#). CLEAR the DTCs. REPEAT the PCM self-test.

→ **No**
 The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST C: THE SYSTEM OVERCHARGES (BATTERY VOLTAGE GREATER THAN 15 VOLTS)

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK THE FAULT CODES IN THE PCM	
<p>1 </p> <p>2 </p> <p>3 </p>	<p>3 Use the recorded PCM DTCs from the continuous and on-demand self-test.</p> <p>● Are any DTCs recorded?</p> <p>→ Yes REFER to PCM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to C2.</p>
C2 CHECK THE BATTERY VOLTAGE	
<p>1 </p> <p>2 </p> <p>3 </p> <p>4 </p>	<p>4 With the engine running and all accessories turned off, measure the</p>

AJ0210-A

voltage at the battery while varying the engine rpm.

- Is the voltage greater than 15 volts?

→ **Yes**
GO to [C4](#).

→ **No**
GO to [C3](#).

C3 CHECK THE VOLTAGE GAUGE OPERATION

1 Vary the engine rpm and monitor the voltage gauge operation.

- Does the voltage gauge read above 15 volts?

→ **Yes**
The voltage gauge is inaccurate. REFER to [Section 413-01](#) to continue gauge diagnostics.

→ **No**
GO to [C4](#).

C4 CHECK THE GENERATOR OUTPUT

1

2

Generator C102a

3

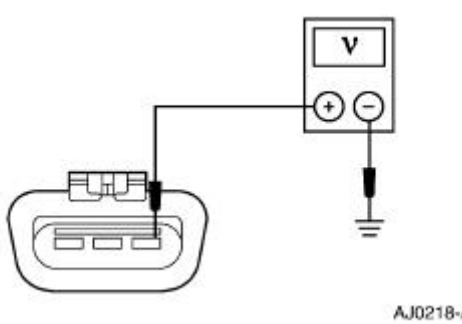

4 Check the generator output. Refer to Component Tests, Generator On-Vehicle Tests in this section.

- Is the generator OK?

	<p>→ Yes GO to C5.</p> <p>→ No INSTALL a new generator. REFER to Section. CLEAR the codes and TEST the system for normal operation.</p>
--	---

C5 CHECK CIRCUIT 30-BA25 (RD)

<p>1</p> 	<p>1 Measure the voltage between the generator C102a pin 3, circuit 30-BA25 (RD), harness side and ground.</p> <ul style="list-style-type: none"> ● Is the voltage less than 0.5 volt from battery voltage. <p>→ Yes INSTALL a new generator. REFER to Section 414-02 . CLEAR codes and test the system for normal operation.</p> <p>→ No REPAIR circuit 30-BA25 (RD) for high resistance. CLEAR codes and TEST the system for normal operation.</p>
--	---

PINPOINT TEST D: CHARGING SYSTEM WARNING INDICATOR IS ON WITH THE ENGINE RUNNING THE SYSTEM INCREASES VOLTAGE

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>D1 CHECK THE FAULT CODES IN THE PCM</p>	
<p>1</p>  <p>2</p>  <p>3</p>	<p>3 Use the recorded PCM DTCs from the continuous and on-demand self-test.</p>

● Are any DTCs recorded?

→ **Yes**
REFER to PCM Diagnostic Trouble Code (DTC) Index.

→ **No**
GO to [D2](#).

D2 CHECK THE SYSTEM FOR OVER CHARGING

1

2

3

4

AJ0210-A

4 With the engine running and all accessories off measure the voltage at the battery terminals while varying the engine rpm.

● Is the voltage greater than 15 volts?

→ **Yes**
GO to [Pinpoint Test C](#).

→ **No**
GO to [D3](#).

D3 CHECK CIRCUIT 30-BA25 (RD)

1

2

Generator C102a

3

4

AJ0218-A

4 Measure the voltage between generator C102a pin 3, circuit 30-BA25 (RD), harness side, and ground.

• Is the voltage equal to battery voltage?

→ Yes
GO to [D4](#).

→ No
REPAIR the circuit. TEST the system for normal operation.

D4 CHECK THE CHARGING SYSTEM WARNING INDICATOR OPERATION

1

2

PCM C175c

3

3 Monitor the charging system warning indicator.

• Is the indicator illuminated?

→ Yes
REPAIR circuit 10-BA25 (GY/RD) for a short to ground. TEST the system for normal operation.

→ **No**
GO to [D5](#).

D5 CHECK THE GENERATOR OUTPUT

1

2

PCM C175c

3

Generator C102a

4 Verify the generator output. Refer to Component Tests, Generator On-Vehicle Test — Load Test in this section.

● **Is the generator OK?**

→ **Yes**
GO to [D6](#).

→ **No**
INSTALL a new generator. REFER to [Section 414-02](#). Clear codes and TEST the system for normal operation.

D6 CHECK FOR CORRECT MODULE OPERATION

1 Check:

- for corrosion
- for pushed-out pins
- connector seated correctly

2 Connect any disconnected connectors.

3 Make sure all other system connectors are fully seated.

4 Operate the system and verify the concern is still present.

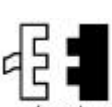

● **Is the concern still present?**

→ **Yes**
INSTALL a new PCM. REFER to [Section 303-14](#). CLEAR the DTCs. REPEAT the PCM self-test.

→ **No**

The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST E: THE CHARGING SYSTEM WARNING INDICATOR IS OFF WITH THE IGNITION SWITCH IN THE RUN POSITION AND THE ENGINE IS OFF

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 CHECK THE FAULT CODES IN THE PCM	
<p>1 </p> <p>2 </p> <p>3 </p>	<p>3 Use the recorded PCM DTCs from the continuous and on-demand self-test.</p> <p>● Are any DTCs recorded?</p> <p>→ Yes REFER to PCM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to E2.</p>
E2 CHECK THE CHARGING SYSTEM WARNING INDICATOR OPERATION	
<p>1 </p> <p>2 </p> <p>3 </p> <p>Generator C102a</p> <p>4</p>	

5

A0016591

- 5 With the engine off, connect a fused (15A), jumper wire between the generator C102a pin 2, circuit 10-BA25 (GY/RD), harness side and ground.

- Does the charging system warning indicator illuminate?

→ **Yes**
INSTALL a new generator. REFER to [Section 414-02](#). TEST the system for normal operation.

→ **No**
GO to [E3](#).

E3 CHECK FOR CORRECT MODULE OPERATION

- 1 Check:

- for corrosion
- for pushed-out pins
- connector seated correctly

- 2 Connect any disconnected connectors.

- 3 Make sure all other system connectors are fully seated.

- 4 Operate the system and verify the concern is still present.

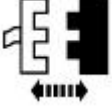

- Is the concern still present?

→ **Yes**
INSTALL a new PCM. REFER to [Section 303-14](#). CLEAR the DTCs. REPEAT the PCM self-test.

→ **No**
The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST F: THE CHARGING SYSTEM WARNING INDICATOR

LAMP FLICKERS OR IS INTERMITTENT

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK THE FAULT CODES IN THE PCM	
<p>1 </p> <p>2 </p> <p>3 </p>	<p>3 Use the recorded PCM DTCs from the continuous and on-demand self-test.</p> <p>● Are any DTCs recorded?</p> <p>→ Yes REFER to PCM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to F2.</p>
F2 CHECK FOR LOOSE CONNECTIONS	
<p>1  Generator C102a</p> <p>3  Generator C102a</p>	<p>2 Check all generator, battery, and power distribution connections for looseness, corrosion, loose or bent terminals, or loose eyelets.</p> <p>● Are all connections clean and tight?</p> <p>→ Yes GO to F3.</p> <p>→ No REPAIR as necessary. TEST the system for normal operation.</p>

F3 CHECK FUSE CONNECTION

1

2 With the engine running, check BJB fuse F415 (5A) in circuit 30-BA25 (RD) for looseness by wiggling the fuse and noting the charging system warning indicator lamp operation.

● **Does the charging system warning indicator lamp flicker?**

→ **Yes**
REPAIR loose fuse connections as necessary. TEST the system for normal operation.

→ **No**
GO to [F4](#).

F4 CHECK THE BATTERY VOLTAGE

1

2

AJ0210-A

2 With the engine running, and all accessories turned off, measure the voltage at the battery while varying the engine rpm.

● **Is the voltage greater than 15 volts?**

→ **Yes**
GO to [Pinpoint Test G](#).

→ **No**
GO to [F5](#).

F5 CHECK THE WARNING SYSTEM INDICATOR OPERATION

1

2

Generator C102a

3

4 Connect a fused jumper wire between generator C102a pin 2, circuit 10-BA25 (GY/RD), harness side and ground.

• Does the charging system warning indicator illuminate?

→ Yes
GO to [F6](#).

→ No
REPAIR the circuit. TEST the system for normal operation.

F6 CHECK THE PCM OPERATION

1

2

Generator C102a

3

3 Monitor the charging system warning indicator operation.

• Is the charging system warning indicator illuminated?

→ Yes
The PCM is operating correctly. RECHECK the generator circuits (including the generator) for intermittent shorts or opens. TEST the system for normal operation.

→ No
GO to [F7](#).

F7 CHECK FOR CORRECT MODULE OPERATION

1 Check:

	<ul style="list-style-type: none"> ● for corrosion ● for pushed-out pins ● connector seated correctly <p>2 Connect any disconnected connectors.</p> <p>3 Make sure all other system connectors are fully seated.</p> <p>4 Operate the system and verify the concern is still present.</p> <p>● Is the concern still present?</p> <p>→ Yes INSTALL a new PCM. REFER to Section 303-14. CLEAR the DTCs. REPEAT the PCM self-test.</p> <p>→ No The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.</p>
--	--

PINPOINT TEST G: THE GENERATOR IS NOISY

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 CHECK FOR ACCESSORY DRIVE NOISE AND MOUNTING BRACKETS	
	<p>1 Check the accessory drive belt for damage and correct installation; refer to Section 303-05.</p> <p>2 Check the accessory mounting brackets and generator pulley for looseness or misalignment.</p> <p>● Is the accessory drive OK?</p> <p>→ Yes If equipped with a one-way clutch (OWC) pulley, GO to G2.</p> <p>If not equipped with an OWC pulley, GO to G3.</p> <p>→ No REPAIR as necessary. TEST the system for normal operation.</p>
G2 CHECK ONE-WAY CLUTCH (OWC) PULLEY	
	<p>1 With the front end accessory drive (FEAD) belt removed, spin the OWC pulley in a clockwise direction, then reverse the direction of the pulley by spinning it in a counterclockwise direction. If necessary, refer to Section 303-05 for belt removal.</p> <p>● Does the OWC pulley engage with the rotor when spun in a clockwise direction and free-wheel when spun in a counterclockwise direction with minimal noise as compared to a known good vehicle?</p> <p>→ Yes</p>

GO to [G3](#).

→ **No**
INSTALL a new generator assembly with OWC pulley. REFER to [Section 414-02](#). TEST the system for normal operation.

G3 CHECK GENERATOR FOR ELECTRICAL NOISE

1

Generator C102a

2

3 With the engine running, turn the headlights on, rear defroster on, and the blower motor to HI.

● **Is the noise still present?**

→ **Yes**
GO to [G4](#).

→ **No**
INSTALL a new generator. REFER to [Section 414-02](#). TEST the system for normal operation.

G4 CHECK GENERATOR FOR MECHANICAL NOISE

1

2

Generator C102a

3

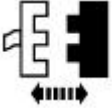

4 Turn all accessories off. With the engine running, use a stethoscope or equivalent listening device to probe the generator for unusual mechanical noise.

● **Is the generator the noise source?**

→ **Yes**
INSTALL a new generator. REFER to [Section 414-02](#). TEST the system for normal operation.

→ **No**
 REFER to [Section 303-00](#) to diagnose the source of the engine noise.

PINPOINT TEST H: RADIO INTERFERENCE

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 VERIFY GENERATOR IS SOURCE OF RADIO INTERFERENCE	
<p>1 </p> <p>3 </p> <p>4  Generator C102a</p> <p>5 </p>	<p>1 Start and run the engine.</p> <p>2 Tune the radio to a station where the interference is present.</p> <p>● Is the interference present with the generator disconnected?</p> <p>→ Yes REFER to Section 415-00 for diagnosis and testing of the in-vehicle entertainment system.</p> <p>→ No INSTALL a new generator. REFER to Section 414-02 . TEST the system for normal operation.</p>

Component Tests

Battery — Drain Testing

Check for current drains on the battery in excess of 30 milliamps (0.030 amp) with all the electrical accessories off and the vehicle at rest for at least 40 minutes. Current drains can be tested with the following procedure:

WARNING: Do not attempt this test on a lead-acid battery that has recently been recharged. Explosive gases can cause personal injury.

CAUTION: To prevent damage to the meter, do not crank the engine or operate accessories that draw more than 10A.

NOTE: Many electronic modules draw 5 mA or more continuously.

NOTE: Use an in-line digital ammeter between the battery negative post and its respective cable.

1. Make sure the engine/luggage compartments and interior fuse panels are accessible without turning on interior, underhood, or luggage compartment lights.
2. Drive the vehicle at least five minutes and over 48 km/h (30 mph) to turn on and activate vehicle systems.
3. Allow the vehicle to sit with the key off for at least 40 minutes to allow modules to time out/power down.
4. Connect a jumper wire between the negative battery cable and the negative battery post to prevent modules from resetting and to catch capacitive drains.
5. Disconnect the negative battery cable from the negative battery post without breaking the connection of the jumper wire.
6. Connect the battery tester between the negative battery cable and post. The meter must be capable of reading milliamps and should have a 10 amp capacity.

NOTE: It is very important that continuity is not broken between the battery post and the negative cable when connecting the meter. If this happens, the entire procedure must be repeated.

7. Remove the jumper wire.

NOTE: If the meter settings need to be switched or the test leads need to be moved to another jack, the jumper wire must be reinstalled to avoid breaking continuity.

8. Note the amperage draw. Draw will vary from vehicle to vehicle depending on the equipment package. Compare to a comparable vehicle for reference. No factory equipped vehicle should have more than a 30 mA draw (0.030 amp).
9. If the draw is found to be excessive, pull fuses from the central, auxiliary, and battery junction boxes one at a time and note the current reading. Do not reinstall fuses until you have finished testing.
10. If the current draw is still excessive, remove the remaining fuses from all three junction boxes one at a time and note the current drop. Do not reinstall fuses until you have finished testing. When the current level drops after pulling a fuse, the circuit containing the excessive draw has been located.
11. Check the Wiring Diagrams for any circuits that run from the battery without passing through either junction box. If the current draw is still excessive, disconnect these circuits until the draw is found. Also disconnect the generator electrical connections if the draw cannot be located. The generator may be internally shorted, causing current drain.

Generator On-Vehicle Tests

CAUTION: To prevent damage to the generator (10346), do not make jumper wire connections except as directed.

CAUTION: Do not allow any metal object to come in contact with the housing and the internal diode cooling fins with key on or off. A short circuit will result and burn out the diodes.

NOTE: Battery posts and cable clamps must be clean and tight for accurate meter indications.

1. Turn off all lamps and electrical components.
2. Place the vehicle in transmission range NEUTRAL and apply the parking brake.
3. Carry out the Load Test and No-Load Test according to the following component tests:

Generator On-Vehicle Tests — Load Test

1. Switch the tester to the ammeter function.
2. Connect the positive and negative leads of the tester to the corresponding battery terminals.
3. Connect the current probe to the generator B+ output terminal, circuit 38 (BK/OG).
4. With the engine running at 2,000 rpm, adjust the tester load bank to determine the output of the generator.
5. With the engine running, turn the A/C on, the blower motor on high speed and the headlamps on high beam.
6. Increase the engine speed to approximately 2,000 rpm. The voltage should increase a minimum of 0.5 volt above the base voltage.
 - If the voltage does not increase as specified, carry out the Generator On-Vehicle Tests in this section.
 - If the voltage increases as specified, the charging system is operating normally.

Generator On-Vehicle Tests — No Load Test

1. Switch the tester to the voltmeter function.
 2. Connect the voltmeter positive lead to the generator B+ terminal and the negative lead to ground.
 3. Turn all electrical accessories off.
 4. With the engine running at 2,000 rpm, check the generator output voltage. The voltage should be between 13.0 and 15.0 volts. If not, refer to the Symptom Chart.
 5. Turn the A/C on, the blower motor on high speed and the headlamps on high beam.
 6. The voltage should increase a minimum of 0.5 volt above the base voltage.
 - If the voltage does not increase as specified, carry out the Generator On-Vehicle Tests. For additional information, refer to Generator On-Vehicle Tests in this section.
 - If the voltage increases as specified, the charging system is operating normally.
-

General Specifications

Battery cable protective tube bolts	6	—	53
Battery hold-down bolt at body	12	9	—

Battery and Cables

Vehicles are equipped with a 12 volt maintenance-free battery (10655) which is located in the luggage compartment, next to the spare tire. The battery purges any battery gases to the outside of the vehicle by means of a vent hose. This vent hose must be attached at all times. New batteries must be of the same vented design.

The battery contains a built-in hydrometer. The hydrometer eye indication is as follows:

- A green dot means the battery is OK.
- A yellow dot, or a red dot, or when the green dot is not visible, means the battery needs to be charged.

If the battery has a cover/shield, make sure it is reinstalled after the battery has been cleaned or after a new battery has been installed.

The battery normally does not require additional water during its useful life. For longer, trouble-free operation, the top of battery should be clean and dry. Also, make certain the battery cables (14300, 14301) are always tightly fastened to the battery terminals.

If any terminal corrosion is detected, remove the cables from the terminals and clean with a wire brush. Battery acid can be neutralized with a solution of baking soda and water.

Always dispose of automotive batteries in a responsible manner. Follow your local authorized standards for disposal. Call your local authorized recycling center to find out more about recycling automotive batteries.

Battery

Special Tool(s)

 <p>ST2442-A</p>	<p>Micro 490 Digital Battery Analyzer 162-00004</p>
---	---

Inspection and Verification

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Battery ● Battery mounting 	<ul style="list-style-type: none"> ● Battery cables ● Battery posts

3. If an obvious cause for a concern is found, correct the cause before proceeding to the next step.
4. If the fault is not visually evident, proceed to the pinpoint test.

Pinpoint Tests

PINPOINT TEST A: BATTERY CONDITION TEST

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 TEST BATTERY CONDITION	
	<p>NOTE: No battery with a red test-eye should be replaced. The red eye only means the battery is discharged, not necessarily defective.</p> <p>NOTE: Failure to fully charge the battery before retesting may cause false readings.</p>
	<p>1 Verify the battery condition using the Battery Analyzer.</p> <ul style="list-style-type: none"> ● Is the battery OK? <p>→ Yes Does the meter read, GOOD BATTERY? RETURN the battery to service. REFER to Section 414-00.</p> <p>Does the meter read, GOOD-RECHARGE? CHARGE the battery and</p>

RETURN to service. REFER to [Section 414-00](#).

Does the meter read, CHARGE & RETEST? Fully CHARGE the battery and RETEST.

→ **No**

Does the meter read, REPLACE BATTERY? INSTALL a new battery.

Does the meter read, BAD CELL-REPLACE? INSTALL a new battery.

Battery Disconnect

 **WARNING:** Batteries normally produce explosive gases which can cause personal injury. Therefore, do not allow flames, sparks or lighted substances to come near the battery, always shield your face and protect your eyes. Always provide ventilation.

 **WARNING:** To avoid accidental deployment and possible injury, the backup power supply must be depleted before repairing or installing any front or side air bag supplemental restraint system (SRS) components and before repairing, installing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

 **WARNING:** When lifting a battery, excessive pressure on the end walls could cause acid to spew through the vent caps, resulting in personal injury. Lift with a battery carrier or with your hands on opposite corners.

 **WARNING:** Keep out of the reach of children. Batteries contain sulfuric acid. Avoid contact with skin, eyes or clothing. Also, shield your eyes when working near the battery to protect against possible splashing of the acid solution. In case of acid contact with the skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If acid is swallowed, call a physician immediately.

1. **NOTE:** When the battery is disconnected and reconnected, some abnormal drive symptoms may occur while the vehicle relearns its adaptive strategy. The vehicle may need to be driven to relearn its strategy.

Disconnect the battery ground cable.

2. Disconnect the positive battery cable.
 3. To install, reverse the removal procedure.
-

Battery

Removal and Installation

⚠ WARNING: Batteries normally produce explosive gases which can cause personal injury. Therefore, do not allow flames, sparks or lighted substances to come near the battery. When charging or working near a battery, always shield your face and protect your eyes. Always provide ventilation.

⚠ WARNING: Keep out of the reach of children. Batteries contain sulfuric acid. Avoid contact with skin, eyes or clothing. Also, shield your eyes when working near the battery to protect against possible splashing of the acid solution. In case of acid contact with the skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If acid is swallowed, call a physician immediately.

1. Disconnect the battery ground cable (14301).

2. Disconnect the battery positive cable (14300).

3. Disconnect the battery vent tube.

4. Remove the bolt and spacer clamp (10B684).

5.  **WARNING:** When lifting a battery, excessive pressure on the end walls could cause acid to spew through the vent caps, resulting in personal injury. Lift with a battery carrier or with your hands on opposite corners.

Remove the battery (10655).

6. **NOTE:** Because the vehicle's engine is electronically controlled by a computer, some control conditions are maintained by power from the battery. When the battery is disconnected or a new battery is installed, the engine must relearn its idle and fuel trim strategy for optimum driveability and performance. Let the engine idle for one minute. The relearning process will automatically complete itself as the vehicle is driven. The vehicle may need to be driven 16 km (10 miles). If the engine is not allowed to relearn its idle trim, the idle quality may be adversely affected until the idle trim is eventually relearned. Additionally, to account for customer driving habits and conditions, the automatic transmission must relearn its adaptive strategy. Optimal shifting will resume within a few hundred kilometers (miles) of operation. The clock and the preset radio stations must be reset once the battery is reconnected.

To install, reverse the removal procedure.

Battery Tray

Removal and Installation

⚠ WARNING: Batteries normally produce explosive gases which can cause personal injury. Therefore, do not allow flames, sparks or lighted substances to come near the battery. When charging or working near a battery, always shield your face and protect your eyes. Always provide ventilation.

⚠ WARNING: Keep out of the reach of children. Batteries contain sulfuric acid. Avoid contact with skin, eyes or clothing. Also, shield your eyes when working near the battery to protect against possible splashing of the acid solution. In case of acid contact with the skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If acid is swallowed, call a physician immediately.

1. Remove the battery (10655). For additional information, refer to [Battery](#).
2. Remove the pin type retainer and position the fuse holder aside.

3. Remove the battery junction box (BJB) cover and remove the BJB from the battery tray (10764) and position it aside.

4. Remove the battery tray bolts and washers and the battery tray.

5. To install, reverse the removal procedure.
-

Battery Cables

Removal and Installation

 **WARNING:** Batteries normally produce explosive gases which can cause personal injury. Therefore, do not allow flames, sparks or lighted substances to come near the battery. When charging or working near a battery, always shield your face and protect your eyes. Always provide ventilation.

 **WARNING:** Keep out of the reach of children. Batteries contain sulfuric acid. Avoid contact with skin, eyes or clothing. Also, shield your eyes when working near the battery to protect against possible splashing of the acid solution. In case of acid contact with the skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If acid is swallowed, call a physician immediately.

1. Remove the battery (10655). For additional information, refer to [Battery](#).
2. Remove the battery junction box (BJB) cover and remove the attachment nut securing the positive cable.

3. Remove the negative cable bolt.

4. Remove the harness clips from the cable in the luggage compartment.

5. Remove the rear seat cushion.

6. Remove the upper RH B-pillar trim panel. For additional information, refer to [Section 501-05](#).

7. **NOTE:** LH shown, RH similar

Remove the lower RH B-pillar trim cover and scuff plate screws .

8. **NOTE:** LH shown, RH similar

Remove the RH front and rear scuff plates.

9. **NOTE:** LH shown, RH similar

Remove the RH A-pillar lower trim panel and position aside the carpet to expose battery cable.

10. Remove the retaining tie straps and detach the cable forward past the rear seatback into the passenger compartment.
11. Remove the cable attachment cover and the nut at the dash through-bolt and remove the cable.

12. In the engine compartment at the dash panel, remove the protective cover and the nut.

13. Remove the bolt at the body.

14. Remove the right front wheel well splash shield. For additional information, refer to [Section 501-02](#).
15. Remove the bolts at the harness protective tubes.

16. **NOTE:** 3.0L shown, 3.9L similar.

Remove the cable protective cover at the starter solenoid and remove the nuts and the cable.

17. To install, reverse the removal procedure.
-

General Specifications

Item	Specification
Generator (10300) 3.0L	XR8U-AC
Generator (10300) 3.9L	XR8U-CD
Rating (gen. crank/rev.) 3.0/3.9L	(105 AMP/MAX)
Generator ratio, 3.0L	2.65:1
Generator ratio, 3.9L	2.78:1
Voltage regulator type (10316)	Electronic integral with generator

Torque Specifications

Description	Nm	lb-ft	lb-in
Generator positive cable nut	8	—	71
Generator mounting bolts, 3.0L	45	33	—
Generator mounting bolts, 3.9L	48	35	—
Generator expanding bushing and bolt assembly	20 + 90°	15 + 90°	—

Generator

The generator has an internal voltage regulator that is not repaired separately. The generator and voltage regulator must be replaced as an assembly.

All 3.0L V6 manual transmission applications are equipped with a one-way clutch (OWC) in the generator pulley. The OWC pulley temporarily disengages the generator rotor from the front end accessory drive (FEAD) system during high acceleration/deceleration rates on the engine, which may increase belt life and decrease belt chirp. A new OWC pulley and generator/voltage regulator must be installed as an assembly.

Generator —3.0L

Removal and Installation

1. Disconnect the battery ground cable. Refer to [Section 414-01](#).
2. Relieve the accessory drive belt tension and move the belt off of the generator pulley. For additional information, refer to [Section 303-05](#).
3. Raise the vehicle. For additional information, refer to [Section 100-02](#).
4. Remove the lower splash shield.
 - Remove the bolts.
 - Remove the pin-type retainers.

5.  **CAUTION:** The generator must be supported by hand after removing the bolts and prior to disconnecting the electrical connectors or damage to the connectors or wiring could result.

Remove the bolts.

6. Disconnect the generator positive cable.
 - Carefully lower the generator to gain access to the battery generator cable nut.
 - Remove the nut and detach the cable.

7. Remove the generator.
 - Disconnect the electrical connector.
 - Remove the generator.

8. To install, reverse the removal procedure.
-

Generator —3.9L

Removal

1. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
2. Remove the air intake tube. For additional information, refer to [Section 303-12](#).
3. Relieve the accessory drive belt tension and move the belt off the generator pulley. For additional information, refer to [Section 303-05](#).
4. Raise the vehicle. For additional information, refer to [Section 100-02](#).
5. Remove the front lower splash shield.

6. Remove the lower RH splash shield.

7. Remove the A/C suction line clip from the radiator core support.

8. Remove the LH A/C suction line lower bracket bolt and position the bracket rearward.

9. **NOTE:** The A/C suction line may need to be positioned rearward to ease generator removal.

Remove the top nut and through bolt.

10. Remove the lower bolts.

11. Turn the generator slightly to access the generator positive cable nut and remove the nut.

12. Lower the generator slightly and disconnect the electrical connector.

13. Remove the generator.
 - Rotate the generator to gain access for removal.
 - Remove the generator.

Installation

1. Position the generator and connect the electrical connector.

2. Rotate generator to gain access to the generator positive terminal and install cable and nut.

3. Install the generator and tighten in the sequence shown.
 1. Loosely assemble the pivot bolt and nut.
 2. Install the expanding bushing and bolt assembly in two stages.
 - Stage 1: Tighten the bolt to 20 Nm (15 lb-ft).
 - Stage 2: Tighten the bolt an additional 90 degrees.
 3. Install the bolt.

4. Install the LH A/C section line lower bracket and bolt.

5. Install the A/C suction line clip into the radiator core support.

6. Install the lower RH splash shield.

7. Install the front lower splash shield.
 8. Lower the vehicle. For additional information, refer to [Section 100-02](#).
 9. Install the accessory drive belt. For additional information, refer to [Section 303-05](#).
 10. Install the air intake tube. For additional information, refer to [Section 303-12](#).
 11. Connect the battery cable ground cable. For additional information, refer to [Section 414-01](#).
-

Audio System

Refer to Wiring Diagrams Section [415-00](#), Audio System--General Information for schematic and connector information.

Special Tool(s)

 <p>ST1137-A</p>	<p>73III Automotive Meter or equivalent 105-R0057</p>
 <p>ST1217-A</p>	<p>New Generation STAR (NGS) Tester or equivalent 418-F048 (007-00500)</p>

Inspection and Verification

1. **NOTE:** The audio control module (ACM) is also referred to as the audio unit.

Verify the customer concern by operating the electronic audio system with the engine running and the vehicle in and out of motion.

2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● ACM physically damaged, misaligned, any control(s) inoperative ● Digital audio compact disc player physically damaged, misaligned, any control(s) inoperative ● Antenna or antenna cable physically damaged, misaligned connection(s) ● Antenna isolator module physically damaged, misaligned connection(s) ● Radio speakers, mounting/speaker cones physically damaged, misaligned ● Radio ignition interference capacitors, radio frequency interference suppression bond, and radio receiver hood bonding strap misaligned (also check for cleanliness and metal-to-metal contact) 	<ul style="list-style-type: none"> ● Central junction box (CJB) Fuse 202 (5A) ● CJB Fuse 227 (10A) ● Battery junction box (BJB) Fuse 414 (5A) ● BJB Fuse 418 (20A) ● BJB Fuse 429 (30A) ● Damaged connector(s) ● Damaged ignition switch ● Damaged circuitry

3. If the fault is not visually evident, proceed to diagnose the audio control module (ACM) by:

- entering the New Generation STAR (NGS) Tester Diagnostics.
- entering ACM Self-Diagnostic Mode.

ACM Self-Diagnostic Mode

NOTE: To enter the speaker walk-around test or ACM Self-Diagnostic Mode, the ACM must be ON and in radio tuner mode (AM/FM). The ACM Self-Diagnostic Mode can only be entered while in the speaker walk-around test.

4. To enter the speaker walk-around test, simultaneously press the ACM Preset Buttons 3 and 6.
5. The speaker walk-around test stops at each speaker and applies a different tone to each speaker for about 1-2 seconds. Each speaker is tested and displayed on the ACM in the following sequence: RF, LF, LR, RR, Subwoofer I, Subwoofer II.
6. The speaker walk-around test automatically continues and tests:
 - for speaker short. If a short is present, SPKR SHORT will be displayed.
 - for CD/DJ. The ACM display will show NO DJ if not present.

The speaker walk-around test will end and the ACM will return to its previous setting.

To enter the following ACM self-diagnostic modes, press the preset button desired while in the speaker walk-around test. This will abort the speaker walk-around test and start the selected test.

7. The ACM Self-Diagnostic Mode has five tests available:
 - Preset button 1 = Audio internal/external SELF TEST. If SELF FAIL is displayed, press TUNE > to scroll view the DTCs stored. Refer to the ACM Diagnostic Trouble Code (DTC) Index. If the system is OK, SELF PASS is displayed.
 - Preset button 2 = View/Clear continuous diagnostic trouble codes (DTCs). NO DTCS is displayed if no DTCs are retrieved. If DTCS FOUND is displayed, press TUNE > button to view the DTCS retrieved. Refer to the ACM Diagnostic Trouble Code (DTC) Index. To clear all DTCS press the EJECT button. DTCS CLEAR will be displayed.
 - Preset button 3 = SIGNAL TEST. This test measures the average strength at the current tuner setting.
 - Preset button 4 = Software configuration level. This test queries each audio system controller for its software configuration level. SOFT LEVELS will be displayed upon completion of the query. Press TUNE > to scroll view the software configuration version level.

Controller	Description	ACM Display Example
Main	Main Micro Software Version	MAIN ##.##.##
CDSP	CDSP Micro Software Version	CDSP ##.##.##
ADSP	ADSP Micro Software Version	ADSP ##.##.##
Auxiliary	Auxiliary Software Version	AUX ##.##.##
CD/DJ	CDDJ Software Version	DJ ##.##.##
CD Changer	CDR Software Version	CD ##.##.##

Tape Deck	Tape Deck Software Version	TAP ##.##.##
RSC	Rear Seat Controller Software Version	RCP ##.##.##

- Preset button 5 = DISPLAY TEST. This test will light all the ACM display segments for 5 seconds and then turn all segments off. When the test is complete, DISPLAY TEST is displayed on the bezel.
 - Preset button 6 = CONFIG LEVELS. This will show the software configuration for the ACM.
8. To exit ACM Self-Diagnostic Mode, turn the ignition switch or the ACM OFF.
 9. If the concern remains and the fault is not detected, proceed to New Generation STAR (NGS) Tester Diagnostics.

New Generation STAR (NGS) Tester Diagnostics

1. If the concern remains after the inspection, connect the New Generation STAR (NGS) Tester to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the NGS Tester menu. If the NGS does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.

2. **NOTE:** The ACM must be in AM, FM1 or FM2 mode to enter NGS Tester diagnostics.

If the NGS still does not communicate with the vehicle, refer to the New Generation STAR Tester manual.

3. Carry out the DATA LINK DIAGNOSTIC TEST. If the NGS responds with:
 - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for audio control module (ACM), go to Pinpoint Test A.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the ACM.
4. If the DTCs retrieved are related to the concern, go to the ACM Diagnostic Trouble Code (DTC) Index to continue diagnostics.
5. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

ACM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	ACM	CLEAR and DOCUMENT the DTCs. CARRY OUT the ACM On-Demand Self-Test. REMOVE the ACM and SEND it to an authorized Ford Audio System repair facility if DTC B1342 is retrieved again.

B2401	Audio Tape Deck Mechanism Fault	ACM	VERIFY that no tape is inserted in the ACM. CLEAR and DOCUMENT the DTCs. CARRY OUT the ACM On-Demand self-test. If DTC B2401 is retrieved again, REMOVE the ACM and SEND it to an authorized Ford Audio System repair facility.
B2402	Audio CD/DJ Thermal Shutdown Fault	ACM	GO to Pinpoint Test C .
B2403	Audio CD/DJ Internal Fault	ACM	GO to Pinpoint Test C .
B2404	Audio Steering Wheel Switch Circuit Fault	ACM	GO to Pinpoint Test M .
B2405	Audio Single-Disc CD Player Thermal Shutdown Fault	ACM	Not applicable.
B2406	Audio Single-Disc CD Player Internal Fault	ACM	Not applicable.
B2477	Module Configuration Fault	ACM	REFER to Section 418-01 .
U2003	Audio CD/D Jockey Is Not Responding	ACM	NOTE: U2003 is retrieved if CDDJ is not present, disconnected, or inoperative. GO to Pinpoint Test C .
U2005	Audio Rear Integrated Control Panel Unit Is Not Responding	ACM	NOTE: U2005 is retrieved if RICP is not present, disconnected, or inoperative. Not applicable.
U2008	Audio Phone Is Not Responding	ACM	REFER to Section 419-08 .
U2014	Audio Subwoofer Unit Is Not Responding	ACM	NOTE: U2014 is retrieved if subwoofer is not present, disconnected, or inoperative. GO to Pinpoint Test L .
U2020	Center Image Amplifier Is Not Responding	ACM	NOTE: U2020 is retrieved if center image amplifier is not present, disconnected, or inoperative. GO to Pinpoint Test I .

ACM Parameter Identification (PID) Index

Display	Description	Expected Value
ASYSON	ASYSON output state	ACTIVE, not ACT
BAND_SW	Band switch (steering wheel controls)	ACTIVE, not ACT
MEM_SW	Memory switch (steering wheel controls)	ACTIVE, not ACT
PHONE	Phone switch (steering wheel controls)	ACTIVE, not ACT
PTA	PTA input state	ACTIVE, not ACT
VOL+_SC	Volume + switch (steering wheel controls)	ACTIVE, not ACT
VOL-_SC	Volume - switch (steering wheel controls)	ACTIVE, not ACT

ACM Active Command Index

Active Command	Display	Action
Speaker Walk-Around Test	SPEAKER WALKAROUND	RF, LF, LR, RR, Subwoofer I, Subwoofer II

Symptom Chart

Symptom Chart

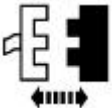

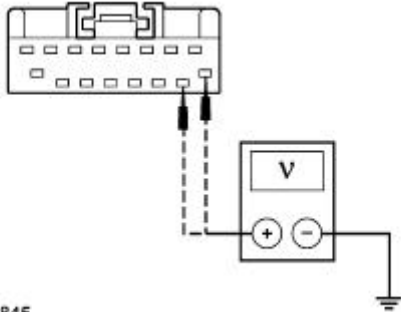

Condition	Possible Sources	Action
<ul style="list-style-type: none"> No communication with the audio control module (ACM) 	<ul style="list-style-type: none"> CJB Fuse 202 (5A). CJB Fuse 227 (10A). BJB Fuse 414 (5A). 		TEST the system for normal operation.
--	--	---------------------------------------

Pinpoint Tests

PINPOINT TEST A: NO COMMUNICATION WITH THE AUDIO CONTROL MODULE (ACM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK THE VOLTAGE TO THE ACM	
<p>1 </p> <p>2  ACM C240c</p> <p>3 </p> <p>4  A0004845</p>	<p>4 Measure the voltage between ACM C240c pin 9, circuit 29-MD15 (WH/BK), harness side and ground; and between ACM C240c pin 10, circuit 75-MD15 (YE/GN), harness side and ground.</p> <ul style="list-style-type: none"> ● Are the voltages greater than 10 volts? <p>→ Yes GO to A2.</p> <p>→ No REPAIR the circuit in question. REPEAT the data link diagnostic test.</p>
A2 CHECK THE GROUND TO THE ACM	
<p>1</p>	<p>1 Measure the resistance between the ACM C240c pin 11, circuit 31-MD15 (BK), harness side and ground; and</p>

A0004846

between C240c pin 16, circuit 31-MD15 (BK), harness side and ground.

- Are the resistances less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit in question. REPEAT the data link diagnostic test.

PINPOINT TEST B: THE AUDIO UNIT IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK OPERATION OF THE ACM	
<p>1</p> 	<p>2 Turn on the ACM.</p> <ul style="list-style-type: none"> • Is the ACM display illuminated? <p>→ Yes GO to B2.</p> <p>→ No GO to B4.</p>
B2 CHECK FOR SOUND COMING FROM THE RADIO SPEAKERS	
	<p>1 Carry out the speaker walk-around test by pressing Preset Buttons 3 and 6 simultaneously.</p> <p>2 Check for sound from the radio speakers.</p> <ul style="list-style-type: none"> • Is sound coming from the speakers? <p>→ Yes</p>

GO to [B3](#).

→ **No**
GO to [Pinpoint Test J](#).

B3 CARRY OUT CONTROLS AND FEATURES TEST

1 Verify that all the audio system controls and features operate correctly; refer to the owner literature.

- **Do all the controls and features operate correctly?**

→ **Yes**
The system is OK.

→ **No**
REMOVE the audio unit and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.

B4 CHECK THE VOLTAGE TO THE ACM

1

2

ACM C240c

3

4

4 Measure the voltage between ACM C240c pin 10, circuit 75-MD15 (YE/GN), harness side and ground; and between ACM C240c pin 9, circuit 29-MD15 (WH/BK), harness side and ground.

- **Are the voltages greater than 10 volts?**

→ **Yes**
GO to [B5](#).

→ **No**
REPAIR the circuit in question. TEST the system for normal operation.

B5 CHECK THE GROUND TO THE ACM

1

1 Measure the resistance between the ACM C240c pin 11, circuit 31-MD15 (BK), harness side and ground; and between C240c pin 16, circuit 31-MD15 (BK), harness side and ground.

- Are the resistances less than 5 ohms?

→ **Yes**
REMOVE the audio unit and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.

→ **No**
REPAIR the circuit in question. TEST the system for normal operation.

PINPOINT TEST C: THE CD CHANGER IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>C1 RETRIEVE THE RECORDED ACM DTCS FROM BOTH THE CONTINUOUS AND ON-DEMAND SELF-TESTS</p>	<p>1 Use the recorded results from the continuous and on-demand self-tests.</p> <ul style="list-style-type: none"> • Are any DTCs retrieved? <p>→ Yes If B2402, B2403, or U2003 is retrieved, GO to C5.</p> <p>→ No GO to C2.</p> <p>All other DTCs, GO to ACM Diagnostic Trouble Code (DTC) Index.</p>
<p>C2 CHECK OPERATION OF THE CD CHANGER</p>	
<p>1</p>	

- 2 Turn on the ACM.
- 3 Verify that the ACM is operating correctly. Refer to the owner literature.
- 4 Verify that the CD changer power loading function is operating correctly. Refer to the owner literature.

● **Is the CD player information displayed on the ACM display?**

→ **Yes**
GO to [C3](#).

→ **No**
GO to [Pinpoint Test D](#).

C3 CHECK FOR SOUND COMING FROM THE RADIO SPEAKERS

- 1 Insert a known good CD and press the CD button.
- 2 Check for sound from the radio speakers.

● **Is sound coming from the speakers?**

→ **Yes**
GO to [C4](#).

→ **No**
GO to [Pinpoint Test J](#).

C4 CD CHANGER PLAY/STOP TEST

- 1 Verify that all CD changer controls and features operate correctly. Refer to the owner literature.

● **Do all controls and features operate correctly?**

→ **Yes**
The system is OK.

→ **No**
GO to [C5](#).

C5 CHECK THE CIRCUITS BETWEEN THE COMPONENTS FOR OPEN

1

2

CD Changer C243

3

ACM C240a

- 4 Measure the resistances between CD changer C243 and ACM C240a as follows:

CD Changer C243	ACM C240a
pin 6, circuit 1-MD50 (WH/BK)	pin 17, circuit 1-MD50 (WH/BK)
pin 5, circuit 1-MD49 (WH/GN)	pin 19, circuit 1-MD49 (WH/GN)
pin 1, circuit 4-EA6 (GY)	pin 6, circuit 4-EA8 (GY/VT)
pin 12, circuit 2-MD50 (GY/BK)	pin 18, circuit 2-MD50 (GY/BK)
pin 11, circuit 2-MD49 (GY/OG)	pin 20, circuit 2-MD49 (GY/OG)
pin 8, circuit 8-MD51 (WH/BU)	pin 5, circuit 8-MD51 (WH/BU)
pin 7, circuit 5-EA6 (BU)	pin 7, circuit 5-EA8 (BU/WH)

- Are the resistances less than 5 ohms?

→ **Yes**
GO to [C6](#).

→ **No**
REPAIR the circuit in question. TEST the system for normal operation.

C6 CHECK THE CIRCUITS BETWEEN THE COMPONENTS FOR SHORT

- 1 Measure the resistance between the CD changer C243, harness side and ground as follows:

- pin 6, circuit 1-MD50 (WH/BK).
- pin 5, circuit 1-MD49 (WH/GN).
- pin 1, circuit 4-EA6 (GY).

- pin 12, circuit 2-MD50 (GY/BK).
- pin 11, circuit 2-MD49 (GY/OG).
- pin 8, circuit 8-MD51 (WH/BU).
- pin 7, circuit 5-EA6 (BU).

● **Are the resistances greater than 10,000 ohms?**

→ **Yes**
GO to [C7](#).

→ **No**
REPAIR the circuit in question. TEST the system for normal operation.

C7 CHECK VOLTAGE TO THE CD CHANGER

1

2

2 Measure the voltage between CD changer C243 pin 9, circuit 29-MD41 (OG), harness side and ground.

● **Is the voltage greater than 10 volts?**

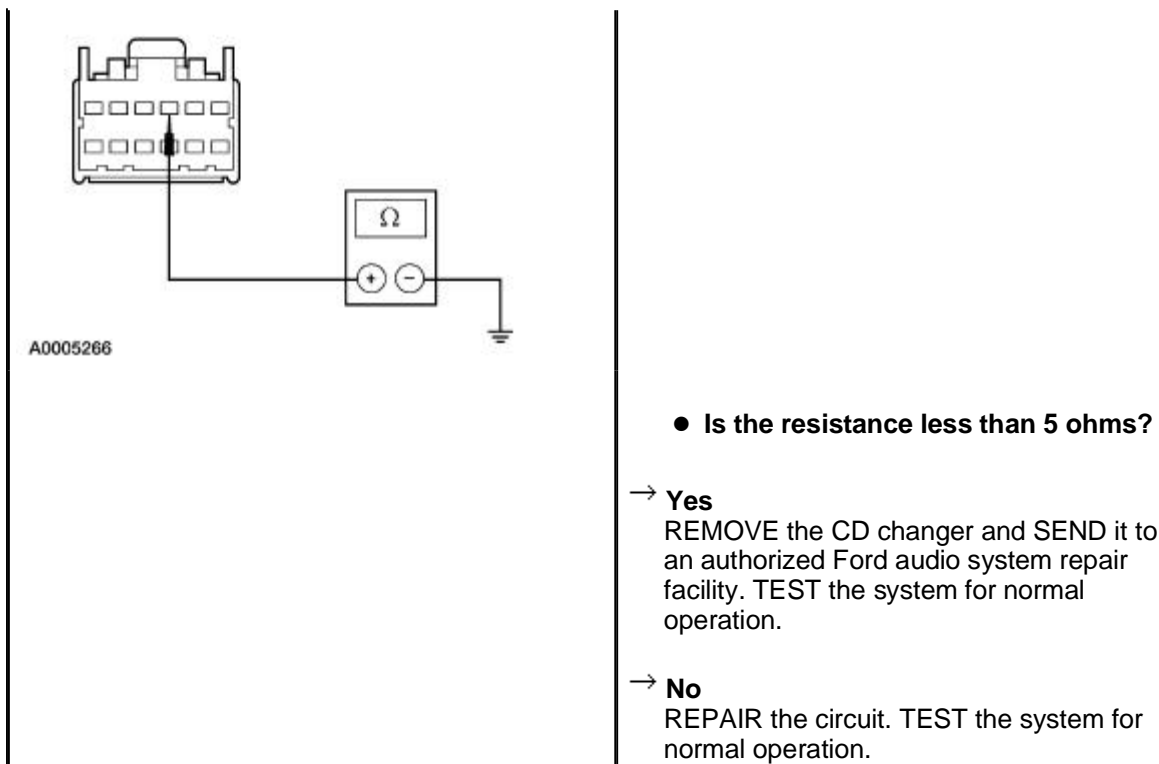

→ **Yes**
GO to [C8](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

C8 CHECK CIRCUIT 31-MD41 (BK) FOR OPEN

1

1 Measure the resistance between CD changer C243 pin 3, circuit 31-MD41 (BK), harness side and ground.

PINPOINT TEST D: THE AUDIO UNIT DOES NOT DISPLAY CD CHANGER INFORMATION

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 CHECK OPERATION OF THE CD CHANGER	
<p>1 </p>	<p>2 Turn on the ACM.</p> <p>3 Verify that the ACM is operating correctly. Refer to the owner literature.</p> <p>4 Verify that the CD changer power loading function is operating correctly. Refer to the owner literature.</p> <ul style="list-style-type: none"> ● Is the CD changer information displayed on the ACM display? <p>→ Yes GO to Pinpoint Test C.</p> <p>→ No GO to D2.</p>
D2 CARRY OUT THE BEZEL DISPLAY TEST	
	<p>1 Carry out the bezel display test. Press Preset Buttons 3 and 6 simultaneously. Within the first five seconds, while in the speaker walk-around test, press Preset Button 5. All segments of the bezel display should illuminate for approximately five seconds and DISPLAY TEST will be shown on the display.</p>

	<ul style="list-style-type: none"> ● Does the display test illuminate all segments? <p>→ Yes GO to D3.</p> <p>→ No REMOVE the audio unit and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.</p>
D3 CHECK FOR SOUND COMING FROM THE RADIO SPEAKERS	
	<p>1 Insert a known good CD and press the CD button.</p> <p>2 Carry out the speaker walk-around test by pressing Preset Buttons 3 and 6 simultaneously.</p> <ul style="list-style-type: none"> ● Is sound coming from the speakers? <p>→ Yes REMOVE the CD changer and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.</p> <p>→ No GO to Pinpoint Test C.</p>

PINPOINT TEST E: NOISY RECEPTION

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 CHECK THE RADIO SIGNAL RECEPTION	
	<p>1 Check the radio signal reception with the engine running and with the engine off.</p> <ul style="list-style-type: none"> ● Is the radio signal reception noisy only with the engine running? <p>→ Yes GO to E2.</p> <p>→ No If FM only, GO to E8. If AM only, GO to E10. If both FM and AM, GO to E12.</p>
E2 CHECK SUPPRESSION EQUIPMENT	
	<p>1 Check all required suppression equipment, radio frequency interference suppression bond, and the hood bonding strap for security, cleanliness, and metal-to-metal contact. Refer to Section 415-01.</p> <ul style="list-style-type: none"> ● Are the contacts clean, secure, and in metal-to-metal contact? <p>→ Yes GO to E3.</p>

→ **No**
INSTALL new radio frequency interference suppression bonds or related equipment, CLEAN, or SECURE the connections as necessary. TEST the system for normal operation.

E3 CHECK CAPACITOR MOUNTING AND CONNECTING CIRCUITS

NOTE: The capacitor mounting points are used to complete the electrical circuit and must be mounted securely to clean surfaces.

1 Check the mounting and connecting circuits of the radio ignition interference capacitor(s) for security, cleanliness, and metal-to-metal contact. Refer to [Section 415-01](#).

- **Are the contacts clean, secure, and in metal-to-metal contact?**

→ **Yes**
GO to [E4](#).

→ **No**
CLEAN or SECURE the connections as necessary. TEST the system for normal operation.

E4 CHECK RADIO IGNITION INTERFERENCE CAPACITOR(S) AND GENERATOR

3

1 Check the operation of the radio ignition interference capacitor(s) by installing known good component(s).

2 Check the generator by disconnecting the wiring harness from the voltage regulator.

4 Check the operation of the ACM.

- **Is the noise eliminated?**

→ **Yes**
REPAIR or INSTALL new components as necessary. TEST the system for normal operation.

→ **No**
GO to [E5](#).

E5 CHECK IGNITION CIRCUITS

1

2 Check the ignition circuits for correct routing, grounding, and security of connections.

- **Are the circuits OK?**

→ **Yes**
GO to [E6](#).

→ **No**
REPAIR the circuit as necessary. TEST the system for normal operation.

E6 CHECK THE IGNITION SYSTEM

1 Test the ignition system; refer to [Section 303-07A](#) or [Section 303-07B](#).

● **Is the ignition system OK?**

→ **Yes**
GO to [E7](#).

→ **No**
REPAIR the ignition system. REFER to [Section 303-07A](#) or [Section 303-07B](#). TEST the system for normal operation.

E7 SUBSTITUTE ACM

1

2 Substitute a known good ACM.

3

4 Check the operation of the ACM.

● **Is the noise eliminated?**

→ **Yes**
REMOVE the audio unit and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.

→ **No**
REINSTALL the original audio unit. USE a jumper cable to GROUND various parts of the vehicle to the frame (for example: engine, fenders, quarter panels, stone deflectors, air cleaner, body sheet metal). When the noise is eliminated, PROVIDE a permanent ground where necessary. TEST the system for normal operation.

E8 CHECK FM ANTENNA FOR DAMAGE

1

2

FM Antenna Lead Terminal

3 Measure the resistance between the FM antenna cable lead terminal and

the end of the FM antenna grid wire.

- **Is the resistance less than 8 ohms?**

→ **Yes**
GO to [E9](#).

→ **No**
REPAIR the antenna; REFER to [Section 415-02](#).

E9 SUBSTITUTE FM ANTENNA EXTENSION CABLE

1

2 Substitute a known good antenna cable between the antenna isolator module and the FM antenna.

3

4 Check the operation of the ACM.

- **Is the noise eliminated?**

→ **Yes**
INSTALL a new antenna cable; REFER to [Section 415-02](#). TEST the system for normal operation.

→ **No**
REINSTALL the original antenna cable. GO to [E13](#).

E10 CHECK AM ANTENNA FOR DAMAGE

1

2

Rear Window
Defroster
Grid

3 Measure the resistance between the left side rear window defroster terminal and the right side rear window defroster terminal.

- **Is the resistance less than 1 ohm?**

→ **Yes**
GO to [E11](#).

→ **No**
REPAIR the antenna; REFER to [Section 415-02](#).

E11 SUBSTITUTE AM ANTENNA EXTENSION CABLE

1

2 Substitute a known good antenna cable between the antenna isolator module and the AM antenna (rear window defroster).

3

4 Check the operation of the ACM.

● **Is the noise eliminated?**

→ **Yes**
INSTALL a new antenna cable; REFER to [Section 415-02](#). TEST the system for normal operation.

→ **No**
REINSTALL the original antenna cable. GO to [E13](#).

E12 SUBSTITUTE ANTENNA EXTENSION CABLE(S)

1

2 Substitute a known good antenna cable(s) between the antenna isolator module and the ACM.

3

4 Check the operation of the ACM.

● **Is the noise eliminated?**

→ **Yes**
INSTALL a new antenna cable; REFER to [Section 415-02](#). TEST the system for normal operation.

→ **No**
REINSTALL the original antenna cable. GO to [E13](#).

E13 SUBSTITUTE ANTENNA ISOLATOR MODULE

1

	<p>2 Substitute a known good antenna isolator module.</p>
<p>3</p> 	<p>4 Check the operation of the ACM.</p> <ul style="list-style-type: none"> ● Is the noise eliminated? <p>→ Yes INSTALL a new antenna isolator module; REFER to Section 415-02. TEST the system for normal operation.</p> <p>→ No REINSTALL the original antenna isolator module. REMOVE the audio unit and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.</p>

PINPOINT TEST F: CONTINUOUS SEEK/SCAN IN AM/FM

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK OPERATION OF THE SEEK/SCAN FUNCTIONS	
<p>1</p> 	<p>2 Operate the SEEK/SCAN functions with the ACM in both AM and FM tuner modes.</p> <ul style="list-style-type: none"> ● Do the SEEK/SCAN functions search continuously in both AM and FM tuner modes? <p>→ Yes GO to F6.</p> <p>→ No If FM only, GO to F2. If AM only, GO to F4.</p>
F2 CHECK FM ANTENNA FOR DAMAGE	
<p>1</p> 	<p>2</p>

FM Antenna Lead Terminal

3 Measure the resistance between the FM antenna cable lead terminal and the end of the FM antenna grid wire.

● Is the resistance less than 8 ohms?

→ Yes
GO to [F3](#).

→ No
REPAIR the antenna; REFER to [Section 415-02](#).

F3 SUBSTITUTE FM ANTENNA EXTENSION CABLE

2

1 Substitute a known good antenna cable between the antenna isolator module and the FM antenna.

3 Check the operation of the ACM.

● Is the noise eliminated?

→ Yes
INSTALL a new antenna cable; REFER to [Section 415-02](#). TEST the system for normal operation.

→ No
REINSTALL the original antenna cable. GO to [F7](#).

F4 CHECK AM ANTENNA FOR DAMAGE

1

2

Rear Window Defroster Grid

3 Measure the resistance between the left side rear window defroster terminal and the right side rear window defroster terminal.

● Is the resistance less than 1 ohm?

→ Yes
GO to [F5](#).

→ **No**
REPAIR the antenna; REFER to [Section 415-02](#).

F5 SUBSTITUTE AM ANTENNA EXTENSION CABLE

1

2 Substitute a known good antenna cable between the antenna isolator module and the AM antenna (rear window defroster).

3

4 Check the operation of the ACM.

● **Is the noise eliminated?**

→ **Yes**
INSTALL a new antenna cable; REFER to [Section 415-02](#). TEST the system for normal operation.

→ **No**
REINSTALL the original antenna cable. GO to [F7](#).

F6 SUBSTITUTE ANTENNA EXTENSION CABLE

1

2 Substitute a known good antenna cable between the antenna isolator module and the ACM.

3

4 Check the operation of the ACM.

● **Is the noise eliminated?**

→ **Yes**
INSTALL a new antenna cable; REFER to [Section 415-02](#). TEST the system for normal operation.

→ **No**
REINSTALL the original antenna cable. GO to [F7](#).

F7 SUBSTITUTE ANTENNA ISOLATOR MODULE

1

	<p>2 Substitute a known good antenna isolator module.</p>
<p>3</p> 	<p>4 Check the operation of the ACM.</p> <ul style="list-style-type: none"> ● Do the SEEK/SCAN functions operate correctly? <p>→ Yes INSTALL a new antenna isolator module; REFER to Section 415-02. TEST the system for normal operation.</p> <p>→ No REINSTALL the original antenna isolator module. REMOVE the audio unit and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.</p>

PINPOINT TEST G: POOR QUALITY/DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 CHECK FOR POOR SOUND	
<p>1</p> 	<p>2 Turn on the ACM.</p> <p>3 Carry out the speaker walk-around test by pressing Preset Buttons 3 and 6 simultaneously.</p> <ul style="list-style-type: none"> ● Do all the radio speakers have poor sound quality? <p>→ Yes REMOVE the audio unit and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.</p> <p>→ No GO to G2.</p>
G2 CHECK THE CIRCUITS TO THE SPEAKER(S)	
<p>1</p>  <p>2</p>	

ACM C240c

3

Poor Sounding
Radio Speaker
(s)

4 Measure the resistances between the distorted radio speaker connector and ACM C240c; and between the following distorted radio speaker connector pins, harness side and ground as follows:

Speaker	Speaker Connector	ACM C240c Pin	Circuit
LR	C702	13	10-MD11 (GY/WH)
LR	C702	12	8-MD11 (WH/VT)
LF	C523	15	10-MD10 (GY/BK)
LF	C523	14	8-MD10 (WH/BK)
RR	C802	6	10-MD18 (GY)
RR	C802	5	8-MD18 (WH)
RF	C612	8	10-MD17 (GY/RD)
RF	C612	7	8-MD17 (WH/RD)

- Are the resistance(s) less than 5 ohms between the distorted radio speaker connector(s) and the ACM, and greater than 10,000 ohms between the radio speaker connector(s) and ground?

→ **Yes**
GO to [G3](#).

→ **No**
REPAIR the circuit in question. TEST the system for normal operation.

G3 CHECK THE SPEAKER

1 Substitute the poor quality speaker with a known good component.

- Is the sound quality OK?

→ **Yes**
INSTALL a new radio speaker(s). TEST the system for normal operation.

→ **No**
REMOVE the audio unit and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.

PINPOINT TEST H: NO SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

CONDITIONS

DETAILS/RESULTS/ACTIONS

H1 CHECK FOR SOUND

1

- 2 Turn on the ACM.
- 3 Carry out the speaker walk-around test by pressing Preset Buttons 3 and 6 simultaneously.

● **Are all the radio speakers without sound?**

→ **Yes**
GO to [Pinpoint Test J](#).

→ **No**
GO to [H2](#).

H2 CHECK THE CIRCUITS BETWEEN THE SPEAKER(S) AND THE ACM

1

2

ACM C240c

3

Silent Radio Speaker(s)

4 Measure the resistance between the silent radio speaker connector and ACM C240c; and between the silent radio speaker connector, harness side and ground as follows:

Speaker	Speaker Connector	ACM C240c Pin	Circuit
LR	C702	13	10-MD11 (GY/WH)
LR	C702	12	8-MD11 (WH/VT)
LF	C523	15	10-MD10 (GY/BK)
LF	C523	14	8-MD10 (WH/BK)
RR	C802	6	10-MD18 (GY)
RR	C802	5	8-MD18 (WH)
RF	C612	8	10-MD17 (GY/RD)

	RF	C612	7	8-MD17 (WH/RD)
	<ul style="list-style-type: none"> ● Are the resistance(s) less than 5 ohms between the radio speaker connector(s) and the ACM, and greater than 10,000 ohms between the radio speaker connector(s) and ground? <p>→ Yes GO to H3.</p> <p>→ No REPAIR the circuit in question. TEST the system for normal operation.</p>			
H3 SUBSTITUTE SPEAKER				
<p>2</p> 	<p>1 Substitute a known good radio speaker for each silent radio speaker.</p> <p>3 Turn on the ACM.</p> <ul style="list-style-type: none"> ● Are the known good radio speaker(s) silent? <p>→ Yes REMOVE the audio unit and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.</p> <p>→ No INSTALL a new radio speaker(s) in question. TEST the system for normal operation.</p>			

PINPOINT TEST I: NO SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS) — CENTER IMAGING

CONDITIONS	DETAILS/RESULTS/ACTIONS
I1 CHECK FOR SOUND	
<p>1</p> 	<p>2 Turn on the ACM.</p> <p>3 Carry out the speaker walk-around test by pressing Preset Buttons 3 and 6 simultaneously.</p> <ul style="list-style-type: none"> ● Are all the radio speakers without sound? <p>→ Yes GO to Pinpoint Test J.</p>

→ **No**

If one center imaging speaker is inoperative, GO to [12](#).

If both center imaging speakers are inoperative, GO to [14](#).

12 CHECK THE CIRCUITS BETWEEN THE SPEAKER(S) AND THE CENTER IMAGING AMPLIFIER

1

2

Center Imaging Amplifier C225

3

Silent Radio Speaker(s)

4

Measure the resistance between the silent radio speaker connector and center imaging amplifier C225; and between the silent radio speaker connector and ground as follows:

Speaker	Speaker Connector	Center Imaging Amplifier C225 Pin	Circuit
LH	C230	7	8-MD30 (WH/BU)
LH	C230	8	10-MD30 (GY/VT)
RH	C231	5	8-MD31 (WH/GN)
RH	C231	6	10-MD31 (GY/OG)

- Are the resistance(s) less than 5 ohms between the radio speaker connector(s) and the ACM, and greater than 10,000 ohms between the radio speaker connector(s) and ground?

→ **Yes**

GO to [13](#).

→ **No**

REPAIR the circuit in question. TEST the system for normal operation.

I3 SUBSTITUTE SPEAKER

2

1 Substitute a known good radio speaker for each silent radio speaker.

3 Turn on the ACM.

• Are the known good radio speaker(s) silent?

→ **Yes**
REMOVE the center imaging amplifier and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.

→ **No**
INSTALL a new radio speaker(s) in question. TEST the system for normal operation.

I4 CHECK CENTER IMAGING AMPLIFIER ENABLE CIRCUIT FOR POWER

1

2

Center Imaging Amplifier C225

3

5

A0005267

4 Turn on the ACM.

5 Measure the voltage between center imaging amplifier C225 pin 13, circuit 7-MD12 (YE), harness side and ground.

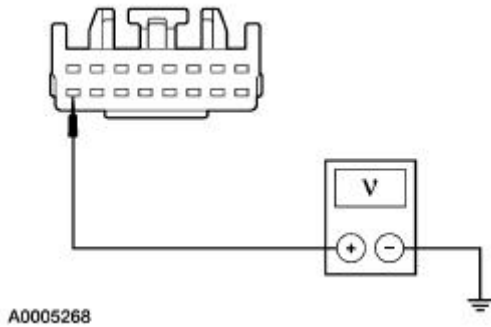

• Is voltage present?

