<p>3</p> <p>REM C420c</p>	
<p>4</p>	

5

A0006299

5

Measure the voltage between REM C420d pin 3, circuit 29-DK31 (OG/BK), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [B2](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

B2 CHECK CIRCUITS 29S-DK31 (OG/BK), 31-DK30D (BK), 31-DK30E (BK), 31-DK30F (BK), 31-DK30G (BK) AND 31-DK30H (BK/OG), FOR OPENS

1

2

REM C420b

3

A0006300

3

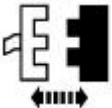

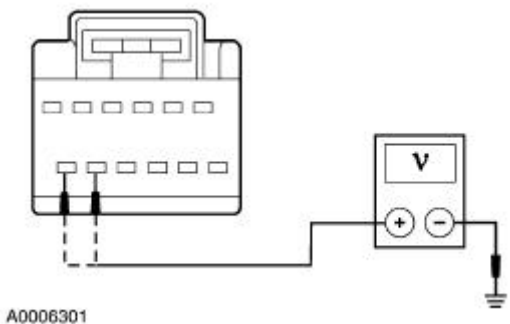

Using the following table, measure the resistance between REM connectors, harness side and ground:

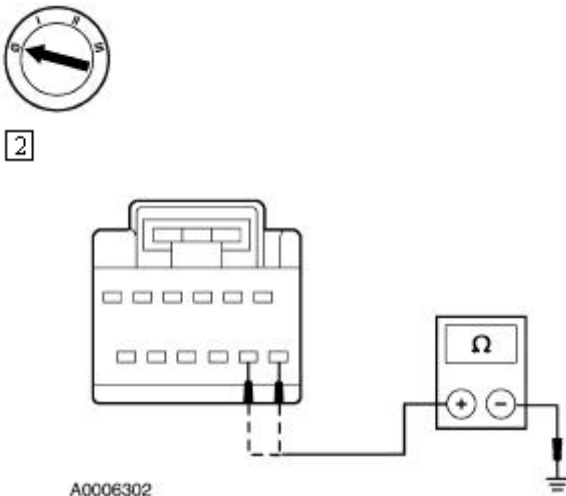

REM	Pin	Circuit
C420c	13	29S-DK31 (OG/BK)
C420c	12	31-DK30E (BK)
C420c	11	31-DK30D (BK)
C420c	26	31-DK30G (BK)
C420c	25	31-DK30F (BK)
C420b	12	31-DK30H (BK/OG)

• Are the resistances less than 5 ohms?

- **Yes**
REFER to [Section 418-00](#).
- **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST C: NO COMMUNICATION WITH THE DRIVER DOOR MODULE (DDM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK CIRCUITS 29-AJ80 (OG) AND 29S-AJ86 (OG/BU) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1 </p> <p>2  DDM C501a</p> <p>3 </p> <p>4  A0006301</p>	<p>4 Measure the voltage between DDM C501a pin 11, circuit 29-AJ80 (OG), harness side and ground; and between DDM C501a pin 12, circuit 29S-AJ86 (OG/BU), harness side and ground.</p> <ul style="list-style-type: none"> • Are the voltages greater than 10 volts? <p>→ Yes GO to C2.</p> <p>→ No REPAIR the circuit(s) in question. C2 CHECK CIRCUITS 31-AJ80B (BK/OG) AND 91-AJ80 (BN/BU) FOR OPENS	
1	

A0006302

2 Measure the resistance between DDM C501a pin 7, circuit 91-AJ80 (BN/BU), harness side and ground; and between DDM C501a pin 8, circuit 31-AJ80B (BK/OG), harness side and ground.

- Are the resistances less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST D: THE MIRRORS ARE INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>D1 CHECK DDM AND FEM DTCS</p>	<p>1 Use the recorded results from the FEM and DDM self-tests.</p> <ul style="list-style-type: none"> ● Are any DTCs retrieved? <p>→ Yes For DTC B2336 or B2320, GO to D9.</p> <p>→ No GO to D2.</p>
<p>D2 CHECK CIRCUIT 33-AD12 (YE) FOR VOLTAGE</p> <p>1</p>  <p>2</p>  <p style="text-align: center;">Exterior Rear View Mirror Control C204</p>	

3

4

A0002454

4

Measure the voltage between exterior rear view mirror control C204 pin 7, circuit 33-AD12 (YE), harness side and ground.

● Is the voltage greater than 5 volts?

→ Yes
GO to [D4](#).

→ No
GO to [D3](#).

D3 CHECK CIRCUIT 33-AD12 (YE) FOR AN OPEN

1

2

DDM C501d

3

4

A0002455

4

Measure the resistance between the exterior rear view mirror control C204 pin 7, circuit 33-AD12 (YE), harness side and DDM C501d pin 12, circuit 7-AD1 (YE), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

D4 CHECK CIRCUIT 31-AD12 (BK/YE) FOR AN OPEN

1

1 Measure the resistance between exterior rear view mirror control C204 pin 3, circuit 31-AD12 (BK/YE), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [D5](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

D5 CHECK CIRCUIT 33-AD12 (YE) FOR A SHORT TO GROUND

1

1 Measure the resistance between exterior rear view mirror control C204 pin 4, circuit 33-AD12 (YE), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [D7](#).

→ **No**
GO to [D6](#).

D6 CHECK DDM FOR AN INTERNAL SHORT TO GROUND

1

2

DDM C501d

3

4

A0002458

4 Measure the resistance between exterior rear view mirror control C204 pin 4, circuit 33-AD12 (YE), harness side and ground.

• Is the resistance greater than 10,000 ohms?

→ Yes
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

D7 CHECK CIRCUIT 33-AD12 (YE) FOR AN OPEN

1

2

DDM C501d

3

4

4 Measure the resistance between exterior

rear view mirror control C204 pin 4, circuit 33-AD12 (YE), harness side and DDM C501d pin 18, circuit 33-AD12 (YE), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [D8](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

D8 CHECK THE EXTERIOR REAR VIEW MIRROR CONTROL

1 Carry out the exterior rear view mirror control component test. Refer to Wiring Diagrams Section 700-09-00, Component Testing.

- Is the exterior rear view mirror control OK?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
INSTALL a new exterior rear view mirror control. For additional information, REFER to [Switch—Exterior Rear View Mirror Control](#) in this section. CLEAR the DTCs. REPEAT the self test.

D9 CHECK THE EXTERIOR REAR VIEW MIRROR CONTROL

1

2

Exterior Rear View Mirror Control C204

3 Carry out the exterior rear view mirror control component test. Refer to Wiring Diagrams Section 700-09-00, Component Testing.

- Is the exterior rear view mirror control OK?

→ **Yes**
GO to [D10](#).

→ **No**
INSTALL a new exterior rear view mirror control. For additional information, REFER to [Switch—Exterior Rear View Mirror Control](#) in this section. CLEAR the DTCs. REPEAT the self test.

D10 CHECK EXTERIOR REAR VIEW MIRROR CONTROL CIRCUITS FOR VOLTAGE

1

2

2 Using the following table, measure the voltage between the exterior rear view mirror control C204 pins, harness side and ground:

Pin	Circuit
1	32-AD30 (WH/BK)
2	32-AD32 (WH/RD)
4	33-AD12 (YE)
8	34-AD31 (BU/WH)
9	34-AD29 (BU/OG)

- Is the voltage greater than 10 volts for any measurement?

→ **Yes**
GO to [D12](#).

→ **No**
GO to [D11](#).

D11 CHECK EXTERIOR REAR VIEW MIRROR CONTROL CIRCUITS FOR SHORT TO GROUND

1

2

DDM C501d

3

3 Using the following table, measure the

A0005551

resistance between the exterior rear view mirror control C204 pins, harness side and ground:

Pin	Circuit
1	32-AD30 (WH/BK)
2	32-AD32 (WH/RD)
4	33-AD12 (YE)
8	34-AD31 (BU/WH)
9	34-AD29 (BU/OG)

- Is the resistance less than 5 ohms for any measurement?

→ **Yes**
 INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

D12 CHECK EXTERIOR REAR VIEW MIRROR CONTROL CIRCUITS FOR SHORT TO VOLTAGE

1

2

DDM C501d

3

4

A0005550

4 Using the following table, measure the voltage between the exterior rear view mirror control C204 pins, harness side and ground:

Pin	Circuit
1	32-AD30 (WH/BK)
2	32-AD32 (WH/RD)
4	33-AD12 (YE)
8	34-AD31 (BU/WH)
9	34-AD29 (BU/OG)

	<ul style="list-style-type: none"> ● Is voltage present for any measurement? <p>→ Yes REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No INSTALL a new DDM. REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p>
--	---

PINPOINT TEST E: A SINGLE MIRROR IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 CHECK THE DDM DTCS	
	<p>1 Use the recorded results from the DDM self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs retrieved? <p>→ Yes For DTC B2336, GO to E30. For DTC B2320 or B2324, GO to E20. For all other DDM DTCs, REFER to the DDM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to E2.</p>
E2 CHECK THE FEM DTCS	
	<p>1 Use the recorded results from the FEM self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes For DTC B2312 or B2316, GO to E5. For all other FEM DTCs, REFER to the FEM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to E3.</p>
E3 CHECK THE EXTERIOR REAR VIEW MIRROR CONTROL PIDS	
NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p>  <p>2</p>	

3

3 Monitor the DDM PIDs MIRH_SW, MIRV_SW and MIR_SEL, while operating the exterior rear view mirror control in each direction

- **Did the DDM PID values agree with the exterior rear view mirror control positions?**

→ **Yes**
GO to [E4](#).

→ **No**
GO to [E18](#).

E4 IDENTIFY THE INOPERATIVE MIRROR

1 Operate the driver and passenger exterior rear view mirrors.

- **Is the passenger mirror inoperative?**

→ **Yes**
GO to [E5](#).

→ **No**
GO to [E20](#).

E5 CHECK BJB FUSE 406 (10A) FOR VOLTAGE

2

1 Remove BJB Fuse 406 (10A).

2 Measure the voltage between BJB Fuse 406 (10A) input side, circuit 30S-DB15 (RD/OG), harness side and ground.

A0002460

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [E6](#).

→ **No**
REPAIR the power source to the fuse.
CLEAR the DTCs. REPEAT the self-test.

E6 CHECK CIRCUIT 29S-DK21 (OG/WH) AND 29S-LG1 (OG/YE) FOR AN OPEN

2

3

FEM C201a

4

5

1 Reinstall Fuse 406 (10A).

5 Measure the voltage between FEM C201a pin 1, circuit 29S-DK21 (OG/WH), harness side and ground.

A0002461

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [E7](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

E7 CHECK THE PASSENGER MIRROR ACTIVE COMMAND

1 Select the FEM active command menu
POWER MIRROR CONTROL.

2 Trigger the FEM active commands PR
UP, PR DOWN, PR LEFT and PR
RIGHT ON and OFF.

- Did the passenger exterior rear view mirror function correctly?

→ **Yes**
GO to [E14](#).

→ **No**
GO to [E8](#).

E8 CHECK FOR VOLTAGE AT THE PASSENGER MIRROR MOTOR

Passenger Exterior Rear View Mirror C601

4

A0002462

4

Using the following table, measure the voltage between the passenger exterior rear view mirror C601 pins, harness side and ground:

Pin	Circuit
4	33-AD10 (YE/BK)
2	32-AD10 (WH/BK)
6	35-AD11 (VT/WH)
8	34-AD11 (BU/OG)

- Is the voltage greater than 10 volts for any measurement?

→ **Yes**
GO to [E12](#).

→ **No**
GO to [E9](#).

E9 CHECK FOR RESISTANCE AT THE PASSENGER EXTERIOR REAR VIEW MIRROR

1

A0002463

1

Using the following table, measure the resistance between passenger exterior rear view mirror C601 pins, harness side and ground:

Pin	Circuit
4	33-AD10 (YE/BK)
2	32-AD10 (WH/BK)
6	35-AD11 (VT/WH)
8	34-AD11 (BU/OG)

- Are the resistances less than 5 ohms?

→ **Yes**
GO to [E13](#).

→ **No**
GO to [E10](#).

E10 CHECK FOR AN OPEN AT THE PASSENGER MIRROR ASSEMBLY

1

1

Using the following table, measure the voltage between passenger exterior rear view mirror C601 pins, harness side and ground, while moving the exterior rear view mirror control to the listed positions:

Pin	Circuit	Mirror Position
4	33-AD10 (YE/BK)	RIGHT

A0002462

2	32-AD10 (WH/BK)	LEFT
6	35-AD11 (VT/WH)	DOWN
8	34-AD11 (BU/OG)	UP

- Are the voltages greater than 10 volts for all measurements?

→ **Yes**
 INSTALL a new passenger rear view mirror motor. For additional information, REFER to [Mirror—Motor](#) in this section. CLEAR the DTCs. REPEAT the self-test.

→ **No**
 GO to [E11](#).

E11 CHECK CIRCUITS 33-AD10 (YE/BK), 32-AD10 (WH/BK), 35-AD11 (VT/WH) AND 34-AD11 (BU/OG) FOR AN OPEN

1

2

FEM C201e

3

4

A0002464

4 Using the following table, measure the resistance between FEM C201e pins, harness side and passenger exterior rear view mirror C601 pins, harness side:

Passenger Exterior Rear View Mirror Pin	Circuit	FEM C201e Pin
4	33-AD10 (YE/BK)	24
2	32-AD10 (WH/BK)	23
6	35-AD11	21

	(VT/WH)	
8	34-AD11 (BU/OG)	20

- Are the resistances less than 5 ohms?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

E12 CHECK CIRCUITS 33-AD10 (YE/BK), 32-AD10 (WH/BK), 35-AD11 (VT/WH) AND 34-AD11 (BU/OG) FOR A SHORT TO VOLTAGE

1

2

FEM C201e

3

4

A0002462

4 Using the following table, measure the voltage between the passenger exterior rear view mirror C601 pins, harness side and ground:

Pin	Circuit
4	33-AD10 (YE/BK)
2	32-AD10 (WH/BK)
6	35-AD11 (VT/WH)
8	34-AD11 (BU/OG)

- Is voltage present for any measurement?

→ **Yes**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

→ **No**
INSTALL a new FEM. REFER to [Section](#)

[419-10](#). CLEAR the DTCs. REPEAT the self-test.

E13 CHECK CIRCUITS 33-AD10 (YE/BK), 32-AD10 (WH/BK), 35-AD11 (VT/WH) AND 34-AD11 (BU/OG) FOR A SHORT TO GROUND

1

2

FEM C201e

3

4

4 Using the following table, measure the resistance between FEM C201e pins, harness side and passenger exterior rear view mirror C601 pins, harness side:

Passenger Exterior Rear View Mirror Pin	Circuit	FEM C201e Pin
4	33-AD10 (YE/BK)	24
2	32-AD10 (WH/BK)	23
6	35-AD11 (VT/WH)	21
8	34-AD11 (BU/OG)	20

● Are the resistances less than 5 ohms?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

E14 CHECK THE FEM FOR THE CORRECT OUTPUTS

1

2

3

2

Select FEM active command POWER MIRROR CONTROL.

3

Trigger the FEM active commands PR UP, PR DOWN, PR LEFT and PR RIGHT ON and OFF, while monitoring the FEM PIDs MIRH_SW and MIRV_SW.

Do the FEM PID values agree with the passenger exterior rear view mirror commanded positions?

→ Yes

INSTALL a new FEM. REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.

→ No

GO to E15.

E15 CHECK CIRCUITS 8-AD19 (WH/RD), 7-AD19 (YE/RD), 9-AD19 (BN/RD) AND 10-AD19 (GY/RD) FOR A SHORT TO VOLTAGE

1

2

Passenger Exterior Rear View Mirror C601

3

FEM C201e

4

5

5

Using the following table, measure the voltage between the passenger exterior rear view mirror C601 pins, harness side and ground:

Pin	Circuit

A0002465

1	8-AD19 (WH/RD)
7	7-AD19 (YE/RD)
3	9-AD19 (BN/RD)
5	10-AD19 (GY/RD)

- **Is voltage present for any measurement?**

- **Yes**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.
- **No**
GO to [E16](#).

E16 CHECK CIRCUITS 8-AD19 (WH/RD), 7-AD19 (YE/RD), 9-AD19 (BN/RD) AND 10-AD19 (GY/RD) FOR A SHORT TO GROUND

1

2

A0002466

- 2 Using the following table, measure the resistance between passenger exterior rear view mirror C601 pins, harness side and ground:

Pin	Circuit
1	8-AD19 (WH/RD)
7	7-AD19 (YE/RD)
3	9-AD19 (BN/RD)
5	10-AD19 (GY/RD)

- **Are the resistances greater than 10,000 ohms?**

- **Yes**
GO to [E17](#).
- **No**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

E17 CHECK CIRCUITS 8-AD19 (WH/RD), 7-AD19 (YE/RD), 9-AD19 (BN/RD) AND 10-AD19 (GY/RD) FOR AN OPEN

1

- 1 Using the following table, measure the resistance between FEM C201e pins, harness side and passenger exterior rear view mirror C601 pins, harness

side:

Passenger Exterior Rear View Mirror Pin	Circuit	FEM C201e Pin
1	8-AD19 (WH/RD)	7
7	7-AD19 (YE/RD)	8
3	9-AD19 (BN/RD)	22
5	10-AD19 (GY/RD)	11

- Are the resistances less than 5 ohms?

→ **Yes**
 INSTALL a new passenger exterior rear view mirror. CLEAR the DTCs. REPEAT the self-test.

→ **No**
 REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

E18 CHECK THE EXTERIOR REAR VIEW MIRROR CONTROL

1 Carry out the exterior rear view mirror control component test. Refer to Wiring Diagrams Section 700-09-00, Component Testing.

- Did the exterior rear view mirror control pass?

→ **Yes**
 GO to [E19](#).

→ **No**
 INSTALL a new exterior rear view mirror control. For additional information, REFER to [Switch—Exterior Rear View Mirror Control](#) in this section. CLEAR the DTCs. REPEAT the self-test.

E19 CHECK THE EXTERIOR REAR VIEW MIRROR CONTROL CIRCUITS FOR AN OPEN

1

2

Exterior Rear View Mirror Control C204

3

DDM C501d

4

5

5 Using the following table, measure the resistance between the following exterior rear view mirror control C204 pins, harness side and DDM C501d pins, harness side:

Exterior Rear View Mirror Control Pins	Circuit	DDM Pins
1	32-AD30 (WH/BK)	15
2	32-AD32 (WH/RD)	17
9	34-AD29 (BU/OG)	14
8	34-AD31 (BU/WH)	16

• Are the resistances less than 5 ohms?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

E20 CHECK CJB FUSE 222 (10A) FOR VOLTAGE

- 1 Remove CJB Fuse 222 (10A).
- 2 Measure the voltage between CJB Fuse 222 (10A) input side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [E21](#).

→ **No**
REPAIR the power source to Fuse 222 (10A). CLEAR the DTCs. REPEAT the self-test.

E21 CHECK CIRCUIT 29S-AJ86 FOR AN OPEN

2

3

DDM C501a

4

5

A0002471

1 Reinstall Fuse 222 (10A).

5 Measure the voltage between DDM C501a pin 12, circuit 29S-AJ86 (OG/BU), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [E22](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

E22 CHECK THE DRIVER EXTERIOR REAR VIEW MIRROR ACTIVE COMMANDS

1

2

1 Select DDM active command menu POWER MIRROR CONTROL.

2 Trigger the DDM active command DR UP, DR DOWN, DR LEFT and DR RIGHT.

- Did the driver exterior rear view mirror operate correctly?

→ Yes
GO to [E27](#).

→ No
GO to [E23](#).

E23 CHECK FOR VOLTAGE AT THE DRIVER MIRROR MOTOR

1

2

Driver Exterior Rear View Mirror C520

3

4

A0002462

4 Using the following table, measure the voltage between driver exterior rear view mirror C520 pins, harness side and ground:

Pin	Circuit
4	33-AD7 (YE/RD)
2	32-AD7 (WH/RD)
6	35-AD8 (VT)
8	34-AD8 (BU/WH)

- Is any voltage greater than 10 volts?

→ Yes
GO to [E31](#).

→ No
GO to [E24](#).

E24 CHECK FOR OPENS AT THE DRIVER MIRROR ASSEMBLY

1

1 Using the following table, measure the voltage between driver exterior rear view mirror C520 pins, harness side and ground, while moving the exterior rear view mirror control through the listed positions.

	Mirror

A0002462

Pin	Circuit	Position
4	33-AD7 (YE/RD)	RIGHT
2	32-AD7 (WH/RD)	LEFT
6	35-AD8 (VT)	DOWN
8	34-AD8 (BU/WH)	UP

- Are the voltages greater than 10 volts?

→ **Yes**
 INSTALL a new driver rear view mirror motor. For additional information, REFER to [Mirror—Motor](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 GO to [E25](#).

E25 CHECK FOR RESISTANCE AT THE DRIVER EXTERIOR REAR VIEW MIRROR

1

2

DDM C501c

3

4

A0002472

- 4 Using the following table, measure the resistance between DDM C501c pins, harness side and driver exterior rear view mirror C520 pins, harness side.

Driver Exterior Rear View Mirror Pin	Circuit	DDM Pin
2	32-AD7 (WH/RD)	1
4	33-AD7 (YE/RD)	2
6	35-AD8 (VT)	4
8	34-AD8	3

(BU/WH)

- Are the resistances less than 5 ohms?

→ **Yes**
GO to [E26](#).

→ **No**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

E26 CHECK CIRCUITS 32-AD7 (WH/RD), 33-AD7 (YE/RD), 34-AD8 (BU/WH) AND 35-AD8 (VT) FOR A SHORT TO GROUND

1

1 Using the following table, measure the resistance between driver exterior rear view mirror C520 pins, harness side and ground.

Pin	Circuit
2	32-AD7 (WH/RD)
4	33-AD7 (YE/RD)
6	35-AD8 (VT)
8	34-AD8 (BU/WH)

- Are the resistances greater than 10,000 ohms?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

E27 CHECK THE DDM FOR THE CORRECT OUTPUTS

1

2

3

2 Select DDM active command menu POWER MIRROR CONTROL.

3 Trigger the DDM active command DR UP, DR DOWN, DR LEFT and DR RIGHT ON and OFF while monitoring the DDM PIDs MIRH_SW and MIRV_SW.

- Do the PID values agree with the

**driver exterior rear view mirror
commanded positions?**

- **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.
- **No**
GO to [E28](#).

E28 CHECK CIRCUITS 8-AD18 (WH/BK), 7-AD18 (YE/BK), 9-AD18 (BN/YE) AND 10-AD18 (GY/BK) FOR A SHORT TO VOLTAGE

1

2

Driver Exterior Rear View Mirror C520

3

DDM C501c

4

5

- 5 Using the following table, measure the voltage between driver exterior rear view mirror C520 pins, harness side and ground.

Pin	Circuit
1	8-AD18 (WH/BK)
7	7-AD18 (YE/BK)
3	9-AD18 (BN/YE)
5	10-AD18 (GY/BK)

• Is voltage present for any measurement?

- **Yes**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.
- **No**
GO to [E29](#).

E29 CHECK CIRCUITS 8-AD18 (WH/BK), 7-AD18 (YE/BK), 9-AD18 (BN/YE) AND 10-AD18 (GY/BK) FOR A SHORT TO GROUND

1

A0002466

1

Using the following table, measure the resistance between driver exterior rear view mirror C520 pins, harness side and ground.

Pin	Circuit
1	8-AD18 (WH/BK)
7	7-AD18 (YE/BK)
3	9-AD18 (BN/YE)
5	10-AD18 (GY/BK)

• Are the resistances greater than 10,000 ohms?

→ **Yes**
GO to [E30](#).

→ **No**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

E30 CHECK CIRCUITS 8-AD18 (WH/BK), 7-AD18 (YE/BK), 9-AD18 (BN/YE) AND 10-AD18 (GY/BK) FOR AN OPEN

1

2

Driver Exterior Rear View Mirror C520

3

DDM C501c

4

A0002473

4

Using the following table, measure the resistance between DDM C501c pins, harness side and driver exterior rear view mirror C520 pins, harness side.

Driver Exterior Rear View Mirror Pin	Circuit	DDM Pin
1	8-AD18 (WH/BK)	14
7	7-AD18 (YE/BK)	5

3	9-AD18 (BN/YE)	19
5	10-AD18 (GY/BK)	15

- Are the resistances less than 5 ohms?

→ **Yes**
 INSTALL a new driver exterior rear view mirror. For additional information, REFER to [Mirror—Exterior Rear View](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

E31 CHECK FOR VOLTAGE AT THE DRIVER EXTERIOR REAR VIEW MIRROR ASSEMBLY

1

2

Driver Exterior Rear View Mirror C520

3

DDM C501c

4

5

A0002462

5 Using the following table, measure the voltage between driver exterior rear view mirror C520 pins, harness side and ground.

Pin	Circuit
2	32-AD7 (WH/RD)
4	33-AD7 (YE/RD)
8	34-AD8 (BU/WH)
6	35-AD8 (VT)

- Are any of the voltages greater than 10 volts?

	<p>→ Yes REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No INSTALL a new DDM. REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p>
--	--

PINPOINT TEST F: THE AUTO DIMMING MIRROR DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK FOR REM RETRIEVED DIAGNOSTIC TROUBLE CODES	
	<p>1 Use the recorded results from the REM self-test.</p> <ul style="list-style-type: none"> • Are any DTCs retrieved? <p>→ Yes REFER to the REM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to F2.</p>
F2 CHECK POWER TO CJB FUSE 216 (5A)	
<p>1</p>  <p>CJB Fuse 216 (5A)</p> <p>2</p> 	<p>3 Measure the voltage between CJB Fuse 216 (5A) input terminal and ground.</p> <ul style="list-style-type: none"> • Is the voltage greater than 10 volts? <p>→ Yes GO to F3.</p> <p>→ No REPAIR the power supply to the fuse. CLEAR the DTCs. REPEAT the self-test.</p>
F3 CHECK CIRCUIT 640 (RD/YE) FOR AN OPEN	
1	

2

CJB Fuse 216 (5A)

3

Interior Rear View Mirror C911

4

5

A0002474

5 Measure the voltage between interior rear view mirror C911, pin 1 circuit 20-AD15 (PK), harness side and ground.

• Is the voltage greater than 10 volts?

→ Yes
GO to [F4](#).

→ No
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

F4 CHECK CIRCUIT 31-AD15 (BK) FOR AN OPEN

1

A0002475

1 Measure the resistance between interior rear view mirror C911, pin 2 circuit 31-AD15 (BK), harness side and ground.

• Is the resistance less than 5 ohms?

→ **Yes**
GO to [F5](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

F5 CHECK THE REM OUTPUT

1

3

A0002476

2  **CAUTION: Make sure the engine is not running. The ignition switch should be in the RUN position with the engine OFF.**

Engage the parking brake and shift the transmission to the REVERSE position.

3 Measure the voltage between interior rear view mirror C911, pin 3 circuit 8-AD15 (WH/BU), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [F8](#).

→ **No**
GO to [F6](#).

F6 CHECK CIRCUIT 8-AD15 (WH/BU) FOR AN OPEN

1

2

3

REM C420b

4

A0002477

4

Measure the resistance between interior rear view mirror C911, pin 3 circuit 8-AD15 (WH/BU), harness side and REM C420b pin 4, circuit 8-AD15 (WH/BU), harness side.

• Is the resistance less than 5 ohms?

→ **Yes**
GO to [F7](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

F7 CHECK CIRCUIT 8-AD15 (WH/BU) FOR A SHORT TO GROUND

1

A0002478

1

Measure the resistance between REM C420b pin 4, circuit 8-AD15 (WH/BU), harness side and ground.

• Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

F8 CHECK FOR THE CORRECT OUTPUT TO THE MIRROR

1

PRND
↑

2

A0002476

2

Measure the voltage between interior rear view mirror C911, pin 3 circuit 8-AD15 (WH/BU), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [F9](#).

→ **No**
INSTALL a new interior rear view mirror. For additional information, REFER to [Mirror—Interior Rear View](#). CLEAR the DTCs. REPEAT the self-test. If the auto dimming feature continues to function incorrectly, INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

F9 CHECK CIRCUIT 8-AD15 (WH/BU) FOR A SHORT TO VOLTAGE

1

2

REM C420b

3

4

4

Measure the voltage between REM C420b pin 4, circuit 8-AD15 (WH/BU), harness side and ground.

A0002479

● **Is voltage present?**

→ **Yes**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

→ **No**
INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST G: THE MEMORY MIRROR IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS						
G1 CHECK FOR DDM DTCS							
	<p>1 Use the recorded results from the DDM self-test.</p> <p>● Was DTC B1534, B1538 or B1530 retrieved?</p> <p>→ Yes GO to G2.</p> <p>→ No GO to G4.</p>						
G2 CHECK THE MEMORY SET SWITCH FOR A SHORT TO GROUND							
<p>1</p>  <p>Memory Set Switch C503</p> <p>2</p>	<p>2 Using the following table, measure the resistance between memory set switch C503 pins, harness side and ground.</p> <table border="1" data-bbox="890 1892 1171 2037"> <thead> <tr> <th>Pin</th> <th>Circuit</th> </tr> </thead> <tbody> <tr> <td>2</td> <td>8-AH27 (WH)</td> </tr> <tr> <td>6</td> <td>8-AH31 (WH/RD)</td> </tr> </tbody> </table>	Pin	Circuit	2	8-AH27 (WH)	6	8-AH31 (WH/RD)
Pin	Circuit						
2	8-AH27 (WH)						
6	8-AH31 (WH/RD)						

A0002480

1 | 8-AH32 (WH/BU)

- Are the resistances greater than 10,000 ohms?

→ **Yes**
 INSTALL a new memory set switch.
 CLEAR the DTCs. REPEAT the self-test.

→ **No**
 GO to [G3](#).

G3 CHECK CIRCUIT 8-AH27 (WH), 8-AH31 (WH/RD) AND 8-AH32 (WH/BU) FOR A SHORT TO GROUND

1

DDM C501c

2

A0002480

2 Using the following table, measure the resistance between memory set switch C503 pins, harness side and ground.

Pin	Circuit
2	8-AH27 (WH)
6	8-AH31 (WH/RD)
1	8-AH32 (WH/BU)

- Are the resistances greater than 10,000 ohms?

→ **Yes**
 INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

G4 CHECK THE MEMORY SET SWITCH USING DDM PIDS

1

1 Monitor the DDM PIDs MEMS_SW, MEM1_SW and MEM2_SW, while

actuating the memory set switch buttons.

- Did the DDM PID values agree with the memory set switch positions?

→ **Yes**
 INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 GO to [G5](#).

G5 CHECK CIRCUIT 31-AH27 (BK) FOR AN OPEN

1

Memory Set Switch C503

2

2 Measure the resistance between memory set switch C503 pin 4, circuit 31-AH27 (BK), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**
 GO to [G6](#).

→ **No**
 REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

G6 CHECK FOR AN OPEN CIRCUIT BETWEEN THE DDM AND MEMORY SET SWITCH

1

DDM C501c

2

2 Using the following table, measure the resistance between DDM C501d pins, harness side and memory set switch C503 pins, harness side.

DDM	Memory Set
-----	------------

A0002482

Pin	Circuit	Switch Pin
25	8-AH27 (WH)	2
10	8-AH31 (WH/RD)	6
11	8-AH32 (WH/BU)	1

- Are the resistances less than 5 ohms?

→ **Yes**
GO to [G7](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

G7 CHECK THE MEMORY SET SWITCH FOR AN OPEN

1

Memory Set Switch C503

2

A0002442

- 2 Using the following table, measure the resistance between DDM C501d pins, harness side and ground, while activating the indicated memory set switch button.

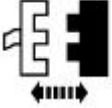

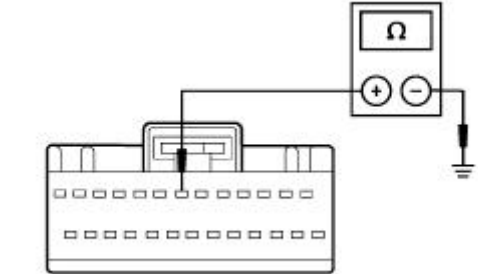

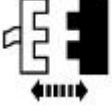

DDM Pin	Circuit	Memory Set Switch Button
25	8-AH27 (WH)	SET
10	8-AH31 (WH/RD)	MEMORY 1
11	8-AH32 (WH/BU)	MEMORY 2

- Is the resistance less than 5 ohms when each button is pressed?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
INSTALL a new memory set switch. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST H: THE MEMORY MIRROR IS INOPERATIVE — MEMORY SET SWITCH LED

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 CHECK THE MEMORY SWITCH LED	
	<p>1 Operate the memory set switch.</p> <ul style="list-style-type: none"> ● Is the memory set switch LED always ON? <p>→ Yes GO to H6.</p> <p>→ No GO to H2.</p>
H2 CHECK CIRCUIT 7S-AH27 (YE) FOR RESISTANCE	
<p>1</p>  <p>DDM C501c</p> <p>2</p>  <p>A0002483</p>	<p>2 Measure the resistance between DDM C501d pin 7, circuit 7S-AH27 (YE), harness side and ground.</p> <ul style="list-style-type: none"> ● Is the resistance greater than 10,000 ohms? <p>→ Yes GO to H4.</p> <p>→ No GO to H3.</p>
H3 CHECK CIRCUIT 7S-AH27 (YE) FOR A SHORT TO GROUND	
<p>1</p>  <p>Memory Set Switch C503</p> <p>2</p>	<p>2 Measure the resistance between DDM C501d pin 7, circuit 7S-AH27 (YE), harness side and ground.</p>

A0002483

- Is the resistance greater than 10,000 ohms?

- **Yes**
 INSTALL a new memory set switch.
 CLEAR the DTCs. REPEAT the self-test.
- **No**
 REPAIR the circuit. CLEAR the DTCs.
 REPEAT the self-test.

H4 CHECK THE DDM

- 1 Connect a 5A fused jumper wire between DDM C501c pin 7, circuit 7S-AH27 (YE), harness side and battery voltage.

- Did the memory set switch LED illuminate?

- **Yes**
 INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.
- **No**
 GO to [H5](#).

H5 CHECK CIRCUIT 7S-AH27 (YE) FOR AN OPEN

1

Memory Set Switch C503

2

- 2 Measure the resistance between memory set switch C503 pin 5, circuit 7S-AH27 (YE), harness side and DDM C501d pin 7, circuit 7S-AH27 (YE), harness side.

● Is the resistance less than 5 ohms?

- **Yes**
 INSTALL a new memory set switch.
 CLEAR the DTCs. REPEAT the self-test.
- **No**
 REPAIR the circuit. CLEAR the DTCs.
 REPEAT the self-test.

H6 CHECK THE DDM FOR AN INTERNAL SHORT TO VOLTAGE

1

DDM C501c

● Did the memory set switch LED turn OFF?

- **Yes**
 INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.
- **No**
 GO to [H7](#).

H7 CHECK CIRCUIT 7S-AH27 (YE) FOR A SHORT TO VOLTAGE

1

Memory Set Switch C503

2

- 2 Measure the voltage between memory set switch C503 pin 5, circuit 7S-AH27 (YE), harness side and ground.