→ **Yes**
GO to [15](#).

→ **No**
GO to [19](#).

15 CHECK POWER TO THE CENTER IMAGING AMPLIFIER

1

1

Measure the voltage between center imaging amplifier C225 pin 16, circuit 29-MD12 (OG/YE), harness side and ground.

● **Is the voltage greater than 10 volts?**

→ **Yes**
GO to [16](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

16 CHECK GROUND TO THE CENTER IMAGING AMPLIFIER

1

2

2

Measure the resistance between center imaging amplifier C225 pin 15, circuit 31-MD12 (BK), harness side and ground.

● **Is the resistance less than 5 ohms?**

→ **Yes**
GO to [17](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

17 CHECK THE CIRCUITS BETWEEN THE ACM AND THE CENTER IMAGING AMPLIFIER

1

ACM C240b

2 Measure the resistance between ACM C240b and center imaging amplifier C225; and between ACM C240b and ground as follows:

ACM 240b Pin	Center Imaging Amplifier C225 Pin	Circuit
5	2	2-MD12 (GY)
6	1	1-MD12 (WH)

- Are the resistance(s) less than 5 ohms between the ACM and the center imaging amplifier, and greater than 10,000 ohms between the ACM and ground?

→ Yes
GO to 18.

→ No
REPAIR the circuit in question. TEST the system for normal operation.

18 CHECK THE ACM

1 Substitute the ACM with a known good component.

- Do the center imaging speakers operate?

→ Yes
REMOVE the audio unit and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.

→ No
REMOVE the center imaging amplifier and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.

19 CHECK THE ENABLE CIRCUIT TO THE CENTER IMAGING AMPLIFIER

1

2

2 Measure the resistance between center imaging amplifier C225 pin 13, circuit 7-MD12 (YE), harness side and ACM C240b pin 8, circuit 7-MD12 (YE), harness side; and

A0005270

between center imaging amplifier C225 pin 13, circuit 7-MD12 (YE), harness side and ground.

- Is the resistance less than 5 ohms between the center imaging amplifier and the ACM and greater than 10,000 ohms between the center imaging amplifier and ground?

→ **Yes**

REMOVE the audio unit and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.

→ **No**

REPAIR the circuit. TEST the system for normal operation.

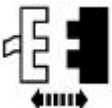

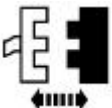

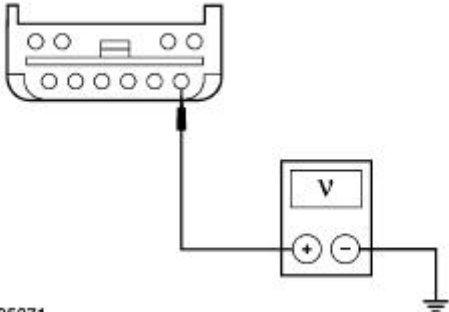

PINPOINT TEST J: NO SOUND FROM ALL SPEAKERS

CONDITIONS	DETAILS/RESULTS/ACTIONS
J1 CHECK FOR ACM POWER	
<p>1</p> 	<p>2 Turn on the ACM.</p> <ul style="list-style-type: none"> ● Does the display on the ACM illuminate? <p>→ Yes GO to J2.</p> <p>→ No GO to Pinpoint Test B.</p>
J2 CHECK FOR SOUND	
	<p>1 Carry out the speaker walk-around test by pressing Preset Buttons 3 and 6 simultaneously.</p> <ul style="list-style-type: none"> ● Are all the radio speakers without sound? <p>→ Yes REMOVE the audio unit and SEND it to an authorized Ford audio system</p>

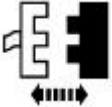

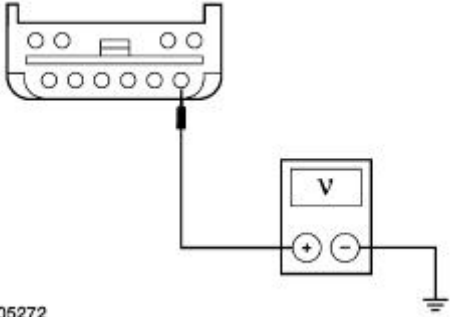

repair facility. TEST the system for normal operation.

→ **No**
GO to [Pinpoint Test H](#).

PINPOINT TEST K: LOUD POPS WHEN CYCLING THE IGNITION SWITCH

CONDITIONS	DETAILS/RESULTS/ACTIONS
K1 CHECK CIRCUIT 7-MD19 (WH/RD) AND 8-MD19 (WH/RD) FOR POWER	
<p>1</p>  <p>2</p>  <p>ACM C240b</p> <p>3</p>  <p>Subwoofer Amplifier C466</p> <p>4</p>  <p>A0005271</p>	<p>4 Measure the voltage between the subwoofer amplifier C466 pin 1, circuit 8-MD19 (WH/RD), harness side and ground.</p> <p>● Is voltage present?</p> <p>→ Yes REPAIR the circuit. TEST the system for normal operation.</p> <p>→ No REMOVE the audio unit and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.</p>

PINPOINT TEST L: THE SUBWOOFER IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
L1 CHECK THE SUBWOOFER OPERATION	
<p>1</p> 	<p>2 Turn the ACM on.</p> <p>3 Check the operation of the subwoofer speakers.</p> <ul style="list-style-type: none"> • Are both subwoofer speakers inoperative? <p>→ Yes GO to L2.</p> <p>→ No GO to L7.</p>
L2 CHECK CIRCUIT 7-MD19 (YE/RD) FOR POWER	
<p>1</p>  <p>2</p>  <p>Subwoofer Amplifier C466</p> <p>3</p>  <p>4</p>  <p>A0005272</p>	<p>4 Measure the voltage between subwoofer amplifier C466 pin 1, circuit 7-MD19 (YE/RD), harness side and ground.</p> <ul style="list-style-type: none"> • Is voltage present? <p>→ Yes GO to L3.</p> <p>→ No</p>

GO to [L8](#).

L3 CHECK CIRCUIT 30-MD19 (RD) FOR VOLTAGE

1

2

A0005273

2 Measure the voltage between subwoofer amplifier C466 pin 5, circuit 30-MD19 (RD), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [L4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

L4 CHECK GROUND CIRCUIT 31-MD19 (BK)

1

A0005274

1 Measure the resistance between subwoofer amplifier C466 pin 2, circuit 31-MD19 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [L5](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

L5 CHECK CIRCUIT 1-MD19 (WH/RD)

1

ACM C240b

2

2

Measure the resistance between subwoofer amplifier C466 pin 7, circuit 1-MD19 (WH/RD), and ACM C240b pin 2, circuit 1-MD19 (WH/RD); and between subwoofer amplifier C466 pin 7, circuit 1-MD19 (WH/RD), harness side and ground.

- Is the resistance less than 5 ohms between the subwoofer amplifier and the ACM, and greater than 10,000 ohms between the subwoofer amplifier and ground?

→ **Yes**
GO to [L6](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

L6 CHECK CIRCUIT 2-MD19 (GY/RD)

1

1

Measure the resistance between subwoofer amplifier C466 pin 8, circuit 2-MD19 (GY/RD), harness side and ACM C240b pin 1, circuit 2-MD19 (GY/RD), harness side; and between subwoofer amplifier C466 pin 8, circuit 2-MD19 (GY/RD), harness side and ground.

- Is the resistance less than 5 ohms between the subwoofer amplifier and the ACM, and greater than 10,000 ohms between the subwoofer amplifier and ground?

→ **Yes**
REMOVE the subwoofer amplifier and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.

→ **No**

REPAIR the circuit. TEST the system for normal operation.

L7 CHECK SUBWOOFER SPEAKER

1

3

2 Substitute the inoperative subwoofer speaker with a known good subwoofer speaker.

4 Check the operation of the subwoofer speakers.

• **Does the known good subwoofer speaker operate correctly?**

→ **Yes**
INSTALL a new subwoofer speaker;
REFER to [Section 415-03](#). TEST the system for normal operation.

→ **No**
REPAIR the circuit between the subwoofer amplifier and the inoperative subwoofer speaker. TEST the system for normal operation.

L8 CHECK CIRCUIT 7-MD19 (YE/RD) FOR OPEN

1

2

ACM C240b

3

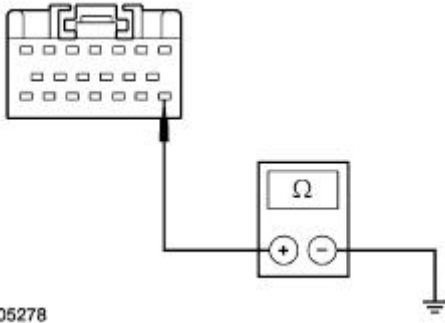

3 Measure the resistance between subwoofer amplifier C466 pin 1, circuit 7-MD19 (YE/RD), harness side and ACM C240b pin 4, circuit 7-MD19 (YE/RD), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
REMOVE the subwoofer amplifier and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST M: THE AUXILIARY AUDIO CONTROL IS INOPERATIVE/DOES NOT OPERATE CORRECTLY — STEERING WHEEL CONTROL SWITCHES

CONDITIONS	DETAILS/RESULTS/ACTIONS																
M1 CHECK THE STEERING WHEEL CONTROL SWITCH RESISTANCES																	
<p>1 </p> <p>2  ACM C240a</p> <p>3 </p> <p>4  A0005278</p>	<p>4 Measure the resistance between ACM C240a pin 14, circuit 8-MD26 (WH/BK), harness side and ground while depressing the steering wheel control switches as follows:</p> <table border="1" data-bbox="887 1586 1345 2013"> <thead> <tr> <th>Switch</th> <th>Resistance range</th> </tr> </thead> <tbody> <tr> <td>VOL Down</td> <td>53.1-54.1 ohms</td> </tr> <tr> <td>VOL Up</td> <td>145.3-148.1 ohms</td> </tr> <tr> <td>SEEK Up</td> <td>297.7-303.7 ohms</td> </tr> <tr> <td>SEEK Down</td> <td>556.1-567.3 ohms</td> </tr> <tr> <td>MEDIA</td> <td>1026.4-1047.0 ohms</td> </tr> <tr> <td>Phone/Mute</td> <td>2016.4-2057.0 ohms</td> </tr> <tr> <td>None</td> <td>greater than 10,000 ohms</td> </tr> </tbody> </table>	Switch	Resistance range	VOL Down	53.1-54.1 ohms	VOL Up	145.3-148.1 ohms	SEEK Up	297.7-303.7 ohms	SEEK Down	556.1-567.3 ohms	MEDIA	1026.4-1047.0 ohms	Phone/Mute	2016.4-2057.0 ohms	None	greater than 10,000 ohms
Switch	Resistance range																
VOL Down	53.1-54.1 ohms																
VOL Up	145.3-148.1 ohms																
SEEK Up	297.7-303.7 ohms																
SEEK Down	556.1-567.3 ohms																
MEDIA	1026.4-1047.0 ohms																
Phone/Mute	2016.4-2057.0 ohms																
None	greater than 10,000 ohms																

- Are the resistances within specification?

→ **Yes**

REMOVE the audio unit and SEND it to an authorized Ford audio system repair facility. TEST the system for normal operation.

→ **No**

GO to [M2](#).

M2 CHECK CIRCUIT 8-MD26 (WH/BK)

1

Air Bag Sliding Contact C218a

2

A0005279

2

Measure the resistance between ACM C240a pin 14, circuit 8-MD26 (WH/BK), harness side and air bag sliding contact C218a pin 1, circuit 8-MD26 (WH/BK), harness side; and between ACM C240a pin 14, circuit 8-MD26 (WH/BK), harness side and ground.

- Is the resistance less than 5 ohms between the ACM and the air bag sliding contact, and greater than 10,000 ohms between the ACM and ground?

→ **Yes**

GO to [M3](#).

→ **No**

REPAIR the circuit. TEST the system for normal operation.

M3 CHECK CIRCUIT 31S-PG24 (BK/OG)

1

PCM 175a

2

2

Measure the resistance between air bag sliding contact C218a pin 8, circuit 31S-PG24 (BK/OG), harness side and PCM C175a pin 56, circuit 31S-PG24 (BK/OG), harness side; and between air bag sliding contact C218a pin 8, circuit

A0005280

31S-PG24 (BK/OG), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [M4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

M4 CHECK THE AIR BAG SLIDING CONTACT

1

Air Bag Sliding Contact C217

2

A0005281

- 2 Measure the resistance between air bag sliding contact C218a pin 1, component side and horn switch C217 pin 6, component side; and between air bag sliding contact C218a pin 8, component side and horn switch C217 pin 3, component side.

- Are the resistances less than 5 ohms?

→ **Yes**
GO to [M5](#).

→ **No**
INSTALL a new air bag sliding contact; REFER to [Section 501-20B](#). TEST the system for normal operation.

M5 CHECK THE HORN SWITCH

1

- 1 Measure the resistance between horn switch C217 pin 6, component side and steering wheel control switch C208 pin 3, component side; and between horn switch C217 pin 3, component side and

A0005282

steering wheel control switch C208 pin 2,
component side.

- Are the resistances less than 5 ohms?

→ **Yes**

INSTALL new steering wheel control switches. TEST the system for normal operation.

→ **No**

INSTALL a new horn switch; REFER to [Section 413-06](#). TEST the system for normal operation.

Cassette Player Cleaning

1. For best performance, it is recommended that the tape player be cleaned once for every 10 to 12 hours of playing time. The tape player should be cleaned using a Ford tape player cleaning cartridge, available at your Ford or Lincoln-Mercury Dealer. The use of other cleaning products is not recommended, as these products could cause damage to the player or cassette tapes.
-

Torque Specifications

Description	Nm	lb-in
Battery ground cable	10	89
CD changer bolts	5	44
CD changer nut	5	44
Center imaging amplifier nuts	5	44

Audio System

The audio system consists of the following:

- P100i audio unit
 - audiophile system
 - four premium speakers (premium model, audiophile)(18971)
 - two subwoofer speakers (audiophile only) (19A068)
 - two center imaging speakers (audiophile only)
 - center imaging amplifier (audiophile only)(located in the left side of instrument panel)
 - CD changer (located in the glove compartment)(if equipped)
 - antenna isolator module (AIM)(located in the rear package tray)
 - steering wheel controls
-

Audio Unit

Removal and Installation

1. Disconnect the battery ground cable. Refer to [Section 414-01](#).
2. Remove the center A/C register finish panel. For additional information, refer to [Section 412-01](#).
3. Remove the ashtray finish panel.
 - Disconnect the electrical connectors.

4. Position the audio/DATC assembly.
 1. Remove the bolts.
 2. Position the audio unit.

5. Remove the audio/DATC assembly.
 1. Disconnect the DATC electrical connectors.
 2. Disconnect the antenna lead-in cable.
 3. Disconnect the audio unit electrical connectors.
 4. Remove the audio unit.

6. Separate the audio unit from the audio/DATC assembly.
 1. Remove the six screws.
 2. Separate the audio unit.

7. To install, reverse the removal procedure.
-

Compact Disc (CD) Changer

Removal and Installation

NOTE: Prior to the removal of the CD changer, it is necessary to remove the magazine.

1. Remove the glove compartment. For additional information, refer to [Section 501-12](#).
2. Remove the RH end panel.

3. Remove the CD changer bracket bolt.

4. Remove the CD changer.
 1. Remove the two bolts.
 2. Remove the nuts.
 - Disconnect the electrical connector.

5. Remove the brackets from the CD changer.

6. To install, reverse the removal procedure.

Amplifier —Subwoofer

Removal and Installation

1. Disconnect the battery ground cable. [Section 414-01](#).
2. Open the deck lid.
3. Remove the subwoofer amplifier.
 1. Disconnect the electrical connectors.
 2. Remove the bolts.
 3. Remove the subwoofer amplifier.

4. To install, reverse the removal procedure.
-

Amplifier —Center Imaging

Removal and Installation

1. Disconnect the battery ground cable. Refer to [Section 414-01](#).
2. Remove the driver side instrument panel insulator.
3. Remove the driver side lower heat duct.
4. Remove the center imaging amplifier.
 1. Remove the nuts.
 2. Disconnect the electrical connector.

5. To install, reverse the removal procedure.
-

Auxiliary Control —Steering Wheel Switch

Removal and Installation

1. Remove the driver side air bag module (043B13). Refer to [Section 501-20B](#).
2. Remove the auxiliary control.
 1. Disconnect the electrical connector.
 2. Remove the screws.
 3. Remove the auxiliary control.

3. To install, reverse the removal procedure.
-

General Specifications

Item	Specification
Grid wire repair kit	ESB-M4J58-A
D8AZ-19562-AA	

Torque Specifications

Description	Nm	lb-in
Antenna isolator module bolts	9	80
Battery ground cable bolt	10	89

Antenna

The radio antenna is concealed on the inside of the rear window glass. The AM antenna consists of the rear window defroster grid and the FM antenna is the conductive tracing above the rear window defroster grid. The radio antenna uses an antenna isolator module mounted under the rear package tray trim panel to separate the AM signals, FM signals, and rear defroster power.

Antenna Grid Wire Repair

Special Tool(s)

NOTE: Any breaks longer than 25.4 mm (1 in) in one grid cannot be repaired. The back window glass must be replaced. Breaks equal to or shorter than 25.4 mm (1 in) in the heated back window grid wire can be successfully repaired by using the following procedure:

1. Obtain a grid wire repair repair kit meeting Ford specification ESB-M4J58-A.
2. The vehicle should be brought inside and allowed to reach 16°C (60°F) or above.
3. Clean the repair area with denatured alcohol.
4. Place the grid line mask over the break aligning the cut out slots on either side of the repair area.

5. Apply the epoxy to the repair area.
6. Remove the mask without disturbing the epoxy.
7. Use Heat Gun to heat the repair area for one to two minutes at a distance of about 25-50 mm (1-2 in). This procedure should heat the repair area to approximately 149°C (300°F).
8. The heated back window may be energized immediately after the repair. Optimum hardness and adhesion will occur after 24 hours. Do not disturb the repaired area until that time.

Antenna

Removal

1. The antenna is integral to the back window glass and can be repaired, but not replaced separately. For removal and installation of the back window glass, refer to [Section 501-11](#) . For repair procedures, refer to [Antenna Grid Wire Repair](#) .
-

Cable

Removal and Installation

1.  **CAUTION:** The antenna lead-in cable is not removable from the rear lamp wiring harness. If the cable needs to be replaced, leave it in the rear lamp wiring harness, install a new cable on top and secure it with ties.

Disconnect the battery ground cable. Refer to [Section 414-01](#).

2. Remove the instrument panel. Refer to [Section 501-12](#).
3. Remove the LH A-pillar lower trim panel.

4. **NOTE:** Front LH scuff plate shown. Rear LH scuff plate similar.

Remove the front and rear LH scuff plates.

- Remove the protective covers to expose the wiring harness.

5. Remove the rear seat. For additional information, refer to [Section 501-10](#)
6. **NOTE:** The rear seat back release handles are located in the luggage compartment.

Lower the LH and RH rear seat backrests.

7. Position the LH and RH rear seat side bolsters aside.
 1. Release the upper retaining latches.
 2. Position the rear seat side bolsters aside.

8. Remove the upper pass-through trim panel.
 1. Remove the five pin-type retainers.
 2. Release the latch covers.
 3. Remove the upper pass-through trim panel.

9. Remove the high mounted stoplamp cover.

10. Position the LH and RH rear door opening sealing strips aside.

11. Position the LH and RH rear quarter panel trim panels aside.
 - Grasp trim panels at the top and gently pull outward to release the clips.

12. Remove the package tray.
 1. Remove the pin-type retainers.
 2. Remove the package tray.

13. Disconnect the antenna lead-in cable from the antenna isolator module.

14.  **CAUTION:** The antenna lead-in cable is not removable from the rear lamp wiring

harness. If the cable needs to be replaced, leave it in the rear lamp wiring harness, install a new cable on top and secure it with ties.

NOTE: To avoid noise after the new antenna lead-in cable has been installed, cut both ends of the old antenna lead-in cable to remove the metal connectors.

To install, reverse the removal procedure.

Module —Isolator

Removal and Installation

1. Disconnect the battery ground cable. Refer to [Section 414-01](#).
2. **NOTE:** The rear seat back release handles are located in the luggage compartment.

Lower the LH and RH rear seat backrests.

3. Position the LH and RH rear seat side bolsters aside.
 1. Release the upper retaining latches.
 2. Position the rear seat side bolsters aside.

4. Remove the upper pass-through trim panel.
 1. Remove the five pin-type retainers.
 2. Release the latch covers.
 3. Remove the upper pass-through trim panel.

5. Remove the high mounted stoplamp cover.

6. Position the LH and RH rear door opening sealing strips aside.

7. Position the LH and RH rear quarter panel trim panels aside.

- Grasp trim panels at the top and gently pull outward to release the clips.

8. Remove the package tray.

1. Remove the pin-type retainers.
2. Remove the package tray.

9. **NOTE:** RH rear defroster grid wiring harness shown, LH similar.

Disconnect the LH and RH rear defroster grid wiring harness.

- Release the harness retainers.

10. Remove the isolator module.
1. Disconnect the electrical connector.
 2. Disconnect the antenna lead-in cables.
 3. Remove the bolts.
 4. Remove the isolator module.

11. To install, reverse the removal procedure.

Speakers

There are two speaker systems available:

- The premium sound speaker system.
- The optional audiophile speaker system.

The premium sound system has one speaker mounted in each door.

The optional audiophile system has one two-way speaker mounted in each door, two subwoofer speakers in an enclosure mounted to the package tray, and two center imaging speakers mounted in the center stack area of the instrument panel.

Speaker —Door Mounted

Removal and Installation

1. Remove the door trim panel. Refer to [Section 501-05](#).
2. Remove the speakers.
 1. Remove the screws.
 2. Disconnect the electrical connector.
 3. Remove the speakers.

3. To install, reverse the removal procedure.
-

Speaker —Subwoofer

Removal and Installation

1. Remove the subwoofer speaker grill.

2. Remove the screws.

3. Disconnect the electrical connector.
 4. Remove the speaker.
 5. To install, reverse the removal procedure.
-

Speaker —Subwoofer Enclosure

Removal and Installation

1. Remove the package tray trim panel. For additional information, refer to [Section 501-05](#).
2. Disconnect the electrical connector.

3. Support the housing and remove the nuts.

4. Transfer all the components to the new housing as necessary.
 5. To install, reverse the removal procedure.
-

Torque Specifications

Description	Nm	lb-ft	lb-in
Battery ground cable bolt	10	—	89
Fog lamp assembly nuts	5	—	44
Headlamp assembly bolts	6	—	53
Stoplamp assembly nuts	5	—	44

Exterior Lighting

The exterior lighting system consists of:

- headlamps
 - autolamps
 - parking lamps
 - front marker lamps
 - fog lamps
 - rear lamps
 - stoplamps
 - high mounted stoplamp
 - license plate lamps
 - turn signals
 - reversing lamps
 - headlamp switch
 - brake pedal position (BPP) switch
-

Headlamps

Refer to Wiring Diagrams Section [417-01](#), Exterior Lighting for schematic and connector information.

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052 or equivalent diagnostic tool
 ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

NOTE: The front electronic module (FEM), the rear electronic module (REM) and the instrument cluster module (ICM) must be reconfigured before installing a new module. Refer to [Section 418-01](#).

The vehicle electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely on the standard corporate protocol (SCP) communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message) control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Exterior Lighting

The exterior lighting outputs are zone controlled by the FEM and REM. The front exterior lights are controlled by the FEM and the rear exterior lights are controlled by the REM. An additional function of the lighting system is a lamp outage function which indicates to the driver if certain exterior bulbs are not functioning. With a bulb inoperative, the FEM or REM will send a message to the instrument cluster and message center (if equipped with the message center), which will indicate to the driver that the lamp is inoperative with a lamp out indicator (with the message center a message will be displayed). To provide complete input and output functionality, each exterior lamp feature will be described individually. All exterior lighting is powered by the switched system power (SSP) feature (refer to Switched System Power [SSP]). A failure of all or any of the SSP features will cause inoperative

exterior lighting. When diagnosing exterior lighting, it is essential to determine if all related symptoms and DTCs are controlled by the SSP feature.

Headlamps

The headlamps are controlled by the FEM and instrument cluster module. The headlamp and multifunction switches are hardwired to the instrument cluster. When the headlamp switch is in any position, the instrument cluster module will send a command to the FEM through the SCP communication network. The FEM will process this information and output the appropriate command to the headlamps, which are hardwired to the FEM. This is the same for the low and high beams and flash-to-pass position. Daytime running lamps (DRL) is an additional feature which the FEM may be configured to include. Left and right low, as well as high beams will provide a lamp outage indication. Fault management of the headlamps will provide some headlamp functionality. In the event of all multifunction switch, all headlamp switch or ignition switch invalid or missing data failures, the low beams will be illuminated. There is also a headlamp battery saver feature. This feature turns off the headlamps in ten minutes after the ignition is turned off.

The vehicle electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the SCP communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message) control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Switched System Power (SSP)

The SSP is invoked by both the FEM and REM. This function removes power from relays that provide power to the exterior lamps, interior lamps, and power door locks. This is only accomplished when both the FEM and the REM are in sleep mode. The sleep function of the FEM and REM places the modules in sleep mode when the ignition switch is in the OFF position, and no wake up (input) signals occur for 30 minutes. The module will not sleep if the parking lamps or the hazard lamps are active. The following relays are controlled by the SSP function: SSP1, SSP2, SSP3, and SSP4. When either the FEM or REM are not in sleep mode, all SSP relays will be energized. When energized, each relay will supply power to multiple features/functions. For additional information, refer to the SSP Index for diagnosis and testing of SSP related issues.

Inspection and Verification

1. Verify the customer concern by operating the headlamps following these steps:
 1. Place the ignition switch in the ON position.
 2. Place the headlamp switch in the ON position.
 3. **NOTE:** For autolamp concerns, refer to [Autolamps](#).

Verify the low and high beam operation.

 4. Place the headlamps in the OFF position.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Damaged FEM ● Damaged instrument cluster 	<ul style="list-style-type: none"> ● Battery junction box (BJB) Fuses: <ul style="list-style-type: none"> ■ 423 (30A) ■ 424 (30A) ■ 427 (30A) ■ 432 (30A) ■ 425 (40A) ■ 422 (20A) ● Central junction box (CJB) Fuses: <ul style="list-style-type: none"> ■ 204 (5A) ■ 208 (5A) ■ 209 (10A) ■ 210 (5A) ■ 211 (10A) ■ 213 (5A) ■ 217 (5A) ■ 223 (10A) ■ 225 (10A) ■ 235 (5A) ■ 205 (5A) ■ 220 (10A) ■ 207 (5A) ● Damaged wiring harness ● Loose or corroded connections ● Damaged headlamp switch

3. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
4. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.
5. Carry out the DATA LINK DIAGNOSTIC TEST. If the diagnostic tool responds with:
 - CKT914, CKT915 or CKT70 =ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for FEM, go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for REM, go to Pinpoint Test B.
 - NO RESP/NOT EQUIP for instrument cluster, go to Pinpoint Test C.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM.
6. If the DTCs retrieved are related to the concern, go to FEM Diagnostic Trouble Code (DTC) Index, and Instrument Cluster Module (ICM) Diagnostic Trouble Code (DTC) Index, or SSP Relay Index to continue diagnostics.
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

FEM Diagnostic Trouble Code (DTC) Index

FEM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action

SSP2	BJB Fuse 432 (30A)	<ul style="list-style-type: none"> ● LH low beam headlamp (FEM) ● LF park/turn/side marker lamps (FEM) ● Interior courtesy/ demand lighting ● Windshield wiper washer pump ● Switch illumination backlighting
SSP3	BJB Fuse 424 (30A)	<ul style="list-style-type: none"> ● High mounted stoplamp (REM) ● RR park/stoplamps (REM) ● Reversing lamps (REM) ● LR turn signal (REM) ● Passenger power mirror ● Trailer stoplamps/turn signals (if equipped with trailer tow)
SSP4	BJB Fuse 423 (30A)	<ul style="list-style-type: none"> ● LR park/stoplamps (REM) ● RR turn signal (REM) ● Passenger door/side locks (REM)

	<ul style="list-style-type: none"> ● License lamps ● Luggage compartment lid release solenoid/switch ● Fuel door release solenoid/switch ● Luggage compartment lamp ● Trailer park lamps (if equipped with trailer tow)
--	--

When diagnosing an SSP relay, check that all systems for that relay are inoperative. Refer to Symptom Chart if:

- all systems for one SSP relay are inoperative.
- all systems for all SSP relays are inoperative.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
<ul style="list-style-type: none"> ● No communication with the front electronic module 	<ul style="list-style-type: none"> ● Fuses 425 (40A), 422 (20A). ● Circuitry. ● FEM. 	<ul style="list-style-type: none"> ● GO to Pinpoint Test A.

Pinpoint Tests

CAUTION: Electronic modules are sensitive to electrical charges. If exposed to these charges, damage may result.

PINPOINT TEST A: NO COMMUNICATION WITH THE FRONT ELECTRONIC MODULE

CONDITIONS	DETAILS/RESULTS/ACTIONS
------------	-------------------------

A1 CHECK CIRCUITS 29-DK20 (OG/GN) AND 29S-DK22 (OG/YE) FOR VOLTAGE

NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.

1

2

FEM C201c

3

FEM C201f

4

5

A0006297

5

Measure the voltage between FEM C201c pin 6, circuit 29-DK20 (OG/GN), harness side and ground; and between FEM C201f pin 1, circuit 29S-DK22 (OG/YE), harness side and ground.

- Are the voltages greater than 10 volts?

→ **Yes**
GO to [A2](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

A2 CHECK CIRCUITS 31-DK20 (BK/RD), 31-DK20A (BK/RD), 31-DK20B (BK/RD), 31-DK20C (BK/RD) AND 31-DK20D (BK/RD) FOR OPENS

1

2

FEM C201a

3

A0006298

3 Measure the resistance between FEM connectors, harness side and ground:

FEM	Pin	Circuit
C201c	12	31-DK20 (BK/RD)
C201a	11	31-DK20A (BK/RD)
C201a	13	31-DK20B (BK/RD)
C201a	14	31-DK20C (BK/RD)
C201a	15	31-DK20D (BK/RD)

- Is the resistance less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#) .

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST B: NO COMMUNICATION WITH THE REAR ELECTRONIC MODULE

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK CIRCUIT 29-DK31 (OG/BK) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p> <p>2</p> <p style="text-align: center;">REM C420d</p> <p>3</p> <p style="text-align: center;">REM C420c</p> <p>4</p>	

5

A0006299

5

Measure the voltage between REM C420d pin 3, circuit 29-DK31 (OG/BK), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [B2](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

B2 CHECK CIRCUITS 29S-DK31 (OG/BK), 31-DK30D (BK), 31-DK30E (BK), 31-DK30F (BK), 31-DK30G (BK) AND 31-DK30H (BK), FOR OPENS

1

2

REM C420b

3

A0006300

3

Measure the resistance between REM connectors, harness side and ground:

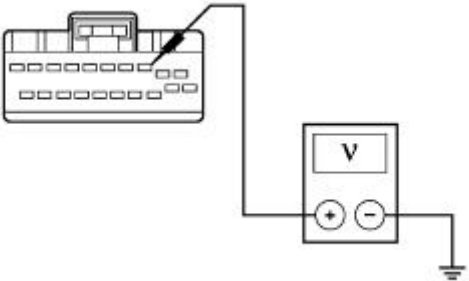

REM	Pin	Circuit
C420c	13	29S-DK31 (OG/BK)
C420c	12	31-DK30E (BK)
C420c	11	31-DK30D (BK)
C420c	26	31-DK30G (BK)
C420c	25	31-DK30F (BK)
C420b	12	31-DK30H (BK)

● Is the resistance less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST C: NO COMMUNICATION WITH THE INSTRUMENT CLUSTER MODULE

CONDITIONS	DETAILS/RESULTS/ACTIONS								
C1 CHECK HOT AT ALL TIMES POWER SUPPLY CIRCUIT									
<p>1 </p> <p>2 </p> <p>3 </p>	<p>3 Measure the voltage between instrument cluster C220b pin 3, circuit 29-GG11 (OG/BU), harness side and ground.</p> <p>● Is the voltage greater than 10 volts?</p> <p>→ Yes GO to C2.</p> <p>→ No REPAIR the circuit. TEST the system for normal operation.</p>								
C2 CHECK HOT IN RUN POWER SUPPLY CIRCUITS									
<p>1 </p> <p>2 </p>	<p>2 Measure the voltage between the instrument cluster and ground as follows:</p> <table border="1" data-bbox="887 1828 1326 2011"> <thead> <tr> <th>Connector pin</th> <th>Circuit</th> </tr> </thead> <tbody> <tr> <td>C220a pin 11</td> <td>15-JA14 (GN/BK)</td> </tr> <tr> <td>C220b pin 6</td> <td>15-GG14 (GN/RD)</td> </tr> <tr> <td>C220b pin 17</td> <td>75-GG15 (YE/GN)</td> </tr> </tbody> </table>	Connector pin	Circuit	C220a pin 11	15-JA14 (GN/BK)	C220b pin 6	15-GG14 (GN/RD)	C220b pin 17	75-GG15 (YE/GN)
Connector pin	Circuit								
C220a pin 11	15-JA14 (GN/BK)								
C220b pin 6	15-GG14 (GN/RD)								
C220b pin 17	75-GG15 (YE/GN)								

A0002793

- Are the voltages greater than 10 volts?

→ **Yes**
GO to [C3](#).

→ **No**
REPAIR the circuit(s). TEST the system for normal operation.

C3 CHECK GROUND CIRCUITS

1

2

A0002794

2 Measure the resistance between the instrument cluster and ground as follows:

Connector pin	Circuit
C220a pin 6	31-AL11 (BK)
C220b pin 13	91-GG11 (BN/RD)

- Are the resistances less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s). TEST the system for normal operation.

PINPOINT TEST D: ONE LOW BEAM HEADLAMP IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	

D1 CHECK OPERATION OF THE HEADLAMPS

1

2 Place the headlamp switch in the ON position.

- **Do the low beams operate correctly?**

→ **Yes**
The system is working correctly.

→ **No**
If the left low beam is inoperative, GO to [D2](#).
If the right low beam is inoperative, GO to [D7](#).

D2 CHECK THE FEM OUTPUT

1

2

Diagnostic Tool

3

4

5 While observing the left low beam lamp trigger the FEM active command LEFT LOW ON and then OFF.

- **Does the left low beam turn ON?**

→ **Yes**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [D3](#).

D3 CHECK CJB FUSE 225 (10A) FOR POWER

NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.

1

2

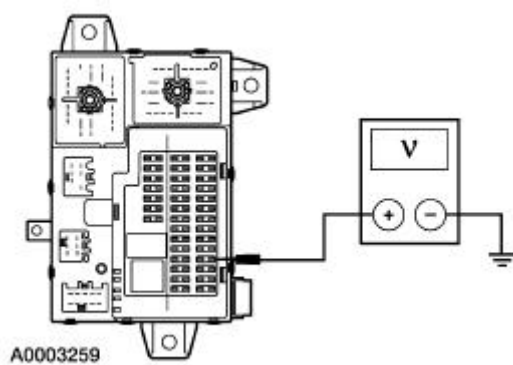

CJB 225 (10A)

3

4

4

Measure the voltage between CJB Fuse 225 (10A), input side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [D4](#).

→ **No**
REFER to the SSP Relay Index in this section.

D4 CHECK CIRCUIT 29S-LE16 (OG/GN) FOR AN OPEN

1

2

LH Low Beam Headlamp C1021

3

3

Measure the resistance between CJB Fuse 225 (10A) output side, circuit 29S-LE16 (OG/GN) and LH low beam headlamp C1021 pin 2, circuit 29S-LE16

(OG/GN), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
REINSTALL CJB Fuse 225 (10A).GO to [D5](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

D5 CHECK CIRCUIT 31S-LE16 (BK/RD) FOR AN OPEN

NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.

1

2

FEM C201a

3

3

Measure the resistance between FEM C201a pin 8, circuit 31S-LE16 (BK/RD), harness side and LH low beam headlamp C1021 pin 1, circuit 31S-LE16 (BK/RD), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [D6](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

D6 CHECK CIRCUIT 31S-LE16 (BK/RD) FOR A SHORT TO POWER

NOTE: Cycle the ignition switch from OFF to RUN to enable SSP feature.

1

2

2

Measure the voltage between LH low beam headlamp C1021 pin 1, circuit 31S-LE16 (BK/RD), harness side and ground.

• **Is any voltage indicated?**

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

D7 CHECK RIGHT LOW BEAM ACTIVE COMMANDS

1

Diagnostic Tool

2

3

3

Trigger the FEM active commands RIGHT LOW ON then RIGHT HIGH ON.

• **Do the low beams operate correctly?**

→ **Yes**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

TRIGGER the FEM active commands RIGHT LOW and RIGHT HIGH OFF. GO to [D8](#).

D8 CHECK CJB FUSE 209 (10A) FOR POWER

1

CJB Fuse 209 (10A)

2

2

Measure the voltage between CJB Fuse 209 (10A), input side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [D9](#).

→ **No**
REFER to the SSP Relay Index in this section.

D9 CHECK CIRCUIT 29S-LE16 (OG/GN) FOR AN OPEN

1

2

RH Low Beam Headlamp C1041

3

3

Measure the resistance between RH low beam headlamp C1041 pin 2, circuit 29S-LE16 (OG/GN), harness side and CJB Fuse 209 (10A), output side circuit 29S-LE23 (OG/WH).

● Is the resistance less than 5 ohms?

→ **Yes**
REINSTALL CJB Fuse 209 (10A), GO to [D10](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

D10 CHECK CIRCUIT 31S-LE23 (BK/WH) FOR AN OPEN

1

FEM C201a

2

2

Measure the resistance between headlamp C1041 pin 1, circuit 31S-LE16 (BK/RD), harness side, and FEM C201a pin 7, circuit 31S-LE23 (BK/WH), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [D11](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

D11 CHECK CIRCUIT 31S-LE16 (BK/RD) FOR A SHORT TO POWER

1

2

2

Measure the voltage between RH low beam headlamp C1041 pin 1, circuit 31S-LE16 (BK/RD), harness side and ground.

A0003262

- Is any voltage indicated?

- **Yes**
REPAIR the circuit. TEST the system for normal operation.
- **No**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST E: ONE HIGH BEAM HEADLAMP IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
E1 CHECK OPERATION OF THE HEADLAMP	
<p>1</p> 	<p>2 Place the headlamp switch in the ON position.</p> <ul style="list-style-type: none"> ● Do the high beams operate correctly? <p>→ Yes The system is working correctly.</p> <p>→ No If the left high beam is inoperative, GO to E2. If the right high beam is inoperative, GO to E6.</p>
E2 CHECK THE FEM OUTPUT	
NOTE: Cycle the ignition switch from OFF to RUN to enable the SSP feature.	
<p>1</p>	

2

Diagnostic Tool

3

4

5 While observing the left high beam lamp, trigger the FEM active command LEFT HIGH ON and then OFF.

• Do the high beams illuminate?

→ Yes
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No
GO to [E3](#).

E3 CHECK CIRCUIT 29S-LE15 (OG/BK) FOR AN OPEN

1

2

LH High Beam headlamp C1020

3

4

4 Measure the voltage between LH high beam headlamp C1020 pin 2, circuit 29S-LE15 (OG/BK), harness side and ground.

A0003266

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [E4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

E4 CHECK CIRCUIT 31S-LE15 (BK/GN) FOR AN OPEN

1

2

FEM C201a

3

A0003267

3 Measure the resistance between FEM C201a pin 17, circuit 31S-LE15 (BK/GN), harness side and LH headlamp C1020 pin 1, circuit 31S-LE15 (BK/GN), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [E5](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

E5 CHECK CIRCUIT 31S-LE15 (BK/GN) FOR A SHORT TO POWER

1

2

A0003268

2

Measure the voltage between C201a pin 17, circuit 31S-LE15 (BK/GN), harness side and ground.

• Is any voltage indicated?

→ Yes

REPAIR the circuit. TEST the system for normal operation.

→ No

INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

E6 CHECK THE FEM OUTPUT

1

2

Diagnostic Tool

3

4

5

While observing the left high beam lamp trigger the FEM active command RIGHT HIGH ON and then OFF.

• Do the high beams illuminate?

→ Yes

INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [E7](#).

E7 CHECK CIRCUIT 29S-LE15 (OG/BK) FOR AN OPEN

1

2

RH High Beam Headlamp C1040

3

A0003266

3 Measure the voltage between RH high beam headlamp C1040 pin 2, circuit 29S-LE15 (OG/BK), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [E8](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

E8 CHECK CIRCUIT 31S-LE22 (BK/RD) FOR AN OPEN

1

2

FEM C201a

3

3 Measure the resistance between FEM C201a pin 10, circuit 31S-LE22 (BK/RD), harness side and headlamp C1040 pin 1, circuit 31S-LE15 (BK/GN), harness side.

A0003269

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [E9](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

E9 CHECK CIRCUIT 31S-LE22 (BK/RD) FOR A SHORT TO POWER

1

A0003270

1

Measure the voltage between FEM C201a pin 10, circuit 31S-LE22 (BK/RD), harness side and ground.

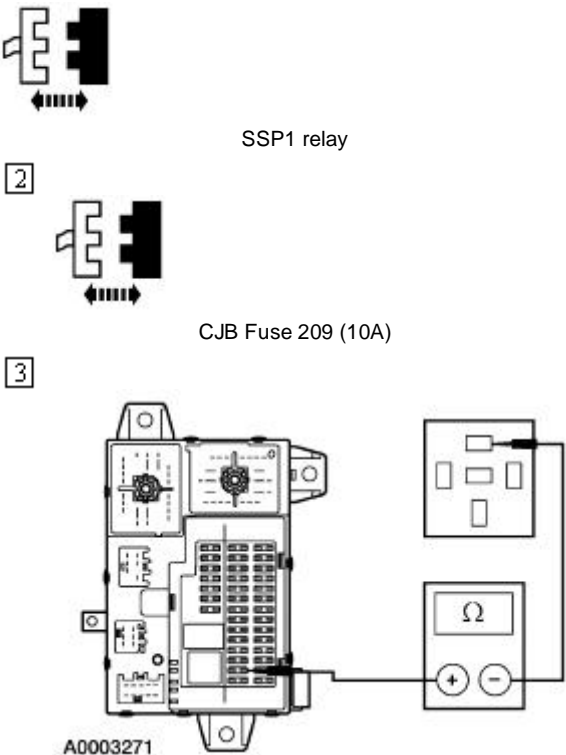

- Is any voltage indicated?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST F: EXTERIOR LAMPS ARE INOPERATIVE — RF PARK, RF TURN, RF SIDE MARKER LAMPS, RF LOW BEAM, LF HIGH BEAM, LF PARK, LF TURN, AND LF SIDE MARKER

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK CIRCUIT 30-DD3 (RD) FOR AN OPEN	
1	

SSP1 relay

2

CJB Fuse 209 (10A)

3

A0003271

3 Measure the resistance between SSP1 relay pin 87, circuit 30-DD3 (RD), harness side, and CJB Fuse 209 (10A) input side.

- Is the resistance less than 5 ohms?

→ **Yes**
REFER to SSP Relay Index in this section.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST G: THE HEADLAMPS ARE ON CONTINUOUSLY — BOTH LOW BEAMS

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
G1 CHECK CJB FUSE 220 (5A) FOR POWER	
<p>1</p>  <p>CJB Fuse 220 (5A)</p> <p>2</p>  <p>3</p>	<p>3 Measure the voltage between CJB Fuse 220 (5A) input side, circuit 30-DD1</p>

(RD/YE), and ground.

- Is the voltage greater than 10 volts?

→ **Yes**
REINSTALL CJB Fuse 220 (5A).GO to [G2](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

G2 CHECK CIRCUIT 29-DK20 (OG/GN) FOR AN OPEN

NOTE: Cycle the ignition switch from OFF to RUN to enable the SSP feature.

- 4 Measure the voltage between FEM C201c pin 6, circuit 29-DK20 (OG/GN), harness side and ground.

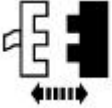

- Is the voltage greater than 10 volts?

→ **Yes**

INSTALL a new FEM; REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST H: THE HEADLAMPS ARE ON CONTINUOUSLY — SINGLE LOW/HIGH BEAMS

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
H1 CHECK OPERATION OF THE HEADLAMP	
<p>1</p> 	<p>2 Place the headlamp switch in the ON position.</p> <p>3 Using the multifunction switch, place the high beams in the ON, and then OFF position.</p> <ul style="list-style-type: none"> ● Do the headlamps operate correctly? <p>→ Yes The system is working correctly.</p> <p>→ No If the left low beam operates correctly, GO to H2. If the right low beam operates correctly, GO to H3. If the left high beam operates correctly, GO to H4. If the right high beam operates correctly, GO to H5.</p>
H2 CHECK LH LOW BEAM FOR A SHORT TO GROUND	
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
<p>1</p>  <p>2</p>  <p>FEM C201a</p> <p>3</p>	

● Does the LH low beam turn OFF?

→ **Yes**

INSTALL a new FEM; REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**

REPAIR circuit 31S-LE16 (BK/RD). TEST the system for normal operation.

H3 CHECK THE RH LOW BEAM FOR A SHORT TO GROUND

NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.

1

2

FEM C201a

3

● Does the RH low beam turn OFF?

→ **Yes**

INSTALL a new FEM; REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**

REPAIR circuit 31S-LE23 (BK/WH). TEST the system for normal operation.

H4 CHECK THE LH HIGH BEAM FOR A SHORT TO GROUND

NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.

1

2

FEM C201a

3

● Does the LH high beam turn OFF?

→ **Yes**

INSTALL a new FEM; REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**

REPAIR circuit 31S-LE15 (BK/GN). TEST the system for normal operation.

H5 CHECK THE RH HIGH BEAM FOR A SHORT TO GROUND

NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.

1

2

FEM C201a

3

● Does the RH high beam turn OFF?

→ **Yes**

INSTALL a new FEM; REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**

REPAIR circuit 31S-LE22 (BK/RD). TEST the system for normal operation.

PINPOINT TEST I: THE POWER SUPPLY RELAY IS INOPERATIVE — ALL SSP FEATURES

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.</p>	
<p>NOTE: Refer to Principles of Operation and SSP Relay Index for complete detail of SSP powered features.</p>	
<p>I1 CHECK THE BJB FUSES FOR POWER</p>	
<p>1</p>	

BJB Fuse 427 (30A)

2

BJB Fuse 432 (30A)

3

BJB Fuse 424 (30A)

4

BJB Fuse 423 (30A)

5

5 Measure the voltage between the BJB Fuses, input side and ground as follows:

BJB Fuse
423 (30A)
424 (30A)
427 (30A)
432 (30A)

• Are the voltages greater than 10 volts?

→ **Yes**
REINSTALL all the fuses.GO to [I2](#).

→ **No**
REPAIR the power supply circuit. TEST the system for normal operation.

I2 CHECK BJB RELAYS FOR POWER

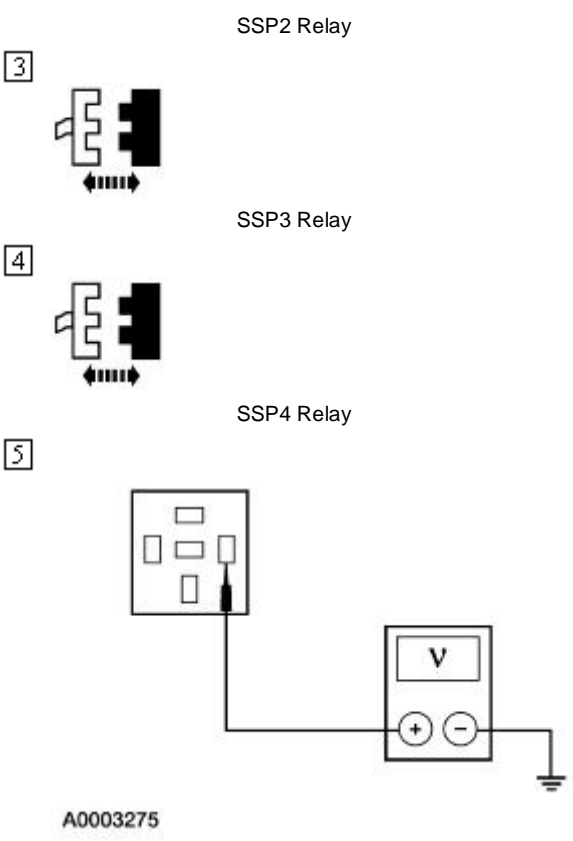

1

SSP1 Relay

2

5 Measure the voltage between BJB relay pin 86, harness side and ground as follows:

BJB Relay	Circuit
SSP1	30-DG51 (BK/YE)
SSP2	30-DG53 (RD/OG)
SSP3	30-DG55 (RD/BK)
SSP4	30-DG57 (RD/YE)

• Are the voltages greater than 10 volts?

→ Yes
GO to 13.

→ No
REPAIR or INSTALL a new BJB. TEST the system for normal operation.

13 CHECK SSP RELAY(S)

NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.

1 Carry out the relay component test on each SSP relay; refer to Wiring Diagrams Section 700-09, Component Testing.

• Does each relay pass the component test?

→ Yes
GO to 14.

→ No
INSTALL a new SSP relay(s). TEST the system for normal operation.

14 CHECK CIRCUIT(S) FOR A SHORT TO POWER

NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.

1

2

A0003276

2

Measure the voltage between SSP relay BJB pin 85, harness side and ground as follows:

Relay	Circuit
SSP1	31S-DG51 (BK/YE)
SSP2	31S-DG53 (BK/OG)
SSP3	31S-DG55 (BK/RD)
SSP4	31S-DG57 (BK/YE)

• Is any voltage indicated?

→ Yes
GO to [15](#).

→ No
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

15 CHECK THE FEM FOR A SHORT TO POWER

NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.

1

2

FEM C201c

3

A0003276

3

Measure the voltage between SSP relay pin 85, harness side and ground as follows:

Relay	Circuit
SSP1	31S-DG51 (BK/YE)
SSP2	31S-DG53 (BK/OG)
SSP3	31S-DG55 (BK/RD)
SSP4	31S-DG57 (BK/YE)

• Is any voltage indicated?

→ Yes

GO to [16](#).

→ **No**
 INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

I6 CHECK THE REM FOR A SHORT TO POWER

NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.

1

REM C420d

2

2 Measure the voltage between SSP relay pin 85, harness side and ground as follows:

Relay	Circuit
SSP1	31S-DG51 (BK/YE)
SSP2	31S-DG53 (BK/OG)
SSP3	31S-DG55 (BK/RD)
SSP4	31S-DG57 (BK/YE)

● Is any voltage indicated?

→ **Yes**
 REPAIR the circuit. TEST the system for normal operation.

→ **No**
 INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST J: THE POWER SUPPLY RELAY IS INOPERATIVE — SSP1

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.</p> <p>NOTE: Refer to Principles of Operation and SSP Relay Index for complete details of SSP1 powered features.</p>	
<p>J1 CHECK THE BJB FOR POWER</p>	
<p>1</p> <p>SSP1 Relay</p>	

2

3

A0003277

3

Measure the voltage between SSP1 relay BJB pin 86, circuit 30-DG51 (BK/YE), harness side and ground; and between SSP1 relay BJB pin 30, circuit 30-DG52 (RD/BU), harness side and ground.

- Are the voltages greater than 10 volts?

→ **Yes**
GO to [J2](#).

→ **No**
REPAIR the power supply circuit. TEST the system for normal operation.

J2 CHECK SSP1 RELAY

1

Carry out the relay component test; refer to Wiring Diagrams Section 700-09, Component Testing.

- Does the relay pass the component test?

→ **Yes**
GO to [J3](#).

→ **No**
INSTALL a new relay. TEST the system for normal operation.

J3 CHECK CIRCUIT 31S-DG51 (BK/YE) FOR AN OPEN

1

2

FEM C201b

3

3

Measure the resistance between SSP1 relay BJB pin 85, circuit 31S-DG51

A0003278

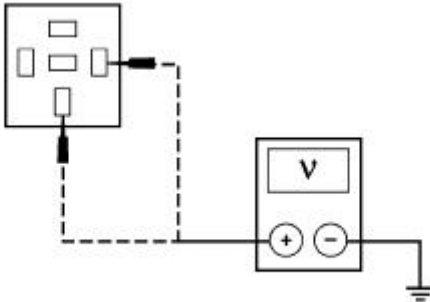

(BK/YE), harness side and FEM C201b pin 21, circuit 31S-DK21 (BK/WH), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
REPAIR circuit 30-DD3 (RD). TEST the system for normal operation.

→ **No**
REPAIR circuit 31S-DG51 (BK/YE). TEST the system for normal operation.

PINPOINT TEST K: THE POWER SUPPLY RELAY IS INOPERATIVE — SSP2

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.</p> <p>NOTE: Refer to Principles of Operation and SSP Relay Index for complete details of SSP2 powered features.</p>

<p>L2 CHECK SSP3 RELAY</p>	
	<p>1 Carry out the relay component test; refer to Wiring Diagrams Section 700-09.</p> <ul style="list-style-type: none"> • Does the relay pass the component test?

- **Yes**
GO to [L3](#).
- **No**
INSTALL a new relay. TEST the system for normal operation.

L3 CHECK CIRCUIT 31S-DG55 (BK/RD) FOR AN OPEN

3 Measure the resistance between SSP3 relay BJB pin 85, circuit 31S-DG55 (BK/RD), harness side and FEM C201b pin 21, circuit 31S-DK21 (BK/WH), harness side.

● **Is the resistance less than 5 ohms?**

- **Yes**
REPAIR or INSTALL a new BJB. TEST the system for normal operation.
- **No**
REPAIR circuit. TEST the system for normal operation.

PINPOINT TEST M: THE POWER SUPPLY RELAY IS INOPERATIVE — SSP4

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.</p> <p>NOTE: Refer to Principles of Operation and SSP Relay Index for complete details of SSP4 powered features.</p>	
<p>M1 CHECK THE BJB FOR POWER</p>	
<p>1</p>	

SSP4 Relay

2

3

A0003277

3 Measure the voltage between SSP4 relay BJB pin 86, circuit 31S-DG57 (BK/YE), harness side and ground; and between SSP4 relay BJB pin 30, circuit 30-DG58 (RD/BU), harness side and ground.

• Are the voltages greater than 10 volts?

→ Yes
GO to [M2](#).

→ No
REPAIR the power supply circuit. TEST the system for normal operation.

M2 CHECK SSP4 RELAY

1 Carry out the relay component test; refer to Wiring Diagrams Section 700-09, Component Testing.

• Does the relay pass the component test?

→ Yes
GO to [M3](#).

→ No
INSTALL a new relay. TEST the system for normal operation.

M3 CHECK CIRCUIT 31S-DG57 (BK/YE) FOR AN OPEN

1

2

FEM C201b

3

3

Measure the resistance between SSP4 relay BJB pin 85, circuit 31S-DG57 (BK/YE), harness side and FEM C201b pin 21, circuit 31S-DK21 (BK/WH), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**

REPAIR or INSTALL a new BJB. TEST the system for normal operation.

→ **No**

REPAIR the circuit. TEST the system for normal operation.

Autolamps

Refer to Wiring Diagrams Section [417-01](#), Exterior Lighting for schematic and connector information.

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052 or equivalent diagnostic tool
 ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

NOTE: The front electronic module (FEM), the rear electronic module (REM) and the instrument cluster module (ICM) must be reconfigured before installing a new module. Refer to [Section 418-01](#).

The vehicle's electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the standard corporate protocol (SCP) communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message) control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Exterior lighting

The exterior lighting outputs are zone controlled by the front electronic module (FEM) and rear electronic module (REM). The FEM and REM. An additional function of the lighting system is a lamp outage function which indicates to the driver if certain exterior bulbs are not functioning. With a bulb inoperative, the FEM or REM will send a message to the instrument cluster and message center (if equipped with the message center) which will in turn indicate to the driver that the lamp is inoperative with a lamp out indicator (with the message center a message will be displayed). To provide complete input and output functionality, each exterior lamp feature will be described individually. All exterior lighting is powered by the switched system power (SSP) feature (refer to Switched System Power [SSP]). A failure of all or any of the SSP features will cause inoperative exterior lighting. When

diagnosing exterior lighting, it is essential to determine if all related symptoms and DTCs are controlled by the SSP feature.

Autolamps

The autolamps are controlled by the headlamp switch, autolamp sensor, instrument cluster module and the FEM. The headlamps may be in the high or low beam position depending on the multifunction switch position. When the headlamp switch is in the autolamp position, the instrument cluster module will send an ON or OFF command to the FEM, depending on the signal from the autolamp sensor. The FEM will process this information and output the appropriate command to the headlamps, which are hardwired to the FEM. The autolamps will remain ON for approximately 20 seconds after the ignition switch is changed from the RUN position to the ACC or OFF position.

Autolamps and daytime running lamps (DRL) are two functions which the FEM may be configured to include.

Left and right low, as well as high beams will provide a lamp outage indication. Fault management of the headlamps will provide some headlamp functionality. In the event of all multifunction switch, all headlamp switch or ignition switch invalid or missing data failures, the low beams will be illuminated.

The vehicle's electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the SCP communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message), control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Switched System Power (SSP)

The SSP is invoked by both the FEM and REM. This function removes power from relays that provide power to the exterior lamps, interior lamps, and power door locks. This is only accomplished when both the FEM and the REM are in sleep mode. The sleep function of the FEM and REM places the modules in sleep mode when the ignition switch is in the OFF position, and no wake up (input) signals occur for 30 minutes. The module will not sleep if the parking lamps or the hazard lamps are active. The following relays are controlled by the SSP function: SSP1, SSP2, SSP3, and SSP4. When either the FEM or REM are not in sleep mode, all SSP relays will be energized. When energized, each relay will supply power to multiple features/functions. For additional information, go to the SSP Index for diagnosis and testing of SSP related issues. Refer to [Headlamps](#).

Inspection and Verification

1. Verify the customer concern by operating the autolamps following these steps:
 1. Place the ignition switch (11572) in the ON position.
 2. Place the headlamp switch (11654) in the ON position.
 3. **NOTE:** For headlamp concerns, refer to [Headlamps](#).
- Verify the low beam operation.
4. Place the headlamps in the autolamp position.
5. **NOTE:** When aiming light and covering the light sensor amplifier, there may be a one minute delay for the autolamps to change conditions.

Verify the autolamp operation by aiming a light at the light sensor amplifier and removing the light source and covering the light sensor amplifier. The headlamps should turn OFF with the light and illuminate with the light sensor amplifier covered.

2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Damaged FEM ● Damaged instrument cluster (10849) 	<ul style="list-style-type: none"> ● Battery junction box (BJB) Fuses: <ul style="list-style-type: none"> ■ 427 (30A) ■ 432 (30A) ■ 422 (20A) ■ 423 (30A) ■ 424 (30A) ■ 425 (40A) ● Central junction box (CJB) Fuses: <ul style="list-style-type: none"> ■ 204 (5A) ■ 205 (5A) ■ 213 (5A) ■ 220 (5A) ● Damaged wiring harness ● Loose or corroded connections ● Damaged headlamp switch

3. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
4. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.
5. Carry out the DATA LINK DIAGNOSTIC TEST. If the diagnostic tool responds with:
 - CKT 914, CKT 915 or CKT 70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for FEM, go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for instrument cluster, go to Pinpoint Test C.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM.
6. If the DTCs retrieved are related to the concern, go to FEM Diagnostic Trouble Code (DTC) Index, REM Diagnostic Trouble Code (DTC) Index, Instrument Cluster Diagnostic Trouble Code (DTC) Index, or SSP Relay Index to continue diagnostics. Refer to [Headlamps](#).
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action

N4 CHECK CIRCUIT 15-LE42 (GN/RD) FOR POWER

1

2

Autolamp Sensor C287

3

4

A0003279

4 Measure the voltage between autolamp sensor C287 pin 6, circuit 15-LE42 (GN/RD), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [N5](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

N5 CHECK CIRCUIT 31-LE42 (BK) FOR OPEN

1

A0003280

1 Measure the resistance between autolamp sensor C287 pin 1, circuit 31-LE42 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [N6](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

N6 CHECK CIRCUIT 8-LE42 (WH/BU) FOR SHORT TO POWER

1

2

Instrument Cluster C220a

3

4

A0003281

4 Measure the voltage between instrument cluster C220a pin 19, circuit 8-LE42 (WH/BU), harness side and ground.

● Is any voltage indicated?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
GO to [N7](#).

N7 CHECK CIRCUIT 8-LE42 (WH/BU) FOR OPEN OR SHORT TO GROUND

1

2

2 Measure the resistance between instrument cluster C220a pin 19, circuit 8-LE42 (WH/BU), harness side and

A0003282

ground; and between instrument cluster C220a pin 19, circuit 8-LE42 (WH/BU), harness side and autolamp sensor C278 pin 4, circuit 8-LE42 (WH/BU), harness side.

- Is the resistance greater than 10,000 ohms between instrument cluster C220a and ground and less than 5 ohms between instrument cluster C220a and autolamp sensor C278?

→ **Yes**
 INSTALL a new autolamp sensor; REFER to [Photocell and Amplifier—Light Sensor](#) in this section. TEST the system for normal operation.

→ **No**
 REPAIR the circuit. TEST the system for normal operation.

N8 CHECK CIRCUIT 10-LE47 (GY/OG) FOR SHORT TO POWER

A0003283

- 3 Measure the voltage between headlamp switch C205 pin 8, circuit 10-LE47 (GY/OG), harness side and ground.

- Is any voltage indicated?

→ **Yes**
 REPAIR the circuit. TEST the system for

normal operation.

→ **No**
GO to [N9](#).

N9 CHECK CIRCUIT 10-LE47 (GY/OG) FOR OPEN OR SHORT TO GROUND

1

Instrument Cluster C220c

2

A0003284

2

Measure the resistance between headlamp switch C205 pin 8, circuit 10-LE47 (GY/OG), harness side and ground; and between headlamp switch C205 pin 8, circuit 10-LE47 (GY/OG), harness side and instrument cluster C220c pin 14, circuit 10-LE47 (GY/OG), harness side.

- **Is the resistance greater than 10,000 ohms between headlamp C205 and ground and less than 5 ohms between headlamp C205 and instrument cluster C220c?**

→ **Yes**
INSTALL a new instrument cluster;
REFER to [Section 413-01](#). TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST O: THE AUTO LAMPS ARE ON CONTINUOUSLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
O1 CHECK THE OPERATION OF THE AUTOLAMPS	
<p>1</p> 	<p>2</p> <p>Place the autolamp switch in the OFF position.</p> <ul style="list-style-type: none">● Do the headlamps turn off? <p>→ Yes</p>

The system is operating correctly.

→ **No**
GO to [O2](#).

O2 CHECK THE OPERATION OF THE AUTOLAMP SENSOR

1

Autolamp sensor C287

- Do the headlamps turn off?

→ **Yes**
INSTALL a new autolamp sensor; REFER to [Photocell and Amplifier—Light Sensor](#) in this section. TEST the system for normal operation.