A0002485

● **Is voltage present?**

→ **Yes**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

→ **No**
INSTALL a new memory set switch.
CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST I: THE HEATED EXTERIOR MIRROR DOES NOT DEFROST

CONDITIONS	DETAILS/RESULTS/ACTIONS
I1 CHECK THE REAR WINDOW DEFROST OPERATION	
<p>1</p>  <p>2</p> 	<p>3</p> <p>Depress the rear window defrost switch to ON.</p> <p>● Does the rear window defrost or warm up?</p> <p>→ Yes GO to I2.</p> <p>→ No REFER to Section 501-11 to diagnose the rear window defrost system.</p>
I2 CHECK THE HEATED FUNCTION OF THE EXTERIOR REAR VIEW MIRRORS	
	<p>1</p> <p>Check the heated function of the exterior rear view mirrors.</p>

- Is the heated function of both exterior rear view mirrors inoperative?

→ **Yes**
GO to [13](#).

→ **No**
For the driver side exterior rear view mirror, GO to [14](#).

For the passenger side exterior rear view mirror, GO to [16](#).

13 CHECK CIRCUIT 15S-DC1 (GN/YE) FOR VOLTAGE

1

2

BJB Fuse 409 (5A)

3

5

4 Depress the rear window defrost switch to ON.

5 Measure the voltage between BJB Fuse 409 (5A) input pin, circuit 15S-DC1 (GN/YE), and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
REPAIR circuit 29S-HB1 (OG/YE). TEST the system for normal operation.

→ **No**
REPAIR circuit 15S-DC1 (GN/YE). TEST the system for normal operation.

I4 CHECK CIRCUIT 29S-HB1 (OG/YE) FOR OPEN

1

2

Driver Exterior Rear View Mirror C520

3

A0002488

3 Measure the resistance between BJB Fuse 409 (5A) output terminal, circuit 29S-HB1 (OG/YE) and driver exterior rear view mirror C520 pin 9, circuit 29-HB35 (OG/BK), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [15](#).

→ **No**
REPAIR circuit 29-HB35 (OG/BK). TEST the system for normal operation.

I5 CHECK CIRCUIT 31-HB35 (BK) FOR OPEN

1

A0002489

- 1 Measure the resistance between driver exterior rear view mirror C520 pin 10, circuit 31-HB35 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
 INSTALL a new driver exterior rear view mirror. For additional information, REFER to [Mirror—Exterior Rear View](#) in this section. TEST the system for normal operation.

→ **No**
 REPAIR circuit 31-HB35 (BK). TEST the system for normal operation.

I6 CHECK CIRCUIT 29-HB36 (OG/GN) FOR OPEN

1

2

Passenger Exterior Rear View Mirror C601

3

- 3 Measure the resistance between BJB Fuse 409 (5A) output terminal, circuit 29S-HB1 (OG/YE) and passenger exterior rear view mirror C601 pin 9, circuit 29-HB36 (OG/GN), harness side.

A0002488

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [I7](#).

→ **No**
REPAIR circuit 29-HB36 (OG/GN). TEST the system for normal operation.

I7 CHECK CIRCUIT 31-HB36 (BK) FOR OPEN

1

A0002489

1

Measure the resistance between passenger exterior rear view mirror C601 pin 10, circuit 31-HB36 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new passenger exterior rear view mirror. For additional information, REFER to [Mirror—Exterior Rear View](#) in this section. TEST the system for normal operation.

→ **No**

REPAIR circuit 31-HB36 (BK). TEST the system for normal operation.

Mirror —Exterior Rear View

Removal and Installation

1. Remove the front door trim panel. For additional information, refer to [Section 501-05](#).
2. Remove the interior garnish moulding.

3. Disconnect the electrical connector.

4. Remove the exterior rear view mirror nuts.

5. Remove the exterior rear view mirror.

6. To install, reverse the removal procedure.

Mirror —Glass

Removal and Installation

1. Push in the upper edge of the mirror glass to the maximum travel.

2. Grasp the bottom of the mirror glass and pull outward.
3. Disconnect the electrical connectors and remove the mirror glass.

4. **NOTE:** When installing the mirror glass, make sure it snaps into the mirror motor.

To install, reverse the removal procedure.

Mirror —Motor

Removal and Installation

1. Remove the exterior rear view mirror glass. For additional information, refer to [Mirror—Glass](#).
2. Remove the mirror motor screws.

3. Disconnect the electrical connector and remove the mirror motor.

4. To install, reverse the removal procedure.

Mirror —Interior Rear View

Removal

1. Remove the compass module.
 - Disconnect the connector.
 - Remove the screws.
 - Remove the compass connector.

2. Disconnect the mirror connector.

3. Support the mirror with one hand against the windshield and pull towards the passenger side with the other hand.

Installation

1. Push the mirror down on the clip until an audible click is heard and the mirror snaps into place.

2. Install the mirror connector and compass module.
 - Install the mirror connector.
 - Install the compass module connector.

Switch —Exterior Rear View Mirror Control

Removal and Installation

1. Remove the instrument panel steering column cover.
 1. Remove the screws.
 2. Remove the instrument panel steering column cover.
 - Disconnect the electrical connectors.

2. Remove the upper finish panel.

3. Disconnect the interior rear view mirror control switch electrical connector.

4. Remove the interior rear view mirror control switch.

5. To install, reverse the removal procedure.

Torque Specifications

Description	Nm	lb-ft	lb-in
Rear seat bolster nut	11	8	—
Front seat track to floor bolts	25	18	—
Front seat track to floor nuts	25	18	—

Front seat backrest bolts	25	18	—
Front seat safety belt buckle bolt	40	30	—
Side air bag nuts	7	—	62
Rear seat backrest nuts	48	35	—
Front seat track nuts	20	15	—
Rear center safety belt anchor nut	48	35	—

Seats

Seats — Front

The front seats have the following features:

- memory set (optional)
- power lumbar (optional)
- manual lumbar
- horizontal, vertical and front and rear tilt adjustments
- power recline
- heat (optional)

Adjustment of the seat may be accomplished with the seat regulator control switch located on the side of the seat.

Seats — Rear

The rear seat has the following features:

- fold down seat backrest
- removable cushion retained by two latches located at the front of the cushion
- two rear bolsters on each side of the rear seat backrest

Fold down the rear seat backrest by releasing the two levers in the luggage compartment.

Seats — Power Recliner

The power recliner tilts the seat backrest rearward or forward and is controlled by the seat regulator control switch.

The power recliner cannot be repaired separately. If the power recliner needs to be repaired, an entirely new front seat backrest latch must be installed.

Seats — Power Lumbar Support

The seat has electro-mechanical front seat backrest pad adjuster. The lumbar switch adjustment is on the side of the seat.

Seats — Manual Lumbar Support

The manual front seat backrest lumbar is adjusted by a knob (57620) mounted on the front of the seat cushion.

Seats — Memory Set

This system allows automatic positioning of the driver seat, outside rearview mirrors, and power adjusted tilt/telescope steering column to two programmable positions.

The memory seat control is located on the driver door.

Seats — Heated

Each heated front seat is controlled by a switch on the instrument panel.

The heated seat system will only operate with the ignition switch in the RUN position.

Side Air Bag

Driver and passenger side air bags (611A08) are attached to the seat backrest frame. For diagnostic information or if the side air bag has been deployed, refer to [Section 501-20B](#).

The front seat backrest trim covers cannot be repaired. If the front seat backrest covers need to be repaired, an entirely new cover must be installed. Cleaning the front seat backrest cover is permissible.

If a side air bag deployment took place, a new seat back pad, trim cover and side air bag module must be installed. Install a new seat backrest frame if necessary.

Seats — Driver Seat Module

The driver seat module is attached to the driver seat track. For additional information, refer to [Section 419-10](#) for removal and installation procedures.

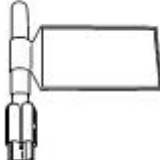

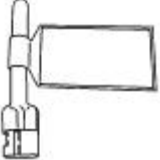

Seats

Refer to Wiring Diagrams Section [501-10](#), Climate Controlled Seats for schematic and connector information.

Refer to Wiring Diagrams Section [501-10](#), Power Seats for schematic and connector information.

Refer to Wiring Diagrams Section [501-10](#), Memory Seats for schematic and connector information.

Restraint System Diagnostic Tool Warning

 **WARNING:** The Restraint System Diagnostic Tools are for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

Principles of Operation

Driver Power Seat

The driver power seat is controlled by the driver seat module (DSM). The DSM does not need to be configured, however the drive seat does need to be calibrated when the DSM is installed. The driver seat regulator control switch provides voltage to the DSM when activated. The neutral position of each driver seat regulator control switch position is a ground state through the seat regulator control switch contacts. A voltage input causes the DSM to power the appropriate motor until the input is removed. Ground is the normal state of the motor circuits through the DSM and is not switched to control the motors. The DSM internally switches the appropriate line from ground to power to adjust the motors.

As the seat is adjusted, the DSM constantly monitors the motor position sensors to record the current seat position. The DSM will remove power from the motor upon termination of the seat regulator control switch input or if the DSM does not see movement from the motor by monitoring the position sensor. The DSM must be calibrated to the seat track it is controlling. For additional information, refer to Seat Calibration. Once the DSM is calibrated to the seat track, it will only allow movement within the calibrated range.

Seat Calibration

The DSM is calibrated using a scan tool. The calibration procedure automatically powers the driver power seat through its full range of motion and records the full stop positions by monitoring the motor position sensors. Once the full stop positions or range of the seat have been recorded, the DSM will only operate within the calibrated range. Any input attempting to drive the seat beyond the calibrated range will be ignored. This calibration is used for all seat control functions including manual switch control and memory recall positioning. During the seat calibration, the DSM may identify a function that is inoperative, such as a position sensor not changing. If the DSM identifies a concern that has a related diagnostic trouble code (DTC), the DSM will set the related DTC at the end of the validation procedure.

The calibration procedure powers the seat track adjustments to the end of their travel, which is determined by the DSM seeing a change of state in the motor position sensors. If there is a concern with the seat track or motor position sensor that limits the travel, the DSM will interpret the stopping point as the end of travel and store the position. The DSM is not able to determine if the seat has moved to its full travel position. It is only capable of monitoring and storing the amount of travel seen by the position sensor changing states.

For additional information on carrying out the power seat calibration procedure, refer to the scan tool operating manual.

Memory Seat

Memory seat positioning can be recalled with the memory switches on the driver door panel or a programmed remote keyless entry transmitter. In either case, the DSM receives a memory recall 1 or 2 command from the driver door module (DDM) over the SCP communication network. The memory recall switches are a hardwired input to the DDM. The DDM also receives the remote keyless entry transmitter signals. Once a valid memory recall command is received from the DDM, the DSM moves the drivers seat to the position stored in memory by powering the appropriate motors and monitoring the motor position sensors until the position is reached.

Easy Exit/Easy Entry

The easy exit function moves the seat backwards about two inches when the ignition key is removed from the ignition switch. The DSM receives a key out command over the SCP communication network and powers the driver seat rearward. This function will not operate if the seat is less than the travel distance to the end of the track, or the function has been deactivated at the message center driver

personality settings. The DSM will also cancel this operation if a valid input command is received, such as the seat regulator control switch or memory recall request.

The DSM will record the current seat position before powering the seat for a easy exit function. This recorded position will be used to return the seat to this position on the easy entry operation. During easy entry operation, the seat is returned to the position previous to the easy exit operation. Easy entry operation will be cancelled if a valid input command is received by the DSM.

Passenger Power Seat

The passenger power seat motors are hardwired to the passenger seat regulator control switch. The circuits are normally at ground through the seat regulator control switch. The individual circuit is switched to power when the specific adjustment position is selected.

Heated Seats

The driver and passenger heated seats share a common battery and ignition feed. A separate shared ignition source supplies the heated seat switches. When the heated seat switch is pressed with the ignition switch in RUN, a momentary voltage signal is sent to the heated seat module. The heated seat module then supplies power to the heating element circuit. The cushion element and seat backrest element are wired in series and powered by the same output. The heated seat module also will ground the separate indicator circuit at the heated seat switch to indicate an ON state. The heated seat module will remain on until the heated seat switch is pressed and a momentary voltage signal is received, or until 10 minutes expire. If the ignition source is removed from the module, the heated seat module will enter an off state and will not return to ON until the switch is once again pressed with the ignition switch in RUN. The heated seat module is designed to heat the seat to 37.5°C (99.5°F) and maintain the temperature until time-out or switched off. This temperature is maintained by the heated seat module monitoring the temperature sensor located in the seat cushion element, and adjusting the current flow to the heating elements.

Inspection and Verification

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Front seat track motors. ● Front seat track binding or obstructed. ● Front seat backrest power recline. ● Lumbar motor. 	<ul style="list-style-type: none"> ● BJB Fuses 411 (15A), 421 (20A), 425 (40A), 428 (20A) ● CJB Fuses 205 (5A), 216 (5A), 207 (5A) ● Seat regulator control switch. ● Memory set switch. ● Lumbar seat control switch.

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the concern remains after the inspection, connect the scan tool to the data link connector (DLC) located beneath the instrument panel. Then select the vehicle to be tested from the scan tool menu. If the scan tool does not communicate with the vehicle:
 - Check that the program card is correctly installed.
 - Check the connections to the vehicle.
 - Check the ignition switch position.

5. If the scan tool still does not communicate with the vehicle, refer to the scan tool manual.
6. Carry out the DATA LINK DIAGNOSTICS test. If the scan tool responds with:
 - CKT 914, CKT 915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for DSM, [Go To Pinpoint Test A](#).
 - NO RESP/NOT EQUIP for DDM, [Go To Pinpoint Test B](#).
 - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self test diagnostics for the DSM and the DDM.
7. If the DSM DTCs retrieved are related to the concern, go to the DSM Diagnostic Trouble Code (DTC) Index.
8. If the DDM DTCs retrieved are related to the concern, go to the DDM Diagnostic Trouble Code (DTC) Index.
9. If no DTCs related to the concern are retrieved, GO to [Symptom Chart](#) to continue the diagnostics.

DSM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Defective	DSM	REPEAT the DSM self-test. If DTC B1342 is retrieved again, INSTALL a new DSM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self test.
B1676	Battery Pack Voltage Out of Range	DSM	Go To Pinpoint Test M .
B1703	Seat Driver Recline Forward Switch Circuit Short to Battery	DSM	Go To Pinpoint Test E .
B1707	Seat Driver Recline Rearward Switch Circuit Short to Battery	DSM	Go To Pinpoint Test E .
B1711	Seat Driver Front Up Switch Circuit Short to Battery	DSM	Go To Pinpoint Test E .
B1715	Seat Driver Front Down Switch Circuit Short to Battery	DSM	Go To Pinpoint Test E .
B1719	Seat Driver Forward Switch Circuit Short to Battery	DSM	Go To Pinpoint Test E .
B1723	Seat Driver Rearward Switch Circuit Short to Battery	DSM	Go To Pinpoint Test E .
B1727	Seat Driver Rear Up Switch Circuit Short to Battery	DSM	Go To Pinpoint Test E .
B1731	Seat Driver Rear Down Switch Circuit Short to Battery	DSM	Go To Pinpoint Test E .

B1757	Seat Driver Rear Down Circuit Failure	DSM	Go To Pinpoint Test E .
B1761	Seat Driver Front Down Circuit Failure	DSM	Go To Pinpoint Test E .
B1765	Seat Driver Forward Circuit Failure	DSM	Go To Pinpoint Test E .
B1769	Seat Driver Backward Circuit Failure	DSM	Go To Pinpoint Test E .
B2143	NVM Memory Failure	DSM	CARRY OUT seat calibration of the DSM. CLEAR the DTCs. REPEAT the self test. IF the DTC resets, INSTALL a new DSM. REFER to Section 419-10 . CARRY OUT seat calibration of the new DSM.
B2146	Seat Recline Motor Position Out of Range	DSM	Go To Pinpoint Test E .
B2149	Seat Front Vertical Motor Position Out of Range	DSM	Go To Pinpoint Test E .
B2152	Seat Rear Vertical Motor Position Out of Range	DSM	Go To Pinpoint Test E .
B2155	Seat Horizontal Motor Position Out of Range	DSM	Go To Pinpoint Test E .
B2158	Seat Recline Motor Memory Position Out of Range	DSM	Go To Pinpoint Test G .
B2161	Seat Front Vertical Motor Memory Position Out of Range	DSM	Go To Pinpoint Test G .
B2164	Seat Rear Vertical Motor Memory Position Out of Range	DSM	Go To Pinpoint Test G .
B2167	Seat Horizontal Motor Memory Position Out of Range	DSM	Go To Pinpoint Test G .

Pinpoint Tests

PINPOINT TEST A: NO COMMUNICATION WITH THE DRIVER SEAT MODULE (DSM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK NGS TESTER COMMUNICATION TO THE DDM	
 WARNING: The restraint system diagnostic tool is for restraint system service only.	

Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in the General Procedures portion of this section.

NOTE: Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: Diagnostics may be performed on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1 Using the results from the DATA LINK DIAGNOSTICS test, check for communication to the DDM.

- Does the NGS Tester communicate with the DDM?

→ Yes
GO to [A2](#).

→ No
[Go To Pinpoint Test B](#).

A2 CHECK CIRCUITS 29-AH80 (OG/WH) AND 30-AH80 (RD) FOR VOLTAGE

1

2

DSM C341b

4

DSM C341c

3 Deactivate the supplemental restraint system (SRS). Refer to [Section 501-20B](#).

5

A0005666

5

Measure the voltage between DSM C341c pin 10, circuit 29-AH80 (OG/WH), harness side and ground; and between DSM C341b pin 4, circuit 30-AH80 (RD), harness side and ground

- Are the voltages greater than 10 volts?

→ **Yes**
GO to [A3](#).

→ **No**
REPAIR the circuit in question. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

A3 CHECK CIRCUIT 31-AH80 (BK) AND 91-AH80 (BK) FOR AN OPEN

1

A0003054

1

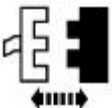

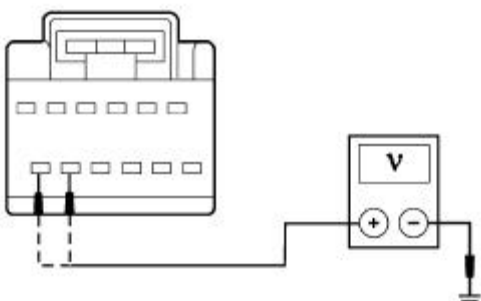

Measure the resistance between the DSM C341b pin 3, circuit 31-AH80 (BK), harness side and ground; and between DSM C341c pin 2, circuit 91-AH80 (BK), harness side and ground.

- Are the resistances less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

PINPOINT TEST B: NO COMMUNICATION WITH THE DRIVER DOOR MODULE (DDM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>B1 CHECK CIRCUITS 29-AJ80 (OG) AND 29S-AJ86 (OG/BU) FOR VOLTAGE</p>	
<p>⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.</p> <p>NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, the air bag system must be deactivated. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.</p> <p>NOTE: Restraint system diagnostic tools MUST be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.</p> <p>NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.</p> <p>NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.</p> <p>NOTE: Diagnostics may be performed on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors.</p> <p>NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.</p>	
<p>1 </p> <p>3  DDM C501a</p> <p>4 </p> <p>5 </p> <p>A0006301</p>	<p>2 Deactivate the supplemental restraint system (SRS). Refer to Section 501-20B.</p> <p>5 Measure the voltage between DDM C501a pin 11, circuit 29-AJ80 (OG), harness side and ground; and between DDM C501a pin 12, circuit 29S-AJ86 (OG/BU), harness side and ground.</p>

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [B2](#).

→ **No**
REPAIR the circuit in question Test the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

B2 CHECK CIRCUITS 31-AJ80 (BK/OG) AND 91-AJ80 (BN/BU) FOR OPENS

1

2

2

Measure the resistance between DDM C501a pin 7, circuit 91-AJ80 (BN/BU), harness side and ground; and between DDM C501a pin 8, circuit 31-AJ80B (BK/OG), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s) in question. Test the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

PINPOINT TEST C: THE POWER SEAT IS INOPERATIVE — DRIVER

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK CIRCUIT 30-AH35 (RD) FOR VOLTAGE	
<p> WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.</p>	

NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in the General Procedures portion of this section.

NOTE: Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: Diagnostics may be performed on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

3

Driver Seat Regulator Control Switch C360

4

2

Deactivate the supplemental restraint system (SRS). Refer to [Section 501-20B](#).

4

Measure the voltage between driver seat regulator control switch C360 pin 6, circuit 30-AH35 (RD), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [C2](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS).

PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

C2 CHECK CIRCUIT 31-AH35 (BK) FOR AN OPEN

1

1

Measure the resistance between driver seat regulator control switch C360 pin 1, circuit 31-AH35 (BK), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**

INSTALL a new driver seat regulator control switch. REFER to [Seat Control Switch](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

PINPOINT TEST D: THE POWER SEAT IS INOPERATIVE—PASSENGER

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 CHECK FOR POWER TO THE PASSENGER SEAT REGULATOR CONTROL SWITCH	<p>⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.</p> <p>NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, the air bag system must be deactivated. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.</p> <p>NOTE: Restraint system diagnostic tools MUST be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.</p> <p>NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when</p>

equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: Diagnostics may be performed on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

3

Passenger Seat Regulator Control Switch C330

4

2

Deactivate the supplemental restraint system (SRS). Refer to [Section 501-20B](#).

4

Measure the voltage between passenger seat regulator control switch C330 pin 6, circuit 30-AH42 (RD), harness side and ground.

● **Is the voltage greater than 10 volts?**

→ **Yes**
GO to [D2](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

D2 CHECK CIRCUIT 31-AH42 (BK) FOR AN OPEN

1

1

Measure the resistance between passenger seat regulator control switch C330 pin 1, circuit 31-AH42 (BK),

harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**

INSTALL a new passenger seat regulator control switch. REFER to [Seat Control Switch](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

PINPOINT TEST E: THE MEMORY SEAT DOES NOT MOVE HORIZONTALLY/VERTICALLY — DRIVER

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 RETRIEVE THE RECORDED DSM DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS	<p>⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.</p> <p>NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, the air bag system must be deactivated. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.</p> <p>NOTE: Restraint system diagnostic tools MUST be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.</p> <p>NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.</p> <p>NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools</p>

must be removed before operating the vehicle over the road.

NOTE: Diagnostics may be performed on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

- 2 Deactivate the supplemental restraint system (SRS). Refer to [Section 501-20B](#).
- 3 Use the results recorded from the DSM continuous and on-demand self-tests.

● **Are any DSM DTCs recorded?**

→ **Yes**

If DTC B1703, B1707, B1711, B1715, B1719, B1723, B1727 or B1731 was retrieved, GO to [E2](#).

If any combination of DTC B1757, B1761, B1765, B1769, B2146, B2149, B2152, or B2155 are retrieved, GO to [E4](#).

If only a combination of DTC B2146, B2149, B2152 or B2155 are retrieved, GO to [E43](#).

→ **No**

GO to [E45](#).

E2 CHECK FOR A SHORT TO BATTERY

1

DSM C341c

2

3

- 3 Using the following table, measure the voltage between DSM C341c pins, harness side and ground.

DSM C341c Pin	Circuit
3	10-AH83 (GY/OG)
4	10-AH82 (GY/RD)

5	8-AH84 (WH/BK)
6	10-AH85 (WH/GN)
11	8-AH83 (WH/GN)
12	8-AH82 (WH/RD)
13	10-AH84 (GY/BK)
14	8-AH85 (WH/VT)

● Are any of the voltages greater than 10 volts?

→ **Yes**
GO to [E3](#).

→ **No**
CLEAR the DSM DTCs. REPEAT the DSM self-test. If DTC B1703, B1707, B1711, B1715, B1719, B1723, B1727 or B1731 is retrieved, INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation.

If any other DTCs are retrieved refer the DSM Diagnostic Trouble Code (DTC) Index. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E3 CHECK THE DRIVER SEAT REGULATOR CONTROL SWITCH FOR A SHORT TO BATTERY

1

2

Driver Seat Regulator Control Switch C360

3

4

4 Using the following table, measure the voltage between DSM C341c pins, harness side and ground.

DSM C341c Pin	Circuit
3	10-AH83 (GY/OG)

4	10-AH82 (GY/RD)
5	8-AH84 (WH/BK)
6	10-AH85 (WH/GN)
11	8-AH83 (WH/GN)
12	8-AH82 (WH/RD)
13	10-AH84 (GY/BK)
14	8-AH85 (WH/VT)

- Are any of the voltages greater than 10 volts?

→ **Yes**

REPAIR the circuit in question. REPEAT the DSM self-test. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

INSTALL a new driver seat regulator control switch. REFER to [Seat Control Switch](#). REPEAT the DSM self-test. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E4 CHECK FOR MULTIPLE DSM DTCS

1 Use the results recorded from the DSM continuous and on-demand self-tests.

- Are the DSM DTCS B1757, B1761 and B1765 all retrieved?

→ **Yes**

GO to [E5](#).

→ **No**

GO to [E10](#).

E5 CHECK THE HORIZONTAL POSITION SENSOR COMMON RETURN

1

2

Horizontal Position Sensor C372

3

A0003063

3

Measure the resistance between horizontal position sensor C372 pin 3, circuit 7-AH26 (YE/RD), harness side and ground.

● Is the resistance less than 180 ohms?

→ **Yes**
GO to [E7](#).

→ **No**
GO to [E6](#).

E6 CHECK CIRCUIT 9-AH26 (BN/RD) FOR AN OPEN

1

DSM C341a

2

A0003064

2

Measure the resistance between horizontal position sensor C372 pin 1, circuit 9-AH26 (BN/RD), harness side and DSM C341a pin 11, circuit 9-AH80 (BN/WH), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the

supplemental restraint system (SRS).
PROVE OUT the supplemental restraint
system (SRS). REFER to [Section 501-
20B](#).

E7 CHECK THE POSITION SENSOR COMMON FEED

1

2

3

A0003065

3 Measure the voltage between horizontal
position sensor C372 pin 3, circuit 7-
AH26 (YE/RD), harness side and
ground.

● Is the voltage greater than 10 volts?

→ Yes
GO to [E10](#).

→ No
GO to [E8](#).

E8 CHECK CIRCUIT 7-AH26 (YE/RD) FOR A SHORT TO GROUND

1

2

DSM C341a

3

3 Measure the resistance between
horizontal position sensor C372 pin 3,
circuit 7-AH26 (YE/RD), harness side
and ground.

A0003066

- Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [E9](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E9 CHECK CIRCUIT 7-AH26 (YE/RD) OR 7-AH80 (YE/VT) FOR AN OPEN

1

A0003067

1

Measure the resistance between horizontal position sensor C372 pin 3, circuit 7-AH26 (YE/RD), harness side and DSM C341a pin 15, circuit 7-AH80 (YE/VT), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-](#)

[20B.](#)

E10 CHECK FOR SINGLE DTCS

1 Using the recorded results from the DSM self-test.

- Was DTC B1757, B1761, B1765 or B1769 retrieved?

→ Yes

For DTC B1757 GO to [E11.](#)

For DTC B1761 GO to [E19.](#)

For DTC B1765 GO to [E27.](#)

For DTC B1769 GO to [E35.](#)

→ No

GO to [E43.](#)

E11 CHECK VOLTAGE TO THE DRIVER SEAT REAR HEIGHT MOTOR

1

Driver Seat Rear Height Motor C382

2

A0003068

2

Measure the voltage between driver seat rear height motor C382, circuit 33-AH41 (YE/VT), harness side and driver seat rear height motor C382, circuit 32-AH41 (WH/VT), harness side.

3

Operate the driver seat regulator control switch to the rear up and rear down position.

- Is the voltage greater than 10 volts in both directions?

→ Yes

GO to [E15.](#)

→ No

GO to [E12.](#)

E12 CHECK THE DSM DRIVER SIDE REAR HEIGHT MOTOR CONTROL

1

1

Measure the voltage between driver seat rear height motor C382, circuit 33-AH41 (YE/VT), harness side and ground while operating the driver seat regulator

A0003069

control switch to the rear down position; and between driver seat rear height motor C382, circuit 32-AH41 (WH/VT), harness side and ground while operating the driver seat regulator control switch to the rear up position.

- Is the voltage greater than 10 volts in both directions?

→ Yes

INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ No

GO to [E13](#).

E13 CHECK CIRCUIT 33-AH41 (YE/VT) AND 32-AH41 (WH/VT) FOR A SHORT TO GROUND

1

2

DSM C341a

3

A0003070

3

Measure the resistance between driver seat rear height motor C382, circuit 33-AH41 (YE/VT), harness side and ground; and between driver seat rear height motor C382, circuit 32-AH41 (WH/VT), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ Yes

GO to [E14](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E14 CHECK CIRCUIT 33-AH41 (YE/VT) AND 32-AH41 (WH/VT) FOR AN OPEN

1

1 Measure the resistance between driver seat rear height motor C382, circuit 33-AH41 (YE/VT), harness side and DSM C341a pin 8, circuit 33-AH41 (YE/VT), harness side; and between driver seat rear height motor C382, circuit 32-AH41 (WH/VT), harness side and DSM C341a pin 16, circuit 32-AH41 (WH/VT), harness side.

● Are the resistances less than 5 ohms?

→ **Yes**
INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
REPAIR the circuit. REPEAT the DSM self-test. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E15 CHECK CIRCUIT 9-AH25 (BN/GN) FOR AN OPEN

1

2

Rear Height Motor Position Sensor C383

3

3 Measure the resistance between rear height motor position sensor C383 pin 3,

A0003063

circuit 9-AH25 (BN/GN), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [E16](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E16 CHECK CIRCUIT 7-AH25 (YE/GN) FOR AN OPEN

1

2

A0003065

2 Measure the voltage between rear height motor position sensor C383 pin 1, circuit 7-AH25 (YE/GN), harness side and ground.

- Is the voltage approximately 5 volts?

→ **Yes**
GO to [E17](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E17 CHECK CIRCUIT 8-AH25 (WH/GN) FOR A SHORT TO GROUND

1

2

DSM C341a

3

3

Measure the resistance between rear height motor position sensor C383 pin 2, circuit 8-AH25 (WH/GN), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [E18](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E18 CHECK CIRCUIT 8-AH25 (WH/GN) FOR AN OPEN

1

1

Measure the resistance between rear height motor position sensor C383 pin 2, circuit 8-AH25 (WH/GN), harness side and DSM C341a pin 14, circuit 8-AH25 (WH/GN), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new seat track. REFER to [Seat Track](#) in this section. CALIBRATE the driver seat. REFER to Principles of

Operation. REPEAT the DSM self-test. If DTC B1757 is retrieved, INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E19 CHECK THE DRIVER SEAT FRONT HEIGHT MOTOR SUPPLY

1

Driver Seat Front Height Motor C363

2

A0003068

2 Measure the voltage between driver seat front height motor C363, circuit 33-AH38 (YE/BK), harness side and driver seat front height motor C363, circuit 32-AH38 (WH/BK), harness side.

3 Operate the driver seat regulator control switch to the front up and front down position.

- **Is the voltage greater than 10 volts in both directions?**

→ **Yes**
GO to [E23](#).

→ **No**
GO to [E20](#).

E20 CHECK THE DSM DRIVER SEAT FRONT HEIGHT MOTOR CONTROL

1

1 Measure the voltage between driver seat front height motor C363, circuit 33-AH38 (YE/BK), harness side and ground while operating the driver seat regulator control switch to the front down position; and between driver seat front height motor C363, circuit 32-AH38 (WH/BK),

A0003069

harness side and ground, while operating the driver seat regulator control switch to the front up position.

- Is the voltage greater than 10 volts in both directions?

→ **Yes**

INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

GO to [E21](#).

E21 CHECK CIRCUIT 33-AH38 (YE/BK) AND 32-AH38 (WH/BK) FOR A SHORT TO GROUND

1

DSM C341a

2

A0003070

2

Measure the resistance between driver seat front height motor C363, circuit 33-AH38 (YE/BK), harness side and ground; and between driver seat front height motor C363, circuit 32-AH38 (WH/BK), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**

GO to [E22](#).

→ **No**

REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS).

PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E22 CHECK CIRCUIT 33-AH38 (YE/BK) AND 32-AH38 (WH/BK) FOR AN OPEN

1

1

Measure the resistance between driver seat front height motor C363, circuit 33-AH38 (YE/BK), harness side and DSM C341a pin 7, circuit 33-AH38 (YE/BK), harness side; and between driver seat front height motor C363, circuit 32-AH38 (WH/BK), harness side and DSM C341a pin 17, circuit 32-AH38 (WH/BK), harness side.

- Are the resistances less than 5 ohms?

→ Yes

INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ No

REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E23 CHECK CIRCUIT 9-AH24 (BN/YE) FOR AN OPEN

1

Front Height Motor Position Sensor C373

2

A0003066

2

Measure the resistance between front height motor position sensor C373 pin 3, circuit 9-AH24 (BN/YE), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [E24](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self test. REACTIVATE the supplemental restraint system (SRS).
PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E24 CHECK CIRCUIT 7-AH24 (YE/BK) FOR AN OPEN

1

1 Measure the voltage between front height motor position sensor C373 pin 3, circuit 7-AH24 (YE/BK), harness side and ground.

● Is the voltage approximately 5 volts?

→ **Yes**
GO to [E25](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self test. REACTIVATE the supplemental restraint system (SRS).
PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E25 CHECK CIRCUIT 8-AH24 (WH/BK) FOR A SHORT TO GROUND

1

DSM C341a

2

2 Measure the resistance between front height motor position sensor C373 pin 2, circuit 8-AH24 (WH/BK), harness side and ground.

A0003072

- Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [E26](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E26 CHECK CIRCUIT 8-AH24 (WH/BK) FOR AN OPEN

1

A0003076

1

Measure the resistance between front height motor position sensor C373 pin 2, circuit 8-AH24 (WH/BK), harness side and DSM C341a pin 5, circuit 8-AH24 (WH/BK), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new seat track. REFER to [Seat Track](#). CALIBRATE the driver seat. REFER to Principles of Operation. REPEAT the DSM self-test. If DTC B1761 is retrieved, INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
REPAIR the circuit. REPEAT the DSM

self-test. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E27 CHECK THE VOLTAGE TO THE DRIVER SEAT FORWARD/REARWARD MOTOR

1

Driver Seat Forward/Rearward Motor C362

2

A0003068

2

Measure the voltage between driver side forward/rearward motor C362, circuit 33-AH37 (WH/GN), harness side and driver side forward/rearward motor C362, circuit 32-AH37 (YE/GN), harness side.

3

Operate the driver seat regulator control switch to the forward and rearward position.

● **Is the voltage greater than 10 volts in both directions?**

→ **Yes**
GO to [E31](#).

→ **No**
GO to [E28](#).

E28 CHECK THE DSM FORWARD/REARWARD MOTOR CONTROL

1

A0003069

1

Measure the voltage between driver side forward/rearward motor C362, circuit 33-AH37 (WH/GN), harness side and ground while operating the driver seat regulator control switch to the rearward position; and between driver side forward/rearward motor C362, circuit 32-AH37 (YE/GN), harness side and ground while operating the driver seat regulator control switch to the forward position.

● **Is the voltage greater than 10 volts in both directions?**

→ **Yes**
INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat,

REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
GO to [E29](#).

E29 CHECK CIRCUIT 33-AH37 (WH/GN) AND 32-AH37 (YE/GN) FOR A SHORT TO GROUND

1

2

DSM C341

3

A0003070

3 Measure the resistance between driver side forward/rearward motor C362, circuit 33-AH37 (WH/GN), harness side and ground; and between driver side forward/rearward motor C362, circuit 32-AH37 (YE/GN), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
GO to [E30](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E30 CHECK CIRCUIT 33-AH37 (WH/GN) AND 32-AH37 (YE/GN) FOR AN OPEN

1

1 Measure the resistance between driver side forward/rearward motor C362, circuit 33-AH37 (WH/GN), harness side and DSM C341a pin 1, circuit 33-AH37 (YE/GN), harness side; and between driver side forward/rearward motor C362, circuit 32-AH37 (YE/GN), harness

side and DSM C341a pin 10, circuit 32-AH9 (YE/GN), harness side.

- Are the resistances less than 5 ohms?

→ **Yes**

INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E31 CHECK CIRCUIT 9-AH26 (BN/RD) FOR AN OPEN

1

Forward/Rearward Motor Position Sensor C372

2

2

Measure the resistance between forward/rearward motor position sensor C372 pin 1, circuit 9-AH26 (BN/RD), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**

GO to [E32](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E32 CHECK CIRCUIT 7-AH26 (YE/RD) FOR AN OPEN

1

1 Measure the voltage between forward/rearward motor position sensor C372 pin 3, circuit 7-AH26 (YE/RD), harness side and ground.

- Is the voltage approximately 5 volts?

→ **Yes**
GO to [E33](#).

→ **No**
REPAIR the circuit. REPEAT the DSM self-test. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E33 CHECK CIRCUIT 8-AH26 (WH/RD) FOR A SHORT TO GROUND

1

DSM C341a

2

2 Measure the resistance between forward/rearward motor position sensor C372 pin 2, circuit 8-AH26 (WH/RD), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [E34](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E34 CHECK CIRCUIT 8-AH26 (WH/RD) FOR AN OPEN

1

1 Measure the resistance between forward/rearward motor position sensor C372 pin 2, circuit 8-AH26 (WH/RD), harness side and DSM C341a pin 4, circuit 8-AH26 (WH/RD), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new seat track. REFER to [Seat Track](#). CALIBRATE the driver seat. REFER to Principles of Operation. REPEAT the DSM self-test. If DTC B1765 is retrieved, INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E35 CHECK THE DRIVER SEAT BACKREST MOTOR SUPPLY

1

Driver Seat Backrest Motor C368

2

2 Measure the voltage between driver seat backrest motor C368, circuit 33-AH36 (YE/RD), harness side and driver seat

A0003079

backrest motor C368, circuit 32-AH36 (WH/RD), harness side, while operating the driver seat regulator control switch to the recline forward and recline rearward position.

- Is the voltage greater than 10 volts in both directions?

→ **Yes**
GO to [E39](#).

→ **No**
GO to [E36](#).

E36 CHECK THE DSM BACKREST MOTOR CONTROL

1

A0003080

1

Measure the voltage between driver seat backrest motor C368, circuit 33-AH36 (YE/RD), harness side and ground while operating the driver seat regulator control switch to the backrest forward position; and between driver seat backrest motor C368, circuit 32-AH36 (WH/RD), harness side and ground while operating the driver seat regulator control switch to the backrest rearward position.

- Is the voltage greater than 10 volts in both directions?

→ **Yes**
INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
GO to [E37](#).

E37 CHECK CIRCUIT 33-AH36 (YE/RD) AND 32-AH36 (WH/RD) FOR A SHORT TO GROUND

1

DSM C341a

2

A0003081

2

Measure the resistance between driver seat backrest motor C368, circuit 33-AH36 (YE/RD), harness side and ground; and between driver seat backrest motor C368, circuit 32-AH36 (WH/RD), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
GO to [E38](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E38 CHECK CIRCUIT 33-AH36 (YE/RD), 33-AH36 (YE/RD), 32-AH36 (WH/RD) AND 32-AH36 (WH/RD) FOR AN OPEN

1

A0003082

1

Measure the resistance between driver seat backrest motor C368, circuit 33-AH36 (YE/RD), harness side and DSM C341a pin 9, circuit 33-AH36 (YE/RD), harness side; and between driver seat backrest motor C368, circuit 32-AH36 (WH/RD), harness side and DSM C341a pin 2, circuit 32-AH36 (WH/RD), harness side.

- Are the resistances less than 5 ohms?

→ **Yes**
INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.

REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#)

E39 CHECK CIRCUIT 9-AH30 (BN/BU) FOR AN OPEN

1

Backrest Motor Position Sensor C376

2

A0003066

2

Measure the resistance between backrest motor position sensor C376 pin 3, circuit 9-AH30 (BN/BU), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [E40](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E40 CHECK CIRCUIT 7-AH30 (YE/BU) FOR AN OPEN

1

A0003075

1

Measure the voltage between backrest motor position sensor C376 pin 1, circuit 7-AH30 (YE/BU), harness side and ground.

● Is the voltage approximately 5 volts?

→ **Yes**
GO to [E41](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self test. REACTIVATE the
supplemental restraint system (SRS).
PROVE OUT the supplemental restraint
system (SRS). REFER to [Section 501-
20B](#).

E41 CHECK CIRCUIT 8-AH30 (WH/BU) FOR A SHORT TO GROUND

1

DSM C341a

2

2 Measure the resistance between
backrest motor position sensor C376 pin
2, circuit 8-AH30 (WH/BU), harness side
and ground.

- Is the resistance greater than
10,000 ohms?

→ **Yes**
GO to [E42](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self test. REACTIVATE the
supplemental restraint system (SRS).
PROVE OUT the supplemental restraint
system (SRS). REFER to [Section 501-
20B](#).

E42 CHECK CIRCUIT 8-AH30 (WH/BU) FOR AN OPEN

1

1 Measure the resistance between
backrest motor position sensor C376 pin
2, circuit 8-AH30 (WH/BU), harness side
and DSM C341a pin 13, circuit 8-AH30
(WH/BU), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**

INSTALL a new seat track. REFER to [Seat Track](#). CALIBRATE the driver seat. REFER to Principles of Operation. REPEAT the DSM self-test. If DTC B1769 is retrieved, INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E43 CHECK FOR HESITATION OR JOGGING

1

2

3

2 Clear all DSM DTCs.

3 Operate the driver seat regulator control switch through all positions while monitoring DSM PIDs SFNT_MT, SREARMT, SFWD_MT and SRCL_MT, while watching seat movement.

- **Did the driver seat stop or hesitate, or did any of the DSM PIDs read inconsistently?**

→ **Yes**
INSTALL a new seat track. REFER to [Seat Track](#). CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
GO to [E44](#).

E44 CHECK FOR AN INTERMITTENT CONCERN

1

1 Clear all DSM DTCs.

3

DSM Self-Test

- 2 Operate the driver power seat. Wiggle the harness and connectors. Inspect for any visual concerns.

- **Were any DTCs retrieved?**

→ **Yes**

If DTC B2146, B2149, B2152 or B2155 is retrieved, INSTALL a new seat track. REFER to [Seat Track](#). CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E45 CHECK THE DRIVER SEAT REGULATOR CONTROL SWITCH PIDS

1

- 1 Operate the driver seat regulator control seat switch through all positions while monitoring the DSM PIDs SFNT_SW, SFWD_SW, SREARSW and SRCL_SW.

- **Do the DSM PIDs accurately represent the seat regulator control switch positions?**

→ **Yes**

INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
GO to [E46](#).

E46 CHECK THE DRIVER SEAT REGULATOR CONTROL SWITCH CIRCUITS FOR AN OPEN

1

DSM C341c

2

2 Using the following table, measure the resistance between DSM C341c pins, harness side and ground.

DSM C341c Pin	Circuit
3	10-AH83 (GY/OG)
4	10-AH82 (GY/RD)
5	8-AH84 (WH/BK)
6	10-AH85 (WH/GN)
11	8-AH83 (WH/GN)
12	8-AH82 (WH/RD)
13	10-AH84 (GY/BK)
14	8-AH85 (WH/VT)

• Are the resistances less than 5 ohms?

→ **Yes**
GO to [E47](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

E47 CHECK THE DRIVER SEAT REGULATOR CONTROL SWITCH CIRCUITS FOR A SHORT TO GROUND

1

Driver Seat Regulator Control Switch C360

2

2 Using the following table, measure the resistance between DSM C341c pins, harness side and ground.

DSM C341c Pin	Circuit
3	10-AH83 (GY/OG)

4	10-AH82 (GY/RD)
5	8-AH84 (WH/BK)
6	10-AH85 (WH/GN)
11	8-AH83 (WH/GN)
12	8-AH82 (WH/RD)
13	10-AH84 (GY/BK)
14	8-AH85 (WH/VT)

- Are the resistances greater than 10,000 ohms?

→ **Yes**

INSTALL a new driver seat regulator control switch. REFER to [Seat Track](#). CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

PINPOINT TEST F: THE POWER SEAT DOES NOT MOVE HORIZONTALLY/VERTICALLY —PASSENGER

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK THE PASSENGER SEAT MOTOR OPERATION	<p>⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.</p> <p>NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, the air bag system must be deactivated. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.</p> <p>NOTE: Restraint system diagnostic tools MUST be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.</p> <p>NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.</p> <p>NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.</p>

NOTE: Diagnostics may be performed on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

3

4

5

2 Deactivate the supplemental restraint system (SRS). Refer to [Section 501-20B](#).

3 Disconnect the passenger seat motor connector in question: (forward/rearward motor C332, seat height motor C333, or seat backrest motor C338).

5 Using the following table, measure the voltage between the inoperative passenger seat motor connector, harness side and ground, while moving the seat regulator control switch in the indicated direction:

Motor Connector	Pin	Circuit	Direction of Control Switch
Forward/Reverse Motor C332	1	32-AH44 (WH/GN)	Forward
Forward/Reverse Motor C332	2	33-AH44 (YE/GN)	Reverse
Height Motor C333	1	32-AH34 (WH/BK)	Up
Height Motor C333	2	33-AH34 (YE/BK)	Down
Backrest Motor C338	1	32-AH15 (WH/RD)	Tilt Up
Backrest Motor C338	2	33-AH15 (YE/RD)	Tilt Down

- Are the voltages greater than 10 volts in the inoperative directions?

→ Yes

INSTALL a new passenger seat track or the backrest assembly. REFER to [Seat Track](#) or [Front Seat Backrest](#). TEST the system for normal operation.

REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ No

GO to [F2](#).

F2 CHECK THE PASSENGER SEAT MOTOR CIRCUITS FOR A SHORT TO GROUND

1

2

Passenger Seat Regulator Control Switch C330

3

3

Using the following table, measure the resistance between passenger seat regulator control switch C330 pins, harness side and ground:

Pin	Circuit	Inoperative Motor
12	32-AH43 (WH/RD)	Backrest
7	33-AH43 (YE/RD)	Backrest
4	32-AH34 (WH/BK)	Height
5	33-AH34 (YE/BK)	Height
3	32-AH44 (WH/GN)	Forward/Rearward
11	33-AH44 (YE/GN)	Forward/Rearward

- Are the resistances greater than 10,000 ohms?

→ Yes

GO to [F3](#).

→ No

REPAIR the circuit in question. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

F3 CHECK FOR AN OPEN CIRCUIT

1

2

2

Measure the resistance between the passenger seat regulator control switch C330 pins, harness side and the inoperative motor connector, harness side:

C330 Pin	Circuit	Motor Connector
Height Motor		
4	32-AH34 (WH/BK)	C333 pin 1
5	33-AH34 (YE/BK)	C333 pin 2
Forward/Reverse Motor		
3	32-AH44 (WH/GN)	C332 pin 1
11	33-AH44 (YE/GN)	C332 pin 2
Backrest Motor		
12	32-AH43, 32-AH15 (WH/RD)	C338 pin 1
7	33-AH43, 33-AH15 (YE/RD)	C338 pin 2

- Are all resistance readings less than 5 ohms?

→ **Yes**

INSTALL a new passenger seat regulator control switch. REFER to [Seat Control Switch](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

REPAIR the circuit in question. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the

supplemental restraint system (SRS).
REFER to [Section 501-20B](#).

PINPOINT TEST G: THE MEMORY SEAT IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 CHECK THE MEMORY MIRROR OPERATION	
<p> WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.</p> <p>NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, the air bag system must be deactivated. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.</p> <p>NOTE: Restraint system diagnostic tools MUST be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.</p> <p>NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.</p> <p>NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.</p> <p>NOTE: Diagnostics may be performed on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors.</p> <p>NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.</p>	
	<p>1 Carry out a memory recall for the exterior rear view mirrors.</p> <ul style="list-style-type: none">● Did the memory mirrors operate correctly? <p>→ Yes GO to G2.</p> <p>→ No REFER to Section 501-09.</p>
G2 CHECK THE DTCS FROM THE DSM	
	<p>1 Using the recorded results from DSM self-test.</p> <ul style="list-style-type: none">● Was DSM DTC B1342 retrieved? <p>→ Yes CLEAR the DSM DTCS. REPEAT the DSM self-test. If DTC B1342 is retrieved, INSTALL a new DSM. REFER to Section 419-10. CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCS. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to Section 501-20B.</p>

→ **No**
GO to [G3](#).

G3 CHECK THE POWER SEAT CALIBRATION

1

2 Calibrate the driver seat. Refer to Seat Calibration in Principles of Operation.

● **Were any DSM DTCs retrieved from calibration?**

→ **Yes**
REFER to the DSM Diagnostic Trouble Code (DTC) Index.

→ **No**
GO to [G4](#).

G4 CHECK THE MEMORY RECALL OPERATION

1 Set a new memory seat position for driver 1 and driver 2.

2 Activate the memory recall for driver position 1 and driver position 2 from the memory set switch.

● **Do the memory recall functions operate correctly?**

→ **Yes**
The driver power seat is operating correctly. REVERIFY symptom.

→ **No**
INSTALL a new DSM. REFER to [Section 419-10](#). CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. GO to [G5](#).

G5 CHECK THE MEMORY RECALL OPERATION

1 Set a new memory seat position for driver 1 and driver 2.

2 Activate the memory recall for driver position 1 and driver position 2 from the memory set switch.

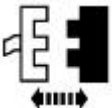

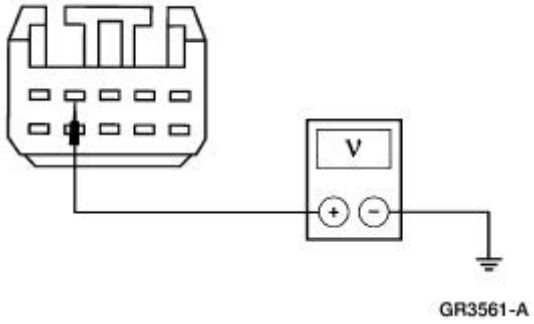

● **Do the memory recall functions operate correctly?**

→ **Yes**
The driver power seat is operating correctly. REVERIFY symptom.

→ **No**
CHECK the DDM for any memory function related DTCs. REPAIR as necessary. REFER to the DDM Diagnostic Trouble Code (DTC) Index.

CHECK for any DSM DTCs. REPAIR as necessary. REFER to the DSM Diagnostic Trouble Code (DTC) Index. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

PINPOINT TEST H: THE HEATED SEAT IS INOPERATIVE — DRIVER

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>H1 CHECK FOR VOLTAGE TO THE HEATED SEAT MODULE — CIRCUIT 30-HC21 (RD)</p> <p>⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. 1

2

Driver Heated Seat Switch C344

3

4

A0005661

4 Measure the voltage between driver heated seat switch C344 pin 3, circuit 20-HC6 (OG/GN), harness side and ground.

● **Is the voltage greater than 10 volts?**

→ **Yes**
GO to [H3](#).

→ **No**
REPAIR circuit 20-HC6 (OG/GN). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

H3 CHECK FOR VOLTAGE TO THE HEATED SEAT MODULE — CIRCUIT 15-HC21 (GN/BK)

1

2

Driver Heated Seat Module C359

3

4

A0003088

4 Measure the voltage between heated seat module C359 pin 6, circuit 15-HC21 (GN/BK), harness side and ground.

● Is the voltage greater than 10 volts?

→ Yes
GO to [H4](#).

→ No
REPAIR circuit 15-HC21 (GN/BK). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

H4 CHECK DRIVER HEATED SEAT MODULE GROUND — CIRCUIT 31-HC21 (BK)

1

GR3644-A

1 Measure the resistance between driver heated seat module C359 pin 8, circuit 31-HC21 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [H5](#).

→ **No**
REPAIR circuit 31-HC21 (BK). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

H5 CHECK FOR VOLTAGE TO THE HEATED SEAT MODULE

1

2

Driver Heated Seat Module C359

3

4

4 Measure the voltage between driver heated seat module C359 pin 2, circuit 20S-HC21 (PK/BK), harness side and ground while pressing and holding the heated seat switch.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [H7](#).

→ **No**
GO to [H6](#).

H6 CHECK CIRCUIT 20S-HC21 (PK/BK) FOR OPEN

1

2

2 Measure the resistance between driver heated seat module C359 pin 2, circuit

A0041536

20S-HC21 (PK/BK), and driver heated seat switch C344 pin 4, circuit 20S-HC21 (PK/BK), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
 INSTALL a new heated seat switch.
 TEST the system for normal operation.
 REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS).
 REFER to [Section 501-20B](#).

→ **No**
 REPAIR circuit 20S-HC21 (PK/BK).
 TEST the system for normal operation.
 REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS).
 REFER to [Section 501-20B](#).

H7 CHECK THE HEATED SEAT CIRCUITRY FOR OPEN AND SHORT TO GROUND

1

2

Driver Heated Seat Module 359

3

A0041535

3 Measure the resistance between heated seat module C359 pin 3, circuit 20S-HC17 (PK), and heated seat module C359 pin 5, circuit 31S-HC16 (BK/BU); and between heated seat module C359 pin 5, circuit 20S-HC17 (PK), harness side and ground.

- Is the resistance less than 5 ohms between the two connectors and greater than 10,000 ohms between

the heated seat module connector and ground?

→ **Yes**

INSTALL a new heated seat module. REFER to [Heated Seat Module](#) in this section. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

GO to [H8](#).

H8 CHECK CIRCUIT 20S-HC17 (PK) FOR OPEN AND SHORT TO GROUND

1

Driver Heated Seat Cushion C364

2

2

Measure the resistance between heated seat module C359 pin 3, circuit 20S-HC17 (PK), and heated seat cushion C364 pin 1, circuit 20S-HC17 (PK); and between heated seat module C359 pin 3, circuit 20S-HC17 (PK), harness side and ground.

● Is the resistance less than 5 ohms between the two connectors and greater than 10,000 ohms between the seat module connector and ground?

→ **Yes**

GO to [H9](#).

→ **No**

REPAIR circuit 20S-HC17 (PK). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

H9 CHECK CIRCUIT 31S-HC16 (BK/BU) FOR OPEN

1

Driver Heated Seat Backrest C365

2

GR3565-A

2

Measure the resistance between heated seat module C359 pin 5, circuit 31S-HC16 (BK/BU), and heated seat backrest C365 pin 2, circuit 31S-HC16 (BK/BU), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [H10](#).

→ **No**
REPAIR circuit 31S-HC16 (BK/BU).
TEST the system for normal operation.
REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS).
REFER to [Section 501-20B](#).

H10 CHECK CIRCUIT 20S-HC16 (PK/BU) FOR OPEN

1

GR3566-A

1

Measure the resistance between heated seat backrest C365 pin 1, circuit 20S-HC16 (PK/BU), and heated seat cushion C364 pin 4, circuit 20S-HC16 (PK/BU), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [H11](#).

→ **No**
REPAIR circuit 20S-HC16 (PK/BU).
TEST the system for normal operation.
REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS).
REFER to [Section 501-20B](#).

H11 CHECK THE HEATED SEAT TEMPERATURE SENSOR CIRCUITRY FOR CONTINUITY

1

2

2

Measure the resistance between heated seat module C359 pin 7, circuit 8-HC23 (WH/BK), and heated seat module C359 pin 1, circuit 9-HC23 (BN/YE), harness side.

- Is the resistance less than 300,000 ohms and greater than 50 ohms?

→ Yes

INSTALL a new heated seat module. REFER to [Heated Seat Module](#) in this section. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ No

GO to [H12](#).

H12 CHECK CIRCUIT 8-HC23 (WH/BK) FOR OPEN AND SHORT TO GROUND

1

Driver Heated Seat Cushion C364

2

2

Measure the resistance between heated seat module C359 pin 7, circuit 8-HC23 (WH/BK), and heated seat cushion C364 pin 2, circuit 8-HC23 (WH/BK); and between heated seat module C359 pin 7, circuit 8-HC23 (WH/BK), harness side and ground.

- Is the resistance less than 5 ohms between the two connectors and greater than 10,000 ohms between the heated seat module connector and ground?

- **Yes**
GO to [H13](#).
- **No**
REPAIR circuit 8-HC23 (WH/BK). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

H13 CHECK CIRCUIT 9-HC23 (BN/YE) FOR OPEN AND SHORT TO GROUND

1

1

Measure the resistance between heated seat module C359 pin 1, circuit 9-HC23 (BN/YE), and heated seat cushion C364 pin 3, circuit 9-HC23 (BN/YE); and between heated seat module C359 pin 1, circuit 9-HC23 (BN/YE), harness side and ground.

- **Is the resistance less than 5 ohms between the two connectors and greater than 10,000 ohms between the heated seat module connector and ground?**

- **Yes**
INSTALL a new heated seat cushion. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

- **No**
REPAIR circuit 9-HC23 (BN/YE). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

PINPOINT TEST I: THE HEATED SEAT IS INOPERATIVE — PASSENGER

CONDITIONS	DETAILS/RESULTS/ACTIONS
I1 CHECK FOR VOLTAGE TO THE HEATED SEAT MODULE — CIRCUIT 30-HC22 (RD)	
 WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.	

NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in the General Procedures portion of this section.

NOTE: Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: Diagnostics may be performed on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

2

3

Passenger Heated Seat Module C329

4

1 Deactivate the supplemental restraint system (SRS). Refer to [Section 501-20B](#).

4 Measure the voltage between passenger heated seat module C329 pin 4, circuit 30-HC22 (RD), harness side and ground.

● Is the voltage greater than 10 volts?

→ Yes
GO to [12](#).

→ No
REPAIR circuit 30-HC22 (RD). TEST the system for normal operation.
REACTIVATE the supplemental restraint

system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

I2 CHECK FOR VOLTAGE TO THE HEATED SEAT SWITCH — CIRCUIT 20-HC9 (PK/BK)

1

2

Passenger Heated Seat Switch C342

3

4

A0005661

- 4 Measure the voltage between the passenger heated seat switch C342 pin 3, circuit 20-HC9 (PK/BK), harness side and ground.

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [I3](#).

→ **No**
REPAIR circuit 20-HC9 (PK/BK). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

I3 CHECK FOR VOLTAGE TO THE HEATED SEAT MODULE — CIRCUIT 15-HC22 (GN/YE)

1

2

Passenger Heated Seat Module C329

3

4

A0003088

- 4 Measure the voltage between heated seat module C329 pin 6, circuit 15-HC22 (GN/YE), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [14](#).

→ **No**
REPAIR circuit 15-HC22 (GN/YE). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

I4 CHECK PASSENGER HEATED SEAT MODULE GROUND — CIRCUIT 31-HC22 (BK)

1

- 1 Measure the resistance between heated seat module C329 pin 8, circuit 31-HC22 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [15](#).

→ **No**
REPAIR circuit 31-HC22 (BK). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the

supplemental restraint system (SRS).
REFER to [Section 501-20B](#).

I5 CHECK FOR VOLTAGE TO THE HEATED SEAT MODULE

1

2

Passenger Heated Seat Module C329

3

4

- 4 Measure the voltage between heated seat module C329 pin 2, circuit 20S-HC22 (PK/YE), harness side and ground while pressing and holding the heated seat switch.

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [17](#).

→ **No**
GO to [16](#).

I6 CHECK CIRCUIT 20S-HC22 (PK/YE) FOR OPEN

1

2

- 2 Measure the resistance between passenger heated seat module C329 pin 2, circuit 20S-HC22 (PK/YE), and passenger heated seat switch C342 pin 4, circuit 20S-HC22 (PK/YE), harness side.

A0041536

- Is the resistance less than 5 ohms?

→ **Yes**

INSTALL a new heated seat switch.
TEST the system for normal operation.
REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS).
REFER to [Section 501-20B](#).

→ **No**

REPAIR circuit 20S-HC22 (PK/YE).
TEST the system for normal operation.
REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS).
REFER to [Section 501-20B](#).

17 CHECK THE HEATED SEAT CIRCUITRY FOR OPEN AND SHORT TO GROUND

1

2

Passenger Heated Seat Module C329

3

A0041535

3

Measure the resistance between heated seat module C329 pin 3, circuit 20S-HC20 (PK/WH), and heated seat module C329 pin 5, circuit 31S-HC19 (BK/RD); and between heated seat module C329 pin 5, circuit 20S-HC20 (PK/WH), harness side and ground.

- Is the resistance less than 5 ohms between the two connectors and greater than 10,000 ohms between

the heated seat module connector and ground?

→ **Yes**

INSTALL a new heated seat module. REFER to [Heated Seat Module](#) in this section. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

GO to [18](#).

18 CHECK CIRCUIT 20S-HC20 (PK/WH) FOR OPEN AND SHORT TO GROUND

1

Passenger Heated Seat Cushion C334

2

2

Measure the resistance between heated seat module C329 pin 3, circuit 20S-HC20 (PK/WH), and heated seat cushion C334 pin 1, circuit 20S-HC20 (PK/WH), and between heated seat module C329 pin 3, circuit 20S-HC20 (PK/WH), harness side and ground.

- Is the resistance less than 5 ohms between the two connectors and greater than 10,000 ohms between the seat module connector and ground?

→ **Yes**

GO to [19](#).

→ **No**

REPAIR circuit 20S-HC20 (PK/WH). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

19 CHECK CIRCUIT 31S-HC19 (BK/RD) FOR OPEN

1

Passenger Heated Seat Backrest C335

2

GR3565-A

2

Measure the resistance between heated seat module C329 pin 5, circuit 31S-HC19 (BK/RD), and heated seat backrest C335 pin 2, circuit 31S-HC19 (BK/RD), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [I10](#).

→ **No**
REPAIR circuit 31S-HC19 (BK/RD).
TEST the system for normal operation.
REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS).
REFER to [Section 501-20B](#).

I10 CHECK CIRCUIT 20S-HC19 (PK/OG) FOR OPEN

1

GR3566-A

1

Measure the resistance between heated seat backrest C335 pin 1, circuit 20S-HC19 (PK/OG), and heated seat cushion C334 pin 4, circuit 20S-HC19 (PK/OG), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [I11](#).

→ **No**
REPAIR circuit 20S-HC19 (PK/OG).
TEST the system for normal operation.
REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS).
REFER to [Section 501-20B](#).

I11 CHECK THE HEATED SEAT TEMPERATURE SENSOR CIRCUITRY FOR CONTINUITY

1

2

2

Measure the resistance between heated seat module C329 pin 7, circuit 8-HC24 (WH/RD), and heated seat module C329 pin 1, circuit 9-HC24 (BN/RD), harness side.

- Is the resistance less than 300,000 ohms and greater than 50 ohms?

→ Yes

INSTALL a new heated seat module. REFER to [Heated Seat Module](#) in this section. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ No

GO to [112](#).

112 CHECK CIRCUIT 8-HC24 (WH/RD) FOR OPEN AND SHORT TO GROUND

1

Passenger Heated Seat Cushion C334

2

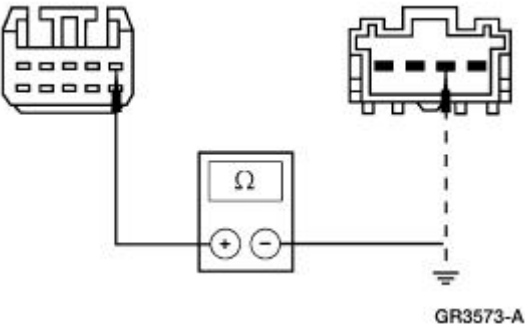

2

Measure the resistance between heated seat module C329 pin 7, circuit 8-HC24 (WH/RD), and heated seat cushion C334 pin 2, circuit 8-HC24 (WH/RD), and between heated seat module C329 pin 7, circuit 8-HC24 (WH/RD), harness side and ground.

- Is the resistance less than 5 ohms between the two connectors and greater than 10,000 ohms between the heated seat module connector and ground?

	<p>→ Yes GO to 113.</p> <p>→ No REPAIR circuit 8-HC24 (WH/RD). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to Section 501-20B.</p>
--	---

113 CHECK CIRCUIT 9-HC24 (BN/RD) FOR OPEN AND SHORT TO GROUND

<p>1</p> 	<p>1</p> <p>Measure the resistance between heated seat module C329 pin 1, circuit 9-HC24 (BN/RD), and heated seat cushion C334 pin 3, circuit 9-HC24 (BN/RD), and between heated seat module C329 pin 1, circuit 9-HC24 (BN/RD), harness side and ground.</p> <ul style="list-style-type: none"> ● Is the resistance less than 5 ohms between the two connectors and greater than 10,000 ohms between the heated seat module connector and ground? <p>→ Yes INSTALL a new seat cushion heater. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to Section 501-20B.</p> <p>→ No REPAIR circuit 9-HC24 (BN/RD). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to Section 501-20B.</p>
--	---

PINPOINT TEST J: THE HEATED SEATS ARE INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>J1 CHECK THE IGNITION INPUT TO THE HEATED SEAT SWITCHES</p>	<p>⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.</p> <p>NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, the air bag system must be deactivated. Refer to</p>

[Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in the General Procedures portion of this section.

NOTE: Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: Diagnostics may be performed on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

A0005661

1 Deactivate the supplemental restraint system (SRS). Refer to [Section 501-20B](#).

5 Measure the voltage between driver heated seat switch C344 pin 3, circuit 20-HC6 (PK/YE), harness side and ground.

- Is the voltage greater than 10 volts?

→ Yes
GO to [J8](#).

→ **No**
GO to [J2](#).

J2 CHECK CIRCUIT 20-HC6 (PK/YE) FOR AN OPEN

1

1 Measure voltage between CJB fuse 216 (5A), output side and ground.

● **Is the voltage greater than 10 volts?**

→ **Yes**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
GO to [J3](#).

J3 CHECK CIRCUIT 20-HC6 (PK/YE) FOR A SHORT TO GROUND

1

2

2 Measure the resistance between driver heated seat switch C344 pin 3, circuit 20-HC6 (PK/YE), harness side and ground.

● **Is the resistance less than 5 ohms?**

→ **Yes**
GO to [J4](#).

→ **No**
REPAIR the circuit. TEST the system for

normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

J4 CHECK CIRCUIT 20S-HC21 (PK/BK) FOR A SHORT TO GROUND

1

Driver Heated Seat Module C359

2

2

Measure the resistance between driver heated seat switch C344 pin 4, circuit 20S-HC21 (PK/BK), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [J5](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

J5 CHECK CIRCUIT 20S-HC22 (PK/YE) FOR A SHORT TO GROUND

1

Passenger Heated Seat Module C329

2

Passenger Heated Seat Switch C342

3

3

Measure the resistance between passenger heated seat switch C342 pin 4, circuit 20S-HC22 (PK/YE), harness side and ground.

A0005664

- Is the resistance greater than 10,000 ohms?

→ **Yes**

GO to [J6](#).

→ **Yes**

REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

J6 CHECK THE PASSENGER HEATED SEAT MODULE FOR A SHORT

1

Passenger Heated Seat Switch C342

2

Passenger Heated Seat Module C329

4

- 3 Install a new CJB fuse 216 (5A).

- 5 Press the passenger heated seat switch to ON.

- Is CJB fuse 216 (5A) OK?

→ **Yes**

GO to [J7](#).

→ **No**

INSTALL a new passenger heated seat module. REFER to [Heated Seat Module](#). TEST the system for normal operation. REACTIVATE the

supplemental restraint system (SRS).
PROVE OUT the supplemental restraint
system (SRS). REFER to [Section 501-
20B](#).

J7 CHECK THE DRIVER HEATED SEAT MODULE FOR A SHORT

1

Driver Heated Seat Switch C344

2

Driver Heated Seat Module C359

3

4 Press the driver heated seat switch to ON.

● **Is CJB fuse 216 (5A) OK?**

→ **Yes**
CHECK the driver and passenger system for an intermittent short to ground. REVERIFY the symptom. GO to [Symptom Chart](#).

→ **No**
INSTALL a new driver heated seat module. REFER to [Heated Seat Module](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

J8 CHECK THE ANTI-THEFT OPERATION

NOTE: The anti-theft system and heated seat system use a common fuse. CJB Fuse 205 (5A) supplies ignition power to both the anti-theft system and heated seat system.

1 Check the anti-theft system operation. Refer to [Section 419-01A](#).

● **Does the anti-theft system operate?**

→ **Yes**
GO to [J9](#).

→ **No**
REFER to [Section 419-01A](#) to repair the

anti-theft system operation. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#)

J9 CHECK CIRCUIT 15-HC21 (GN/BK) FOR AN OPEN

1

2

Driver Heated Seat Module C359

3

4

A0003088

4 Measure the voltage between driver heated seat module C359 pin 6, circuit 15-HC21 (GN/BK), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [J10](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

J10 CHECK THE COMMON BATTERY SUPPLY

1

1 Measure the voltage between driver heated seat module C359 pin 4, circuit 30-HC21 (RD), harness side and ground.

A0003089

- Is the voltage greater than 10 volts?

→ **Yes**
The heated seat system is operating correctly. CHECK each system independently. REVERIFY the symptom. GO to [Symptom Chart](#).

→ **No**
GO to [J11](#).

J11 CHECK CIRCUIT 30-HC21 (RD) FOR AN OPEN

1

A0005665

1 Measure voltage between BJB fuse 411 (15A) and ground.

- Is the voltage greater than 10 volts?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
GO to [J12](#).

J12 CHECK CIRCUIT 30-HC21 (RD) FOR A SHORT TO GROUND

1

2

Passenger Heated Seat Module C329

3

3

Measure the resistance between driver heated seat module C359 pin 4, circuit 30-HC21 (RD), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ Yes
GO to [J13](#).

→ No
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

J13 CHECK FOR A SHORTED PASSENGER HEATED SEAT SYSTEM

1

Passenger Heated Seat Module C329

3

2

Install a new BJB fuse 411 (15A).

4

Press the passenger heated seat switch to ON.

● Is rear BJB fuse 411 (15A) OK?

→ Yes
GO to [J15](#).

→ No
GO to [J14](#).