→ **No**
GO to [O3](#).

O3 CHECK INSTRUMENT CLUSTER OUTPUT

1

Instrument Cluster C220c

- Do the headlamps turn off?

→ **Yes**
INSTALL a new instrument cluster; REFER to [Section 413-01](#). TEST the system for normal operation.

→ **No**
GO to [O4](#).

O4 CHECK CIRCUIT 10-LE47 FOR A SHORT TO POWER

1

Headlamp Switch C205

2

2 Measure the resistance between headlamp switch C205 pin 8 circuit 10-LE47 (GY/OG), harness side and instrument cluster C220c pin 14 circuit 10-LE47 (GY/OG), harness side.

A0005098

- Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new headlamp switch;
REFER to [Lamp Switch—Headlamp](#) in
this section. TEST the system for normal
operation.

→ **No**
REPAIR the circuit. TEST the system for
normal operation.

Stoplamps

Refer to Wiring Diagrams Section [417-01](#), Exterior Lighting for schematic and connector information.

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052 or equivalent diagnostic tool
 ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

NOTE: The front electronic module (FEM), the rear electronic module (REM) and the instrument cluster module (ICM) must be reconfigured before installing a new module. Refer to [Section 418-01](#).

The vehicle's electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the standard corporate protocol (SCP) communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message), control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Exterior Lighting

The exterior lighting outputs are zone controlled by the FEM and REM. The front exterior lights are controlled by the FEM and the rear exterior lights are controlled by the REM. An additional function of the lighting system is a lamp outage function which indicates to the driver if certain exterior bulbs are not functioning. With a bulb inoperative, the FEM or REM will send a message to the instrument cluster and message center (if equipped with the message center) which will in turn indicate to the driver that the lamp is inoperative with a lamp out indicator (with the message center a message will be displayed). To provide complete input and output functionality, each exterior lamp feature will be described individually. All exterior lighting is powered by the switched system power (SSP) feature (refer to Switched System Power [SSP]). A failure of all or any of the SSP features will cause

inoperative exterior lighting. When diagnosing exterior lighting, it is essential to determine if all related symptoms and DTCs are controlled by the SSP feature.

Stoplamps

Brake lighting is controlled by the REM. The brake pedal position (BPP) switch is hardwired to the REM. When the brake pedal is depressed, the BPP switch will input information to the REM. Then, the REM will process the information and output to the left, right, and high mounted stoplamps. Only the left and right stoplamps will provide lamp outage indication.

The vehicle's electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the SCP communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message), control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Switched System Power (SSP)

The SSP is invoked by both the FEM and REM. This function removes power from relays that provide power to the exterior lamps, interior lamps, and power door locks. This is only accomplished when both the FEM and the REM are in sleep mode. The sleep function of the FEM and REM places the modules in sleep mode when the ignition switch is in the OFF position, and no wake up (input) signals occur for 30 minutes. The module will not sleep if the parking lamps or the hazard lamps are active. The following relays are controlled by the SSP function: SSP1, SSP2, SSP3, and SSP4. When either the FEM or REM are not in sleep mode, all SSP relays will be energized. When energized, each relay will supply power to multiple features/functions. For additional information, go to the SSP Index for diagnosis and testing of SSP related issues. Refer to [Headlamps](#)

Inspection and Verification

1. Verify the customer concern by operating the stoplamps.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Damaged REM 	<ul style="list-style-type: none"> ● Battery junction box (BJB) Fuses: <ul style="list-style-type: none"> ■ 403 (5A) ■ 407 (5A) ■ 423 (30A) ■ 424 (30A) ■ 430 (30A) ■ 431 (30A) ● Central junction box (CJB) Fuses: <ul style="list-style-type: none"> ■ 204 (5A) ■ 220 (10A) ■ 235 (5A)

- Damaged wiring harness
- Loose or corroded connections
- Damaged BPP switch

3. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
4. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.
5. Carry out the DATA LINK DIAGNOSTIC TEST. If the diagnostic tool responds with:
 - CKT914, CKT915 or CKT70 =ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for REM, go to Pinpoint Test B.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM.
6. If the DTCs retrieved are related to the concern, go to FEM Diagnostic Trouble Code (DTC) Index, and Instrument Cluster Diagnostic Trouble Code (DTC) Index, or SSP Relay Index to continue diagnostics. Refer to [Headlamps](#).
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

Symptom Chart

Pinpoint Tests

PINPOINT TEST P: THE STOPLAMPS ARE INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
P1 CHECK FOR DTCs	
	<ol style="list-style-type: none"> Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test.

● Are any DTCs recorded?

- **Yes**
If DTC B1483, GO to [P2](#). For all other DTCs, GO to REM Diagnostic Trouble Code (DTC) Index. REFER to [Headlamps](#).
- **No**
GO to [P2](#).

P2 CHECK THE REM INPUT

1

1

Monitor the REM PID BOO while pressing and releasing the brake pedal.

● Does the PID change states?

- **Yes**
INSTALL a new REM; REFER to [Section 419-10](#). TEST the system for normal operation.
- **No**
GO to [P3](#).

P3 CHECK BPP SWITCH OPERATION

1

BPP Switch C278

2

A0003286

2

Connect a 10A fused jumper wire between BPP switch C278 pin 1, circuit 29-CF58 (OG/GN), harness side and BPP switch C278 pin 2, circuit 29S-CF1 (OG/YE), harness side.

● Do the stoplamps illuminate?

- **Yes**
INSTALL a new BPP switch; REFER to [Lamp Switch—Brake Pedal Position \(BPP\)](#) in this section. TEST the system for normal operation.
- **No**
GO to [P4](#).

P4 CHECK POWER TO BPP SWITCH

1

A0003287

1

Measure the voltage between BPP switch C278 pin 1, circuit 29-CF58 (OG/GN), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [P5](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

P5 CHECK CIRCUIT 29S-CF1 (OG/BU) FOR AN OPEN

1

REM C420b

2

A0003288

2

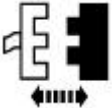

Measure the resistance between BPP switch C278 pin 2, circuit 29S-CF1 (OG/YE), harness side and REM C420b pin 13, circuit 29S-DK30 (OG), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new REM; REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST Q: ONE OR MORE STOPLAMPS ARE INOPERATIVE — RR STOPLAMP

CONDITIONS	DETAILS/RESULTS/ACTIONS
Q1 CHECK FOR DTCs	
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
	<p>1 Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes GO to REM Diagnostic Trouble Code (DTC) Index. REFER to Headlamps in this section.</p> <p>→ No GO to Q2.</p>
Q2 CHECK INPUT TO REM	
	<p>1 While observing the RR stoplamp, trigger the active command R STOP ON and then OFF.</p> <ul style="list-style-type: none"> ● Does RR stoplamp operate correctly? <p>→ Yes INSTALL a new REM; REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No GO to Q3.</p>
Q3 CHECK CIRCUIT 29S-LF23 (OG) FOR POWER	
<p>1</p>  <p>2</p>  <p>RR Combination Lamp C417</p> <p>3</p>  <p>4</p>	<p>4 Measure the voltage between RR combination lamp C417 pin 1, circuit 29S-LF23 (OG), harness side and ground.</p>

A0003289

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [Q4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation

Q4 CHECK CIRCUIT 31S-LG14 (BK/OG) FOR SHORT TO POWER

1

A0003290

1 Measure the voltage between RR combination lamp C417 pin 3, circuit 31S-LG14 (BK/OG), harness side and ground.

● Is any voltage indicated?

→ **Yes**
GO to [Q5](#).

→ **No**
GO to [Q6](#).

Q5 CHECK REM FOR SHORT TO POWER

1

2

REM C420e

3

3 Measure the voltage between RR combination lamp C417 pin 3, circuit 31S-LG14 (BK/OG), harness side and

A0003290

ground.

- Is any voltage indicated?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

Q6 CHECK CIRCUIT 31S-LG14 (BK/OG) FOR AN OPEN

1

2

REM C420e

3

A0003291

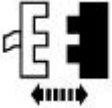

3 Measure the resistance between REM C420e pin 1, circuit 31S-LG21 (BK/GN), harness side and RR combination lamp C417 pin 3, circuit 31S-LG14 (BK/OG), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST R: ONE OR MORE STOPLAMPS ARE INOPERATIVE — LR STOPLAMP

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.</p>	
<p>R1 CHECK FOR DTCs</p>	
	<p>1 Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes GO to REM Diagnostic Trouble Code (DTC) Index. REFER to Headlamps.</p> <p>→ No GO to R2.</p>
<p>R2 CHECK REM OUTPUT</p>	
	<p>1 While observing the LR stoplamp, trigger the active command L STOP ON and then OFF.</p> <ul style="list-style-type: none"> ● Does LR stoplamp operate correctly? <p>→ Yes INSTALL a new REM; REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No GO to R3.</p>
<p>R3 CHECK POWER TO THE LR STOP LAMP</p>	
<p>NOTE: Cycle ignition switch from OFF to RUN to enable the SSP feature.</p>	
<p>1</p>  <p>LR Combination Lamp C414</p> <p>2</p>  <p>3</p>	<p>3 Measure the voltage between LR stop lamp C414 pin 1, circuit 29S-LF23 (OG), harness side and ground.</p>

A0003289

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [R4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

R4 CHECK CIRCUIT 31S-LG14 (BK/OG) FOR A SHORT TO POWER

NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.

1

A0003290

1 Measure the voltage between LR combination lamp C414 pin 3, circuit 31S-LG14 (BK/OG), harness side and ground.

● Is any voltage indicated?

→ **Yes**
GO to [R5](#).

→ **No**
GO to [R6](#).

R5 CHECK REM FOR A SHORT TO POWER

1

2

REM C420e

3

3 Measure the voltage between LR combination lamp C414 pin 3, circuit

A0003290

31S-LG14 (BK/OG), harness side and ground.

● Is any voltage indicated?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

R6 CHECK CIRCUIT 31S-LG14 (BK/OG) FOR AN OPEN

1

REM C420e

2

A0003292

2 Measure the resistance between LR combination lamp C414 pin 3, circuit 31S-LG14 (BK/OG), harness side and REM C420e pin 2, circuit 31S-LG14 (BK/OG), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST S: ONE OR MORE STOPLAMPS ARE INOPERATIVE — HIGH MOUNTED STOPLAMP

CONDITIONS	DETAILS/RESULTS/ACTIONS
S1 CHECK FOR DTCs	
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
	<p data-bbox="810 293 1331 390">1 Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> <li data-bbox="855 433 1203 465">● Are any DTCs recorded? <p data-bbox="810 508 1302 627">→ Yes GO to REM Diagnostic Trouble Code (DTC) Index. REFER to Headlamps in this section.</p> <p data-bbox="810 670 975 724">→ No GO to S2.</p>
S2 CHECK REM OUTPUT	
<p data-bbox="201 791 233 823">1</p>  <p data-bbox="201 950 233 983">2</p> 	<p data-bbox="810 950 1337 1047">2 While observing the high mounted stoplamp, trigger the active command H MNT STP ON and then OFF.</p> <ul style="list-style-type: none"> <li data-bbox="855 1134 1315 1198">● Does the high mounted stoplamp operate correctly? <p data-bbox="810 1241 1337 1360">→ Yes INSTALL a new REM; REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p data-bbox="810 1403 975 1457">→ No GO to S3.</p>
S3 CHECK POWER TO BJB 408 (10A)	
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.

A0003293

- Is the voltage greater than 10 volts?

- **Yes**
REINSTALL the fuse.GO to [S4](#).
- **No**
INSTALL a new or REPAIR the BJB.
TEST the system for normal operation.

S4 CHECK CIRCUIT 29S-LG6 (OG/YE) FOR AN OPEN

1

2

High Mounted Stoplamp C302

3

A0003294

- 3 Measure the voltage between high mounted stoplamp C302 pin 1, circuit 29S-LG6 (OG/YE), harness side and ground.

- Is the voltage greater than 10 volts?

- **Yes**
GO to [S5](#).
- **No**
REPAIR the circuit. TEST the system for normal operation.

S5 CHECK CIRCUIT 31S-LG6 (BK/YE) FOR A SHORT TO POWER

1

2

A0003295

2

Measure the voltage between high mounted stoplamp C302 pin 3, circuit 31S-LG6 (BK/YE), harness side and ground.

● Is any voltage indicated?

→ Yes
GO to [S6](#).

→ No
GO to [S7](#).

S6 CHECK REM FOR A SHORT TO POWER

NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.

1

2

REM C420e

3

4

A0003295

4

Measure the voltage between high mounted stoplamp C302 pin 3, circuit 31S-LG6 (BK/YE), harness side and ground.

● Is any voltage indicated?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

S7 CHECK CIRCUIT 31S-LG6 (BK/YE) FOR AN OPEN

1

2

REM C420e

3

3 Measure the resistance between high mounted stoplamp C302 pin 3, circuit 31S-LG6 (BK/YE), harness side and REM C420e pin 17, circuit 31S-LG6 (BK/YE), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST T: THE EXTERIOR LAMP(S) ARE INOPERATIVE — LR STOP AND PARK LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
T1 CHECK FOR DTCs	
	<p>1 Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test.</p> <p>● Are any DTCs recorded?</p>

- **Yes**
GO to REM Diagnostic Trouble Code (DTC) Index. REFER to [Headlamps](#).
- **No**
GO to [T2](#).

T2 CHECK POWER TO BJB FUSE 403 (5A)

1

BJB Fuse 403 (5A)

2

3

- 3 Measure the voltage between BJB Fuse 403 (5A), circuit 30S-DB16 (RD/GN), input side and ground.

● **Is the voltage greater than 10 volts?**

- **Yes**
GO to [T3](#).
- **No**
REPAIR or INSTALL a new BJB. TEST the system for normal operation.

T3 CHECK POWER TO LR STOP AND PARK LAMPS

1

2

LR Combination Lamp C414

3

Park Lamp C412

4

Park Lamp C419

5

6

A0003298

6

Measure the voltage between the LR combination lamp C414 pin 1, circuit 29S-LF23 (OG), harness side and ground; between LR park lamp C412 pin 1, circuit 29S-LF11 (OG/WH), harness side and ground; and between LR park lamp C419 pin 1, circuit 29S-LF11 (OG/WH), harness side and ground.

● Is the voltage greater than 10 volts?

→ Yes
GO to [T4](#).

→ No
REPAIR the circuit. TEST the system for normal operation.

T4 CHECK REM OUTPUT

1

2

Diagnostic Tool

3

4

4

While observing the LR park lamps, trigger the REM active command PARKLAMPS ON and then OFF.

5

While observing the LR stop and park lamps, trigger the REM active command

	<p>L STOP ON and then OFF.</p> <ul style="list-style-type: none"> ● Do all the LR stop and park lamps illuminate? <p>→ Yes INSTALL a new REM; REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No REFER to Symptom Chart to REPAIR individual lighting concerns.</p>
--	---

PINPOINT TEST U: THE EXTERIOR LAMP(S) ARE INOPERATIVE — RR STOP AND PARK LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
U1 CHECK FOR DTCs	
	<p>1 Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes GO to REM Diagnostic Trouble Code (DTC) Index. REFER to Headlamps in this section.</p> <p>→ No GO to U2.</p>
U2 CHECK POWER TO THE BJB FUSE 407 (5A)	
<p>1</p>  <p>2</p>  <p>3</p>	<p>3 Measure the voltage between BJB Fuse 407, circuit 30S-DB16 (RD/GN), input side and ground.</p>

A0003299

- Is the voltage greater than 10 volts?

→ **Yes**

GO to [U3](#).

→ **No**

REPAIR or INSTALL a new BJB. TEST the system for normal operation.

U3 CHECK POWER TO RR STOP AND PARK LAMPS

1

2

RR Combination Lamp C417

3

RR Park Lamp C418

4

RR Park Lamp C415

5

6

- 6 Measure the voltage between RR combination lamp C417 pin 1, circuit 29S-LF23 (OG), harness side and ground; between RR park lamp C418 pin 1, circuit 29S-LF20 (OG), harness side and ground; and between RR park lamp C415 pin 1, circuit 29S-LF11 (OG/WH), harness side and ground.

A0003298

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [U4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

U4 CHECK REM OUTPUT

1

2

Diagnostic Tool

3

4

4 While observing the RR park lamps, trigger the REM active command PARKLAMPS ON and then OFF.

5 While observing the RR stop and park lamps, trigger the REM active command R STOP ON and then OFF.

● Did all the RR stop and park lamps illuminate?

→ **Yes**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REFER to Symptom Chart to REPAIR individual lighting concerns.

PINPOINT TEST V: THE STOPLAMPS ARE ON CONTINUOUSLY — ALL STOPLAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.</p>	
<p>V1 CHECK FOR DTCs</p>	
	<p>1 Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes GO to REM Diagnostic Trouble Code (DTC) Index. REFER to Headlamps in this section.</p> <p>→ No GO to V2.</p>
<p>V2 CHECK INPUT TO REM</p>	
<p>1  Diagnostic Tool</p> <p>2 </p> <p>3 </p>	<p>3 Monitor the REM PID BOO.</p> <p>4 Depress and release the brake pedal.</p> <ul style="list-style-type: none"> ● Does the PID change value when the brake pedal is depressed and released? <p>→ Yes INSTALL a new REM; REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No GO to V3.</p>
<p>V3 CHECK BPP SWITCH OPERATION</p>	
<p>1</p>	

2

BPP Switch C278

● Do the stoplamps turn off?

→ Yes

INSTALL a new BPP switch; REFER to [Lamp Switch—Brake Pedal Position \(BPP\)](#) in this section. CLEAR the DTCs. REPEAT the self-test.

→ No

GO to [V4](#).

V4 CHECK CIRCUIT 29S-CF1 (OG/YE) FOR A SHORT TO POWER

NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.

1

2

REM C420b

3

A0003300

3

Measure the voltage between BPP C278 pin 2, circuit 29S-CF1 (OG/YE), harness side and ground.

● Is any voltage indicated?

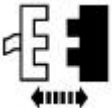

→ Yes

REPAIR the circuit. TEST the system for normal operation.

→ No

INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST W: THE STOPLAMPS ARE ON CONTINUOUSLY — RR STOPLAMP ONLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
W1 CHECK FOR DTCs	
	<p>1 Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes GO to REM Diagnostic Trouble Code (DTC) Index. REFER to Headlamps in this section.</p> <p>→ No GO to W2.</p>
W2 CHECK CIRCUIT 31S-LG14 (BK/OG) FOR A SHORT TO GROUND	
<p>1 </p> <p>2  REM C420e</p> <p>3 </p>	<ul style="list-style-type: none"> ● Does the RR stoplamp turn off? <p>→ Yes INSTALL a new REM; REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No REPAIR the circuit. TEST the system for normal operation.</p>

PINPOINT TEST X: THE STOPLAMPS ARE ON CONTINUOUSLY — LR STOPLAMP ONLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	

X1 CHECK FOR DTCs	
<p>1</p>  <p>2</p>  <p>REM C420e</p> <p>3</p> 	<p>1 Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes</p> <p>GO to REM Diagnostic Trouble Code (DTC) Index. INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs.
REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

Turn Signal and Hazard Lamps

Refer to Wiring Diagrams Section [417-01](#), Exterior Lighting for schematic and connector information.

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052 or equivalent diagnostic tool
 ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

NOTE: The front electronic module (FEM), the rear electronic module (REM), and the instrument cluster module (ICM) must all be reconfigured before installing a new module. Refer to [Section 418-01](#).

The vehicle electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the standard corporate protocol (SCP) communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message), control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Exterior Lighting

The exterior lighting outputs are zone controlled by the FEM and REM. The front exterior lights are controlled by the FEM and the rear exterior lights are controlled by the REM. An additional function of the lighting system is a lamp outage function which indicates to the driver if certain exterior bulbs are not functioning. With a bulb inoperative, the FEM or REM will send a message to the instrument cluster and message center (if equipped with the message center) which will in turn indicate to the driver that the lamp is inoperative with a lamp out indicator (with the message center a message will be displayed). To provide complete input and output functionality, each exterior lamp feature will be described individually. All exterior lighting is powered by the switched system power (SSP) feature

(refer to Switched System Power [SSP]). A failure of all or any of the SSP features will cause inoperative exterior lighting. When diagnosing exterior lighting, it is essential to determine if all related symptoms and DTCs are controlled by the SSP feature.

Turn Signal, Cornering and Hazard Lamps

The LF and RF turn signal, LR and RR turn signal outputs, front and rear hazard lamp outputs, and the cornering lamp outputs are controlled by the FEM and REM. The multifunction switch and the hazard switch are hardwired to the instrument cluster. When the switch is in the left or right turn position, or the hazard switch is placed in the ON position, the instrument cluster will send a command through the standard corporate protocol (SCP) network to the FEM and REM, which will process this information and output the appropriate command to the front and rear turn, and hazard lamps. When the instrument cluster commands a turn signal ON, the FEM and REM additionally command the appropriate cornering lamp, which is hard-wired to the FEM. All turn lamps will provide lamp outage indication.

The vehicle's electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the SCP communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message), control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Switched System Power (SSP)

The SSP is invoked by both the FEM and REM. This function removes power from relays that provide power to the exterior lamps, interior lamps, and power door locks. This is only accomplished when both the FEM and the REM are in sleep mode. The sleep function of the FEM and REM places the modules in sleep mode when the ignition switch is in the OFF position, and no wake up (input) signals occur for 30 minutes. The module will not sleep if the parking lamps or the hazard lamps are active. The following relays are controlled by the SSP function: SSP1, SSP2, SSP3, and SSP4. When either the FEM or REM are not in sleep mode, all SSP relays will be energized. When energized, each relay will supply power to multiple features/functions. For additional information, go to the SSP Index for diagnosis and testing of SSP related issues. Refer to [Headlamps](#).

Inspection and Verification

1. Verify the customer concern by operating the turn signal, and hazard lamps.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none">● Damaged FEM● Damaged REM	<ul style="list-style-type: none">● Battery junction box (BJB) fuses:<ul style="list-style-type: none">■ 402 (10A)

<ul style="list-style-type: none"> ● Damaged instrument cluster ● Damaged multifunction switch 	<ul style="list-style-type: none"> ■ 406 (10A) ■ 412 (5A) ■ 422 (20A) ■ 423 (30A) ■ 424 (30A) ■ 425 (40A) ■ 427 (30A) ■ 432 (30A) ● Central junction box (CJB) fuses: <ul style="list-style-type: none"> ■ 208 (5A) ■ 210 (5A) ■ 213 (5A) ■ 220 (5A) ● Damaged wiring harness ● Loose or corroded connections ● Damaged bulbs
--	--

3. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.

4. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.

5. Carry out the DATA LINK DIAGNOSTIC TEST. If the diagnostic tool responds with:
 - CKT914, CKT915 or CKT70 =ALL ECUS NO RESP/NOT EQUIP, REFER to [Section 418-00](#).
 - NO RESP/NOT EQUIP for FEM, go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for REM, go to Pinpoint Test B.
 - NO RESP/NOT EQUIP for instrument cluster, go to Pinpoint Test C.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM.

6. If the DTCs retrieved are related to the concern, go to FEM Diagnostic Trouble Code (DTC) Index, REM Diagnostic Trouble Code (DTC) Index, Instrument Cluster Diagnostic Trouble Code (DTC) Index, or SSP Relay Index to continue diagnostics. Refer to [Headlamps](#).

7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

1

2

LF Turn Lamp C1022

3

FEM C201a

4

5

A0003414

5

Measure the voltage between FEM C201a pin 5, circuit 31S-LG11 (BK/WH), harness side and ground.

● **Is any voltage indicated?**

→ **Yes**

REPAIR the circuit. TEST the system for normal operation.

→ **No**

INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

AD6 CHECK OPERATION OF RF TURN SIGNAL LAMP

1

2

Place the multifunction switch in the RH turn signal ON position.

● **Does the RF turn signal lamp operate correctly?**

→ **Yes**

System is operating correctly.

→ **No**

For continuously on, GO to [AD7](#).

For inoperative, GO to [AD8](#).

AD7 CHECK 31S-LG18 (BK/YE) FOR A SHORT TO GROUND

1

2

FEM C201a

- Does the RF turn signal lamp turn off?

→ **Yes**
 INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 REPAIR the circuit. TEST the system for normal operation.

AD8 CHECK CIRCUIT 31S-LG18 (BK/YE) FOR AN OPEN

1

2

RF Turn Lamp C1042

3

FEM C201a

4

A0003415

4 Measure the resistance between FEM C201a pin 4, circuit 31S-LG18 (BK/YE), harness side and RF park/turn lamp C1042 pin 3, circuit 31S-LG11 (BK/WH), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
 INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 REPAIR the circuit. TEST the system for

normal operation.

AD9 CHECK CIRCUIT 31S-LG18 (BK/YE) FOR A SHORT TO POWER

1

2

RF Parking/Turn Lamp C1042

3

FEM C201a

4

5

A0003416

5 Measure the voltage between FEM C201a pin 4, circuit 31S-LG18 (BK/YE), harness side and ground.

● Is any voltage indicated?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST AE: THE HAZARD FLASHER LAMPS ARE NEVER/ALWAYS ON

CONDITIONS	DETAILS/RESULTS/ACTIONS
	NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.
	AE1 CHECK FOR DTCs FROM FEM

1 Retrieve the recorded DTC results from the FEM for the continuous and on-demand self-test.

● **Are any DTCs recorded?**

→ **Yes**
GO to FEM Diagnostic Trouble Code (DTC) Index. REFER to [Headlamps](#) in this section.

→ **No**
GO to [AE2](#).

AE2 CHECK FOR DTCs FROM REM

1 Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test.

● **Are any DTCs recorded?**

→ **Yes**
GO to REM Diagnostic Trouble Code (DTC) Index. REFER to [Headlamps](#) .

→ **No**
GO to [AE3](#).

AE3 CHECK TURN SIGNAL OPERATION

1 Check the turn signal operation.

● **Do the turn signal lamps operate correctly?**

→ **Yes**
INSTALL a new multifunction switch; REFER to [Section 211-05](#) . TEST the system for normal operation.

→ **No**
REFER to Symptom Chart for inoperative turn signals.

Parking, Rear and License Lamps

Refer to Wiring Diagrams Section [417-01](#), Exterior Lighting for schematic and connector information.

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052 or equivalent diagnostic tool
 ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

NOTE: The front electronic module (FEM), the rear electronic module (REM), and the instrument cluster module (ICM) must be reconfigured before installing a new module. Refer to [Section 418-01](#).

The vehicle electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the standard corporate protocol (SCP) communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message), control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Exterior Lighting

The exterior lighting outputs are zone controlled by the FEM and REM. The front exterior lights are controlled by the FEM and the rear exterior lights are controlled by the REM. An additional function of the lighting system is a lamp outage function which indicates to the driver if certain exterior bulbs are not functioning. With a bulb inoperative, the FEM or REM will send a message to the instrument cluster and message center (if equipped with the message center), which will indicate to the driver that the lamp is inoperative with a lamp out indicator (with the message center a message will be displayed). To provide complete input and output functionality, each exterior lamp feature will be described individually. All exterior lighting is powered by the switched system power (SSP) feature (refer to Switched System Power [SSP]). A failure of all or any of the SSP features will cause inoperative

exterior lighting. When diagnosing exterior lighting, it is essential to determine if all related symptoms and DTCs are controlled by the SSP feature.

Parking, Rear or License Lamps

For the LH and RH rear park, license, and LH and RH front park lamps, outputs are controlled by the REM and FEM. The headlamp switch is hardwired to the ICM. When the switch is in the headlamp or park position, the ICM will send a command via the network link to the FEM and REM. The REM and FEM will process this information and output the appropriate command to the rear park, license, and front park lamps, which are hardwired to the REM and FEM. Only the left and right rear lamps will provide lamp outage indication. Fault management of the park lamps will provide rear park lamp functionality in the event of certain multifunction switch, headlamp switch, ignition switch, REM or FEM failures. The park lamps are also part of the daytime running lamps (DRL) feature.

The vehicle's electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the SCP communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message), control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Switched System Power (SSP)

The SSP is invoked by both the FEM and REM. This function removes power from relays that provide power to the exterior lamps, interior lamps, and power door locks. This is only accomplished when both the FEM and the REM are in sleep mode. The sleep function of the FEM and REM places the modules in sleep mode when the ignition switch is in the OFF position, and no wake up (input) signals occur for 30 minutes. The module will not sleep if the parking lamps or the hazard lamps are active. The following relays are controlled by the SSP function: SSP1, SSP2, SSP3, and SSP4. When either the FEM or REM are not in sleep mode, all SSP relays will be energized. When energized, each relay will supply power to multiple features/functions. For additional information, go to the SSP Index for diagnosis and testing of SSP related issues. Refer to [Headlamps](#).

Inspection and Verification

1. Verify the customer concern by operating the turn signal, cornering and hazard lamps.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Damaged FEM ● Damaged REM ● Damaged instrument cluster 	<ul style="list-style-type: none"> ● Battery junction box (BJB) Fuses: <ul style="list-style-type: none"> ■ 402 (10A) ■ 403 (5A) ■ 407 (5A)

	<ul style="list-style-type: none"> ■ 412 (5A) ■ 423 (30A) ■ 424 (30A) ■ 425 (40A) ■ 427 (30A) ■ 432 (30A) ● Central junction box (CJB) Fuses: <ul style="list-style-type: none"> ■ 204 (5A) ■ 208 (5A) ■ 210 (5A) ■ 213 (5A) ■ 220 (10A) ● Damaged wiring harness ● Loose or corroded connections ● Damaged bulbs
--	---

3. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
4. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.
5. Carry out the DATA LINK DIAGNOSTIC TEST. If the diagnostic tool responds with:
 - CKT914, CKT915 or CKT70 =ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for FEM, go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for REM, go to Pinpoint Test B.
 - NO RESP/NOT EQUIP for instrument cluster, go to Pinpoint Test C.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the REM .
6. If the DTCs retrieved are related to the concern, go to the FEM Diagnostic Trouble Code (DTC) Index, REM Diagnostic Trouble Code (DTC) Index, Instrument Cluster Diagnostic Trouble Code (DTC) Index, or SSP Relay Index to continue diagnostics. Refer to [Headlamps](#).
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

Pinpoint Tests

PINPOINT TEST AF: ONE OR MORE PARKING, REAR, OR LICENSE LAMP IS INOPERATIVE — FRONT PARKING AND MARKER LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
AF1 CHECK OPERATION OF FRONT PARKING AND SIDE MARKER LAMP	
	<p>1 Place the headlamp switch in the parking lamps ON position.</p> <ul style="list-style-type: none"> ● Do the front parking and marker lamps illuminate? <p>→ Yes The system is operating correctly.</p> <p>→ No If the LF parking lamp is inoperative, GO to AF2.</p> <p>If the LF side marker lamp is inoperative, GO to AF5.</p> <p>If the RF parking lamp is inoperative, GO to AF9.</p> <p>If the RF side marker lamp is inoperative, GO to AF12.</p>
AF2 CHECK THE OPERATION OF THE LF PARKING LAMP	
1	

Diagnostic Tool

2

3

3 While observing the left parking lamp trigger the FEM active command PARKLAMPS ON and then OFF.

• Does the LF parking lamp illuminate?

→ Yes
INSTALL a new FEM; REFER to [Section 419-10](#). TEST the system for normal operation.

→ No
GO to [AF3](#).

AF3 CHECK CIRCUIT 31S-LF7 (BK/BU) FOR AN OPEN

1

2

LF Parking Lamp C1022

3

FEM C201c

4

A0003301

4 Measure the resistance between LF parking lamp C1022 pin 2 circuit 31S-LF7 (BK/BU), harness side and FEM C201c pin 2 circuit 31S-LF7 (BK/BU), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [AF4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AF4 CHECK CIRCUIT 31S-LF7 (BK/BU) FOR SHORT TO POWER

1

2

A0003302

2 Measure the voltage between FEM C201c pin 2, circuit 31S-LF7 (BK/BU), harness side and ground.

● Is any voltage indicated?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

AF5 CHECK THE OPERATION OF THE LF MARKER LAMP

1

Diagnostic Tool

2

3

4 While observing the LF side marker lamp trigger the FEM active command

PARKLAMP ON and then OFF.

- Does the LF side marker lamp turn ON?

→ **Yes**

INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

GO to [AF6](#).

AF6 CHECK CIRCUIT 29S-LF8 (OG) FOR AN OPEN

NOTE: Cycle ignition switch from OFF to RUN to enable the SSP feature.

1

2

LF Side Marker C151

3

4

A0003303

4

Measure the voltage between LF side marker C151 pin 1, circuit 29S-LF8 (OG), harness side and ground.

- Is the voltage greater than 10 volts?

→ **Yes**

GO to [AF7](#).

→ **No**

REPAIR the circuit. TEST the system for normal operation.

AF7 CHECK CIRCUIT 31S-LF8 (BK/OG) FOR AN OPEN

1

2

FEM C201b

3

3 Measure the resistance between FEM C201b pin 22, circuit 31S-LF8 (BK/OG), harness side, and LF side marker C151 pin 2, circuit 31S-LF8 (BK/OG), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [AF8](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AF8 CHECK CIRCUIT 31S-LF8 (BK/OG) FOR A SHORT TO POWER

1

2

2 Measure the voltage between FEM C201b pin 22, circuit 31S-LF8 (BK/OG), harness side and ground.

● Is any voltage indicated?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**

INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

AF9 CHECK THE OPERATION OF THE RF PARKING LAMP

1

Diagnostic Tool

2

3

4 While observing the RF parking lamp trigger the FEM active command PARKLAMP ON and then OFF.

• Does the RF parking lamp illuminate?

→ **Yes**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [AF10](#).

AF10 CHECK CIRCUIT 31S-LF16 (BK/RD) FOR AN OPEN

1

2

FEM C201c

3

LF Parking/Turn Lamp C1042

4

4 Measure the resistance between FEM C201c pin 10, circuit 31S-LF16 (BK/RD), harness side and RF parking/turn lamp C1042 pin 2, circuit 31S-LF7 (BK/BU),

A0003305

harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [AF11](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AF11 CHECK CIRCUIT 31S-LF16 (BK/RD) FOR SHORT TO POWER

1

2

A0003306

- 2 Measure the voltage between FEM C201c pin 10, circuit 31S-LF16 (BK/RD), harness side and ground.

- Is any voltage indicated?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

AF12 CHECK THE OPERATION OF THE RF SIDE MARKER LAMP

NOTE: Cycle ignition switch from OFF to RUN to enable the SSP feature.

1

Diagnostic Tool

2

3

4 While observing the RF side marker lamp trigger the FEM active command PARKLAMP ON and then OFF.

• Does the right marker lamp illuminate?

→ **Yes**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [AF13](#).

AF13 CHECK CIRCUIT 29S-LF17 (OG/WH) FOR AN OPEN

1

2

RF Side Marker C161

3

4

A0003307

4 Measure the voltage between RF side marker C161 pin 2, circuit 29S-LF17 (OG/WH), harness side and ground.

• Is the voltage greater than 10 volts?

- **Yes**
GO to [AF14](#).
- **No**
REPAIR the circuit. TEST the system for normal operation.

AF14 CHECK CIRCUIT 31S-LF17 (BK/WH) FOR AN OPEN

1

2

FEM C201b

3

A0003308

- 3 Measure the resistance between FEM C201b pin 11, circuit 31S-LF17 (BK/WH), harness side and RF side marker C161 pin 1, circuit 31S-LF17 (BK/WH), harness side.

- Is the resistance less than 5 ohms?

- **Yes**
GO to [AF15](#).
- **No**
REPAIR the circuit. TEST the system for normal operation.

AF15 CHECK CIRCUIT 31S-LF17 FOR SHORT TO POWER

1

RF Side Marker C161

2

3

- 3 Measure the voltage between FEM C201b pin 11, circuit 31S-LF17 (BK/WH), harness side and ground.

A0003309

- Is any voltage indicated?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST AG: ONE OR MORE PARKING, REAR OR LICENSE LAMPS ARE INOPERATIVE—LEFT REAR LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
AG1 CHECK REM OPERATION	
<p>1 </p> <p>Diagnostic Tool</p> <p>2 </p> <p>3 </p>	<p>3 Monitor REM PID L_TAIL.</p> <p>4 Place the headlamp switch in the parking lamp ON position.</p> <ul style="list-style-type: none"> ● Does the PID change when the headlamp switch is placed in the parking lamp position? <p>→ Yes GO to AG5.</p>

→ **No**
GO to [AG2](#).

AG2 CHECK REM OUTPUT

1

1

While observing the LR parking lamp, trigger the REM active command PARKLAMPS ON and then OFF.

● **Did the LR parking lamp illuminate?**

→ **Yes**

INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

GO to [AG3](#).

AG3 CHECK POWER TO LR LAMP

1

2

LR Rear Lamp C412

3

LR Rear Lamp C419

4

LR Combination Lamp C414

5

6

6

Measure the voltage between the following connector pins, harness side and ground:

Connector	Pin	Circuit
LR Combination Lamp C414	1	29S-LF23 (OG)

A0003298

LR Rear Lamp C412	1	29S-LF11 (OG/WH)
LR Rear Lamp C419	1	29S-LF11 (OG/WH)

• Are the voltages greater than 10 volts?

→ **Yes**
GO to [AG4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AG4 CHECK CIRCUIT(S) 31S-LF11 (BK/WH) FOR A SHORT TO POWER

1

A0003311

1

Measure the voltage between the following connector pins, harness side and ground:

Connector	Pin	Circuit
LR Combination Lamp C414	2	31S-LF11A (BK/WH)
LR Rear Lamp C412	2	31S-LF11 (BK/WH)
LR Rear Lamp C419	2	31S-LF11 (BK/WH)

• Is any voltage indicated?

→ **Yes**
GO to [AG5](#).

→ **No**
GO to [AG6](#).

AG5 CHECK REM FOR SHORT TO POWER

1

2

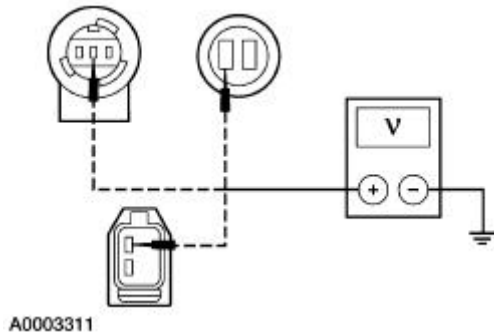

REM C420e

3

4

4 Measure the voltage between the following connector pins harness side and ground:

Connector	Pin	Circuit
LR Combination Lamp C414	2	31S-LF11A (BK/WH)
LR Rear Lamp C412	2	31S-LF11 (BK/WH)
LR Rear Lamp C419	2	31S-LF11 (BK/WH)

• Is any voltage indicated?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

AG6 CHECK LH REAR LAMP CIRCUITS AN FOR OPEN

1

2

2 Measure the resistance between C420e pin 6, circuit 31S-LF2 (BK/BU), harness side and the following connector pins:

Connector	Pin	Circuit
LR Combination Lamp C414	2	31S-LF11A (BK/WH)
LR Rear Lamp C412	2	31S-LF11 (BK/WH)
LR Rear Lamp C419	2	31S-LF11 (BK/WH)

• Are the resistances less than 5 ohms?

→ **Yes**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST AH: ONE OR MORE PARKING, REAR OR LICENSE LAMP IS INOPERATIVE —RIGHT REAR LAMP

CONDITIONS	DETAILS/RESULTS/ACTIONS
AH1 CHECK REM OPERATION	
<p>1</p>  <p>Diagnostic Tool</p> <p>2</p>  <p>3</p> 	<p>3</p> Monitor the REM PID R_TAIL. <p>4</p> Turn the parking lamps on. <ul style="list-style-type: none">• Does the PID change when the parking lamps are turned on? <p>→ Yes GO to AH4.</p> <p>→ No GO to AH2.</p>
AH2 CHECK REM OUTPUT	
<p>1</p> 	<p>2</p> While observing the RR parking lamp, trigger the REM active command PARKLAMPS ON and then OFF. <ul style="list-style-type: none">• Does the RR lamp illuminate? <p>→ Yes INSTALL a new REM; REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No GO to AH3.</p>

AH3 CHECK POWER TO RR LAMPS

1

2

RH Combination Lamp C417

3

RH Rear Lamp C415

4

RH Rear Lamp C418

5

6

A0003298

6

Measure the voltage between the following connector pins, harness side and ground:

Connector	Pin	Circuit
RR Combination Lamp C417	1	29S-LF23 (OG)
RR Rear Lamp C415	1	29S-LF20 (OG)
RR Rear Lamp C418	1	29S-LF11 (OG/WH)

• Are the voltages greater than 10 volts?

→ **Yes**
GO to [AH4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AH4 CHECK CIRCUIT(S) FOR SHORT TO POWER

1

1

Measure the voltage between the following connector pins, harness side and ground:

A0003311

Connector	Pin	Circuit
RR Combination Lamp C417	2	31S-LF11A (BK/WH)
RR Rear Lamp C415	1	31S-LF20 (BK/OG)
RR Rear Lamp C418	2	31S-LF11 (BK/WH)

● Is any voltage indicated?

→ **Yes**
GO to [AH5](#).

→ **No**
GO to [AH6](#).

AH5 CHECK REM FOR SHORT TO POWER

1

2

REM C420e

3

4

A0003311

4 Measure the voltage between the following connector pins, harness side and ground:

Connector	Pin	Circuit
RR Combination Lamp C417	2	31S-LF11A (BK/WH)
RR Rear Lamp C415	1	31S-LF20 (BK/OG)
RR Rear Lamp C418	2	31S-LF11 (BK/WH)

● Is any voltage indicated?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**

INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

AH6 CHECK CIRCUIT(S) FOR OPEN

1

2

2

Measure the resistance between REM C420e pin 5, circuit 31S-LF4 (BK/BU), harness side and the following connector pins:

Connector	Pin	Circuit
RR Combination Lamp C417	2	31S-LF11A (BK/WH)
RR Rear Lamp C415	2	31S-LF20 (BK/OG)
RR Rear Lamp C418	2	31S-LF11 (BK/WH)

● Is the resistance less than 5 ohms?

→ Yes

INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No

REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST AI: ONE OR MORE PARKING, REAR OR LICENSE LAMP IS INOPERATIVE — LICENSE LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
AI1 CHECK POWER TO LICENSE LAMPS	
1	<p>LH License Lamp C452</p>
2	<p>RH License Lamps C462</p>
3	

4

A0003314

4

Measure the voltage between LH license lamp C452 pin 1, circuit 29S-LF21 (OG/BK), harness side and ground; and between RH license lamp C462 pin 1, circuit 29S-LF22 (OG/BK), harness side and ground.

- Are the voltages greater than 10 volts?

→ **Yes**
GO to [AI2](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AI2 CHECK CIRCUITS 31S-LF21 (BK/GN) AND 31S-LF22 (BK/GN) FOR SHORT TO POWER

1

A0003303

1

Measure the voltage between LH license lamp C452 pin 2, circuit 31S-LF21 (BK/GN), harness side and ground; and between RH license lamp C462 pin 2, circuit 31S-LF22 (BK/GN), harness side and ground.

- Are any voltages indicated?

→ **Yes**
GO to [AI3](#).

→ **No**
GO to [AI4](#).

AI3 CHECK REM FOR A SHORT TO POWER

1

REM C420a

2

2

Measure the voltage between LH license lamp C452 pin 2, circuit 31S-LF21

A0030338

(BK/GN), harness side and ground; and between RH license lamp C462 pin 2, circuit 31S-LF22 (BK/GN), harness side and ground.

● **Is any voltage indicated?**

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

AI4 CHECK CIRCUITS 31S-LF21 (BK/GN) AND 31S-LF22 (BK/GN) FOR OPEN

1

A0003316

1

Measure the resistance between REM C420a pin 5, circuit 31S-LF12 (BK/GN), harness side and LH license lamp C452 pin 2, circuit 31S-LF21 (BK/GN), harness side; REM C420a pin 5, circuit 31S-LF12 (BK/GN), harness side and RH license lamp C462 pin 2, circuit 31S-LF22 (BK/GN), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST AJ: THE EXTERIOR LAMP(S) ARE INOPERATIVE — LF OR RF PARKING AND TURN LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
AJ1 CHECK OPERATION OF FRONT PARKING AND TURN LAMPS	
1	

2 Turn the parking lamps on.

- **Do the front parking and turn lamps illuminate?**

→ **Yes**
The system is operating correctly.

→ **No**
If the left side is inoperative, GO to [AJ2](#).
If the right side is inoperative, GO to [AJ3](#).

AJ2 CHECK CIRCUIT 29S-LF7 (OG/BU) FOR AN OPEN

1

2

LF Parking/Turn Lamp C1022

3

4

A0003289

4 Measure the voltage between the left parking/turn lamp C1022 pin 1, circuit 29S-LF7 (OG/BU), harness side and ground.

- **Is the voltage greater than 10 volts?**

→ **Yes**
INSTALL a new parking/turn lamp unit.
TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AJ3 CHECK CIRCUIT 29S-LF7 (OG/BU) FOR AN OPEN

PINPOINT TEST AK: THE EXTERIOR LAMP(S) ARE INOPERATIVE — FRONT PARKING/TURN AND SIDE MARKER LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
AK1 CHECK OPERATION OF FRONT PARKING/TURN AND SIDE MARKER LAMPS	
<p>1</p> 	<p>2</p> <p>Turn the parking lamps on.</p> <ul style="list-style-type: none"> • Do the front parking/turn and side marker lamps illuminate?

- **Yes**
The system is operating correctly.
- **No**
If the left side is inoperative, GO to [AK2](#).
- If the right side is inoperative, GO to [AK3](#).

AK2 CHECK CJB FUSE 210 (5A) FOR POWER

1

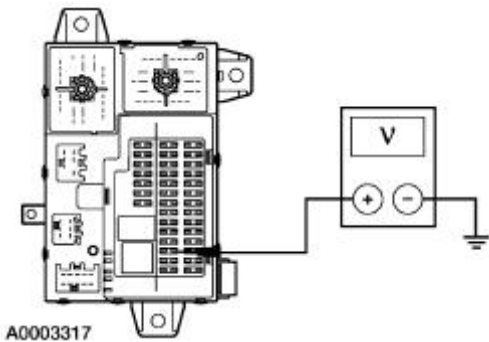

2

CJB Fuse 210 (5A)

3

3 Measure the voltage between CJB Fuse 210 (5A), input side and ground.

● **Is the voltage greater than 10 volts?**

- **Yes**
REPAIR circuit 29S-LF3 (OG/YE). TEST the system for normal operation.
- **No**
REPAIR the CJB. TEST the system for normal operation.

AK3 CHECK CJB FUSE 208 (5A) FOR POWER

1

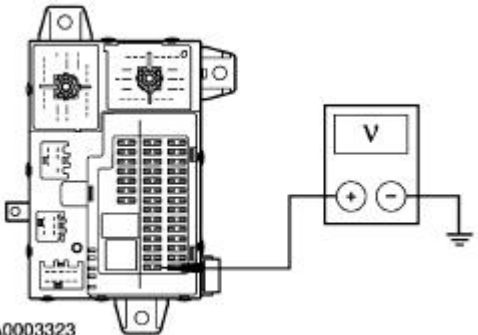

2

CJB Fuse 208 (5A)

3

3 Measure the voltage between CJB Fuse 208 (5A), input side and ground.

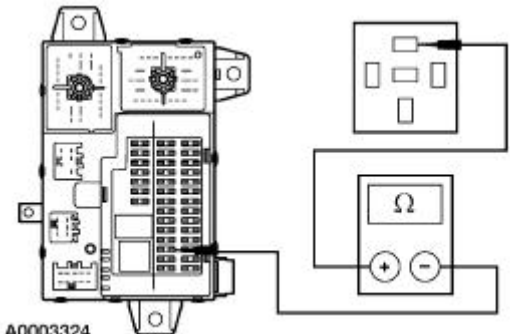

● Is the voltage greater than 10 volts?

→ **Yes**
REPAIR circuit 29S-LF3 (OG/YE). TEST the system for normal operation.

→ **No**
REPAIR the CJB. TEST the system for normal operation.

PINPOINT TEST AL: THE EXTERIOR LAMP(S) ARE INOPERATIVE — FRONT PARKING/TURN, SIDE MARKER, AND LOW BEAM LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
AL1 CHECK CIRCUIT 30-DD2 (RD) FOR AN OPEN	
<p>1</p>  <p>SSP2 relay</p> <p>2</p>  <p>CJB Fuse 210 (5A)</p> <p>3</p>  <p>A0003324</p>	<p>3 Measure the resistance between SSP2 relay pin 87, circuit 30-DD2 (RD), harness side and CJB Fuse 210 (5A), input side.</p> <p>● Is the resistance less than 5 ohms?</p> <p>→ Yes</p>

	REPAIR the CJB. TEST the system for normal operation. → No REPAIR the circuit. TEST the system for normal operation.
--	---

PINPOINT TEST AM: THE PARKING, REAR OR LICENSE LAMP IS ON CONTINUOUSLY — FRONT PARKING AND MARKER LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
AM1 CHECK OPERATION OF FRONT PARKING AND MARKER LAMP	
	<p>1 Turn the parking lamps off.</p> <ul style="list-style-type: none"> ● Are the front parking and marker lamps still illuminated? <p>→ Yes If the LF parking lamp is illuminated, GO to AM2. If the RF parking lamp is illuminated, GO to AM3. If the LF marker lamp is illuminated, GO to AM4. If the RF marker lamp is illuminated, GO to AM5.</p> <p>→ No The system is working correctly.</p>
AM2 CHECK CIRCUIT 31S-LF7 (BK/BU) FOR SHORT TO GROUND	
<p>1</p>  <p>FEM C201c</p> <p>2</p> 	<ul style="list-style-type: none"> ● Does the LF parking lamp turn off? <p>→ Yes INSTALL a new FEM; REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No REPAIR the circuit. TEST the system for normal operation.</p>
AM3 CHECK CIRCUIT 31S-LF16 (BK/RD) FOR SHORT TO GROUND	
1	

FEM C201c

2

● Does the RF parking lamp turn off?

→ Yes

INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No

REPAIR the circuit. TEST the system for normal operation.

AM4 CHECK CIRCUIT 31S-LF8 (BK/OG) FOR SHORT TO GROUND

1

FEM C201b

2

● Does the LF marker lamp turn off?

→ Yes

INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No

REPAIR the circuit. TEST the system for normal operation.

AM5 CHECK CIRCUIT 31S-LF17 (BK/WH) FOR SHORT TO GROUND

1

FEM C201b

2

● Does the RF marker lamp turn off?

→ Yes

INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs.
REPEAT the self-test.

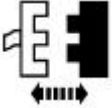

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST AN: ONE OR MORE PARKING, REAR, OR LICENSE LAMP IS ON CONTINUOUSLY— LICENSE LAMPS

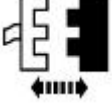

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
AN1 CHECK CIRCUIT(S) FOR SHORT TO GROUND	
<p>1 Turn the parking lamps off.</p> <p>2 </p> <p>3  REM C420a</p> <p>4 </p> <p>● Do the license lamps turn off?</p> <p>→ Yes INSTALL a new REM; REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No REPAIR circuit 31S-LF12 (BK/GN), 31S-LF21 (BK/GN), and 31S-LF22 (BK/GN). TEST the system for normal operation.</p>	

PINPOINT TEST AO: ONE OR MORE PARKING, REAR, OR LICENSE LAMP IS ON CONTINUOUSLY — LR PARKING LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
AO1 CHECK CIRCUIT(S) FOR SHORT TO GROUND	
<p>1 Turn the parking lamps off.</p> <p>2 </p>	

<p>3</p>  <p>REM C420e</p>	
<p>4</p> 	
	<ul style="list-style-type: none"> • Does the LR parking lamp turn off? <p>→ Yes INSTALL a new REM; REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No REPAIR circuit 31S-LF (BK/WH) and 31S-LF11A (BK/WH). TEST the system for normal operation.</p>

PINPOINT TEST AP: ONE OR MORE PARKING, REAR, OR LICENSE LAMP IS ON CONTINUOUSLY — RR PARKING LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>AP1 CHECK CIRCUIT(S) FOR SHORT TO GROUND</p>	
<p>1</p>	<p>1 Turn the parking lamps off.</p>
<p>2</p>

<p>4</p> 	<ul style="list-style-type: none"> • Does the RR parking lamp turn off? <p>→ Yes INSTALL a new REM; REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No REPAIR circuit 31S-LF (BK/WH) and 31S-LF11A (BK/WH). TEST the system for normal operation.</p>

Fog Lamps

Refer to Wiring Diagrams Section [417-01](#), Exterior Lighting for schematic and connector information.

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052 or equivalent diagnostic tool
 ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

NOTE: The front electronic module (FEM), the rear electronic module (REM), and the instrument cluster module (ICM) must be reconfigured before installing a new module. Refer to [Section 418-01](#).

The vehicle electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the standard corporate protocol (SCP) communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message) control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Exterior Lighting

The exterior lighting outputs are zone controlled by the FEM and REM. The front exterior lights are controlled by the FEM and the rear exterior lights are controlled by the REM. An additional function of the lighting system is a lamp outage function which indicates to the driver if certain exterior bulbs are not functioning. With a bulb inoperative, the FEM or REM will send a message to the instrument cluster and message center (if equipped with the message center), which will indicate to the driver that the lamp is inoperative with a lamp out indicator (with the message center a message will be displayed). To provide complete input and output functionality, each exterior lamp feature will be described individually. All exterior lighting is powered by the switched system power (SSP) feature (refer to Switched System Power [SSP]). A failure of all or any of the SSP features will cause inoperative

exterior lighting. When diagnosing exterior lighting, it is essential to determine if all related symptoms and DTCs are controlled by the SSP feature.

The vehicle's electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the SCP communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message), control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Fog Lamps

The fog lamps are controlled by the headlamp switch. The switch toggles the fog lamps between on and off. When activated, the switch sends voltage to the instrument cluster. The instrument cluster sends a signal to the FEM which activates the fog lamp.

The vehicles electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the SCP communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- whether module which received the input (message) controls the output of the feature, or whether it outputs a message over the SCP communication network to another module.
- which module controls the output of the feature.

Switched System Power (SSP)

The SSP is invoked by both the FEM and REM. This function removes power from relays that provide power to the exterior lamps, interior lamps, and power door locks. This is only accomplished when both the FEM and the REM are in sleep mode. The sleep function of the FEM and REM places the modules in sleep mode when the ignition switch is in the OFF position, and no wake up (input) signals occur for 30 minutes. The module will not sleep if the parking lamps or the hazard lamps are active. The following relays are controlled by the SSP function: SSP1, SSP2, SSP3, and SSP4. When either the FEM or REM are not in sleep mode, all SSP relays will be energized. When energized, each relay will supply power to multiple features/functions. For additional information, go to the SSP Index for diagnosis and testing of SSP related issues. Refer to [Headlamps](#).

Inspection and Verification

1. Verify the customer concern by operating the fog lamps following these steps:
 1. Place the ignition switch (11572) in the ON position.
 2. Place the headlamp switch (11564) in the ON position.
 3. Place the fog lamp switch in the ON position.
 4. Verify the fog lamp operation.

5. Place the headlamps in the OFF position.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Damaged FEM ● Damaged instrument cluster (10849) 	<ul style="list-style-type: none"> ● Battery junction box (BJB) Fuses: <ul style="list-style-type: none"> ■ 422 (20A) ■ 423 (30A) ■ 424 (30A) ■ 425 (40A) ■ 427 (30A) ■ 432 (30A) ● Central junction box (CJB) Fuse: <ul style="list-style-type: none"> ■ 213 (5A) ■ 220 (5A) ● Underhood auxiliary junction box UAJB Fuses: <ul style="list-style-type: none"> ■ 103 (15A) ● Damaged wiring harness ● Loose or corroded connections ● Damaged headlamp switch

3. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
4. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.
5. Carry out the DATA LINK DIAGNOSTIC TEST. If the diagnostic tool responds with:
 - CKT914, CKT915 or CKT70 =ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for FEM, go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for instrument cluster, go to Pinpoint Test C.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM.
6. If the DTCs retrieved are related to the concern, go to FEM Diagnostic Trouble Code (DTC) Index, and Instrument Cluster Diagnostic Trouble Code (DTC) Index, or SSP Relay Index to continue diagnostics. Refer to [Headlamps](#).
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

Pinpoint Test

PINPOINT TEST AQ: THE FOG LAMPS ARE INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
AQ1 CHECK UAJB FUSE 103 (15A) FOR POWER	

1

UAJB Fuse 103 (15A)

2

3

3

Measure the voltage between UAJB Fuse 103 (15A), input side and ground.

● Is the voltage greater than 10 volts?

→ Yes

REINSTALL the fuse;GO to [AQ2](#).

→ No

REPAIR the power source. TEST the system for normal operation.

AQ2 CHECK FRONT FOG LAMPS RELAY

1

Fog Lamp Relay C1007

2

Carry out the relay component test. Refer to Wiring Diagrams Section 700-09.

● Does the relay pass the component test?

→ Yes

GO to [AQ3](#).

→ No

INSTALL a new relay. TEST the system for normal operation.

AQ3 CHECK CIRCUITS 30-LD8A (RD) AND 30-LD8 (RD) FOR AN OPEN

1

1

Measure the voltage between fog lamp relay C1007 pin 86, circuit 30-LD8A (RD), harness side and ground; and

A0003277

between fog lamp relay C1007 pin 30, circuit 30-LD8 (RD), harness side and ground.

- Are the voltages greater than 10 volts?

→ **Yes**
GO to [AQ4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AQ4 CHECK CIRCUITS 31S-LD9 (BK/GN) FOR AN OPEN

1

FEM C201c

2

A0003339

2

Measure the resistance between fog lamp relay C1007 pin 85, circuit 31S-LD9 (BK/GN), harness side and FEM C201c pin 5, circuit 31S-LD9 (BK/GN), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [AQ5](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AQ5 CHECK CIRCUITS 31S-LD9 (BK/GN) FOR AN OPEN

1

2

A0003276

- 2 Measure the voltage between fog lamp relay C1007 pin 85, circuit 31S-LD9 (BK/GN), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
REINSTALL the fog lamp relay; GO to [AQ6](#).

AQ6 CHECK CIRCUITS 30S-LD11 (RD/WH) AND 30S-LD17 (RD/WH) FOR AN OPEN

1

LF Fog Lamp C152

2

5

A0003266

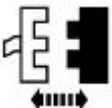

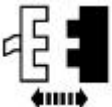

- 3 Turn the headlamps on.
4 Turn the fog lamps on.
5 Measure the voltage between LF fog lamp C152 pin 2, circuit 30S-LD11 (RD/WH), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation

PINPOINT TEST AR: THE INDIVIDUAL FOG LAMP IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
AR1 CHECK THE FRONT FOG LAMP OPERATION	
<p>1</p> 	<p>2 Turn headlamps on.</p> <p>3 Turn fog lamps on.</p> <ul style="list-style-type: none"> ● Do the fog lamps illuminate? <p>→ Yes The system is operating correctly.</p> <p>→ No If the left side is inoperative, GO to AR5. If the right side is inoperative, GO to AR2.</p>
AR2 CHECK CIRCUIT 30S-LD11 (RD/WH) FOR AN OPEN	
<p>1</p>  <p>2</p>  <p>LF Fog Lamp C152</p> <p>3</p>  <p>Fog Lamp Relay C1007</p> <p>4</p>	<p>4 Measure the resistance between LF fog lamp C152 pin 2, circuit 30S-LD11 (RD/WH), harness side and front fog lamp relay C1007 pin 87, circuit 30S-LD11 (RD/WH), harness side.</p>

● Is the resistance less than 5 ohms?

→ **Yes**
REINSTALL the fog lamp relay;GO to [AR3](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AR3 CHECK CIRCUIT 31-LD11 (BK) FOR AN OPEN

1

1

Measure the resistance between LF fog lamp C152 pin 1, circuit 31-LD11 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [AR4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AR4 CHECK CIRCUIT 31-LD11 (BK) FOR A SHORT TO POWER

1

2

2

Measure the voltage between LF fog lamp C152 pin 1, circuit 31-LD11 (BK), harness side and ground.

A0003262

● Is any voltage indicated?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

AR5 CHECK CIRCUIT 30S-LD17 (RD/WH) FOR AN OPEN

1

2

RF Fog Lamp C162

3

Fog Lamp Relay C1007

4

A0003340

4 Measure the resistance between RF fog lamp C162 pin 1, circuit 30S-LD17 (RD/WH), harness side and front fog lamp relay C1007 pin 87, circuit 30S-LD17 (RD/WH), harness side.

● Is the resistance less than 5 ohms?

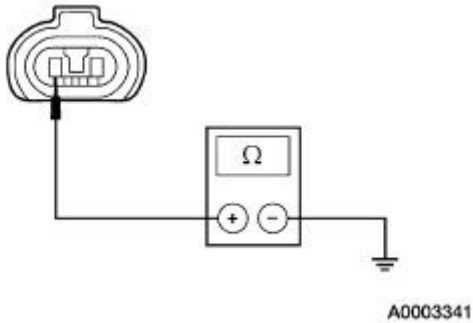

→ **Yes**

REINSTALL the front fog lamp relay. GO to [AR6](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AR6 CHECK CIRCUIT 31-LD17 (BK) FOR AN OPEN

1

1 Measure the resistance between RF fog lamp C162 pin 2, circuit 31-LD17 (BK), harness side and ground.

● **Is the resistance less than 5 ohms?**

→ **Yes**
GO to [AR7](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AR7 CHECK CIRCUIT 31-LD17 (BK) FOR A SHORT TO POWER

1

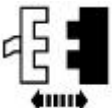

1 Measure the voltage between RF fog lamp C162 pin 2, circuit 31-LD17 (BK), harness side and ground.

● **Is any voltage indicated?**

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new FEM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST AS: THE FOG LAMPS ARE ON CONTINUOUSLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
AS1 CHECK THE OPERATION OF THE FRONT FOG LAMPS	
<p>1</p> 	<p>2 Turn the fog lamps off.</p> <ul style="list-style-type: none"> ● Do the fog lamps turn off? <p>→ Yes The system is operating correctly.</p> <p>→ No If both lamps are on continuously, GO to AS2.</p> <p>If the LF fog lamp is on continuously, REPAIR circuit 30S-LD11 (RD/WH) for a short to power. TEST the system for normal operation.</p> <p>If the RF fog lamp is on continuously, REPAIR circuit 30S-LD17 (RD/WH) for a short to power. TEST the system for normal operation.</p>
AS2 CHECK FRONT FOG LAMP RELAY	
<p>1</p>  <p>2</p>  <p>Front Fog Lamp Relay C1007</p>	<p>3 Carry out the relay component test. 2

A0030337

2

Measure the resistance between fog lamp relay C1007 pin 85, circuit 31S-LD9 (BK/GN), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**

INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the circuit. TEST the system for normal operation.

Reversing Lamps

Refer to Wiring Diagrams Section [417-01](#), Exterior Lighting for schematic and connector information.

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052 or equivalent diagnostic tool
 ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

NOTE: The front electronic module (FEM), the rear electronic module (REM) and the instrument cluster module (ICM) must be reconfigured before installing a new module. Refer to [Section 418-01](#).

The vehicle's electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the standard corporate protocol (SCP) communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message), control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Exterior Lighting

The exterior lighting outputs are zone controlled by the FEM and REM. The front exterior lights are controlled by the FEM and the rear exterior lights are controlled by the REM. An additional function of the lighting system is a lamp outage function which indicates to the driver if certain exterior bulbs are not functioning. With a bulb inoperative, the FEM or REM will send a message to the instrument cluster and message center (if equipped with the message center), which will indicate to the driver that the lamp is inoperative with a lamp out indicator (with the message center a message will be displayed). To provide complete input and output functionality, each exterior lamp feature will be described individually. All exterior lighting is powered by the switched system power (SSP) feature (refer to Switched System Power [SSP]). A failure of all or any of the SSP features will cause inoperative

exterior lighting. When diagnosing exterior lighting, it is essential to determine if all related symptoms and DTCs are controlled by the SSP feature.

Reversing Lamps

The reversing lamps are controlled by the REM and PCM. The PCM sends a message through the SCP communication network to the REM indicating the transmission has been placed in REVERSE. The REM will process this information and output the command to the reversing lamps which are hardwired to the REM. Fault management of the reversing lamps will provide limited reversing lamp functionality. In the event of a transmission missing or invalid data, the reversing lamps will remain in the last state of operation prior to the failure for one key cycle. In the event of invalid or missing data for the ignition switch, the lamps will work in relation to PRNDL messages.

The vehicle's electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the SCP communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message), control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Switched System Power (SSP)

The SSP is invoked by both the FEM and REM. This function removes power from relays that provide power to the exterior lamps, interior lamps, and power door locks. This is only accomplished when both the FEM and the REM are in sleep mode. The sleep function of the FEM and REM places the modules in sleep mode when the ignition switch is in the OFF position, and no wake up (input) signals occur for 30 minutes. The module will not sleep if the parking lamps or the hazard lamps are active. The following relays are controlled by the SSP function: SSP1, SSP2, SSP3, and SSP4. When either the FEM or REM are not in sleep mode, all SSP relays will be energized. When energized, each relay will supply power to multiple features/functions. For additional information, go to the SSP Index for diagnosis and testing of SSP related issues. Refer to [Headlamps](#).

Inspection and Verification

1. Verify the customer concern by operating the turn signal, cornering, and hazard lamps.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none">● Damaged REM	<ul style="list-style-type: none">● Battery junction box (BJB) Fuses:<ul style="list-style-type: none">■ 406 (10A)■ 423 (30A)■ 424 (30A)■ 425 (40A)

- 427 (30A)
- 432 (30A)
- Damaged wiring harness
- Loose or corroded connections
- Damaged bulbs

3. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
4. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.
5. Carry out the DATA LINK DIAGNOSTIC TEST. If the diagnostic tool responds with:
 - CKT914, CKT915 or CKT70 =ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for REM, go to Pinpoint Test B.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the REM.
6. If the DTCs retrieved are related to the concern, go to REM Diagnostic Trouble Code (DTC) Index, or SSP Relay Index to continue diagnostics. Refer to [Headlamps](#).
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

Symptom Chart

Pinpoint Tests

PINPOINT TEST AT: THE REVERSING LAMPS ARE INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
AT1 CHECK THE DTCs	
	<p>1 Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes</p> <p>GO to REM Diagnostic Trouble Code (DTC) Index. REFER to Headlamps .</p> <p>→ No GO to AT2 .</p>
AT2 CHECK REM OUTPUT	
<p>1</p>  <p>Diagnostic Tool</p> <p>2</p>	

3

3

While observing the reversing lamps, trigger REM active command BACKUPLMP ON and then OFF.

• Do the reversing lamps operate correctly?

→ Yes

Check for digital transmission ranger (TR) sensor concerns. If no concerns exist INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No

GO to [AT3](#).

AT3 CHECK POWER TO THE REVERSING LAMPS

1

2

LH Reversing Lamp C451

3

RH Reversing Lamp C461

4

5

5

Measure the voltage between LH reversing lamp C451 pin 1, circuit 29S-LG9 (OG/BK), harness side and ground; and between RH reversing lamp C461 pin 3, circuit 29S-LG16 (OG/GN), harness side and ground.

- Are the voltages greater than 10 volts?

→ **Yes**
GO to [AT4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AT4 CHECK CIRCUIT 31S-LG16 (BK/RD) AND CIRCUIT 31S-LG9 (BK/GN) FOR A SHORT TO POWER

1

A0005097

1

Measure the voltage between LH reversing lamp C451 pin 3, circuit 31S-LG9 (BK/GN), harness side and ground; and between RH reversing lamp C461 pin 1, circuit 31S-LG16 (BK/RD), harness side and ground.

- Is any voltage indicated?

→ **Yes**
GO to [AT5](#).

→ **No**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

AT5 CHECK THE REM FOR A SHORT TO POWER

1

2

REM C420e

3

4

4

Measure the voltage between REM C420e pin 9, circuit 31S-LG9 (BK/GN), harness side and LH reversing lamp C451 pin 3, circuit 31S-LG9 (BK/GN), harness side; and between REM C420e pin 10, circuit 31S-LG16 (BK/RD), harness side and RH reversing lamp

C461 pin 1, circuit 31S-LG16 (BK/RD), harness side.

● **Is any voltage indicated?**

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST AU: THE INDIVIDUAL REVERSING LAMP IS INOPERATIVE — LH REVERSING LAMP

CONDITIONS	DETAILS/RESULTS/ACTIONS
AU1 CHECK THE DTCs	<p>1 Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test.</p> <p>● Are any DTCs recorded?</p> <p>→ Yes GO to REM Diagnostic Trouble Code (DTC) Index. REFER to Headlamps in this section.</p> <p>→ No GO to AU2.</p>
AU2 CHECK REM OUTPUT	
<p>1</p>  <p>Diagnostic Tool</p> <p>2</p>  <p>3</p>	

3 While observing the reversing lamps, trigger REM active command BACKUPLMP ON and then OFF.

• Do the reversing lamps operate correctly?

→ Yes
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No
GO to [AU3](#).

AU3 CHECK POWER TO THE LH REVERSING LAMPS

1

2

LH Reversing Lamp C451

3

4

A0003294

4 Measure the voltage between LH reversing lamp C451 pin 1, circuit 29S-LG9 (OG/BK), harness side and ground.

• Is the voltage greater than 10 volts?

→ Yes
GO to [AU4](#).

→ No
REPAIR the circuit. TEST the system for normal operation.

AU4 CHECK CIRCUIT 31S-LG9 (BK/GN) FOR AN OPEN

1

2

3

REM C420e

A0003327

3 Measure the resistance between LH reversing lamp C451 pin 3, circuit 31S-LG9 (BK/GN), harness side and REM C420e pin 9 circuit 31S-LG9 (BK/GN), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST AV: THE INDIVIDUAL REVERSING LAMP IS INOPERATIVE — RH REVERSING LAMP

CONDITIONS	DETAILS/RESULTS/ACTIONS
AV1 CHECK THE DTCs	<p>1 Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes GO to REM Diagnostic Trouble Code (DTC) Index. REFER to Headlamps in this section.</p> <p>→ No GO to AV2.</p>
AV2 CHECK REM OUTPUT	
1	

Diagnostic Tool

2

3

3

While observing the reversing lamps, trigger REM active command BACKUPLMP ON and then OFF.

• Do the reversing lamps operate correctly?

→ Yes

INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No

GO to [AV3](#).

AV3 CHECK POWER TO THE RH REVERSING LAMPS

1

2

RH Reversing Lamp C461

3

4

A0003295

4

Measure the voltage between RH reversing lamp C461 pin 3, circuit 29S-LG16 (OG/GN), harness side and ground.

• Is the voltage greater than 10 volts?

- **Yes**
GO to [AV4](#).
- **No**
REPAIR the circuit. TEST the system for normal operation.

AV4 CHECK CIRCUIT 31S-LG16 (BK/RD) FOR AN OPEN

- 3** Measure the resistance between RH reverse lamp C461 pin 1, circuit 31S-LG16 (BK/RD), harness side and REM C420e pin 10, circuit 31S-LG16 (BK/RD), harness side.

● **Is the resistance less than 5 ohms?**

- **Yes**
INSTALL a new REM; REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.
- **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST AW: THE REVERSING LAMPS ARE ON CONTINUOUSLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
NOTE: The ignition switch must be cycled from OFF to RUN to enable the SSP feature.	
AW1 CHECK THE DTCs	
	<ul style="list-style-type: none"> 1 Retrieve the recorded DTC results from the REM for the continuous and on-demand self-test. <p>● Are any DTCs recorded?</p>

→ **Yes**

GO to REM Diagnostic Trouble Code (DTC) Index. REFER to [Headlamps](#) .

→ **No**

GO to [AW2](#) .

AW2 CHECK CIRCUIT 31S-LG9 (BK/GN) AND CIRCUIT 31S-LG16 (BK/RD) FOR A SHORT TO GROUND

1

2

REM C420e

3

- **Do the reversing lamps turn off?**

→ **Yes**

Check for digital transmission range (TR) sensor concerns. If no concerns exist, INSTALL a new REM; REFER to [Section 419-10](#) . CLEAR the DTCs. REPEAT the self-test.

→ **Yes**

REPAIR the circuit in question. Clear the DTCs. REPEAT the self-test.

Trailer Lamps

Refer to Wiring Diagrams Section [417-01](#), Exterior Lighting for schematic and connector information.

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052 or equivalent diagnostic tool
 ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

NOTE: The front electronic module (FEM), the rear electronic module (REM), and the instrument cluster module (ICM) must be reconfigured before installing a new module. Refer to [Section 418-01](#).

The vehicle electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the standard corporate protocol (SCP) communication network in order to transmit and receive signals. As a technician it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- does the module which received the input (message), control the output of the feature, or does it output a message over the SCP communication network to another module.
- which module controls the output of the feature.

Trailer Tow

The trailer lighting is controlled by the trailer tow module (TTM) (if equipped). The architecture of the vehicle lighting system requires the TTM to be used for correct trailer lighting operation. The TTM controls the park, turn, and stoplamps of the trailer lighting when connected. Trailer lighting is powered through the trailer tow relay and trailer tow auxiliary junction box (TTAJB). The TTM, which is hardwired to the rear electronics module (REM), senses the vehicle's rear exterior park, turn, and stoplamps. For turn lamp operation, when either turn lamp is activated, the TTM will apply power to the appropriate trailer turn lamp(s). For stoplamps operation, the TTM senses the vehicle right rear stoplamps only, and when activated, the TTM will apply power to both trailer stoplamps. For tail lamp operation, the TTM senses the vehicle right rear lamp only, and when activated, the TTM will apply

power to the trailer tail lamps.

Switched System Power (SSP)

The SSP is invoked by both the FEM and REM. This function removes power from relays that provide power to the exterior lamps, interior lamps, and power door locks. This is only accomplished when both the FEM and the REM are in sleep mode. The sleep function of the FEM and REM places the modules in sleep mode when the ignition switch is in the OFF position, and no wake up (input) signals occur for 30 minutes. The module will not sleep if the parking lamps or the hazard lamps are active. The following relays are controlled by the SSP function: SSP1, SSP2, SSP3, and SSP4. When either the FEM or REM are not in sleep mode, all SSP relays will be energized. When energized, each relay will supply power to multiple features/functions. For additional information, go to the SSP Index for diagnosis and testing of SSP related concerns. Refer to [Headlamps](#).

Inspection and Verification

1. Verify the customer concern by operating the vehicle stoplamps, turn signals and rear lamps. If the vehicle exterior lamps do not operate correctly, refer to [Stoplamps](#), [Turn Signal and Hazard Lamps](#), or [Parking, Rear and License Lamps](#) in this section.
2. Visually inspect for obvious signs of mechanical and electrical damage.
3. If the vehicle exterior lamps operate correctly, verify the operation of the trailer stoplamps, turn signals and tail lamps.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Damaged TTM ● Damaged bulbs ● Damaged trailer tow (TT) relay ● Damaged or corroded wiring 	<ul style="list-style-type: none"> ● Battery junction box (BJB) Fuses: <ul style="list-style-type: none"> ■ 423 (30A) ■ 424 (30A) ■ 427 (30A) ■ 432 (30A) ● TTAJB fuses 433 (15A), 434 (15A)

4. If the concern remains after the inspection, proceed to Symptom Chart to continue diagnostics.

Symptom Chart

Pinpoint Tests

PINPOINT TEST AX: THE TRAILER LAMPS ARE INOPERATIVE — ALL

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: It is necessary for the vehicle exterior lighting to be operating correctly. Repair any concerns with the vehicle rear exterior lighting before the diagnosis of the trailer tow module (TTM) and wiring is attempted.</p>	
<p>AX1 CHECK POWER TO THE TRAILER TOW RELAY</p>	
<p>1</p>  <p>2</p>	

TT Relay C424

3

4

A0003277

4 Measure the voltage between TT relay C424 pin 86, circuit 29S-LF5A (OG/BU), harness side and ground; and between TT relay C424 pin 30, circuit 30-ND3 (RD), harness side and ground.

- Are the voltages greater than 10 volts?

→ Yes
GO to [AX2](#).

→ No
REPAIR the circuit in question. TEST the system for normal operation.

AX2 CHECK TRAILER TOW RELAY

1 Carry out the component test for TT relay. Refer to Wiring Diagrams Section 700-09.

- Does the relay pass the component test?

→ Yes
GO to [AX3](#).

→ No
INSTALL a new TT relay. TEST the system for normal operation.

AX3 CHECK CIRCUIT 31-ND3 (BK)

1

2

2 Measure the resistance between TT relay C424 pin 85, circuit 31-ND3 (BK), harness side and ground.

● **Is the resistance less than 5 ohms?**

→ **Yes**
REINSTALL the TT relay.GO to [AX4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AX4 CHECK CIRCUIT 30S-DC1 (RD/BU) AND 30S-DC4 (RD/BU) FOR AN OPEN

1

TTAJB Fuse 433 (15A)

2

TTAJB Fuse 434 (15A)

3

4 Measure the voltage between TTAJB Fuse 433 (15A), circuit 30S-DC1 (RD/BU), input side and ground; and between TTAJB Fuse 434 (15A), circuit 30S-DC4 (RD/BU), input side and ground.

● **Are the voltages greater than 10 volts?**

→ **Yes**
REINSTALL the fuses.GO to [AX5](#).

→ **No**
REPAIR the circuit in question. TEST the system for normal operation.

AX5 CHECK POWER TO THE TTM

1

2

TTM C425

3

4

4 Measure the voltage between trailer tow module (TTM) C425 pin 11, circuit 30S-ND16B (RD/BU), harness side and ground; and between TTM C425 pin 1, circuit 30S-ND16A (RD/BU), harness side and ground.

• Are the voltages greater than 10 volts?

→ Yes
GO to [AX6](#).

→ No
REPAIR the circuit in question. TEST the system for normal operation.

AX6 CHECK CIRCUIT 31-ND16 (BK) AND 99-ND9 (WH/BU) FOR AN OPEN

1

2

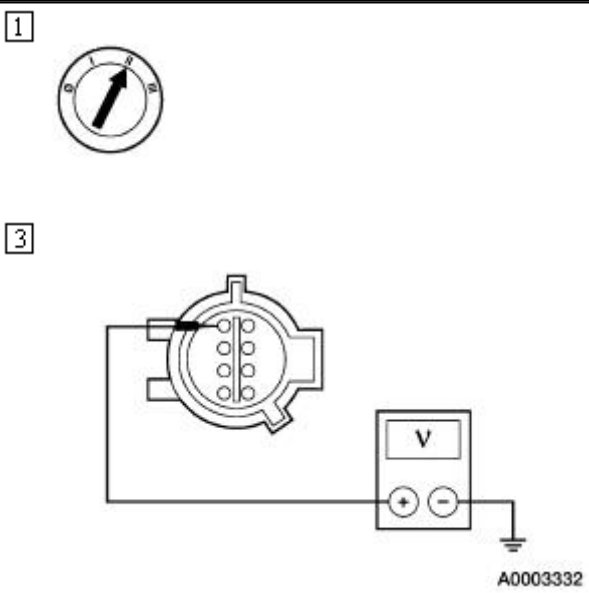

2 Measure the resistance between TTM C425 pin 12, circuit 31-ND16 (BK), harness side and ground; and between trailer harness C422 pin 7, circuit 99-ND9 (WH/BU), harness side and ground.

• Are the resistances less than 5 ohms?

	<p>→ Yes INSTALL a new TTM. TEST the system for normal operation.</p> <p>→ No REPAIR the circuit in question. TEST the system for normal operation.</p>
--	---

PINPOINT TEST AY: THE TRAILER LAMPS ARE INOPERATIVE — REAR LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: It is necessary for the vehicle exterior lighting to be operating correctly. Repair any concerns with the vehicle rear exterior lighting before the diagnosis of the trailer tow module (TTM) and wiring is attempted.</p>	
<p>AY1 CHECK TTM OUTPUT</p>	
<p>1</p>  <p>3</p>	<p>2 Turn the parking lamps on.</p> <p>3 Measure the voltage between trailer harness C422 pin 8, circuit 87-ND29 (BN/BU), harness side and ground.</p> <p>● Is the voltage greater than 10 volts?</p> <p>→ Yes The system is OK. REPAIR the trailer harness. TEST the system for normal operation.</p> <p>→ No GO to AY2.</p>
<p>AY2 CHECK POWER TO TRAILER TOW MODULE</p>	
<p>1</p>  <p>2</p>	

TTAJB Fuse 434 (15A)

3

4 Measure the voltage between TTAJB Fuse 434 (15A), circuit 30S-DC4 (RD/BU), input side and ground.

• Is the voltage greater than 10 volts?

→ Yes
REINSTALL the fuse.GO to [AY3](#).

→ No
REPAIR the circuit. TEST the system for normal operation.

AY3 CHECK POWER TO TTM

1

2

TTM C425

3

4

4 Measure the voltage between TTM C425 pin 1, circuit 30S-ND16A (RD/BU), harness side and ground.

• Is the voltage greater than 10 volts?

→ Yes
GO to [AY4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AY4 CHECK CIRCUIT 87-ND29 (BN/BU) FOR AN OPEN

1

2

A0003333

2 Measure the resistance between TTM C425 pin 2, circuit 87-ND29 (BN/BU), harness side and trailer harness C422 pin 8, circuit 87-ND29 (BN/BU), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [AY5](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AY5 CHECK CIRCUIT 31S-ND22 (BK/WH) FOR AN OPEN

1

RR Lamp C415

2

A0003334

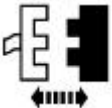

2 Measure the resistance between TTM C425 pin 19, circuit 31S-ND22 (BK/WH), harness side and RR lamp C415 pin 2, circuit 31S-LF20 (BK/OG), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new TTM. TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST AZ: THE TRAILER LAMPS ARE INOPERATIVE — ANY STOP OR TURN LAMP

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: It is necessary for the vehicle exterior lighting to be operating correctly. Repair any concerns with the vehicle rear exterior lighting before the diagnosis of the trailer tow module (TTM) and wiring is attempted.</p>	
<p>AZ1 CHECK POWER TO TTAJB</p>	
<p>1 </p> <p>2  TTAJB Fuse 433 (15A)</p> <p>3 </p>	<p>4 Measure the voltage between TTAJB Fuse 433 (15A), circuit 30S-ND16B (RD/BU), input side and ground.</p> <ul style="list-style-type: none"> ● Is the voltage greater than 10 volts? <p>→ Yes REINSTALL the fuse.GO to AZ2.</p> <p>→ No REPAIR the circuit. TEST the system for normal operation.</p>
<p>AZ2 CHECK POWER TO TTM</p>	
<p>1 </p> <p>2  TTM C425</p> <p>3</p>	

4

4 Measure the voltage between TTM C425 pin 11, circuit 30S-ND16B (RD/BU), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [AZ3](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

AZ3 CHECK CIRCUITS 96-ND31 (GN/BU) AND 88-ND28 (YE) FOR AN OPEN

1

2

2 Measure the resistance between TTM C425 pin 14, circuit 96-ND31 (GN/BU), harness side; and trailer harness C422 pin 4, circuit 96-ND31 (GN/BU), harness side and between TTM C425 pin 4, circuit 88-ND28 (YE), harness side and trailer harness C422 pin 3, circuit 88-ND28 (YE), harness side.

● Are the resistances less than 5 ohms?

→ **Yes**
GO to [AZ4](#).

→ **No**
REPAIR the circuit in question. TEST the system for normal operation.

AZ4 CHECK CIRCUIT 31S-ND19 (BK/BU), 31S-ND18 (BK/YE), AND 31S-ND21 (BK/OG)

1

2

RR Turn Lamp C416

3

LR Turn Lamp C413

4

RR Stop/Rear Lamp C414

5

A0003337

5

Measure the resistance between TTM C425 pin 10, circuit 31S-ND19 (BK/BU), harness side and RR turn lamp C416 pin 1, circuit 31S-LG12 (BK/YE), harness side and between TTM C425 pin 9, circuit 31S-ND18 (BK/YE), harness side and LR turn lamp C413 pin 1, circuit 31S-LG12 (BK/YE), harness side and between TTM C425 pin 20, circuit 31S-ND21 (BK/OG), harness side and RR stop/rear lamp C414 pin 1, circuit 31S-LG14 (BK/OG), harness side.

- Are the resistances less than 5 ohms?

→ **Yes**
INSTALL a new TTM. TEST the system for normal operation.

→ **No**
REPAIR the circuit in question. TEST the system for normal operation.

PINPOINT TEST BA: THE TRAILER LAMPS ARE ALWAYS ON — ALL

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: It is necessary for the vehicle exterior lighting to be operating correctly. Repair any concerns with the vehicle rear exterior lighting before the diagnosis of the trailer tow module (TTM) and wiring is attempted.</p>	
<p>BA1 CHECK POWER TO TTM</p>	

1

2

TTM C425

● **Do the trailer lamps turn off?**

→ **Yes**

INSTALL a new TTM. TEST the system for normal operation.

→ **No**

The system is OK. REPAIR the trailer wiring harness. TEST the system for normal operation.

Headlamp Adjustment

Headlamp Aiming

1. The headlamp aiming procedure depends on the type of beam pattern the headlamp is equipped with. Vehicles may come equipped with visual optical right (VOR), visual optical left (VOL), or SAE only (includes sealed beam type) headlamps. To identify the headlamp beam pattern, look on the headlamp lens. Molded in small letters on the headlamp lens is one of the following:
 - SAE
 - VOR or SAE
 - VOL or SAE
2. Once the headlamp beam pattern is identified, aim the headlamps using one of the following methods as applicable.
 - Photometric aimers can aim SAE, VOR and VOL type headlamps. This is the preferred method of headlamp aiming.
 - Visual or screen method aiming can be used to aim SAE, VOR and VOL type headlamps.
 - Mechanical aimers can be used only with SAE type headlamps. Lamps that can be aimed mechanically will have three nibs molded into the lens of the lamp.

Photometric Aiming

1. For the photometric aiming procedure, refer to the appropriate photometric headlamp aimer instruction manual.

Screen Method Aiming

All headlamp types

NOTE: Horizontal aim is not necessary for VOR or VOL headlamps.

NOTE: Consult your state vehicle inspection manual for recommended tolerance ranges for visual aiming.

NOTE: The sight shield may need to be positioned or removed for access to the adjusters.

1. Before starting headlamp adjustment:
 - Check the tire inflation.
 - Check that no other load is in the vehicle other than a half tank of fuel.
 - Check that the headlamps are clean.
 - Check for correct headlamp operation.

- Check that the vehicle is on level ground.
 - If the vehicle is equipped with air suspension, make sure that the switch is on.
2. **NOTE:** The vertical wall or screen must be a minimum of 2.4 meters (8 feet) wide.

Park the vehicle on a level surface approximately 7.6 meters (25 feet) from the vertical wall or screen directly in front of it.

3. **NOTE:** The center of the lamp is marked by a 3 mm (0.12 in) circle on the headlamp lens.

Mark a horizontal reference line on the vertical wall or screen.

1. Measure the center of the headlamp height to ground and record.
2. Make a 2.4 meter (8 foot) horizontal mark (masking tape) on the vertical wall or screen at the same distance from the ground as previously recorded.

4. **NOTE:** This procedure should be done in a dark environment to effectively see the headlamp beam pattern.

Turn on the low beam headlamps to illuminate the wall or screen and open the hood.

5. **NOTE:** For SAE type headlamps, the appearance of the beam pattern may vary between vehicles.

On the wall or screen, locate the high intensity area of the beam pattern. Place the top edge of the high intensity zone even with the horizontal reference line.

VOR type headlamps

6. **NOTE:** The appearance of the VOR beam pattern may vary between vehicles.

Identify at the top edge of this high intensity area a distinct horizontal cutoff in the beam pattern. If the top edge of this cutoff is not even with the horizontal reference line, the headlamp beam will need to be adjusted.

VOL type headlamps

7. For VOL type headlamps, there will be a distinct cutoff in the left portion of the beam pattern.
The edge of this cutoff should be positioned 50.2 mm (2 in) below the horizontal reference line.
 1. Horizontal reference line.
 2. Top edge of the beam pattern.
 3. High intensity zone.

Mechanical Aiming

1. For the mechanical aiming procedure, refer to the appropriate mechanical headlamp aimer instruction manual.
-

Bulb —Headlamp

Removal and Installation

1.  **WARNING:** The halogen bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope.

NOTE: The headlamp bulb should not be removed from the headlamp assembly until just before a replacement bulb is installed. Removing the bulb for an extended period of time may affect headlamp bulb performance. Contaminants may enter the headlamp assembly where they can settle on the lens and reflector. Never turn on the headlamps with the bulb removed.

NOTE: Make sure that the headlamp switch and the ignition switch are in the OFF position.

Remove the radiator upper sight shield.

1. Remove the pin-type retainers.
2. Remove the radiator upper sight shield.

2. **NOTE:** Remove both the high and low beam headlamp bulbs in the same way.

Remove the headlamp bulb.

1. Disconnect the electrical connector.
2. Remove the headlamp bulb.

3. To install, reverse the removal procedure.

Bulb —Fog Lamp

Removal and Installation

1.  **WARNING:** The halogen fog lamp bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope.

Raise and support the vehicle. For additional information, refer to [Section 100-02](#).

2. Remove the fog lamp bulb.
 1. Disconnect the electrical connector.
 2. Remove the fog lamp bulb.

3. To install, reverse the removal procedure.
-

Lamp Assembly —Headlamp

Removal and Installation

⚠ WARNING: The halogen fog lamp bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope.

NOTE: The headlamp bulb should not be removed from the headlamp assembly until just before a replacement bulb is installed. Removing the bolt for an extended period of time may affect headlamp bulb performance. Contaminants may enter the headlamp assembly where they can settle on the lens and reflector. Never turn on the headlamps with the bulb removed.

1. **NOTE:** Make sure that the headlamp switch and the ignition switch are in the OFF position.

Release the ambient air temperature sensor.

2. Remove the radiator grille opening cover at the top shelf of the bumper.

3. Remove the radiator upper sight shield.
 1. Remove the pin-type retainers.
 2. Remove the radiator upper sight shield.

4. Position the headlamp assembly for removal.
 1. Remove the three bolts.
 2. Position the headlamp assembly for removal.
 - Disconnect the electrical connectors and remove the headlamp assembly.

5. To install, reverse the removal procedure.
 - If necessary, install new bulbs.
 - If necessary, adjust the headlamps. For additional information, refer to [Headlamp Adjustment](#) in this section.
-

Lamp Assembly —Fog Lamp

Removal and Installation

1.  **WARNING:** The halogen fog lamp bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope.

Raise and support the vehicle. For additional information, refer to [Section 100-02](#).

2. Remove the fog lamp assembly.
 1. Disconnect the electrical connector.
 2. Remove the nuts.
 3. Remove the fog lamp assembly.
 - If necessary, install a new bulb.

3. To install, reverse the removal procedure.

Lamp Assembly —Stoplamp

Removal and Installation

1. Remove the luggage compartment scuff plate.
 - Pull to unsnap.

2. Position the luggage compartment side trim panel aside.
 1. Remove the pin-type retainers.
 2. Position the luggage compartment side trim panel aside.

3. Remove the stoplamp assembly.
 1. Disconnect the electrical connector.
 2. Remove the three nuts.
 3. Push the rubber grommet through the sheet metal and remove the stoplamp assembly.
 - If necessary, install new bulbs.

4. To install, reverse the removal procedure.

Lamp Assembly —Rear

Removal and Installation

1. Remove the luggage compartment door trim panel.
 1. Remove the 13 pin-type retainers.
 2. Remove the luggage compartment door trim panel.

2. Remove the rear lamp assembly.
 1. Disconnect the electrical connectors.
 2. Remove the nuts.
 3. Remove the rear lamp assembly.
 - If necessary, install new bulbs.

3. To install, reverse the removal procedure.

Lamp Assembly —High Mounted Stoplamp

Removal and Installation

1. Remove the carpeted package tray trim panel. For additional information, refer to [Section 501-05](#).
2. If equipped, remove the subwoofer enclosure. For additional information, refer to [Section 415-03](#).
3.  **CAUTION: Exercise care not to break the locator pins, which are positioned on the high mounted stoplamp assembly at the rear of the vehicle.**

Depress the two retaining tabs from the inside of the luggage compartment.

4. Lift the high mounted stoplamp up to clear the locator pins and remove the stoplamp assembly.
5. To install, reverse the removal procedure.

License Plate Lamp

Removal and Installation

1. If necessary, remove the license plate.
2. Remove the pin-type retainers and the luggage compartment lid trim panel.

3. Disconnect the license plate lamp electrical connector.

4. Remove the lamp socket from the license plate lamp.
5. Using a suitable tool, through the access hole, release the clips and remove the license plate lamp.

6. To install, reverse the removal procedure.

Reversing Lamp

Removal and Installation

1. Remove the license plate housing. For additional information, refer to section [Section 501-08](#).
2. Release the clips and remove the reversing lamp.

3. To install, reverse the removal procedure.
-

Lamp Switch —Headlamp

Removal and Installation

1. Disconnect the battery ground cable. Refer to [Section 414-01](#).
2. Remove the instrument panel steering column cover.
 1. Remove the screws.
 2. Remove the instrument panel steering column cover.
 - Disconnect the electrical connectors.

3. Remove the outer instrument panel finish panel.
 - Disconnect the electrical connector.

4. Remove the headlamp switch.
 1. Release the four retaining clips.
 2. Remove the headlamp switch.

5. To install, reverse the removal procedure.

Lamp Switch —Brake Pedal Position (BPP)

Removal

1. Remove the instrument panel insulator.
 - Disconnect electrical connector.
2. Remove the brake pedal position (BPP) switch.
 1. Disconnect the electrical connector.
 2. Remove the BPP switch.

Installation

⚠ CAUTION: Initial installation of a brake pedal position (BPP) switch allows for one adjustment. If additional adjustments are required, install a new switch.

1. Rotate the lock knob counterclockwise to the stop to unlock.

2. With the engine running, fully depress and hold the brake pedal.
3. Install the BPP switch.
 1. Position the BPP switch in the bracket and rotate counterclockwise.
 2. Connect the electrical connector.

4. Slowly release the brake pedal.
-

Photocell and Amplifier —Light Sensor

Removal and Installation

1. Disconnect the battery ground cable. Refer to [Section 414-01](#).
2. Remove the RH and LH windshield side garnish mouldings.

3.  **CAUTION:** To avoid damaging the photocell and amplifier electrical connector, lift the instrument panel defroster opening grille assembly only enough to expose the connector.

Remove the instrument panel defroster opening grille assembly.

4. Remove the photocell and amplifier.
 1. Disconnect the electrical connector.
 2. Release the two retaining clips.
 3. Remove the photocell and amplifier.

5. To install, reverse the removal procedure.

Interior Lighting

The interior lighting system consists of:

- driver and passenger front door lamp (integral to the door trim panel)
 - left and right instrument panel lamps
 - rear dome lamp (integral to the headliner)
 - left and right front map lamps (integral to the headliner)
 - rear map lamps
 - deck lid lamp
 - glove box lamp
 - inside console lamp
 - driver and passenger vanity lamp
-

Interior Lighting

Refer to Wiring Diagrams Section [417-02](#) for schematic and connector information.

Special Tool(s)

 ST1137-A	73III Automotive Meter 105-R0057
 ST1217-A	New Generation STAR (NGS) Tester or equivalent 418-F048 (007-00500)

Principles of Operation

NOTE: The front electronic module (FEM), rear electronic module (REM), and driver door module (DDM) must all be reconfigured before installing a new module. REFER to [Section 418-01](#).

The vehicle's electronic functions are divided into zones. The FEM controls the front portion of the vehicle and the REM controls the rear portion of the vehicle. These systems rely heavily on the standard corporate protocol (SCP) communication network in order to transmit and receive signals. As a technician, it is very important to understand:

- where the input (command) originates from.
- all information (messages) necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- whether the module which received the input (message) controls the output of the feature, or whether it outputs a message over the SCP communication network to another module.
- which module controls the output of the feature.

FEM Operation

This system is unique in that many of the inputs the FEM receives are delivered via the SCP communication network. These input messages come from other modules connected to the network, such as the REM, DDM, and instrument cluster. The FEM will interpret the inputs and, in turn, command the correct output. The FEM also receives inputs which come directly from components which are hardwired to the module, such as the passenger door ajar switch.

Interior Lighting

The FEM controls the outputs to all interior lighting. The interior lamps include: courtesy lamps, dome lamps, and map lamps. The lamps will be illuminated if the driver or front passenger door is ajar. The

switches are hardwired to the FEM. When any of the two doors are opened, the FEM will command the interior lamps through the SCP network to the FEM. The right and left rear ajar switches are hardwired to the REM. When any of these doors are ajar, the REM will send a command through the SCP network, to the FEM. The FEM will command the appropriate interior lamps on.

The FEM also handles the grounds for the glove box and the visor lamps. Fault management of the interior lamps will provide limited functionality in the event of certain dome or lighting mode inputs, vehicle speed or ignition switch failures. All interior lighting is powered by the switched system power (SSP) feature (refer to Switched System Power). A failure of any or all of the SSP feature(s) could cause inoperative interior lighting. When diagnosing the interior lighting, it is essential to determine if all relative symptoms and DTCs are controlled by the SSP feature.

Switched System Power (SSP)

The SSP is invoked by both the FEM and REM. This function removes power from relays that provide power to the exterior lamps, interior lamps, and power door locks. This is only accomplished when both the FEM and the REM are in sleep mode. The sleep function of the FEM and REM places the modules in sleep mode when the ignition switch is in the OFF position, and no wake up (inputs) signals occur for 30 minutes. The module will not sleep if the parking lamps or the hazard lamps are active. The following relays are controlled by the SSP function: SSP1, SSP2, SSP3, and SSP4. When either the FEM or REM are not in sleep mode, all SSP relays will be energized. Each relay, when energized, will supply power to multiple features/functions. For additional information, refer to the SSP Relay Index for diagnosis and testing of SSP-related issues.

Inspection and Verification

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Electrical
<ul style="list-style-type: none">● Wiring harness● Loose or corroded connections● Battery junction box (BJB) Fuses:<ul style="list-style-type: none">■ 404 (10A)■ 405 (10A)■ 422 (20A)■ 425 (40A)■ 423 (30A)■ 424 (30A)■ 430 (30A)■ 431 (30A)● Central junction box (CJB) Fuses:<ul style="list-style-type: none">■ 207 (5A)■ 220 (10A)■ 222 (10A)■ 235 (5A)● Lamp(s)● Relay(s)● Headlamp switch● Instrument cluster● Dimmer switch● FEM● REM● DDM

3. If the concern remains after the inspection, connect the New Generation STAR (NGS) Tester to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the NGS Tester menu. If the NGS Tester does not communicate with the vehicle:
 - Check that the program card is correctly installed.
 - Check the connections to the vehicle.
 - Check the ignition switch position.
4. If the NGS Tester still does not communicate with the vehicle, refer to the New Generation STAR Tester manual.
5. Carry out the DATA LINK DIAGNOSTICS test. If the NGS Tester responds with:
 - CKT914, CKT915 or CKT70 =ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for FEM, go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for REM, go to Pinpoint Test B.
 - NO RESP/NOT EQUIP for DDM, go to Pinpoint Test C.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM.
6. If the DTCs retrieved are related to the concern, go to FEM Diagnostic Trouble Code (DTC) Index or REM Diagnostic Trouble Code (DTC) Index.
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

FEM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1319	Driver Door Ajar Circuit Failure	FEM	GO to Pinpoint Test F .
B1327	Passenger Door Ajar Circuit Failure	FEM	GO to Pinpoint Test F .

DDM Parameter Identification (PID) Index

PID	Description	Expected Value
D_DN_SW	Driver Window Down Switch	OFF, DOWN
D_PWPK	Driver Power Window Peak Current	AMP
D_UP_SW	Driver Window Up Switch	OFF, UP
DMIR_H	Driver Side Mirror Horizontal Motor	notSEN, SENSED
DMIR_V	Driver Mirror Vertical	notSEN, SENSED
DR_LOCK	Driver Door Lock Output State	NO, YES
DR_UNLK	All Doors Unlock Output State	NO, YES
DRLKCYL	Door Lock Cylinder	notACT, ACTIVE
MEM1_SW	Memory Recall Switch #1	notACT, ACTIVE
MEM2_SW	Memory Recall Switch #2	notACT, ACTIVE
MEMS_SW	Memory Set Switch	notACT, ACTIVE
MIR_SEL	Power Mirror Select Switch	DRVMIR, PSGMIR, OFF
MIRH_SW	Pow Mir Position Switch - Horizontal	SHORT, RIGHT, LEFT, OFF
OTD_SW	One Touch Down Switch	OFF, DOWN
VBAT	Battery Voltage	Volts

DDM Active Command Index

Active Command	Display	Action
DOOR LOCK CONTROL	DD LOCK	OFF, ON
DOOR LOCK CONTROL	DD UNLOCK	OFF, ON
DOUBLE LOCK COMMAND	DOUBLE LK	UNLOCK, LOCK
FRONT WINDOW CONTROL	DR DOWN	OFF, ON
FRONT WINDOW CONTROL	DR UP	OFF, ON
ONE TOUCH WINDOW DOWN & ACCY DELAY	ONE TOUCH	OFF, ON
POWER MIRROR CONTROL	DR DOWN	OFF, ON
POWER MIRROR CONTROL	DR LEFT	OFF, ON
POWER MIRROR CONTROL	DR RIGHT	OFF, ON
POWER MIRROR CONTROL	DR UP	OFF, ON

SSP Relay Index

Relay	Fuse	Controlled System(s)
SSP1	BJB Fuse 427 (30A)	.

		<ul style="list-style-type: none"> ● Driver power door lock (FEM) ● LH high beam headlamps (FEM) ● RF park/turn/side marker lamps (FEM) ● RH low beam headlamp ● Driver exterior rear view mirror ● LF park/turn/side marker lamps (FEM)
SSP2	BJB Fuse 432 (30A)	<ul style="list-style-type: none"> ● LH low beam headlamp (FEM) ● RH high beam headlamps (FEM) ● Passenger exterior rear view mirror (FEM) ● Switch illumination backlighting
SSP3	BJB Fuse 424 (30A)	<ul style="list-style-type: none"> ● High mounted stoplamp (REM) ● RR park/stoplamps (REM) ● Reversing lamps (REM) ● LR turn signals (REM) ● Interior courtesy and demand lighting (FEM)
SSP4	BJB Fuse 423 (30A)	<ul style="list-style-type: none"> ● LR park/stoplamps (REM) ● RR turn signals (REM) ● All passenger door locks (REM) ● License lamps ● Luggage compartment release solenoid/switch ● Fuel door release solenoid/switch ● Luggage compartment lamp

When diagnosing an SSP relay, check that all systems for that relay are inoperative. Refer to [Section 417-01](#).

Symptom Chart

Symptom Chart

Pinpoint Tests

PINPOINT TEST A: NO COMMUNICATION WITH THE FRONT ELECTRONIC MODULE (FEM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK CIRCUITS 29-DK20 (OG/GN) AND 29S-DK22 (OG/YE) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p>  <p>2</p>	

FEM C201c

3

FEM C201f

4

5

A0006297

5 Measure the voltage between FEM C201c pin 6, circuit 29-DK20 (OG/GN), harness side and ground; and between FEM C201f pin 1, circuit 29S-DK22 (OG/YE) harness side and ground.

• Are the voltages greater than 10 volts?

→ Yes
GO to [A2](#).

→ No
REPAIR the circuit(s) in question. TEST the system for normal operation.

A2 CHECK CIRCUITS 31-DK20 (BK/RD), 31-DK20A (BK/RD), 31-DK20B (BK/RD), 31-DK20C (BK/RD) AND 31-DK20D (BK/RD) FOR OPENS

1

2

FEM C201a

3

3 Using the following table, measure the resistance between FEM connectors, harness side and ground:

FEM	Pin	Circuit

A0006298

C201c	12	31-DK20 (BK/RD)
C201a	11	31-DK20A (BK/RD)
C201a	13	31-DK20B (BK/RD)
C201a	14	31-DK20C (BK/RD)
C201a	15	31-DK20D (BK/RD)

- Are the resistances less than 5 ohms?

→ Yes

REFER to [Section 418-00](#).

→ No

REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST B: NO COMMUNICATION WITH THE REAR ELECTRONIC MODULE (REM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK CIRCUIT 29-DK31 (OG/BK) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p>	
<p>2</p> <p>REM C420d</p>	
<p>3</p> <p>REM C420c</p>	
<p>4</p>	
<p>5</p>	<p>5</p> Measure the voltage between REM C420d pin 3, circuit 29-DK31 (OG/BK), harness side and ground.

A0006299

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [B2](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

B2 CHECK CIRCUITS 29S-DK31 (OG), 31-DK30D (BK), 31-DK30E (BK), 31-DK30F (BK), 31-DK30G (BK) AND 31-DK30H (BK/OG), FOR OPENS

1

2

REM C420b

3

A0006300

3 Using the following table, measure the resistance between REM connectors, harness side and ground:

REM	Pin	Circuit
C420c	13	29S-DK31 (OG/BK)
C420c	12	31-DK30E (BK)
C420c	11	31-DK30D (BK)
C420c	26	31-DK30G (BK)
C420c	25	31-DK30F (BK)
C420b	12	31-DK30H (BK/OG)

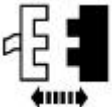

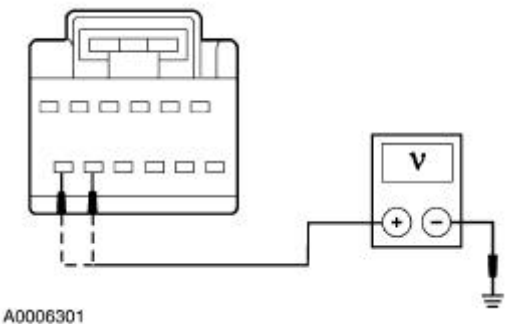

- Are the resistances less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s) in question. TEST

the system for normal operation.

PINPOINT TEST C: NO COMMUNICATION WITH THE DRIVER DOOR MODULE (DDM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK CIRCUITS 29-AJ80 (OG) AND 29S-AJ86 (OG/BU) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1 </p> <p>2  DDM C501a</p> <p>3 </p> <p>4  A0006301</p>	<p>4 Measure the voltage between DDM C501a pin 11, circuit 29-AJ80 (OG), harness side and ground; and between DDM C501a pin 12, circuit 29S-AJ86 (OG/BU), harness side and ground.</p> <p>● Is the voltage greater than 10 volts?</p> <p>→ Yes GO to C2.</p> <p>→ No REPAIR the circuit(s) in question. TEST the system for normal operation.</p>
C2 CHECK CIRCUITS 31-AJ80B (BK/OG) AND 91-AJ80 (BN/BU) FOR OPENS	
<p>1 </p> <p>2</p>	<p>2 Measure the resistance between DDM C501a pin 7, circuit 91-AJ80 (BN/BU),</p>

A0006302

harness side and ground; and between DDM C501a pin 8, circuit 31-AJ80B (BK/OG), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST D: THE COURTESY LAMPS ARE INOPERATIVE — ALL COURTESY AND INTERIOR LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>D1 CHECK CIRCUIT 30-DD2 (RD) FOR OPEN</p>	
<p>NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.</p>	
<p>1</p> <p>BJB Fuse 405 (10A)</p> <p>2</p> <p>A0004308</p>	<p>2</p> <p>Measure the voltage between BJB Fuse 405 (10A) pin 1, circuit 30-DD2 (RD), and ground.</p> <ul style="list-style-type: none"> ● Is the voltage greater than 10 volts? <p>→ Yes INSTALL Fuse 405 (10A).GO to D2.</p>

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

D2 CHECK CIRCUIT 29S-LC36 (OG/YE) FOR AN OPEN

1

RF Door Courtesy Lamp C606

2

2 Measure the voltage between the right front door courtesy lamp C606 pin 1, circuit 29S-LC36 (OG/YE), harness side and ground.

● **Is the voltage greater than 10 volts?**

→ **Yes**
RECONNECT C606 and GO to [D3](#).

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

D3 CHECK CIRCUIT 29S-LC3 (OG/BU) FOR SHORT TO POWER

1

3

FEM C201f

4

2 Remove BJB Fuse 405 (10A).

4 Measure the voltage between FEM C201f pin 12, circuit 29S-LC3 (OG/BU), harness side and ground.

A0005552

- Is the voltage greater than 10 volts?

→ **Yes**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [D4](#).

D4 CHECK FEM FOR OPENS

1

A0004310

1

Connect a 30A fused jumper between FEM C201f pin 12, circuit 29S-LC3 (OG), harness side and ground.

- Did the courtesy lamps illuminate?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [D5](#).

D5 CHECK CIRCUIT 29S-LC3 (OG) FOR AN OPEN

1

2

Interior AJB C283b

3

3

Measure the resistance between the

A0004311

interior AJB C283b pin 3, circuit 29S-LC3 (OG), harness side and FEM C201f pin 12, circuit 29S-LC3 (OG) harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
REPAIR the interior AJB. REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST E: AN INDIVIDUAL COURTESY LAMP IS INOPERATIVE — INDIVIDUAL AND MULTIPLE LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 VERIFY COURTESY LAMP SYMPTOM	<p>1 Verify the courtesy lamp symptom.</p> <ul style="list-style-type: none"> ● Is more than one lamp inoperative? <p>→ Yes GO to E26.</p> <p>→ No If a front door courtesy lamp is inoperative,GO to E2.</p> <p>If a map lamp is inoperative,GO to E9.</p> <p>If the dome lamp is inoperative,GO to E16.</p> <p>If a footwell lamp is inoperative,GO to E19.</p>
E2 VERIFY FRONT DOOR COURTESY LAMP SYMPTOM	<p>1 Verify the area of the front door courtesy lamp symptom.</p> <ul style="list-style-type: none"> ● Which front door courtesy lamp is inoperative?

→ **Yes**
Driver door GO to [E3](#).

→ **No**
Front passenger door GO to [E6](#).

E3 CHECK CIRCUIT 29S-LC34 (OG/YE) FOR VOLTAGE

NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.

1

2

Driver Door Courtesy Lamp C506

3

3 Measure the voltage between the driver door courtesy lamp C506, circuit 29S-LC34 (OG/YE), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [E5](#).

→ **No**
GO to [E4](#).

E4 CHECK CIRCUIT 29S-L34 (OG/YE) FOR AN OPEN

1

2

Interior AJB C283b

3

3 Measure the resistance between interior AJB C283b pin 7, circuit 29S-L34

A0004312

(OG/YE), harness side and driver door courtesy lamp C506, circuit 29S-LC34 (OG/YE) harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new interior AJB. REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

E5 CHECK CIRCUIT 9-LC34 (BN) FOR AN OPEN

1

2

Interior AJB C283b

3

A0004313

3 Measure the resistance between interior AJB C283b pin 2, circuit 9-LC34 (BN), harness side and driver door courtesy lamp C506, circuit 9-LC34 (BN) harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new interior AJB. REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

E6 CHECK CIRCUIT 29S-LC36 (OG/YE) FOR VOLTAGE

NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.

1

2

Front Passenger Door Courtesy Lamp C606

3

3

Measure the voltage between the front passenger door courtesy lamp C606, circuit 29S-LC36 (OG/YE), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [E8](#).

→ **No**
GO to [E7](#).

E7 CHECK CIRCUIT 29S-LC36 (OG/YE) FOR AN OPEN

1

2

BJB C270d

3

3

Measure the resistance between BJB C270d pin 20, circuit 29S-LC36 (OG/YE), harness side and front passenger door courtesy lamp C606, circuit 29S-LC36 (OG/YE) harness side.

A0004315

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new BJB. REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

E8 CHECK CIRCUIT 9-LC36 (BN) FOR AN OPEN

1

2

Interior AJB C283a

3

A0004316

3 Measure the resistance between interior AJB C283a pin 11, circuit 9-LC36 (BN), harness side and front passenger door courtesy lamp C606, circuit 9-LC36 (BN), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new interior AJB. REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

E9 VERIFY COURTESY MAP LAMP SYMPTOM

1 Verify the area of the courtesy map lamp symptom.

● Is the left map lamp inoperative?

→ Yes
GO to [E10](#).

→ No
GO to [E13](#).

E10 CHECK LEFT MAP LAMP SWITCH FOR VOLTAGE

NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.

1

2

LF Map Reading Lamp Switch C910

3

A0004318

3 Measure the voltage between the left front map reading lamp switch C910 pin 1, circuit 31S-LB12 (BK/YE), harness side and ground.

● Is the voltage greater than 10 volts?

→ Yes
GO to [E11](#).

→ No
GO to [E12](#).

E11 CHECK CIRCUIT 9-LB13 (BN/RD) FOR AN OPEN

1

1 Measure the resistance between left map lamp switch C910 pin 6, circuit 9-LB13 (BN/RD), harness side and ground.

A0004317

2 Open the driver door.

- When the driver door is opened, does resistance drop to less than 5 ohms?

→ **Yes**
 INSTALL a new front map lamp assembly. REFER to [Lamp Assembly—Front Map](#) in this section. REPEAT the self-test. CLEAR the DTCs.

→ **No**
 REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

E12 CHECK CIRCUITS 29S-LB12 (OG/YE) AND 31S-LB12 (BK/YE) FOR AN OPEN

1

LF Map Lamp Bulb C908

2

A0004319

2 Measure the voltage between LF map lamp bulb C908a, circuit 29S-LB12 (OG/YE), harness side and ground.

- Is the voltage greater than 10 volts?

→ **Yes**
 REPAIR circuit 31S-LB12 (BK/YE). REPEAT the self-test. CLEAR the DTCs.

→ **No**

REPAIR circuit 29S-LB12 (OG/YE).
REPEAT the self-test. CLEAR the DTCs.

E13 CHECK THE RIGHT MAP LAMP SWITCH FOR VOLTAGE

NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.

1

RF Map Reading Lamp Switch C905

2

3

3 Measure the voltage between the RF map reading lamp switch C905 pin 1, circuit 31S-LB19 (BK/BU), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [E14](#).

→ **No**
GO to [E15](#).

E14 CHECK CIRCUIT 9-LB20 (BN/BU) FOR AN OPEN

1

1 Measure the resistance between RF map reading lamp switch C905 pin 6, circuit 9-LB20 (BN/BU), harness side and ground.

2 Open the driver door.

- **When the driver door is opened, does resistance drop to less than 5 ohms?**

- **Yes**
 INSTALL a new front map lamp assembly. For additional information, REFER to [Lamp Assembly—Front Map](#) in this section. REPEAT the self-test. CLEAR the DTCs.
- **No**
 REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

E15 CHECK CIRCUITS 29S-LB19 (OG/BU) AND 31S-LB19 (BK/BU) FOR AN OPEN

1

RF Map Lamp Bulb C903

2

A0004319

- 2 Measure the voltage between RF map lamp bulb C903, circuit 29S-LB19 (OG/BU), harness side and ground.

- **Is the voltage greater than 10 volts?**

- **Yes**
 REPAIR circuit 31S-LB19 (BK/BU). REPEAT the self-test. CLEAR the DTCs.
- **No**
 REPAIR circuit 29S-LB19 (OG/BU). REPEAT the self-test. CLEAR the DTCs.

E16 CHECK REAR DOME LAMP SWITCH FOR VOLTAGE

NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.

1

Rear Dome Lamp Switch C900

2

3

A0004318

3

Measure the voltage between the rear dome lamp switch C900 pin 1, circuit 31S-LB29 (BK/OG), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [E17](#).

→ **No**
GO to [E18](#).

E17 CHECK CIRCUIT 9-LB32 (BN/WH) FOR AN OPEN

1

A0004317

1

Measure the resistance between rear dome lamp switch C900 pin 6, circuit 9-LB20 (BN/BU), harness side and ground.

2 Open the driver door.

• **When the driver door is opened, does resistance drop to less than 5 ohms?**

→ **Yes**
INSTALL a new rear dome lamp assembly. REFER to [Lamp Assembly—Rear Reading](#) in this section. REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-

test. CLEAR the DTCs.

E18 CHECK CIRCUITS 29S-LB29 (OG) AND 31S-LB29 (BK/OG) FOR AN OPEN

1

Rear Dome Lamp Bulb C901

2

2

Measure the voltage between rear dome lamp bulb C901, circuit 29S-LB29 (OG/BU), harness side and ground.

● **Is the voltage greater than 10 volts?**

→ **Yes**
REPAIR circuit 31S-LB29 (BK/OG).
REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR circuit 29S-LB29 (OG). REPEAT the self-test. CLEAR the DTCs.

E19 VERIFY COURTESY FRONT FOOTWELL LAMP SYMPTOM

1

Verify the area of the front footwell courtesy lamp symptom.

● **Are both front footwell lamps inoperative?**

→ **Yes**
GO to [E26](#).

→ **No**
If the left footwell lamp is inoperative, GO to [E20](#).

If the right footwell lamp is inoperative, GO to [E23](#).

E20 CHECK CIRCUIT 29S-LC11 (OG/WH) FOR VOLTAGE

NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.

1

2

LF Footwell Lamp Bulb C209

3

3 Measure the voltage between the LF footwell lamp C209, circuit 29S-LC11 (OG/WH), harness side and ground.

• Is the voltage greater than 10 volts?

→ Yes
GO to [E22](#).

→ No
GO to [E21](#).

E21 CHECK CIRCUIT 29S-LC11 (OG/WH) FOR AN OPEN

1

2

Interior AJB C283d

3

3 Measure the resistance between the LF footwell lamp C209, circuit 29S-LC11 (OG/WH), harness side and interior AJB C283d pin 15, circuit 29S-LC11 (OG/WH), harness side.

• Is the resistance less than 5 ohms?

- **Yes**
INSTALL a new interior AJB. REPEAT the self-test. CLEAR the DTCs.
- **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

E22 CHECK CIRCUIT 31S-LC11 (BK/WH) FOR AN OPEN

1

2

Joint Connector No. 3, C224

3

A0004321

- 3 Measure the resistance between joint connector No. 3, C224 pin 19, circuit 31S-LC11 (BK/WH), harness side and left front footwell lamp C209, circuit 31S-LC11 (BK/WH), harness side.

- Is the resistance more than 5 ohms?

- **Yes**
REPAIR joint connector No. 3, C224. REPEAT the self-test. CLEAR the DTCs.
- **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

E23 CHECK CIRCUIT 29S-LC23 (OG/WH) FOR VOLTAGE

NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.

1

2

RF Footwell Lamp Bulb C266

3

3

Measure the voltage between the right front footwell lamp C266, circuit 29S-LC23 (OG/WH), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [E25](#).

→ **No**
GO to [E24](#).

E24 CHECK CIRCUIT 29S-LC23 (OG/WH) FOR AN OPEN

1

2

Joint Connector No. 1, C261

3

3

Measure the resistance between the RF footwell lamp C266, circuit 29S-LC23 (OG/WH), harness side and joint connector No. 1, C261 pin 7, circuit 29S-LC23 (OG/WH) harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
Verify if the glove box lamp is operating correctly. If it is OK, REPAIR junction connector No. 1 C261. REPEAT the self-test. CLEAR the DTCs.

If the glove box lamp is not operating correctly, GO to [E26](#).

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

E25 CHECK CIRCUIT 31S-LC23 (BK/WH) FOR AN OPEN

1

2

Joint Connector No. 3, C224

3

A0004323

3 Measure the resistance between the joint connector No. 3, C224 pin 18, circuit 31S-LC23 (BK/WH), harness side and right front footwell lamp C266, circuit 31S-LC23 (BK/WH), harness side.

● **Is the resistance more than 5 ohms?**

→ **Yes**
REPAIR joint connector No. 3, C224.
REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

E26 CHECK LEFT AND RIGHT FRONT FOOTWELL LAMPS

1 Verify the symptom.

● **Are both door courtesy lamps inoperative only?**

→ **Yes**
INSTALL a new interior AJB. REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [E27](#).

E27 CHECK LEFT AND RIGHT FRONT FOOTWELL LAMPS

1 Verify the symptom.

- Are both front footwell courtesy lamps inoperative only?

→ **Yes**
GO to [E28](#).

→ **No**
GO to [E30](#).

E28 CHECK VOLTAGE TO INTERIOR AJB

1

Interior AJB C283d

2

A0004324

2 Measure the voltage between the interior AJB C283d pin 10, circuit 31S-LC4 (BK/GN), harness side and ground.

- Is the voltage greater than 10 volts?

→ **Yes**
INSTALL a new interior AJB. REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [E29](#).

E29 CHECK CIRCUIT 31S-LC4 (BK/GN) FOR AN OPEN

1

Joint Connector No. 3, C224

2

2 Measure the resistance between the joint connector No. 3, C224 pin 17, circuit 31S-LC4 (BK/GN), harness side and interior AJB C283d pin 10, circuit 31S-LC4 (BK/GN), harness side.

- Is the resistance less than 5 ohms?

- **Yes**
REPAIR joint connector No. 3, C224.
REPEAT the self-test. CLEAR the DTCs.
- **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

E30 CHECK RIGHT FRONT FOOTWELL LAMP AND GLOVE BOX LAMP

- 1 Verify the symptom.

- Are the right front footwell and glove box lamps the only lamps that are inoperative?

- **Yes**
GO to [E31](#).
- **No**
GO to [E32](#).

E31 CHECK FOR VOLTAGE TO JOINT CONNECTOR No. 1, C261

1

Joint Connector No. 1, C261

2

3

- 3 Measure the voltage between joint connector No. 1, C261 pin 15, circuit 29S-LC1 (OG/YE), harness side and ground.

A0004326

- Is the voltage greater than 10 volts?

- **Yes**
REPAIR joint connector No. 1, C261.
REPEAT the self-test. CLEAR the DTCs.
- **No**
REPAIR circuit 29S-LC1 (OG/YE).
REPEAT the self-test. CLEAR the DTCs.

E32 CHECK LEFT FRONT FOOTWELL LAMP AND GLOVE BOX LAMP

- 1 Verify the symptom.

- Are the left front footwell and left door courtesy lamps the only lamps that are inoperative?

- **Yes**
GO to [E33](#).
- **No**
GO to [E34](#).

E33 CHECK FOR VOLTAGE TO THE INTERIOR AJB

1

Interior AJB C283b

2

3

- 3 Measure the voltage between the interior AJB C283b pin 15, circuit 29S-LC5 (OG/GN), harness side and ground.

A0004327

- Is the voltage greater than 10 volts?

- **Yes**
INSTALL a new interior AJB. REPEAT the self-test. CLEAR the DTCs.
- **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

E34 CHECK BOTH MAP AND DOME LAMPS OPERATION AT THE INTERIOR AJB

1

Interior AJB C283a

2

A0004328

- 2 Connect a 10A fused jumper between interior AJB C283a pin 2, circuit 9-LB1 (BN), harness side and ground.

- Do both map and dome lamps illuminate?

- **Yes**
INSTALL a new interior AJB. REPEAT the self-test. CLEAR the DTCs.
- **No**
GO to [E35](#).

E35 CHECK CIRCUIT 9-LB1 (BN) FOR AN OPEN

1

2

Rear Dome Lamp C900

3

A0004329

3 Measure the resistance between the rear dome lamp C900 pin 6, circuit 9-LB32 (BN/WH), harness side and interior AJB C283a pin 2, circuit 9-LB1 (BN), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
REPAIR circuit 29S-LB2 (OG/BU) between BJB, map and dome lamps. REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR circuit 9-LB1 (BN). REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST F: THE COURTESY LAMPS STAY ON CONTINUOUSLY — ALL COURTESY AND INTERIOR LAMPS

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 USE THE RECORDED RESULTS FROM FEM SELF-TESTS	<p>1 Use the recorded FEM continuous and self-test DTCs.</p> <ul style="list-style-type: none"> • Are any DTCs recorded? <p>→ Yes If DTC B1319, GO to F3. If DTC B1327, GO to F6.</p> <p>→ No GO to F2.</p>
F2 USE THE RECORDED RESULTS FROM REM SELF-TESTS	<p>1 Use the recorded REM continuous and</p>

self-test DTCs.

- Are any DTCs recorded?

→ Yes

If DTC B1335, GO to [F20](#).

If DTC B1571, GO to [F23](#).

→ No

GO to [F9](#).

F3 CHECK THE DRIVER DOOR AJAR SWITCH

1

2

Driver Door Lock Actuator C525

3

A0005553

3

Connect a fused jumper wire between driver door lock actuator C525 pin 6, circuit 31-AA58 (BK), harness side and pin 8, circuit 31S-GL46 (BK/YE), harness side.

- After 20-30 seconds did the interior lamps turn OFF?

→ Yes

INSTALL a new driver door lock actuator/ajar switch. REFER to [Section 501-14B](#).

→ No

GO to [F4](#).

F4 CHECK CIRCUIT 31-AA58 (BK) FOR AN OPEN

1

1

Measure the resistance between driver door lock actuator C525 pin 6, circuit 31-AA58 (BK), harness side and ground.

A0005554

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [F5](#).

→ **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

F5 CHECK CIRCUIT 31S-GL46 (BK/YE) FOR AN OPEN

1

FEM C201f

2

A0004332

2 Measure the resistance between driver door lock actuator C525 pin 8, circuit 31S-GL46 (BK/YE), harness side and FEM C201f pin 8, circuit 31S-GL46 (BK/YE), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

F6 CHECK THE FRONT PASSENGER DOOR AJAR SWITCH

1

2

Front Passenger Door Lock Actuator C609

3

A0005553

3

Connect a fused jumper wire between front passenger door lock actuator C609 pin 6, circuit 31-AA5BB (BK), harness side and pin 8, circuit 31S-GL47 (BK/BU), harness side.

- After 20-30 seconds did the interior lamps turn OFF?

→ **Yes**
INSTALL a new passenger door lock actuator/ajar switch. REFER to [Section 501-14B](#).

→ **No**
GO to [F7](#).