J14 CHECK FOR A SHORTED PASSENGER HEATING ELEMENT CIRCUIT

1

2

Passenger Heated Seat Module C329

3

3

Measure the resistance between passenger heated seat module C329 pin 3, circuit 20S-HC20 (PK/WH), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**

INSTALL a new passenger heated seat module. REFER to [Heated Seat Module](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

J15 CHECK FOR A SHORTED DRIVER HEATED SEAT SYSTEM

1

Driver Heated Seat Module C359

2

3

Press the driver heated seat switch to ON.

- Is rear BJB fuse 411 (15A) OK?

→ **Yes**

The heated seat system is operating correctly. CHECK each system independently. REVERIFY the symptom. GO to [Symptom Chart](#) .

→ **No**

GO to [J16](#) .

J16 CHECK FOR A SHORTED DRIVER HEATING ELEMENT CIRCUIT

1

2

Driver Heated Seat Module C359

3

A0003119

3

Measure the resistance between driver heated seat module C359 pin 3, circuit 20S-HC17 (BK), harness side and ground.

- Is the resistance greater than 10,000 ohms?

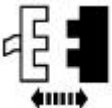

→ **Yes**

INSTALL a new driver heated seat module. REFER to [Heated Seat Module](#) . TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#) .

→ **No**

REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#) .

PINPOINT TEST K: THE POWER LUMBAR IS INOPERATIVE — DRIVER

CONDITIONS	DETAILS/RESULTS/ACTIONS
K1 CHECK THE DRIVER POWER SEAT OPERATION	
<p> WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.</p> <p>NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, the air bag system must be deactivated. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.</p> <p>NOTE: Restraint system diagnostic tools MUST be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.</p> <p>NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.</p> <p>NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.</p> <p>NOTE: Diagnostics may be performed on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors.</p> <p>NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.</p>	
	<p>1 Operate the driver power seat.</p> <ul style="list-style-type: none"> ● Does the power seat operate? <p>→ Yes GO to K2.</p> <p>→ No Go To Pinpoint Test C.</p>
K2 CHECK CIRCUIT 30-AH40 (RD) FOR AN OPEN	
<p>2</p>  <p>3</p>  <p>Driver Seat Lumbar Control Switch C361</p> <p>4</p>	<p>1 Deactivate the supplemental restraint system (SRS). Refer to Section 501-20B.</p>

5

A0003120

5 Measure the voltage between the driver seat lumbar control switch C361 pin 5, circuit 30-AH40 (RD), harness side and ground.

• Is the voltage greater than 10 volts?

→ Yes
GO to [K3](#).

→ No
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

K3 CHECK CIRCUIT 31-AH40 (BK) FOR AN OPEN

1

2

A0003121

2 Measure the resistance between driver seat lumbar control switch C361 pin 3, circuit 31-AH40 (BK), harness side and ground.

• Is the resistance less than 5 ohms?

→ Yes
GO to [K4](#).

→ No
REPAIR the circuit. TEST the system for

normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

K4 CHECK THE DRIVER SEAT LUMBAR MOTOR

1

Driver Seat Lumbar Control Switch C361

2

Driver Seat Lumbar Motor C366

3

A0003122

3 Measure the voltage between driver seat lumbar motor C366, circuit 32-AH39 (WH/BU), harness side and driver seat lumbar motor C366, circuit 33-AH39 (YE/BU), harness side.

4 Operate the driver seat lumbar control switch in both directions.

- Is the voltage greater than 10 volts?

→ **Yes**
INSTALL a new driver seat lumbar motor. REFER to [Motor—Front Seat Lumbar](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
GO to [K5](#).

K5 CHECK CIRCUIT 32-AH39 (WH/BU) AND 33-AH39 (YE/BU) FOR A SHORT TO GROUND

1

2

Driver Seat Lumbar Control Switch C361

3

3

Measure the resistance between driver seat lumbar control switch C361 pin 1, circuit 32-AH39 (WH/BU), harness side and ground; and between driver seat lumbar control switch C361 pin 4, circuit 33-AH39 (YE/BU), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
GO to [K6](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

K6 CHECK CIRCUIT 32-AH39 (WH/BU) FOR AN OPEN

1

1

Measure the resistance between driver seat lumbar control switch C361 pin 1, circuit 32-AH39 (WH/BU), harness side and driver seat lumbar motor C366, circuit 32-AH39 (WH/BU), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [K7](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-](#)

K7 CHECK CIRCUIT 33-AH39 (YE/BU) FOR AN OPEN

1

A0003124

1

Measure the resistance between driver seat lumbar control switch C361 pin 4, circuit 33-AH39 (YE/BU), harness side and driver seat lumbar motor C366, circuit 33-AH39 (YE/BU), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**

INSTALL a new driver seat lumbar control switch. REFER to [Lumbar Control Switch](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

PINPOINT TEST L: THE POWER LUMBAR IS INOPERATIVE — PASSENGER

CONDITIONS	DETAILS/RESULTS/ACTIONS
L1 CHECK THE PASSENGER POWER SEAT OPERATION	
<p>⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.</p> <p>NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, the air bag system must be deactivated. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.</p> <p>NOTE: Restraint system diagnostic tools MUST be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.</p> <p>NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. The</p>	

restraint system diagnostic tools must be removed prior to operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: Diagnostics may be performed on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1 Operate the passenger power seat.

● Does the power seat operate?

→ **Yes**
GO to [L2](#).

→ **No**
[Go To Pinpoint Test D](#).

L2 CHECK CIRCUIT 30-AH46 (RD) FOR AN OPEN

1

Passenger Seat Lumbar Control Switch C331

2

A0003120

1 Deactivate the supplemental restraint system (SRS). Refer to [Section 501-20B](#).

2 Measure the voltage between the passenger seat lumbar control switch C331 pin 5, circuit 30-AH46 (RD), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [L3](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

L3 CHECK CIRCUIT 31-XL20 (BK) FOR AN OPEN

1

2

A0003121

2

Measure the resistance between passenger seat lumbar control switch C331 pin 3, circuit 31-AH46 (BK), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [L4](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

L4 CHECK THE PASSENGER SEAT LUMBAR MOTOR

1

Passenger Seat Lumbar Control Switch C331

2

Passenger Seat Lumbar Motor C336

3

A0003122

3

Measure the voltage between passenger seat lumbar motor C336, circuit 32-AH23 (WH/BU), harness side and passenger seat lumbar motor C336, circuit 33-AH23 (YE/BU), harness side.

4

Operate the passenger seat lumbar control switch in both directions.

- Is the voltage greater than 10 volts?

→ **Yes**

INSTALL a new driver seat lumbar motor. REFER to [Motor—Front Seat Lumbar](#) . TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#) .

→ **No**

GO to [L5](#) .

L5 CHECK CIRCUIT 32-AH45 (WH/BU) AND 33-AH45 (YE/BU) FOR A SHORT TO GROUND

1

2

Passenger Seat Lumbar Control Switch C331

3

3

Measure the resistance between passenger seat lumbar control switch C331 pin 1, circuit 32-AH45 (WH/BU), harness side and ground; and between passenger seat lumbar control switch C331 pin 4, circuit 33-AH45 (YE/BU), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**

GO to [L6](#) .

→ **No**

REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#) .

L6 CHECK CIRCUIT 32-AH45 (WH/BU) FOR AN OPEN

1

1

Measure the resistance between passenger seat lumbar control switch

A0003123

C331 pin 1, circuit 32-AH45 (WH/BU), harness side and passenger seat lumbar motor C336, circuit 32-AH45 (WH/BU), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [L7](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

L7 CHECK CIRCUIT 33-AH45 (YE/BU) FOR AN OPEN

1

A0003124

1

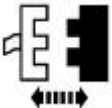

Measure the resistance between passenger seat lumbar control switch C331 pin 4, circuit 33-AH45 (YE/BU), harness side and passenger seat lumbar motor C336, circuit 33-AH23 (YE/BU), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new passenger seat lumbar control switch. REFER to [Lumbar Control Switch](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-](#)

PINPOINT TEST M: DTC B1676 BATTERY PACK VOLTAGE OUT OF RANGE

CONDITIONS	DETAILS/RESULTS/ACTIONS
M1 CHECK FOR VOLTAGE AT THE DSM	
<p> WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.</p> <p>NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, the air bag system must be deactivated. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.</p> <p>NOTE: Restraint system diagnostic tools MUST be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.</p> <p>NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.</p> <p>NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.</p> <p>NOTE: Diagnostics may be performed on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors.</p> <p>NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.</p>	
<p>1 </p> <p>3  DSM C341b</p> <p>4 </p> <p>5</p>	<p>2 Deactivate the supplemental restraint system (SRS). Refer to Section 501-20B.</p> <p>5 Measure the voltage between DSM C341b pin 4, circuit 30-AH80 (RD), harness side and ground.</p>

A0003125

- Is the voltage between 11.5 and 16 volts?

→ **Yes**

CLEAR the DTC. REPEAT the DSM self-test. If DTC B1676 is retrieved, INSTALL a new DSM. REFER to [Section 419-10](#). REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

REFER to [Section 414-00](#) for battery and charging system repair.

PINPOINT TEST N: THE POWER SEAT DOES NOT MOVE HORIZONTALLY/VERTICALLY — DRIVER

CONDITIONS	DETAILS/RESULTS/ACTIONS
N1 CHECK HORIZONTAL DIRECTION MOTOR FOR CORRECT OPERATION	
<p>⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.</p> <p>NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, the air bag system must be deactivated. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.</p> <p>NOTE: Restraint system diagnostic tools MUST be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.</p> <p>NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.</p> <p>NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.</p> <p>NOTE: Diagnostics may be performed on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors.</p>	

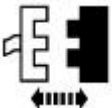

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

<p>1</p>  <p>3</p> 	<p>2</p> <p>Deactivate the supplemental restraint system (SRS). Refer to Section 501-20B.</p> <p>4</p> <p>Operate the driver power seat forward and rearward.</p> <ul style="list-style-type: none">● Will the seat move horizontally? <p>→ Yes GO to N2.</p> <p>→ No GO to N3.</p>
---	--

N2 CHECK BACKREST MOTOR FOR CORRECT OPERATION

	<p>1</p> <p>Operate the driver power seat backrest up and down.</p> <ul style="list-style-type: none">● Will the seat backrest move up and down? <p>→ Yes GO to N6.</p> <p>→ No GO to N13.</p>
--	---

N3 CHECK THE VOLTAGE TO THE DRIVER SEAT FORWARD/REVERSE MOTOR

<p>1</p>  <p>Driver Seat Forward/Reverse Motor C362</p> <p>2</p>	<p>2</p> <p>Measure the voltage between driver seat forward/reverse motor C362 pin 1, circuit 32-AH37 (YE/GN), harness side and C362 pin 2, circuit 33-AH37 (WH/GN), harness side, while pushing the driver seat regulator control switch forward and rearward.</p>
---	---

A0003068

- Is the voltage greater than 10 volts when the switch is pushed forward, greater than -10 volts when the switch is pushed rearward, and 0 volts when the switch is in a rest position?

→ **Yes**
 INSTALL a new driver seat forward/reverse motor. REFER to [Seat Track](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
 GO to [N4](#).

N4 CHECK CIRCUIT 32-AH37 (WH/GN) FOR AN OPEN AND SHORT TO GROUND

1

2

Driver Seat Forward/Reverse Motor C362

3

A0005668

3 Measure the resistance between driver seat regulator control switch C360 pin 3, circuit 32-AH37 (WH/GN), harness side and driver seat forward/reverse motor C362 pin 2, circuit 32-AH37 (WH/GN), harness side; and between driver seat regulator control switch C360 pin 3, circuit 32-AH37 (WH/GN), harness side and ground.

- Is the resistance less than 5 ohms between the driver seat

forward/reverse motor and the driver seat regulator control switch, and greater than 10,000 ohms between the driver seat regulator control switch and ground?

→ **Yes**
GO to [N5](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

N5 CHECK CIRCUIT 33-AH37 (YE/GN) FOR AN OPEN AND SHORT TO GROUND

1

1

Measure the resistance between driver seat regulator control switch C360 pin 11, circuit 33-AH37 (YE/GN), harness side and driver seat forward/reverse motor C362 pin 2, circuit 33-AH37 (YE/GN), harness side; and between driver seat regulator control switch C360 pin 11, circuit 33-AH37 (YE/GN), harness side and ground.

● **Is the resistance less than 5 ohms between the driver seat forward/reverse motor and the driver seat regulator control switch, and greater than 10,000 ohms between the driver seat regulator control switch and ground?**

→ **Yes**
INSTALL a new driver seat regulator control switch. REFER to [Seat Control Switch](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

N6 DETERMINE SEAT TILTING FAILURE

1 Determine seat tilting failure.

- **Can the seat be tilted forward or backward?**

→ **Yes**

If only forward tilting operates, GO to [N7](#).

If only rear tilting operates, GO to [N10](#).

→ **No**

INSTALL a new driver seat regulator control switch. REFER to [Seat Control Switch](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

N7 CHECK THE VOLTAGE TO THE DRIVER SEAT REAR HEIGHT MOTOR

1

Driver Seat Rear Height Motor C382

2

A0003068

2

Measure the voltage between driver seat rear height motor C382 pin 1, circuit 32-AH41 (WH/VT), harness side and C382 pin 2, circuit 33-AH41 (WH/VT), harness side, while depressing the rear tilt switch up and down.

- **Is the voltage greater than +10 volts when the rear tilt switch is pressed down, greater than -10 volts when the rear tilt switch is pressed up and 0 volts when the switch is in the rest position?**

→ **Yes**

INSTALL a new the driver seat rear height motor. REFER to [Seat Track](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

GO to [N8](#).

N8 CHECK CIRCUIT 32-AH41 (WH/VT) FOR OPEN AND SHORT TO GROUND

1

Driver Seat Regulator Control Switch C360

2

2

Measure the resistance between driver seat regulator control switch C360 pin 8, circuit 32-AH41 (WH/VT), harness side and driver seat rear height motor C382 pin 1, circuit 32-AH41 (WH/VT), harness side; and between driver seat regulator control switch C360 pin 8, circuit 32-AH41 (WH/VT), and ground.

- Is the resistance less than 5 ohms between the driver seat rear height motor and the driver seat regulator control switch, and greater than 10,000 ohms between the driver seat regulator control switch and ground?

→ **Yes**
GO to [N9](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

N9 CHECK CIRCUIT 33-AH41 (WH/VT) FOR OPEN AND SHORT TO GROUND

1

1

Measure the resistance between driver seat regulator control switch C360 pin 9, circuit 33-AH41 (WH/VT), harness side and driver seat rear height motor C382 pin 2, circuit 33-AH41 (WH/VT), harness side; and between driver seat regulator control switch C360 pin 9, circuit 33-AH41 (WH/VT), harness side and ground.

- Is the resistance less than 5 ohms between the driver seat rear height motor and the driver seat regulator control switch, and greater than 10,000 ohms between the driver seat regulator control switch and

ground?

→ **Yes**

INSTALL a new driver seat regulator control switch. REFER to [Seat Control Switch](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

N10 CHECK THE VOLTAGE TO DRIVER SEAT FRONT HEIGHT MOTOR

1

Driver Seat Front Height Motor C363

2

A0003068

2

Measure the voltage between driver seat front height motor C363 pin 1, circuit 33-AH38 (YE/BK), harness side and C363 pin 2, circuit 32-AH38 (WH/BK), while pushing the rear tilting switch up and down.

- **Is the voltage greater than +10 volts when the front tilt switch is pressed down, greater than -10 volts when the front tilt switch is pressed up and 0 volts when the switch is in the rest position?**

→ **Yes**

INSTALL a new driver seat front height motor. REFER to [Seat Track](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

GO to [N11](#).

N11 CHECK CIRCUIT 32-AH38 (WH/BK) FOR OPEN AND SHORT TO GROUND

1

Driver Seat Regulator Control Switch C360

2

2

Measure the resistance between driver seat regulator control switch C360 pin 5, circuit 32-AH38 (WH/BK), harness side and driver seat front height motor C363 pin 2, circuit 32-AH38 (WH/BK), harness side; and between driver seat regulator control switch C360 pin 5, circuit 32-AH38 (WH/BK), harness side and ground.

- Is the resistance less than 5 ohms between the driver seat front height motor and the driver seat regulator control switch, and greater than 10,000 ohms between the driver seat regulator control switch and ground?

→ **Yes**
GO to [N12](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to [Section 501-20B](#). PROVE OUT the supplemental restraint system (SRS).

N12 CHECK CIRCUIT 33-AH38 (YE/BK) FOR OPEN

1

1

Measure the resistance between driver seat regulator control switch C360 pin 4, circuit 33-AH38 (YE/BK) harness side, and driver seat front height motor C363 pin 1, circuit 33-AH38 (YE/BK), harness side; and between driver seat regulator control switch C360 pin 4, circuit 33-AH38 (YE/BK), harness side and ground.

- Is the resistance less than 5 ohms between the driver seat front height motor and the driver seat regulator control switch, and greater than 10,000 ohms between the driver seat regulator control switch and ground?

→ **Yes**
INSTALL a new driver seat regulator control switch. REFER to [Seat Control Switch](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

N13 CHECK THE VOLTAGE TO DRIVER SEAT BACKREST MOTOR

1

Driver Seat Backrest Motor C368

2

2 Measure the voltage between driver seat backrest motor C368 pin 1, circuit 32-AH36 (WH/RD), harness side and C363 pin 2, circuit 33-AH36 (YE/RD), while pushing the backrest switch forward and rearward.

- Is the voltage greater than 10 volts when the switch is pushed forward, greater than -10 volts when the switch is pushed rearward, and 0 volts when the switch is in a rest position?

→ **Yes**
INSTALL a new driver seat backrest motor. REFER to [Front Seat Backrest](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**
GO to [N14](#).

N14 CHECK CIRCUIT 32-AH36 (WH/RD) FOR OPEN AND SHORT TO GROUND

1

Driver Seat Regulator Control Switch C360

2

A0005704

2

Measure the resistance between driver seat regulator control switch C360 pin 12, circuit 32-AH36 (WH/RD), harness side and driver seat backrest motor C368 pin 1, circuit 32-AH36 (WH/RD), harness side; and between driver seat regulator control switch C360 pin 12, circuit 32-AH36 (WH/RD), harness side and ground.

- **Is the resistance less than 5 ohms between the driver seat backrest motor and the driver seat regulator control switch, and greater than 10,000 ohms between the driver seat regulator control switch and ground?**

→ **Yes**
GO to [N15](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

N15 CHECK CIRCUIT 33-AH36 (YE/RD) FOR OPEN

1

A0005705

1

Measure the resistance between driver seat regulator control switch C360 pin 7, circuit 33-AH36 (YE/RD) harness side, and driver seat backrest motor C368 pin 2, circuit 33-AH36 (YE/RD), harness side; and between driver seat regulator control switch C360 pin 7, circuit 33-AH36 (YE/RD), harness side and ground.

- **Is the resistance less than 5 ohms between the driver seat backrest motor and the driver seat regulator control switch, and greater than 10,000 ohms between the seat regulator control switch and ground?**

→ **Yes**

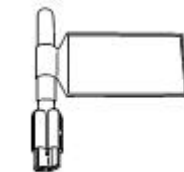

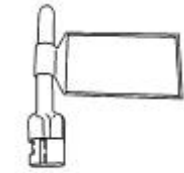

INSTALL a new driver seat regulator control switch. REFER to [Seat Control Switch](#). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

→ **No**

REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). PROVE OUT the supplemental restraint system (SRS). REFER to [Section 501-20B](#).

Supplemental Restraint System (SRS) Deactivation and Reactivation

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F395
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Deactivation

 **WARNING:** Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

 **WARNING:** The safety belt buckle pretensioner and safety belt retractor pretensioner are pyrotechnic devices. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

WARNING: Vehicle sensor orientation is critical for proper system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and properly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.**

NOTE: Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

- WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle workshop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, Disconnect the battery ground cable and wait at least one minute to allow for the depletion of the restraint system backup power supply. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable and wait at least one minute to allow for the depletion of the restraint system backup power supply. For additional information, refer to [Section 414-01](#).

- Remove the two screws and pull out on the lower steering column opening finish panel enough to access the electrical connectors.

3. Remove the lower steering column opening finish panel.
 1. Disconnect the electrical connectors.
 2. Remove the lower steering column opening finish panel.

4. Remove the screws. Separate the hood latch release cable and handle assembly from the steering column opening reinforcement.

5. Remove the two pin-type retainers and the RH instrument panel insulator.
 - Disconnect the courtesy lamp.

6. Remove the screw and the heater duct.

7. Loosen the two driver-side instrument panel tunnel brace bolts.
 - Position the carpet aside to gain access to the bolts.

8. Remove the screws and the steering column opening reinforcement.

9. Disconnect the clockspring electrical connector at the base of the steering column.

10. Attach the restraint system diagnostic tool to the vehicle harness side of the clockspring

electrical connector.

11. Remove the glove compartment. For additional information, refer to [Section 501-12](#).
12. Disconnect the passenger air bag module electrical connector.
 1. Reaching into the glove box opening toward the center of the instrument panel, under the cross-car beam, slide and disengage the passenger air bag module electrical connector locking clip.
 2. Push in on the two release tabs and disconnect the passenger air bag module electrical connector.

13. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger air bag electrical connector.

14. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
15. Move and tilt the front seats to their highest and most forward position.
16.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors,

instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle workshop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, Disconnect the battery ground cable and wait at least one minute to allow for the depletion of the restraint system backup power supply. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable and wait at least one minute to allow for the depletion of the restraint system backup power supply. For additional information, refer to [Section 414-01](#).

17. From under the passenger seat, release the tab on the connector bracket and remove the passenger seat side air bag electrical connector.

18. Disconnect the passenger seat side air bag electrical connector.
 1. Slide and disengage the passenger seat side air bag electrical connector locking clip.
 2. Push in to release the tab and disconnect the passenger seat side air bag electrical connector.

19. Attach the restraint system diagnostic tool to the passenger seat side air bag floor electrical connector.

20. Remove the passenger side B-pillar weatherstripping.
21. Position the safety belt D-ring to its highest point.
22. Remove the passenger side B-pillar upper trim panel.

23. Remove the passenger side front and rear door scuff plates.

24. Remove the passenger side B-pillar lower trim panel.

25. Disconnect the passenger side safety belt retractor pretensioner floor electrical connector.

26. Attach the restraint system diagnostic tool to the passenger side safety belt retractor pretensioner floor electrical connector.

27. From under the driver seat, release the tab on the connector bracket and remove the driver seat side air bag electrical connector.

28. Disconnect the driver seat side air bag electrical connector.
1. Slide and disengage the driver seat side air bag electrical connector locking clip.
 2. Push down to release the tab and disconnect the driver seat side air bag electrical connector.

29. Attach the restraint system diagnostic tool to the driver seat side air bag floor electrical connector.

30. Remove the driver side B-pillar weatherstripping.

31. Position the safety belt D-ring to its highest point.

32. Remove the driver side B-pillar upper trim panel.

33. Remove the driver side front and rear door scuff plates.

34. Remove the driver side B-pillar lower trim panel.

35. Disconnect the driver side safety belt retractor pretensioner electrical connector.

36. Attach the restraint system diagnostic tool to the driver side safety belt retractor pretensioner floor electrical connector.

37. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
38. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).
39. Disconnect the battery ground cable and wait at least one minute to allow for the depletion of the restraint system backup power supply. For additional information, refer to [Section 414-01](#).

Reactivation

⚠️ WARNING: To reduce the risk of serious personal injury, read and follow all warnings and notes at the beginning of the deactivation procedure.

1. Remove the restraint system diagnostic tool from the driver side safety belt retractor pretensioner floor electrical connector.

2. Connect the driver side safety belt retractor pretensioner electrical connector.

3. Install the driver side B-pillar lower trim panel.

4. Install the driver side front and rear door scuff plates.

5. **NOTE:** Position the safety belt D-ring to its highest point.

Install the driver side B-pillar upper trim panel.

6. Install the driver side B-pillar weatherstripping.
7. Remove the restraint system diagnostic tool from the driver seat side air bag floor electrical connector.

8. Connect the driver seat side air bag electrical connector.
 1. Connect the driver seat side air bag electrical connector.
 2. Slide and engage the driver seat side air bag electrical connector locking clip.

9. Install the driver seat side air bag electrical connector onto the connector bracket under the driver seat.

10. Remove the restraint system diagnostic tool from the passenger side safety belt retractor pretensioner electrical connector.

11. Connect the passenger side safety belt retractor pretensioner electrical connector.

12. Install the passenger side B-pillar lower trim panel.

13. Install the passenger side front and rear door scuff plates.

14. **NOTE:** Position the safety belt D-ring to its highest point.

Install the passenger side B-pillar upper trim panel.

15. Install the passenger side B-pillar weatherstripping.

16. Remove the restraint system diagnostic tool from the passenger seat side air bag floor electrical connector.

17. Connect the passenger seat side air bag electrical connector.

1. Connect the passenger seat side air bag electrical connector.
2. Slide and engage the passenger seat side air bag electrical connector locking clip.

18. Install the passenger seat side air bag electrical connector onto the connector bracket under the passenger seat.

19. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).

20. Position the front seats rearward.

21.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle workshop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, Disconnect the battery ground cable and wait at least one minute to allow for the depletion of the restraint system backup power supply. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable and wait at least one minute to allow for the depletion of the restraint system backup power supply. For additional information, refer to [Section 414-01](#).

22. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger air bag electrical connector.

23. Connect the passenger air bag module electrical connector.
1. Reach into the glove box opening toward the center of the instrument panel, under the cross-car beam and connect the passenger air bag module electrical connector.
 2. Slide and engage the passenger air bag module electrical connector locking clip.

24. Install the glove compartment. For additional information, refer to [Section 501-12](#).
25. Remove the restraint system diagnostic tool from the vehicle harness side of the clockspring electrical connector.

26. Connect the clockspring electrical connector at the base of the steering column.

27. Position the steering column opening reinforcement and install the screws.

28. Tighten the two driver-side instrument panel tunnel brace bolts.

- Reposition the carpet.

29. Position the heater duct and install the screw.

30. Install the RH instrument panel insulator and the two pin-type retainers.

- Connect the courtesy lamp.

31. Position the hood latch release cable and handle assembly to the steering column opening reinforcement and install the screws.

32. Connect the electrical connectors to the switches in the lower steering column opening finish panel.

33. Install the lower steering column opening finish panel to the instrument panel.
1. Position the lower steering column opening finish panel to the instrument panel and push in, seating the retaining clips.
 2. Install the screws.

34. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).

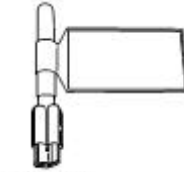

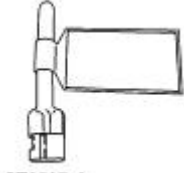

35.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

36. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).

Seat Control Switch

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F395
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal

 **WARNING:** Always wear safety glasses when repairing a air bag supplemental restraint system (SRS) vehicle and when handling an airbag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

NOTE: The left side is shown, the right side is similar.

1. Prepare the vehicle for seat control switch removal.

-  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute.

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

3.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.

Remove the affected seat. For additional information, refer to [Front Seat](#) in this section.

2.  **CAUTION:** Do not use a screwdriver to remove the safety belt cover.

Remove the front safety belt cover by placing fingers behind the cover and pushing outward.

3. Remove the side trim panel screw.

4. Remove the side trim panel screw.

5. Remove the seat control knobs.

6. Position the seat regulator control switch plate aside.

7. Remove the screw and set aside the front cushion side shield.

8. Remove the seat regulator control switch.
 1. Remove the screws.
 2. Disconnect the electrical connector.

Installation

⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the removal procedure.

1. Install the seat regulator control switch.
 1. Connect the electrical connector.
 2. Install the screws.

2. Position the front cushion side shield and install the screw.

3. Install the seat regulator control switch plate.

4. Install the seat control knobs.

5. Install the side trim panel screw.

6. Install the side panel trim screw.

7. Install the front safety belt cover.

8. Restore the vehicle to operating condition.

1.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the seat removal and installation procedure.**

Install the affected seat. For additional information, refer to [Front Seat](#) in this section.

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

3.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

4. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).
-

Heated Seat Switch

Removal and Installation

All vehicles

1. Apply the parking brake.

Vehicles with manual transmission

2. If equipped with a manual transmission, place the selector lever in fourth gear.

Vehicles with automatic transmission

3. If equipped with an automatic transmission, place the selector lever in NEUTRAL.

All vehicles

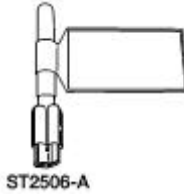

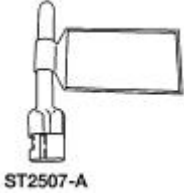

4. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
5. Remove the ashtray finish panel.

6. Remove the two screws and the ashtray assembly.
 - Disconnect the electrical connectors.
 7. Release the locking tabs and remove the heated seat switch.
 8. To install, reverse the removal procedure.
-

Lumbar Control Switch

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F395
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal

 **WARNING:** Always wear safety glasses when repairing a air bag supplemental restraint system (SRS) vehicle and when handling an airbag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

NOTE: The left side is shown, the right side is similar.

1. Prepare the vehicle for lumbar control switch removal.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

3.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.

Remove the affected seat. For additional information, refer to [Front Seat](#) in this section.

2. Remove the seat control knobs.

3. Position the seat regulator control switch plate aside.

4. Remove the lumbar control switch.
 1. Disconnect the connector.
 2. Remove the lumbar control switch.

Installation

⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the removal procedure.

1. Install the lumbar control switch.
 1. Connect the electrical connector.
 2. Install the lumbar control switch.

2. Install the seat regulator control switch plate.

3. Install the seat control knobs.

4. Restore the vehicle to operating condition.

1.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the seat removal and installation procedure.**

Install the affected seat. For additional information, refer to [Front Seat](#) in this section.

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

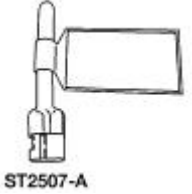

3.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

4. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).

 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal

All seats

 **WARNING:** Always wear safety glasses when repairing a air bag supplemental restraint system (SRS) vehicle and when handling an airbag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

NOTE: If a side air bag deployment took place the seatback pad, trim cover, and side air bag module must be replaced. The seatback frame should be replaced if necessary.

NOTE: The left side is shown, the right side is similar.

1. Prepare the vehicle for front seat backrest removal.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air

bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

3.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.

Remove the affected seat. For additional information, refer to [Front Seat](#) in this section.

2.  **WARNING:** Front seat back trim covers installed on seats equipped with side air bags cannot be repaired, they are to be replaced (cleaning is permissible).

 **CAUTION:** When removing the seat backrest trim panel, be careful not to damage the J-hooks. If the seat backrest trim panel J-hooks are damaged, install a new seat backrest trim panel.

 **CAUTION:** When removing the seat backrest trim panel, be careful not to damage the pin-type retainers. Pulling towards you, use a smooth, controlled force to release the pin-type retainers.

Remove the seat backrest trim panel.

1. Pull and release the pin-type retainers at the bottom of the seat backrest trim panel.
2. While holding the seat backrest trim panel at the bottom, push in on the left side of the panel at the lip of the map pocket and slide it to the right to disengage the J-hook. Repeat this process for the right side J-hook but slide the panel to the left to disengage the hook.
3. While pushing in at the top of the seat backrest trim panel, slide it down to disengage the top J-hooks.
4. Remove the seat backrest trim panel and inspect the J-hooks and pin-type retainers for damage.

Seats with manual lumbar

3. Remove the retaining hook.

4. Align the end of the adjusting cable in the slot.

5. Release the adjusting cable.

All seats

6. Disconnect the electrical connectors.

7. Disconnect the electrical connector.

8. Remove the front cushion side shield trim panel. For additional information, refer to [Seat—Front Cushion Side Shield](#) in this section.
9. Remove the two front seat backrest bolts on each side. Remove the front seat backrest.

Installation

 **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings and notes at the beginning of the removal procedure.

All seats

1. Position the front seat backrest and install two bolts on each side.

2. Install the front cushion side shield trim panel. For additional information, refer to [Seat—Front Cushion Side Shield](#) in this section.
3. Connect the electrical connector.

4. Connect the electrical connectors.

Seats with manual lumbar

5. Install the retaining hook.

6. Align the end of the adjusting cable in the slot.

7. Install the adjusting cable.

8.  **CAUTION: Inspect the seat backrest trim panel J-hooks for damage. If damaged, install a new seat backrest trim panel.**

NOTE: If re-installing the original seat backrest trim panel, install new pin-type retainers.

Install the seat backrest trim panel.

1. Angle the top of the seat backrest trim panel inward and up to engage the upper J-hooks to the seat backrest frame.
2. While holding the seat backrest trim panel up, align the pin-type retainers at the bottom of the seat backrest trim panel and install them into the seat backrest frame.
3. With the palm of your hand, install the J-clips by pushing down on the seat backrest trim panel and towards the center of the seat.
 - Check the retention of the seat backrest trim panel by lightly pulling on the bottom, sides, and top where the retainers are located.

9. Restore the vehicle to operating condition.

1.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the seat removal and installation procedure.**

Install the affected seat. For additional information, refer to [Front Seat](#) in this section.

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

3.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

4. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).
-

Seat Backrest —Rear Side Bolsters

Removal and Installation

1. Remove the rear seat cushions. For additional information, refer to [Seat—Rear Cushion](#).

2. From the luggage compartment, release and fold down the seat backrest.
3. Remove the rear seat bolster nut.

4. **NOTE:** Pull down the lever to release the LH latch. Push up the lever to release the RH latch.

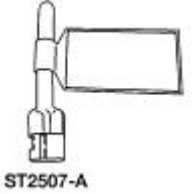

Release the latch and remove the rear seat bolster.

5. To install, reverse the removal procedure.

Front Seat

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F395
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal

 **WARNING:** Always wear safety glasses when repairing a air bag supplemental restraint system (SRS) vehicle and when handling an airbag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

NOTE: The driver seat is shown, the passenger seat is similar.

NOTE: If a side air bag deployment took place the seatback pad, trim cover, and side air bag module must be replaced. The seatback frame should be replaced if necessary.

1. Prepare the vehicle for seat removal.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

2. Reconnect the battery ground cable.
3. Move the seat rearward.
4. Remove the bolts.

5. Position the seat forward.
6. Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

7.  **CAUTION:** Do not use a screwdriver to remove the safety belt cover.

Remove the safety belt cover by placing fingers behind the cover and pushing outward.

8. Remove the nut and the front safety belt.

9. Remove the seat track rear covers.

10. Remove the nuts.

11. Disconnect the electrical connector.

12. Remove the seat.

Installation

 **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the removal procedure.

1. Position the seat in the vehicle.
2. Connect the electrical connectors.

3. Install the nuts.

4. **NOTE:** Make sure the seat track covers are positioned below the level of the seat track rail to prevent damage to the cover during seat travel.

Install the seat track rear covers.

5. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
6. Position the seat rearward.
7. Install the bolts.

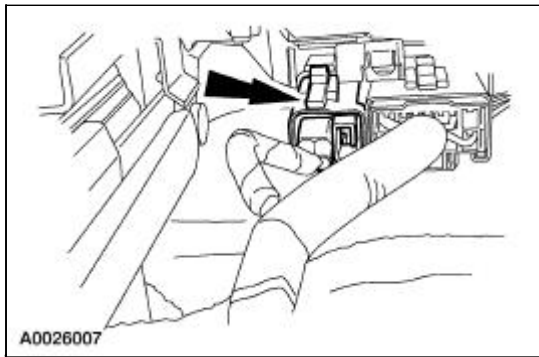

8. Position the seat forward.
9. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
10. Remove the restraint system diagnostic tool from the driver seat side air bag floor electrical connector.