F7 CHECK CIRCUIT 31-AA5BB (BK) FOR AN OPEN

1

A0005554

1

Measure the resistance between front passenger door lock actuator C609 pin 6, circuit 31-AA5BB (BK), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [F8](#).

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

F8 CHECK CIRCUIT 31S-GL47 (BK/BU) FOR AN OPEN

1

2

FEM C201e

3

3

Measure the resistance between front passenger door lock actuator C609 pin 8, circuit 31S-GL47 (BK/BU), harness side and FEM C201e pin 15, circuit 31S-GL47 (BK/BU), harness side.

● Is the resistance less than 5 ohms?

→ Yes

INSTALL a new FEM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ No

REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

F9 CHECK LEFT FRONT MAP READING LAMP OPERATION

1

2

Activate the left front map reading lamp demand switch.

● Do ALL other courtesy lamps turn OFF?

→ Yes

GO to [F12](#).

→ No

GO to [F10](#).

F10 CHECK RIGHT FRONT MAP READING LAMP OPERATION

1

Activate the right front map lamp switch.

● Do ALL other courtesy lamps turn OFF?

→ Yes

GO to [F13](#).

→ **No**
GO to [F11](#).

F11 CHECK REAR DOME LAMP OPERATION

- 1 Activate the rear dome lamp switch.
- **Do ALL other courtesy lamps turn OFF?**
- **Yes**
GO to [F14](#).
- **No**
GO to [F15](#).

F12 CHECK CIRCUIT 31S-LB12 (BK) FOR SHORT TO GROUND

1

LF Map Reading Lamp Switch C910

- **Does the LF map lamp stay ON?**
- **Yes**
REPAIR the circuit. TEST the system for normal operation.
- **No**
INSTALL a new front map lamp assembly. REFER to [Lamp Assembly—Front Map](#) in this section. REPEAT the self-test. CLEAR the DTCs.

F13 CHECK FRONT MAP LAMP

1

RF Map Reading Lamp Switch C905

- **Does the RF map lamp stay ON?**
- **Yes**
REPAIR the circuit. TEST the system for normal operation.
- **No**
INSTALL a new front map lamp assembly. REFER to [Lamp Assembly—Front Map](#) in this section. REPEAT the self-test. CLEAR the DTCs.

F14 CHECK CIRCUIT 31S-LB29 (BK) FOR SHORT TO GROUND

1

Rear Dome Lamp Switch C900

- Does the rear dome lamp stay ON?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new rear dome lamp assembly. REFER to [Lamp Assembly—Rear Reading](#) in this section . REPEAT the self-test. CLEAR the DTCs.

F15 ISOLATE CIRCUIT 29S-LC3 (OG/BU) AND FEM FOR SHORT TO GROUND

1

2

Interior AJB C283b

3

3 Measure the resistance between interior AJB C283b pin 3, circuit 29S-LC3 (OG), harness side and ground.

- Is resistance greater than 10,000 ohms?

→ **Yes**
GO to [F17](#).

→ **No**
GO to [F16](#).

F16 CHECK CIRCUIT 29S-LC3 (OG/BU) FOR SHORT TO GROUND

1

FEM C201f

2

A0004334

2

Measure the resistance between interior AJB C283b pin 3, circuit 29S-LC3 (OG), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#) . REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

F17 CHECK CIRCUIT 9-LC34 (BN) FOR SHORT TO GROUND

1

2

Interior AJB C283b

3

A0005600

3

Measure the resistance between interior AJB C283b pin 2, circuit 9-LC34 (BN), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [F18](#).

F18 ISOLATE THE INSTRUMENT PANEL LAMP CIRCUITS FOR SHORT TO GROUND

1

Interior AJB C283d

2

A0005601

2 Measure the resistance between interior AJB C283d pin 10, circuit 31S-LC4 (BK/GN), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
REPAIR the circuit. TEST system for normal operation.

→ **No**
GO to [F19](#).

F19 CHECK CIRCUITS 9-LB1 (BN) AND 9-LC36 (BN) FOR SHORT TO GROUND

1

Interior AJB C283a

2

A0005602

2 Measure the resistance between interior AJB C283a pin 2, circuit 9-LB1 (BN), harness side and ground; and between AJB C283a pin 11, circuit 9-LC36 (BN), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**

INSTALL a new AJB. TEST system for normal operation.

→ **No**
REPAIR the circuit in question. TEST system for normal operation.

F20 CHECK THE RIGHT REAR PASSENGER DOOR AJAR SWITCH

1

2

RR Passenger Door Lock Actuator C804

3

A0005553

3 Connect a fused jumper wire between RR passenger door lock actuator C804 pin 6, circuit 31-AA58C (BK), harness side and pin 8, circuit 31S-GL19 (BK/GN), harness side.

● After 20-30 seconds did the interior lamps turn OFF?

→ **Yes**
INSTALL a new RR passenger door lock actuator/ajar switch. REFER to [Section 501-14B](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [F21](#).

F21 CHECK CIRCUIT 31-AA58C (BK) FOR AN OPEN

1

A0005554

1 Measure the resistance between RR passenger door lock actuator C804 pin 6, circuit 31-AA58C (BK), harness side and ground.

● Is the resistance less than 5 ohms?

- **Yes**
GO to [F22](#).
- **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

F22 CHECK CIRCUIT 31S-GL19 (BK/GN) FOR AN OPEN

1

REM C420d

2

- 2 Measure the resistance between RR passenger door lock actuator C804 pin 8, circuit 31S-GL19 (BK/GN), harness side and REM C420d pin 17, circuit 31S-GL19 (BK/GN), harness side.

● **Is the resistance less than 5 ohms?**

- **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.
- **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

F23 CHECK THE LEFT REAR PASSENGER DOOR AJAR SWITCH

1

2

LR Passenger Door Lock Actuator C704

3

- 3 Connect a fused jumper wire between LR passenger door lock actuator C704 pin 6, circuit 31-AA58D (BK), harness side and pin 8, circuit 31S-GL12 (BK/OG), harness side.

A0005553

- After 20-30 seconds did the interior lamps turn OFF?

→ **Yes**
 INSTALL a new LR passenger door lock actuator/ajar switch. REFER to [Section 501-14B](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
 GO to [F24](#).

F24 CHECK CIRCUIT 31-AA58D (BK) FOR AN OPEN

1

A0005554

1 Measure the resistance between left rear passenger door lock actuator C704 pin 6, circuit 31-AA58D (BK), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**
 GO to [F25](#).

→ **No**
 REPAIR circuit 31-AA58D (BK). REPEAT the self-test. CLEAR the DTCs.

F25 CHECK CIRCUIT 31S-GL12 (BU/OG) FOR AN OPEN

1

REM C420c

2

2 Measure the resistance between LR passenger door lock actuator C704 pin 8, circuit 31S-GL12 (BK/OG), harness side and REM C420c pin 16, circuit 31S-GL12 (BU/OG), harness side.

PINPOINT TEST G: THE DEMAND LAMPS STAY ON CONTINUOUSLY — LEFT MAP, RIGHT MAP OR REAR DOME LAMP

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 VERIFY DEMAND LIGHTING	
	<ol style="list-style-type: none"> 1 Close all doors. 2 Toggle demand switch in question to the courtesy and demand positions. <p>● Does the lamp in question turn OFF?</p> <p>→ Yes System OK.</p> <p>→ No INSTALL a new switch. TEST system for normal operation.</p>

PINPOINT TEST H: THE COURTESY LAMPS DO NOT TURN ON WITH ONE DOOR OPEN

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 VERIFY COURTESY LAMP SYMPTOM	
	<ol style="list-style-type: none"> 1 Open and close all the doors one at a time and observe the courtesy lamps. <p>● Are the courtesy lamps inoperative from the driver door?</p>

→ **Yes**
GO to [H2](#).

→ **No**
If the courtesy lamps are inoperative from the front passenger door, GO to [H5](#).

If the courtesy lamps are inoperative from the left rear door, GO to [H8](#).

If the courtesy lamps are inoperative from the right rear door, GO to [H11](#).

H2 CHECK DRIVER DOOR INPUT TO THE FEM

NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.

1

2

NGS

3

4

4 Monitor the FEM PID D_DOOR.

5 Open the driver door.

● **Does the FEM PID D_DOOR read AJAR?**

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [H3](#).

H3 CHECK DRIVER DOOR AJAR SWITCH

1

Driver Door Lock Actuator C525

- Are the courtesy lamps illuminated?

- **Yes**
INSTALL a new driver door lock actuator/ajar switch. REFER to [Section 501-14B](#). REPEAT the self-test. CLEAR the DTCs.
- **No**
GO to [H4](#).

H4 CHECK CIRCUIT 31S-GL46 (BK/YE) FOR SHORT TO GROUND

1

2

FEM 201f

3

- 3 Measure the resistance between driver door lock actuator C525 pin 8, circuit 31S-GL46 (BK/YE), harness side and ground.

- Is the resistance greater than 10,000 ohms?

- **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.
- **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

H5 CHECK FRONT PASSENGER DOOR INPUT TO THE FEM

NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.

1

2

NGS

3

4

4 Monitor the FEM PID P_DOOR.

5 Open the front passenger door.

• Does the FEM PID P_DOOR read AJAR?

→ Yes
INSTALL a new FEM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ No
GO to [H6](#).

H6 CHECK FRONT PASSENGER DOOR AJAR SWITCH

1

2

Front Passenger Door Lock Actuator C609

• Are the courtesy lamps illuminated?

→ Yes
INSTALL a new front passenger door lock actuator/ajar switch. REFER to [Section 501-14B](#). REPEAT the self-test. CLEAR the DTCs.

→ No
GO to [H7](#).

H7 CHECK CIRCUIT 31S-GL47 (BK/BU) FOR SHORT TO GROUND

1

FEM 201e

2

2

Measure the resistance between passenger door lock actuator C609 pin 8, circuit 31S-GL47 (BK/BU), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ **Yes**

INSTALL a new FEM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**

REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

H8 CHECK LR DOOR INPUT TO THE REM

NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.

1

2

NGS

3

4

4

Monitor the REM PID LRDR_SW.

5 Open the left rear door.

- Does the REM PID LRDR_SW read AJAR?

→ **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [H9](#).

H9 CHECK LR DOOR AJAR SWITCH

1

2

LR Door Lock Actuator C704

- Are the courtesy lamps illuminated?

→ **Yes**
INSTALL a new LR door lock actuator/ajar switch. REFER to [Section 501-14B](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [H10](#).

H10 CHECK CIRCUIT 31S-GL12 (BK/OG) FOR SHORT TO GROUND

1

2

REM 420c

3

3 Measure the resistance between LR door lock actuator C704 pin 8, circuit 31S-GL12 (BK/OG), harness side and ground.

A0004338

- Is the resistance greater than 10,000 ohms?

- **Yes**
 INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.
- **No**
 REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

H11 CHECK RR DOOR INPUT TO THE REM

NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.

1

2

NGS

3

4

- 4 Monitor the REM PID RRDR_SW.

- 5 Open the RR door.

- Does the REM PID RRDR_SW read AJAR?

- **Yes**
 INSTALL a new REM. REFER to

[Section 419-10](#). REPEAT the self-test.
CLEAR the DTCs.

→ **No**
GO to [H12](#).

H12 CHECK RIGHT REAR DOOR AJAR SWITCH

1

RR Door Lock Actuator C804

● **Are the courtesy lamps illuminated?**

→ **Yes**
INSTALL a new RR door lock actuator/ajar switch. REFER to [Section 501-14B](#). REPEAT the self-test.
CLEAR the DTCs.

→ **No**
GO to [H13](#).

H13 CHECK CIRCUIT 31S-GL19 (BK/GN) FOR SHORT TO GROUND

1

2

REM 420d

3

A0004338

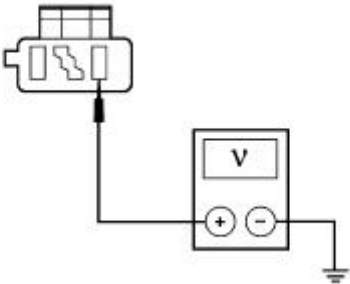

3 Measure the resistance between RR door lock actuator C804 pin 8, circuit 31S-GL19 (BK/GN), harness side and ground.

● **Is the resistance greater than 10,000 ohms?**

→ **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test.

	<p>CLEAR the DTCs.</p> <p>→ No REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.</p>
--	---

PINPOINT TEST I: INDIVIDUAL DEMAND LAMP IS INOPERATIVE — GLOVE COMPARTMENT, VANITY MIRROR(S), MAP OR REAR DOME LAMP

CONDITIONS	DETAILS/RESULTS/ACTIONS
I1 VERIFY LAMP SYMPTOM	
NOTE: If any of the courtesy lamps are also inoperative, refer to symptom chart. If multiple lamps are inoperative, refer to Pinpoint Test E.	
	<p>1 Verify the inoperative lamp.</p> <ul style="list-style-type: none"> ● Is the glove box lamp inoperative? <p>→ Yes GO to 12.</p> <p>→ No If the left hand visor lamp is inoperative, GO to 14.</p> <p>If the right hand visor lamp is inoperative, GO to 16.</p> <p>If a map lamp is inoperative, GO to 18.</p> <p>If the rear dome lamp is inoperative, GO to 19.</p>
I2 CHECK CIRCUIT 29S-LB8 (OG) FOR AN OPEN	
NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.	
<p>1</p>  <p>Glove Box Lamp and Switch C254</p> <p>2</p>  <p style="text-align: right;">A0005603</p>	<p>2 Measure the voltage between glove box lamp and switch C254 pin 3, circuit 29S-LB8 (OG), harness side and ground.</p>

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [13](#).

→ **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

13 CHECK CIRCUIT 31-LB8 (OG) FOR AN OPEN

1

2

A0004340

2 Measure the resistance between glove box lamp and switch C254, circuit 31-LB8 (OG), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new glove box lamp and switch. REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

14 CHECK CIRCUIT 29S-LB16 (OG/GN) FOR OPEN

NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.

1

Left Vanity Mirror Lamp and Switch C907

2

2 Measure the voltage between left vanity mirror lamp and switch C907 pin 2, circuit 29S-LB16 (OG/GN), harness side and ground.

A0004342

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [15](#).

→ **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

15 CHECK CIRCUIT 31-LB16 (BK) FOR AN OPEN

1

2

A0004341

2 Measure the resistance between left vanity mirror lamp and switch C907 pin 1, circuit 31-LB16 (BK), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new left vanity mirror lamp and switch. REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

16 CHECK CIRCUIT 29S-LB23 (OG/WH) FOR AN OPEN

NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.

2

Right Vanity Mirror Lamp and Switch C906

3

4

A0004342

4 Measure the voltage between right vanity mirror lamp and switch C906 pin 2, circuit 29S-LB23 (OG/WH), harness side and ground.

• Is the voltage greater than 10 volts?

→ Yes
GO to [17](#).

→ No
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

17 CHECK CIRCUIT 31-LB23 (BK) FOR AN OPEN

1

2

A0004341

2 Measure the resistance between right vanity mirror lamp and switch C906 pin 1, circuit 31-LB23 (BK), harness side and ground.

• Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new right vanity mirror lamp and switch. REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

18 CHECK GROUND CIRCUIT TO MAP SWITCH

1

2

Front Map Reading Lamp Switch C905 or C910

3

A0005604

3 For the LF map reading lamp switch measure the resistance between C910 pin 4, circuit 31-LB13 (BK), harness side and ground. For the RF map reading lamp switch measure the resistance between C905 pin 4, circuit 31-LB20 (BK), harness side and ground.

● **Are the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new front map lamp assembly. REFER to [Lamp Assembly—Front Map](#) in this section. REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

19 CHECK GROUND CIRCUIT TO REAR DOME LAMP SWITCH

1

2

Rear Dome Lamp Switch C900

3

A0005604

3

Measure the resistance between the rear dome lamp switch C900 pin 4, circuit 31-LB32 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ Yes

INSTALL a new rear dome lamp assembly. REFER to [Lamp Assembly—Rear Reading](#) in this section. REPEAT the self-test. CLEAR the DTCs.

→ No

REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST J: THE COURTESY LAMP STAYS ON CONTINUOUSLY — LUGGAGE COMPARTMENT LAMP ONLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
J1 RETRIEVE DIAGNOSTIC TROUBLE CODES	
<p>1</p> 	<p>1 Use recorded results from REM self-test.</p> <p>● Are any DTCs recorded?</p> <p>→ Yes If B1331GO to J4.</p> <p>For all other DTCs REFER to the REM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to J2.</p>
J2 CHECK THE LUGGAGE COMPARTMENT LID AJAR SWITCH INPUT TO THE REM	
<p>NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is turned OFF. Refer to Principles of Operation for Switched System Power operation.</p>	
<p>1</p> 	<p>1 While opening and closing the luggage compartment lid, monitor the REM PID DECKLID.</p>

- Do the REM PID values agree with the luggage compartment lid positions?

→ **Yes**
GO to [J3](#).

→ **No**
GO to [J4](#).

J3 CHECK CIRCUIT 31S-LB25 (BK/BU) FOR SHORT TO GROUND

1

2

REM C420a

3

Luggage Compartment Lid Lamp C428

4

A0004343

- 4 Measure the resistance between the REM C420a pin 11, circuit 31S-LB25 (BK/BU), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

J4 CHECK THE LUGGAGE COMPARTMENT LID AJAR SWITCH

1

Luggage Compartment Lid Ajar Switch C429

2

A0004345

2

Connect a fused (10A) jumper wire between the luggage compartment lid ajar switch C429 pins 1 and 2, harness side.

• Does the luggage compartment lid lamp go OFF?

→ **Yes**
INSTALL a new luggage compartment lid ajar switch. REFER to [Section 501-14A](#).

→ **No**
GO to [J5](#).

J5 CHECK CIRCUIT 31-GL20 (BK/RD) FOR AN OPEN

1

2

A0004346

2

Measure the resistance between the luggage compartment lid ajar switch C429 pin 2, circuit 31-GL20 (BK/RD), harness side and ground.

• Is the resistance less than 5 ohms?

→ **Yes**
GO to [J6](#).

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

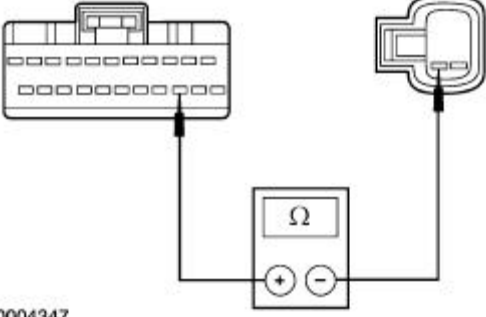

J6 CHECK CIRCUIT 8-GL20 (WH/BK) FOR AN OPEN

1

REM C420b

2

A0004347

2 Measure the resistance between the REM C420b pin 14, circuit 8-GL20 (WH/BK) , harness side and luggage compartment lid ajar switch C429 pin 1, circuit 8-GL20 (WH/BK), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST K: THE COURTESY LAMPS DO NOT TURN ON WITH ONE DOOR OPEN — LUGGAGE COMPARTMENT LID LAMP INOPERATIVE WITH LUGGAGE COMPARTMENT LID OPEN

CONDITIONS	DETAILS/RESULTS/ACTIONS
K1 RETRIEVE REM DIAGNOSTIC TROUBLE CODES	
<p>1</p> 	<p>1 Use recorded results from REM self-test.</p> <ul style="list-style-type: none"> ● Are any REM DTCs recorded? <p>→ Yes REFER to REM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to K2.</p>
K2 CHECK THE LUGGAGE COMPARTMENT LID AJAR SWITCH INPUT TO THE REM	
<p>NOTE: The ignition switch must be cycled from OFF to RUN to enable the switched system power feature. The switched system power will remain active for one half-hour after ignition is</p>	

turned OFF. Refer to Principles of Operation for Switched System Power operation.

1

1

While opening and closing the luggage compartment lid, monitor the REM PID DECKLID.

- Does the REM PID values DECKLID agree with the luggage compartment lid position?

→ Yes
GO to [K3](#).

→ No
GO to [K8](#).

K3 CHECK POWER TO THE BJB FUSE 404 (10A)

1

BJB Fuse 404 (10A)

2

3

3

Measure the voltage between the BJB Fuse 404 (10A) input side and ground.

- Is the voltage greater than 10 volts?

→ Yes
INSTALL BJB fuse 404 (10A) and GO to [K4](#).

→ No
REPAIR supply circuit to the BJB.
REPEAT the self-test. CLEAR the DTCs.

K4 CHECK CIRCUIT 29S-LB25 (OG/BU) FOR AN OPEN

1

Luggage Compartment Lid Lamp C428

2

A0004349

2

Measure the voltage between luggage compartment lid lamp C428, circuit 29S-LB25 (OG/BU), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [K5](#).

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

K5 CHECK CIRCUIT 31S-LB25 (BK/BU) FOR VOLTAGE

1

A0004350

1

Measure the voltage between luggage compartment lid lamp C428, circuit 31S-LB25 (BK/BU), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [K7](#).

→ **No**
GO to [K6](#).

K6 CHECK CIRCUIT 31S-LB25 (BK/BU) FOR AN OPEN

1

2

REM C420a

3

3

Measure the resistance between the REM C420a pin 11, circuit 31S-LB25 (BK/BU), harness side and luggage compartment lid lamp C429, circuit 31S-LB25 (BK/BU), harness side.

● Is the resistance less than 5 ohms?

→ Yes

INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ No

REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

K7 CHECK CIRCUIT 31S-LB25 (BK/BU) FOR SHORT TO BATTERY

1

2

REM C420b

3

4

4

Measure the voltage between the luggage compartment lid lamp C428, circuit 31S-LB25 (BK/BU) harness side and ground.

A0004350

- **Is the voltage greater than 10 volts?**

- **Yes**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.
- **No**
INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

K8 CHECK FOR A STUCK OR STICKING LUGGAGE COMPARTMENT AJAR SWITCH

1

2

Luggage Compartment Lid Ajar Switch C429

- 3 While disconnecting the luggage compartment lid ajar switch observe luggage compartment lamp.

- **Does the luggage compartment lid lamp go ON?**

- **Yes**
INSTALL a new luggage compartment lid ajar switch. REFER to [Section 501-14A](#).
- **No**
GO to [K9](#).

K9 CHECK CIRCUIT 8-GL20 (WH/BK) FOR SHORT TO GROUND

1

2

REM C420b

3

A0004352

- 3 Measure resistance between the luggage compartment lid ajar switch C429 pin 1, circuit 8-GL20 (WH/BK), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

Lamp Assembly —Rear Reading

Removal and Installation

NOTE: The rear reading lamp assembly is an integral part of the headliner. This does not include the reading lamp lens and the bulbs.

For additional information, refer to [Section 501-05](#).

Lamp Assembly —Front Map

Removal and Installation

NOTE: The front map lamp assembly is an integral part of the headliner. This does not include the front map lamp lens and bulbs.

For additional information, refer to [Section 501-05](#).

Daytime Running Lamps (DRL)

Refer to Wiring Diagrams Section [417-01](#) for schematic and connector information.

Principles of Operation

The daytime running lamps (DRL) feature will illuminate the high beam headlamps, pulse width modulated at a 40% duty cycle when the following conditions exist:

- The ignition switch (11572) is in the RUN position.
- The headlamp switch (11654) is in the OFF or PARK position.
- The autolamps feature has not illuminated the parking lamps and the headlamps.

The headlamps are controlled by the front electronic module (FEM) and the instrument cluster (10849) in all phases of operation. The headlamp switch is hardwired to the instrument cluster, which sends a command through the standard corporate protocol (SCP) network to the FEM, which outputs the appropriate voltage to the headlamps. For additional information, refer to [Section 417-01](#).

Inspection and Verification

NOTE: The FEM must be reconfigured upon replacement. Refer to [Section 418-01](#).

1. Verify the customer concern by operating the DRL following these steps:
 1. Place the ignition switch in the RUN position.
 2. Place the autolamp switch in the OFF position.
 3. Place the headlamp switch in the OFF or PARK position.
 2. Verify the parking lamp operation.
 1. Place the headlamp switch in the PARK position.
If at least one of the parking lamps operates correctly, proceed to the next step.
If none of the parking lamps operate, refer to [Section 417-01](#).
 3. Verify the high beam headlamp operation.
 1. Place the headlamp switch in the ON position.
 2. Place the multifunction switch in the high beam headlamp position.
If the high beam headlamp operation is correct and the DRL operation is incorrect, install a new FEM; refer to [Section 419-10](#).
If the high beam operation is incorrect, refer to [Section 417-01](#).
-

11	—	Restraint control module (RCM)
12	13B520	Rear electronic module (REM)

Communications Network

Refer to Wiring Diagrams Section [418-00](#), Multiplex Communication Network for schematic and connector information.

Special Tool(s)

 ST1137-A	73III Automotive Meter or equivalent 105-R0057
 ST1217-A	New Generation STAR (NGS) Tester or equivalent 418-F048 (007-00500)

Principles of Operation

The vehicle has two module communication networks. The standard corporate protocol (SCP), which is an unshielded twisted pair cable: data bus plus and data bus minus, and the International Standards Organization (ISO) 9141 communications network, which is a single wire network. Both networks can be connected to the New Generation STAR (NGS) Tester by one connector called the data link connector (DLC). This makes troubleshooting these systems easier by allowing one smart tester to be able to diagnose and control any module on the two networks from one connector. The DLC can be found under the instrument panel, between the steering column and the radio.

The ISO 9141 communication network does not permit inter-module communication. When the NGS Tester communicates to modules on the ISO 9141 communication network, the NGS Tester must ask for all information; the modules cannot initiate communications.

The SCP communication network will remain operational even with the severing of one of the bus wires. Communications will also continue if one of the bus wires is shorted to ground or voltage, or if some, but not all, termination resistors are lost.

Unlike the SCP communication network, the ISO 9141 communication network will not function if the wire is shorted to ground or voltage. Also, if one of the modules on the ISO 9141 communication network loses power or shorts internally, communications to that module will fail.

The anti-lock brake control module is connected to the SCP communication network. The module comes in three types. The first type is the standard equipped anti-lock brake system (ABS). It controls the brake pressure to the four wheels to keep the vehicle under control while braking. For additional information, refer to [Section 206-09A](#). The second type of ABS, if fitted, adds traction control to the anti-lock brake control module. For additional information, refer to [Section 206-09B](#). The third type of ABS, if fitted, is called the stability assist module. This module adds yaw rate sensors, lateral accelerometer, and a steering angle rate sensor to the package to help in sensing a loss of vehicle control. For additional information, refer to [Section 206-09C](#). All three types use the SCP communication network for diagnosis and communication between other SCP networked modules.

The audio control module (ACM) is connected to the SCP communication network and also to the audio control protocol (ACP) communication network. The ACM communicates with the compact disc player/changer and the cellular phone transceiver. For additional information on the compact disc player/changer, refer to [Section 415-00](#). For additional information on the cellular phone, refer to [Section 419-08](#).

The driver door module (DDM) is connected to the SCP communication network. The module controls many functions including power windows, power locks, and remote keyless entry. The DDM also communicates with the driver seat module (DSM) to control power seat and mirror memory. For additional information, refer to [Section 501-14B](#).

The DSM is connected to the SCP communication network. The DSM controls the driver power seat. The module also communicates with the DDM to control the driver seat memory functions. For additional information, refer to [Section 501-10](#).

The dual automatic temperature control (DATC) module is connected to the SCP communication network. The DATC module controls automatic climate functions that maintain the vehicle at a constant temperature setting. For additional information, refer to [Section 412-00](#).

The instrument cluster (also known as an instrument cluster module [ICM]) is connected to the SCP communication network. The instrument cluster displays information received on the SCP including speedometer, odometer, fuel, and message center warnings. The instrument cluster also controls the passive anti-theft system (PATS). For additional information, refer to [Section 413-00](#) for instrument cluster operation and [Section 419-01B](#) for PATS.

The front electronic module (FEM) and rear electronic module (REM) are connected to the SCP communication network. The FEM and REM controls both interior and exterior lighting and active anti-theft functions. For additional information on interior lamps, refer to [Section 417-02](#). For additional information on exterior lighting, refer to [Section 417-01](#). For additional information on active anti-theft, refer to [Section 419-01A](#).

The powertrain control module (PCM) is connected to the SCP communication network. The PCM controls the engine performance, electronic ignition, emission controls, speed control, and on board diagnostics. For additional information, refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.

The remote emergency satellite cellular unit (RESCU) module is connected to the SCP communication network. The module allows a user to request emergency assistance (police, ambulance, fire, wrecker) or directions to a desired location at the touch of a button. Also, if any of the vehicle's airbags are deployed while the RESCU System is powered ON, the system automatically issues a call for emergency assistance. For additional information, refer to [Section 419-05](#).

The steering column lock module (SCLM) is connected to the SCP communication network. The module controls locking of the steering column and is only equipped on vehicles with manual transmissions. For additional information, refer to [Section 211-05](#).

The restraint control module (RCM) is connected to the ISO 9141 communication network. The RCM controls the deployment of the air bags and safety belt pretensioners based on sensor input. For additional information, refer to [Section 501-20B](#).

Inspection and Verification

1. Verify the customer concern by operating the system in question.
2. Visually inspect for obvious signs of electrical damage.

Visual Inspection Chart

Electrical
<ul style="list-style-type: none"> ● Central junction box (CJB) Fuses 206 (10A) and 232 (20A) ● Wiring harness ● Loose or corroded connections

3. If the concern remains after the inspection, connect New Generation STAR (NGS) Tester to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from NGS Tester menu. If NGS Tester does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check that the correct version of the program card is installed.
 - check the connections to the vehicle.
 - check the ignition switch position.

If the NGS Tester still does not communicate with the vehicle, go to Pinpoint Test O.

4. Go to Pinpoint Test PC.

System Precheck

PINPOINT TEST PC: DATA LINK DIAGNOSTICS NETWORK TEST

CONDITIONS	DETAILS/RESULTS/ACTIONS

→ **No**
REPAIR circuit 4-CF6 (GY). For additional information, REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

A4 CHECK FOR OPEN BETWEEN INTERIOR AJB C283c AND INTERIOR AJB C283d — SCP (+)

1

Interior AJB C283d

2

2 Measure the resistance between interior AJB C283d pin 16 and interior AJB C283c pin 5, component side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [A5](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

A5 CHECK FOR OPEN BETWEEN INTERIOR AJB C283d AND JOINT CONNECTOR #4 C223 — SCP (+)

1

Joint Connector #4 C223

2

2

Measure the resistance between interior AJB C283d pin 16, circuit 4-EG1 (GY), harness side and joint connector #4 C223 pin 22, circuit 4-EG1 (GY), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [A6](#).

→ **No**
REPAIR circuit 4-EG1 (GY). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

A6 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (+)

1

1

Measure the resistance between joint connector #4 C223 pin 22 and pin 20, component side.

A0004357

- Is the resistance less than 5 ohms?

→ **Yes**
 REPAIR circuit 4-EG7 (GY/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
 REPAIR joint connector #4 C223. TEST the system for normal operation.

A7 CHECK FOR OPEN BETWEEN DLC C251 AND ANTI-LOCK BRAKE CONTROL MODULE C135 OR C155 — SCP (-)

A0004358

- 3 Disconnect the anti-lock brake control module with or without traction control C135 or the stability assist module C155.
- 4 Measure the resistance between anti-lock brake control module C135 pin 10 or stability assist module C155 pin 19, circuit 5-CF6 (BU), harness side and DLC C251 pin 10, circuit 5-EG7 (BU/RD), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new anti-lock brake control module or stability assist module. REFER to [Section 206-09A](#) , [Section 206-09B](#) , or [Section 206-09C](#) .

→ **No**
GO to [A8](#) .

A8 CHECK FOR OPEN BETWEEN INTERIOR AJB C283c AND ANTI-LOCK BRAKE CONTROL MODULE C135 OR C155 — SCP (-)

1

Interior AJB C283c

2

A0004359

2 Measure the resistance between anti-lock brake control module C135 pin 10 or stability assist module C155 pin 19, circuit 5-CF6 (BU), harness side and interior AJB C283c pin 6, circuit 5-CF6 (BU), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
GO to [A9](#) .

→ **No**
REPAIR circuit 5-CF6 (BU). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

A9 CHECK FOR OPEN BETWEEN INTERIOR AJB C283c AND INTERIOR AJB C283d — SCP (-)

1

Interior AJB C283d

2

2 Measure the resistance between interior AJB C283d pin 12 and interior AJB C283c pin 6, component side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [A10](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

A10 CHECK FOR OPEN BETWEEN INTERIOR AJB C283d AND JOINT CONNECTOR #4 C223 — SCP (-)

1

Joint Connector #4 C223

2

2

Measure the resistance between interior AJB C283d pin 12, circuit 5-EG1 (BU), harness side and joint connector #4 C223 pin 1, circuit 5-EG1 (BU), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [A11](#).

→ **No**
REPAIR circuit 5-EG1 (BU). For additional information, REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

A11 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (-)

1

1

Measure the resistance between joint connector #4 C223 pin 1 and pin 3, component side.

A0004362

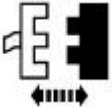

● Is the resistance less than 5 ohms?

→ **Yes**
REPAIR circuit 5-EG7 (BU/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

PINPOINT TEST B: THE FRONT ELECTRONIC MODULE (FEM) DOES NOT RESPOND TO THE NGS TESTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK FEM C201c FOR DAMAGE	
<p>1 </p> <p>2  FEM C201c</p> <p>4  FEM C201c</p> <p>5  NGS</p>	<p>3 Inspect FEM C201c for damage; repair as necessary.</p>

6

7

DATA LINK DIAGNOSTICS

- Was the result received GEM: NO RESPONSE ON CKT914 (BUS+)?

→ Yes
GO to [B2](#).

→ No
GO to [B7](#).

B2 CHECK FOR OPEN BETWEEN DLC C251 AND FEM C201c — SCP (+)

1

2

NGS

3

FEM C201c

4

A0004363

- 4 Measure the resistance between FEM C201c pin 7, circuit 4-EG11 (GY), harness side and DLC C251 pin 2, circuit 4-EG7 (GY/RD), harness side.

- Is the resistance less than 5 ohms?

→ Yes
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal

operation.

→ **No**
GO to [B3](#).

B3 CHECK FOR OPEN BETWEEN INTERIOR AJB C283c AND FEM C201c — SCP (+)

1

Interior AJB C283c

2

2

Measure the resistance between FEM C201c pin 7, circuit 4-EG11 (GY), harness side and interior AJB C283c pin 10, circuit 4-EG11 (GY), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [B4](#).

→ **No**
REPAIR circuit 4-EG11 (GY). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

B4 CHECK FOR OPEN BETWEEN INTERIOR AJB C283c AND INTERIOR AJB C283d — SCP (+)

1

Interior AJB C283d

2

2

Measure the resistance between interior AJB C283d pin 16 and interior AJB C283c pin 10, component side.

● Is the resistance less than 5 ohms?

- **Yes**
GO to [B5](#).
- **No**
INSTALL a new AJB. TEST the system for normal operation.

B5 CHECK FOR OPEN BETWEEN INTERIOR AJB C283d AND JOINT CONNECTOR #4 C223 — SCP (+)

1

Joint Connector #4 C223

2

2

Measure the resistance between interior AJB C283d pin 16, circuit 4-EG1 (GY), harness side and joint connector #4 C223 pin 22, circuit 4-EG1 (GY), harness side.

- Is the resistance less than 5 ohms?

- **Yes**
GO to [B6](#).
- **No**
REPAIR circuit 4-EG1 (GY). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

B6 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (+)

1

A0004357

1

Measure the resistance between joint connector #4 C223 pin 22 and pin 20, component side.

- Is the resistance less than 5 ohms?

- **Yes**

REPAIR circuit 4-EG7 (GY/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

B7 CHECK FOR OPEN BETWEEN DLC C251 AND FEM C201c — SCP (-)

1

2

NGS

3

FEM C201c

4

A0004366

4 Measure the resistance between FEM C201c pin 1, circuit 5-EG11 (BU), harness side and DLC C251 pin 10, circuit 5-EG7 (BU/RD), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
GO to [B8](#).

B8 CHECK FOR OPEN BETWEEN INTERIOR AJB C283c AND FEM C201c — SCP (-)

1

Interior AJB C283c

2

2 Measure the resistance between FEM

A0004367

C201c pin 1, circuit 5-EG11 (BU), harness side and interior AJB C283c pin 8, circuit 5-EG11 (BU), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [B9](#).

→ **No**
REPAIR circuit 5-EG11 (BU). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

B9 CHECK FOR OPEN BETWEEN INTERIOR AJB C283c AND INTERIOR AJB C283d — SCP (-)

1

Interior AJB C283d

2

A0004368

2 Measure the resistance between interior AJB C283d pin 12 and interior AJB C283c pin 8, component side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [B10](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

B10 CHECK FOR OPEN BETWEEN INTERIOR AJB C283d AND JOINT CONNECTOR #4 C223 — SCP (-)

1

Joint Connector #4 C223

2

2

Measure the resistance between interior AJB C283d pin 12, circuit 5-EG1 (BU), harness side and joint connector #4 C223 pin 1, circuit 5-EG1 (BU), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [B11](#).

→ **No**
REPAIR circuit 5-EG1 (BU). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

B11 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (-)

1

1

Measure the resistance between joint connector #4 C223 pin 1 and pin 3, component side.

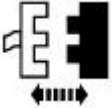

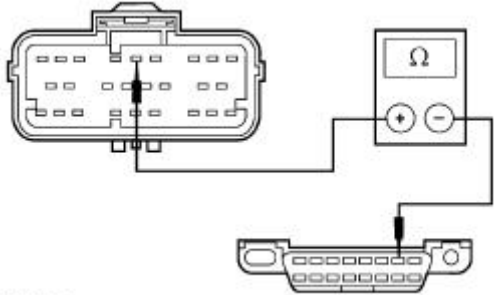

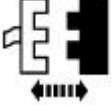

● Is the resistance less than 5 ohms?

→ **Yes**
REPAIR circuit 5-EG7 (BU/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

PINPOINT TEST C: THE RESTRAINT CONTROL MODULE (RCM)

DOES NOT RESPOND TO THE NGS TESTER

1

2

NGS

3

Instrument Cluster C220b

4

A0004371

- 4 Measure the resistance between instrument cluster C220b pin 15, circuit 4-EG8 (GY/VT), harness side and DLC C251 pin 2, circuit 4-EG7 (GY/RD), harness side.

- Is the resistance less than 5 ohms?

→ Yes
INSTALL a new instrument cluster.
REFER to [Section 413-01](#) . TEST the

system for normal operation.

→ **No**
GO to [D3](#).

D3 CHECK FOR OPEN BETWEEN INSTRUMENT CLUSTER C220b AND JOINT CONNECTOR #4 C223 — SCP (+)

1

Joint Connector #4 C223

2

2

Measure the resistance between instrument cluster C220b pin 15, circuit 4-EG8 (GY/VT), harness side and joint connector #4 C223 pin 21, circuit 4-EG8 (GY/VT), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
GO to [D4](#).

→ **No**
REPAIR circuit 4-EG8 (GY/VT). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

D4 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (+)

1

A0004373

1

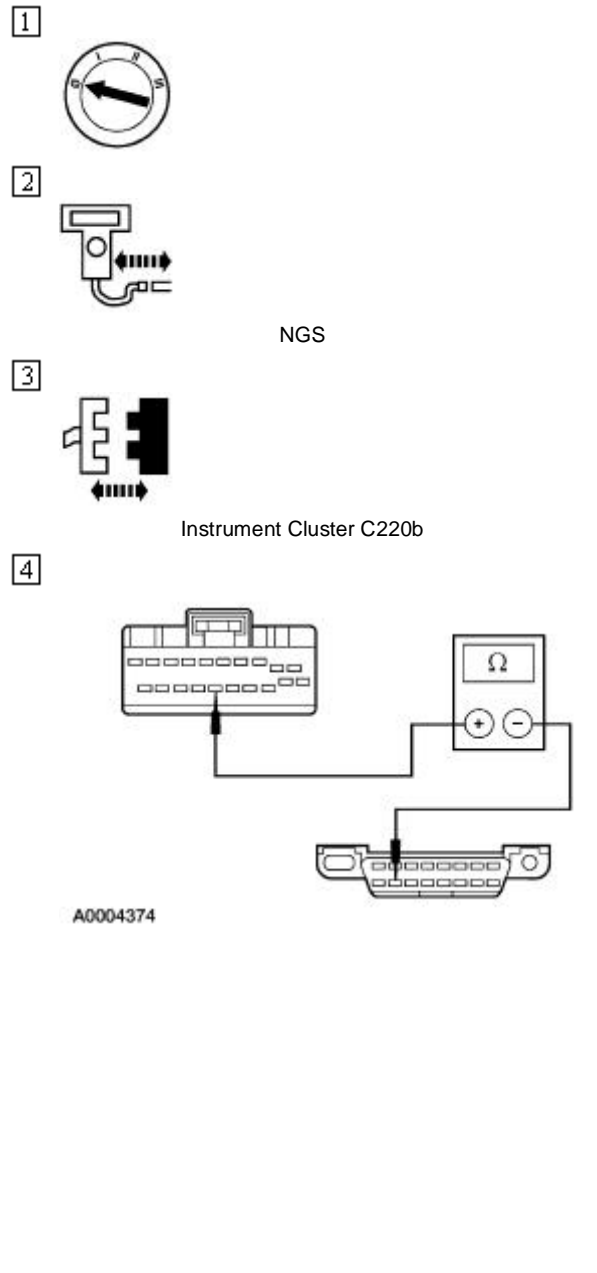

Measure the resistance between joint connector #4 C223 pin 21 and pin 20, component side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
REPAIR circuit 4-EG7 (GY/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

D5 CHECK FOR OPEN BETWEEN DLC C251 AND INSTRUMENT CLUSTER C220b — SCP (-)

4 Measure the resistance between instrument cluster C220b pin 16, circuit 5-EG8 (BU/WH), harness side and DLC C251 pin 10, circuit 5-EG7 (BU/RD), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new instrument cluster. REFER to [Section 413-01](#). TEST the system for normal operation.

→ **No**
GO to [D6](#).

D6 CHECK FOR OPEN BETWEEN INSTRUMENT CLUSTER C220b AND JOINT CONNECTOR #4 C223 — SCP (-)

2 Measure the resistance between instrument cluster C220b pin 16, circuit 5-EG8 (BU/WH), harness side and joint

connector #4 C223 pin 1, circuit 5-EG1 (BU), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [D7](#).

→ **No**
REPAIR circuit 5-EG8 (BU/WH). REFER to [Communication Circuit Wiring Repair](#). TEST the system for normal operation.

D7 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (-)

1

1

Measure the resistance between joint connector #4 C223 pin 2 and pin 3, component side.

● Is the resistance less than 5 ohms?

→ **Yes**
REPAIR circuit 5-EG7 (BU/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

PINPOINT TEST E: THE POWERTRAIN CONTROL MODULE (PCM) DOES NOT RESPOND TO THE NGS TESTER

CONDITIONS	DETAILS/RESULTS/ACTIONS

DATA LINK DIAGNOSTICS

3 Inspect PCM C175a for damage; repair as necessary.

• Was the result received PCM: NO RESPONSE ON CKT914 (BUS+)?

→ Yes
GO to E2.

→ No
GO to E7.

E2 CHECK FOR OPEN BETWEEN DLC C251 AND PCM C175a — SCP (+)

1

2

NGS

3

PCM C175a

4

A0004377

4

Measure the resistance between PCM C175a pin 3, circuit 4-RE8 (GY), harness side and DLC C251 pin 2, circuit 4-EG7 (GY/RD), harness side.

• Is the resistance less than 5 ohms?

→ **Yes**
REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.

→ **No**
GO to [E3](#).

E3 CHECK FOR OPEN BETWEEN INTERIOR AJB C283c AND PCM C175a — SCP (+)

1

Interior AJB C283c

2

A0004378

2

Measure the resistance between PCM C175a pin 3, circuit 4-RE8 (GY), harness side and interior AJB C283c pin 4, circuit 4-RE8 (GY), harness side.

• Is the resistance less than 5 ohms?

→ **Yes**
GO to [E4](#).

→ **No**
REPAIR circuit 4-RE8 (GY). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

E4 CHECK FOR OPEN BETWEEN INTERIOR AJB C283c AND INTERIOR AJB C283d — SCP (+)

1

Interior AJB C283d

2

2

Measure the resistance between interior AJB C283d pin 16 and interior AJB C283c pin 4, component side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [E5](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

E5 CHECK FOR OPEN BETWEEN INTERIOR AJB C283d AND JOINT CONNECTOR #4 C223 — SCP (+)

1

Joint Connector #4 C223

2

2

Measure the resistance between interior AJB C283d pin 16, circuit 4-EG1 (GY), harness side and joint connector #4 C223 pin 22, circuit 4-EG1 (GY), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [E6](#).

→ **No**

REPAIR circuit 4-EG1 (GY). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

E6 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (+)

1

A0004357

1

Measure the resistance between joint connector #4 C223 pin 22 and pin 20, component side.

● **Is the resistance less than 5 ohms?**

→ **Yes**

REPAIR circuit 4-EG7 (GY/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**

REPAIR joint connector #4 C223. TEST the system for normal operation.

E7 CHECK FOR OPEN BETWEEN DLC C251 AND PCM C175a — SCP (-)

1

2

NGS

3

PCM C175a

4

4

A0004387

(BU/YE), harness side and joint connector #4 C223 pin 4, circuit 5-FA10 (BU/YE), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [F7](#).

→ **No**
REPAIR circuit 5-FA10 (BU/YE). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

F7 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (-)

1

A0004388

1

Measure the resistance between joint connector #4 C223 pin 4 and pin 3, component side.

● Is the resistance less than 5 ohms?

→ **Yes**
REPAIR circuit 5-EG7 (BU/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

PINPOINT TEST G: THE AUDIO CONTROL MODULE (ACM) DOES NOT RESPOND TO THE NGS TESTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 CHECK ACM C240a FOR DAMAGE	
1	

2

ACM C240a

3 Inspect ACM C240a for damage; repair as necessary.

4

ACM C240a

5

NGS

6

7

DATA LINK DIAGNOSTICS

• Was the result received ACM: NO RESPONSE ON CKT914 (BUS+)?

→ Yes
GO to [G2](#).

→ No
GO to [G5](#).

G2 CHECK FOR OPEN BETWEEN DLC C251 AND ACM C240a — SCP (+)

1

2

NGS

3

ACM C240a

4

4

Measure the resistance between ACM C240a pin 3, circuit 4-EG10 (GY/BK), harness side and DLC C251 pin 2, circuit 4-EG7 (GY/RD), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new ACM. REFER to [Section 415-01](#). TEST the system for normal operation.

→ **No**
GO to [G3](#).

G3 CHECK FOR OPEN BETWEEN ACM C240a AND JOINT CONNECTOR #4 C223 — SCP (+)

1

Joint Connector #4 C223

2

2

Measure the resistance between ACM C240a pin 3, circuit 4-EG10 (GY/BK), harness side and joint connector #4 C223 pin 18, circuit 4-EG10 (GY/BK), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [G4](#).

→ **No**
REPAIR circuit 4-EG10 (GY/BK). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal

operation.

G4 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (+)

1

A0004391

1

Measure the resistance between joint connector #4 C223 pin 18 and pin 20, component side.

● **Is the resistance less than 5 ohms?**

→ **Yes**

REPAIR circuit 4-EG7 (GY/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**

REPAIR joint connector #4 C223. TEST the system for normal operation.

G5 CHECK FOR OPEN BETWEEN DLC C251 AND ACM C240a — SCP (-)

1

2

NGS

3

ACM C240a

4

A0004392

4

Measure the resistance between ACM C240a pin 4, circuit 5-EG10 (BU/YE), harness side and DLC C251 pin 10, circuit 5-EG7 (BU/RD), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new ACM. REFER to [Section 415-01](#). TEST the system for normal operation.

→ **No**
GO to [G6](#).

G6 CHECK FOR OPEN BETWEEN ACM C240a AND JOINT CONNECTOR #4 C223 — SCP (-)

1

Joint Connector #4 C223

2

2

Measure the resistance between ACM C240a pin 4, circuit 5-EG10 (BU/YE), harness side and joint connector #4 C223 pin 5, circuit 5-EG10 (BU/YE), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [G7](#).

→ **No**
REPAIR circuit 5-EG10 (BU/YE). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

G7 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (-)

1

1

Measure the resistance between joint connector #4 C223 pin 5 and pin 3, component side.

● Is the resistance less than 5 ohms?

- **Yes**
REPAIR circuit 5-EG7 (BU/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.
- **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

PINPOINT TEST H: THE STEERING COLUMN LOCK MODULE (SCLM) DOES NOT RESPOND TO THE NGS TESTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 CHECK SCLM C267 FOR DAMAGE	
<p>1</p> 	
<p>2</p>  <p>SCLM C267</p>	<p>3 Inspect SCLM C267 for damage; repair as necessary.</p>
<p>4</p>  <p>SCLM C267</p>	
<p>5</p>  <p>NGS</p>	
<p>6</p> 	
<p>7</p>  <p>DATA LINK DIAGNOSTICS</p>	<ul style="list-style-type: none"> ● Was the result received SCLU: NO RESPONSE ON CKT914 (BUS+)?

→ **Yes**
GO to [H2](#).

→ **No**
GO to [H6](#).

H2 CHECK FOR OPEN BETWEEN DLC C251 AND SCLM C267 — SCP (+)

1

2

NGS

3

SCLM C267

4

A0004395

4 Measure the resistance between SCLM C267 pin 4, circuit 4-GL58 (GY/OG), harness side and DLC C251 pin 2, circuit 4-EG7 (GY/RD), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new SCLM. REFER to [Section 211-05](#). TEST the system for normal operation.

→ **No**
GO to [H3](#).

H3 CHECK FOR OPEN BETWEEN SCLM C267 AND JOINT CONNECTOR #4 C223 — SCP (+)

1

Joint Connector #4 C223

2

2 Measure the resistance between SCLM C267 pin 4, circuit 4-GL58 (GY/OG), harness side and joint connector #4

A0004396

C223 pin 17, circuit 4-GL58 (GY/OG), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [H5](#).

→ **No**
GO to [H4](#).

H4 CHECK FOR OPEN BETWEEN SCLM C267 AND IN-LINE C248F — SCP (+)

1

In-Line C248

2

A0004397

2

Measure the resistance between SCLM C267 pin 4, circuit 4-GL58 (GY/OG), harness side and in-line C248F pin 3, circuit 4-GL58 (GY/OG), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
REPAIR circuit 4-GL58 (GY/OG) between in-line C248M and joint connector #4 C223. REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR circuit 4-GL58 (GY/OG) between in-line C248F and SCLU C267. REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

H5 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (+)

1

1

Measure the resistance between joint

A0004398

connector #4 C223 pin 17 and pin 20, component side.

- Is the resistance less than 5 ohms?

→ **Yes**
REPAIR circuit 4-EG7 (GY/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

H6 CHECK FOR OPEN BETWEEN DLC C251 AND SCLM C267 — SCP (-)

1

2

NGS

3

SCLM C267

4

A0004399

4 Measure the resistance between SCLM C267 pin 3, circuit 5-GL58 (BU/BK), harness side and DLC C251 pin 10, circuit 5-EG7 (BU/RD), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**

INSTALL a new SCLM. REFER to [Section 211-05](#). TEST the system for normal operation.

→ **No**
GO to [H7](#).

H7 CHECK FOR OPEN BETWEEN SCLM C267 AND JOINT CONNECTOR #4 C223 — SCP (-)

1

Joint Connector #4 C223

2

2

Measure the resistance between SCLM C267 pin 3, circuit 5-GL58 (BU/BK), harness side and joint connector #4 C223 pin 6, circuit 5-GL58 (BU/BK), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [H9](#).

→ **No**
GO to [H8](#).

H8 CHECK FOR OPEN BETWEEN SCLM C267 AND IN-LINE C248F — SCP (+)

1

In-Line C248

2

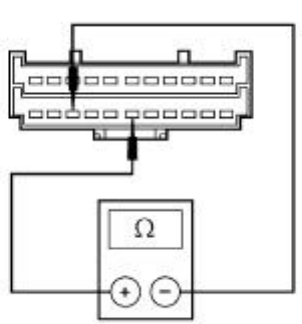

2

Measure the resistance between SCLM C267 pin 3, circuit 5-GL58 (BU/BK), harness side and in-line C248F pin 4, circuit 5-GL58 (BU/BK), harness side.

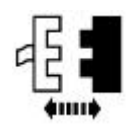

● Is the resistance less than 5 ohms?

	<p>→ Yes REPAIR circuit 5-GL58 (BU/BK) between in-line C248M and joint connector #4 C223. REFER to Communication Circuit Wiring Repair in this section. TEST the system for normal operation.</p> <p>→ No REPAIR circuit 5-GL58 (BU/BK) between in-line C248F and SCLM C267. REFER to Communication Circuit Wiring Repair in this section. TEST the system for normal operation.</p>
--	--

H9 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (-)

<p>1</p>  <p>A0004402</p>	<p>1 Measure the resistance between joint connector #4 C223 pin 6 and pin 3, component side.</p> <p>● Is the resistance less than 5 ohms?</p> <p>→ Yes REPAIR circuit 5-EG7 (BU/RD). REFER to Communication Circuit Wiring Repair in this section. TEST the system for normal operation.</p> <p>→ No REPAIR joint connector #4 C223. TEST the system for normal operation.</p>
--	---

PINPOINT TEST I: THE REMOTE EMERGENCY SATELLITE CELLULAR UNIT (RESCU) MODULE DOES NOT RESPOND TO THE NGS TESTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
I1 CHECK RESCU MODULE C401a FOR DAMAGE	
<p>1</p>  <p>2</p> 	

RESCU Module C401a

4

RESCU Module C401a

5

NGS

6

7

DATA LINK DIAGNOSTICS

3 Inspect RESCU module C401a for damage; repair as necessary.

• Was the result received RESCU: NO RESPONSE ON CKT914 (BUS+)?

→ Yes
GO to 12.

→ No
GO to 17.

12 CHECK FOR OPEN BETWEEN DLC C251 AND RESCU MODULE C401a — SCP (+)

1

2

NGS

3

RESCU Module C401a

4

4 Measure the resistance between RESCU module C401a pin 8, circuit 4-GP8 (GY/BK), harness side and DLC

A0004403

C251 pin 2, circuit 4-EG7 (GY/RD), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
 INSTALL a new RESCU module. REFER to [Section 419-05](#). TEST the system for normal operation.

→ **No**
 GO to [I3](#).

I3 CHECK FOR OPEN BETWEEN INTERIOR AJB C283b AND RESCU MODULE C401a — SCP (+)

1

Interior AJB C283b

2

A0004404

2

Measure the resistance between RESCU module C401a pin 8, circuit 4-GP8 (GY/BK), harness side and interior AJB C283b pin 8, circuit 4-GP8 (GY/BK), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
 GO to [I4](#).

→ **No**
 REPAIR circuit 4-GP8 (GY/BK). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

I4 CHECK FOR OPEN BETWEEN INTERIOR AJB C283b AND INTERIOR AJB C283d — SCP (+)

1

Interior AJB C283d

2

2

Measure the resistance between interior AJB C283d pin 16 and interior AJB C283b pin 8, component side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [15](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

15 CHECK FOR OPEN BETWEEN INTERIOR AJB C283d AND JOINT CONNECTOR #4 C223 — SCP (+)

1

Joint Connector #4 C223

2

2

Measure the resistance between interior AJB C283d pin 16, circuit 4-EG1 (GY), harness side and joint connector #4 C223 pin 22, circuit 4-EG1 (GY), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [16](#).

→ **No**
REPAIR circuit 4-EG1 (GY). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

I6 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (+)

1

A0004357

1

Measure the resistance between joint connector #4 C223 pin 22 and pin 20, component side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
REPAIR circuit 4-EG7 (GY/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

I7 CHECK FOR OPEN BETWEEN DLC C251 AND RESCU MODULE C401a — SCP (-)

1

2

NGS

3

RESCU Module C401a

4

A0004406

4

Measure the resistance between RESCU module C401a pin 2, circuit 5-GP8 (BU/YE), harness side and DLC C251 pin 10, circuit 5-EG7 (BU/RD), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new RESCU module. REFER to [Section 419-05](#). TEST the system for normal operation.

→ **No**
GO to [18](#).

18 CHECK FOR OPEN BETWEEN INTERIOR AJB C283b AND RESCU MODULE C401a — SCP (-)

1

Interior AJB C283b

2

2 Measure the resistance between RESCU module C401a pin 2, circuit 5-GP8 (BU/YE), harness side and interior AJB C283b pin 4, circuit 5-GP8 (BU/YE), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [19](#).

→ **No**
REPAIR circuit 5-GP8 (BU/YE). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

19 CHECK FOR OPEN BETWEEN INTERIOR AJB C283b AND INTERIOR AJB C283d — SCP (-)

1

Interior AJB C283d

2

2 Measure the resistance between interior AJB C283d pin 12 and interior AJB C283b pin 4, component side.

A0004408

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [I10](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

I10 CHECK FOR OPEN BETWEEN INTERIOR AJB C283d AND JOINT CONNECTOR #4 C223 — SCP (-)

1

Joint Connector #4 C223

2

A0004361

2

Measure the resistance between interior AJB C283d pin 12, circuit 5-EG1 (BU), harness side and joint connector #4 C223 pin 1, circuit 5-EG1 (BU), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [I11](#).

→ **No**
REPAIR circuit 5-EG1 (BU). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

I11 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (-)

1

1

Measure the resistance between joint connector #4 C223 pin 1 and pin 3, component side.

A0004362

● Is the resistance less than 5 ohms?

→ **Yes**
 REPAIR circuit 5-EG7 (BU/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
 REPAIR joint connector #4 C223. TEST the system for normal operation.

PINPOINT TEST J: THE DRIVER SEAT MODULE (DSM) DOES NOT RESPOND TO THE NGS TESTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
J1 CHECK DSM 341c FOR DAMAGE	
<p>1 </p> <p>2  DSM 341c</p> <p>4  DSM 341c</p> <p>5  NGS</p>	<p>3 Inspect DSM 341c for damage; repair as necessary.</p>

6

7

DATA LINK DIAGNOSTICS

- Was the result received DSM: NO RESPONSE ON CKT914 (BUS+)?

→ Yes
GO to [J2](#).

→ No
GO to [J8](#).

J2 CHECK FOR OPEN BETWEEN DLC C251 AND DSM 341c — SCP (+)

1

2

NGS

3

DSM 341c

4

A0004409

- 4 Measure the resistance between DSM 341c pin 1, circuit 4-AH80 (GY/WH), harness side and DLC C251 pin 2, circuit 4-EG7 (GY/RD), harness side.

- Is the resistance less than 5 ohms?

→ Yes
INSTALL a new DSM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
GO to [J3](#).

J3 CHECK FOR OPEN BETWEEN INTERIOR AJB C283a AND DSM 341c — SCP (+)

1

Interior AJB C283a

2

A0004410

2 Measure the resistance between DSM 341c pin 1, circuit 4-AH80 (GY/WH), harness side and interior AJB C283a pin 16, circuit 4-AH80 (GY/WH), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [J5](#).

→ **No**
GO to [J4](#).

J4 CHECK FOR OPEN BETWEEN IN-LINE C315M AND DSM 341c — SCP (+)

1

In-Line C315

2

A0004411

2 Measure the resistance between DSM 341c pin 1, circuit 4-AH80 (GY/WH), harness side and in-line C315M pin 6, circuit 4-AH80 (GY/WH), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
REPAIR circuit 4-AH80 (GY/WH) between in-line C315F and interior AJB C283a. REFER to [Communication Circuit](#)

[Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR circuit 4-AH80 (GY/WH) between in-line C315M and DSM C341c. REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

J5 CHECK FOR OPEN BETWEEN INTERIOR AJB C283a AND INTERIOR AJB C283d — SCP (+)

1

Interior AJB C283d

2

2 Measure the resistance between interior AJB C283d pin 16 and interior AJB C283a pin 16, component side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
GO to [J6](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

J6 CHECK FOR OPEN BETWEEN INTERIOR AJB C283d AND JOINT CONNECTOR #4 C223 — SCP (+)

1

Joint Connector #4 C223

2

2 Measure the resistance between interior AJB C283d pin 16, circuit 4-EG1 (GY), harness side and joint connector #4 C223 pin 22, circuit 4-EG1 (GY), harness side.

A0004356

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [J7](#).

→ **No**
REPAIR circuit 4-EG1 (GY). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

J7 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (+)

1

A0004357

1 Measure the resistance between joint connector #4 C223 pin 22 and pin 20, component side.

● Is the resistance less than 5 ohms?

→ **Yes**
REPAIR circuit 4-EG7 (GY/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

J8 CHECK FOR OPEN BETWEEN DLC C251 AND DSM 341c — SCP (-)

1

2

NGS

3

DSM 341c

4

A0004413

4

Measure the resistance between DSM 341c pin 9, circuit 5-AH80 (BU/OG), harness side and DLC C251 pin 10, circuit 5-EG7 (BU/RD), harness side.

● Is the resistance less than 5 ohms?

→ Yes

INSTALL a new DSM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ No

GO to [J9](#).

J9 CHECK FOR OPEN BETWEEN INTERIOR AJB C283a AND DSM 341c — SCP (-)

1

Interior AJB C283a

2

A0004414

2

Measure the resistance between DSM 341c pin 9, circuit 5-AH80 (BU/OG), harness side and interior AJB C283a pin 12, circuit 5-AH80 (BU/OG), harness side.

● Is the resistance less than 5 ohms?

→ Yes

GO to [J11](#).

→ **No**
GO to [J10](#).

J10 CHECK FOR OPEN BETWEEN IN-LINE C315M AND DSM 341c — SCP (+)

1

In-Line C315

2

A0004415

2

Measure the resistance between DSM 341c pin 9, circuit 5-AH80 (BU/OG), harness side and in-line C315M pin 13, circuit 5-AH80 (BU/OG), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**

REPAIR circuit 5-AH80 (BU/OG) between in-line C351F and interior AJB C283a. REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**

REPAIR circuit 5-AH80 (BU/OG) between in-line C351M and DSM C341c. REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

J11 CHECK FOR OPEN BETWEEN INTERIOR AJB C283a AND INTERIOR AJB C283d — SCP (-)

1

Interior AJB C283d

2

2

Measure the resistance between interior AJB C283d pin 12 and interior AJB C283a pin 12, component side.

A0004416

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [J12](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

J12 CHECK FOR OPEN BETWEEN INTERIOR AJB C283d AND JOINT CONNECTOR #4 C223 — SCP (-)

1

Joint Connector #4 C223

2

A0004361

2

Measure the resistance between interior AJB C283d pin 12, circuit 5-EG1 (BU), harness side and joint connector #4 C223 pin 1, circuit 5-EG1 (BU), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [J13](#).

→ **No**
REPAIR circuit 5-EG1 (BU). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

J13 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (-)

1

1

Measure the resistance between joint connector #4 C223 pin 1 and pin 3, component side.