11. Connect the driver seat side air bag electrical connector.
 1. Connect the driver seat side air bag electrical connector.
 2. Slide and engage the driver seat side air bag electrical connector locking clip.

12. Install the driver seat side air bag electrical connector onto the connector bracket under the driver seat.

13. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
14. With the restrain system diagnostic tools still installed at the remaining deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

15.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).

16. Install the front safety belt.
 1. Install the safety belt.
 2. Install the bolt.

17. Install the safety belt cover.

18. Restore the vehicle to operating condition.

1.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

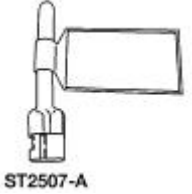

2.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

3. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).

Seat —Front Cushion Side Shield

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F395
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal and Installation

 **WARNING:** Always wear safety glasses when repairing a air bag supplemental restraint system (SRS) vehicle and when handling an airbag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

NOTE: The left side is shown, the right side is similar.

1. Prepare the vehicle for front cushion side shield removal.

-  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

3.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.

Remove the affected seat. For additional information, refer to [Front Seat](#) in this section.

2.  **CAUTION:** Do not use a screwdriver to remove the safety belt cover.

Remove the safety belt cover by placing fingers behind the cover and pushing outward.

3. Remove the front cushion side shield screw.

4. Remove the front cushion side shield screw.

5. Remove the seat control switch knobs.

6. Position the seat control switch plate aside.

7. Disconnect the lumbar control switch electrical connector.

8. Remove the screw and the front cushion side shield.

Installation

⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the removal procedure.

1. Install the front cushion side shield. Install the screw.

2. Connect the lumbar control switch electrical connector.

3. Install the seat regulator control switch plate.

4. Install the seat control switch knobs.

5. Install the front cushion side shield screw.

6. Install the front cushion side shield screw.

7. Install the safety belt cover.

8. Restore the vehicle to operating condition.

1.  **WARNING:** To reduce the risk of serious personal injury, read and follow all

warnings, notes, and instructions in the seat removal and installation procedure.

Install the affected seat. For additional information, refer to [Front Seat](#) in this section.

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

3.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

4. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).
-

Seat —Rear Cushion

Removal and Installation

1. Using a suitable tool, release the mini-buckle.

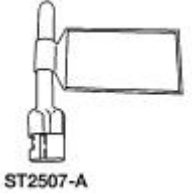

2. Release the two latches and remove the rear seat cushion.

3. To install, reverse the removal procedure.
 - Check the restraint system for correct operation.
-

Seat Track

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F395

 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal

 **WARNING:** Always wear safety glasses when repairing a air bag supplemental restraint system (SRS) vehicle and when handling an airbag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

 **CAUTION:** Use care when handling the seat and track assembly. Dropping the assembly or sitting on a seat not secured in the vehicle may result in damaged components.

NOTE: The left side is shown, the right side is similar.

1. Prepare the vehicle for seat track removal.

-  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

3.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.

Remove the affected seat. For additional information, refer to [Front Seat](#) in this section.

4. Remove the front cushion side shield. For additional information, refer to [Seat—Front Cushion Side Shield](#) in this section.
5. Remove the seat backrest. For additional information, refer to [Front Seat Backrest](#) in this section.

2. Remove the nuts and the seat track.

3. Remove the wiring harness, driver seat module, seat track trim panel, and if equipped, the heated seat module.

Installation

⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the removal procedure.

1. Install the wiring harness, driver seat module, seat track trim panel, and if equipped, the heated seat module.

2. Install the seat track and nuts.

3. Restore the vehicle to operating condition.
 1. Install the seat backrest. For additional information, refer to [Front Seat Backrest](#) in this section.
 2. Install the front cushion side shield. For additional information, refer to [Seat—Front Cushion Side Shield](#) in this section.
 3. **⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the seat removal and installation procedure.**

Install the affected seat. For additional information, refer to [Front Seat](#) in this section.

4. **⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

5. **⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

6. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).

Seat —Rear Seatback

Removal and Installation

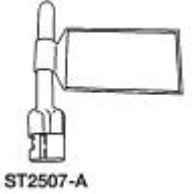

1. From the luggage compartment, release and fold down the seat backrest.
2. Remove the rear seat backrest nuts and remove the seat backrest.

3. To install, reverse the removal procedure.
-

Heated Seat Module

Removal

 **WARNING:** Always wear safety glasses when repairing a air bag supplemental restraint system (SRS) vehicle and when handling an airbag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

NOTE: The left side is shown, the right side is similar.

1. Prepare the vehicle for heated seat module removal.

-  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

3.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.

Remove the affected seat. For additional information, refer to [Front Seat](#) in this section.

2. Remove the heated seat module.
 1. Disconnect the electrical connector.
 2. Remove the module.

Installation

1. Install the heated seat module.
 1. Connect the electrical connector.
 2. Install the module.

2. Restore the vehicle to operating condition.
 1.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the seat removal and installation procedure.

Install the affected seat. For additional information, refer to [Front Seat](#) in this section.

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

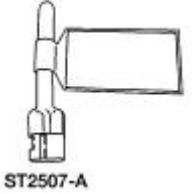

3.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

4. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).
-

Motor —Front Seat Lumbar

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F395
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal

 **WARNING:** Always wear safety glasses when repairing a air bag supplemental restraint system (SRS) vehicle and when handling an airbag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

NOTE: The left side is shown, the right side is similar.

1. Prepare the vehicle for front seat lumbar motor removal.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.**

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

3.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

Remove the affected seat. For additional information, refer to [Front Seat](#) in this section.

2.  **WARNING: Front seat back trim covers installed on seats equipped with side air bags cannot be repaired, they are to be replaced (cleaning is permissible).**

 **CAUTION: When removing the seat backrest trim panel, be careful not to damage the J-hooks. If the seat backrest trim panel J-hooks are damaged, install a new seat backrest trim panel.**

 **CAUTION: When removing the seat backrest trim panel, be careful not to damage the pin-type retainers. Pulling towards you, use a smooth, controlled force to release the pin-type retainers.**

Remove the seat backrest trim panel.

1. Pull and release the pin-type retainers at the bottom of the seat backrest trim panel.
2. While holding the seat backrest trim panel at the bottom, push in on the left side of the panel at the lip of the map pocket and slide it to the right to disengage the J-hook. Repeat this process for the right side J-hook but slide the panel to the left to disengage the J-hook.
3. While pushing in at the top of the seat backrest trim panel, slide it down to disengage the top J-hooks.
4. Remove the seat backrest trim panel and inspect the J-hooks and pin-type retainers for damage. Discard any damaged retainers and install new.

3. Disconnect the electrical connectors.
 - Release the electrical connector locators.

4. Release the J-retainers and pin-type retainers.

5. Remove the retaining hook.

6. Disconnect the lumbar motor electrical connector.

7. Remove the screws and the front seat lumbar motor.

Installation

 **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings and notes at the beginning of the removal procedure.

1. Install the front seat lumbar motor and the screws.

2. Connect the lumbar motor electrical connector.

3. Install the retaining hook.

4. Install the J-retainers and pin-type retainers.

5. Connect the electrical connectors.
 - Install the electrical connector locators.

6.  **CAUTION: Inspect the seat backrest trim panel J-hooks for damage. If damaged, install a new seat backrest trim panel.**

NOTE: If re-installing the original seat backrest trim panel, install new pin-type retainers.

Install the seat backrest trim panel.

1. Angle the top of the seat backrest trim panel inward and up to engage the upper J-hooks to the seat backrest frame.
2. While holding the seat backrest trim panel up, align the new pin-type retainers at the bottom of the seat backrest trim panel and install them into the seat backrest frame.
3. With the palm of your hand, install the J-clips by pushing down on the seat backrest trim panel and towards the center of the seat.
 - Check the retention of the seat backrest trim panel by lightly pulling on the bottom, sides, and top where the retainers are located.

7. Restore the vehicle to operating condition.

1.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the seat removal and installation procedure.**

Install the affected seat. For additional information, refer to [Front Seat](#) in this section.

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

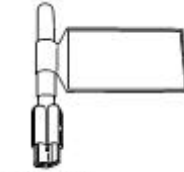

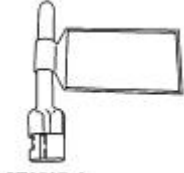

3.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

4. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).

 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Disassembly

 **WARNING:** Always wear safety glasses when repairing a air bag supplemental restraint system (SRS) vehicle and when handling an airbag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

NOTE: The left side is shown, the right side is similar.

NOTE: If a side air bag deployment took place the seatback pad, trim cover, and side air bag module must be replaced. The seatback frame should be replaced if necessary.

All seats

1. Prepare the vehicle for front seat cushion disassembly.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air

bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

3.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.

Remove the affected seat. For additional information, refer to [Front Seat](#) in this section.

2.  **WARNING:** Front seat back trim covers installed on seats equipped with side air bags cannot be repaired, they are to be replaced (cleaning is permissible).

 **CAUTION:** When removing the seat backrest trim panel, be careful not to damage the J-hooks. If the seat backrest trim panel J-hooks are damaged, install a new seat backrest trim panel.

 **CAUTION:** When removing the seat backrest trim panel, be careful not to damage the pin-type retainers. Pulling towards you, use a smooth, controlled force to release the pin-type retainers.

Remove the seat backrest trim panel.

Seats with manual lumbar

3. Remove the retaining hook.

4. Align the end of the adjusting cable in the slot.

5. Release the adjusting cable.

6. Remove the manual lumbar knob.

7. Remove the manual lumbar screws.

All seats

8. Remove the front cushion side shield. For additional information, refer to [Seat—Front Cushion Side Shield](#) in this section.

9. Remove the seat track. For additional information, refer to [Seat Track](#) in this section.
10. Remove the seat regulator control switch. For additional information, refer to [Seat Control Switch](#) in this section.
11. Release the J-hooks and seat cushion trim cover.

Assembly

 **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the removal procedure.

All seats

1. Install the J-hooks and the seat trim cover.

2. Install the front cushion side shield. For additional information, refer to [Seat—Front Cushion Side Shield](#) in this section.
3. Install the seat track. For additional information, refer to [Seat Track](#) in this section.
4. Install the seat regulator control switch. For additional information, refer to [Seat Control Switch](#) in this section.

Seats with manual lumbar

5. Install the retaining hook.

6. Align the end of the adjusting cable in the slot.

7. Install the adjusting cable.

8. Install the manual lumbar screws.

9. Install the manual lumbar knob.

All seats

10.  **CAUTION: Inspect the seat back trim panel J-hooks for damage. If damaged, install a new seat back trim panel.**

NOTE: If re-installing the original seat backrest trim panel, install new pin-type retainers.

Install the seat backrest trim panel.

1. Angle the top of the seat backrest trim panel inward and up to engage the upper J-hooks to the seat backrest frame.
2. While holding the seat backrest trim panel up, align the pin-type retainers at the bottom of the seat backrest trim panel and install them into the seat backrest frame.
3. With the palm of your hand, install the J-clips by pushing down on the seat backrest trim panel and towards the center of the seat.
 - Check the retention of the seat backrest trim panel by lightly pulling on the bottom, sides, and top where the retainers are located.

11. Restore the vehicle to operating condition.

1.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the seat removal and installation procedure.**

Install the affected seat. For additional information, refer to [Front Seat](#) in this section.

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

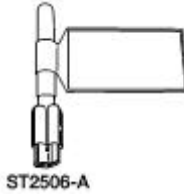

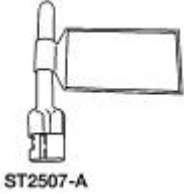

3.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

4. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).

Disassembly

 **WARNING:** Always wear safety glasses when repairing a air bag supplemental restraint system (SRS) vehicle and when handling an airbag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

NOTE: If a side air bag deployment took place the seatback pad, trim cover, and side air bag module must be replaced. The seatback frame should be replaced if necessary.

NOTE: The left side is shown, the right side is similar.

1. Prepare the vehicle for front seat backrest removal.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

3.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.

Remove the affected seat. For additional information, refer to [Front Seat](#) in this section.

4. Remove the seat backrest. For more information, refer to [Front Seat Backrest](#) in this section.
2. Remove the front cushion side shield trim panel. For additional information, refer to [Seat—Front Cushion Side Shield](#) in this section.
3. Remove the bolt and the safety belt buckle.

4. Remove the headrest.

5. Release the electrical connector locators.

6. Release the J-retainers and pin-type retainers.

7. Reposition the seat backrest trim cover and pad and remove the side air bag module retaining nut cover.

8. Push the wire harness and grommet through the seat backrest frame.

9. **NOTE:** If installing a new side air bag module, use new retaining nuts. If the same side air bag module is to be reused then reuse the side air bag module nuts.

Remove the side air bag nuts. For additional information, refer to [Section 501-20B](#).

10. With one hand on the side air bag module, position the seat backrest trim cover and pad forward enough to access the side air bag module.

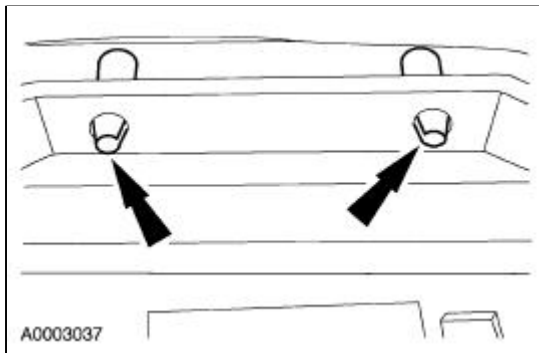

11. Remove the side air bag module from the deployment chute.
 1. Separate the side air bag module and deployment chute from the seat backrest mounting bracket.
 2. Pull the side air bag module mounting studs back through the deployment chute openings and remove the side air bag module from the deployment chute.

12. Disconnect and remove the side air bag module.
 1. Slide the side air bag electrical connector locking clip to disengage it.
 2. Release the two connector tabs (one shown) by pushing in on them and disconnect the side air bag module.
 3. Remove the side air bag module.

13. Pull back the cover to remove the headrest retaining clip.

14. Remove the seat backrest cover from the frame.

Assembly

WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the removal procedure.

1. Position the seat backrest cover and install the headrest guides.

2. Install the seat backrest cover onto the frame.
3. Connect the side air bag module electrical connector.
 1. Install the connector to the side air bag module.
 2. Slide the side air bag module electrical connector locking clip to secure the connector to the side air bag module.

4. Make sure the electrical connector is securely fastened to the side air bag module.

⚠ WARNING: Inspect the mounting surfaces of the side air bag module for any foreign objects before installing the side air bag module. If any foreign objects are found, remove them. Failure to do so may result in personal injury in the event of an air bag deployment.

⚠ WARNING: Inspect the side air bag deployment chute and the side air bag cavity in the seat back pad for any foreign objects. If any foreign objects are found, remove them. Failure to do so may result in personal injury in the event of an air bag deployment.

⚠ WARNING: Before installing the side air bag module into the deployment chute, check it for damage and foreign objects. If the air bag module is damaged, replace it. If any foreign objects are found, remove them. Failure to do so may result in personal injury in the event of an air bag deployment.

⚠ WARNING: If the air bag cover has separated or the air bag material has been exposed, install a new side air bag module. Do not attempt to repair the air bag module. Failure to do so may result in personal injury in the event of an air bag deployment.

⚠ WARNING: Check the side air bag deployment chute for damage. The deployment chute must not be repaired. If there is any damage to the deployment chute, the seat back trim cover and deployment chute must be installed new as a unit.

⚠ WARNING: If the air bag deployment chute is not properly positioned, the side air bag may not deploy properly.

5. **NOTE:** The alignment pin will only allow the side air bag module to be installed to the seat backrest mounting bracket one way.

Position the side air bag module into the deployment chute.

- Position the side air bag module into the deployment chute with the alignment pin offset to the top and the electrical connector to the bottom of the seat backrest. This will position the alignment pin correctly when the side air bag module and deployment chute are mounted to the seat backrest frame mounting bracket.
- The side air bag module mounting studs must come through the deployment chute stud openings.

6.  **WARNING:** Inspect the mounting surfaces of the deployment chute and the seat back frame mounting bracket for any foreign objects before installing the side air bag module/deployment chute assembly. If any foreign objects are found, remove them. Failure to do so may result in personal injury in the event of an air bag deployment.

Install the new side air bag module retaining nuts and tighten to specification.

7. Pull the wire harness back through the hole in the seat backrest frame and seat the grommet.

8. Reposition the seat backrest pad and trim cover to the seat backrest frame.

9. Attach the side air bag retaining nut cover.

- Check that all three attaching clips on the side air bag nuts cover are correctly installed around the side air bag mounting bracket.

10. Install the electrical connector locators.

11. Install the headrest.

12. Position the front seat safety belt buckle. Install the bolt.

13. Install the front cushion side shield trim panel. For additional information, refer to [Seat—Front Cushion Side Shield](#) in this section.

14. Restore the vehicle to operating condition.

1. Install the seat backrest. For additional information, refer to [Front Seat Backrest](#) in this section.

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the seat removal and installation procedure.**

Install the affected seat. For additional information, refer to [Front Seat](#) in this section.

3.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation and reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

4.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

5. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).

**WINDOW REGULATOR ELECTRIC DRIVE

Glass, Frames and Mechanisms

The glass, frames and mechanisms include:

- front door window motor
- rear door window motor
- master window regulator control switch
- back window glass
- front door window glass
- rear door window glass
- rear quarter window glass
- front door window regulator
- rear door window regulator
- windshield glass

Window, One-Touch Down

The driver window one-touch down feature is activated by pressing the master window regulator control switch to the second down position. This allows the front door window glass to move downward until it is fully lowered. Momentarily pressing the window regulator control switch while the window is moving downward will stop the front door window glass.

Window Glass, Door

The bottom of the door window glass is mounted on a slider bracket which is part of the door window regulator. Door window glass bracket spacers provide attachment points for the door window glass and prevent direct contact between the slider bracket and the door window glass.

Switch, Window Regulator Control

Power windows are standard in the LS series. The master window regulator control switch can be used to power any or all of the power windows. A single window regulator control is located on all passenger door armrests to activate the individual power window only.

Motor, Window Regulator

The front and rear window regulator motors are replaced separately.

Glass, Frames and Mechanisms

Refer to Wiring Diagrams Section [501-11](#) for schematic and connector information.

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052, or equivalent diagnostic tool
 ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

Front Electronics Module (FEM) and Rear Electronics Module (REM)

The front electronics module (FEM) receives inputs and delivers outputs to a majority of the electronically controlled features which reside primarily in the front section of the vehicle. The rear electronics module (REM) receives inputs and delivers outputs to a majority of the electronically controlled features which reside primarily in the rear section of the vehicle. The FEM and REM are configurable modules and must be correctly configured to the vehicle. The modules may also be configured to allow additional features or functions to be added to the vehicle. The FEM and REM do not have any optional window control configurations.

Driver Door Module (DDM)

The DDM receives inputs from the remote keyless entry transmitter and hardwired components such as the master window regulator control switch and delivers outputs in the form of SCP network messages and hardwired component control. The DDM is a configurable module and must be correctly configured to the vehicle. The DDM may also be configured to allow additional features or functions to be added to the vehicle. The only DDM window feature that can be optionally configured is the window global open and close feature.

Module Inputs and Outputs

This system is unique in that many of the inputs that the FEM, REM and DDM receive are over the SCP communication network. These input messages come from other modules connected to the

network. The FEM, REM and DDM will interpret the inputs, and in turn command the correct output that was requested. The modules also receive inputs which come directly from components which are hardwired to the modules such as the window regulator control switches.

One type of output the modules provide is over the SCP communication network in the form of messages. These types of outputs are usually generated from a module monitoring a hardwired input and sending a status message to another module. These outputs are commonly required by other modules to carry out their functions. The second type of output is the control of a component directly hardwired to the module.

Master Window Regulator Control Switch

The master window regulator control switch is hardwired to the DDM. Activating the master window regulator control switch sends a voltage signal to the DDM. The DDM will interpret the signal and control the power and ground to the driver front window regulator electric drive.

Activation of any of the passenger window switches on the master window regulator control switch sends a voltage signal to the DDM. The DDM interprets the signal and sends out the appropriate message over the SCP communication network. For the passenger front window, the FEM will interpret the DDM message and control the passenger front window regulator electric drive. For the rear passenger windows, the REM will interpret the DDM message and control the appropriate rear window regulator electric drive.

The driver one-touch down feature allows the driver front window to be lowered without holding the master window regulator control switch. Activation of the master window regulator control switch to the second down position sends a separate voltage signal to the DDM. The DDM will then control the power and ground to the driver front window regulator electric drive until a switch input is received or the motor reaches a stalled condition.

Passenger Window Power Supply

The REM controls the power supply to all three remote window regulator control switches. To protect the REM from a potential failure, the REM will remove power from the common passenger window power supply when a short to ground is sensed in any remote window regulator control switch, associated circuitry or the power output circuit of the REM. Power will be restored to the power output circuit upon a cycling of the ignition switch. If the REM output circuit is shorted to ground, the REM will immediately remove power from the common power supply circuit. If any remote window regulator control switch or its associated circuits are shorted to ground, the power will remain on the REM output circuit until the switch or circuit containing the short to ground is activated.

Passenger Window Lock-Out

The master window regulator control switch incorporates a passenger window lock-out switch. Activating the passenger window lock-out switch sends a separate voltage signal to the DDM. The DDM will then output a message to the REM. The REM will in turn remove power from the common passenger window power supply circuit. The rear window operation will be allowed from the master window regulator control switch only.

Passenger Front Power Window

The passenger front power window is controlled by the FEM. The passenger front window regulator control switch is hardwired directly to the FEM. Activating the passenger front window regulator control

switch sends a voltage input to the FEM. The FEM then controls power and ground to the passenger front power window regulator electric drive, which is directly hardwired to the FEM. The voltage signal will only be received if the REM is supplying voltage to the remote window regulator control switch circuit.

The passenger front window can also be controlled by the master window regulator control switch. Activating the passenger front switch on the master window regulator control switch sends a voltage input to the DDM. The DDM will then send a message to the FEM over the network. The FEM then controls power and ground to the passenger front window regulator electric drive.

Left Rear (LR) and Right Rear (RR) Power Windows

The LR and RR power windows are controlled by the REM. Operating commands for the rear power windows are received in two forms, from the master window regulator control switch over the SCP communication network from the DDM, or directly from the LR or RR window regulator control switches, which are hardwired to the REM.

Activating the LR or RR switch on the master window regulator control switch causes the DDM to send a message to the REM over the SCP communication network. The REM will then control power and ground to the appropriate window regulator electric drive to raise or lower the window.

Activating either the LR or RR window regulator control switch sends a voltage signal to the REM. The REM will then control power and ground to the appropriate window regulator electric drive to raise or lower the window. A voltage signal will only be received if the window lock-out is OFF and the REM is supplying voltage to the remote window regulator control switch power circuit.

Rear Window Defrost

The rear window defrost feature is controlled by the REM, powertrain control module (PCM), and the dual automatic temperature control (DATC) module. The rear window defrost switch is incorporated in the climate control head. When the switch is selected ON, the DATC module will send a message over the SCP communication network to the REM. The REM will then check its other messages for vehicle rpm from the PCM. If the rpm message is received, the REM will then ground the rear window defrost relay coil control circuit which is hardwired to the REM. The ground signal closes the rear window defrost relay which applies power to the rear window grid through the antenna isolator module. Fault management of the rear window defrost feature will prevent the rear window defrost from operating when a rpm or ignition switch invalid/missing data message is received.

Diagnosis

The FEM, REM and DDM constantly monitor systems under their control and report a concern in the form of a diagnostic trouble code (DTC). DTCs can be retrieved with the diagnostic tool or an equivalent tester through the SCP communication network.

This vehicle's design makes it unique in that electronic functions are divided into zones. The DDM controls features near the driver front door. The FEM controls features in the front portion of the vehicle and the REM controls the features in the rear portion. These systems rely heavily on the SCP communication network in order to transmit and receive messages. It is vital when diagnosing this vehicle's electronic systems, to understand:

- where the input (command) originates.
- all input information messages necessary in order for a feature to operate correctly.

- which module(s) receive(s) the input (or command message).
- if the module which received the input (message) controls the output of the feature, or does it output a message over the communication network to another module.
- which module controls the output of the feature.

Delayed Accessory

Delayed accessory operation allows the power windows, radio and moon roof (if equipped) to operate for up to ten minutes after the ignition is turned to OFF. The delayed accessory function is controlled by the DDM. When the ignition switch is turned from RUN to OFF, the DDM will begin the timing sequence. If a door is opened or the ignition switch is activated to another position, the DDM will cancel the delayed accessory operation.

Heated Wiper Park

The heated wiper park grid (located within the lower painted area of the windshield) receives power from the heated wiper park relay located in the underhood auxiliary junction box (AJB). The heated wiper park relay coil is connected to a fused circuit from the underhood AJB. The heated wiper park relay is controlled by a switched ground from the DATC module controlled heated wiper park ON/OFF switch. The heated wiper park grid is automatically activated by the DATC module when ambient air temperature drops below 38° F (3° C), and can be manually activated by pushing the heated wiper park ON/OFF switch. The system can be manually switched OFF, and will shut off automatically when ambient air temperature rises above 38° F (3° C) or if the vehicle voltage is low.

Inspection and Verification

NOTE: The DATC module, DDM, FEM, and REM must be reconfigured upon replacement. For more information refer to [Section 418-01](#).

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Window regulator ● Window run weatherstrip ● Door window glass 	<ul style="list-style-type: none"> ● Battery junction box (BJB) fuse(s): 409 (5A), 419 (30A), 420 (20A), 422 (30A), 425 (40A), 426 (30A), 427 (30A), 429 (30A), and 430 (20A) ● Central junction box (CJB) fuse 207 (5A) ● Underhood auxiliary junction box (AJB) fuse 113 (30A) ● Master window regulator control switch ● Remote window regulator control switch ● Window regulator electric drive ● DATC module ● DDM ● FEM ● REM ● Rear window defrost grid ● Heated wiper park grid ● Circuitry

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the diagnostic tool does not power up, refer to the diagnostic tool manual.
5. Carry out the DATA LINK DIAGNOSTICS test. If the diagnostic tool responds with:
 - CKT 914, CKT 915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for FEM, go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for REM, go to Pinpoint Test B.
 - NO RESP/NOT EQUIP for DDM, go to Pinpoint Test C.
 - NO RESP/NOT EQUIP for DATC module, refer to [Section 412-00](#).
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), clear the continuous DTCs and carry out self-test diagnostics for the FEM, REM, DDM, and DATC module.
6. If DTCs related to the DATC module are retrieved, refer to [Section 412-00](#).
7. If the DTCs retrieved are related to the concern, go to the FEM Diagnostic Trouble Code (DTC) Index, REM Diagnostic Trouble Code (DTC) Index, or DDM Diagnostic Trouble Code (DTC) Index.
8. If no DTCs related to the concern are retrieved, proceed to the Symptom Chart to continue the diagnostics.

FEM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1319	Driver Door Ajar Circuit Failure	FEM	REFER to Section 417-02 .
B1327	Passenger Door Ajar Circuit Failure	FEM	REFER to Section 417-02 .
B1342	ECU Is Defective	FEM	CLEAR the DTC. REPEAT the FEM self-test. If DTC B1342 is retrieved, INSTALL a new FEM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
B1438	Wiper Mode Select Switch Circuit Failure	FEM	REFER to Section 501-16 .
B1446	Wiper Park Sense Circuit Failure	FEM	REFER to Section 501-16 .
B1479	Wiper Washer Fluid Level Sensor Circuit Failure	FEM	REFER to Section 413-01 .
B1499	Lamp Turn Signal Left Circuit Failure	FEM	REFER to Section 417-01 .
B1501	Lamp Turn Signal Left Circuit Short to Battery	FEM	REFER to Section 417-01 .
B1503	Lamp Turn Signal Right Circuit Failure	FEM	REFER to Section 417-01 .
B1505	Lamp Turn Signal Right Circuit Short to Battery	FEM	REFER to Section 417-01 .
B1519	Hood Switch Circuit Failure	FEM	REFER to Section 419-01A .
B1567	Lamp Headlamp High-Beam	FEM	REFER to Section 417-01 .

	Circuit Failure		
B1676	Battery Pack Voltage Out of Range	FEM	REFER to Section 414-00 .
B1794	Lamp Headlamp Low-Beam Circuit Failure	FEM	REFER to Section 417-01 .
B2214	Window Passenger Front Up Switch Short to Battery	FEM	GO to Pinpoint Test G .

Pinpoint Tests

PINPOINT TEST A: NO COMMUNICATION WITH THE FRONT ELECTRONIC MODULE (FEM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK CIRCUITS 29-DK20 (OG/GN) AND 29S-DK22 (OG/YE) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p>  <p>2</p>  <p>FEM C201c</p> <p>3</p>  <p>FEM C201f</p> <p>4</p>  <p>5</p>  <p>A0006297</p>	<p>5</p> <p>Measure the voltage between FEM C201c pin 6, circuit 29-DK20 (OG/GN), harness side and ground; and between FEM C201f pin 1, circuit 29S-DK22 (OG/YE) harness side and ground.</p>

- Are the voltages greater than 10 volts?

→ **Yes**
GO to [A2](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

A2 CHECK CIRCUITS 31-DK20 (BK/RD), 31-DK20A (BK/RD), 31-DK20B (BK/RD), 31-DK20C (BK/RD) AND 31-DK20D (BK/RD) FOR OPENS

1

2

FEM C201a

3

3 Using the following table, measure the resistance between FEM connectors, harness side and ground:

FEM	Pin	Circuit
C201c	12	31-DK20 (BK/RD)
C201a	11	31-DK20A (BK/RD)
C201a	13	31-DK20B (BK/RD)
C201a	14	31-DK20C (BK/RD)
C201a	15	31-DK20D (BK/RD)

- Is the resistance less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST B: NO COMMUNICATION WITH THE REAR ELECTRONIC MODULE (REM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK CIRCUIT 29-DK31 (OG/BK) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
1	

2

REM C420d

3

REM C420c

4

5

A0006299

5 Measure the voltage between REM C420d pin 3, circuit 29-DK31 (OG/BK), harness side and ground.

• Is the voltage greater than 10 volts?

→ Yes
GO to [B2](#).

→ No
REPAIR the circuit. TEST the system for normal operation.

B2 CHECK CIRCUITS 29S-DK31 (OG/BK), 31-DK30D (BK), 31-DK30E (BK), 31-DK30F (BK), 31-DK30G (BK) AND 31-DK30H (BK/OG), FOR OPENS

1

2

REM C420b

3

3 Using the following table, measure the resistance between REM connectors,

A0006300

harness side and ground:

REM	Pin	Circuit
C420c	13	29S-DK31 (OG/BK)
C420c	12	31-DK30E (BK)
C420c	11	31-DK30D (BK)
C420c	26	31-DK30G (BK)
C420c	25	31-DK30F (BK)
C420b	12	31-DK30H (BK)

- Is the resistance less than 5 ohms?

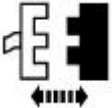

→ **Yes**

REFER to [Section 418-00](#).

→ **No**

REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST C: NO COMMUNICATION WITH THE DRIVER DOOR MODULE (DDM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK CIRCUITS 29-AJ80 (OG/BU) AND 29S-AJ86 (OG/BU) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p>  <p>2</p>  <p>DDM C501a</p> <p>3</p>  <p>4</p>	<p>4</p> <p>Measure the voltage between DDM C501a pin 11, circuit 29-AJ80 (OG/BU), harness side and ground; and between DDM C501a pin 12, circuit 29S-AJ86 (OG/BU), harness side and ground.</p>

A0006301

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [C2](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

C2 CHECK CIRCUITS 31-AJ80B (BK/OG) AND 91-AJ80 (BN/BU) FOR OPENS

1

2

A0006302

- 2 Measure the resistance between DDM C501a pin 7, circuit 91-AJ80 (BN/BU), harness side and ground; and between DDM C501a pin 8, circuit 31-AJ80B (BK/OG), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST D: ALL POWER WINDOWS ARE INOPERATIVE — FROM THE MASTER WINDOW REGULATOR CONTROL SWITCH ONLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 CHECK VOLTAGE TO THE MASTER WINDOW REGULATOR CONTROL SWITCH	

1

2

Master Window Regulator Control Switch C504

3

4

A0003133

4

Measure the voltage between master window regulator control switch C504 pin 9, circuit 7-AJ7 (YE/RD), harness side and ground.

● Is the voltage greater than 6 volts?

→ **Yes**
GO to [D2](#).

→ **No**
GO to [D3](#).

D2 CHECK THE MASTER WINDOW REGULATOR CONTROL SWITCH

1

Check the master window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.

● Did the master window regulator control switch pass the component test?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

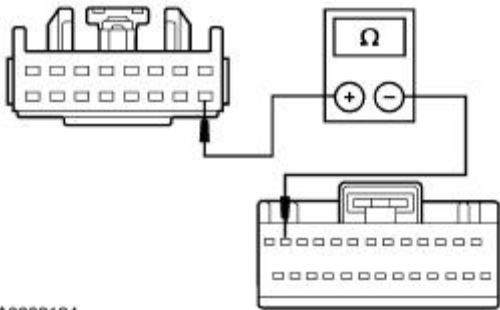

→ **No**
INSTALL a new master window regulator control switch. REFER to [Switch—Master Window Regulator Control](#) in this section. CLEAR the DTCs. REPEAT the self-test.

D3 CHECK CIRCUIT 7-AJ7 (YE/RD) FOR AN OPEN

1 

2 

DDM C501d

3 

A0003134

3 Measure the resistance between the master window regulator control switch C504 pin 9, circuit 7-AJ7 (YE/RD), harness side and DDM C501d pin 12, circuit 7-AD1 (YE), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#) . CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST E: ALL PASSENGER POWER WINDOWS ARE INOPERATIVE — FROM THE REMOTE WINDOW REGULATOR CONTROL SWITCHES

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: The REM supplies power to the three remote window regulator control switches through a single output circuit and splice. To protect the REM from potential failure, the REM will remove power when a short to ground is sensed in any remote window regulator control switch, associated circuitry or the power output circuit of the REM. Power will be restored to the power output circuit upon a cycling of the ignition switch. If the REM output circuit is shorted to ground, the REM will immediately remove power from the circuit. If any remote window regulator control switch or its associated circuits are shorted to ground, the REM will continue to supply power to the output circuit until the switch or circuit containing the failure is activated.</p>	
<p>E1 CHECK FOR FEM DTCS</p>	
	<p>1 Retrieve the recorded results from the FEM self-test.</p> <ul style="list-style-type: none"> • Were any FEM DTCs retrieved that are related to the concern?

- **Yes**
REFER to the FEM Diagnostic Trouble Code (DTC) Index.
- **No**
GO to [E2](#).