A0004362

● Is the resistance less than 5 ohms?

→ **Yes**
REPAIR circuit 5-EG7 (BU/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

PINPOINT TEST K: THE DRIVER DOOR MODULE (DDM) DOES NOT RESPOND TO THE NGS TESTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
K1 CHECK DDM C501a FOR DAMAGE	
<p>1</p>

1

2

NGS

3

DDM C501a

4

Δ0004417

- 4 Measure the resistance between DDM C501a pin 3, circuit 4-EG13 (GY/OG), harness side and DLC C251 pin 2, circuit 4-EG7 (GY/RD), harness side.

- Is the resistance less than 5 ohms?

→ Yes
INSTALL a new DDM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
GO to [K3](#).

K3 CHECK FOR OPEN BETWEEN INTERIOR AJB C283a AND DDM C501a — SCP (+)

1

Interior AJB C283a

2

2

Measure the resistance between DDM C501a pin 3, circuit 4-EG13 (GY/OG), harness side and interior AJB C283a pin 8, circuit 4-EG13 (GY/OG), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [K4](#).

→ **No**
REPAIR circuit 4-EG13 (GY/OG). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

K4 CHECK FOR OPEN BETWEEN INTERIOR AJB C283a AND INTERIOR AJB C283d — SCP (+)

1

Interior AJB C283d

2

2

Measure the resistance between interior AJB C283d pin 16 and interior AJB C283a pin 8, component side.

● Is the resistance less than 5 ohms?

- **Yes**
GO to [K5](#).
- **No**
INSTALL a new AJB. TEST the system for normal operation.

K5 CHECK FOR OPEN BETWEEN INTERIOR AJB C283d AND JOINT CONNECTOR #4 C223 — SCP (+)

1

Joint Connector #4 C223

2

- 2 Measure the resistance between interior AJB C283d pin 16, circuit 4-EG1 (GY), harness side and joint connector #4 C223 pin 22, circuit 4-EG1 (GY), harness side.

● Is the resistance less than 5 ohms?

- **Yes**
GO to [K6](#).
- **No**
REPAIR circuit 4-EG1 (GY). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

K6 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (+)

1

A0004357

- 1 Measure the resistance between joint connector #4 C223 pin 22 and pin 20, component side.

● Is the resistance less than 5 ohms?

- **Yes**
REPAIR circuit 4-EG7 (GY/RD). REFER

to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

K7 CHECK FOR OPEN BETWEEN DLC C251 AND DDM C501a — SCP (-)

1

2

NGS

3

DDM C501a

4

4 Measure the resistance between DDM C501a pin 4, circuit 5-EG13 (BU/BK), harness side and DLC C251 pin 10, circuit 5-EG7 (BU/RD), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
GO to [K8](#).

1

Interior AJB C283a

2

2 Measure the resistance between DDM C501a pin 4, circuit 5-EG13 (BU/BK), harness side and interior AJB C283a pin

A0004421

4, circuit 5-EG13 (BU/BK), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [K9](#).

→ **No**
REPAIR circuit 5-EG13 (BU/BK). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

K9 CHECK FOR OPEN BETWEEN INTERIOR AJB C283a AND INTERIOR AJB C283d — SCP (-)

1

Interior AJB C283d

2

A0004422

2 Measure the resistance between interior AJB C283d pin 12 and interior AJB C283a pin 4, component side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [K10](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

K10 CHECK FOR OPEN BETWEEN INTERIOR AJB C283d AND JOINT CONNECTOR #4 C223 — SCP (-)

1

Joint Connector #4 C223

2

2

Measure the resistance between interior AJB C283d pin 12, circuit 5-EG1 (BU), harness side and joint connector #4 C223 pin 1, circuit 5-EG1 (BU), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [K11](#).

→ **No**
REPAIR circuit 5-EG1 (BU). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

K11 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (-)

1

1

Measure the resistance between joint connector #4 C223 pin 1 and pin 3, component side.

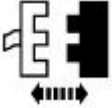

● Is the resistance less than 5 ohms?

→ **Yes**
REPAIR circuit 5-EG7 (BU/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

PINPOINT TEST L: THE REAR ELECTRONIC MODULE (REM) DOES

NOT RESPOND TO THE NGS TESTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
L1 CHECK REM C420b FOR DAMAGE	
<p>1 </p> <p>2  REM C420b</p> <p>4  REM C420b</p> <p>5  NGS</p> <p>6 </p> <p>7  DATA LINK DIAGNOSTICS</p>	<p>3 Inspect REM C420b for damage; repair as necessary.</p> <p>● Was the result received REM: NO RESPONSE ON CKT914 (BUS+)?</p> <p>→ Yes GO to L2.</p> <p>→ No GO to L7.</p>
L2 CHECK FOR OPEN BETWEEN DLC C251 AND REM C420b — SCP (+)	
<p>1 </p>	

2

NGS

3

REM C420b

4

A0004423

4

Measure the resistance between REM C420b pin 1, circuit 4-EG12 (GY/WH), harness side and DLC C251 pin 2, circuit 4-EG7 (GY/RD), harness side.

● Is the resistance less than 5 ohms?

→ Yes

INSTALL a new REM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ No

GO to [L3](#).

L3 CHECK FOR OPEN BETWEEN INTERIOR AJB C283b AND REM C420b — SCP (+)

1

Interior AJB C283b

2

A0004424

2

Measure the resistance between REM C420b pin 1, circuit 4-EG12 (GY/WH), harness side and interior AJB C283b pin 16, circuit 4-EG12 (GY/WH), harness side.

● Is the resistance less than 5 ohms?

→ Yes

GO to [L4](#).

→ **No**
REPAIR circuit 4-EG12 (GY/WH). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

L4 CHECK FOR OPEN BETWEEN INTERIOR AJB C283b AND INTERIOR AJB C283d — SCP (+)

1

Interior AJB C283d

2

A0004425

2 Measure the resistance between interior AJB C283d pin 16 and interior AJB C283b pin 16, component side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
GO to [L5](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

L5 CHECK FOR OPEN BETWEEN INTERIOR AJB C283d AND JOINT CONNECTOR #4 C223 — SCP (+)

1

Joint Connector #4 C223

2

A0004356

2 Measure the resistance between interior AJB C283d pin 16, circuit 4-EG1 (GY), harness side and joint connector #4 C223 pin 22, circuit 4-EG1 (GY), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [L6](#).

→ **No**
REPAIR circuit 4-EG1 (GY). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

L6 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (+)

1

A0004357

1 Measure the resistance between joint connector #4 C223 pin 22 and pin 20, component side.

● Is the resistance less than 5 ohms?

→ **Yes**
REPAIR circuit 4-EG7 (GY/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

L7 CHECK FOR OPEN BETWEEN DLC C251 AND REM C420b — SCP (-)

1

2

NGS

3

REM C420b

4

4 Measure the resistance between REM

A0004426

C420b pin 2, circuit 5-EG12 (BU/OG), harness side and DLC C251 pin 10, circuit 5-EG7 (BU/RD), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
 INSTALL a new REM. REFER to [Section 419-10](#). TEST the system for normal operation..

→ **No**
 GO to [L8](#).

L8 CHECK FOR OPEN BETWEEN INTERIOR AJB C283b AND REM C420b — SCP (-)

1

Interior AJB C283b

2

A0004427

2

Measure the resistance between REM C420b pin 2, circuit 5-EG12 (BU/OG), harness side and interior AJB C283b pin 12, circuit 5-EG12 (BU/OG), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
 GO to [L9](#).

→ **No**
 REPAIR circuit 5-EG12 (BU/OG). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

L9 CHECK FOR OPEN BETWEEN INTERIOR AJB C283b AND INTERIOR AJB C283d — SCP (-)

1

Interior AJB C283d

2

2

Measure the resistance between interior AJB C283d pin 12 and interior AJB C283b pin 12, component side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [L10](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

L10 CHECK FOR OPEN BETWEEN INTERIOR AJB C283d AND JOINT CONNECTOR #4 C223 — SCP (-)

1

Joint Connector #4 C223

2

2

Measure the resistance between interior AJB C283d pin 12, circuit 5-EG1 (BU), harness side and joint connector #4 C223 pin 1, circuit 5-EG1 (BU), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [L11](#).

→ **No**
REPAIR circuit 5-EG1 (BU). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

L11 CHECK FOR OPEN BETWEEN JOINT CONNECTOR #4 C223 PINS — SCP (-)

1

1

Measure the resistance between joint connector #4 C223 pin 1 and pin 3, component side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
REPAIR circuit 5-EG7 (BU/RD). REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR joint connector #4 C223. TEST the system for normal operation.

PINPOINT TEST M: NO ISO 9141 NETWORK COMMUNICATION

CONDITIONS	DETAILS/RESULTS/ACTIONS
M1 CHECK CIRCUIT 4-EE10 (GY/BK) FOR SHORT TO VOLTAGE AND GROUND	
<p>1</p> <p>2</p>	<p>2</p> <p>Measure the voltage between DLC C251 pin 7, circuit 4-EE10 (GY/BK), harness side and DLC C251 pin 4, circuit 31-ED6 (BK), harness side; and between DLC C251 pin 7, circuit 4-EE10 (GY/BK), harness side and DLC C251 pin 16, circuit 29-ED6 (OG/YE), harness side.</p> <p>● Is the voltage zero volts in either measurement?</p> <p>→ Yes GO to M2.</p>

→ **No**
INSTALL a new RCM. REFER to [Section 501-20B](#). TEST the system for normal operation.

M2 CHECK CIRCUIT ANTI-LOCK BRAKE CONTROL MODULE FOR THE SOURCE OF THE CONCERN

1

2

3

4

A0004429

2 Disconnect the anti-lock brake control module with or without traction control C135 or the stability assist module C155.

4 Measure the voltage between DLC C251 pin 7, circuit 4-EE10 (GY/BK), harness side and DLC C251 pin 4, circuit 31-ED6 (BK), harness side; and between DLC C251 pin 7, circuit 4-EE10 (GY/BK), harness side and DLC C251 pin 16, circuit 29-ED6 (OG/YE), harness side.

● Is the voltage zero volts in either measurement?

→ **Yes**
GO to [M3](#).

→ **No**
INSTALL a new anti-lock brake control module or stability assist module. REFER to [Section 206-09A](#), [Section 206-09B](#), or [Section 206-09C](#).

M3 CHECK CIRCUITS 4-EE10 (GY/BK), 4-EE6 (GY), AND 4-EE1 (GY) FOR SHORT TO VOLTAGE AND GROUND

1

2

In-Line C211

3

4

A0004429

4

Measure the voltage between DLC C251 pin 7, circuit 4-EE10 (GY/BK), harness side and DLC C251 pin 4, circuit 31-ED6 (BK), harness side; and between DLC C251 pin 7, circuit 4-EE10 (GY/BK), harness side and DLC C251 pin 16, circuit 29-ED6 (OG/YE), harness side.

● Is the voltage greater than 10 volts in either measurement?

→ **Yes**
GO to [M4](#).

→ **No**
REPAIR circuit 4-EE6 (GY) between the in-line C211F and anti-lock brake control module with or without traction control C135 or the stability assist module C155. TEST the system for normal operation.

M4 CHECK CIRCUITS 4-EE10 (GY/BK), 4-EE6 (GY), AND 4-EE1 (GY) FOR SHORT TO VOLTAGE AND GROUND

1

2

In-Line C212

3

4

4

Measure the voltage between DLC C251 pin 7, circuit 4-EE10 (GY/BK), harness side and DLC C251 pin 4, circuit 31-ED6 (BK), harness side; and between DLC C251 pin 7, circuit 4-EE10 (GY/BK), harness side and DLC C251 pin 16, circuit 29-ED6 (OG/YE), harness side.

A0004429

- Is the voltage greater than 10 volts in either measurement?

→ **Yes**

REPAIR circuit 4-EE10 (GY/BK) between in-line C212M and DLC C251. TEST the system for normal operation.

→ **No**

REPAIR Circuits 4-EE10 (GY/BK), 4-EE1 (GY), and 4-EE6 (GY) between the RCM C310a, in-line C211M, and in-line C212F. TEST the system for normal operation.

PINPOINT TEST N: NO SCP NETWORK COMMUNICATION

CONDITIONS	DETAILS/RESULTS/ACTIONS
N1 CHECK NGS TESTER PINS FOR DAMAGE	
	<p>1 Inspect NGS Tester pins for damage.</p> <ul style="list-style-type: none"> ● Are the NGS Tester pins OK? <p>→ Yes GO to N2.</p> <p>→ No REPAIR the NGS Tester terminals. TEST the system for normal operation.</p>
N2 CHECK DLC C251 PINS 2 AND 10 FOR DAMAGE	
<p>1</p> 	<p>2 Inspect the DLC C251 pins for damage.</p> <ul style="list-style-type: none"> ● Are the pins OK? <p>→ Yes GO to N3.</p>

→ **No**
REPAIR the DLC C251. TEST the system for normal operation.

N3 CHECK CIRCUIT 4-EG7 (GY/RD) AND CIRCUIT 5-EG7 (BU/RD) FOR OPEN — JOINT CONNECTOR #4 C223 DISCONNECTED

1

Joint Connector #4 C223

2

A0004430

3

A0004431

2 Measure the resistance between joint connector #4 C223 pin 20, circuit 4-EG7 (GY/RD), harness side and DLC C251 pin 2, circuit 4-EG7 (GY/RD), harness side.

3 Measure the resistance between joint connector #4 C223 pin 3, circuit 5-EG7 (BU/RD), harness side and DLC C251 pin 10, circuit 5-EG7 (BU/RD), harness side.

- Are the resistances less than 5 ohms?

→ **Yes**
GO to [N4](#).

→ **No**
REPAIR the circuit(s) in question between joint connector #4 C223 and DLC C251. REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

N4 CHECK FOR OPENS IN JOINT CONNECTOR #4 C223

1

1

Measure the resistance between joint connector #4 C223 pin 20 and pin 22, component side.

A0004357

2

A0004362

2 Measure the resistance between joint connector #4 C223 pin 3 and pin 1, component side.

• Are the resistances less than 5 ohms?

→ Yes
GO to [N5](#).

→ No
REPAIR joint connector #4 C223. TEST the system for normal operation.

N5 CHECK SCP COMMUNICATIONS WITH INTERIOR AJB C283d DISCONNECTED

1

Joint Connector #4 C223

2

Interior AJB C283d

3

4

DATA LINK DIAGNOSTICS

- Did only the ACM, ICM, DATC, and the SCLM (if equipped with manual transmission) pass the DATA LINK DIAGNOSTICS test?

→ **Yes**
GO to [N12](#).

→ **No**
GO to [N6](#).

N6 CHECK SCP COMMUNICATIONS WITH ACM C240a DISCONNECTED

1

2

ACM C240a

3

4

DATA LINK DIAGNOSTICS

- Did only the ICM, DATC, and the SCLM (if equipped with manual transmission) pass the DATA LINK DIAGNOSTICS test?

→ **Yes**
INSTALL a new ACM. REFER to [Section 415-01](#). TEST the system for normal operation.

→ **No**
If equipped with the SCLM, GO to [N7](#).

If not equipped with the SCLM, GO to [N9](#).

N7 CHECK SCP COMMUNICATIONS WITH SCLU C267 DISCONNECTED

1

2

SCLM C267

3

4

DATA LINK DIAGNOSTICS

- Did only the ICM and DATC pass the DATA LINK DIAGNOSTICS test?

→ **Yes**
 INSTALL a new SCLM. For additional information, REFER to [Section 211-05](#). TEST the system for normal operation.

→ **No**
 GO to [N8](#).

N8 CHECK SCP COMMUNICATIONS WITH IN-LINE C248 DISCONNECTED

1

2

In-Line C248

3

4

DATA LINK DIAGNOSTICS

- Did only the ICM and DATC pass the DATA LINK DIAGNOSTICS test?

→ **Yes**
 REPAIR the circuits in question between

in-line C248F and SCLM C267. REFER to [Communication Circuit Wiring Repair](#) in the section. TEST the system for normal operation.

→ **No**
GO to [N9](#).

N9 CHECK SCP COMMUNICATIONS WITH DATC C228 DISCONNECTED

1

2

DATC C228

3

4

DATA LINK DIAGNOSTICS

- Did only the ICM pass the DATA LINK DIAGNOSTICS test?

→ **Yes**
INSTALL a new DATC. REFER to [Section 412-00](#). TEST the system for normal operation.

→ **No**
GO to [N10](#).

N10 CHECK INSTRUMENT CLUSTER FOR THE SOURCE OF THE CONCERN

1

2

Instrument Cluster C220b

3

4

A0004789

5

A0004790

4

Measure the voltage between DLC C251 pin 2, circuit 4-EG7 (GY/RD), harness side and DLC C251 pin 4, circuit 31-ED6 (BK), harness side; and between DLC C251 pin 2, circuit 4-EG7 (GY/RD), harness side and DLC C251 pin 16, circuit 29-ED6 (OG/YE).

5

Measure the voltage between DLC C251 pin 10, circuit 5-EG7 (BU/RD), harness side and DLC C251 pin 4, circuit 31-ED6 (BK), harness side; and between DLC C251 pin 10, circuit 5-EG7 (BU/RD), harness side and DLC C251 pin 16, circuit 29-ED6 (OG/YE).

• Is any voltage indicated?

→ Yes
GO to [N11](#).

→ No
INSTALL a new instrument cluster.
REFER to [Section 413-01](#). TEST the system for normal operation.

N11 CHECK SCP CIRCUITS FOR THE SHORT TO VOLTAGE AND GROUND

1

2

Joint Connector #4 C223

3

4

4

Using the following table, measure the voltage between joint connector #4 C223

A0004432

A0004433

pins, harness side and DLC C251 pin 4, circuit 31-ED6 (BK), harness side; and between joint connector #4 C223 pins, harness side and DLC C251 pin 16, circuit 29-ED6 (OG/YE).

Pin	Circuit
17 (if equipped with SCLM)	4-GL58 (GY/OG)
18	4-EG10 (GY/BK)
19	4-FA10 (GY/BK)
20	4-EG7 (GY/RD)
21	4-EG8 (GY/VT)
22	4-EG1 (GY)

5 Using the following table, measure the voltage between joint connector #4 C223 pins, harness side and DLC C251 pin 4, circuit 31-ED6 (BK), harness side; and between joint connector #4 C223 pins, harness side and DLC C251 pin 16, circuit 29-ED6 (OG/YE).

Pin	Circuit
6 (if equipped with SCLM)	5-GL58 (BU/BK)
5	5-EG10 (BU/YE)
4	5-FA10 (BU/YE)
3	5-EG7 (BU/RD)
2	5-EG8 (BU/WH)
1	5-EG1 (BU)

- Is any voltage indicated for any measurement?

→ Yes

REPAIR the circuit(s) in question between joint connector #4 C223 and in-line C248M (if equipped with SCLM), ACM C240a, instrument cluster C220b, DATC C228, interior AJB C283d, or DLC C251. REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

→ No

REPAIR joint connector #4 C223. TEST the system for normal operation.

N12 CHECK SCP COMMUNICATIONS WITH INTERIOR AJB C283a DISCONNECTED

1

2

Interior AJB C283d

3

Interior AJB C283a

4

5

DATA LINK DIAGNOSTICS

- Did only the DDM and DSM fail the DATA LINK DIAGNOSTICS test (RESCU module, DSM, and SCLM are optional modules and will fail if not equipped on the vehicle)?

→ Yes
GO to [N16](#).

→ No
GO to [N13](#).

N13 CHECK SCP COMMUNICATIONS WITH DDM C501 DISCONNECTED

1

2

Interior AJB C283a

3

DDM C501

4

5

DATA LINK DIAGNOSTICS

- Did only the DDM fail the DATA LINK DIAGNOSTICS test (RESCU module, DSM, and SCLM are optional modules and will fail if not equipped on the vehicle)?

→ **Yes**
 INSTALL a new DDM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
 If equipped with the DSM, GO to [N14](#).
 If not equipped with the DSM, GO to [N15](#).

N14 CHECK SCP COMMUNICATIONS WITH DSM C341c DISCONNECTED

1

2

DSM C341c

3

4

DATA LINK DIAGNOSTICS

- Did only the DSM and DDM fail the

DATA LINK DIAGNOSTICS test (RESCU module, DSM, and SCLM are optional modules and will fail if not equipped on the vehicle)?

→ **Yes**
INSTALL a new DSM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
GO to [N15](#).

N15 CHECK SCP COMMUNICATIONS WITH IN-LINE C315 DISCONNECTED

1

2

In-Line C315

3

4

DATA LINK DIAGNOSTICS

● **Did only the DDM and DSM fail the DATA LINK DIAGNOSTICS test (RESCU module, DSM, and SCLM are optional modules and will fail if not equipped on the vehicle)?**

→ **Yes**
REPAIR the circuit in question between in-line C315M and DSM C341c. TEST the system for normal operation.

→ **No**
REPAIR the circuit(s) in question between interior AJB C283a and in-line C315F (if equipped with DSM) or DDM. REFER to [Communication Circuit Wiring Repair](#) in this section. TEST the system for normal operation.

N16 CHECK SCP COMMUNICATIONS WITH INTERIOR AJB C283b DISCONNECTED

1

2

Interior AJB C283a

3

Interior AJB C283b

4

5

DATA LINK DIAGNOSTICS

- Did only the REM and RESC fail the DATA LINK DIAGNOSTICS test (RESCU module, DSM, and SCLM are optional modules and will fail if not equipped on the vehicle)?

→ Yes
GO to [N17](#).

→ No
GO to [N19](#).

N17 CHECK SCP COMMUNICATIONS WITH REM C420b DISCONNECTED

1

2

Interior AJB C283b

3

REM C420b

4

5

DATA LINK DIAGNOSTICS

- Did only the REM fail the DATA LINK DIAGNOSTICS test (RESCU module, DSM, and SCLM are optional modules and will fail if not equipped on the vehicle)?

→ Yes

INSTALL a new REM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ No

If equipped with the RESCU module, GO to [N18](#).

If not equipped with the RESCU module, REPAIR Circuits 4-EG12 (GY/WH) and 5-EG12 (BU/OG). TEST the system for normal operation.

N18 CHECK SCP COMMUNICATIONS WITH RESCU MODULE C401a DISCONNECTED

1

2

RESCU Module C401a

3

4

DATA LINK DIAGNOSTICS

- Did only the RESC and REM fail the DATA LINK DIAGNOSTICS test (DSM, and SCLM are optional

modules and will fail if not equipped on the vehicle)?

→ **Yes**
INSTALL a new RESCU module. REFER to [Section 419-05](#). TEST the system for normal operation.

→ **No**
REPAIR circuits 4-GP8 (GY/BK) and 5-GP8 (BU/YE). TEST the system for normal operation.

N19 CHECK SCP COMMUNICATIONS WITH INTERIOR AJB C283c DISCONNECTED

1

2

Interior AJB C283b

3

Interior AJB C283c

4

5

DATA LINK DIAGNOSTICS

● Did only the ABS, GEM, and PCM fail the DATA LINK DIAGNOSTICS test (RESCU module, DSM, and SCLM are optional modules and will fail if not equipped on the vehicle)?

→ **Yes**
GO to [N20](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

N20 CHECK SCP COMMUNICATIONS WITH FEM C201c DISCONNECTED

1

2

Interior AJB C283c

3

FEM C201c

4

5

DATA LINK DIAGNOSTICS

- Did only the GEM fail the DATA LINK DIAGNOSTICS test (RESCU module, DSM, and SCLM are optional modules and will fail if not equipped on the vehicle)?

→ **Yes**
 INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
 GO to [N21](#).

N21 CHECK SCP COMMUNICATIONS WITH ANTI-LOCK BRAKE CONTROL MODULE C135 OR C155 DISCONNECTED

1

2

3

2 Disconnect the anti-lock brake control module with or without traction control C135 or the stability assist module C155.

4

DATA LINK DIAGNOSTICS

- Did only the ABS and GEM fail the DATA LINK DIAGNOSTICS test (RESCU module, DSM, and SCLM are optional modules and will fail if not equipped on the vehicle)?

→ Yes

INSTALL a new anti-lock brake control module or stability assist module. REFER to [Section 206-09A](#), [Section 206-09B](#), or [Section 206-09C](#).

→ No

GO to [N22](#).

N22 CHECK SCP COMMUNICATIONS WITH FEM C201c DISCONNECTED

1

2

PCM C175a

3

4

DATA LINK DIAGNOSTICS

- Did only the GEM, PCM, and the ABS fail the DATA LINK DIAGNOSTICS test (RESCU module, DSM, and SCLM are optional modules and will fail if not equipped on the vehicle)?

→ Yes

INSTALL a new PCM. REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual. TEST the system for normal operation.

	<p>→ No REPAIR the circuit(s) in question between interior AJB C283c and FEM C201c, PCM C175a, anti-lock brake control module C135 or stability assist C155. REPAIR circuit 4-CF53 (GY/WH) between interior AJB C283c and the ABS test connector C126. REFER to Communication Circuit Wiring Repair in the section. TEST the system for normal operation.</p>
--	---

PINPOINT TEST O: NO MODULE / NETWORK COMMUNICATION — NO POWER TO THE NGS TESTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
O1 CHECK NGS TESTER PINS FOR DAMAGE	
	<p>1 Inspect New Generation STAR (NGS) Tester pins.</p> <ul style="list-style-type: none"> ● Are the pins OK? <p>→ Yes GO to O2.</p> <p>→ No REPAIR NGS Tester pins. TEST the system for normal operation.</p>
O2 CHECK DLC C251 FOR DAMAGE	
<p>1</p> 	<p>2 Inspect the DLC C251 pins for damage.</p> <ul style="list-style-type: none"> ● Are the pins OK? <p>→ Yes GO to O3.</p> <p>→ No REPAIR DLC C251. TEST the system for normal operation.</p>
O3 CHECK VOLTAGE TO DLC C251 PIN 16 — CIRCUIT 29-ED6 (OG/YE).	
<p>1</p>	<p>1 Measure the voltage between DLC C251 pin 16, circuit 29-ED6 (OG/YE), harness side and ground.</p>

A0004434

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [O4](#).

→ **No**
REPAIR circuit 29-ED6 (OG/YE). TEST the system for normal operation.

O4 CHECK THE DLC GROUND — CIRCUIT 31-ED6 (BK) AND CIRCUIT 91-ED6 (BN)

1

A0004435

1

Measure the resistance between DLC C251 pin 4, circuit 31-ED6 (BK), harness side and ground; and between DLC C251 pin 5, circuit 91-ED6 (BN), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
CHECK NGS Tester. TEST the system for normal operation.

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

Communication Circuit Wiring Repair

Special Tool(s)

1. Disconnect the battery ground cable. Refer to [Section 414-01](#).
2. Strip the wires.

3. **NOTE:** Use rosin core mildly activated (RMA) solder, not acid core solder.

Solder the wires.

1. Install the heat shrink tube.
2. Twist the wires together.
3. Solder the wires together.

4. **NOTE:** Wait for the solder to cool before moving the wires.

Bend the wires back in a straight line.

5. Position the heat shrink tube over the wire repair.
 - Overlap the heat shrink tube on both wires.

6. Use Heat Gun to heat the repaired area until adhesive flows out both ends of the heat shrink tube.

7. Reconnect the battery ground cable.
-

Module Configuration

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052, or equivalent scan tool
 ST1270-A	Flash Cable 418-F120 (007-00531) or equivalent

Principles of Operation

Some modules support the ability to change specified factory configuration settings and preset preference items. The process used to change the settings and customer preference items is module configuration. This vehicle supports two different methods of module configuration.

- Programmable Module Installation (PMI)
- Customer preference items

There are three storage locations for module configuration information. One primary storage location and two secondary (or backup) storage locations.

- Primary location is the memory of the specific module.
- First backup location is the VID block memory of the powertrain control module (PCM).
- Second backup is the As-Built Data Center.

During PMI, the scan tool will attempt to extract the module configuration information from the module to be changed. If this is unsuccessful, the scan tool will use the first backup and attempt to extract the module configuration information from the VID block in the PCM. If this also fails, the scan tool will display instructions to contact the As-Built Data Center. This is the only time the As-Built Data Center should be contacted.

Programmable Module Installation (PMI)

NOTE: If the powertrain control module (PCM) needs to have a powertrain calibration flash programmed, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual. Make sure to use the flash cable when programming calibrations or running a PMI routine on the PCM.

The PMI configuration method is used when a new programmable module is to be installed. During the PMI routine the scan tool attempts to gather two pieces of information:

- Option content information from the old module. (module configuration and customer preference settings)
- The vehicle identification number (VIN) from the PCM.

During PMI the scan tool first looks to the PCM for the VIN number of the vehicle. Once the VIN is retrieved the scan tool will carry out a self-test of the suspect module to determine if the module has been configured.

- If DTC B2477 is present the module does not contain complete configuration information. The PMI routine will then halt and give instructions on how to proceed.
- If DTC B2477 is not present the module will allow the scan tool to retrieve its option content information. The scan tool will then store the option content information and the VIN.

The scan tool can store the combined option content information and VIN for only one module at a time. Once information is stored, the scan tool cannot be used to retrieve any other option content information without erasing the previous option content information. Make sure the new module is on hand for installation before retrieving option content information data from the old module.

After the new module is installed, use the scan tool to restore the option content information into the new module.

Vehicle Identification (VID) Block

NOTE: If the powertrain control module (PCM) needs to have a powertrain calibration flash programmed, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual. Make sure to use the flash cable when programming calibrations or running a PMI routine on the PCM.

NOTE: When carrying out a PMI routine on any non-PCM module, use the OBDII cable.

NOTE: Flash programming powertrain calibrations onto the PCM is different than PMI. It has no effect on the backup data in the VID block memory area of the PCM.

The PCM contains a memory area called a vehicle identification (VID) block. A portion of the VID block is used to store the backup data for each programmable module on the vehicle.

The VID block is the first backup of information when using the PMI configuration method. If the scan tool cannot retrieve option content information from the suspect module, the scan tool will attempt to extract backup information from the VID block of the PCM.

The VID block is not related to or effected by the powertrain calibration information stored in the PCM. If a new powertrain calibration has been flashed onto the PCM, the VID block will not be affected.

If using the PMI routine to install a new PCM, the scan tool will reprogram only VID information. The engine calibration information may still need to be flashed. For more information, refer to the powertrain control emissions diagnosis (PC/ED) manual for flash programming information.

As-Built Data Center

The As-Built Data Center keeps a record of the vehicle configuration in a database retrievable using the VIN. The As-Built Data Center records the applicable module configurations stored in each module before the vehicle leaves the factory. The As-Built Data Center will always reflect the original build of the vehicle as it left the factory. Only contact the As-Built Data Center when directed to do so by the scan tool.

Customer Preference Items

This method is used to enable or disable module-controlled items or systems to suit the preference of

the customer. Not all features controlled by a module are listed in this configuration method. Refer to the Module Configuration Index in this section for a list of features per module.

If an item is changed using the customer preference items configuration method, the changed information will not be stored in the PCM VID block. The VID block will retain the original settings as they were recorded when the vehicle left the factory.

Inspection and Verification

1. Visually inspect for obvious signs of electrical damage. Refer to the following chart:

Visual Inspection Chart

Electrical
<ul style="list-style-type: none"> ● Damaged wiring harness ● Loose or corroded connectors ● Anti-lock brake control module (ABS) ● Rear electronics module (REM) ● Front electronics module (FEM) ● Driver door module (DDM) ● Instrument cluster module (ICM) ● Message center module (MCM) ● Dual automatic temperature control (DATC) module ● Audio control module (ACM) ● Remote emergency satellite cellular unit (RESCU) module

2. If the concern remains after inspection, connect the scan tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the scan tool menu. If the scan tool does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch is in RUN position.
3. If the scan tool still does not communicate with the vehicle, refer to [Section 418-00](#).
4. Refer to the Symptom Chart.

Module Configuration Index

NOTE: Do not contact the As-Built Data Center unless the scan tool instructs you to do so. The scan tool will not allow you to use as-built data information unless the scan tool first prompts you for the As-Built Data Center information.

Module Configuration Index

Module	Configuration Method	Customer Preference Items	Manufacturer Options	As-Built Data Center
ABS	PMI	None	—	Supported

Scan Tool Message Index

Scan Tool Message Index

Scan Tool Message	Explanation	Action
Unable to Retrieve VIN from vehicle - Enter the VIN below.	PCM VIN area blank.	Enter VIN using scan tool.
This module has not been configured - Reinstall original module to retrieve config. data - If old module is not available, continue for backup data.	A new module was installed before retrieving configuration data from suspect module. DTC B2477 should be set.	Install the original module and retrieve configuration data. If original module is currently in the vehicle continue with the routine to retrieve backup data from the PCM. Continue with routine to extract backup data from the PCM.
Data previously stored for the following vehicle VIN# - Data will be lost if you continue - Press trigger to continue.	The scan tool has configuration data stored for the same module that could be overwritten.	Make sure that data already stored on scan tool is not needed, then continue with routine to retrieve configuration data.
The module is not configurable - Refer to service manual for info	The module has no configuration information.	Make sure module supports Programmable Module Installation. Refer to Module Configuration Index.
Unable to retrieve (XXX) data from (XXX) module. Unable to locate (XXX) backup data in PCM. Call As-Built Data Center. PCM requires programming.	The suspect module returned DTC B2477 and the PCM did not have backup data.	Make sure module is listed on the Module Configuration Index and that it supports as-built data. Only if As-Built Data Center supports the module, contact the As-Built Data Center.
No data available for module - Select retrieve module config. to obtain vehicle data.	The restore routine was run without retrieving configuration data. The scan tool memory storing configuration data has expired.	Use Programmable Module Installation to retrieve module configuration data.
Unable to retrieve VIN from vehicle - Enter the last five characters of VIN below.	Scan tool was unable to extract VIN for verification.	Enter the last five characters of the VIN.
VIN mismatch for stored data. VIN ##### Current VIN ##### - If you continue, data may not match intended configuration.	The VIN was entered incorrectly. The VIN assigned to the data stored in the scan tool does not match the VIN number of the vehicle that is attempting to utilize the	Exit the routine and attempt to retrieve module configuration data entering the correct VIN.

	configuration data.	
Entered data is not valid	Vehicle data was incorrectly entered. Module configuration data was incorrectly entered.	Refer to As-Built Data Center information and enter the correct module configuration.
Unable to verify download - Refer to service manual for info.	The module will not allow the scan tool to verify the correct information was configured.	Exit the routine and verify correct information manually.
Block data is not valid for the vehicle - Clear block 1 and re-enter.	Block data entered for the module is not correct.	Refer to As-Built Data Center information and enter correct data for each block.
Data is not valid for the entered VIN - Check VIN and re-enter.	The VIN was entered incorrectly.	Exit the routine and repeat the routine entering the correct VIN.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
<ul style="list-style-type: none"> Unable to configure the new module 	<ul style="list-style-type: none"> Module is not programmable. Module. Circuitry. 	<ul style="list-style-type: none"> Make sure the module is listed on the module configuration index. GO to Pinpoint Test A.

Pinpoint Tests

PINPOINT TEST A: UNABLE TO CONFIGURE THE NEW MODULE

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 INITIATE DATA LINK DIAGNOSTICS	
<p>1 </p> <p>2 </p> <p>3 </p> <p>4</p>	<p>4 Carry out the DATA LINK DIAGNOSTICS test.</p>

- Does the module in question appear on the results screen as no response/not equipped?

- **Yes**
REFER to [Section 418-00](#).
- **No**
GO to [A2](#).

A2 CHECK FOR COMMUNICATION WITH THE MODULE

1

- 1 Carry out the suspect module self-test.

- Did the module self-test function correctly?

- **Yes**
RECORD the DTCs and GO to [A3](#).
- **No**
For the FEM, REFER to [Section 501-11](#).
For the ICM, REFER to [Section 413-01](#).
For the MCM, REFER to [Section 413-08](#).
For the ABS, REFER to [Section 206-09A](#).
For the ABS/TC, REFER to [Section 206-09B](#).
For the REM, REFER to [Section 501-11](#).
For the DDM, REFER to [Section 501-14B](#).
For the DATC, REFER to [Section 412-00](#).
For the ACM, REFER to [Section 415-01](#).
For the RESCU, REFER to [Section 419-05](#).

A3 VERIFY THE PROGRAMMABLE ITEM

- 1 Check for the item to be programmed on the module configuration index in this section.

- Does the item appear on the index under the module?

- **Yes**
CARRY OUT the configuration method on the module in question and follow the text screens. REFER to the corresponding configuration method under General Procedures in this section. If the module does not accept configuration, INSTALL a different programmable module.

→ **No**
The item is not configurable.

Programmable Module Installation

NOTE: If using the WDS, select Module Configuration and Programming, then follow the screen prompts.

NOTE: Do not remove the original module from the vehicle until the scan tool has retrieved the modules configuration information.

NOTE: Make sure the module is listed as being supported by Programmable Module Installation in the Module Configuration Index in this section.

NOTE: Make sure to use the flash cable when programming calibrations or running a PMI routine on the PCM.

NOTE: It is important to keep a record of any error message given by the tester during the programmable module installation routine. Additionally, observe the point during the routine that the error message is given and refer to the Scan Tool Message Index in this section. This will help determine what is causing the error message.

1. Select Programmable Module Installation on the scan tool.
 2. Select Retrieve Module Configuration — Old ECU, and follow the text screens until successful.
 3. Install the new module.
 4. Select Restore Module Configuration — New ECU, and follow the text screens until successful.
-

Programmable Module Installation —Using Backup Data

NOTE: If using the WDS, select Module Configuration and Programming, then follow the screen prompts.

NOTE: Make sure to use the flash cable when programming calibrations or running a PMI routine on the PCM.

1. Select Programmable Module Installation on the scan tool.
 2. Select Retrieve Module Configuration — Old ECU. The scan tool will give you a message to reinstall the old module or to continue for backup data. If the module to be replaced will not communicate or has incorrect data, continue and allow the scan tool to find backup data. If the scan tool successfully retrieves the backup data, GO to Step 7 in this procedure. If the scan tool prompts you to contact the As-Built Data Center for backup information, contact the As-Built Data Center and obtain the backup data for the vehicle and continue on.
 3. After the As-Built Data Center backup data is obtained continue with the routine by entering the VIN number of the vehicle when the scan tool prompts you to do so.
 4. The scan tool will prompt you to enter the vehicle data. The vehicle data is listed on the As-Built Data Center sheet in the upper left-hand portion, directly underneath the VIN for the vehicle.
 5. The scan tool will prompt you to enter information for the module that needs to be reprogrammed. Enter all of the data that the scan tool requests. If the scan tool requests information that is not listed on the As-Built Data Center sheet, press NO.
 6. Follow the text screens until all pertinent data is entered and the module data is stored.
 7. Select Restore Module Configuration — New ECU, and follow the text screens until successful.
 8. Manually validate each customer preference item for correct setting. If necessary, ask the customer what setting would be their preference. Refer to the Module Configuration Index in this section for the list of customer preference items.
-

Customer Preference Items

NOTE: If using the WDS, select Module Configuration and Programming, then follow the screen prompts.

NOTE: Make sure module is listed as supporting customer preference items and supports the specific item to be configured in the Module Configuration Index in this section.

1. Select Service Bay Functions on the scan tool.
 2. Select the module that contains the customer preference item to be programmed. Refer to the Module Configuration Index in this section.
 3. Select Customer Preference Items on the scan tool.
 4. Select Module Option Content.
 5. Select the item to be enabled or disabled.
 6. Enable or disable the item as necessary to reflect the customer preference.
-

Torque Specifications

Description	Nm	lb-in
Battery ground cable	10	89

Anti-Theft —Perimeter

The perimeter anti-theft system consists of:

- front door ajar switches (integral part of the latch assemblies)
 - rear door ajar switches (integral part of the latch assemblies)
 - underhood ajar switch
-

Anti-Theft — Perimeter

Refer to Wiring Diagrams Section [419-01A](#) for schematic and connector information.

Special Tool(s)

 ST1137-A	73III Automotive Meter 105-R0057
 ST1217-A	New Generation STAR (NGS) Tester or equivalent 418-F048 (007-00500)

Principles of Operation

Anti-Theft Perimeter Protection Feature

The anti-theft perimeter protection feature is controlled by the front electronic module (FEM), the rear electronic module (REM), and the driver door module (DDM). This feature is configurable to the FEM and REM. The alarm can be armed using the remote transmitter to the DDM module which sends a message via the Standard Corporate Protocol (SCP) communication network to the FEM, or by using the driver door lock switch. The FEM and REM will then monitor all features which will activate the alarm. These features are:

- all door ajar switches
- hood and luggage compartment lid ajar switches
- radio and ignition switch, anti-theft switches

Additionally, a single security hardwire from the FEM to the REM is monitored for an open.

If any of the above features receive any activation once the alarm has been armed, the alarm will activate the visual and audible alerts.

Inspection and Verification

NOTE: If installing a new FEM, REM or DDM, the new module must be reconfigured. Refer to [Section 418-01](#).

1. Verify the customer concern by operating the perimeter anti-theft system.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Hood switch ● Door disarm switch(es) ● Luggage compartment lid disarm switch ● Ignition switch ● Anti-theft horn 	<ul style="list-style-type: none"> ● Central junction box CJB (CJB) Fuses: <ul style="list-style-type: none"> ■ 205 (5A) ■ 207 (5A) ■ 222 (10A) ● Battery junction box (BJB) Fuses: <ul style="list-style-type: none"> ■ 422 (20A) ■ 425 (40A) ● FEM ● REM ● DDM ● Connectors ● Circuitry

3. If the concern remains after the inspection, connect the New Generation STAR (NGS) Tester to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the NGS Tester menu. If the NGS Tester does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
4. If the NGS still does not communicate with the vehicle, refer to the New Generation STAR Tester manual.
5. Carry out the DATA LINK DIAGNOSTIC TEST. If the NGS responds with:
 - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for front electronic module (FEM), go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for rear electronic module (REM), go to Pinpoint Test B.
 - NO RESP/NOT EQUIP for driver door module (DDM), go to Pinpoint Test C.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM or REM.
6. If the DTCs retrieved are related to the concern, go to FEM Diagnostic Trouble Code (DTC) Index or REM Diagnostic Trouble Code (DTC) Index to continue diagnostics.
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

FEM Diagnostic Trouble Code (DTC) Index

B2112	Door Driver Set Switch Stuck Failure	DDM	REFER to Section 501-14B .
B2116	Door Driver Reset Switch Stuck Failure	DDM	REFER to Section 501-14B .
B2320	Mirror Driver Horizontal Feedback Potentiometer Circuit Failure	DDM	REFER to Section 501-09 .
B2324	Mirror Driver Vertical Feedback Potentiometer Circuit Failure	DDM	REFER to Section 501-09 .
B2336	Mirror Switch Assembly Circuit Failure	DDM	REFER to Section 501-09 .
B2425	Remote Keyless Entry Out of Synchronization	DDM	REFER to Section 501-14B .
B2477	Module Configuration Failure	DDM	REFER to Section 418-01 .
U1041	SCP (J1850) Invalid or Missing Data for Vehicle Speed	ABS	CARRY OUT the Anti-Lock Brake Control Module (ABS) self-test. REFER to Section 206-09A .
U1059	SCP (J1850) Invalid or Missing Data for Transmission / Transaxle / PRNDL	PCM	CARRY OUT the Powertrain Control Module (PCM) self-test. REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.

DDM Parameter Identification (PID) Index

PID	Description	Expected Value
ALLOCK	All Doors Lock Sense	notACT, ACTIVE
CCNT	Number Of Continuous DTCs In Module	one count per bit

CNTUNLK	Central Door Unlock Switch Status	notACT, ACTIVE
D_DN_SW	Driver Window Down Switch	OFF, DOWN
D_DSRM	Driver Door Unlock Disarm Switch	NO, YES
D_PWPK	Driver Power Window Peak Current	AMP
D_UP_SW	Driver Window Up Switch	OFF, UP
DMIR_H	Driver Side Mirror Horizontal Motor	notSEN, SENSED
DMIR_V	Driver Mirror Vertical	notSEN, SENSED
DR_LOCK	Driver Door Lock Output State	NO, YES
DR_UNLK	All Doors Unlock Output State	NO, YES
DRLKCYL	Door Lock Cylinder	notACT, ACTIVE
DVMRPSH	Driver Mirror Horizontal Position	one count per bit
DVMRPSV	Driver Mirror Position	one count per bit
LRDN_SW	Left Rear Down Activated	OFF, DOWN
LRUP_SW	Left Rear Up Activated	OFF, UP
MEM1_SW	Memory Recall Switch #1	notACT, ACTIVE
MEM2_SW	Memory Recall Switch #2	notACT, ACTIVE
MEMS_SW	Memory Set Switch	notACT, ACTIVE
MIR_SEL	Power Mirror Select Switch	DRVMIR, PSGMIR, OFF
MIRH_SW	Pow Mir Position Switch - Horizontal	SHORT, RIGHT, LEFT, OFF
MIRV_SW	Power Mir Position Switch - Vertical	SHORT, UP, DOWN, OFF
OTD_SW	One Touch Down Switch	OFF, DOWN
P_DN_SW	Passenger Down Activated	OFF, DOWN
P_UP_SW	Passenger Up Activated	OFF, UP
RRDN_SW	Right Rear Down Activated	OFF, DOWN
RRUP_SW	Right Rear Up Activated	OFF, UP
VBAT	Battery Voltage	Volts

DDM Active Command Index

Active Command	Display	Action
DOOR LOCK CONTROL	DD LOCK	OFF, ON
DOOR LOCK CONTROL	DD UNLOCK	OFF, ON
DOUBLE LOCK COMMAND	DOUBLE LK	UNLOCK, LOCK
FRONT WINDOW CONTROL	DR DOWN	OFF, ON
FRONT WINDOW CONTROL	DR UP	OFF, ON
ONE TOUCH WINDOW DOWN & ACCY DELAY	ONE TOUCH	OFF, ON
POWER MIRROR CONTROL	DR DOWN	OFF, ON
POWER MIRROR CONTROL	DR LEFT	OFF, ON
POWER MIRROR CONTROL	DR RIGHT	OFF, ON
POWER MIRROR CONTROL	DR UP	OFF, ON

Pinpoint Tests

CAUTION: Electronic modules are sensitive to electrical charges. If exposed to these charges, damage may result.

PINPOINT TEST A: NO COMMUNICATION WITH THE FRONT ELECTRONIC MODULE (FEM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK CIRCUITS 29-DK20 (OG/GN) AND 29S-DK22 (OG/YE) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<div style="display: flex; flex-direction: column; align-items: flex-start;"> <div style="margin-bottom: 10px;"> 1  </div> <div style="margin-bottom: 10px;"> 2  <p style="margin-left: 100px;">FEM C201c</p> </div> <div style="margin-bottom: 10px;"> 3  <p style="margin-left: 100px;">FEM C201f</p> </div> <div style="margin-bottom: 10px;"> 4  </div> <div style="margin-bottom: 10px;"> 5  <p style="margin-left: 20px;">A0006297</p> </div> </div>	<div style="margin-top: 20px;"> 5 Measure the voltage between FEM C201c pin 6, circuit 29-DK20 (OG/GN), harness side and ground; and between FEM C201f pin 1, circuit 29S-DK22 (OG/YE) harness side and ground. </div> <div style="margin-top: 20px;"> <ul style="list-style-type: none"> ● Are the voltages greater than 10 volts? </div> <div style="margin-top: 10px;"> <p>→ Yes GO to A2.</p> </div> <div style="margin-top: 10px;"> <p>→ No REPAIR the circuit(s) in question. TEST the system for normal operation.</p> </div>
A2 CHECK CIRCUITS 31-DK20 (BK/RD), 31-DK20A (BK/RD), 31-DK20B (BK/RD), 31-DK20C (BK/RD) AND 31-DK20D (BK/RD) FOR OPENS	
1	

2

FEM C201a

3

A0006298

3 Using the following table, measure the resistance between FEM connectors, harness side and ground:

FEM	Pin	Circuit
C201c	12	31-DK20 (BK/RD)
C201a	11	31-DK20A (BK/RD)
C201a	13	31-DK20B (BK/RD)
C201a	14	31-DK20C (BK/RD)
C201a	15	31-DK20D (BK/RD)

• Are the resistances less than 5 ohms?

→ Yes
REFER to [Section 418-00](#).

→ No
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST B: NO COMMUNICATION WITH THE REAR ELECTRONIC MODULE (REM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK CIRCUIT 29-DK31 (OG/BK) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p> <p>2</p> <p>REM C420d</p> <p>3</p>	

REM C420c

4

5

A0006299

5 Measure the voltage between REM C420d pin 3, circuit 29-DK31 (OG/BK), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [B2](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

B2 CHECK CIRCUITS 29S-DK31 (OG/BK), 31-DK30D (BK), 31-DK30E (BK), 31-DK30F (BK), 31-DK30G (BK) AND 31-DK30H (BK/OG), FOR OPENS

1

2

REM C420b

3

A0006300

3 Using the following table, measure the resistance between REM connectors, harness side and ground:

REM	Pin	Circuit
C420c	13	29S-DK31 (OG/BK)
C420c	12	31-DK30E (BK)
C420c	11	31-DK30D (BK)
C420c	26	31-DK30G (BK)
C420c	25	31-DK30F (BK)

C420b | 12 | 31-DK30H (BK/OG)

- Are the resistances less than 5 ohms?

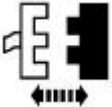

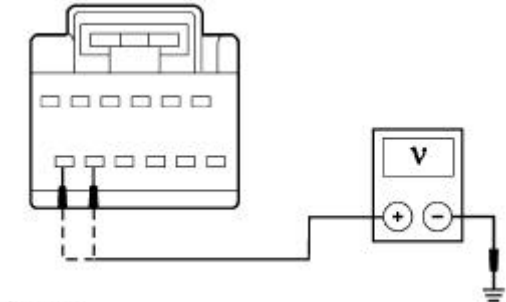

→ Yes

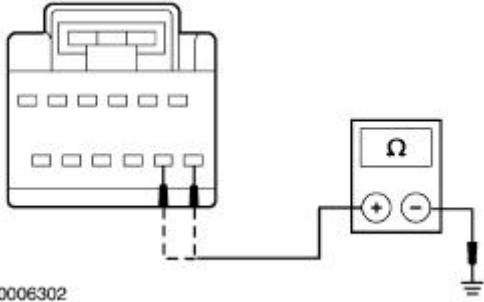

REFER to [Section 418-00](#).

→ No

REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST C: NO COMMUNICATION WITH THE DRIVER DOOR MODULE (DDM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK CIRCUITS 29-AJ80 (OG) AND 29S-AJ86 (OG/BU) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1 </p> <p>2 </p> <p>DDM C501a</p> <p>3 </p> <p>4 </p>	<p>4 Measure the voltage between DDM C501a pin 11, circuit 29-AJ80 (OG), harness side and ground; and between DDM C501a pin 12, circuit 29S-AJ86 (OG/BU), harness side and ground.</p> <ul style="list-style-type: none">● Is the voltage greater than 10 volts? <p>→ Yes GO to C2.</p> <p>→ No</p>

REPAIR the circuit(s) in question. TEST the system for normal operation.	
C2 CHECK CIRCUITS 31-AJ80B (BK/OG) AND 91-AJ80 (BN/BU) FOR OPENS	
<p>1</p>  <p>2</p>  <p>A0006302</p>	<p>2</p> <p>Measure the resistance between DDM C501a pin 7, circuit 91-AJ80 (BN/BU), harness side and ground; and between DDM C501a pin 8, circuit 31-AJ80B (BK/OG), harness side and ground.</p> <p>● Is the resistance less than 5 ohms?</p> <p>→ Yes REFER to Section 418-00.</p> <p>→ No REPAIR the circuit(s) in question. TEST the system for normal operation.</p>

PINPOINT TEST D: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY — LIGHTS FLASH FIVE TIMES WHEN ARMING THE SYSTEM

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST — FEM	<p>1</p> <p>Use the recorded FEM DTCs from the continuous and on-demand self-test.</p> <p>● Are any FEM DTCs recorded?</p> <p>→ Yes If DTC B1519, GO to D5.</p> <p>For all other FEM DTCs, REFER to the FEM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to D2.</p>
D2 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST — REM	

	<p>1 Use the recorded REM DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any REM DTCs recorded? <p>→ Yes REFER to the REM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to D3.</p>
--	--

D3 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST — DDM

	<p>1 Use the recorded DDM DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DDM DTCs recorded? <p>→ Yes REFER to the DDM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to D4.</p>
--	--

D4 CHECK THE INTERIOR COURTESY LAMP OPERATION

	<p>1 Open and close each door, while observing the interior courtesy lamps.</p> <p>2 Open and close the luggage compartment lid, while observing the luggage compartment lamp.</p> <ul style="list-style-type: none"> ● Do the courtesy lamps operate correctly? <p>→ Yes GO to D5.</p> <p>→ No REFER to Section 417-02.</p>
--	--

D5 CHECK FOR A FAULTY HOOD AJAR SWITCH

<p>1 </p> <p>2 </p> <p>Hood Ajar Switch C127</p> <p>3</p>	<p>3 Monitor the FEM PID HOOD_SW, while connecting a fused jumper wire between</p>
---	--

A0003769

hood ajar switch C127 pin 1, circuit 8-GL7 (WH), harness side and hood ajar switch C127 pin 2, circuit 31-GL7 (BK/YE), harness side.

- Does the FEM PID HOOD_SW change from AJAR to CLOSED?

→ **Yes**
INSTALL a new hood ajar switch. CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [D6](#).

D6 CHECK CIRCUIT 31S-GL7 (BK/YE) FOR AN OPEN

1

Hood Ajar Switch C127

2

A0003770

- 2 Measure the resistance between hood ajar switch C127 pin 2, circuit 31-GL7 (BK/YE), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [D7](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

D7 CHECK CIRCUIT 8-GL7 (WH) FOR AN OPEN

1

FEM C201c

2

A0003771

2 Measure the resistance between hood ajar switch C127 pin 2, circuit 8-GL7 (WH), harness side and FEM C201c pin 3, circuit 8-GL7 (WH) harness side.

● Is the resistance less than 5 ohms?

→ **Yes**

Vehicles equipped with manual transmission GO to [D8](#).

All others INSTALL a new FEM. For additional information, REFER to [Section 419-10](#).

CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

D8 CHECK CIRCUIT 91S-GL13 (BK/YE) FOR SHORT TO BATTERY

1

FEM C201f

2

A0003766

2 Measure the voltage between FEM C201f pin 5, circuit 91S-GL13 (BK/YE), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**

GO to [D9](#).

→ **No**

GO to [D10](#).

D9 CHECK REM FOR AN INTERNAL SHORT TO BATTERY

1

2

REM C420d

3

4

A0003766

4 Measure the voltage between FEM C201f pin 5, circuit 91S-GL13 (BK/YE), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

→ **No**
INSTALL a new REM. For additional information, REFER to [Section 419-10](#).
CLEAR the DTCs. REPEAT the self-test.

D10 CHECK REM OPERATION

1

2

FEM C201f

3

REM C420d

4

4 Using a fused jumper wire, jumper REM

A0006303

C420d pin 5, circuit 91S-GL13 (BN) to ground. Using a second fused jumper wire, jumper C420d pin 17, circuit 31S-GL19 (BK/GN) to ground.

- 5 Close all doors, hood and luggage compartment lid.
- 6 Arm the anti-theft system.

● **Do the lights flash five times when the system is armed?**

→ **Yes**
Remove jumper wires. GO to [D11](#).

→ **No**
INSTALL a new REM. For additional information, REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

D11 CHECK CIRCUIT 91S-GL13 (BK/YE) FOR AN OPEN

1

FEM C201f

2

A0003768

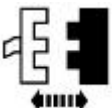

- 2 Measure the resistance between FEM C201f pin 5, circuit 91S-GL13 (BK/YE), harness side and REM C420d pin 5, circuit 91S-GL13 (BK/YE), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new FEM. For additional information, REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST E: THE ALARM SYSTEM DOES NOT ARM/DISARM — USING THE DRIVER SET SWITCH

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 RETRIEVE THE RECORDED DTC CODES — DDM	
	<p>1 Use the recorded DDM DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DDM DTCs recorded? <p>→ Yes If DTC B2112 or B2116, GO to E3.</p> <p>→ No GO to E2.</p>
E2 CHECK THAT THE DRIVER DOOR LOCK AND UNLOCK PIDS READ CORRECTLY	
	<p>1 Monitor the DDM PIDs D_DSRRM and DRLKCYL while turning the key in the driver door lock cylinder to the LOCK and UNLOCK positions.</p> <ul style="list-style-type: none"> ● Do the DDM PID values agree with the LOCK positions? <p>→ Yes INSTALL a new DDM. For additional information, REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No GO to E5.</p>
E3 CHECK CIRCUIT 31S-AA78 (BK/BU) AND 31S-AA79 (BK/WH) FOR SHORT TO GROUND	
<p>1</p>  <p>2</p>  <p style="text-align: center;">Driver Door Lock Actuator C525</p> <p>3</p>	<p>3 Measure the resistance between driver door lock actuator C525 pin 5, circuit 31S-AA79 (BK/WH) harness side and ground; and between C525 pin 7, circuit 31S-AA78 (BK/BU) harness side and ground.</p>

A0003772

- Are the resistances greater than 10,000 ohms?

→ **Yes**
 INSTALL a new driver door lock actuator/ajar switch. For additional information, REFER to [Switch—Front Door Ajar](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 GO to [E4](#).

E4 CHECK THE DDM FOR INTERNAL SHORT TO GROUND

1

DDM C501c

2

A0003773

- 2 Measure the resistance between DDM C501c pin 16, circuit 31S-AA78 (BK/BU), harness side and ground; and between DDM C501c pin 17, circuit 31S-AA79 (BK/WH), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
 INSTALL a new DDM. For additional information, REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

E5 CHECK THE DRIVER SET AND DRIVER RESET SWITCH

1

2

A0003774

2

Monitor the DDM PIDs D_DSRLM and DRLKCYL while connecting a jumper wire between the driver door ajar switch C525 pin 5, circuit 31S-AA79 (BK/WH) harness side and ground; and between C525 pin 7, circuit 31S-AA78 (BK/BU) harness side and ground.

- Do the DDM PID values agree with the LOCK positions?

→ Yes

INSTALL a new driver door lock actuator/ajar switch. For additional information, REFER to [Switch—Front Door Ajar](#). CLEAR the DTCs. REPEAT the self-test.

→ No

GO to [E6](#).

E6 CHECK CIRCUITS 31S-AA78 (BK/BU) AND 31S-AA79 (BK/WH)

1

A0003775

1

Measure the resistance between DDM C501c pin 16, circuit 31S-AA78 (BK/BU), harness side and driver door ajar switch C525 pin 7, circuit 31S-AA78 (BK/BU), harness side; and DDM C501c pin 17, circuit 31S-AA79 (BK/WH), harness side and driver door ajar switch C525 pin 5, circuit 31S-AA79 (BK/WH), harness side.

- Is the resistance less than 5 ohms?

→ Yes

INSTALL a new DDM. For additional information, REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No

REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST F: THE ALARM SYSTEM DOES NOT ARM/DISARM

— USING THE REMOTE TRANSMITTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK THE ALARM SYSTEM USING THE DRIVER SET SWITCH	
	<p>1 ARM and DISARM the alarm system using the driver set switch.</p> <ul style="list-style-type: none"> ● Does the alarm system set and reset correctly? <p>→ Yes GO to F2.</p> <p>→ No GO to Pinpoint Test E.</p>
F2 DETERMINE IF DDM IS RECEIVING CORRECT UNLOCK COMMANDS FROM THE KEY FOB	
<p>2</p> 	<p>1 Remove the key from the ignition.</p> <p>2 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the lock and unlock buttons on the remote transmitter.</p> <ul style="list-style-type: none"> ● Does LAST DATA RECEIVED match the button pressed of the remote transmitter? <p>→ Yes INSTALL a new DDM. For additional information, REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No GO to F3.</p>
F3 REPLACE THE BATTERY IN REMOTE TRANSMITTER AND RETEST	
<p>2</p> 	<p>1 Replace battery in remote transmitter.</p> <p>2 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the lock and unlock buttons on the remote transmitter.</p> <ul style="list-style-type: none"> ● Does LAST DATA RECEIVED match the button pressed of the remote transmitter? <p>→ Yes Fault found as low battery. TEST for normal operation.</p> <p>→ No GO to F4.</p>
F4 REPROGRAM REMOTE TRANSMITTER TO DDM	
<p>NOTE: When carrying out the following procedure, it must be noted that all previous programmed remote transmitters will be erased. The customer needs to be informed that any remote transmitters not present during the programming mode will not operate the vehicle. All remote transmitters must be programmed at the same time.</p>	

Reprogram the remote transmitter to the DDM. For additional information, refer to [Section 501-14B](#).

	<p>1 Monitor the DDM FUNCTION TEST TIC/DATA while pressing the lock and unlock buttons on the remote transmitter.</p> <ul style="list-style-type: none"> ● Does LAST DATA RECEIVED match the button pressed of the remote transmitter? <p>→ Yes SYSTEM is OK. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No PROGRAM a new remote transmitter to the vehicle. For additional information, REFER to Section 501-14B. CLEAR the DTCs. REPEAT the self-test. If the problem still remains, INSTALL a new DDM and program the remote transmitter to the vehicle. For additional information, REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p>

Removal and Installation

NOTE: The rear door ajar switch is an integral part of the door latch assembly.

For additional information, refer to [Section 501-14A](#).

Torque Specifications

Description	Nm	lb-in
Battery ground cable	10	89

Anti-Theft — Passive Anti-Theft System (PATS)

The passive anti-theft system (PATS) contains the following components:

- theft indicator
- encoded ignition key
- transceiver module
- instrument cluster
- powertrain control module (PCM)
- standard corporate protocol (SCP) communication network
- starter relay

The PATS uses radio frequency identification technology to deter a driveaway theft. Passive means that it does not require any activity from the user. This system is known as SecuriLock® in North America, Safeguard® in the U.K. and PATS in continental Europe. This information can be found in customer literature such as the Owner's Literature.

The PATS uses a specially encoded ignition key. Each encoded ignition key contains a permanently installed electronic device called a transponder. Each transponder contains a unique electronic identification code, with over 10 billion billion combinations.

Each encoded ignition key must be programmed into the vehicle instrument cluster before it can be used to start the engine. There are special diagnostic procedures outlined in the manual that must be carried out if the encoded ignition keys need to be replaced.

The encoded key is larger than a traditional ignition key. The key does not require batteries and should last the life of the vehicle.

The transceiver module communicates with the encoded ignition key. The transceiver contains an antenna connected to a small electronics module and is located behind the instrument panel attached to the ignition lock casting. During each vehicle start sequence, the transceiver module reads the encoded ignition key identification code and sends the data to the instrument cluster.

The control functions are contained in the instrument cluster. This module carries out all of the PATS functions such as receiving the identification code from the encoded ignition key and controlling the engine enable. The instrument cluster initiates the key interrogation sequence when the key is inserted into the vehicle ignition switch and also when the vehicle ignition switch is turned to RUN or START.

The PATS uses the PCM to enable or disable the engine. The instrument cluster communicates with the PCM over the SCP communication network in order to enable engine operation. The instrument cluster and the PCM use sophisticated messages in order to prevent a theft. The instrument cluster and the PCM share security data when first installed together that makes them a matched pair. After this security data sharing, these modules will not function in other vehicles. The shared PCM ID is remembered even if the battery is disconnected. The instrument cluster also stores the vehicle key identification code even if the battery is disconnected. There are special diagnostic procedures outlined in this workshop manual that may be carried out if either the instrument cluster or the PCM needs replacement.

All elements of PATS must be functional before the engine is allowed to start. If any of the components are not working correctly, the vehicle will not start.

PATS uses a visual theft indicator. This indicator will prove out for three seconds when the ignition

switch is turned to RUN or START under normal operation. If there is a PATS problem, this indicator will either flash rapidly or glow steadily (for more than three seconds) when the ignition switch is turned to RUN or START.

PATS differs from perimeter anti-theft systems in that PATS enables and disables the engine from starting. If equipped, the perimeter anti-theft system protects the perimeter of the vehicle (doors, hood and trunk) and sounds an alarm.

PATS also disables the starter motor in addition to the PCM disabling the engine. When PATS disables the vehicle, it will neither crank nor start. If the instrument cluster is removed from the vehicle, the engine will not crank.

The starter relay is used as an additional means of disabling the vehicle engine. The starter relay is disabled when the PATS cannot read a valid encoded ignition key at ignition ON. The PATS will not store a diagnostic trouble code (DTC) or flash the theft indicator if a valid encoded ignition key is read but a fault occurs in the starter relay circuit.

The PATS is not compatible with aftermarket remote start system, which allow the vehicle to be started from outside the vehicle. These systems may reduce the vehicle security level, and also may cause no-start issues. Remote start systems must be removed before investigation of PATS-related no start issues.

Anti-Theft — Passive Anti-Theft System (PATS)

Refer to Wiring Diagrams Section [419-01B](#), Anti-Theft for schematic and connector information.

Special Tool(s)

 <p>ST1137-A</p>	<p>73III Automotive Meter 105-R0057</p>
 <p>ST1217-A</p>	<p>New Generation STAR (NGS) Tester 418-F048 (007-00500) or equivalent</p>

Inspection and Verification

NOTE: The instrument cluster must be reconfigured after replacement. Refer to [Section 418-01](#).

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Large metallic objects, devices such as electronic debit transponders or a second ignition key on the same key ring as the PATS ignition key ● Ignition lock cylinder ● Encoded ignition key (PATS key) ● Use of non-encoded ignition key (key without the molded plastic head, non-PATS key) ● Use of a non-programmed encoded ignition key 	<ul style="list-style-type: none"> ● Central junction box (CJB) Fuse 224 (5A) ● Instrument cluster ● PATS transceiver module ● Connectors ● Ignition switch

3. If the concern remains after the inspection, connect the New Generation STAR (NGS) Tester to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the NGS menu. If the NGS Tester does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.

4. If NGS Tester still does not communicate with the vehicle, refer to the New Generation STAR Tester manual.
5. Carry out the DATA LINK DIAGNOSTICS. If NGS Tester responds with:
 - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for instrument cluster module (ICM), go to Pinpoint Test A.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the ICM.
6. If the DTCs retrieved are related to the concern, go to Instrument Cluster Diagnostic Trouble Code (DTC) Index to continue diagnostics.
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

Instrument Cluster Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1201	Fuel Sender Circuit Failure	ICM	REFER to Section 413-01 .

A0003819

10-GL6 (GY/VT), harness side and autolamp day/night sensor C287 pin 2, circuit 10-GL6 (GY/VT), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
 INSTALL a new instrument cluster. Refer to [Section 413-01](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
 REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

B5 CHECK THE AUTOLAMP DAY/NIGHT SENSOR GROUND — CIRCUIT 31-LE42 (BK)

1

2

A0003895

2 Measure the resistance between autolamp day/night sensor C287 pin 1, circuit 31-LE42 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
 GO to [B6](#).

→ **No**
 REPAIR the circuit. REPEAT the self-tast. CLEAR the DTCs.

B6 CHECK THE ANTI -THEFT LED

1

Anti-Theft LED

2

2

Measure the resistance between C287 pin 2 and pin 3 component side.

- Is the resistance greater than 10,000 ohms in one direction and 10-20 ohms in the other direction?

→ Yes

GO to [B7](#).

→ No

REPLACE the anti-theft LED. REFER to [Section 413-01](#). REPEAT the self-test. CLEAR the DTCs. .

B7 CHECK THE AUTOLAMP DAY/NIGHT SENSOR FOR VOLTAGE — CIRCUIT 29-GL6 (OG)

1

2

2

Measure the voltage between autolamp day/night sensor C287 pin 3, circuit 29-GL6 (OG), and ground.

- Is the voltage greater than 10 volts?

→ Yes

INSTALL a new autolamp day/night sensor. Refer to [Section 417-01](#). REPEAT the self-test. CLEAR the DTCs.

→ No

REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST C: THE ALARM SYSTEM DOES NOT OPERATE CORRECTLY — THE VEHICLE STARTS BUT FLASHES RAPIDLY AT KEY ON

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK THE ANTI-THEFT INDICATOR FOR CORRECT OPERATION	
<p>1</p> 	<p>2 Verify the anti-theft indicator proves out correctly.</p> <ul style="list-style-type: none"> • Does the vehicle start with the anti-theft indicator flashing? <p>→ Yes If the vehicle starts, VERIFY proper PCM calibration for vehicle. REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.</p> <p>→ No System is OK.</p>

PINPOINT TEST D: ANTI-THEFT NUMBER OF PROGRAMMED KEYS IS BELOW MINIMUM

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 RETRIEVE THE ICM DTCS	
<p>1</p>  <p>2</p>  <p>NGS</p> <p>3</p>  <p>4</p>  <p>Clear Continuous DTCs</p> <p>5</p>	<p>3 Retrieve and document continuous ICM DTCs.</p>

ICM On-Demand
Self-Test

- Is DTC B1213 the only DTC retrieved?

→ **Yes**

GO to [D2](#).

→ **No**

REPAIR the other DTCs retrieved. REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index. CLEAR the DTCs. REPEAT the instrument cluster self-test.

D2 CHECK FOR PROGRAMMED ENCODED IGNITION KEYS — MONITOR THE ICM PID NUMKEYS

1

1 Monitor the ICM PID NUMKEYS.

- Does the ICM PID NUMKEYS display less than two encoded ignition keys programmed?

→ **Yes**

GO to [D3](#).

→ **No**

System is OK.

D3 PROGRAM ENCODED IGNITION KEYS

2

1 **NOTE:** Two encoded ignition keys must be programmed in order to start the vehicle.

Cut a new encoded ignition key.

2 Turn the ignition switch to RUN. The new encoded ignition key should now be programmed.

3 Program the new encoded ignition key.

- Does the anti-theft indicator illuminate for three seconds and then go out?

→ **Yes**

CLEAR the DTCs. CARRY OUT instrument cluster self-test to verify all codes have been cleared. REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index. If the vehicle is equipped with the valet feature, program the third key (if available) or instruct the customer on how to carry out this service. REFER to [Key Programming—Program a Key Using Two Programmed Keys](#) in this section.

→ **No**
 If the anti-theft indicator is on continuously, REPEAT step D3 with a second new encoded ignition key.

If the theft indicator is flashing, RETRIEVE DTC stored for new fault and REPAIR the other DTC(s) retrieved. REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index

PINPOINT TEST E: DATA MISMATCH (RECEIVE DATA DOES NOT MATCH WHAT WAS EXPECTED)

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 USE THE DTCS FROM THE INSTRUMENT CLUSTER SELF-TEST	
	<p>1 Use the recorded instrument cluster continuous self-test DTCs.</p> <ul style="list-style-type: none"> ● Is DTC B2139 or U1147 recorded? <p>→ Yes GO to E2.</p> <p>→ No System is OK.</p>
E2 CLEAR PCM ID FROM INSTRUMENT CLUSTER AND PCM	
<p>2 </p> <p>3 </p> <p>4 </p> <p>6 </p> <p>7 </p> <p>8 </p>	<p>1 Carry out the security access procedure for the instrument cluster. Refer to Security Access—Procedure.</p> <p>2 NOTE: DO NOT carry out ignition key code erase.</p> <p>Select Ford service function (FSF) card PARAMETER RESET command for instrument cluster.</p> <p>3 Use diagnostic card for PCM active command KEEP ALIVE MEMORY RESET.</p> <p>5 Turn the ignition switch to RUN for three seconds.</p> <p>6 Clear the DTCs.</p> <p>8 Retrieve continuous DTCs.</p>

● **Is DTC B2139, B2162 or U1147 retrieved?**

→ **Yes**

VERIFY PCM calibration is correct for the vehicle. If correct, VERIFY instrument cluster calibration and configuration for the vehicle. If correct, INSTALL a new instrument cluster. Refer to [Section 413-01](#). CYCLE the ignition to RUN using two encoded ignition keys. REPEAT [Pinpoint Test E](#). CLEAR the DTCs. REPEAT instrument cluster self-test. If DTC B2139 or U1147 still exists, REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual. If the vehicle is equipped with the valet feature, program the third key (if available) or instruct the customer on how to carry out this service. REFER to [Key Programming—Program a Key Using Two Programmed Keys](#) in this section.

→ **No**

System is OK. CHECK for any other DTCs. REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.

PINPOINT TEST F: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY — NVM CONFIGURATION FAILURE (NO PCM ID EXCHANGED BETWEEN INSTRUMENT CLUSTER AND PCM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 USE THE DTCS FROM THE INSTRUMENT CLUSTER SELF-TEST	
	<p>1 Use the recorded instrument cluster continuous self-test DTCs.</p> <p>● Is DTC B2141 retrieved?</p> <p>→ Yes GO to F2.</p> <p>→ No System is OK.</p>
F2 CARRY OUT KEEP ALIVE MEMORY RESET FROM PCM	
<p>1</p> 	<p>1 Use diagnostic card for PCM active command — KEEP ALIVE MEMORY RESET.</p> <p>● Did the keep alive memory reset occur?</p> <p>→ Yes GO to F3.</p> <p>→ No REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.</p>
F3 CARRY OUT KEEP ALIVE MEMORY RESET FROM PCM	

1

1 Use diagnostic card for PCM active command — KEEP ALIVE MEMORY RESET.

2

3

3 Leave the key in the RUN position for 30 seconds.

4

5

● Does the vehicle START?

→ Yes
System is OK.

→ No
GO to [F4](#).

F4 RETRIEVE THE INSTRUMENT CLUSTER DTCS

1

Clear Continuous DTCS

2

3

4

4 Retrieve continuous instrument cluster DTCS.

● Is DTC B2141 retrieved?

	<p>→ Yes REPEAT step F2. If the fault persists, VERIFY the PCM calibration. If the calibration is OK, INSTALL a new instrument cluster. REFER to Section 413-01. Cycle the ignition key to RUN using two encoded ignition keys. GO to Pinpoint Test E to initialize the module. REPEAT the self-test. CLEAR the DTCs. If the vehicle is equipped with the valet feature, program the third key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming—Program a Key Using Two Programmed Keys in this section.</p> <p>→ No REFER to the Instrument Cluster Diagnostic Trouble Code (DTC) Index.</p>
--	---

PINPOINT TEST G: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY — PATS IGNITION KEY TRANSPONDER SIGNAL IS NOT RECEIVED OR TRANSPONDER PROGRAMMING FAILED (DAMAGED KEY OR NON-PATS KEY)

CONDITIONS	DETAILS/RESULTS/ACTIONS
	<p>NOTE: Large metallic objects, electronic debit transponder devices or a second key on the same key ring as the PATS ignition key may cause vehicle starting problems and record DTCs under certain conditions. If a fault cannot be identified, examine the customer's key for such objects or devices. If present, inform the customer that they need to keep these objects from touching the PATS ignition key while starting the engine. These objects and devices cannot damage the PATS ignition key, but can cause a momentary problem if they are too close to the key during engine start. If a problem occurs, turn ignition OFF and restart the engine with all other objects on the key ring held away from the ignition key. Check to ensure the encoded ignition key used by the customer is an approved Ford encoded ignition key (encoded ignition keys from Rotunda, Ilco, Curtis, C.E. Marshall, or Strattec are approved Ford encoded ignition keys).</p>
	<p>G1 USE THE DTCS FROM THE INSTRUMENT CLUSTER SELF-TEST</p>
	<p>1 Use the recorded instrument cluster continuous self-test DTCs.</p> <p style="padding-left: 40px;">● Is DTC B1600 or B2431 retrieved?</p> <p>→ Yes GO to G2.</p> <p>→ No If other DTCs are retrieved, REFER to Instrument Cluster Diagnostic Trouble Code (DTC) Index.</p> <p style="padding-left: 40px;">If no DTCs are retrieved, system is OK.</p>
	<p>G2 PROGRAM A NEW ENCODED IGNITION KEY</p>
<p>1</p> 	<p>2 NOTE: Check to make sure the customer and replacement encoded ignition keys are approved Ford encoded PATS ignition keys. Unapproved PATS keys do not always operate correctly over different temperature ranges (encoded ignition keys from Rotunda, Ilco, Curtis, C.E. Marshall, or Strattec are approved encoded ignition keys).</p>

Cut a new encoded ignition key.

3

4 Program the new encoded ignition key. Refer to [Key Programming—Additional Key With One Programmed Key](#).

5

5 Clear the DTCs. Carry out the instrument cluster self-test.

● Is DTC B1600 or B2431 still present?

→ **Yes**
GO to [G3](#).

→ **No**
If no other DTCs are retrieved, system is OK.

If other DTCs are retrieved, REFER to Instrument Cluster Diagnostic Trouble Code (DTC) Index.

G3 INSTALL A NEW PATS TRANSCIEVER

1

2 Install a new PATS transceiver. Refer to [Module—Passive Anti-Theft Transceiver](#).

3

3 **NOTE:** Use the customer's original encoded ignition key, not the encoded ignition key that was cut in the previous step.

4

4 Clear the DTCs. Carry out the instrument cluster self-test.

● Is DTC B1600 or B2431 retrieved?

→ **Yes**
INSTALL a new instrument cluster. REFER to [Section 413-01](#). CYCLE the ignition to RUN using two encoded ignition keys. GO to [Pinpoint Test E](#) to initialize the module. REPEAT the self-test. CLEAR the DTCs. If the vehicle is equipped with the valet feature, program the third key (if available) or instruct the customer on how to carry out this service. REFER to [Key Programming—Program a Key Using Two Programmed Keys](#) in this section.

→ **No**
System is OK.

PINPOINT TEST H: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY — PATS RECEIVED INCORRECT KEY-CODE FROM IGNITION KEY TRANSPONDER (UNPROGRAMMED ENCODED IGNITION KEY)

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: Large metallic objects, electronic debit transponder devices or a second key on the same key ring as the PATS ignition key may cause vehicle starting problems and record DTCs under certain conditions. If a fault cannot be identified, examine the customer's key for such objects or devices. If present, inform the customer that they need to keep these objects from touching the PATS ignition key while starting the engine. These objects and devices cannot damage the PATS ignition key, but can cause a momentary problem if they are too close to the key during engine start. If a problem occurs, turn ignition OFF and restart the engine with all other objects on the key ring held away from the ignition key. Check to ensure the encoded ignition key used by the customer is an approved Ford encoded ignition key (encoded ignition keys from Rotunda, Ilco, Curtis, C.E. Marshall, or Strattec are approved Ford encoded ignition keys).</p>	
<p>H1 USE THE DTCS FROM THE INSTRUMENT CLUSTER SELF-TEST</p>	
	<p>1 Use the recorded instrument cluster continuous self-test DTCs.</p> <ul style="list-style-type: none"> ● Is DTC B1601 recorded? <p>→ Yes GO to H2.</p> <p>→ No System is OK. CHECK all customer encoded ignition keys with instrument cluster self-test to verify all other encoded ignition keys are programmed.</p>
<p>H2 CHECK FOR PROGRAMMED ENCODED IGNITION KEYS — MONITOR THE INSTRUMENT CLUSTER PID NUMKEYS</p>	
<p>1</p> 	<p>1 Monitor the INSTRUMENT CLUSTER PID NUMKEYS.</p> <ul style="list-style-type: none"> ● Does the INSTRUMENT CLUSTER PID NUMKEYS display 8? <p>→ Yes ERASE and REPROGRAM the key codes. REFER to Key Programming—Erase All Key Codes and Program Two Keys. REPEAT the self-test. CLEAR the DTCs. If the vehicle is equipped with the valet feature, program the third key (if available) or instruct the customer on how to carry out this service. REFER to Key Programming—Program a Key Using Two Programmed Keys in this section.</p> <p>→ No GO to H3.</p>
<p>H3 CHECK THE NUMBER OF PROGRAMMED ENCODED IGNITION KEYS AVAILABLE</p>	
	<p>1 Verify there are at least two currently programmed encoded ignition keys available with the vehicle.</p> <ul style="list-style-type: none"> ● Are at least two currently programmed encoded ignition keys available with the vehicle?

→ **Yes**
GO to [H4](#).

→ **No**
CUT new encoded ignition key(s) so that at least two encoded ignition keys are available. PROGRAM the encoded ignition keys; REFER to [Key Programming—Erase All Key Codes and Program Two Keys](#). If the vehicle is equipped with the valet feature, program the third key (if available) or instruct the customer on how to carry out this service. REFER to [Key Programming—Program a Key Using Two Programmed Keys](#) in this section. GO to [H4](#).

H4 VERIFY THE INSTRUMENT CLUSTER PID SPARE_KY INDICATES ENABLE

1

1 Monitor the INSTRUMENT CLUSTER PID SPARE_KY.

● **Does the INSTRUMENT CLUSTER PID SPARE_KY indicate ENABLE?**

→ **Yes**
GO to [H5](#).

→ **No**
ENABLE the PID SPARE KEY to the enable setting. REFER to [Key Programming—Enable/Disable Spare Key Programming](#). REPEAT the self-test. CLEAR the DTCs. Once completed, GO to [H5](#).

H5 CHECK THE ENCODED IGNITION KEYS FOR CORRECT OPERATION

1

2

3

4

2 Start the vehicle using the first encoded ignition key.

3 Start the vehicle with the second ignition key.

● **Does the vehicle start correctly using both encoded ignition keys?**

→ **Yes**
System is OK. If there are additional keys that need to be programmed. REFER to [Key Programming—Program a Key Using Two Programmed Keys](#). If the vehicle is equipped with the valet feature, program the third key (if available) or instruct the customer on how to carry out this service.

REFER to [Key Programming—Program a Key Using Two Programmed Keys](#) in this section.

→ **No**
GO to [H6](#).

H6 RETRIEVE THE INSTRUMENT CLUSTER DTCS — CHECK FOR DTC B1601

1

1 Retrieve and document continuous DTCs.

2

Clear Continuous DTCs

3 Carry out the instrument cluster self-test using both ignition keys from Step H5.

3

● **Is DTC B1601 retrieved?**

→ **Yes**
INSTALL a new instrument cluster. REFER to [Section 413-01](#). CYCLE the ignition to RUN using two encoded ignition keys. GO to [Pinpoint Test E](#) to initialize the vehicle. REPEAT the self-test. CLEAR the DTCs. If the vehicle is equipped with the valet feature, program the third key (if available) or instruct the customer on how to carry out this service. REFER to [Key Programming—Program a Key Using Two Programmed Keys](#) in this section.

→ **No**
System is OK.

If other DTCs are retrieved, REFER to Instrument Cluster Diagnostic Trouble Code (DTC) Index.

PINPOINT TEST I: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY — PATS RECEIVED INVALID FORMAT OF KEY-CODE FROM IGNITION KEY TRANSPONDER (PARTIAL KEY READ)

CONDITIONS	DETAILS/RESULTS/ACTIONS
	<p>NOTE: Large metallic objects, electronic debit transponder devices or a second key on the same key ring as the PATS ignition key may cause vehicle starting problems and record DTCs under certain conditions. If a fault cannot be identified, examine the customer's key for such objects or devices. If present, inform the customer that they need to keep these objects from touching the PATS ignition key while starting the engine. These objects and devices cannot damage the PATS ignition key, but can cause a momentary problem if they are too close to the key during engine start. If a problem occurs, turn ignition OFF and restart the engine with all other objects on the key ring held away from the ignition key. Check to ensure the encoded ignition key used by the customer is an approved Ford encoded ignition key (encoded ignition keys from Rotunda, Ilco, Curtis, C.E. Marshall, or Strattec are approved Ford encoded ignition keys).</p>

I1 USE THE DTCS FROM THE INSTRUMENT CLUSTER SELF-TEST

1 Use the recorded instrument cluster continuous self-test DTCs.

● **Is DTC B1602 retrieved?**

→ **Yes**
GO to [12](#).

→ **No**
System is OK. CHECK all customer encoded ignition keys with instrument cluster self-test to verify all other keys are programmed.

I2 OBTAIN A NEW ENCODED IGNITION KEY

1

2 Cut a new encoded ignition key.

3

4 Program a new encoded ignition key. Refer to [Key Programming—Additional Key With One Programmed Key](#).

5

5 Carry out the instrument cluster self-test.

● **Is DTC B1602 retrieved?**

→ **Yes**
GO to [13](#).

→ **No**
System is OK.

I3 INSTALL A NEW PATS TRANSCIEVER

1

2 Install a new PATS transceiver. Refer to [Module—Passive Anti-Theft Transceiver](#).

3

4 Clear the DTCs. Carry out the instrument cluster self-test.

4

● Are any DTCs retrieved?

→ **Yes**

REFER to Instrument Cluster Diagnostic Trouble Code (DTC) Index.

→ **No**

System is OK.

PINPOINT TEST J: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY — PATS TRANSCEIVER SIGNAL IS NOT RECEIVED (NOT CONNECTED, DAMAGED, OR WIRING)

CONDITIONS	DETAILS/RESULTS/ACTIONS
J1 USE THE DTCS FROM THE INSTRUMENT CLUSTER SELF-TEST	
	<p>1 Use the recorded instrument cluster continuous self-test DTCs.</p> <p>● Is DTC B1681 retrieved?</p> <p>→ Yes GO to J2.</p> <p>→ No System is OK.</p>
J2 INSPECT THE PATS TRANSCEIVER FOR CORRECT INSTALLATION	
<p>1</p> 	<p>2 Verify the PATS transceiver is correctly installed. Refer to Module—Passive Anti-Theft Transceiver.</p> <p>● Was the transceiver correctly installed?</p> <p>→ Yes GO to J3.</p> <p>→ No Correct installation. REPEAT instrument cluster self-test.</p>
J3 CHECK THE PATS TRANSCEIVER FOR VOLTAGE — CIRCUIT 29S-GL36 (OG/BU)	
<p>1</p>	

2

PATS Transceiver C252

3

4

A0003898

4 Measure the voltage between PATS transceiver C252 pin 1, circuit 29S-GL36 (OG/BU), harness side and ground.

• Is the voltage greater than 9 volts?

→ **Yes**
GO to [J4](#).

→ **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

J4 CHECK THE PATS TRANSCEIVER GROUND — CIRCUIT 31-GL36 (BK)

1

2

A0003899

2 Measure the resistance between PATS transceiver C252 pin 2, circuit 31-GL36 (BK), harness side and ground.

• Is the resistance less than 5 ohms?

- **Yes**
GO to [J5](#).
- **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

J5 CHECK THE PATS TRANSCEIVER RECEIVE CIRCUIT FOR VOLTAGE — CIRCUIT 10-GL36 (GY/RD)

1

PATS Transceiver C252

2

3

- 3 Measure the voltage by back probing between PATS transceiver C252 pin 4, circuit 10-GL36 (GY/RD), harness side and ground.

● Is the voltage greater than 9 volts?

- **Yes**
GO to [J7](#).
- **No**
GO to [J6](#).

J6 CHECK THE PATS TRANSCEIVER RECEIVE CIRCUIT FOR SHORT TO GROUND — CIRCUIT 10-GL36 (GY/RD)

1

2

PATS Transceiver C252

3

- 3 Measure the resistance between PATS transceiver C252 pin 4, circuit 10-GL36 (GY/RD), harness side and ground.

A0003901

- Is the resistance greater than 100 ohms?

→ **Yes**
GO to [J7](#).

→ **No**
CHECK circuit 10-GL36 (GY/RD) for short to ground with instrument cluster disconnected.

If the circuit is OK, INSTALL a new instrument cluster. REFER to [Section 413-01](#). CYCLE the ignition key to RUN using two encoded ignition keys. GO to [Pinpoint Test E](#) to initialize the module. REPEAT the self-test. CLEAR the DTCs.

If the circuit is not OK, REPAIR circuit 10-GL36 (GY/RD). REPEAT the self-test. CLEAR the DTCs. If the vehicle is equipped with the valet feature, program the third key (if available) or instruct the customer on how to carry out this service. REFER to [Key Programming—Program a Key Using Two Programmed Keys](#) in this section.

J7 CHECK CIRCUIT 10-GL36 (GY/RD) FOR OPEN

1

2

PATS Transceiver C252

3

Instrument Cluster C220b

4

4 Measure the resistance between PATS

A0003902

transceiver C252 pin 4, circuit 10-GL36 (GY/RD), harness side and instrument cluster C220b pin 5, circuit 10-GL36 (GY/RD), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [J8](#).

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

J8 CHECK THE PATS TRANSCIEVER TRANSMIT CIRCUIT FOR VOLTAGE — CIRCUIT 8-GL36 (WH/RD)

1

2

PATS Transceiver C252

3

Instrument Cluster C220b

4

5

A0003903

5 Measure the voltage by back probing between PATS transceiver C252 pin 3, circuit 8-GL36 (WH/RD), harness side and ground.

● Is the voltage greater than 9 volts?

→ **Yes**
GO to [J10](#).

→ **No**
GO to [J9](#).

J9 CHECK THE PATS TRANSCIEVER TRANSMIT CIRCUIT FOR OPEN — CIRCUIT 8-GL36 (WH/RD)

1

2

PATS Transceiver C252

3

A0003904

3 Measure the resistance between PATS transceiver C252 pin 3, circuit 8-GL36 (WH/RD), harness side and ground.

● Is the resistance greater than 100 ohms?

→ **Yes**
GO to [J10](#).

→ **No**
CHECK circuit 8-GL36 (WH/RD) for short to ground with instrument cluster disconnected.

If the circuit is OK, INSTALL a new instrument cluster. REFER to [Section 413-01](#). CYCLE the ignition to RUN using two encoded ignition keys. GO to [Pinpoint Test E](#) to initialize the module. REPEAT the self-test. CLEAR the DTCs. If the vehicle is equipped with the valet feature, program the third key (if available) or instruct the customer on how to carry out this service. REFER to [Key Programming—Program a Key Using Two Programmed Keys](#) in this section.

If the circuit is not OK, REPAIR circuit 8-

GL36 (WH/RD). REPEAT the self-test.
CLEAR the DTCs.

J10 CHECK THE PATS TRANSMIT CIRCUIT FOR CORRECT OPERATION — CIRCUIT 8-GL36 (WH/RD)

1

1

Trigger the ICM active command RF_ SIGNAL to ON while measuring the voltage by back probing between PATS transceiver C252 pin 3, circuit 8-GL36 (WH/RD), harness side and ground.

- Does the voltage drop from greater than 9 volts to less than 1 volt when the ICM active command RF_ SIGNAL is triggered ON?

→ **Yes**
GO to [J11](#).

→ **No**
CHECK circuit 8-GL36 (WH/RD) for an open between instrument cluster C220b pin 4 and PATS transceiver C252 pin 3.

If the circuit is OK, INSTALL a new instrument cluster. REFER to [Section 413-01](#). CYCLE the ignition to RUN using two encoded ignition keys. GO to [Pinpoint Test E](#) to initialize the module. REPEAT the self-test. CLEAR the DTCs. If the vehicle is equipped with the valet feature, program the third key (if available) or instruct the customer on how to carry out this service. REFER to [Key Programming—Program a Key Using Two Programmed Keys](#) in this section.

If the circuit is not OK, REPAIR circuit 8-GL36 (WH/RD). REPEAT the self-test. CLEAR the DTCs.

J11 CHECK THE PATS SYSTEM WITH A NEW PATS TRANSCIEVER INSTALLED

1

3

2

Install a new PATS transceiver. Refer to [Module—Passive Anti-Theft Transceiver](#).

4

4 Carry out the instrument cluster self-test.

● **Is DTC B1681 retrieved?**

→ **Yes**
GO to [J12](#).

→ **No**
System is OK.

J12 CHECK THE PATS SYSTEM WITH A NEW INSTRUMENT CLUSTER

1

2 Install a new instrument cluster. Refer to [Section 413-01](#). Cycle the ignition to RUN using two encoded ignition keys. GO to Pinpoint Test E to initialize the module. If the vehicle is equipped with the valet feature, program the third key (if available) or instruct the customer on how to carry out this service. REFER to [Key Programming—Program a Key Using Two Programmed Keys](#) in this section.

3

4

4 Clear the DTCs.

5

5 Carry out the instrument cluster self-test.

● **Is DTC B1681 retrieved?**

→ **Yes**
REPAIR circuits 8-GL36 (WH/RD), 10-GL36 (GY/RD), 29S-GL36 (OG/BU), and 31-GL36 (BK). REPEAT the self-test. CLEAR the DTCs.

	<p>→ No If no DTCs are retrieved, the system is OK.</p> <p>If other DTCs are retrieved, REFER to Instrument Cluster Diagnostic Trouble Code (DTC) Index.</p>
--	---

PINPOINT TEST K: THE ANTI-THEFT SYSTEM DOES NOT OPERATE CORRECTLY — ANTENNA NOT CONNECTED OR DEFECTIVE TRANSCEIVER

CONDITIONS	DETAILS/RESULTS/ACTIONS
K1 INSPECT THE PATS TRANSCEIVER FOR CORRECT INSTALLATION	
<p>1 </p> <p>3  NGS</p> <p>4  Instrument Cluster Self-Test</p>	<p>2 Verify the PATS transceiver is correctly installed. REFER to Module—Passive Anti-Theft Transceiver.</p> <p>4 Carry out the instrument cluster self-test.</p> <p>● Is DTC B2103 retrieved?</p> <p>→ Yes INSTALL a new PATS transceiver module. REFER to Module—Passive Anti-Theft Transceiver. REPEAT the instrument cluster self-test. CLEAR the DTCs.</p> <p>→ No System is OK.</p>

PINPOINT TEST L: THE VEHICLE DOES NOT START — THEFT INDICATOR DOES NOT PROVES OUT AND FLASHES RAPIDLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
L1 RECORD THE DTCs FROM THE INSTRUMENT CLUSTER SELF-TEST	

1

2

NGS

3

4

4 Carry out the instrument cluster self-test.

5

5 Use the recorded instrument cluster continuous self-test.

- Is ICM DTC B1213, B1600, B1601, 1602, B1681, B2103, B2139, B2141, B2431 or U1147 retrieved?

→ **Yes**
REPAIR the instrument cluster DTC. Refer to the Instrument Cluster Diagnostic Trouble Code (DTC) Index. REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [L2](#).

L2 CHECK FOR THEFT INDICATOR FLASHING FAULT CODE SEQUENCE 16

1 **NOTE:** The sequence 1-6 will repeat itself.

Check for flashing fault code 16 on the theft indicator.

- When turning ignition to RUN, does the theft indicator flash rapidly for one minute, pause briefly, flash one time, pause briefly and then flash 6 times?

→ **Yes**
GO to [L3](#).

→ **No**
CHECK for other no-start fault.

L3 CARRY OUT PCM DIAGNOSTICS

1 CARRY OUT diagnostics on the PCM module. REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.

● **Does a PCM module concern exist?**

→ **Yes**

REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
REPEAT the self-test. CLEAR the DTCs.

→ **No**

INSTALL a new instrument cluster. REFER to [Section 413-01](#). CYCLE the ignition to RUN using two encoded ignition keys. GO to [Pinpoint Test E](#) to initialize the module. REPEAT the self-test. CLEAR the DTCs. If the vehicle is equipped with the valet feature, program the third key (if available) or instruct the customer on how to carry out this service. REFER to [Key Programming—Program a Key Using Two Programmed Keys](#) in this section.

Security Access —Procedure

Special Tool(s)

 ST1217-A	New Generation STAR (NGS) Tester or equivalent 418-F048 (007-00500)
---	---

NOTE: The security access procedure is utilized to obtain passive anti-theft system (PATS) security access. PATS security access must be granted to erase ignition keys, enable/disable the spare key programming switch or carry out parameter resets for the instrument cluster. The security access procedure invokes an inherent 10 minute time delay prior to granting security access during which time the New Generation STAR (NGS) Tester must remain connected to the vehicle. Once security access has been granted, a security access command menu is displayed that offers various command options.

NOTE: Select only the commands required by the appropriate pinpoint test.

1. Using the Ford Service Function (FSF) card, select the appropriate instrument cluster. Enter SECURITY ACCESS PROCEDURE. This procedure will take 10 minutes to carry out, during which time the the ignition switch must be in RUN and the NGS must be connected to the vehicle.
 2. After the 10-minute security access procedure has been completed, a new menu will be displayed with command options. Select only those functions required before exiting out of this menu. Once exited out of this menu, the security access procedure must be carried out again to select additional commands.
-

Key Programming —Program a Key Using Two Programmed Keys

Special Tool(s)

NOTE: This procedure only works if two or more programmed ignition keys are available and it is desired to program additional key(s). If two keys are not available, follow the procedure in [Key Programming—Erase All Key Codes and Program Two Keys](#).

NOTE: The PID SPARE_KY must be enabled for this procedure to operate. If this Parameter Identification (PID) is not enabled, follow the security access procedure and select Spare Key Programming Switch: Enabled. Refer to [Key Programming—Enable/Disable Spare Key Programming](#).

NOTE: If the programming procedure is successful, the new key(s) will start the vehicle and the THEFT INDICATOR will illuminate for approximately three seconds.

NOTE: If the programming procedure is not successful, the new key(s) will not start the vehicle and the THEFT INDICATOR will flash. If the programming procedure was not successful, repeat the key programming procedure from Step 1. If the failure repeats, check hot at all times in instrument cluster for correct battery voltage. Repair the circuit if voltage is not present. For additional information, refer to Diagnosis and Testing to review diagnostic trouble codes (DTCs) and carry out pinpoint tests as required.

NOTE: A maximum of eight ignition keys can be programmed to a passive anti-theft system (PATS) equipped vehicle. Use INSTRUMENT CLUSTER PID NUMKEYS to determine how many keys are programmed to the vehicle.

NOTE: If the steps are not carried out as outlined, the programming procedure will end.

NOTE: Ignition keys must have correct mechanical key cut for the vehicle and must be a PATS encoded key.

1. Insert the first programmed ignition key into the ignition lock cylinder and turn the ignition switch from OFF to RUN (maintain the ignition switch in RUN for one second).
2. Turn the ignition switch to OFF and remove the first key from the ignition lock cylinder.
3. Within five seconds of turning the ignition switch to OFF, insert the second programmed ignition key into the ignition lock cylinder and turn the ignition switch from OFF to RUN (maintain the ignition switch in RUN for one second).
4. Within five seconds of turning the ignition switch to RUN, turn the ignition switch to OFF and remove the second key from the ignition lock cylinder.
5. Within 10 seconds of turning the ignition lock cylinder to OFF, insert the unprogrammed ignition

key (new key) into the ignition lock cylinder and turn the ignition switch from OFF to RUN (maintain the ignition switch in RUN for one second).

6. If it is desired to program additional key(s), repeat the key programming procedure from the beginning.
-

Key Programming —Erase All Key Codes and Program Two Keys

Special Tool(s)

NOTE: This procedure is used when a customer needs keys programmed into the system and does not have two programmed ignition keys available. This procedure is also useful when programmed ignition key(s) have been lost or a new ignition switch assembly has been installed, and it is desired to erase key(s) from the passive anti-theft system (PATS) memory.

NOTE: This procedure will erase all programmed ignition keys from the vehicle memory and the vehicle will not start until two keys have been reprogrammed to the vehicle.

NOTE: Two PATS encoded keys with the correct mechanical cut must be available to carry out this procedure. One or both of them may be the customer's original keys.

NOTE: If additional (more than two) keys are to be programmed, refer to Key Programming — Program a Key Using Two Programmed Keys. If the remaining keys are with the customer and are not available with the vehicle, then instruct the customer to refer to the owner's literature under the "Programming Spare [SecuriLock ® (North America), Safeguard ® (U.K.) or PATS for all other markets] Keys Procedure" for instructions on programming the remaining keys.

1. Turn the ignition switch from OFF to RUN.
2. Connect the New Generation STAR (NGS) Tester. Follow the SECURITY ACCESS PROCEDURE for instrument cluster to obtain security access.
3. From NGS menu, select IGNITION KEY CODE ERASE.
4. **NOTE:** DO NOT select any additional commands from this menu.

Turn the ignition switch to OFF and disconnect NGS.

5. Insert the first encoded ignition key into the ignition lock cylinder and turn the switch to RUN for three seconds.
6. Insert the second encoded ignition key into the ignition lock cylinder and turn the switch to RUN for three seconds.
7. The vehicle should now start with both ignition keys.

Key Programming —Enable/Disable Spare Key Programming

Special Tool(s)

NOTE: The spare key programming switch is a New Generation STAR (NGS) Tester programmable switch that provides the capability to enable/disable the spare key programming procedure. The spare key programming procedure can be found in the owner's literature and also in this section under [Key Programming—Program a Key Using Two Programmed Keys](#). This programmable switch is provided as a convenience for rental company fleets or other fleet purchasers who may not want the spare key programming procedure available to the vehicle driver.

NOTE: The spare key programming switch state can be viewed by the instrument cluster PID SPARE_KY found on the Diagnostic Card.

1. Insert a programmed ignition key into the ignition lock cylinder and turn the ignition switch to RUN.
2. Enter NGS. Follow the SECURITY ACCESS PROCEDURE. For additional information, refer to [Security Access—Procedure](#) to obtain security access.
3. **NOTE:** The default setting on delivery of all new vehicles is <ENABLE>.

From NGS menu, select SPARE KEY PROGRAMMING SWITCH selection to the desired setting:

<ENABLE> Spare key programming procedure is accessible.

<DISABLE> Spare key programming procedure is not accessible.

Key Programming —Additional Key With One Programmed Key

NOTE: This procedure is used when a customer needs to have an additional key programmed into the vehicle without erasing stored key codes, but does not have two programmed keys available. This procedure is also useful when attempting to determine if an ignition key is defective, as a new key can be installed without erasing keys or without having two programmed keys available.

NOTE: Before programming, the new key must have the correct mechanical cut for the ignition lock.

NOTE: If eight keys are already programmed, this procedure will not allow any further ignition keys to be programmed without erasing all stored key codes first. The number of keys programmed into the system can be determined using the INSTRUMENT CLUSTER PID NUMKEYS.

1. Turn the ignition switch from the OFF position to the RUN position using the new, unprogrammed ignition key.
 2. Enter NGS using the Ford Service Function (FSF) card and enter the appropriate instrument cluster. Follow Security Access to obtain security access. For additional information, refer to [Security Access—Procedure](#).
 3. From the NGS menu Select: IGNITION KEY CODE PROGRAM.
 4. Turn the ignition switch to the OFF position and disconnect NGS.
 5. Attempt to start the engine with the new ignition key. The vehicle engine should start and run normally.
-

Module —Passive Anti-Theft Transceiver

Removal and Installation

1.  **CAUTION:** Electronic modules are sensitive to electrical charges. If exposed to these charges, damage may result.

Disconnect the battery ground cable. Refer to [Section 414-01](#).

2. Remove the instrument panel cluster finish panel. Refer to [Section 501-12](#).
3. Position the passive anti-theft system (PATS) transceiver module aside.
 1. **NOTE:** The ignition must be turned to the RUN position to remove ignition lock cylinder.
 - Push the tab and remove the ignition lock cylinder.
 - Remove the screw.
 - Position the PATS transceiver module aside.

4. Remove the PATS transceiver module.
 1. Disconnect the electrical connector.
 2. Remove the PATS transceiver module.

5. To install, reverse the removal procedure.

Universal Transmitter

The HomeLink® universal transmitter provides a convenient way to replace up to three hand-held transmitters with a single built-in device. The universal transmitter:

- will operate garage doors, gates and home/office lighting and security systems.
 - will actually learn and transmit the radio frequency of up to three hand-held transmitters from any of the systems mentioned above.
 - is an integral part of the left sun visor assembly and is powered by the vehicle battery and charging system.
-

Universal Transmitter

Inspection and Verification

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical damage.

Visual Inspection Chart

Mechanical
<ul style="list-style-type: none"> ● Damaged universal transmitter ● Damaged receiver

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the fault is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
<ul style="list-style-type: none"> ● The universal transmitter is inoperative 	<ul style="list-style-type: none"> ● Universal transmitter. ● Receiver unit. 	<ul style="list-style-type: none"> ● GO to Pinpoint Test A.

Pinpoint Tests

PINPOINT TEST A: THE UNIVERSAL TRANSMITTER IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK LEFT VANITY MIRROR OPERATION	
	<p>1 Check the illumination of the left vanity mirror lamps.</p> <ul style="list-style-type: none"> ● Do the left vanity mirror lamps illuminate?

→ **Yes**
GO to [A2](#).

→ **No**
For additional information, REFER to [Section 417-02](#).

A2 PROGRAM HAND-HELD TRANSMITTER INTO UNIVERSAL TRANSMITTER

1 **NOTE:** If the garage door is equipped with rolling codes, refer to Training a Garage Door Opener Equipped With "Rolling Codes."

Program the universal transmitter; for additional information, refer to [Programming](#).

● **Did the universal transmitter program successfully?**

→ **Yes**
The universal transmitter is OK. VERIFY receiver operation.

→ **No**
REPLACE the left sun visor assembly. TEST the system for normal operation.

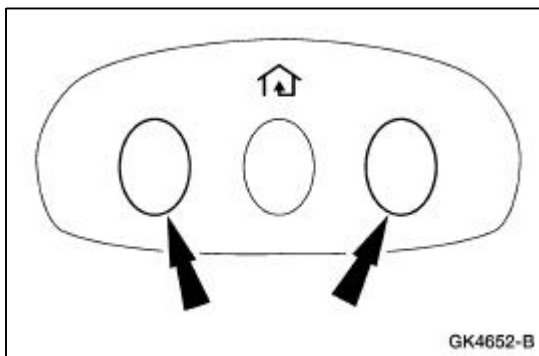

Programming

⚠ WARNING: A garage door opening system that cannot stop or reverse itself after detecting an object in its path does not meet current federal safety standards. To decrease the risk of serious injury or death, do not use this HomeLink® transmitter with a door opening system that lacks stop and reverse features as required by federal standards. This includes any garage door opening system manufactured before April 1, 1982. For more information, call HomeLink® customer assistance at 1-800-355-3515.

1. **⚠ CAUTION:** During this procedure, the system that you are programming will be made to operate. Make sure that people or objects are clear of the garage door or gate being programmed.

Verify the hand-held transmitter is operative.

2. Prepare for programming the universal transmitter by erasing all three channels by holding down the two outside buttons until the red light begins to flash (20-30 seconds). Release both buttons.

3. Select one of the three universal transmitter channels to be programmed by pressing the desired button.
4. Hold the end of the hand-held transmitter 25-51mm (1-2 in) from the front surface of the universal transmitter so that the red light can still be seen.
5. **NOTE:** During programming, the hand-held transmitter may automatically stop transmitting after two seconds, which may not be long enough to program the universal transmitter. If programming this type of hand-held transmitter, continue to hold the button on the universal transmitter while re-pressing the hand-held transmitter button every two seconds (Canada only).

Use both hands to press the hand-held transmitter button and the desired button on the universal transmitter. Do not release either button.

6. Hold down both buttons until the red light on the universal transmitter flashes, first slowly and then rapidly. Release both buttons when the rapid flashing begins. The universal transmitter has successfully learned the new frequency signal and can be used in place of the hand-held transmitter(s).
7. **NOTE:** If the hand-held transmitter appears to program the universal transmitter but does not open the garage door, the garage door opener may have a "code protected" or "rolling code" feature.

To operate, simply press the appropriate button on the universal transmitter. The red light is on while the signal is being transmitted.

Training a Garage Door Opener Equipped With "Rolling Codes"

8. Program the hand-held transmitter to the universal transmitter; for additional information, refer to [Programming](#).
9. Train the garage door opener receiver to recognize the universal transmitter.
 1. Remove the cover panel from the garage door opener receiver.
 2. Locate the training button on the garage door opener receiver. Location and color of the button may vary by garage door opener manufacturer. Refer to the garage door opener instruction manual or call HomeLink® customer assistance at 1-800-355-3515.
 3. Press the training button on the garage door opener receiver for 1-2 seconds.
 4. Press the programmed universal transmitter button for as long as the universal transmitter red light flashes (1-2 seconds). Release the button and re-press the button to confirm that the universal transmitter is trained to the receiver.
 5. The garage door opener should recognize the universal transmitter.

Erasing Channels

1. **NOTE:** Individual channels cannot be erased, but can be reprogrammed using the procedures for programming; for additional information, refer to [Programming](#).

To erase all three programmed channels, hold down the two outside buttons until the red light begins to flash (20-30 seconds). Release both buttons.

Vehicle Emergency Message (VEMS) —Remote Emergency Satellite Cellular Unit (RESCU)

The remote emergency satellite cellular unit (RESCU) system consists of the following:

- global positioning sensor (GPS) antenna 14B286 (located on the package tray).
- RESCU switch assembly (located in the overhead console)
- RESCU module 14B284 (located in the LH quarter panel)

The vehicle emergency message system (VEMS) is a system that allows a user to request emergency assistance (police, ambulance, fire, wrecker) or roadside assistance. Also, if any of the vehicle's airbags are deployed while the VEMS is powered ON, the system automatically issues a call for emergency assistance.

Vehicle Emergency Message (VEMS) —RESCU

Refer to Wiring Diagrams Section [419-05](#), Vehicle Emergency Message for schematic and connector information.

Special Tool(s)

 ST1137-A	73III Automotive Meter or equivalent 105-R0057
 ST1217-A	New Generation STAR (NGS) Tester or equivalent 418-F048 (007-00500)

Principles of Operation

System Description

The remote emergency satellite cellular unit (RESCU) module controls the system. It is hardwired to the vehicle's cellular phone system, radio, restraint control module (RCM), message center, console RESCU switch, and global positioning sensor (GPS) antenna. The RESCU module uses the cellular phone system to place calls to the Lincoln Security Response Center. It mutes the radio upon placing a call and un-mutes the radio when the call is ended. It monitors an input from the RCM to determine if an airbag has deployed and it provides the user with visual feedback during an activation by displaying status messages on the message center.

The console RESCU switch provides the user with two buttons (SOS and i) for activating the system. The console RESCU switch SOS button is used to place a call for emergency assistance and the console RESCU switch i button is used to place a call for roadside assistance.

The GPS antenna receives data from a group of GPS satellites and is used by the RESCU module to determine the location of the vehicle when one of the activation buttons is pressed or an airbag is deployed.

Powering Up

The VEMS powers up when the ignition switch is turned to RUN. During power up, the RESCU module will carry out a check of the system. The system check takes about 15 seconds. If a failure is detected, the RESCU module will display RESCU FAILURE on the message center for five seconds.

If the cellular phone is not detected, the RESCU module will display RESCU FAILURE on the message center for five seconds, followed by CELLULAR PHONE REMOVED and RESCU FEATURE DISABLED. Each of these messages will be displayed on the message center for five seconds.

Pressing SOS, Pressing i, and Airbag Deployment

When the console RESCU switch SOS or i button is pressed, or one of the airbags is deployed, the VEMS will try to take control of the cellular phone system and inform the user that an activation is in progress by displaying SOS REQUEST or INFO REQUEST on the message center. The VEMS also mutes the radio causing PHONE to be displayed on the radio display.

If the VEMS determines that the cellular phone is not correctly connected, the message center will display CELLULAR PHONE REMOVED followed by RESCU FEATURE DISABLED then UNABLE TO PLACE CALL and INSTALL PHONE TO CONTINUE.

If the cellular phone is connected, but the VEMS determines that the phone is not RESCU compatible, NON-RESCU PHONE will be displayed on the message center.

Upon determining that the cellular phone is connected and communication with it can be established, the VEMS checks to see if cellular service is available (a cellular signal is sensed by the vehicle's cellular phone).

If cellular service is not available, the VEMS will continue to check for service for up to two minutes. During this time, NO CELLULAR SIGNAL followed by WAITING TO ACQUIRE are continually displayed in rotation on the message center. If service is still not available after two minutes, UNABLE TO PLACE CALL is displayed on the message center and the activation is terminated.

If service is available, the VEMS places a data call to the Lincoln Security Response Center's central computer and CALL IN PROGRESS is displayed on the message center.

If the call has trouble going through because the cellular system is busy, the VEMS will continue trying to place the call for up to one minute. During this time, CELLULAR SYSTEM BUSY followed by PLEASE WAIT are continuously displayed in rotation on the message center, and then the activation is terminated. If the data call goes through, RINGING RESPONSE CENTER is displayed on the message center.

Once the data call is answered by the response center, the VEMS sends it an electronic data message. This message includes: the type of activation (SOS, i, or airbag), a customer identification number (CID), the most recently recorded location (latitude and longitude), the speed and direction of travel of the vehicle, the time at which the location and speed data was taken, and the system's cellular phone number. While this data is being transmitted, the system updates the message center with SENDING LOCATION DATA.

After the data has been received by the response center, DATA RECEIVED will be displayed on the message center. The call will then be displayed on the message center. The call will then be forwarded to the response center's operator switchboard.

If the data call fails to go through, the VEMS will carry out a voice call redial to the Lincoln Security Response Center's operator switchboard. While this call is being placed, REDIAL IN PROGRESS will be displayed on the message center. While the system is waiting for an operator to answer, WAITING FOR OPERATOR will be displayed on the message center.

Upon answering the call, the operator will attempt to talk with the caller to determine the level of assistance required. The operator will contact the appropriate emergency assistance provider if the call was made due to a console RESCU switch SOS button press or an airbag deployment. If the call was caused by pressing the console RESCU switch i button, the operator will provide directions to the location asked for by the caller.

Throughout the rest of the call CID... AT..., and LON... data that was sent to the response center will be continually displayed in rotation on the message center.

If the call is initiated by pressing the console RESCU switch SOS button or by the deployment of an airbag, the caller has no control of the phone and all communication with the response center operator will occur hands-free. If the call is initiated by pressing the console RESCU switch i button, communication with the response center operator defaults to hands-free but may be switched to private mode (using the phone's internal speaker and microphone) by removing the phone from its cradle.

When the RESCU call is ended, the message center will return to displaying vehicle information and the radio will un-mute and return to its previous operating mode.

Powering Down

When the ignition switch is turned from RUN to OFF, or from RUN to ACC, the VEMS may be powered off so no status messages will be displayed. If the ignition switch is turned from RUN to OFF or ACC while the VEMS is in a call, the call will continue, but the message center will be turned off. After the call is ended, the VEMS will remain on for six minutes. After the six minutes have expired, the VEMS will power OFF. To reuse the VEMS after this time, the ignition switch will have to be turned back to the RUN position.

Inspection and Verification

1. **NOTE:** The RESCU module must be reconfigured upon replacement. For more information refer to [Section 418-01](#).

Verify the customer concern by operating the VEMS. Observe the information and message center display while operating the VEMS. If there is no status information displayed by the information and message center display, refer to [Section 413-08](#).

2. Visually inspect for obvious signs of electrical damage.

Visual Inspection Chart

Electrical
<ul style="list-style-type: none">● BJB Fuse 414 (5A)● CJB Fuse 229 (5A)● Cellular phone system● Circuitry● Console RESCU switch● RESCU module● GPS antenna coaxial cable and connectors● Portable support electronics (PSE) module

3. Verify the cellular phone system has an activated service.
4. If the concern remains after the inspection, connect the New Generation STAR (NGS) Tester to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from NGS tester menu. If NGS tester does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
5. If the NGS tester still does not communicate with the vehicle, refer to the New Generation STAR Tester manual.
6. Carry out the DATA LINK DIAGNOSTICS. If the NGS tester responds with:
 - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for RESCU, go to Pinpoint Test A.

- SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), clear the continuous DTCs and carry out self-test diagnostics for the RESCU module.

7. If the DTCs retrieved are related to the concern, go to RESCU Diagnostic Trouble Code (DTC) Index.
8. If no DTCs related to the concern are retrieved, proceed to the Symptom Chart.

RESCU Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1216	Emergency & Road Side Assistance Switch Circuit Short to Ground	RESCU	GO to Pinpoint Test E .
B1342	ECU is Defective	RESCU	CLEAR the DTCs. RETRIEVE the DTCs. If DTC B1342 is retrieved, INSTALL a new RESCU module. For additional information, REFER to Module—Remote Emergency Satellite Cellular Unit (RESCU) . CLEAR the DTCs. REPEAT the self-test.
B1871	Passenger Air Bag Disable Module Fault	RESCU	GO to Pinpoint Test F .
B1874	Cellular Phone Handset Not Present (Phone transceiver is connected but not responding to any RESCU query)	RESCU	GO to Pinpoint Test G .
B1893	GPS Antenna Open Circuit	RESCU	GO to Pinpoint Test H .
B2102	GPS Antenna Circuit Short to Ground	RESCU	GO to Pinpoint Test J .
B2141	NVM Configuration Failure [No/invalid telephone number(s) present]	RESCU	CLEAR the DTCs. CARRY OUT RESCU On-Demand Self-Test. If DTC B2141 is retrieved, INSTALL a new RESCU module. For additional information, REFER to Module—Remote Emergency Satellite Cellular Unit (RESCU) . CLEAR the DTCs. REPEAT the self-test.
B2477	Module Configuration Failure (No/invalid VIN present or RESCU configuration error)	RESCU	CHECK the RESCU module configuration. For additional information, REFER to Section 418-01 .

RESCU Parameter Identification (PID) Index

PID	Description	Expected Value

• Are the resistances greater than 10,000 ohms?

→ Yes
GO to [C3](#).

→ No
REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

C3 CHECK THE CIRCUITS BETWEEN THE RESCU MODULE AND CELLULAR HANDSET

COIL CORD FOR OPENS

1

A0004048

1

Using the following table, measure the resistance between RESCU module C401b pins, harness side and cellular handset coil cord C318 pins, harness side:

RESCU Module Pin	Circuit	Cellular Handset Coil Cord Pin
6	1-MC10 (WH/BK)	3
7	2-MC10 (GY/BK)	2
16	4-MC10 (GY/BK)	7
15	5-MC10 (BU/YE)	6
14	8-MC10 (WH/BK)	5
8	9-MC10 (BN/YE)	1
4	31-MC10 (BK/RD)	4

- Are the resistances less than 5 ohms?

→ **Yes**

INSTALL a new RESCU module: REFER to [Module—Remote Emergency Satellite Cellular Unit \(RESCU\)](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST D: THE VEMS DOES NOT OPERATE CORRECTLY — AIR BAG WARNING INDICATOR ON CONTINUOUSLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 CHECK THE AIR BAG WARNING INDICATOR — RESCU MODULE DISCONNECTED	
<p>1</p> <p>2</p>	

RESCU Module C401b

3

- Does the air bag warning indicator flash code 25 or code 27?

→ **Yes**
GO to [D2](#).

→ **No**
DIAGNOSE the RCM; REFER to [Section 501-20B](#).

D2 CHECK CIRCUIT 8-GP8 (WH/BK) FOR OPEN

1

3

RCM C310a

4

2 Deactivate the air bags. Refer to [Section 501-20B](#).

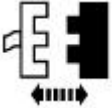

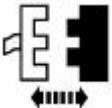

4 Measure the resistance between RESCU module C401b pin 3, circuit 8-GP8 (WH/BK), harness side and RCM C310a pin 17, circuit 8-GP8 (WH/BK), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
DIAGNOSE the RCM; REFER to [Section 501-20B](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST E: EMERGENCY & ROAD SIDE ASSISTANCE SWITCH CIRCUIT SHORT TO GROUND

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 CHECK CONSOLE RESCU SWITCH FOR SHORT TO GROUND	
<p>1 </p> <p>2  Console RESCU switch C915</p> <p>3  NGS</p> <p>4 </p> <p>5 </p>	<p>5 Clear the RESCU DTCs. Carry out the RESCU on-demand self-test.</p> <p>● Is DTC B1216 retrieved?</p> <p>→ Yes GO to E2.</p> <p>→ No INSTALL a new console RESCU switch; REFER to Console—Remote Emergency Satellite Cellular Unit (RESCU) Switch. CLEAR the DTCs. REPEAT the self-test.</p>
E2 CHECK CIRCUIT 8-GP6 (WH/RD) FOR SHORT TO GROUND	
<p>1 </p> <p>2  RESCU Module C401b</p> <p>3</p>	<p>3 Measure the resistance between console</p>

A0004050

RESCU switch C915 pin 6, circuit 8-GP6 (WH/RD), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [E3](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

E3 CHECK CIRCUIT 10-GP6 (GY/RD) FOR SHORT TO GROUND

1

A0004051

1

Measure the resistance between console RESCU switch C915 pin 1, circuit 10-GP6 (GY/RD), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new RESCU module; REFER to [Module—Remote Emergency Satellite Cellular Unit \(RESCU\)](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST F: PASSENGER AIR BAG DISABLE MODULE FAULT

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK CIRCUIT 8-GP8 (WH/BK) FOR SHORT TO GROUND — RCM CONNECTED	
1	

2

RESCU Module C401b

3

A0004052

3

Measure the resistance between RESCU module C401b pin 3, circuit 8-GP8 (WH/BK), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ Yes

INSTALL a new RESCU module; REFER to [Module—Remote Emergency Satellite Cellular Unit \(RESCU\)](#). CLEAR the DTCs. REPEAT the self-test.

→ No

GO to [F2](#).

F2 CHECK CIRCUIT 8-GP8 (WH/BK) FOR SHORT TO GROUND — RCM DISCONNECTED

1

RCM C310a

2

A0004052

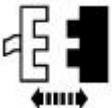

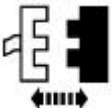

2

Measure the resistance between RESCU module C401b pin 3, circuit 8-GP8 (WH/BK), harness side and ground.

- Is the resistance greater than 10,000 ohms?

- **Yes**
DIAGNOSE the RCM; REFER to [Section 501-20B](#) . CLEAR the DTCs. REPEAT the self-test.
- **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST G: CELLULAR PHONE HANDSET NOT PRESENT (PHONE TRANSCEIVER IS CONNECTED BUT NOT RESPONDING TO ANY RESCU QUERY)

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 CHECK THE CELLULAR PHONE	
<p>1</p> 	<p>2 Operate the cellular phone.</p> <ul style="list-style-type: none"> ● Does the cellular phone operate correctly? <p>→ Yes GO to G2.</p> <p>→ No DIAGNOSE the cellular phone; REFER to Section 419-08 . CLEAR the DTCs. REPEAT the self-test.</p>
G2 CHECK THE CIRCUITS BETWEEN THE RESCU MODULE AND THE PSE FOR OPENS	
<p>1</p>  <p>2</p>  <p>RESCU Module C401a</p> <p>3</p>  <p>PSE C403a and C403b</p> <p>4</p>	<p>4 Using the following table, measure the resistance between RESCU module C401a pins, harness side and PSE</p>

connector pins, harness side:

RESCU Module Pin	Circuit	PSE Module Connector
10	1-GP11 (WH/GN)	C403a Pin 1
9	2-GP10 (GY/VT)	C403a Pin 6
2	4-GP14 (GY/RD)	C403b Pin 5
3	5-GP12 (BU/YE)	C403b Pin 6
4	8-GP13 (WH/VT)	C403a Pin 11
8	10-GP9 (GY)	C403b Pin 11
12	31-MC10A (BK/RD)	C403b Pin 13

- Are the resistances less than 5 ohms?

→ **Yes**

INSTALL a new RESCU module; REFER to [Module—Remote Emergency Satellite Cellular Unit \(RESCU\)](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST H: GPS ANTENNA OPEN CIRCUIT

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 CHECK THE COAXIAL ANTENNA CENTER CONDUCTOR FOR OPEN	
<p>1</p> <p>2</p> <p>GPS Coaxial Antenna Connector C325</p> <p>3</p>	

RESCU Module Coaxial Antenna Connector C401c

4

4

Measure the resistance between GPS coaxial antenna C325 center conductor pin, harness side and RESCU module coaxial antenna C401c center conductor pin, harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [H2](#).

→ **No**
INSTALL a new antenna coaxial cable.
CLEAR the DTCs. REPEAT the self-test.

H2 CHECK THE COAXIAL ANTENNA SHIELD FOR OPEN

1

1

Measure the resistance between GPS coaxial antenna C325 shield, harness side and RESCU module coaxial antenna C401c shield, harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [H3](#).

→ **No**
INSTALL a new antenna coaxial cable.
CLEAR the DTCs. REPEAT the self-test.

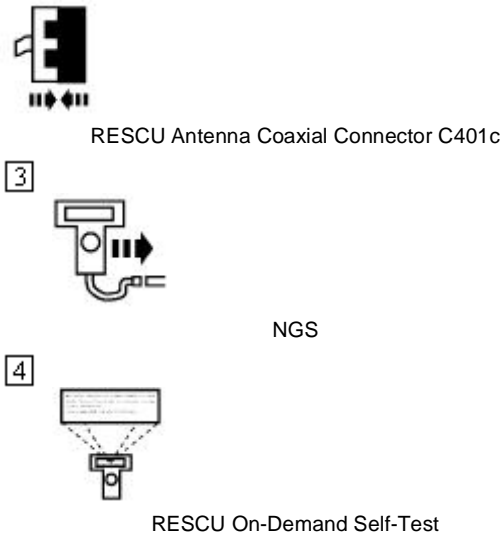

H3 REPEAT RESCU ON-DEMAND SELF-TEST

1

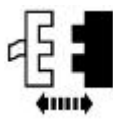

GPS Coaxial Antenna Connector C325

2

 <p>RESCU Antenna Coaxial Connector C401c</p> <p>3</p> <p>NGS</p> <p>4</p> <p>RESCU On-Demand Self-Test</p>	<ul style="list-style-type: none"> ● Is DTC B1893 retrieved? <p>→ Yes INSTALL a new GPS antenna; REFER to Antenna—Global Positioning Sensor (GPS). CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No System is OK.</p>
--	---

PINPOINT TEST J: GPS ANTENNA CIRCUIT SHORT TO GROUND

CONDITIONS	DETAILS/RESULTS/ACTIONS
J1 CHECK THE COAXIAL ANTENNA CENTER CONDUCTOR FOR SHORT TO GROUND — RESCU MODULE CONNECTED	
<p>1</p>  <p>2</p>  <p>GPS Coaxial Antenna Connector C325</p> <p>3</p>	<p>3 Measure the resistance between GPS coaxial antenna C325 center conductor, harness side and ground.</p>

A0004056

- Is the resistance greater than 10,000 ohms?