E2 CHECK FOR REM DTCS

- 1 Retrieve the recorded results from the REM self-test.
 - **Were any REM DTCS retrieved that are related to the concern?**
- **Yes**
REFER to the REM Diagnostic Trouble Code (DTC) Index.
 - **No**
GO to [E3](#).

E3 CHECK CIRCUIT 7-AJ14A (YE/BU) FOR POWER

NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.

1

2

LR Window Regulator Control Switch C701

3

4

A0003135

- 4 Measure the voltage between LR window regulator control switch C701 pin 3, circuit 7-AJ14A (YE/BU), harness side and ground.

- **Is the voltage reading greater than 10 volts?**

- **Yes**
GO to [E7](#).

→ **No**
GO to [E4](#).

E4 CHECK CIRCUIT 7-AJ1 (YE) FOR AN OPEN

1

2

REM C420b

3

3 Measure the resistance between LR window regulator control switch C701 pin 3, circuit 7-AJ14A (YE/BU), harness side and REM C420b pin 5, circuit 7-AJ1 (YE), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [E5](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

E5 CHECK CIRCUIT 7-AJ1 (YE) FOR A SHORT TO GROUND

1

2

3

2 Disconnect the remote passenger window regulator control switches:

- passenger front C604
- RR passenger C801
- LR passenger C701

3 Measure the resistance between REM C420b pin 5, circuit 7-AJ1 (YE), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [E6](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

E6 CHECK FOR A SHORTED REMOTE WINDOW REGULATOR CONTROL SWITCH

1

2 Check the RR, LR and passenger front window regulator control switches; Refer to Wiring Diagrams Section 700-09, Component Testing.

- Did the remote window regulator control switches pass the component test?

→ **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
INSTALL a new passenger window regulator control switch. CLEAR the DTCs. REPEAT the self-test.

E7 CHECK THE PASSENGER FRONT WINDOW OPERATION

1 Operate the passenger front window UP and DOWN using the passenger front window regulator control switch.

- Does the passenger front window operate correctly?

→ **Yes**
GO to [E10](#).

→ **No**
GO to [E8](#).

E8 CHECK THE PASSENGER FRONT WINDOW REGULATOR CONTROL SWITCH

1

2

Passenger Front Window Regulator Control Switch C604

3 Check the passenger front window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.

- **Did the passenger front window regulator control switch pass the component test?**

→ **Yes**
GO to [E9](#).

→ **No**
INSTALL a new passenger window regulator control switch. CLEAR the DTCs. REPEAT the self-test.

E9 CHECK CIRCUITS 8-AJ18 (WH/VT) AND 10-AJ18 (GY/WH) FOR A SHORT TO GROUND

1

2

FEM C201e

3

A0003137

3 Measure the resistance between passenger front window regulator control switch C604 pin 1, circuit 8-AJ18 (WH/VT), harness side and ground; and between passenger front window regulator control switch C604 pin 2, circuit 10-AJ18 (GY/WH), harness side and ground

- **Are the resistances greater than**

10,000 ohms?

- **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.
- **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

E10 CHECK THE LEFT REAR AND RIGHT REAR WINDOW OPERATION

1

2

LR Window Regulator Control Switch C701

3

- 4 Operate the rear windows UP and DOWN using the LR and RR window regulator control switches.

- Do the rear windows operate correctly?

- **Yes**
The system is operating correctly. VERIFY the concern and REFER to the Symptom Chart.

- **No**
GO to [E11](#).

E11 CHECK THE LR AND RR WINDOW REGULATOR CONTROL SWITCH

1

2

LR C701 and RR C801 Window Regulator Control Switches

- 3 Check the LR and RR window regulator control switches; Refer to Wiring Diagrams Section 700-09, Component

Testing.

- **Did the window regulator control switches pass the component test?**

→ **Yes**
GO to [E12](#).

→ **No**
INSTALL a new rear window regulator control switch. CLEAR the DTCs.
REPEAT the self-test.

E12 CHECK CIRCUIT 8-AJ24 (WH), 10-AJ24 (GY), 8-AJ14A (WH/BU) and 10-AJ14A (GY/VT) FOR A SHORT TO GROUND

1

2

REM C420c and C420d

3

A0003137

4

A0003137

3 Measure the resistance between RR window regulator control switch C801 pin 1, circuit 8-AJ24 (WH), harness side and ground; and between RR window regulator control switch C801 pin 2, circuit 10-AJ24A (GY), harness side and ground.

4 Measure the resistance between LR window regulator control switch C701 pin 1, circuit 8-AJ14A (WH/BU), harness side and ground; and between LR window regulator control switch C701 pin 2, circuit 10-AJ14A (GY/VT), harness side and ground.

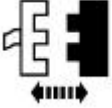

- **Are the resistances greater than 10,000 ohms?**

→ **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs.

REPEAT the self-test.

→ **No**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST F: A SINGLE POWER WINDOW IS INOPERATIVE — DRIVER WINDOW FROM THE MASTER WINDOW REGULATOR CONTROL SWITCH

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK THE DDM DTCS	
NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.	
	<p data-bbox="818 698 1310 763">1 Retrieve the recorded results from the DDM self-test.</p> <p data-bbox="853 806 1334 871">● Were any DDM DTCs retrieved that are related to the concern?</p> <p data-bbox="818 914 1310 1000">→ Yes IF DTC B1405 or B1408 was retrieved, GO to F2.</p> <p data-bbox="853 1043 1294 1129">Any other DDM DTCs, REFER to the DDM Diagnostic Trouble Code (DTC) Index.</p> <p data-bbox="818 1172 975 1215">→ No GO to F4.</p>
F2 CHECK THE MASTER WINDOW REGULATOR CONTROL SWITCH	
<p data-bbox="201 1291 233 1323">1</p>  <p data-bbox="201 1453 233 1485">2</p>  <p data-bbox="268 1604 719 1625">Master Window Regulator Control Switch C504</p>	<p data-bbox="818 1647 1334 1733">3 Check the master window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.</p> <p data-bbox="853 1776 1334 1862">● Did the master window regulator control switch pass the component test?</p> <p data-bbox="818 1905 975 1970">→ Yes GO to F3.</p>

→ **No**
INSTALL a new master window regulator control switch. REFER to [Switch—Master Window Regulator Control](#) in this section. CLEAR the DTCs. REPEAT the self-test.

F3 CHECK CIRCUIT 7S-AJ40 (YE/RD) AND CIRCUIT 7S-AJ41 (YE/BU) FOR A SHORT TO BATTERY

1

2

DDM C501d

3

4

4 Measure the voltage between master window regulator control switch C504 pin 6, circuit 7S-AJ40 (YE/RD), harness side and ground; and between master window regulator control switch C504 pin 7, circuit 7S-AJ41 (YE/BU), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. GO to [E6](#).

→ **No**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

F4 CHECK THE DDM OUTPUT

1

2

3

4

4 Select DDM active command FRONT WINDOW CONTROL.

5 Trigger DR UP to ON then OFF. Then trigger DR DOWN to ON then OFF.

• **Did the driver front window raise and lower?**

→ **Yes**
GO to [F5](#).

→ **No**
GO to [F9](#).

F5 CHECK THE DDM PIDS D_UP_SW AND D_DN_SW

1

1 Monitor the DDM PIDs D_UP_SW and D_DN_SW while operating the master window regulator control switch to the UP and DOWN positions.

• **Do the DDM PIDs agree with the master window regulator control switch positions?**

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [F6](#).

F6 CHECK THE WINDOW REGULATOR CONTROL SWITCH

1

2

Master Window Regulator Control Switch C504

3 Check the master window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.

• **Did the master window regulator**

control switch pass the component test?

→ **Yes**
GO to [F7](#).

→ **No**
INSTALL a new master window regulator control switch. REFER to [Switch—Master Window Regulator Control](#) in this section. CLEAR the DTCs. REPEAT the self-test.

F7 CHECK CIRCUITS 7S-AJ40 (YE/RD) AND 7S-AJ41 (YE/BU) FOR AN OPEN

1

DDM C501d

2

2

Measure the resistance between master window regulator control switch C504 pin 6, circuit 7S-AJ40 (YE/RD), harness side and DDM C501d pin 20 circuit 7S-AJ40 (YE/RD), harness side; and between master window regulator control switch C504 pin 7, circuit 7S-AJ41 (YE/BU), harness side and DDM C501d pin 19 circuit 7S-AJ41 (YE/BU), harness side.

● **Are the resistances less than 5 ohms?**

→ **Yes**
GO to [F8](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

F8 CHECK CIRCUITS 7S-AJ40 (YE/RD) AND 7S-AJ41 (YE/BU) FOR A SHORT TO GROUND

1

1

Measure the resistance between master window regulator control switch C504 pin 6, circuit 7S-AJ40 (YE/RD), harness side and ground; and between master window regulator control switch C504 pin 7, circuit 7S-AJ41 (YE/BU), harness side and ground.

● **Are the resistances greater than 10,000 ohms?**

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

F9 CHECK POWER TO BJB FUSE 420 (20A)

1

2

BJB Fuse 420 (20A)

3

4

4 Measure the voltage between BJB fuse 420 (20A), input terminal and ground.

A0003141

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [F10](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.

REPEAT the self-test.

F10 CHECK FOR VOLTAGE FROM THE DDM

1

2

Driver Front Window Regulator Electric Drive C524

3

4

5

A0003143

6

A0003144

4 Select DDM active command FRONT WINDOW CONTROL.

5 Measure the voltage between driver front window regulator electric drive C524, circuit 32-AJ26 (WH), harness side and ground while triggering DR DOWN to ON. Note reading.

6 Measure the voltage between driver front window regulator electric drive C524, circuit 33-AJ26 (YE), harness side and ground while triggering DR UP to ON.

• Are the voltages greater than 10 volts when commanded ON?

→ Yes
GO to [F11](#).

→ No
GO to [F12](#).

F11 CHECK CIRCUIT 31-AJ80 (BK) FOR AN OPEN

1

2

DDM C501b

3

3

Measure the resistance between DDM C501b pin 3, circuit 31-AJ80 (BK), harness side and ground.

● **Is the resistance less than 5 ohms?**

→ **Yes**

INSTALL a new driver front window regulator electric drive. REFER to [Motor and Window Regulator—Front Door](#) in this section. CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

F12 CHECK WINDOW POWER TO THE DDM

1

2

DDM C501b

3

4

4

Measure the voltage between DDM C501b pin 4, circuit 30-AJ80 (RD), harness side and ground.

A0003146

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [F13](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

F13 CHECK CIRCUIT 32-AJ26 (WH) AND CIRCUIT 33-AJ26 (YE) FOR AN OPEN

1

2

A0003147

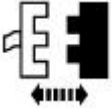

- 2 Measure the resistance between driver front window regulator electric drive C524, circuit 32-AJ26 (WH), harness side and DDM C501b pin 1, circuit 32-AJ26 (WH), harness side; and between driver front window regulator electric drive C524, circuit 33-AJ26 (YE), harness side and DDM C501b pin 2, circuit 33-AJ26 (YE), harness side.

- Are the resistances less than 5 ohms?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

PINPOINT TEST G: A SINGLE POWER WINDOW IS INOPERATIVE — PASSENGER FRONT FROM MASTER AND PASSENGER FRONT WINDOW REGULATOR CONTROL SWITCHES

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 CHECK THE DDM DTCS	
	<p data-bbox="815 243 1310 308">1 Retrieve the recorded results from the DDM self-test.</p> <ul data-bbox="855 357 1289 383" style="list-style-type: none"> • Were any DDM DTCs retrieved? <p data-bbox="815 433 1310 519">→ Yes REFER to the DDM Diagnostic Trouble Code (DTC) Index.</p> <p data-bbox="815 562 975 616">→ No GO to G2.</p>
G2 CHECK THE FEM DTCS	
	<p data-bbox="815 681 1310 745">1 Retrieve the recorded results from the FEM self-test.</p> <ul data-bbox="855 795 1326 849" style="list-style-type: none"> • Were any FEM DTCs retrieved that are related to the concern? <p data-bbox="815 896 1342 1015">→ Yes If DTC B2214 or B2215 were retrieved, GO to G3. All others, REFER to the FEM Diagnostic Trouble Code (DTC) Index.</p> <p data-bbox="815 1058 975 1112">→ No GO to G5.</p>
G3 CHECK THE PASSENGER FRONT WINDOW REGULATOR CONTROL SWITCH	
<p data-bbox="204 1177 228 1209">1</p>  <p data-bbox="204 1338 228 1371">2</p>  <p data-bbox="220 1500 767 1522">Passenger Front Window Regulator Control Switch C604</p>	<p data-bbox="815 1543 1326 1662">3 Check the passenger front window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.</p> <ul data-bbox="855 1711 1310 1787" style="list-style-type: none"> • Did the passenger front window regulator control switch pass the component test? <p data-bbox="815 1841 975 1895">→ Yes GO to G4.</p> <p data-bbox="815 1938 1326 2035">→ No INSTALL a new passenger front window regulator control switch. CLEAR the</p>

DTCs. REPEAT the self-test.

G4 CHECK CIRCUIT 8-AJ18 (WH/VT) AND CIRCUIT 10-AJ18 (GY/WH) FOR A SHORT TO BATTERY

1

FEM C201e

2

2

Measure the voltage between FEM C201e pin 25, circuit 8-AJ18 (WH/VT), harness side and ground; and between FEM C201e pin 10, circuit 10-AJ18 (GY/WH), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**

REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test. GO to [G6](#).

→ **No**

INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

G5 CHECK THE FEM OUTPUT

NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.

1

2

3

4

4

Select FEM active command FRONT WINDOW CONTROL.

5

Trigger PR UP to ON then OFF. Then

trigger PR DOWN to ON then OFF.

- Did the passenger front window raise and lower?

→ **Yes**

INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

GO to [G6](#).

G6 CHECK POWER TO BJB FUSE 426 (20A)

1

2

BJB Fuse 426 (30A)

3

4

4

Measure the voltage between BJB fuse 426 (30A), input terminal and ground.

A0003149

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [G7](#).

→ **No**
REPAIR the BJB input circuit. CLEAR the DTCs. REPEAT the self-test.

G7 CHECK THE FEM OUTPUTS

1

2

Passenger Front Window Regulator Electric Drive C608

3

BJB Fuse 426 (30A)

4

5

6

A0003143

7

5 Select FEM active command FRONT WINDOW CONTROL.

6 Measure the voltage between passenger front window regulator electric drive C608, circuit 32-AJ27 (WH/VT), harness side and ground while triggering PR DOWN to ON. Note reading.

7 Measure the voltage between passenger front window regulator electric drive C608, circuit 33-AJ27 (YE/VT), harness side and ground while triggering PR UP to ON.

A0003144

- Are the voltages greater than 10 volts when commanded ON?

→ **Yes**
GO to [G8](#).

→ **No**
GO to [G9](#).

G8 CHECK CIRCUIT 31-AJ71 (BK/YE) FOR AN OPEN

1

2

FEM C201d

3

A0003157

- 3 Measure the resistance between FEM C201d pin 4, circuit 31-AJ71 (BK/YE), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new passenger front window regulator electric drive. REFER to [Motor and Window Regulator—Front Door](#).
CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

G9 CHECK POWER TO THE FEM

1

2

FEM C201d

3

4

4 Measure the voltage between FEM C201d pin 3, circuit 30-AJ71 (RD/YE), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [G10](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

G10 CHECK CIRCUIT 32-AJ27 (WH/VT) AND CIRCUIT 33-AJ27 (YE/VT) FOR AN OPEN

1

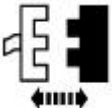

2

2 Measure the resistance between passenger front window electric drive C608, circuit 32-AJ27 (WH/VT), harness side and FEM C201d pin 2, circuit 32-AJ27 (WH/VT), harness side; and between passenger front window electric drive C608, circuit 33-AJ27 (YE/VT), harness side and FEM C201d pin 1, circuit 33-AJ27 (YE/VT), harness side.

	<ul style="list-style-type: none"> ● Are the resistances less than 5 ohms? <p>→ Yes INSTALL a new FEM. REFER to Section 419-10. CLEAR the DTCs. REPEAT the self-test.</p> <p>→ No REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.</p>
--	--

PINPOINT TEST H: A SINGLE POWER WINDOW IS INOPERATIVE — PASSENGER FRONT FROM THE MASTER WINDOW REGULATOR CONTROL SWITCH ONLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 CHECK THE DDM DTCS	
	<p>1 Retrieve the recorded results from the DDM self-test.</p> <ul style="list-style-type: none"> ● Were any DDM DTCs retrieved? <p>→ Yes If DTC B1420 was retrieved, GO to H2. For all other DDM DTCs, REFER to the FEM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to H4.</p>
H2 CHECK THE MASTER WINDOW REGULATOR CONTROL SWITCH	
<p>1</p>  <p>2</p>  <p>Master Window Regulator Control Switch C504</p>	<p>3 Check the master window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.</p> <ul style="list-style-type: none"> ● Did the master window regulator control switch pass the component test?

→ **Yes**
GO to [H3](#).

→ **No**
INSTALL a new master window regulator control switch; REFER to [Switch—Master Window Regulator Control](#) . CLEAR the DTCs. REPEAT the self-test.

H3 CHECK CIRCUIT 7S-AJ48 (YE/VT) AND CIRCUIT 7S-AJ47 (YE/BK) FOR A SHORT TO BATTERY

1

DDM C501d

2

3

3 Measure the voltage between master window regulator control switch C504 pin 3, circuit 7S-AJ48 (YE/VT), harness side and ground; and between master window regulator control switch C504 pin 2, circuit 7S-AJ47 (YE/BK), harness side and ground.

● **Is the voltage greater than 10 volts?**

→ **Yes**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

→ **No**
INSTALL a new DDM. REFER to [Section 419-10](#) . CLEAR the DTCs. REPEAT the self-test.

H4 CHECK THE DDM PIDS P_UP_SW AND P_DN_SW

1

2

3

4

4

Monitor the DDM PIDS P_UP_SW and P_DN_SW while operating the passenger front window from the master window regulator control switch in the UP and DOWN positions.

- **Did the DDM PIDS P_UP_SW and P_DN_SW agree with the master window regulator control switch positions?**

→ **Yes**

INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

GO to [H5](#).

H5 CHECK THE WINDOW REGULATOR CONTROL SWITCH

1

2

Master Window Regulator Control Switch C504

3

Check the master window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.

- **Did the master window regulator control switch pass the component test?**

→ **Yes**

GO to [H6](#).

→ **No**

INSTALL a new master window regulator control switch. REFER to [Switch—Master Window Regulator Control](#) in this section. CLEAR the DTCs. REPEAT the self-test.

H6 CHECK CIRCUITS 7S-AJ48 (YE/VT) AND 7S-AJ41 (YE/BK) FOR AN OPEN

1

DDM C501d

2

A0003152

2

Measure the resistance between master window regulator control switch C504 pin 3, circuit 7S-AJ48 (YE/VT), harness side and DDM C501d pin 3 circuit 7S-AJ48 (YE/VT), harness side; and between master window regulator control switch C504 pin 2, circuit 7S-AJ47 (YE/BK), harness side and DDM C501d pin 2 circuit 7S-AJ41 (YE/BK), harness side.

- Are the resistances less than 5 ohms?

→ Yes
GO to [H7](#).

→ No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

H7 CHECK CIRCUITS 7S-AJ48 (YE/VT) AND 7S-AJ47 (YE/BK) FOR A SHORT TO GROUND

1

A0003153

1

Measure the resistance between master window regulator control switch C504 pin 3, circuit 7S-AJ48 (YE/VT), harness side and ground; and between master window regulator control switch C504 pin 2, circuit 7S-AJ47 (YE/BK), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ Yes
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST I: A SINGLE POWER WINDOW IS INOPERATIVE — PASSENGER FRONT FROM THE PASSENGER FRONT WINDOW REGULATOR CONTROL SWITCH ONLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
------------	-------------------------

I1 CHECK THE FEM DTCS

1 Retrieve the recorded results from the FEM self-test.

- **Were any FEM DTCS retrieved that are related to the concern?**

→ **Yes**
REFER to the FEM Diagnostic Trouble Code (DTC) Index.

→ **No**
GO to [I2](#).

I2 CHECK THE FEM PIDS P_UP_SW AND P_DN_SW

NOTE: Cycle the ignition switch to enable the switched system power feature.

1

2

3

4

4 Monitor the FEM PIDS P_UP_SW and P_DN_SW while operating the passenger front window regulator control switch in the UP and DOWN positions.

- **Did the FEM PIDS P_UP_SW and P_DN_SW PIDs agree with the passenger front window regulator control switch positions?**

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [I3](#).

I3 CHECK THE PASSENGER FRONT WINDOW REGULATOR CONTROL SWITCH

1

2

Passenger Front Window Regulator Control Switch C604

3 Check the passenger front window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.

- **Did the passenger front window regulator control switch pass the component test?**

→ **Yes**
GO to [14](#).

→ **No**
INSTALL a new passenger front window regulator control switch. CLEAR the DTCs. REPEAT the self-test.

14 CHECK THE POWER TO THE PASSENGER FRONT WINDOW REGULATOR CONTROL SWITCH

1

Passenger Front Window Switch C604

2

3

3 Measure the voltage between passenger front window regulator control switch C604 pin 3, circuit 7-AJ18 (YE/VT), harness side and ground.

- **Is the voltage greater than 10 volts?**

→ **Yes**
GO to [15](#).

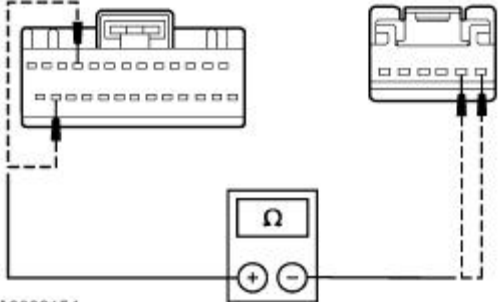

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

15 CHECK CIRCUITS 8-AJ18 (WH/VT) AND 8-AJ18 (GY/WH) FOR AN OPEN

1 

2 

FEM C201e

3 

3 Measure the resistance between passenger front window regulator control switch C604 pin 1, circuit 8-AJ18 (WH/VT), harness side and FEM C201e pin 25 circuit 8-AJ18 (WH/VT), harness side; and between passenger front window regulator control switch C604 pin 2, circuit 8-AJ18 (GY/WH), harness side and FEM C201e pin 10 circuit 10-AJ18 (GY/WH), harness side.

- **Are the resistances less than 5 ohms?**

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST J: A SINGLE POWER WINDOW IS INOPERATIVE — RIGHT REAR FROM MASTER AND REMOTE WINDOW REGULATOR CONTROL SWITCHES

CONDITIONS	DETAILS/RESULTS/ACTIONS
J1 CHECK THE DDM DTCS	<p>1 Retrieve the recorded results from the DDM self-test.</p> <ul style="list-style-type: none"> ● Were any DDM DTCs retrieved? <p>→ Yes REFER to the DDM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to J2.</p>

J2 CHECK THE REM DTCS

1 Retrieve the recorded results from the REM self-test.

- **Were any REM DTCS retrieved that are related to the concern?**

→ **Yes**

If DTC B2190 or B2194 were retrieved, GO to [J3](#).

For all other REM DTCS; REFER to the REM Diagnostic Trouble Code (DTC) Index.

→ **No**

GO to [J5](#).

J3 CHECK THE RR WINDOW REGULATOR CONTROL SWITCH

1

2

RR Window Regulator Control Switch C801

3 Check the RR window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.

- **Did the RR window regulator control switch pass the component test?**

→ **Yes**

GO to [J4](#).

→ **No**

INSTALL a new RR window regulator control switch. CLEAR the DTCS. REPEAT the self-test.

J4 CHECK CIRCUIT 10-AJ24 (GY/WH) AND CIRCUIT 8-AJ24 (WH) FOR A SHORT TO BATTERY

1

2

REM C420d

3

4

4

Measure the voltage between REM C420d pin 7, circuit 8-AJ24 (WH), harness side and ground; and between REM C420d pin 20, circuit 10-AJ24 (GY/WH), harness side and ground.

● Is the voltage greater than 10 volts?

→ Yes

REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

→ No

INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

J5 CHECK THE REM OUTPUT

NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.

1

2

3

4

4

Select REM active command REAR WINDOW CONTROL.

5

Trigger RR UP to ON then OFF. Then trigger RR DOWN to ON then OFF.

● Did the right rear window raise and lower?

→ **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [J6](#).

J6 CHECK POWER TO BJB FUSE 430 (20A)

1

2

BJB Fuse 430 (20A)

3

4

A0008637

4 Measure the voltage between BJB fuse 430 (20A), input terminal and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [J7](#).

→ **No**
REPAIR the BJB input circuit. CLEAR the DTCs. REPEAT the self-test.

J7 CHECK THE REM OUTPUTS

1

2

RR Window Regulator Electric Drive C803

3

BJB Fuse 430 (20A)

4

5

6

A0003144

7

A0003143

5 Select REM active command REAR WINDOW CONTROL.

6 Measure the voltage between RR window regulator electric drive C803, circuit 35-AJ23 (VT/WH), harness side and ground while triggering the REM active command RR DOWN to ON.

7 Measure the voltage between RR window regulator electric drive C803, circuit 34-AJ23 (BU/OG), harness side and ground while triggering the REM active command RR UP to ON.

- Are the voltages greater than 10 volts when the REM active commands are triggered to ON?

→ **Yes**
GO to [J8](#).

→ **No**
GO to [J9](#).

J8 CHECK CIRCUIT 31-DK30B (RD) FOR AN OPEN

1

2

REM C420g

3

3 Measure the resistance between REM C420g pin 1, circuit 31-DK30B (RD), harness side and ground.

● **Is the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new RR window regulator electric drive. REFER to [Motor and Window Regulator—Rear Door](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

J9 CHECK WINDOW POWER TO THE REM

1

2

REM C420g

3

4

4

Measure the voltage between REM C420g pin 2, circuit 30-DK30 (RD), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [J10](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

J10 CHECK CIRCUIT 35-AJ23 (VT/WH) AND CIRCUIT 34-AJ23 (BU/OG) FOR AN OPEN

1

2

2

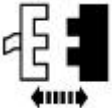

Measure the resistance between RR window regulator electric drive C803, circuit 34-AJ23 (BU/OG), harness side and REM C420g pin 3, circuit 34-AJ23 (BU/OG), harness side; and between RR window regulator electric drive C803, circuit 35-AJ23 (VT/WH), harness side and REM C420g pin 4, circuit 35-AJ23 (VT/WH), harness side.

● Are the resistances less than 5 ohms?

→ **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

PINPOINT TEST K: A SINGLE POWER WINDOW IS INOPERATIVE — RIGHT REAR FROM THE MASTER WINDOW REGULATOR CONTROL SWITCH ONLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
K1 CHECK THE DDM DTCS	
	<p>1 Retrieve the recorded results from the DDM self-test.</p> <ul style="list-style-type: none"> • Were any DDM DTCs retrieved? <p>→ Yes If DTC B1424 was retrieved, GO to K2. For all other DDM DTCs; REFER to the DDM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to K4.</p>
K2 CHECK THE MASTER WINDOW REGULATOR CONTROL SWITCH	
<p>1</p>  <p>2</p>  <p>Master Window Regulator Control Switch C504</p>	<p>3 Check the master window regulator control switch. Refer to Wiring Diagrams Section 700-09, Component Testing.</p> <ul style="list-style-type: none"> • Did the master window regulator control switch pass the component test? <p>→ Yes GO to K3.</p> <p>→ No INSTALL a new master window regulator control switch. REFER to Switch—Master Window Regulator Control in this section. CLEAR the DTCs. REPEAT the self-test.</p>
K3 CHECK CIRCUIT 7S-AJ52 (YE) AND CIRCUIT 7S-AJ51 (YE/RD) FOR A SHORT TO BATTERY	
<p>1</p> 	

DDM C501d

2

3

A0003159

3

Measure the voltage between master window regulator control switch C504 pin 10, circuit 7S-AJ52 (YE), harness side and ground; and between master window regulator control switch C504 pin 12, circuit 7S-AJ51 (YE/RD), harness side and ground.

● Is the voltage greater than 10 volts?

→ Yes

REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

→ No

INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

K4 CHECK THE DDM PIDS RRUP_SW AND RRDN_SW

1

2

3

3

Monitor the DDM PIDs RRUP_SW and RRDN_SW while operating the right rear window from the master window regulator control switch to the UP and DOWN positions.

● Did the DDM PIDs RRUP_SW and RRDN_SW agree with the master window regulator control switch positions?

→ Yes

INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No

GO to [K5](#).

K5 CHECK THE WINDOW REGULATOR CONTROL SWITCH

1

2

Master Window Regulator Control Switch C504

3 Check the master window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.

- **Did the master window regulator control switch pass the component test?**

→ **Yes**
GO to [K6](#).

→ **No**
INSTALL a new master window regulator control switch. REFER to [Switch—Master Window Regulator Control](#) in this section. CLEAR the DTCs. REPEAT the self-test.

K6 CHECK CIRCUITS 7S-AJ52 (YE) AND 7S-AJ51 (YE/RD) FOR AN OPEN

1

DDM C501c

2

2 Measure the resistance between master window regulator control switch C504 pin 10, circuit 7S-AJ52 (YE), harness side and DDM C501c pin 5 circuit 7S-AJ52 (YE), harness side; and between master window regulator control switch C504 pin 12, circuit 7S-AJ51 (YE/RD), harness side and DDM C501d pin 4 circuit 7S-AJ51 (YE/RD), harness side.

- **Are the resistances less than 5 ohms?**

→ **Yes**
GO to [K7](#).

→ **No**

REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

K7 CHECK CIRCUITS 7S-AJ52 (YE) AND 7S-AJ51 (YE/RD) FOR A SHORT TO GROUND

1

1

Measure the resistance between master window regulator control switch C504 pin 10, circuit 7S-AJ52 (YE), harness side and ground; and between master window regulator control switch C504 pin 12, circuit 7S-AJ51 (YE/RD), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**

INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST L: A SINGLE POWER WINDOW IS INOPERATIVE — RIGHT REAR FROM RR WINDOW REGULATOR CONTROL SWITCH ONLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
L1 CHECK THE FEM DTCS	
	<p>1 Retrieve the recorded results from the REM self-test.</p> <ul style="list-style-type: none"> • Were any REM DTCs retrieved that are related to the concern? <p>→ Yes REFER to the REM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to L2.</p>
L2 CHECK THE REM PIDS RRUP_SW AND RRDN_SW	
NOTE: Cycle the ignition switch to enable the switched system power feature.	
1	

2

3

4

4 Monitor the REM PIDS RRUP_SW and RRDN_SW while operating the RR window regulator control switch to the UP and DOWN positions.

- Did the REM PIDS RRUP_SW and RRDN_SW agree with the RR window regulator control switch positions?

→ Yes
INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No
GO to [L3](#).

L3 CHECK THE RR WINDOW REGULATOR CONTROL SWITCH

1

2

RR Window Regulator Control Switch C801

3 Check the RR window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.

- Did the RR window regulator control switch pass the component test?

→ Yes
GO to [L4](#).

→ No
INSTALL a new RR window regulator

control switch. CLEAR the DTCs.
REPEAT the self-test.

L4 CHECK THE POWER TO THE RR WINDOW REGULATOR CONTROL SWITCH

1

RR Window Regulator Control Switch C801

2

3

3 Measure the voltage between RR window regulator control switch C801 pin 3, circuit 7-AJ24 (YE), harness side and ground.

● Is the voltage greater than 10 volts?

→ Yes
GO to [L5](#).

→ No
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

L5 CHECK CIRCUITS 8-AJ24 (GYWH) AND 10-AJ24 (GY) FOR AN OPEN

1

2

REM C420d

3

3 Measure the resistance between RR window regulator control switch C801 pin 7, circuit 8-AJ24 (WH), harness side and REM C420d pin 7 circuit 8-AJ24 (WH), harness side; and between RR window regulator control switch C801 pin 2, circuit 10-AJ24 (GY/WH), harness side and REM C420d pin 20 circuit 10-AJ24 (GY/WH), harness side.

A0003162

- **Are the resistances less than 5 ohms?**

→ **Yes**
 INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
 REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST M: A SINGLE POWER WINDOW IS INOPERATIVE — LEFT REAR FROM ALL WINDOW REGULATOR CONTROL SWITCHES

CONDITIONS	DETAILS/RESULTS/ACTIONS
M1 CHECK THE DDM DTCS	<p>1 Retrieve the recorded results from the DDM self-test.</p> <ul style="list-style-type: none"> ● Were any DDM DTCs retrieved? <p>→ Yes REFER to the DDM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to M2.</p>
M2 CHECK THE REM DTCS	<p>1 Retrieve the recorded results from the REM self-test.</p> <ul style="list-style-type: none"> ● Were any REM DTCs retrieved that are related to the concern? <p>→ Yes If DTC B2174 or B2178 were retrieved, GO to M3.</p>

For all other REM DTCs, REFER to the REM Diagnostic Trouble Code (DTC) Index.

→ **No**
GO to [M5](#).

M3 CHECK THE LR WINDOW REGULATOR CONTROL SWITCH

1

2

LR Window Regulator Control Switch C701

3 Check the LR window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.

- **Did the LR window regulator control switch pass the component test?**

→ **Yes**
GO to [M4](#).

→ **No**
INSTALL a new LR window regulator control switch. CLEAR the DTCs. REPEAT the self-test.

M4 CHECK CIRCUIT 10-AJ14 (GY/VT) AND CIRCUIT 8-AJ14 (WH/BU) FOR A SHORT TO BATTERY

1

REM C420c

2

3

3 Measure the voltage between REM C420c pin 24, circuit 8-AJ14 (WH/BU), harness side and ground; and between REM C420c pin 22, circuit 10-AJ14 (GY/VT), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**

REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

→ **No**

INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

M5 CHECK THE REM OUTPUT

NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.

1

2

3

4

4

Trigger the REM active commands LR UP and LR DOWN to ON then OFF.

● Did the left rear window raise and lower?

→ **Yes**

INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

GO to [M6](#).

M6 CHECK POWER TO BJB FUSE 419 (20A)

1

2

BJB Fuse 419 (20A)

3

4

A0003164

4 Measure the voltage between BJB fuse 419 (20A), input terminal and ground.

● Is the voltage greater than 10 volts?

→ Yes
GO to [M7](#).

→ No
REPAIR the BJB input circuit. CLEAR the DTCs. REPEAT the self-test.

M7 CHECK THE REM OUTPUTS

1

2

LR Window Regulator Electric Drive C703

3

BJB Fuse 419 (20A)

4

5

6

6

Measure the voltage between LR window regulator electric drive C703, circuit 35-AJ13 (VT/BU), harness side and ground while triggering the REM active command LR DOWN to ON.

7

7

Measure the voltage between LR window regulator electric drive C703, circuit 34-AJ13 (BU/RD), harness side and ground while triggering the REM active command LR UP to ON.

- Are the voltages greater than 10 volts when the REM active commands LR DOWN and LR UP are triggered to ON?

→ Yes
GO to [M8](#).

→ No
GO to [M9](#).

1

2

REM C420f

3

3 Measure the resistance between REM C420f pin 3, circuit 31-DK30A (BK/OG), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new LR window regulator electric drive. REFER to [Motor and Window Regulator—Rear Door](#) in this section. CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

M9 CHECK WINDOW POWER TO THE REM

1

2

REM C420f

3

4

4 Measure the voltage between REM C420f pin 2, circuit 30-DK30A (RD), harness side and ground.

A0003146

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [M10](#).

→ **No**
REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

M10 CHECK CIRCUIT 35-AJ13 (VT/BU) AND CIRCUIT 34-AJ13 (BU/RD) FOR AN OPEN

1

2

A0003165

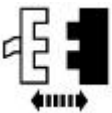

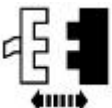

2 Measure the resistance between LR window regulator electric drive C703, circuit 34-AJ13 (BU/RD), harness side and REM C420f pin 1, circuit 34-AJ13 (BU/RD), harness side; and between LR window regulator electric drive C703, circuit 35-AJ13 (VT/BU), harness side and REM C420f pin 3, circuit 35-AJ13 (VT/BU), harness side.

- Are the resistances less than 5 ohms?

→ **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST N: A SINGLE POWER WINDOW IS INOPERATIVE — LEFT REAR FROM THE MASTER WINDOW REGULATOR CONTROL SWITCH ONLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
N1 CHECK THE DDM DTCS	
	<p>1 Retrieve the recorded results from the DDM self-test.</p> <ul style="list-style-type: none"> • Were any DDM DTCs retrieved? <p>→ Yes If DTC B1416 was retrieved, GO to N2.</p> <p>For all other DDM DTCs, REFER to the DDM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to N4.</p>
N2 CHECK THE MASTER WINDOW REGULATOR CONTROL SWITCH	
<p>1 </p> <p>2  Master Window Regulator Control Switch C504</p>	<p>3 Check the master window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.</p> <ul style="list-style-type: none"> • Did the master window regulator control switch pass the component test? <p>→ Yes GO to N3.</p> <p>→ No INSTALL a new master window regulator control switch. REFER to Switch—Master Window Regulator Control in this section. CLEAR the DTCs. REPEAT the self-test.</p>
N3 CHECK CIRCUIT 7S-AJ50 (YE/BU) AND CIRCUIT 7S-AJ49 (YE/GN) FOR A SHORT TO BATTERY	
<p>1  DDM C501d</p> <p>2</p>	

3

A0003166

3

Measure the voltage between master window regulator control switch C504 pin 15, circuit 7S-AJ50 (YE/BU), harness side and ground; and between master window regulator control switch C504 pin 13, circuit 7S-AJ49 (YE/GN), harness side and ground.

● **Is the voltage greater than 10 volts?**

→ **Yes**

REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

→ **No**

INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

N4 CHECK THE DDM PIDS LRUP_SW AND LRDN_SW

1

2

3

4

4

Monitor the DDM PIDS LRUP_SW and LRDN_SW while operating the left rear window to the UP and DOWN positions from the master window regulator control switch.

● **Did the DDM PIDS LRUP_SW and LRDN_SW agree with the master window regulator control switch positions?**

→ **Yes**

INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the

self-test.

→ **No**
GO to [N5](#).

N5 CHECK THE WINDOW REGULATOR CONTROL SWITCH

1

2

Master Window Regulator Control Switch C504

3 Check the master window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.

- **Did the master window regulator control switch pass the component test?**

→ **Yes**
GO to [N6](#).

→ **No**
INSTALL a new master window regulator control switch. REFER to [Switch—Master Window Regulator Control](#) in this section. CLEAR the DTCs. REPEAT the self-test.

N6 CHECK CIRCUITS 7S-AJ50 (YE/BU) AND 7S-AJ49 (YE/GN) FOR AN OPEN

1

DDM C501c

2

Master Window Regulator Control Switch C504

3

3 Measure the resistance between master window regulator control switch C504 pin 15, circuit 7S-AJ50 (YE/BU), harness side and DDM C501c pin 9 circuit 7S-AJ50 (YE/BU), harness side; and between master window regulator control switch C504 pin 13, circuit 7S-AJ49 (YE/GN), harness side and DDM C501c pin 8 circuit 7S-AJ49 (YE/GN), harness side.

- Are the resistances less than 5 ohms?

→ **Yes**
GO to [N7](#).

→ **No**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

N7 CHECK CIRCUITS 7S-AJ50 (YE/BU) AND 7S-AJ49 (YE/GN) FOR A SHORT TO GROUND

1

1

Measure the resistance between master window regulator control switch C504 pin 15, circuit 7S-AJ50 (YE/BU), harness side and ground; and between master window regulator control switch C504 pin 13, circuit 7S-AJ49 (YE/GN), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST O: A SINGLE POWER WINDOW IS INOPERATIVE — LEFT REAR FROM THE LR WINDOW REGULATOR CONTROL SWITCH ONLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
O1 CHECK THE REM DTCS	

1 Retrieve the recorded results from the REM self-test.

- Were any REM DTCs retrieved that are related to the concern?

→ **Yes**
REFER to the REM Diagnostic Trouble Code (DTC) Index.

→ **No**
GO to [O2](#).

O2 CHECK THE REM PIDS LRUP_SW AND LRDN_SW

NOTE: Cycle the ignition switch to enable the switched system power feature.

1

2

3

4

4 Monitor the REM PIDS LRUP_SW and LRDN_SW while operating the LR window regulator control switch to the UP and DOWN positions.

- Did the REM PIDS LRUP_SW and LRDN_SW agree with the LR window regulator control switch positions?

→ **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
GO to [O3](#).

O3 CHECK THE LR WINDOW REGULATOR CONTROL SWITCH

1

2

LR Window Regulator Control Switch C701

3 Check the LR window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.

- Did the LR window regulator control switch pass the component test?

→ Yes
GO to O4.

→ No
INSTALL a new LR window regulator control switch. CLEAR the DTCs. REPEAT the self-test.

O4 CHECK THE POWER TO THE LR WINDOW REGULATOR CONTROL SWITCH

1

2

2 Measure the voltage between LR window regulator control switch C701 pin 3, circuit 7-AJ14A (YE/BU), harness side and ground.

- Is the voltage greater than 10 volts?

→ Yes
GO to O5.

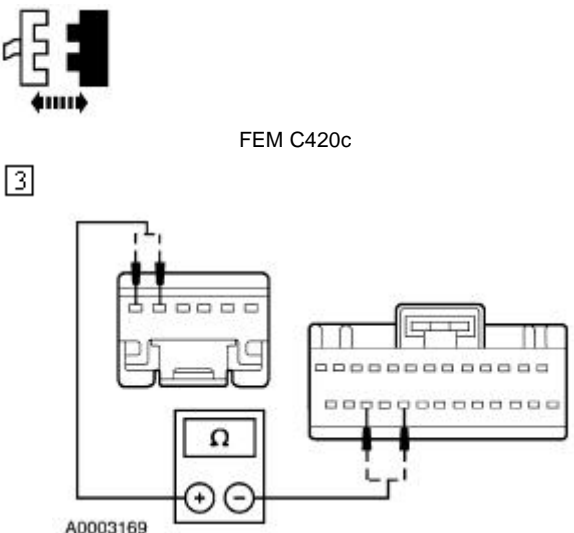

→ No
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

O5 CHECK CIRCUITS 8-AJ14A (WH/BU) AND 10-AJ14 (GY/VT) FOR AN OPEN

1

2

FEM C420c

3

3

Measure the resistance between LR window regulator control switch C701 pin 1, circuit 8-AJ14A (WH/BU), harness side and REM C420c pin 24 circuit 8-AJ14A (WH/BU), harness side; and between LR window regulator control switch C701 pin 2, circuit 10-AJ14 (GY/VT), harness side and REM C420c pin 22 circuit 10-AJ14 (GY/VT), harness side.

- Are the resistances less than 5 ohms?

→ Yes
INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST P: ALL/SINGLE PASSENGER POWER WINDOWS ARE INOPERATIVE — PASSENGER WINDOW LOCK-OUT NOT OPERATING CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
P1 CHECK THE MASTER WINDOW REGULATOR CONTROL SWITCH	
<p>1</p>  <p>2</p>  <p>Master Window Regulator Control Switch C504</p>	<p>3</p> <p>Check the master window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.</p> <ul style="list-style-type: none"> • Did the master window regulator control switch pass the component test?

→ **Yes**
GO to [P2](#).

→ **No**
INSTALL a new master window regulator control switch. REFER to [Switch—Master Window Regulator Control](#) in this section. CLEAR the DTCs. REPEAT the self-test.

P2 CHECK CIRCUIT 7S-AJ20 (YE/BU) FOR A SHORT TO BATTERY

1

2

2 Measure the voltage between master window regulator control switch C504 pin 5, circuit 7S-AJ20 (YE/BU), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [P3](#).

→ **No**
GO to [P4](#).

P3 CHECK THE DDM FOR AN INTERNAL SHORT TO BATTERY

1

2

DDM C501d

3

4

4 Measure the voltage between master window regulator control switch C504 pin 5, circuit 7S-AJ20 (YE/BU), harness side and ground.

A0003170

- Is the voltage greater than 10 volts?

→ **Yes**

REPAIR the circuit. CLEAR the DTCs.
REPEAT the self-test.

→ **No**

INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

P4 CHECK CIRCUIT 7S-AJ20 (YE/BU) FOR A SHORT TO GROUND

1

2

A0003171

2

Measure the resistance between master window regulator control switch C504 pin 5, circuit 7S-AJ20 (YE/BU), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**

GO to [P6](#).

→ **No**

GO to [P5](#).

P5 CHECK THE DDM FOR AN INTERNAL SHORT TO GROUND

1

DDM C501d

2

A0003171

2

Measure the resistance between master window regulator control switch C504 pin 5, circuit 7S-AJ20 (YE/BU), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

P6 CHECK CIRCUIT 7S-AJ20 (YE/BU) FOR AN OPEN

1

DDM C501c

2

A0003172

2

Measure the resistance between master window regulator control switch C504 pin 5, circuit 7S-AJ20 (YE/BU), harness side and DDM C501c pin 22, circuit 7S-AJ20 (YE/BU), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST Q: THE ONE TOUCH DOWN FEATURE IS

INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
Q1 CHECK THE DDM DTCS	
	<p>1 Retrieve the recorded results from the DDM self-test.</p> <ul style="list-style-type: none"> ● Were any DDM DTCs retrieved? <p>→ Yes If DTC B1400 was retrieved, GO to Q6.</p> <p>For all other DTCs, REFER to the DDM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to Q2.</p>
Q2 CHECK THE MASTER WINDOW REGULATOR CONTROL SWITCH	
<p>1</p>  <p>2</p>  <p>Master Window Regulator Control Switch C504</p>	<p>3 Check the master window regulator control switch; Refer to Wiring Diagrams Section 700-09, Component Testing.</p> <ul style="list-style-type: none"> ● Did the master window regulator control switch pass the component test? <p>→ Yes GO to Q3.</p> <p>→ No INSTALL a new master window regulator control switch. REFER to Switch—Master Window Regulator Control in this section. CLEAR the DTCs. REPEAT the self-test.</p>
Q3 CHECK CIRCUIT 7S-AJ16 (YE/BK) FOR A SHORT TO GROUND	
<p>1</p>	<p>1 Measure the resistance between master window regulator control switch C504 pin 4, circuit 7S-AJ16 (YE/BK), harness side and ground.</p>

A0003173

- Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [Q5](#).

→ **No**
GO to [Q4](#).

Q4 CHECK THE DDM FOR AN INTERNAL SHORT TO GROUND

1

DDM C501d

2

A0003173

- 2 Measure the resistance between master window regulator control switch C504 pin 4, circuit 7S-AJ16 (YE/BK), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

Q5 CHECK CIRCUIT 7S-AJ16 (YE/BK) FOR AN OPEN

1

DDM C501c

2

2

Measure the resistance between master window regulator control switch C504 pin 4, circuit 7S-AJ16 (YE/BK), harness side and DDM C501c pin 21, circuit 7S-AJ16 (YE/BK), harness side.

● Is the resistance less than 5 ohms?

→ Yes

INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No

REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

Q6 CHECK THE MASTER WINDOW REGULATOR CONTROL SWITCH FOR AN INTERNAL SHORT

1

2

3

4

Master Window Regulator Control Switch C504

3

Monitor the DDM PID OTD_SW.

● Did the DDM PID OTD_SW change when the master window regulator control switch C504 was disconnected?

→ **Yes**
 INSTALL a new master window regulator control switch. REFER to [Switch—Master Window Regulator Control](#) in this section. CLEAR the DTCs. REPEAT the self-test.

→ **No**
 GO to [Q7](#).

Q7 CHECK CIRCUIT 7S-AJ16 (YE/BK) FOR A SHORT TO BATTERY

1

2

DDM C501d

3

4

A0003175

4 Measure the voltage between master window regulator control switch C504 pin 4, circuit 7S-AJ16 (YE/BK), harness side and ground.

● **Is the voltage greater than 10 volts?**

→ **Yes**
 REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

→ **No**
 INSTALL a new DDM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

PINPOINT TEST R: THE DEFROST SYSTEM IS INOPERATIVE — REAR WINDOW DEFROST

CONDITIONS	DETAILS/RESULTS/ACTIONS
R1 CHECK THE REM DTCS	

1 Retrieve the recorded results from the REM self-test.

● Are any REM DTCs retrieved?

→ **Yes**
REFER to the REM Diagnostic Trouble Code (DTC) Index.

→ **No**
GO to [R2](#).

R2 CHECK THE REM OUTPUT

1

2

3

3 Trigger the REM active command R DEF RLY to ON then OFF while listening for the rear window defrost relay to click.

● Did the rear window defrost relay click when activated ON and OFF?

→ **Yes**
GO to [R3](#).

→ **No**
GO to [R6](#).

R3 CHECK THE REAR WINDOW DEFROST POWER

1

2

Rear Window Defrost Power Connector

3

4

4 Trigger the REM active command R DEF RLY to ON.

5

A0003178

5 Measure the voltage between rear window defrost power connector, circuit (BK), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [R4](#).

→ **No**
GO to [R10](#).

R4 CHECK THE REAR WINDOW DEFROST GROUND CIRCUIT

1

2

Rear Window Defrost Ground Connector

3

A0003179

3 Measure the resistance between rear window defrost ground connector, circuit (BK), harness side and ground.

• Is the resistance less than 5 ohms?

→ **Yes**
GO to [R5](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

R5 CHECK THE REAR WINDOW DEFROST GRID

1 Carry out the grid wire component test. Refer to Component Tests.

- **Did the rear window defrost grid pass the component test?**

→ **Yes**

INSTALL a new DATC module; REFER to [Section 412-04](#). CLEAR the DTCs.

REPEAT the self-test. If the rear window defrost is still inoperative, INSTALL a new REM, REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the rear window defrost grid. For additional information, REFER to [Lead Terminal Repair](#) in this section. TEST the system for normal operation.

R6 CHECK THE POWER SUPPLY TO THE REAR WINDOW DEFROST RELAY

1

2

Rear Window Defrost Relay C443

3

4

4 Measure the voltage between the rear window defrost relay C443 pin 86, circuit 30-HB23A (RD/WH), harness side and ground; and between rear window defrost relay C443 pin 30, circuit 30-HB23A (RD/WH), harness side and ground.

A0003176

- Are the voltages greater than 10 volts?

→ **Yes**
GO to [R7](#).

→ **No**
GO to [R9](#).

R7 CHECK THE REAR WINDOW DEFROST RELAY

- 1 Check the rear window defrost relay. Refer to Wiring Diagrams Section 700-09, Component Testing.

- Did the rear window defrost relay pass the component test?

→ **Yes**
GO to [R8](#).

→ **No**
INSTALL a new rear window defrost relay. TEST the system for normal operation.

R8 CHECK CIRCUIT 91S-HB23 (BN/WH) FOR AN OPEN

1

2

REM C420b

3

A0003177

3

Measure the resistance between REM C420b pin 7, circuit 91S-HB23 (BN/WH), harness side and rear window defrost relay C443 pin 85, circuit 91S-HB23 (BN/WH), harness side.

● Is the resistance less than 5 ohms?

→ Yes

INSTALL a new DATC module; REFER to [Section 412-04](#). CLEAR the DTCs. REPEAT the self-test.

If rear window defrost is still inoperative, INSTALL a new REM, REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No

REPAIR the circuit. TEST the system for normal operation.

R9 CHECK CIRCUIT 30-HB23 (RD/WH) FOR OPEN

1

2

BJB Fuse 429 (30A)

3

3

Measure the voltage between BJB fuse 429 (30A) pin 1, circuit 30-HB23 (RD/WH), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
REPAIR circuit 30-HB23 (RD/WH). TEST the system for normal operation.

→ **No**
REPAIR the BJB input circuit. TEST the system for normal operation.

R10 CHECK THE OUTPUT TO THE ANTENNA ISOLATOR MODULE

1

2

Antenna Isolator Module C301

3

4

5

4

Trigger the REM active command R DEF RLY to ON.

5

Measure the voltage between antenna

A0003178

isolator module C301, circuit 15S-HB19 (GN/BU), harness side and ground.

- Is the voltage greater than 10 volts?

→ **Yes**
 INSTALL a new antenna isolator module. REFER to [Section 415-02](#). TEST the system for normal operation.

→ **No**
 GO to [R11](#).

R11 CHECK CIRCUIT 15S-HB19 (GN/BU) FOR AN OPEN

1

2

Rear Window Defrost Relay C443

3

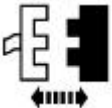

A0003180

3 Measure the resistance between antenna isolator module C301, circuit 15S-HB19 (GN/BU), harness side and rear window defrost relay C443 pin 87, circuit 15S-DA13 (GN/YE), harness side.

	<ul style="list-style-type: none"> ● Is the resistance less than 5 ohms? <p>→ Yes GO to R12.</p> <p>→ No REPAIR the circuit. TEST the system for normal operation.</p>
R12 CHECK THE REAR WINDOW DEFROST RELAY	
	<p>1 Check the rear window defrost relay. Refer to Wiring Diagrams Section 700-09, Component Testing.</p> <ul style="list-style-type: none"> ● Did the rear window defrost relay pass the component test? <p>→ Yes REPAIR circuit 30-HB23 (RD/WH). TEST the system for normal operation.</p> <p>→ No INSTALL a new rear window defrost relay. TEST the system for normal operation.</p>

PINPOINT TEST S: THE DEFROST SYSTEM IS INOPERATIVE — HEATED WIPER PARK

CONDITIONS	DETAILS/RESULTS/ACTIONS
S1 CHECK THE POWER TO THE HEATED WIPER PARK RELAY	
<p>1</p>  <p>2</p>  <p>Heated Wiper Park Relay C1014</p> <p>3</p>	<p>3 Measure the voltage between heated wiper park relay C1014 pin 86, circuit 30-HB8A (RD/OG), harness side and ground; and between heated wiper park relay C1014 pin 30, circuit 30-HB8 (RD/OG), harness side and ground.</p>

- Are both voltages greater than 10 volts?

→ **Yes**
GO to [S2](#).

→ **No**
GO to [S6](#).

S2 CHECK THE SWITCHED GROUND FROM THE DATC MODULE

1

3

2 Depress the heated wiper park switch to the ON position.

3 Measure the voltage between heated wiper park relay C1014 pin 85, circuit 91S-HB7 (BN/RD), harness side and heated wiper park relay C1014 pin 86, circuit 30-HB8A (RD/OG), harness side.

A0005751

● Is the voltage greater than 10 volts?

→ Yes
GO to [S3](#).

→ No
GO to [S7](#).

S3 CHECK THE HEATED WIPER PARK RELAY OUTPUT

1

2

Heated Wiper Park Relay C1014

3

Heated Wiper Park C247

4

5 Operate the heated wiper park switch to the ON position.

6

A0005160

6

Measure the voltage between heated wiper park C247 pin 1, circuit 30S-HB42 (BK), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [S5](#).

→ **No**
GO to [S4](#).

S4 CHECK CIRCUIT 30S-HB42 (BK) FOR AN OPEN

1

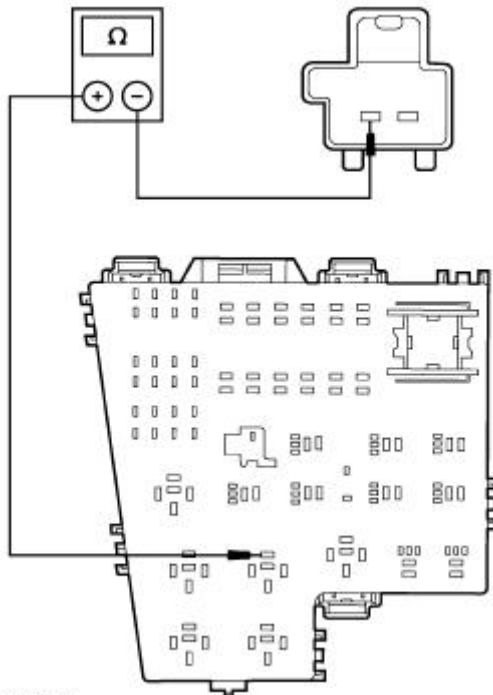

2

Heated Wiper Park Relay C1014

3

A0005162

3

Measure the resistance between heated wiper park relay C1014 pin 87, circuit 30S-HB42 (RD/YE), harness side and heated wiper park C247 pin 1, circuit 30S-HB42 (BK), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new heated wiper park relay.
TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

S5 CHECK THE HEATED WIPER PARK GROUND

1

2

Heated Wiper Park C246

3

5

4 Operate the heated wiper park switch to the ON position.

5 Measure the voltage between heated wiper park C247 pin 1, circuit 30S-HB42 (BK), harness side and heated wiper park C246 pin 1, circuit 31-HB42 (BK), harness side.

● Is the voltage greater than 10 volts?

→ **Yes**
INSTALL a new windshield. REFER to [Windshield Glass](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR circuit 31-HB42 (BK). TEST the system for normal operation.

S6 CHECK THE UNDERHOOD AJB FOR POWER

1

Underhood AJB Fuse 113 (30A)

2

2

Measure the voltage between underhood AJB fuse 113 (30A) pin 1 (input circuit), harness side and ground.

● Is the voltage greater than 10 volts?

→ Yes

REPAIR circuit 30-HB8. TEST the system for normal operation.

→ No

REPAIR the underhood AJB input circuit. TEST the system for normal operation.

S7 CHECK CIRCUIT 91S-HB7 (BN/RD) FOR AN OPEN

1

2

DATC Module C228b

3

3

Measure the resistance between heated wiper park relay C1014 pin 85, circuit 91S-HB7 (BN/RD), harness side and DATC module C228b pin 20, circuit 91S-HB7 (BN/RD), harness side.

PINPOINT TEST T: THE DEFROST SYSTEM WILL NOT SHUT OFF AUTOMATICALLY — REAR WINDOW DEFROST

CONDITIONS	DETAILS/RESULTS/ACTIONS
T1 CHECK THE REM DTCS	<p>1 Retrieve the recorded results from the REM self-test.</p> <ul style="list-style-type: none"> ● Are any REM DTCS retrieved? <p>→ Yes REFER to the REM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to T2.</p>
T2 CHECK FOR A STUCK OR STICKING REAR WINDOW DEFROST RELAY	
1	

2

Rear Window Defrost Relay C443

3

● Is the rear window defrost defroster off?

→ Yes
GO to [T3](#).

→ No
GO to [T5](#).

T3 CHECK THE REAR WINDOW DEFROST RELAY

1

2

Rear Window Defrost Relay C443

3 Check the rear window defrost relay; refer to Wiring Diagrams Section 700-09, Component Testing.

● Did the rear window defrost relay pass the component test?

→ Yes
GO to [T4](#).

→ No
INSTALL a new rear window defrost relay. TEST the system for normal operation.

T4 CHECK CIRCUIT 91S-HB23 (BN/WH) FOR A SHORT TO GROUND

1

REM C420b

2

2

Measure the resistance between REM C420b pin 7, circuit 91S-HB23 (BN/WH), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ Yes

INSTALL a new REM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ No

REPAIR the circuit. TEST the system for normal operation.

T5 CHECK CIRCUITS 15S-DC1 (GN/YE) AND 29S-HB1 (OG/YE) FOR SHORT TO POWER

1

2

BJB Fuse 409 (5A)

3

4

4

Measure voltage between BJB fuse 409 (5A) pin 1, circuit 15S-DC1 (GN/YE), harness side and ground and between BJB fuse 409 (5A) pin 2, circuit 29S-HB1 (OG/YE), harness side and ground.

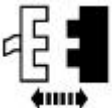

A0008334

- Are the voltages greater than 10 volts?

→ **Yes**
REPAIR the circuit in question. TEST the system for normal operation.

→ **No**
VERIFY the symptom; REFER to the Symptom Chart.

PINPOINT TEST U: THE DEFROST SYSTEM WILL NOT SHUT OFF AUTOMATICALLY — HEATED WIPER PARK

CONDITIONS	DETAILS/RESULTS/ACTIONS
U1 CHECK FOR A SHORTED CONTROL CIRCUIT	
<p>1 </p> <p>2 </p> <p>Heated Wiper Park Relay C1014</p> <p>3</p>	<p>3 Measure the resistance between heated wiper park relay C1014 pin 85, circuit 91S-HB7 (BN/RD), harness side and ground.</p>

A0005157

- Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [U3](#).

→ **No**
GO to [U2](#).

U2 CHECK CIRCUIT 91S-HB7 (BN/RD) FOR A SHORT TO GROUND

1

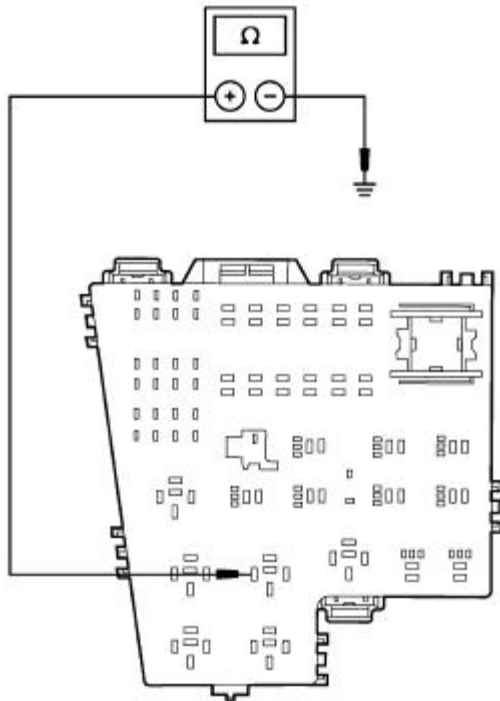

DATC Module C228b

2

2

Measure the resistance between heated wiper park relay C1014 pin 85, circuit 91S-HB7 (BN/RD), harness side and ground.

A0005157

- Is the resistance greater than 10,000 ohms?

- **Yes**
INSTALL a new DATC module. REFER to [Section 412-04](#). TEST the system for normal operation.
- **No**
REPAIR the circuit. TEST the system for normal operation.

U3 CHECK CIRCUIT 30S-HB42 (RD/YE) FOR A SHORT TO BATTERY

1

2

- 2 Measure the voltage between heated wiper park relay C1014 pin 87, circuit 30S-HB42 (RD/YE), harness side and ground.

Component Test

Grid Wire Test

1. Using a bright lamp in the vehicle, inspect the wire grid from the exterior. A broken grid wire will appear as a brown spot.
2. Run the engine at idle. Set the rear window defrost switch to ON. The indicator light should come on.
3. Working in the vehicle with a voltmeter, contact the broad red-brown stripes of the rear glass window positive lead to battery side and the negative lead to ground side. The meter should read 10-13 volts. A lower voltage reading indicates a loose ground connection.
4. Contact a good ground point with the negative lead of the meter. The voltage reading should remain the same.
5. With the negative lead of the meter grounded, touch each grid line of the rear window defrost glass (42006) at its midpoint with the positive lead. A reading of approximately six volts indicates that the line is good. A reading of zero volts indicates that the line is broken between the midpoint and the B+ side of the grid line. A reading of 12 volts indicates that the circuit is broken between the midpoint of the grid line and ground.

Lead Terminal Repair

Special Tool(s)

 ST1110-A	Heat Gun 107-R0300 or equivalent
---	-------------------------------------

1. **NOTE:** The rear window glass (42006) must be at room temperature at the time of the repair.

Clean the bus bar in the area to be repaired with steel wool (3/0 to 4/0 grade).

2. **NOTE:** Allow 10 minutes of drying time between the coats.

Apply three coats of Rear Window Defroster Repair D8AZ-19562-AA or equivalent meeting Ford specification ESB-M4J58-A to the surface.

3.  **CAUTION:** Do not overheat the rear window glass or damage to the rear window glass may occur.

Tin the bus bar repair area with solder.

4.  **CAUTION:** To prevent overheating the rear window glass, remove the soldering gun as soon as the solder flows.

Preheat the rear window glass in the area to be repaired using the special tool and solder the terminal to the bus bar.

5. **NOTE:** Turn the heated back window switch ON for five minutes prior to the final inspection of the repair.

Apply Rear Window Defroster Repair D8AZ-19562-AA or equivalent meeting Ford specification ESB-M4J58-A to the repair area as needed.

Switch —Master Window Regulator Control

Removal and Installation

1.  **CAUTION:** Carefully lift out the master control regulator switch from the front of the door panel to avoid breaking the tab.

Remove the master window control regulator switch.

2. Disconnect the electrical connector.

3. To install, reverse the removal procedure.

Window Glass —Back

Special Tool(s)

 ST1320-A	Rotunda Interior Auto Glass Cut-Out Knife Kit 164-R2450 or equivalent
 ST1109-A	Rotunda Pneumatic Knife with Offset Blade 107-R1511 or equivalent
 ST2085-A	The Pumper 164-R2459 or equivalent

Removal

 **WARNING:** To prevent glass splinters from entering the eyes or cutting the hands, wear safety glasses and heavy gloves when cutting the glass from the vehicle.

 **CAUTION:** Do not scratch the pinch weld.

1. Remove the package tray trim panel. For additional information, refer to [Section 501-05](#).
2. Disconnect the three back window glass electrical connectors:
 - two rear defrost electrical connectors.
 - FM antenna electrical connector.
3. If equipped, disconnect the cellular phone antenna connector.
4. Lower the rear portion of the headliner.
5. Using a soft brush or vacuum, remove the dirt and foreign material from the pinch weld.
6.  **CAUTION:** Care must be taken to avoid scratching the pinch weld.

NOTE: Lubricate the existing urethane adhesive with water to aid the special tool while cutting.

Using the special tool, starting at the top center of the back window glass, cut the adhesive

away from the glass and work down the sides.

7. Using the special tool, distance the back window glass from the body.

8. Using the special tool, cut the remaining urethane adhesive and remove the back window glass.

9. Using a soft brush or vacuum, remove the dirt and foreign material from the pinch weld.

Installation

⚠ CAUTION: After installing the new urethane-installed glass, the vehicle should not be driven until the urethane adhesive has cured. The curing time at temperatures above 13° C (55° F) and relative humidity above 50% is 12-24 hours. (Refer to the Essex drive away chart for the cure times as the temperatures and humidity vary). Inadequate curing of the urethane adhesive may adversely affect the strength of the urethane adhesive bond.

1. Dry fit the replacement back window glass to the existing urethane bed on the body pinch weld. Align the back window glass in the opening for uniform fit.
2. Use tape or non-permanent marking pencil to make alignment marks on the back window glass (preferably at the setting blocks), and the body to aid in the installation alignment of the replacement back window glass.

3. After alignment, remove the back window glass and molding assemblies from the vehicle and place on a stable work surface.

4.  **CAUTION: Care must be taken to avoid scratching the pinch weld.**

Trim the remaining urethane adhesive on the pinch weld using only the full-cut method. In this method, most of the existing urethane adhesive is removed leaving a level bead around the entire pinch weld.

5.  **WARNING: All rust found on the pinch weld must be removed and the pinch weld restored to OEM specifications. If surface rust is found, remove completely down to clean, bare metal. Prime pinch weld metal with an OEM recommended curing automotive paint primer and allow to cure properly. If rust has penetrated through the pinch weld metal, repair the pinch weld sheet metal at a body shop before proceeding.**

Check the pinch weld for damaged sheet metal, raised sheet metal at the spot welds, rust or foreign material that may cause glass breakage. Clean or repair surface as necessary.

6. Use the wool applicator to apply Urethane Metal Primer Essex U-413 meeting Ford specification WSB-M2G234-C to any exposed metal on the pinch weld. Allow six to ten minutes to dry.
7. If reinstalling the original back window glass, remove any excess urethane adhesive.
8. Clean the inside of the glass surface with an alcohol-free cleaner to make sure the ceramic-coated area is clean.
9.  **CAUTION: Wipe off the urethane glass prep immediately after each application because it flash dries. Apply deliberate strokes, making sure not to overlap the applied area.**

If installing a new back window glass, apply Urethane Glass Prep Essex U-401 meeting Ford specification WSB-M2G314-B twice around the glass surface to be prepped.
10. If installing a new back window glass, apply Urethane Glass Primer Essex U-402 meeting Ford specification WSB-M5B280-C to the same area that was prepped in the previous step. Allow five minutes to dry.
11. Cut the urethane adhesive applicator tip to specification.

12. **⚠ CAUTION:** If the vehicle is to be driven within 24 hours of urethane adhesive application, Urethane Adhesive Essex U-216 meeting Ford specification WSB-M2G316-B must be used due to its one-hour cure time.

Apply a bead of Urethane Adhesive Essex 400-HV or Essex U-216, meeting Ford specification WSB-M2G316-B to the pinch weld.

13. **⚠ CAUTION:** Open the windows to prevent the back window glass from being pushed out by air pressure if a door is closed.

Install the back window glass on the pinch weld. Align the back window glass to the body using the alignment marks while pushing downward to set the stops.

14. Inspect the back window glass for air or water leaks and add urethane adhesive where needed.
15. If equipped, install the cellular phone antenna. For additional information, refer to [Section 419-05](#).
16. Connect the three back window electrical connectors:
- two rear defroster connectors.
 - FM antenna electrical connector.
17. Install the package tray trim panel. For additional information, refer to [Section 501-05](#).
-

Window Glass —Front Door

Removal and Installation

1. Remove the door trim panel. For additional information; refer to [Section 501-05](#).
2. Remove the interior garnish moulding.

3. Remove the watershield.
4. Remove the interior weatherstrip.

5. Position the forward front window regulator to glass bolt to the bottom of the access hole.

6. **NOTE:** Do not remove the bolts.

Loosen the front window regulator to glass bolts.

7. Hold the glass in place and lower the window regulator to the bottom of the door panel.

8. Remove the front door window glass.

9.  **CAUTION: Make sure the front door window glass correctly seats in the glass mounting brackets as the front door window glass is raised.**

NOTE: Position the front door window glass against the B-pillar.

NOTE: Support the front door window glass and raise the window regulator to the full upright position.

To install, reverse the removal procedure.

Window Glass —Rear Door

Removal and Installation

1. Remove the rear door trim panel. For additional information, refer to [Section 501-05](#).
2. Remove the interior garnish molding.

3. Remove the interior weather strip.

4. Lower the rear door window glass until the glass spacer bracket is visible in the access hole.

5. Remove the rear door window glass spacer bracket.
 1. Using a punch, remove the center portion of the spacer bracket.
 2. Remove the outer portion of the spacer bracket.