→ **Yes**
 INSTALL a new GPS antenna; REFER to [Antenna—Global Positioning Sensor \(GPS\)](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 GO to [J2](#).

J2 CHECK THE COAXIAL ANTENNA CENTER CONDUCTOR FOR SHORT TO GROUND — RESCU MODULE DISCONNECTED

1

RESCU Module Coaxial Antenna C401c

2

A0004056

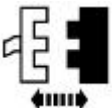

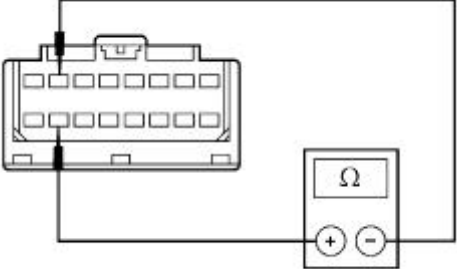

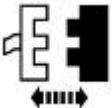

- 2 Measure the resistance between RESCU module coaxial antenna C401c connector center conductor, harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
 INSTALL a new RESCU module; REFER to [Module—Remote Emergency Satellite Cellular Unit \(RESCU\)](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 INSTALL a new antenna coaxial cable. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST K: THE VEMS DOES NOT OPERATE CORRECTLY — RESCU DOES NOT RESPOND TO THE CONSOLE RESCU SWITCH SOS BUTTON

CONDITIONS	DETAILS/RESULTS/ACTIONS
K1 CHECK THE CONSOLE RESCU SWITCH SOS BUTTON CIRCUIT FOR CONTINUITY	
<p>1 </p> <p>2  RESCU Module C401b</p> <p>3  A0004057</p>	<p>3 Measure the resistance between RESCU module C401b pin 2, circuit 8-GP6 (WH/RD), harness side and RESCU module C401b pin 10, circuit 9-GP6 (BN/RD), harness side while pressing the console RESCU switch SOS button.</p> <ul style="list-style-type: none"> ● Is the resistance less than 5 ohms? <p>→ Yes INSTALL a new RESCU module; REFER to Module—Remote Emergency Satellite Cellular Unit (RESCU). CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No GO to K2.</p>
K2 CHECK CIRCUIT 8-GP6 (WH/RD) FOR OPEN	
<p>1  Console RESCU switch C915</p> <p>2</p>	<p>2 Measure the resistance between RESCU module C401b pin 2, circuit 8-GP6 (WH/RD), harness side and console RESCU switch C915 pin 6, circuit 8-GP6 (WH/RD), harness side.</p>

A0004058

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [K3](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

K3 CHECK CIRCUIT 9-GP6 (BN/RD) FOR OPEN

1

A0004046

1

Measure the resistance between RESCU module C401b pin 10, circuit 9-GP6 (BN/RD), harness side and console RESCU switch C915 pin 2, circuit 9-GP6 (BN/RD), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new console RESCU switch;
REFER to [Console—Remote Emergency Satellite Cellular Unit \(RESCU\) Switch](#).
CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

Module —Remote Emergency Satellite Cellular Unit (RESCU)

Removal and Installation

1.  **CAUTION:** Electronic modules are sensitive to electrical charges. If exposed to these charges, damage may result.

NOTE: The remote emergency satellite cellular unit (RESCU) module must be reconfigured upon replacement. Refer to [Section 418-01](#).

Disconnect the battery ground cable. Refer to [Section 414-01](#).

2. Position the LH quarter trim panel aside.
3. Remove the RESCU module nuts.

4. Remove the RESCU module.
 1. Disconnect the antenna.
 2. Disconnect the electrical connector.

5. To install, reverse the removal procedure.

Console —Remote Emergency Satellite Cellular Unit (RESCU) Switch

Removal and Installation

1. Remove the sun visors from each side.

2. Remove the assist handle.

3. Remove the windshield garnish mouldings.

4. Remove the upper B-pillar trim.

5. Remove the front dome lamp assembly bezel.
6. **NOTE:** Folding the headliner will require installing a new headliner.

Carefully pull the front of the headliner down to gain access to the console remote emergency satellite cellular unit (RESCU) switch.

7. Remove the switch.
 1. Remove the screws.
 2. Disconnect the electrical connector.

8. To install, reverse the removal procedure.
-

Antenna —Global Positioning Sensor (GPS)

Removal and Installation

1. Remove the package tray trim panel. For additional information, refer to [Section 501-05](#).
2. Remove the two bolts and the global positioning sensor (GPS) antenna.

3. To install, reverse the removal procedure.
-

General Specifications

Item	Specification
Ultra-Clear Spray Glass Cleaner E4AZ-19C507-AA	ESR-M14P5-A

Torque Specifications

Description	Nm	lb-in
Cellular phone module (CPM) nuts	9	80

Cellular Phone

The portable cellular phone system consists of:

- cellular phone handset
 - handset battery
 - handset holder
 - coil cord
 - steering column shroud mounted microphone
 - steering wheel switch controls
 - cellular phone module (CPM)
 - on-glass cellular phone antenna (late production)
 - antenna cable
 - audio unit controls
-

Cellular Phone

Refer to Wiring Diagrams Section [419-08](#) for schematic and connector information.

Special Tool(s)

 ST1137-A	73III Automotive Meter or equivalent 105-R0057
 ST1217-A	New Generation STAR (NGS) Tester or equivalent 418-F048 (007-00500)

Inspection and Verification

1. Verify the customer concern by operating the portable cellular phone both in portable mode and while connected to the vehicle.
2. Make sure the portable cellular phone is turned ON. With the power button ON, the system should be on while the ignition switch is in ACC or RUN.
3. Make sure the customer is calling within the coverage area. No Svc will appear in the display if the customer is calling from outside the coverage area.
4. Check to see if the Roam indicator is on. If so, follow the roaming instructions in the owner literature.
5. Check to see if the display reads Locked. If so, press Clr and enter the customer three-digit unlock code.
6. Make sure the portable cellular phone is securely connected to the coil cord and seated in the holder.
7. Check the coil cord connections in the console.
8. Check the portable cellular phone antenna and cellular phone module connections.
9. Check the portable cellular phone system registration. Also, check to make sure that the portable cellular phone is correctly programmed. Incorrect programming can result in single system scanning, loss of speed dialing, loss of hands-free audio, loss of auto redial, loss of dial tone multi-frequency tones, and the loss of other keypad/portable cellular phone functions.
10. Check the customer account status with the cellular carrier.

If the customer concern is still present, follow these steps to diagnose the concern:

11. Inspect to determine if one of the following mechanical or electrical concerns apply:

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Damaged portable cellular phone ● Damaged microphone ● Damaged cellular phone module (CPM) ● Damaged vehicle emergency messaging system (VEMS) module (if equipped) ● Damaged portable cellular phone holder ● Damaged coil cord 	<ul style="list-style-type: none"> ● Central junction box (CJB) fuses <ul style="list-style-type: none"> ■ 218 (20A) ■ 227 (10A) ■ 202 (5A) ● Battery junction box (BJB) fuses <ul style="list-style-type: none"> ■ 422 (20A) ■ 414 (5A) ● Damaged, loose or corroded connectors

12. If inspection reveals obvious concerns which can be readily identified, repair as necessary.
13. If the cause of the fault is not visually evident, proceed to diagnose the portable cellular phone system by:
- Entering the New Generation STAR (NGS) Tester Diagnostics or
 - Entering Audio Control Module (ACM) Self-Diagnostic Mode.

ACM Self-Diagnostic Mode

NOTE: To enter the Speaker Walk-Around Test or ACM self-diagnostic mode, the ACM must be turned on and in radio tuner mode (AM/FM).

ACM self-diagnostic mode can only be entered while in the Speaker Walk-Around Test.

14. To enter the Speaker Walk-Around Test, press the ACM preset buttons 3 and 6 simultaneously.
15. The Speaker Walk-Around Test stops at each speaker and applies a tone to each speaker for about 1-2 seconds. Each speaker is tested and displayed on the ACM in the following sequence: SPEAKER RF, SPEAKER LF, SPEAKER LR, SPEAKER RR, SUBWOOFER I (for subwoofer, if equipped), and SUBWOOFER II (for center imaging speakers, if equipped). This test can isolate an open circuit for each speaker (broken wire or disconnect), however, a short circuit can only be isolated to either the right pair or left pair.
16. The Speaker Walk-Around Test automatically continues and tests:
- for a speaker circuit short. If a short is present, SPKR SHORT will be displayed. Speaker circuit shorts are detected only in the RF, LF, LR, and RR speaker circuitry.
 - for the CD/DJ. The ACM display will show NO DJ if not present. The Speaker Walk-Around Test will end and the ACM will return to its previous setting.
17. ACM self-diagnostic mode has six tests available:
- Preset Button 1 = Audio internal/external SELF TEST. If SELF FAIL is displayed, press TUNE > to scroll view the DTCs stored. Refer to the ACM Diagnostic Trouble Codes (DTC) Index. If the system is OK, SELF PASS is displayed.
 - Preset button 2 = View/Clear continuous diagnostic trouble codes (DTCs). NO DTCS is

displayed if no DTCs are retrieved. If DTCS FOUND is displayed, press TUNE > button to view the DTCs retrieved. Refer to the ACM Diagnostic Trouble Codes (DTC) Index. To clear all DTCs, press the EJECT button. DTCS CLEAR will be displayed.

- Preset button 3 = SIGNAL TEST. This test measures the average strength at the current tuner setting.
- Preset button 4 = Software configuration level. This test queries each radio system controller for the software configuration level. SOFT LEVELS will be displayed upon completion of the query. Press TUNE > to scroll view the software configuration version level.

Controller	Description	Radio Display Example
Main	Main Micro Software Version	MAIN ##.##.##
CDSP	CDSP Micro Software Version	CDSP ##.##.##
ADSP	ADSP Micro Software Version	ADSP ##.##.##
Auxiliary	Auxiliary Software Version	AUX ##.##.##
CD/DJ	CDDJ Software Version	DJ ##.##.##
CD Changer	CDR Software Version	CD ##.##.##
Tape Deck	Tape Deck Software Version	TAP ##.##.##
RSC	Rear Seat Controller Software Version	RCP ##.##.##

- Preset button 5 = DISPLAY TEST. This test will light all the ACM display segments for five seconds, then turn all segments off. When the test is complete, DISPLAY TEST is displayed on the bezel.
 - Preset button 6 = Configuration/EQ ID. This test queries the audio system controller for the software configuration and EQ ID.
18. To enter these tests, press the preset button desired while in the Speaker Walk-Around Test. This will abort the Speaker Walk-Around Test and start the selected test.
 19. To exit ACM self-diagnostic mode, turn the ignition switch or the ACM off.
 20. If the concern remains and the fault is not detected, proceed to the New Generation STAR (NGS) Tester Diagnostics to continue diagnostics.

New Generation STAR (NGS) Tester Diagnostics

1. Connect the New Generation STAR (NGS) Tester to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the NGS menu. If the NGS does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
2. **NOTE:** The ACM must be in AM, FM1, or FM2 mode to enter NGS tester diagnostics.

NOTE: The portable cellular phone system is diagnosed through the ACM.

NOTE: The cellular phone module (CPM) is also referred to as the portable support electronics (PSE) module.

If the NGS still does not communicate with the vehicle, refer to the New Generation STAR Tester manual.

3. Carry out the DATA LINK DIAGNOSTIC TEST. If the NGS responds with:
 - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for audio control module (ACM), go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for cellular phone module (CPM), go to Pinpoint Test B.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs, and carry out self-test diagnostics for the CPM.
4. If the DTCs retrieved are related to the concern, go to the ACM Diagnostic Trouble Code (DTC) Index or to the CPM Diagnostic Trouble Code (DTC) Index to continue diagnostics.
5. If no DTCs related to the concern are retrieved, proceed to the Symptom Chart to continue diagnostics.

ACM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	ACM	CLEAR and DOCUMENT the DTCs. CARRY OUT the ACM On-Demand Self-Test. If DTC B1342 is retrieved again, REMOVE the ACM and SEND it to an authorized Ford Audio System repair facility.
B2401	Audio Tape Deck Mechanism Fault	ACM	VERIFY that no tape is inserted in the ACM. CLEAR and DOCUMENT the DTCs. CARRY OUT the ACM On-Demand self-test. If DTC B2401 is retrieved again, REMOVE the ACM and SEND it to an authorized Ford Audio System repair facility.
B2402	Audio CD/DJ Thermal Shutdown Fault	ACM	REFER to Section 415-00 .
B2403	Audio CD/DJ Internal Fault	ACM	REFER to Section 415-00 .
B2404	Audio Steering Wheel Switch Circuit Fault	ACM	REFER to Section 415-00 .
B2405	Audio Single-Disc CD Player Thermal Shutdown Fault	ACM	REFER to Section 415-00 .
B2406	Audio Single-Disc CD Player Internal Fault	ACM	REFER to Section 415-00 .
B2477	Module Configuration Fault	ACM	REFER to Section 418-01 .
U2003	CD/DJ Is Not Responding	ACM	NOTE: U2003 is retrieved if CDDJ is not present, disconnected, or inoperative. REFER to Section 415-00 .
U2005	Audio Rear Integrated Control Panel Unit Is	ACM	NOTE: U2005 is retrieved if RICP is not present, disconnected, or inoperative.

	Not Responding		REFER to Section 415-00 .
U2008	Audio Phone Is Not Responding	ACM	GO to Pinpoint Test B .
U2014	Audio Subwoofer Unit Is Not Responding	ACM	NOTE: U2014 is retrieved if subwoofer is not present, disconnected, or inoperative. REFER to Section 415-00 .
U2020	Center Image Amplifier Is Not Responding	ACM	NOTE: U2020 is retrieved if center image amplifier is not present, disconnected, or inoperative. REFER to Section 415-00 .

SIG_STR	Cellular Network Signal Strength	%

System/Carrier Concerns

Dropped calls, bad connections, noisy audio and other intermittent symptoms usually indicate a system or cellular carrier concern, and are not the fault of the phone itself. Such symptoms may occur in situations such as the following:

- In certain geographic areas (for example: areas of excessive foliage or hills) or at the edge of coverage areas.
- At the same place each day.
- At the same time each day.
- Under bridges, tunnels, in lower freeways, or in congested downtown areas.

If the customer phone exhibits any of the above symptoms or symptoms occur under the above conditions, the customer or the dealer should contact customer assistance at their particular cellular provider/carrier or call the 1-800 assistance number provided in the Ford Cellular System Dealer kit.

Other Possible Concerns

1. If, for some reason, the customer's electronic serial number was incorrectly recorded in the carrier switch, the phone will not work. Call the 1-800 number in your dealer kit to check the electronic serial number.
2. A customer initial call must be made in his/her home coverage area for correct activation of the Ford Cellular System.
3. A customer may have to wait 24 hours after the coverage activation before making a call from outside of his/her home coverage area or the phone might be reported stolen and coverage stopped.
4. There may be a slight delay in activation after leaving the dealership.

If, after checking these possibilities, the phone still does not function, do not attempt to repair the phone. Call the cellular distributor, Audiotronics, at 1-800-755-4161.

Pinpoint Tests

PINPOINT TEST A: NO COMMUNICATION WITH THE MODULE — AUDIO CONTROL MODULE (ACM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK THE VOLTAGE TO THE ACM	
<p>1</p>  <p>2</p>  <p>ACM C240c</p> <p>3</p>  <p>4</p>	<p>4</p> <p>Measure the voltage between ACM C240c pin 9, circuit 29-MD15 (OG/BK), harness side and ground; and between ACM C240c pin 10, circuit 75-MD15 (YE/GN), harness side and ground.</p>

A0004845

- Are the voltages greater than 10 volts?

→ **Yes**
GO to [A2](#).

→ **No**
REPAIR the circuit in question. TEST the system for normal operation.

A2 CHECK THE GROUND TO THE ACM

1

A0004846

1

Measure the resistance between ACM C240c pin 11, circuit 31-MD15B (BK), harness side and ground; and between C240c pin 16, circuit 31-MD15A (BK), harness side and ground.

- Are the resistances less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#),
Communication System Diagnostics, to
diagnose the network concern.

→ **No**
REPAIR the circuit. TEST the system for
normal operation.

PINPOINT TEST B: NO COMMUNICATION WITH THE MODULE — CELLULAR PHONE MODULE (CPM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 RETRIEVE THE RECORDED ACM DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS	
	1 Retrieve the recorded ACM DTCs from

both continuous and on-demand self-tests.

- **Are any DTCs retrieved?**

→ **Yes**

If DTC U2008 is retrieved, GO to [B2](#).

→ **No**

The system is OK.

B2 CHECK THE VOLTAGE TO THE CPM

1

2

CPM

3

4

4

Measure the voltage between CPM C404 pin 8, circuit 75-MC9 (YE/GN), harness side and ground; and between CPM C404 pin 10, circuit 30-MC9 (RD/GN), harness side and ground (without VEMS) or between CPM C403a pin 5, circuit 75-MC9 (YE/GN), harness side and ground; and between CPM C403a pin 4, circuit 30-MC9B (RD/GN), harness side and ground (with VEMS).

- **Are the voltages greater than 10 volts?**

→ **Yes**

GO to [B3](#).

→ **No**

REPAIR the circuit in question. TEST the system for normal operation.

B3 CHECK THE GROUND TO THE CELLULAR PHONE MODULE (CPM)

1

2

2 Measure the resistance between CPM C403a pin 3, circuit 31-MC9F (BK/GN), harness side and ground (with VEMS) or between CPM C404 pin 9, circuit 31-MC9 (BK/GN), harness side and ground (without VEMS).

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [B4](#).

→ **No**
REPAIR the circuit in question. TEST the system for normal operation.

B4 CHECK ACP CIRCUITS FOR OPEN OR SHORT TO GROUND

1

CD Changer C243 (if equipped)

2

Audio Unit C240a

3

3 Measure the resistance between:

- CPM C404 pin 12, circuit 4-MC9 (GY/OG), harness side and audio unit C240a pin 6, circuit 4-EA8 (GY/VT), harness side (without VEMS); or between CPM C403b pin 9, circuit 4-MC9 (GY/OG), harness side and audio unit C240a pin 6, circuit 4-EA8 (GY/VT), harness side (with VEMS).
- CPM C404 pin 12, circuit 4-MC9 (GY/OG), harness side and ground (without VEMS).
- CPM C403b pin 9, circuit 4-MC9 (GY/OG), harness side and ground (with VEMS).

A0006750

4

A0006751

4 Measure the resistance between:

- CPM C404 pin 13, circuit 5-MC9 (BU/BK), harness side and audio unit C240a pin 7, circuit 5-EA8 (BU/WH), harness side (without VEMS); or between CPM C403b pin 10, circuit 5-MC9 (BU/BK), harness side and audio unit C240a pin 7, circuit 5-EA8 (BU/WH), harness side (with VEMS).
- CPM C404 pin 13, circuit 5-MC9 (BU/BK), harness side and ground (without VEMS).
- CPM C403b pin 10, circuit 5-MC9 (BU/WH), harness side and ground (with VEMS).

- Are the resistances less than 5 ohms between the CPM and the audio unit, and greater than 10,000 ohms between the CPM and ground?

→ Yes
GO to [Pinpoint Test C](#).

→ **No**
REPAIR the circuit in question. TEST the system for normal operation.

PINPOINT TEST C: THE PHONE DOES NOT POWER UP

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK THE PORTABLE CELLULAR PHONE	
	<p>1 Disconnect the portable cellular phone from the vehicle.</p> <ul style="list-style-type: none"> • Does the portable cellular phone power up in portable cellular mode? <p>→ Yes GO to C3.</p> <p>→ No GO to C2.</p>
C2 CHECK THE BATTERY	
	<p>1 Install a known good, charged battery on the portable cellular phone.</p> <ul style="list-style-type: none"> • Does the portable cellular phone power up in portable cellular mode? <p>→ Yes INSTALL a new portable cellular phone battery. TEST the system for normal operation.</p> <p>→ No INSTALL a new portable cellular phone. CALL Audiotronics at 1-800-755-4161 for replacement information. TEST the system for normal operation.</p>
C3 CHECK FOR IGNITION SUPPLY	
<p>1 </p> <p>2 </p> <p>CPM</p> <p>3</p>	

4

- 4 Measure the voltage between CPM C404 pin 8, circuit 75-MC9 (YE/GN), harness side and ground (without VEMS); or between CPM C403a pin 5, circuit 75-MC9 (YE/GN), harness side and ground (with VEMS).

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [C4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

C4 CHECK FOR BATTERY SUPPLY

1

- 1 Measure the voltage between:

- CPM C403a pin 4, circuit 30-MC9B (RD/GN), harness side and ground.
- CPM C404 pin 10, circuit 30-MC9 (RD/GN), harness side and ground (without VEMS); or between PSE module C403a pin 9, circuit 30-MC9C (RD/GN), harness side and ground (with VEMS).

● Is the voltage(s) greater than 10 volts?

→ **Yes**
GO to [C5](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

C5 CHECK THE SYSTEM GROUND

1

- 1 Measure the resistance between CPM C403a pin 3, circuit 31-MC9F (BK/GN), harness side and ground (with VEMS); or between CPM C404 pin 9, circuit 31-MC9 (BK/GN), harness side and ground

(without VEMS).

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [C6](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

C6 SUBSTITUTE A KNOWN GOOD PORTABLE CELLULAR PHONE

- Substitute the portable cellular phone with a known good component.

- Does the system power up?

→ **Yes**
INSTALL a new portable cellular phone. CALL Audiotronics at 1-800-755-4161 for replacement information. TEST the system for normal operation.

→ **No**
INSTALL a new CPM; REFER to [Module—Cellular Phone \(CPM\)](#). TEST the system for normal operation.

PINPOINT TEST D: REDUCED SOUND OR NO SOUND THROUGH THE SPEAKERS

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 CHECK HANDS-FREE MODE	<ol style="list-style-type: none"> Place the portable cellular phone in the hands-free mode. Refer to the owner literature. <ul style="list-style-type: none"> ● Does the portable cellular phone operate in the hands-free mode? <p>→ Yes GO to D2.</p> <p>→ No</p>

GO to [Pinpoint Test E](#).

D2 CHECK THE RADIO SPEAKERS

1

2 Turn the audio unit on.

- Do the radio speakers operate correctly?

→ Yes
GO to [D3](#).

→ No
REFER to [Section 415-00](#).

D3 CHECK CIRCUITS 8-MD15 (WH/GN), 2-MC9 (GY/OG), AND 1-MC9 (WH/GN)

1

2

CPM

3

Audio Unit C240a

4 Measure the resistance between CPM and audio unit C240a; and between CPM and ground as follows:

With VEMS

Circuit	Audio Unit	CPM C403b
8-MD15 (WH/GN)	C240a Pin 10	C403b Pin 4
2-MC9 (GY/OG)	C240a Pin 11	C403b Pin 14
1-MC9 (WH/GN)	C240a Pin 12	C403b Pin 15

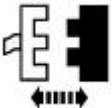

Without VEMS

Circuit	Audio Unit	CPM C404
8-MD15 (WH/GN)	C240a Pin 10	C404 Pin 11
2-MC9 (GY/OG)	C240a Pin 11	C404 Pin 21
1-MC9 (WH/GN)	C240a Pin 12	C404 Pin 22

- Are the resistances less than 5 ohms between the CPM and audio unit C240a; and greater than 10,000 ohms between the CPM and

	<p style="text-align: center;">ground?</p> <p>→ Yes GO to D4.</p> <p>→ No REPAIR the circuit in question. TEST the system for normal operation.</p>
D4 SUBSTITUTE A KNOWN GOOD CPM	
	<p>1 Substitute the CPM with a known good component.</p> <ul style="list-style-type: none"> ● Do the speakers operate correctly? <p>→ Yes INSTALL a new CPM; REFER to Module—Cellular Phone (CPM). TEST the system for normal operation.</p> <p>→ No REMOVE the audio unit and SEND it to an authorized Ford Audio System repair facility. TEST the system for normal operation.</p>

PINPOINT TEST E: THE PHONE SYSTEM WILL NOT GO INTO HANDS-FREE MODE

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 CHECK THE VEHICLE OPTION CONTENT	
	<p>1 Check the option content of the vehicle.</p> <ul style="list-style-type: none"> ● Is the vehicle equipped with VEMS? <p>→ Yes REFER to Section 419-05.</p> <p>→ No GO to E2.</p>
E2 CHECK CIRCUIT 2-MC10 (GY/BK)	
<p>1</p>  <p style="text-align: center;">Console C318</p> <p>2</p>  <p style="text-align: center;">CPM C404</p> <p>3</p>	<p>3 Measure the resistance between CPM C404 pin 5, circuit 2-MC10 (GY/BK), harness side and console C318 pin 1, circuit 2-MC10 (GY/BK), harness side.</p>

A0004854

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [E3](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

E3 SUBSTITUTE A KNOWN GOOD PORTABLE CELLULAR PHONE HOLDER

1 Substitute the portable cellular phone holder with a known good component.

- Is the system OK?

→ **Yes**
INSTALL a new portable cellular phone holder. TEST the system for normal operation.

→ **No**
GO to [E4](#).

E4 SUBSTITUTE A KNOWN GOOD COIL CORD

1 Substitute the coil cord with a known good component.

- Is the system OK?

→ **Yes**
INSTALL a new coil cord. TEST the system for normal operation.

→ **No**
GO to [E5](#).

E5 SUBSTITUTE A KNOWN GOOD PORTABLE CELLULAR PHONE

1 Substitute the portable cellular phone with a known good component.

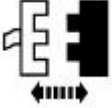

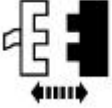

- Is the system OK?

→ **Yes**
INSTALL a new portable cellular phone.

CALL Audiotronics at 1-800-755-4161 for replacement information. TEST the system for normal operation.

→ **No**
 INSTALL a new CPM; REFER to [Module—Cellular Phone \(CPM\)](#). TEST the system for normal operation.

PINPOINT TEST F: POOR RECEPTION, STATIC ON CALLS, FREQUENT DROP OF CALLS

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 SUBSTITUTE A KNOWN GOOD COIL CORD	
	<p>1 Substitute the coil cord with a known good component.</p> <ul style="list-style-type: none"> ● Is the system OK? <p>→ Yes INSTALL a new coil cord. TEST the system for normal operation.</p> <p>→ No GO to F2.</p>
F2 SUBSTITUTE A KNOWN GOOD PORTABLE CELLULAR PHONE	
	<p>1 Substitute the portable cellular phone with a known good component.</p> <ul style="list-style-type: none"> ● Is the system OK? <p>→ Yes INSTALL a new portable cellular phone. CALL Audiotronics at 1-800-755-4161 for replacement information. TEST the system for normal operation.</p> <p>→ No GO to F3.</p>
F3 CHECK THE ANTENNA CABLE RESISTANCE	
<p>1</p>  <p>Antenna Console Connection</p> <p>2</p>  <p>Antenna Cable Rear Window Connection</p>	

3

A0004930

3

Measure the resistance between the antenna cable center conductor and the outer shield.

- Is the resistance greater than 10,000 ohms?

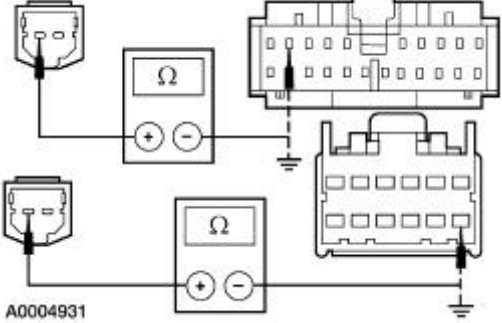

→ Yes

The system is operating correctly.

→ No

INSTALL a new antenna cable. TEST the system for normal operation.

PINPOINT TEST G: THE CELLULAR PHONE MICROPHONE IS NOT OPERATING CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>G1 CHECK CIRCUIT 9-MC8 (BN/RD)</p>	
<p>1</p>  <p>CPM</p> <p>2</p>  <p>Microphone C221</p> <p>3</p>  <p>A0004931</p>	<p>3 Measure the resistance between:</p> <ul style="list-style-type: none"> ■ microphone C221, circuit 9-MC8 (BN/RD), harness side and CPM C404 pin 2, circuit 9-MC8 (BN/RD) (without VEMS); or between microphone C221, circuit 9-MC8 (BN/RD), harness side and CPM C403a pin 7, circuit 9-MC8 (BN/RD) (with VEMS). ■ microphone C221, circuit 9-MC8 (BN/RD), harness side and ground (without VEMS); or

between microphone C221, circuit 9-MC8 (BN/RD), harness side and ground (with VEMS).

- **Is the resistance less than 5 ohms between the microphone and the CPM and greater than 10,000 ohms between the microphone and ground?**

→ **Yes**
GO to [G2](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

G2 CHECK CIRCUIT 8-MC8 (WH/RD)

1

1 Measure the resistance between:

- microphone C221, circuit 8-MC8 (WH/RD), harness side and CPM C404 pin 3, circuit 8-MC8 (WH/RD) (without VEMS); or between microphone C221, circuit 8-MC8 (WH/RD), harness side and CPM C403a pin 8, circuit 8-MC8 (WH/RD) (with VEMS).
- microphone C221, circuit 8-MC8 (WH/RD), harness side and ground (without VEMS); or between microphone C221, circuit 8-MC8 (WH/RD), harness side and ground (with VEMS).

- **Is the resistance less than 5 ohms between the microphone and the CPM and greater than 10,000 ohms between the microphone and ground?**

→ **Yes**
GO to [G3](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

G3 SUBSTITUTE A KNOWN GOOD MICROPHONE

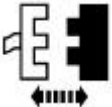

1 Substitute the microphone with a known good component.

- **Is the system OK?**

→ **Yes**

	<p>INSTALL a new microphone; REFER to Microphone. TEST the system for normal operation.</p> <p>→ No GO to G4.</p>
G4 SUBSTITUTE A KNOWN GOOD PORTABLE CELLULAR PHONE	
	<p>1 Substitute the portable cellular phone with a known good component.</p> <p>● Is the system OK?</p> <p>→ Yes INSTALL a new portable cellular phone. CALL Audiotronics at 1-800-755-4161 for replacement information. TEST the system for normal operation.</p> <p>→ No INSTALL a new CPM; REFER to Module—Cellular Phone (CPM). TEST the system for normal operation.</p>

PINPOINT TEST H: NO SVC DISPLAY STAYS ON

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 CHECK THE PORTABLE CELLULAR PHONE	
<p>NOTE: No Svc indicator might illuminate within the coverage area when the vehicle is in totally enclosed areas such as underground parking garages or tunnels. This does not indicate a hardware failure.</p>	
	<p>1 Disconnect the portable cellular phone from the coil cord.</p> <p>2 Power up portable cellular phone in a known good cellular coverage area.</p> <p>● Is No Svc still displayed in the portable cellular mode?</p> <p>→ Yes INSTALL a new portable cellular phone. CALL Audiotronics at 1-800-755-4161 for replacement information. TEST the system for normal operation.</p> <p>→ No GO to H2.</p>
H2 CHECK THE ANTENNA RESISTANCE	
<p>1</p> 	

Antenna Console Connection

2

A0004930

2

Measure the resistance between the antenna cable center conductor and the outer shield at the antenna console connection.

- Is the resistance greater than 100 ohms?

→ **Yes**

INSTALL a new inside antenna base (early production) or REPAIR the cellular phone antenna grid (late production); REFER to [Section 415-02](#) for antenna grid repair procedure. TEST the system for normal operation.

→ **No**

INSTALL a new antenna cable. TEST the system for normal operation.

PINPOINT TEST I: CANNOT ENTER THE PROGRAMMING MODE

CONDITIONS	DETAILS/RESULTS/ACTIONS
I1 VERIFY THE SECURITY CODE	<p>1 Make sure the:</p> <ul style="list-style-type: none"> ■ correct entry sequence is used. ■ entry sequence is entered quickly enough. <p>2 Verify the security code.</p> <ul style="list-style-type: none"> ● Has the programming mode been entered? <p>→ Yes The system is operating correctly.</p> <p>→ No INSTALL a new portable cellular phone. CALL Audiotronics at 1-800-755-4161 for replacement information. TEST the system for normal operation.</p>

PINPOINT TEST J: THE VOICE ACTIVATED PHONE FUNCTIONS ARE INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
J1 CHECK FOR A BEEP FROM THE AUDIO SYSTEM	
	<p>1 Connect the portable cellular phone to the console coil cord and mount in the holder.</p> <p>2 Power up the phone.</p> <p>● Can a beep be heard?</p> <p>→ Yes GO to J2.</p> <p>→ No GO to Pinpoint Test E.</p>
J2 CHECK FOR PHONE RESPONSE	
	<p>1 With the portable cellular phone mounted in the holder, press and hold the # or * button on the portable cellular phone.</p> <p>● Does the phone display: READY?</p> <p>→ Yes GO to J3.</p> <p>→ No INSTALL a new CPM; REFER to Module—Cellular Phone (CPM). TEST the system for normal operation.</p>
J3 CHECK THE FUNCTION BUTTON	
	<p>1 With the portable cellular phone mounted in the holder, press the phone button on the radio.</p> <p>● Does the phone display: READY?</p> <p>→ Yes The system is operating correctly.</p> <p>→ No GO to Pinpoint Test G.</p>

Microphone

Removal

1. Remove the air bag sliding contact. For additional information, refer to [Section 501-20B](#).
2. Remove the cellular phone microphone from the air bag sliding contact.

Installation

1. Install the cellular phone microphone on to the air bag sliding contact.

2. Install the air bag sliding contact; For additional information, refer to [Section 501-20B](#).
-

Module —Cellular Phone (CPM)

Removal and Installation

1. Open the luggage compartment and position the LH trim near the rear seat release handle aside.

2. Remove the cellular phone module (CPM).
 1. Disconnect the electrical connector.
 2. Remove the nuts.
 3. Remove the CPM.

3. To install, reverse the removal procedure.

Antenna —Vehicle Portable Cellular Phone

Removal and Installation

CAUTION: To avoid damage to the glass, do not pry the antenna base when removing.

1. Remove the cellular phone antenna base.
 1. Disconnect the antenna cable.
 2. Cut the two-way tape holding the cellular phone antenna base to the glass.
 3. Remove the cellular phone antenna base.

2. **NOTE:** Before applying new two-way tape to install the cellular phone antenna base, use Ultra-Clear Spray Glass Cleaner E4AZ-19C507-AA meeting Ford specification ESR-M14P5-A or equivalent to thoroughly clean the glass.

NOTE: Inside and outside antenna bases must be carefully and accurately aligned so they don't cover any heater wire grids.

NOTE: The coaxial cable connector must be installed toward the right of the vehicle.

To install, reverse the removal procedure.

Torque Specifications

Description	Nm	lb-in
Battery ground cable	10	89
Rear electronic module (REM) nuts	7	62
Front electronic module (FEM) bolt	9	80
Front electronic module (FEM) nuts	4	35
Auxiliary junction block nuts	3	27

Module Controlled Functions

The multifunction modules consist of the:

- front electronic module (FEM)
 - rear electronic module (REM)
 - driver door module (DDM)
 - driver seat module (DSM)
-

Multifunction Electronic Module

For warning chime concerns, refer to [Section 413-09](#).

For exterior lighting concerns, refer to [Section 417-01](#).

For interior lighting concerns, refer to [Section 417-02](#).

For perimeter anti-theft concerns, refer to [Section 419-01A](#).

For power mirror concerns, refer to [Section 501-09](#).

For power seat concerns, refer to [Section 501-10](#).

For power window concerns, refer to [Section 501-11](#).

For remote keyless entry and power door lock concerns, refer to [Section 501-14B](#).

For daytime running lamp concerns, refer to [Section 417-04](#).

For variable assist power steering (VAPS) concerns, refer to [Section 211-00](#).

For roof opening panel concerns, refer to [Section 501-17](#).

Module —Driver Door (DDM)

Removal and Installation

1.  **CAUTION:** Prior to removal of the module, it is necessary to upload module configuration information to the appropriate diagnostic equipment. This information needs to be downloaded into the new module once installed. For additional information, refer to [Section 418-01](#).

 **CAUTION:** Electronic modules are sensitive to electrical charges. If exposed to these charges, damages may result.

Disconnect the battery ground cable. Refer to [Section 414-01](#).

2. Remove the driver door trim panel. For additional information, refer to [Section 501-05](#).
3. Remove the driver door module.
 1. Disconnect the electrical connectors.
 2. Remove the three bolts.
 3. Remove the DDM.

4. To install, reverse the removal procedure.

Module —Driver Seat (DSM)

Removal and Installation

1. Remove the driver seat; refer to [Section 501-10](#).
2. Release the driver seat module (DSM) bracket from the seat track.
 1. Release the four retainers.
 2. Release the module bracket.

3. Remove the DSM.
 1. Disconnect the electrical connectors.
 2. Remove the screws.
 3. Remove the DSM.

4. **NOTE:** Once the new module is installed, it is necessary to calibrate the seat. For additional information, refer to [Section 501-10](#).

NOTE: It is important to make sure that the locking tabs are in the correct locations.

To install, reverse the removal procedure.

Module —Rear Electronic (REM)

Removal and Installation

1.  **CAUTION:** Prior to removal of the module, it is necessary to upload module configuration information to the appropriate diagnostic equipment. This information needs to be downloaded into the new module once installed. For additional information, refer to [Section 418-01](#).

 **CAUTION:** Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage may result.

Disconnect the battery ground cable. Refer to [Section 414-01](#).

2. Position the RR quarter trim panel aside.
 1. Disconnect the luggage compartment lamp.
 2. Remove the push clip.
 3. Position RR quarter trim panel aside.

3. Position the rear electronic module (REM) aside.
 1. Remove the nuts.
 2. Position the REM aside.

4. Remove the REM.
 1. Disconnect the seven electrical connectors.
 2. Remove the REM.

5. To install, reverse the removal procedure.

Module —Front Electronic (FEM)

Removal and Installation

1.  **CAUTION:** Prior to removal of the module, it is necessary to upload module configuration information to the appropriate diagnostic equipment. This information needs to be downloaded into the new module once installed. For additional information, refer to [Section 418-01](#).

 **CAUTION:** Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage may result.

Disconnect the battery ground cable. Refer to [Section 414-01](#).

2. Remove the LH scuff plate.

3. Release the retaining clips and remove the LH A-pillar lower trim panel.

4. Remove the lower instrument panel finish panel.
 - Remove the courtesy lamp from the instrument panel finish panel.
5. Position the driver side carpet aside.
6. Position interior auxiliary junction box (AJB) aside.
 1. Remove the nuts.
 2. Position the AJB aside.

7. Remove the nuts, bolt and position the FEM aside.

8. Remove the FEM.
 1. Disconnect the six electrical connectors.
 2. Remove the FEM.

9. To install, reverse the removal procedure.
-

General Specifications

Item	Specification
Adhesives	
Weatherstrip Adhesive E8AZ-19552-A	ESB-M2G14-A
Lubricants	
Silicone Lubricant F7AZ-19G208-BA	ESR-M13P4-A
Sealers	
Liquid Butyl Sealer F8AZ-19554-CA	ESB-M4G162-A
3M Strip Caulk-Black 051135-08578	WSB-M4G32-C
Silicone Gasket and Sealant F7AZ-19554-EA	WSE-M4G323-A4

Body

Body and Sheet Metal

The body:

- is a uni-body open cowl structure.
 - is constructed of a monocoque, lightweight, all-steel material with removable bolted hood (16612), front fenders (16005), doors, and luggage compartment lid.
-

Insulation

Insulation is comprised of urethane, PVC, and recycled felt. Insulation is installed:

- under the roof panel.
 - above and below the instrument panel.
 - on the cowl sides.
 - over the front and rear floor areas.
 - in the B-pillar and C-pillar sections.
-

Body Sealer Types and Applications

Liquid Butyl Sealer

Liquid Butyl Sealer F8AZ-19554-CA or equivalent meeting Ford Specification ESB-M4G162-A:

- does not run.
- is fast drying.
- remains semi-elastic.
- can be used for seam sealing on the floor pan, wheelhouse, door openings, and drip rails.

Caulking Cord

3M Strip Caulk-Black 051135-08578 or equivalent meeting Ford specification WSB-M4G32-C:

- is a heavy-bodied, plastic base with a filler.
- is commonly known as perma-gum.
- is used on spot-welds holes and between surfaces not sealed with a gasket.

Weatherstrip Adhesive

Weatherstrip Adhesive E8AZ-19552-A or equivalent meeting Ford specification ESB-M2G14-A:

- is a quick drying, strong adhesive designed to hold weatherstripping onto all body panels and surrounding metal.

Silicone Lubricant

Silicone Lubricant F7AZ-19G208-BA meeting Ford specification ESR-M13P4-A:

- is used to keep the door and the window weatherstrip pliable and soft.
 - should be applied to the weatherstrip at every lubrication period.
 - makes the door easier to close.
 - retards weatherstrip squeaks.
 - retards weatherstrip wear.
 - helps retain door window alignment by reducing friction between the glass frame and the rubber weatherstrip.
 - should not be used prior to painting.
-

Body System

Inspection and Verification

Leaks

NOTE: Trim will reveal the location of most leaks.

1. Remove any trim or carpet in the general area of the leak.
2. Road test or water test the vehicle.
3. Inspect for a dust pattern around the area in question. Inspect for water paths near and above the area in question.
4. Some leaks can be located by placing bright light under the vehicle, removing any necessary trim or carpet, and inspecting the interior of the body at joints and weld lines.

Noise

Wind noise, rattles and their sources are detected by driving the vehicle at highway speeds. The vehicle should be driven in four different directions with all of the windows closed, the radio off, the blower motor off, and all of the ventilation ducts open.

Most wind noise leaks will occur at the door and window seals or at the sheet metal joints in the door or the door opening.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
<ul style="list-style-type: none">● Dust and water leaks	<ul style="list-style-type: none">● Body sealer missing.● Opening in weldings or body joints.● Components not fully installed.● Components missing.● Components damaged.	<ul style="list-style-type: none">● REMOVE trim. CHECK for leaks and SEAL with appropriate sealer. ROAD TEST or WATER TEST for leaks. RECHECK trim for leaks; USE light under the vehicle with trim removed. CHECK interior of body at joints and weld lines.
<ul style="list-style-type: none">● Dust/water leaks at floor pan and grommets	<ul style="list-style-type: none">● Missing or damaged plugs and/or grommets.	<ul style="list-style-type: none">● CHECK plugs for proper installation. REPLACE if necessary.

Front End Body Panels

The grille opening reinforcement:

- is bolted to the fenders and bumper beam.
- retains the headlamp assemblies and bumper cover.

The cowl vent screen is a two-piece component. The right side of the cowl vent screen may be removed without the removal of the windshield wiper pivot arm.

Cowl Vent Screen

Removal

NOTE: To remove the left side cowl vent screen, the right cowl vent screen must be removed first. Follow the entire cowl vent screen procedure.

Right Side Only

1. **NOTE:** The fasteners are reusable.

Remove the right side of the cowl vent screen.

1. Remove the two-part pin-type retainers and separate the Velcro® attachment of the rubber hinge cover to the rear outboard corner of the cowl vent screen.
2. Pull up on the cowl vent screen to release the lower clips.

Entire Cowl Vent Screen

2. Remove the two wiper pivot arms.
 1. Remove the two pivot arm nut covers.
 2. Remove the two nuts.
 3. Remove the two wiper pivot arms.

3. **NOTE:** Remove the right side first when removing the entire cowl vent screen.

Remove the cowl vent screen.

1. Remove the two-part pin-type retainers and separate the Velcro® attachment of the rubber hinge cover to the rear outboard corner of the cowl vent screen.
2. Lift up on the cowl vent screen to release the clips.

Installation

NOTE: When installing the entire cowl vent screen, install the left side first. Follow the entire cowl vent screen procedure.

Right Side Only

1. Install the right side of the cowl vent screen.
 1. Position the cowl vent screen and the Velcro® attachment of the rubber hinge cover.
 2. Install the two-part pin-type retainers.

Entire Cowl Vent Screen

2. **NOTE:** Use the lower rearward clips as locators prior to installation, working from the center of the vehicle outward.

Install the cowl vent screen.

1. Position the windshield moulding flap over the left side cowl vent screen and attach the rubber hinge cover to the cowl screen.
2. Install the cowl vent screens and install the two-part pin-type retainers.

3. Cycle the windshield wiper motor to park the windshield wiper pivot arm shafts.

4. Install the windshield wiper and pivot arms onto the pivot shaft and align the blade to the heated wiper park/windshield wire lines on the windshield glass within the specification.

5. Tighten the windshield wiper pivot arm nuts.
 - Install the two pivot arm nut covers.

Fender

Removal and Installation

LH or RH Side

1. Remove the front bumper cover. For additional information, refer to [Section 501-19](#).
2. Remove the wheel and tire assembly. For additional information, refer to [Section 204-04](#).
3. Remove the front and rear inner splash shield.

LH Side Only

4. Position the speed control module aside.
 - Loosen the top bolt.
 - Remove the bottom bolt.

LH or RH Side

5. Remove the fender stuffer.
6. Remove the inner front fender bolts.

7. Remove the two front two-part pin-type retainers and position the front rocker moulding aside.

8. Remove the lower front fender bolts.

9. Remove the radiator upper sight shield.
 1. Remove the retainers.
 2. Remove the radiator upper sight shield.

10. Remove the headlamp assembly.
 1. Remove the three bolts.
 2. Remove the headlamp assembly.
 - Disconnect the electrical connector.

11. Remove the radiator grille opening panel to front fender bolts.

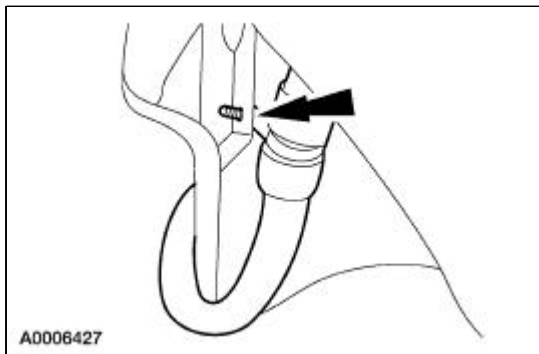

LH Side Only

12. Position the splash shield aside.

LH or RH Side

13. Disengage the wiring harness locator.

14. **NOTE:** Support the hood using a prop rod.

Disengage the lower hood assist strut.

15. Remove the front fender bolts and the hood assist strut ball stud.

16. Remove the front fender.
 17. To install, reverse the removal procedure.
-

Radiator Grille Opening Panel

Removal and Installation

1. Remove the front bumper cover. For additional information, refer to [Section 501-19](#).
2. Remove the radiator upper sight shield.
 1. Remove the retainers.
 2. Remove the radiator upper sight shield.

3. **NOTE:** LH side shown, RH side similar.

Remove the two headlamp assemblies.

1. Remove the six bolts.
 2. Remove the headlamp assemblies.
- Disconnect the electrical connector.

4. Release the wiring harness fasteners and position the wiring harnesses rearward.

5. Remove the radiator grille opening panel bolts and the brackets.

6. Remove the radiator grille opening panel.
 7. To install, reverse the removal procedure.
-

Torsion Bar Loading

 **WARNING:** Safety glasses must be worn when carrying out this operation. Failure to follow these instructions may result in physical injury.

1. **NOTE:** The luggage compartment lid tension should be decreased if the luggage compartment lid (40110) opens with more force than desired. The luggage compartment lid tension should be increased if the luggage compartment lid opens with less force than desired.

Open and support the luggage compartment lid in the full-open position.

2.  **WARNING:** Use care when adjusting the luggage compartment lid torsion bar. It is under tension and could spring out of control if it is not handled correctly. Failure to follow these instructions could result in personal injury.

Move the luggage compartment lid end of the luggage compartment lid torsion bar to another position.

3. Check the adjustment.
4. If required, move the luggage compartment lid end of the luggage compartment lid torsion bar to another position.

Door

Removal

All Doors

1. Remove the door trim panel. For additional information, refer to [Section 501-05](#).
2. Remove the screws and the speaker.

Front Door

3. **NOTE:** Driver door shown, passenger door similar.

Disconnect the electrical connectors.

4. Remove the two nuts, the bolt and the inner front door support bracket.

5. Release the wiring harness locators.

Rear Door

6. Disconnect the electrical connector.

7. Release the wiring harness locators.

All Doors

8. Remove the grommet and wiring harness.

9.  **CAUTION: Do not close the door after the door check screws have been removed.**

Remove the door check strap screws.

10. Mark the hinge location on the door.
11. **NOTE:** An assistant is required to support the door during its removal.
Remove the hinge to door bolts and the door.

Installation

All Doors

1. Position the door and install the hinge to door bolts.

2. Install the door check strap screws.

3. Install the grommet and the wiring harness.

Rear Door

4. Connect the electrical connector.

Front Door

5. Install the front door support bracket, the two nuts and the bolt.

6. Connect the electrical connectors.

All Doors

7. Install the screws and the speaker.
 8. Install the door trim panel. For additional information, refer to [Section 501-05](#).
 9. Check the door for a flush fit to the body.
-

Door —Check Strap

Removal and Installation

All Doors

1. Remove the door trim panel. For additional information, refer to [Section 501-05](#).
2. Remove the screws and the speaker.

3.  **CAUTION:** Do not close the door after removal of the check strap screws

Remove the door check strap screws.

Rear Door

4. Remove the cover.

All Doors

5. Remove the nuts and the door check strap.

6. To install, reverse the removal procedure.
-

Headliner Adhesive	WSS-M2G355-B
F1VY-19562-A	

Torque Specifications

Description	Nm	lb-ft
Front seat safety belt nut	40	30
Rear safety belt anchor bolt	40	30

Interior Trim

CAUTION: Many of the interior trim panels use concealed fasteners. Use caution when removing or replacing the interior trim panels to avoid damaging the panels.

The shoulder safety belt height adjuster must be at its highest setting before installing the upper B-pillar trim panel to prevent safety belt binding.

Trim Panel —Front Door

Removal

1. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
2. Lift the cover and remove the screws.

3. Remove the interior door handle trim panel.

4. Remove the five screws and remove the trim panel.
 - Disconnect the electrical connectors.

Installation

1. To install, reverse the removal procedure.

Trim Panel —Rear Door

Removal

1. Lift the cover and remove the screws.

2. Remove the door trim panel.
 1. Remove the three screws.
 2. Remove the ashtray assembly.
 - Disconnect the electrical connectors.

Installation

1. To install, reverse the removal procedure.

Trim Panel —A-Pillar Lower

Removal

1. Remove the front scuff plate.

2. Pull back the weatherstrip.

3. Remove the A-pillar lower trim panel.

Installation

1. To install, reverse the removal procedure.

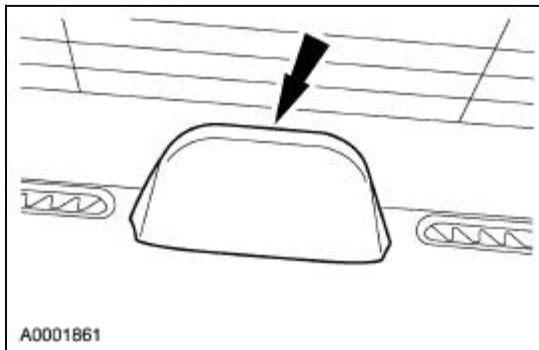

Trim Panel —Package Tray

Removal

1. Remove the rear seat bolsters. For additional information, refer to [Section 501-10](#).
2. Position the two quarter trim panels aside.

3. Remove the rear high mounted stoplamp (HMSL) cover.

4. Remove the rear center safety belt cover.

5. Remove the pin-type retainers and pull down the rear seat latch covers.

6. Remove the package tray trim panel.

Installation

1. To install, reverse the removal procedure.
-

Trim Panel —Upper B-Pillar

Removal

1. Pull back the weatherstrip surrounding the upper B-pillar trim.
2. Remove the front seat safety belt cover.

3. Remove the front seat safety belt nut.

4. Remove the upper B-pillar trim.

Installation

1. **NOTE:** Position the shoulder safety belt height adjuster at its highest setting before installing the B-pillar trim.

To install, reverse the removal procedure.

- Check the restraint system for correct operation.
-

Trim Panel —Quarter

Special Tool(s)

Removal

1. Remove the rear seat bolster. For additional information, refer to [Section 501-10](#).
2. Using the special tool, remove the rear safety belt anchor bolt.

3. Remove the quarter trim panel.

Installation

1. **NOTE:** Position the weatherstrip over the quarter trim panel.

To install, reverse the removal procedure.

- Check the restraint system for correct operation.

Trim Panel —Windshield Side Garnish Moulding

1. Position the weatherstrip aside.
2. Remove the windshield side garnish moulding.

Installation

1. To install, reverse the removal procedure.
-

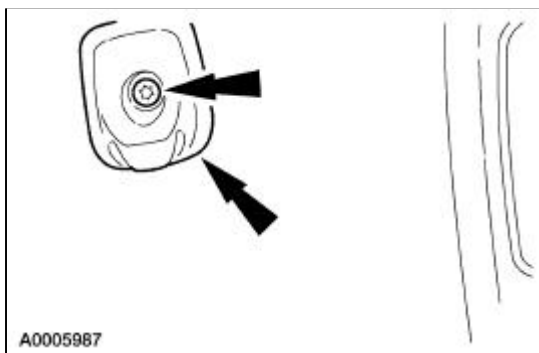

Headliner

Removal

1. Move the front passenger seat fully rearward and fully recline.
2. Move the driver seat fully forward and the seat backrest fully upright.
3. Remove the screws and the sun visors.
 - Disconnect the electrical connectors.

4. Remove the screws and the sun visor clips.

5. Remove the four assist handles.
 1. Position the end caps aside.
 2. Remove the screws.

6. Remove the windshield side garnish mouldings.

7. Position the upper B-pillar trim aside.

8. Position the upper portion of the door weatherstrip seals aside.
9. Remove the quarter trim panels. For additional information, refer to [Trim Panel—Quarter](#).
10. **NOTE:** Vehicles without moon roofs—Use a plastic scraper to detach the headliner from the roof.

Release the map lamp clips and lower the headliner.

11. Disconnect the electrical connector.

12. Remove the headliner from the left rear door opening.

Installation

Installing New Headliner

1.  **CAUTION: Folding the headliner will result in damage to the headliner.**

Carefully position the headliner in the vehicle.

2. **NOTE:** Adhesive required for vehicles without moon roofs.

Apply Headliner Adhesive F1VY-19562-A or equivalent meeting Ford specification WSS-M2G355-B in a triangular pattern to the center of the headliner.

3. Connect the electrical connector.

4. Press the headliner against the roof to make sure adhesive contacts both surfaces.

Installing Existing Headliner

5.  **CAUTION: Folding the headliner will result in damage to the headliner.**

Carefully position the roof headliner in the vehicle.

6. Bend the tabs of the rear locator back into their original position.

7. Apply Headliner Adhesive F1VY-19562-A or equivalent meeting Ford specification WSS-M2G355-B in a triangular pattern to the center of the headliner.

8. Connect the electrical connector.

9. Press the headliner against the roof to make sure the adhesive contacts both surfaces.

New or Existing Headliner

10. Install the quarter trim panels. For additional information, refer to [Trim Panel—Quarter](#) .

11. Install the upper B-pillar trim.

12. Install the windshield garnish mouldings on each side.

13. Position the sun visor clips and install the screws.

14. Connect the electrical connectors, position the sun visors, and install the screws.

15. Install the four assist handles.
1. Position the assist handles.

2. Install the screws.
3. Install the end caps.

16. Install the door weatherstrips.
 17. Place the seats in upright positions.
-

Radiator Grille

Removal and Installation

1. Open the hood.
2. Remove the radiator grille.
 1. Remove the nuts.
 2. Release the clips.

3. To install, reverse the removal procedure.
-

License Plate Housing

Removal and Installation

1. Remove the pin-type retainers and the luggage compartment lid trim panel.

2. Disconnect the two reversing lamp electrical connectors.

3. Disconnect the two license plate lamp electrical connectors.

4. Remove the license plate housing.
 1. Remove the nuts.
 2. Release the retaining clips.

5. To install, reverse the removal procedure.
- Transfer components as necessary.
-

Torque Specifications

Description	Nm	lb-ft	lb-in
Exterior rear view mirror nuts	5	—	44
Mirror motor screws	2	—	18

Rear View Mirrors

Rear View Mirrors

The exterior rear view mirror is:

- electrically operated.
- controlled by the exterior mirror control switch for both vertical and horizontal movement.

The interior rear view mirror features automatic dimming which:

- automatically reduces glare caused by headlamps reflecting in the interior rear view mirror.
- houses two sensors to determine dimmer actuator.
- activates whenever the ignition is in the RUN or ACC position.
- defaults to the NORMAL setting when the transmission is shifted to REVERSE to allow a bright view for backing up.
- is disabled by pushing the mirror-mounted switch to the OFF position.
- can be manually activated or deactivated.

Memory

The memory mirror:

- automatically provides preferred positioning of the exterior rear view mirrors.
- may be recalled through the door-mounted switches, the remote-entry transmitter or keyless entry keypad.
- provides recall when the ignition switch is in the OFF or RUN position and the transmission is in the PARK or NEUTRAL position.
- position is stored in the driver door module (DDM).

Heated Mirrors

The heated mirror function:

- provides electric heating to both the driver and passenger side exterior rear view mirrors.
- raises the temperature of the glass to clear frost and condensation.
- is activated by activating the rear defrost button.
- automatically shuts off after ten minutes.

Electrochromic Interior Rear View Mirror

The optional electrochromic interior rear view mirror:

- is equipped with an automatic dimming feature that controls the interior rear view mirror reflecting surface to reduce glare caused by headlamps reflecting in the mirror.
 - has two integral sensors to control dimming functions.
 - defaults to normal setting when the transmission is shifted to REVERSE to allow a bright view for backing up.
 - can be switched off by pressing the MODE switch to the OFF position.
-

Rear View Mirrors

Refer to Wiring Diagrams Section [501-09](#), Rear View Mirrors for schematic and connector information.

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052 or equivalent diagnostic tool
 ST1137-A	73 III Automotive Meter 105-R0057 or equivalent

Principles of Operation

Exterior Mirrors

The exterior mirrors are controlled by the exterior rear view mirror control. The exterior rear view mirror control is hardwired to the driver door module (DDM). When the driver exterior rear view mirror is selected, adjustment is carried out by moving the control to the desired position. The DDM receives the adjustment input command from the exterior rear view mirror control and supplies power and ground to the appropriate exterior rear view mirror motor to adjust the exterior rear view mirror. The passenger exterior rear view mirror is controlled by the front electronics module (FEM). When the DDM receives an adjustment command for the passenger exterior rear view mirror, the DDM interprets the command and sends the adjustment command over the SCP communication network to the FEM. The FEM interprets the command and supplies power and ground to the appropriate exterior rear view mirror motor to adjust the exterior rear view mirror.

Memory Operation

The DDM and FEM constantly track mirror position. Each exterior mirror motor is equipped with a potentiometer, which the modules monitor to track the mirror position. This position remains in memory as long as the module retains power. When a position is stored in memory by the operator, the module will retain this position in memory for future recall. When a memory position is recalled by the operator, the DDM and FEM will power the exterior mirror motors simultaneously and monitor the potentiometer circuits. When the stored memory position is reached, the DDM and FEM will remove power from the motors. If the exterior rear view mirror control is operated during a memory recall, the modules will stop the memory recall and respond to the exterior rear view mirror control command.

Heated Exterior Mirrors

The heated exterior mirrors will only function when the rear window defrost is operating. There is no separate control for heated exterior mirrors, they will function anytime the rear window defrost is ON. For additional information on the rear window defrost, refer to [Section 501-11](#).

The heated mirror power is supplied by the rear window defrost relay through a separate battery junction box (BJB) fuse that isolates the heated mirrors from the rear window defrost in the event of a concern.

Automatic Dimming Mirror

The automatic dimming mirror will lighten or darken depending on the input of the sensors that are internal to the mirror.

The automatic dimming mirror reverse input is supplied by a hardwired circuit to the rear electronic module (REM). When REVERSE is selected, the REM will receive the PRNDL message over the SCP communication network from the PCM stating reverse has been selected. The REM will then supply a power signal to the automatic dimming mirror causing the automatic dimming mirror to cancel any dimming function currently operating and return to a full bright status. When the gear selector is moved out of REVERSE, the automatic dimming mirror returns normal operation and resumes any interrupted dimming functions.

If the REM does not receive the PRNDL information from the PCM, a communication DTC will be logged. As a default, the REM will supply power to the dimming circuit preventing the automatic dimming function from operating until the message and communication is restored.

The reverse message supplied to the REM has a time delay before the message is sent by the PCM. This delay allows for the gear selector to be moved through REVERSE without canceling dimming operations.

Switched System Power (SSP)

The SSP is invoked by both the FEM and REM. This function removes power from relays that provide power to the exterior lamps, interior lamps, and power door locks. This is only accomplished when both the FEM and the REM are in sleep mode. The sleep function of the FEM and REM places the modules in sleep mode when the ignition switch is in the OFF position, and no wake up (inputs) signals occur for 30 minutes. The module will not sleep if the parking lamps or the hazard lamps are active. The following relays are controlled by the SSP function: SSP1, SSP2, SSP3, and SSP4. When either the FEM or REM are not in sleep mode, all SSP relays will be energized. Each relay, when energized, will supply power to multiple features/functions. For additional information, refer to the SSP Relay Index for diagnosis and testing of SSP-related issues.

Inspection and Verification

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Damaged exterior rear view mirrors ● Damaged interior rear view mirror 	<ul style="list-style-type: none"> ● Battery junction box (BJB) Fuses 406 (10A), 409 (5A), 422 (20A), 423 (30A), 424 (30A), 425 (40A), 427 (30A), and 432 (30A). ● Central junction box (CJB) Fuse 207 (5A), 216 (5A), 222 (10A), and 235 (5A). ● Switched system power (SSP) relays 1 and 2. ● Exterior rear view mirror control. ● Exterior rear view mirror motor. ● Exterior rear view mirror glass. ● Interior rear view mirror. ● Wiring harness.

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the diagnostic tool tester does not power up, refer to the diagnostic tool manual.
5. Carry out the DATA LINK DIAGNOSTICS. If the diagnostic tool responds with:
 - CKT 914, CKT 915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for FEM, go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for REM, go to Pinpoint Test B.
 - NO RESP/NOT EQUIP for DDM, go to Pinpoint Test C.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM, REM and DDM.
6. If the DTCs retrieved are related to the concern, go to the FEM Diagnostic Trouble Code (DTC) Index, REM Diagnostic Trouble Code (DTC) Index, or DDM Diagnostic Trouble Code (DTC) Index.
7. If no DTCs related to the concern are retrieved, proceed to the Symptom Chart to continue the diagnostics.

FEM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1319	Driver Door Ajar Circuit Failure	FEM	REFER to Section 417-02 .
B1327	Passenger Door Ajar Circuit Failure	FEM	REFER to Section 417-02 .
B1342	ECU Is Defective	FEM	CLEAR the DTC. REPEAT the FEM self-test. If DTC B1342 is retrieved, INSTALL a new FEM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