6. Remove the exterior weatherstrip.

7. Remove the rear door window glass.

- Lift the rear door window glass out of the window regulator.
- Lower the rear door window glass out of the channel.
- Lift the rear door window glass through the belt opening to the outside of the channel.

8. **NOTE:** Prior to the installation of the window, reinstall the outer and center portion of the spacer bracket into the rear door window glass. The spacer bracket should protrude equal distances on both sides of the window glass.

To install, reverse the removal procedure.

Window Glass —Rear Quarter

Removal and Installation

1. Remove the rear door window glass. For additional information, refer to [Window Glass—Rear Door](#).
2. Remove the rear door glass run and the exterior moulding at the top of the glass.
3. Remove the quarter window glass nuts.

4. Remove the quarter window glass.
 1. Remove the screw.
 2. Remove the quarter window glass.

5. **NOTE:** If reinstalling the original quarter glass, clean off any remaining butyl prior to installation.

NOTE: Clean the area of any remaining foam or residue prior to installation of the quarter window glass.

NOTE: Apply the new butyl to the installation area.

To install, reverse the removal procedure.

Window Regulator —Front Door

Removal and Installation

1. Remove the front door window glass. For additional information, refer to [Window Glass—Front Door](#).
2. Disconnect the door latch electrical connector.

3. Remove the anti-theft shield screw.

4. Remove the nut and position the anti-theft shield aside.

5. Release the clip and disconnect the exterior door handle actuating rod.

6. Remove the nut and the door lock cylinder (driver door only).

7. Remove the latch screws.

8. Remove the two nuts, the bolt and the inner front door support bracket.

9. Remove the bolts and the front door inner support.

10. Remove the bolts and the window regulator assembly.
 - Disconnect the harness locators and reposition the harness.

11. To install, reverse the removal procedure.
-

Window Regulator —Rear Door

Removal

1. Remove the rear door trim panel. For additional information, refer to [Section 501-05](#).
2. Lower the rear door window glass until the glass spacer bracket is visible in the access hole.

3. Remove the rear door window glass spacer bracket.
 1. Using a punch, remove the center portion of the spacer bracket.
 2. Remove the outer portion of the spacer bracket.

4. Position the rear window glass to the top of the window opening and tape around the door frame to hold in place.
5. Position the inner door module assembly aside.
 1. Remove the bolts.
 2. Position the support aside.

6. Remove the rear door window regulator.
 1. Remove the two nuts.
 2. Remove the bolt.
 3. Remove the rear door window regulator.
 - Disconnect the electrical connector.

Installation

1. **NOTE:** Prior to the attaching the window to the regulator, reinstall the outer and center portions of the spacer bracket into the rear door window glass. The spacer bracket should protrude equal distances on both sides of the window glass.

Install the spacer bracket into the rear door window glass.

2. Install the rear door window regulator.
 1. Position the window regulator.
 2. Install the two nuts and one bolt.
 - Connect the electrical connector.

3. Position the inner door module assembly to the door and install the bolts.

4. Operate the rear door window regulator to the full up position until the rear window glass spacer bracket is engaged with the regulator.
 - An audible click should be heard when the spacer bracket is engaged.
 5. Install the rear door trim panel. For additional information, refer to Section 501-05.
 6. Check the rear door window glass for proper operation.
-

Motor and Window Regulator —Front Door

Removal and Installation

1. Remove the front door window regulator. For additional information, refer to [Window Regulator—Front Door](#).
2. Remove the screws and the motor from the front door window regulator.

3. To install, reverse the removal procedure.

Motor and Window Regulator —Rear Door

Removal and Installation

1. Remove the rear door window regulator. For additional information, refer to [Window Regulator—Rear Door](#).
2. Remove the screws and the motor from the rear door window regulator.

3. To install, reverse the removal procedure.
-

Windshield Glass

Special Tool(s)

 ST1109-A	Pneumatic Knife with Offset Blade 107-R1511 or equivalent
 ST1320-A	Interior Auto Glass Cut-Out Knife Kit 164-R2450 or equivalent
 ST2085-A	The Pumper 164-R2459 or equivalent

Removal

 **WARNING:** To prevent glass splinters from entering the eyes or cutting the hands, wear safety glasses and heavy gloves when cutting the glass from the vehicle.

1. Remove the cowl vent screen. For additional information, refer to [Section 501-02](#).
2. Remove the interior rear view mirror. For additional information, refer to [Section 501-09](#).
3. Remove the rain sensor module (if equipped). For additional information, refer to [Section 501-16](#).
4. Remove the screws and the sun visors.
 - Disconnect the electrical connectors.

5. Remove the screws and the sun visor clips.

6. Remove the LH and RH windshield side garnish mouldings. For additional information, refer to [Section 501-05](#).
7. Partially remove the front door weatherstrip.
8. Partially drop the headliner near the windshield glass opening and block with suitable material.
9. Disconnect the two heated wiper park grid electrical connectors.
10. Remove the instrument panel defroster opening grille assembly.
 - Disconnect the electrical connectors.

11. Remove the eight screws and the windshield drip mouldings.
12. Using a soft brush or vacuum, remove dirt and foreign material from the pinch weld.
13.  **CAUTION: Cover the instrument panel in order to prevent possible damage.**

 **CAUTION: Care must be used to avoid scratching the pinch weld.**

NOTE: Lubricate the existing urethane adhesive with water to aid the special tool while cutting.

NOTE: When cutting foam inside, first cut foam dam to access urethane adhesive.

Using the special tool, starting at the top center of the windshield glass, cut the urethane adhesive away from the glass and work down the sides.

14. Remove the windshield glass and mouldings assembly using a suitable suction tool.

15. Remove the dual lock windshield glass stops from the sheet metal frame.
16. Using a soft brush or vacuum, remove dirt and foreign material from the pinch weld.

Installation

⚠ CAUTION: After installing the new urethane-installed glass, the vehicle should not be driven until the urethane adhesive has cured. The curing time at temperatures above 13° C (55° F) and relative humidity above 50% is 12-24 hours. (Refer to the Essex drive away chart for the cure times as the temperatures and humidity vary). Inadequate curing of the urethane adhesive may adversely affect the strength of the urethane adhesive bond.

1. Dry fit the replacement windshield glass to the existing urethane bed on the body pinch weld. Align the windshield in the opening for uniform fit and adjust setting blocks as needed for best fit.
2. Use tape or non-permanent marking pencil to make alignment marks on the windshield (preferably at the setting blocks), and the body to aid in the installation alignment of the replacement windshield.
3. After alignment, remove the windshield glass and moulding assemblies from the vehicle and place on a stable work surface.
4. **⚠ CAUTION:** Care must be taken to avoid scratching the pinch weld.

Trim the remaining urethane adhesive on the pinch weld. The urethane must be smooth and free of cuts and contamination after trimming. Avoid touching the urethane surface after preparation.

5. **⚠ CAUTION: All rust found on the pinch weld must be removed and the pinch weld restored to OEM specifications. If surface rust is found, remove completely down to clean, bare metal. Prime pinch weld metal with an OEM recommended curing automotive paint primer and allow to cure properly. If rust has penetrated through the pinch weld metal, repair the pinch weld sheet metal at a body shop before proceeding.**

Check the pinch weld for damaged sheet metal, raised sheet metal at the spot welds, rust or foreign material that may cause glass breakage. Clean or repair surface as necessary.

6. Use the wool applicator to apply Urethane Metal Primer Essex U-413 meeting Ford specification WSB-M2G234-C to any exposed metal on the pinch weld. Allow six to ten minutes to dry.
7. If re-installing the same windshield glass that was removed, trim the remaining urethane adhesive from the windshield surface, leaving a thin layer for adhering to the new urethane bead.
8. Clean the inside of the glass surface with an alcohol-free cleaner to make sure the ceramic-coated area is clean.
9. **NOTE:** If the moulding is already on the windshield glass, proceed to the next step.

Align the "V" notch in the ceramic paint and windshield outside molding at top center. Fully seat the windshield outside molding along the top edge of the windshield glass and along the sides and bottom edges of the windshield glass.

10. Remove the dual lock windshield glass stop adhesive backing.

11. **⚠ CAUTION: Wipe off the urethane glass prep immediately after each application because it flash dries. Apply deliberate strokes, making sure not to overlap the applied area.**

If installing a new windshield glass, apply Urethane Glass Prep Essex U-401 meeting Ford specification WSB-M2G314-B twice around the glass surface to be prepped.

12. If installing a new windshield glass, apply Urethane Glass Primer Essex U-402 meeting Ford specification WSB-M5B280-C to the same area that was prepped in the previous step. Allow five minutes to dry.
13. Cut the urethane adhesive applicator tip to specification.

14. **⚠ CAUTION:** If the vehicle is to be driven within 24 hours of urethane adhesive application, Urethane Adhesive Essex U-216 meeting Ford specification WSB-M2G316-B must be used due to its one-hour cure time.

Apply a bead of Urethane Adhesive Essex 400-HV or Essex U-216 meeting Ford specification WSB-M2G316-B to the pinch weld just outside the foam dam.

15. **⚠ CAUTION:** Before installing the windshield glass, open the windows slightly to prevent the windshield from being pushed out by air pressure as the door is closed.

NOTE: The windshield glass must be positioned within 10 minutes of applying the urethane adhesive.

Install the windshield glass on the vehicle, aligning it with marks made previously.

16. Check the windshield installation for air or water leaks through the urethane bead and add urethane adhesive where needed.
17. Place two strips of duct tape onto the windshield glass and secure it to the roof panel. This will help avoid misalignment while the urethane cures.
18. Install the windshield drip mouldings.
- Install the eight screws.
19. Install the instrument panel defrost opening grille assembly.
- Connect the electrical connector.

20. Connect the two heated wiper park grid electrical connectors.
21. Position the headliner.
22. Install the weatherstrips.
23. Install the LH and RH windshield side garnish mouldings. For additional information, refer to [Section 501-05](#).
24. Install the sun visor clips and screws.

25. Install the sun visors and screws.
 - Connect the electrical connectors.

26. Install the rain sensor module. For additional information, refer to [Section 501-16](#).
27. Install the rear view mirror. For additional information, refer to [Section 501-09](#).
28. Install the cowl vent screen. For additional information, refer to [Section 501-02](#).

Torque Specifications

Description	Nm	lb-ft	lb-in
Bulkhead electrical connector bolt	3	—	27
Floor console assembly rear screws	8	—	71
Glove compartment bolts	6	—	53
Instrument panel cowl side bolts	20	15	—
Instrument panel cowl side nuts	20	15	—
Instrument panel cowl top screws	3	—	27
Instrument panel reinforcement bolts	20	15	—
Instrument panel tunnel brace bolts	20	15	—
Intermediate shaft to steering column pinch bolt	35	26	—

Instrument Panel

The instrument panel consists of the following components:

- passenger air bag module
 - instrument panel cluster finish panel
 - glove compartment
 - instrument cluster
 - audio unit
 - climate control head
 - instrument panel finish panels
 - instrument panel defroster opening grille
 - instrument panel steering column opening cover reinforcement
 - instrument panel steering column cover
-

Console —Floor

The floor console consists of the following components:

- console air condition duct
- console base assembly (automatic transmission)
- console base assembly (manual transmission)
- console rear finish panel assembly
- console finish panel assembly

The console finish panel assembly consists of the following components:

- armrest assembly
 - single cupholder assembly (manual transmission)
 - dual cupholder assembly (automatic transmission)
 - phone presenter assembly
-

Instrument Panel

Removal

 **CAUTION:** Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage may result.

1. Position the steering wheel in the straight ahead position.
2. Remove the driver air bag module. For additional information, refer to [Section 501-20B](#).
3. Remove the floor console. For additional information, refer to [Console—Floor](#) in this section.
4. Remove the console A/C duct.

5. If equipped, remove the automatic transmission selector lever assembly. For additional information, refer to [Section 307-05](#).
6. Remove the three pin-type retainers and the LH instrument panel insulator.
 - Disconnect the courtesy lamp.

7. Remove the two pin-type retainers and the RH instrument panel insulator.
 - Disconnect the courtesy lamp.

8. Remove the LH and RH scuff plates.

9. Position the LH and RH door weatherstrips aside.

10. Remove the LH and RH A-pillar lower trim panels.

11. Remove the LH and RH windshield side garnish mouldings.

12. Remove the instrument panel defroster opening grille assembly.
 - Disconnect the electrical connector.

13. Remove the instrument panel cowl top screws.

14. Loosen the instrument panel upper reinforcement bolts.

15. Remove the LH and RH instrument panel side finish panels.

16. Position the hood release handle and cable aside.
 1. Remove the screws.
 2. Position the hood release handle and cable aside.

17. Disconnect the upper RH bulkhead electrical connector.
 1. Loosen the bolt.
 2. Disconnect the upper RH bulkhead electrical connector.

18. Disconnect the RH electrical connectors through the instrument panel side opening.

19. Disconnect the passenger side tunnel electrical connector.

20.  **CAUTION: Secure the steering wheel to prevent any rotation or damage to the air bag sliding contact.**

Separate the intermediate shaft from the steering column.

1. Remove the pinch bolt.
2. Separate the intermediate shaft from the steering column.

21. Disconnect the LH junction box electrical connector.
- Position the carpet aside to gain access to the connector.

22. Disconnect the LH electrical connectors through the instrument panel side opening.

23. If equipped, disconnect the ignition shift interlock electrical connector.

24. Remove the four instrument panel tunnel brace bolts.
● Position the carpet aside to gain access to the bolts.

25. Remove the driver side outer instrument panel cowl side cover and reinforcement bolt.

26. Remove the LH instrument panel cowl side bolt and nut.

27. Remove the RH instrument panel cowl side bolt and nut.

28. **NOTE:** Two technicians are required to carry out this step.

Remove the instrument panel.

Installation

CAUTION: Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage may result.

1. **NOTE:** Two technicians are required to carry out this step.

Install the instrument panel.

2. Install the instrument panel cowl top screws.

3. Install the RH instrument panel cowl side bolt and nut.

4. Install the LH instrument panel cowl side bolt and nut.

5. Install the driver side outer instrument panel cowl side reinforcement bolt and cover.

6. Tighten the instrument panel upper reinforcement bolts.

7.  **CAUTION:** Be sure the steering column cover reinforcement is in place before completing this step.

Install the four instrument panel tunnel brace bolts.

- Reposition the carpet.

8. If equipped, connect the ignition shift interlock electrical connector.

9. Connect the LH electrical connectors through the instrument panel side opening.

10. Connect the LH junction box electrical connector.

- Reposition the carpet.

11. Connect the intermediate shaft to the steering column.

1. Connect the intermediate shaft to the steering column.
2. Install the pinch bolt.

12. Connect the passenger side tunnel electrical connector.

13. Connect the RH electrical connectors through the instrument panel side opening.

14. Connect the RH bulkhead electrical connector.
 1. Connect the RH bulkhead electrical connector.
 2. Tighten the bolt.

15. Position the hood release handle and cable and install the screws.

16. Install the LH and RH instrument panel side finish panels.

17. Install the instrument panel defroster opening grille assembly.

- Connect the electrical connector.

18. Install the LH and RH windshield side garnish mouldings.

19. Install the LH and RH A-pillar lower trim panels.

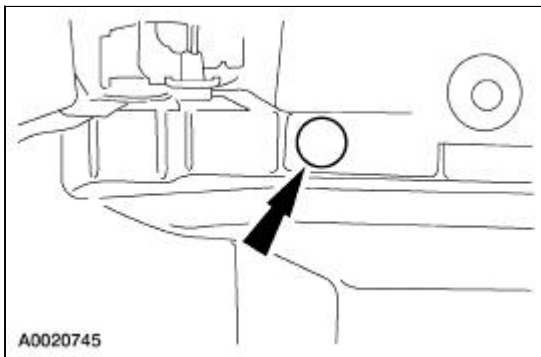

20. Install the LH and RH door weatherstrips.

21. Install the LH and RH scuff plates.

22. Position the LH instrument panel insulator and install the three pin-type retainers.
- Connect the courtesy lamp.

23. Position the RH instrument panel insulator and install the two pin-type retainers.
- Connect the courtesy lamp.

24. If equipped, install the automatic transmission selector lever assembly. For additional information, refer to [Section 307-05](#).
25. Install the console A/C duct.

26. Install the floor console. For additional information, refer to [Console—Floor](#) in this section.
 27. Install the driver air bag module. For additional information, refer to [Section 501-20B](#).
-

Instrument Panel —Cluster Finish Panel

Removal and Installation

1. Adjust the steering column to the full tilt down and full extended position.
2. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
3. Remove the instrument panel steering column cover.
 1. Remove the pin-type retainers.
 2. Remove the instrument panel steering column cover.
 - Disconnect the electrical connectors.

4. Remove the outer instrument panel finish panel.
 - Disconnect the electrical connectors.

5. Remove the inner instrument panel finish panel.

6. Position the instrument panel cluster finish panel aside.
 1. Remove the screws.
 2. Position the instrument panel cluster finish panel aside.

7. Disconnect the in-car air temperature sensor and remove the instrument panel cluster finish panel.

8. To install, reverse the removal procedure.
-

Console —Floor

Removal and Installation

1. Apply the parking brake.
2. If equipped with a manual transmission, place the selector lever in fourth gear.
3. If equipped with an automatic transmission, place the selector lever in neutral.
4. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
5. Remove the ashtray finish panel.
 - Disconnect the electrical connectors.

6. If equipped with a manual transmission, remove the gearshift lever knob.
7. If equipped, disconnect the cellular phone electrical connectors.
8. Remove the console finish panel assembly by pulling upward from the front first.
 - If equipped, disconnect the traction control switch electrical connector.
 - If equipped, release the cellular phone wiring harness from the console finish panel assembly.

9. Remove the console rear finish panel assembly.
 - Unclip by pulling rearward.

10. Unclip the parking brake boot from the console base.

11. Remove the console assembly front screws.

12. Remove the console assembly rear screws.

13. Remove the console air condition duct mounting screw.

14. Remove the console assembly by sliding rearward.
 15. To install, reverse the removal procedure.
-

Console —Floor, Finish Panel Assembly

Removal and Installation

1. Apply the parking brake.
2. If equipped with a manual transmission, place the selector lever in fourth gear.
3. If equipped with an automatic transmission, place the selector lever in neutral.
4. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
5. Remove the ashtray finish panel.
 - Disconnect the electrical connectors.

6. If equipped with a manual transmission, remove the gearshift lever knob.
7. If equipped, disconnect the cellular phone electrical connectors.
8. Remove the console finish panel assembly by pulling upward from the front first.
 - If equipped, disconnect the traction control switch electrical connector.
 - If equipped, release the cellular phone wiring harness from the console finish panel assembly.

9. To install, reverse the removal procedure.

Glove Compartment

Removal

All Vehicles

1. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).

Late Build Vehicles

2. Remove the two pin-type retainers and the RH instrument panel insulator.
 - Disconnect the courtesy lamp.

3. Remove the RH floor heat duct.
4. From under the instrument panel, release the assist cable from the glove compartment arm.

All Vehicles

5. Open the glove compartment.
6. Remove the instrument panel finish panel.

Late Build Vehicles

7. Push down on the glove compartment arms and lower the glove compartment door.

Early Build Vehicles

8. Release the assist cable from the glove compartment.

9. Lower the glove compartment.
 1. Release the glove compartment stops.
 2. Lower the glove compartment.

10. If equipped with a compact disc changer, remove the glove compartment door inner panel.
 1. Remove the screws.
 2. Remove the glove compartment door inner panel.

All Vehicles

11. Remove the glove compartment instrument panel finish panel.
 1. Remove the screws.
 2. Remove the finish panel.
 - Disconnect the electrical connectors.

12. Remove the glove compartment.
 1. Remove the bolts.
 2. Remove the glove compartment.
 - Disconnect the electrical connector.

Installation

1. To install, reverse the removal procedure.

General Specifications

Item	Specification

**LOCK REPAIR/REPLACEMENT
SPECIFICATIONS**

Part Number	Lock Repair Package Name
11582	Ignition Cylinder
5421990	Door Lock
5443262	Luggage Compartment Lid
5406082	Glove Box
5421970	Lock Lever Kit

Handles, Locks, Latches and Mechanisms

Actuator

The actuator is not repairable and is a part of the latch assembly.

Fuel Filler Door Lock Switch

The fuel filler door lock switch actuates a solenoid integral to the fuel filler door latch to release the fuel tank filler door.

Global Window Open/Close

WARNING: Disconnect the battery ground cable when working on or near the driver side door cylinder lock rod or door latch. Failure to follow these instructions may result in personal injury.

This vehicle is equipped with a global window open/close feature activated by turning the key to either the lock or unlock position and holding it there for at least three seconds. Turning the key to the lock position will close all of the windows. Turning the key to the unlock position will open all of the windows. This function can accidentally be activated when working around or with the driver side door cylinder lock rod or door latch causing the windows to abruptly open or close. To avoid personal injury, always disconnect the battery ground cable when working on or near the driver side door cylinder lock rod or door latch.

Lock Cylinder Repair

Individual lock cylinders are repaired by discarding the inoperative cylinder and building a new lock cylinder using the appropriate lock repair package. The lock repair package includes a detailed instruction sheet to build the new lock cylinder to the current key code of the vehicle.

Luggage Compartment Remote Control Lock Switch

Refer to [Section 501-14B](#) for diagnostics.

Power Locks

The door lock system consists of:

- interior front door latch remote control assembly
- front door latch and cable assembly
- exterior door handle and front door latch actuating rod
- lock cylinder rod
- door latch striker plate

- door lock cylinder
- adjunct actuator
- circuit wiring and circuit protection
- front door lock switch

Refer to [Section 501-14B](#) for diagnostics.

Theft Shield

The theft shield is:

- located inside the driver door panel.
- fastened near the bottom of the door and the door handle.

Trunk Release Lockout Switch

The trunk release lockout switch is:

- located within the glove compartment.
 - disables the trunk release switch.
-

Locks, Latches and Mechanisms

Refer to [Section 501-14B](#) for power door lock diagnostics.

Refer to [Section 501-14B](#) for luggage compartment lid remote control lock switch diagnostics.

Latch —Front Door

Removal and Installation

 **WARNING:** Disconnect the battery ground cable when working on or near the driver side door cylinder lock rod or door latch. Failure to follow these instructions may result in personal injury.

Driver and Passenger Front Door

1. Disconnect the battery ground cable (14301). For additional information, refer to [Section 414-01](#).
2. Remove the front door trim panel. For additional information, refer to [Section 501-05](#).
3. Remove the lower theft shield screw.

4. Remove the nut and position the theft shield aside .

Driver Door Only

5. Remove the nut and the lock cylinder.

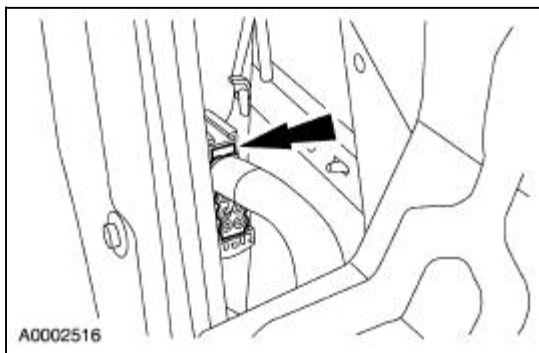

Driver and Passenger Front Door

6. Release the clip and disconnect the exterior door handle actuator rod.
 - If equipped, disconnect the door lock cylinder switch electrical connector.

7. Disconnect the electrical connector.

8. Remove the door latch screws.

9. Remove the interior handle actuating cable.

10. Remove the door latch.

11. To install, reverse the removal procedure.

Latch —Rear Door

Removal and Installation

1. Remove the rear door trim panel. For additional information, refer to [Section 501-05](#).
2. Release the clip and disconnect the exterior door handle actuating rod.

3. Remove the door latch screws.

4. Disconnect the electrical connector.

5. Remove the interior door handle release cable and remove the rear door latch.

6. To install, reverse the removal procedure.

Handle —Exterior Front Door

Removal and Installation

Driver and Passenger Front Door

WARNING: Disconnect the battery ground cable when working on or near the driver side door cylinder lock rod or door latch. Failure to follow these instructions may result in personal injury.

1. Disconnect the battery ground cable (14301). For additional information, refer to [Section 414-01](#).
2. Remove the front door trim panel. For additional information, refer to [Section 501-05](#).
3. Remove the lower theft shield screw.

4. Remove the nut and position the theft shield aside.

5. Release the clip and disconnect the exterior door handle actuating rod.
 - If equipped, disconnect the door lock cylinder switch electrical connector.

6. Remove the nut and position the door lock cylinder aside.

Driver and Passenger Front Door

7. Remove the nut and the exterior door handle.

8. To install, reverse the removal procedure.
-

Handle —Exterior Rear Door

Removal and Installation

1. Remove the rear door trim panel. For additional information, refer to [Section 501-05](#).
2. Release the clip and disconnect the exterior door handle actuator rod.

3. Remove the grommet.

4. Remove the nuts and exterior door handle.

5. To install, reverse the removal procedure.

Handle —Interior Door

Special Tool(s)

Removal and Installation

1. Disconnect the battery ground cable (14301). For additional information, refer to [Section 414-01](#).
2. Remove the door trim panel. For additional information, refer to [Section 501-05](#).
3. **NOTE:** Using the special tool is required to install the rivets.

Remove the rivets.

4. Release the cable and remove the interior door handle.

5. To install, reverse the removal procedure.

Lock Cylinder —Door

Removal and Installation

⚠ WARNING: Disconnect the battery ground cable when working on or near the driver side door cylinder lock rod or door latch. Failure to follow these instructions may result in personal injury.

NOTE: Individual lock cylinders are repaired by discarding the inoperative cylinder and building a new lock cylinder using the appropriate lock repair package. The lock repair package includes a detailed instruction sheet to build the new lock cylinder to the current key code of the vehicle.

1. Disconnect the battery ground cable (14301). For additional information, refer to [Section 414-01](#).
2. Remove the front door trim panel. For additional information, refer to [Section 501-05](#).
3. Remove the lower theft shield screw.

4. Remove the nut and the theft shield.

5. Remove the lock cylinder nut and remove the lock cylinder.
 - If equipped, disconnect the door lock cylinder switch electrical connector.

6. To install, reverse the removal procedure.

Latch Remote Control —Fuel Door Release

Removal and Installation

1. Remove the fuel filler cap.
2. Remove the bolts and position the fuel door release latch remote control aside.

3. Disconnect the electrical connector and remove the latch remote control.

4. To install, reverse the removal procedure.
-

Switch —Fuel and Luggage Compartment Lid Release

Removal and Installation

1. Remove the instrument panel steering column cover.

2. Disconnect the electrical connector.

3. Remove the fuel luggage compartment lid release switch.

4. To install, reverse the removal procedure.

Switch —Luggage Compartment Lid Lockout

Removal and Installation

1. Remove the glove compartment. For additional information, refer to [Section 501-12](#).
2. Remove the screws and the luggage compartment lid lockout switch.

3. To install, reverse the removal procedure.
-

Keyless Entry

The keyless entry system consists of the following:

- driver door module (DDM)
- four button remote transmitter
- front electronic module (FEM)
- rear electronic module (REM)

For removal and installation of the actuator, refer to [Section 501-14A](#).

For removal and installation of the driver door module (DDM), refer to [Section 419-10](#).

For removal and installation of the rear electronic module (REM), refer to [Section 419-10](#).

For removal and installation of the front electronic module (FEM), refer to [Section 419-10](#).

Keyless Entry

Refer to Wiring Diagrams Section [501-14B](#) for schematic and connector information.

Special Tool(s)

 ST1217-A	New Generation STAR (NGS) Tester 418-F048 (007-00500) or equivalent
 ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Principles of Operation

The rear electronics module (REM) controls the output functions of the door locks for the following:

- Passenger front door lock actuator
- Passenger rear door lock actuator
- Driver rear door lock actuator

The REM controls the input functions of the door locks for the following:

- Passenger door lock and unlock switch

The driver door module (DDM) controls the output functions of the door locks for the following:

- Driver door lock actuator

The DDM controls the input functions of the door locks for the following:

- Driver door lock and unlock switch

Operating commands for the passenger front, passenger rear and driver rear lock actuators are received in two forms: the standard corporate protocol (SCP) communication network from the DDM or directly from the passenger door lock and unlock switch, which is hardwired to the REM. The driver door lock and unlock switch is hardwired to the DDM. When the driver switch is activated, the DDM will activate the driver door lock actuator and also sends a message through the SCP network. In turn, the REM will output the desired command to the appropriate lock actuators. When the passenger door lock and unlock switch is activated, the REM will activate the lock actuators, which it controls, and it will also send a message through the SCP network to the DDM to activate the driver door lock actuator.

Operating commands for the driver actuator are received in two forms: through the SCP communication network from the REM or directly from the driver door lock and unlock switch, which is hardwired to the DDM. The passenger door lock and unlock switch is hardwired to the REM. When the passenger switch is activated, the REM will activate the passenger front, passenger rear, and driver rear door lock actuators and also send a message through the SCP network. In turn, the DDM will output the desired command to the driver front door lock actuator. When the driver door lock and unlock switch is activated, the DDM will activate the driver lock actuator, which it controls, and it will also send a message through the SCP network to the REM to activate the appropriate door lock actuators.

Operating commands for the luggage compartment release lock motor are received in two forms: directly from the luggage compartment release switch which is hardwired to the REM, or through the SCP network from the DDM. When the luggage compartment release switch is activated, the REM will activate the luggage compartment lock actuator, which is hardwired to the REM. The luggage compartment unlock operation is also possible when activated from the remote transmitter through the DDM, with the DDM sending a message over the SCP network. The REM will then activate the luggage compartment release motor.

The DDM receives inputs from the remote transmitter(s) and delivers outputs enabling the driver to lock and unlock the vehicle's power lock system, or to arm and disarm the perimeter alarm. The DDM can be programmed to accept up to four transmitter ID codes from four remote transmitters.

Remote locking and unlocking of the doors is accomplished by the DDM receiving a command message from the remote transmitter. The DDM then processes the command and sends a signal directly to the driver door lock actuator, and sends a message through the SCP network, to the REM which will drive the appropriate passenger door lock actuators. Fault management will disable the remote locking and unlocking feature in the event of an ignition switch or PRNDL invalid or missing message to the front electronic module (FEM).

All power door locks and the luggage compartment release motor are powered by the switched system power (SSP) feature. A failure of any or all of the SSP features could cause inoperative power door locks. When diagnosing power door locks, it is essential to determine if all the related symptoms and DTCs are controlled by the SSP feature.

Inspection and Verification

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Door lock mechanisms 	<ul style="list-style-type: none"> ● Central junction box (CJB) Fuses: <ul style="list-style-type: none"> ■ 222 (10A) ■ 207 (5A) ● Battery junction box (BJB) Fuses: <ul style="list-style-type: none"> ■ 401 (15A) ■ 422 (20A) ■ 425 (40A) ● DDM ● REM ● FEM ● Circuitry ● Remote transmitter

3. If the concern remains after the inspection, connect the New Generation STAR (NGS) Tester to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the NGS menu. If the NGS does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
4. If the NGS still does not communicate with the vehicle, refer to the New Generation STAR (NGS) Tester manual.
5. Carry out the DATA LINK DIAGNOSTICS. If the NGS responds with:
 - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for DDM, go to Pinpoint Test A.
 - NO RESP/NOT EQUIP for REM, go to Pinpoint Test B.
 - NO RESP/NOT EQUIP for FEM, go to Pinpoint Test R.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs, and carry out self-test diagnostics for the DDM, FEM or REM.
6. If the DTCs retrieved are related to the concern, go to DDM Diagnostic Trouble Code (DTC) Index, REM Diagnostic Trouble Code (DTC) Index, FEM Diagnostic Trouble Code (DTC) Index, or SSP Relay Index to continue diagnostics.
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1309	Power Door Lock Circuit Short to Ground	DDM	GO to Pinpoint Test C .

Pinpoint Tests

PINPOINT TEST A: NO COMMUNICATION WITH THE DRIVER DOOR MODULE (DDM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK CIRCUITS 29-AJ80 (OG) AND 29S-AJ86 (OG/BU) FOR VOLTAGE	
NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p>  <p>2</p>  <p>DDM C501a</p> <p>3</p>  <p>4</p>	<p>4</p> <p>Measure the voltage between DDM C501a pin 11, circuit 29-AJ80 (OG),</p>

A0006301

harness side and ground; and between DDM C501a pin 12, circuit 29S-AJ86 (OG/BU), harness side and ground.

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [A2](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

A2 CHECK CIRCUITS 31-AJ80B (BK/OG) AND 91-AJ80 (BN/BU) FOR OPENS

1

2

A0006302

2 Measure the resistance between DDM C501a pin 7, circuit 91-AJ80 (BN/BU), harness side and ground; and between DDM C501a pin 8, circuit 31-AJ80B (BK/OG), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuits in question. TEST the system for normal operation.

PINPOINT TEST B: NO COMMUNICATION WITH THE REAR ELECTRONIC MODULE (REM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK CIRCUIT 29-DK31 (OG/BK) FOR VOLTAGE	

1

2

REM C420d

3

REM C420c

4

5

A0006299

5 Measure the voltage between REM C420d pin 3, circuit 29-DK31 (OG/BK), harness side and ground.

• Is the voltage greater than 10 volts?

→ Yes
GO to [B2](#).

→ No
REPAIR the circuit. TEST the system for normal operation.

B2 CHECK CIRCUITS 29S-DK31 (OG/BK), 31-DK30D (BK), 31-DK30E (BK), 31-DK30F (BK), 31-DK30G (BK) AND 31-DK30H (BK/OG), FOR OPENS

1

2

REM C420b

3

3 Using the following table, measure the

A0006300

resistance between REM connectors,
harness side and ground:

REM	Pin	Circuit
C420c	13	29S-DK31 (OG/BK)
C420c	12	31-DK30E (BK)
C420c	11	31-DK30D (BK)
C420c	26	31-DK30G (BK)
C420c	25	31-DK30F (BK)
C420b	12	31-DK30H (BK/OG)

● Is the resistance less than 5 ohms?

→ Yes

REFER to [Section 418-00](#).

→ No

REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST C: ALL DOOR LOCKS ARE INOPERATIVE — FROM DRIVER DOOR SWITCH

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST — DDM	<p>1 Use the recorded DDM DTCs from the continuous and on-demand self-test.</p> <p>● Are any DDM DTCs recorded?</p> <p>→ Yes If DTC B1309 or DTC B1341, GO to C4.</p> <p>For all other DDM DTCs, REFER to the DDM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to C2.</p>
C2 CHECK DRIVER DOOR LOCK SWITCH AND CIRCUITS — MONITOR THE DDM PID DR_LOCK AND DR_UNLK	
NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p>  <p>2</p>	

NGS

3

4

4

Monitor the DDM PIDs DR_LOCK and DR_UNLK, while locking and unlocking the driver power door lock switch.

- Do the DDM PID values agree with the driver power door lock switch positions?

→ Yes

INSTALL a new DDM. For additional information, REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ No

If the PID(s) read YES at all times GO to [C3](#).

If the PID(s) read NO at all times GO to [C5](#).

C3 CHECK DRIVER POWER DOOR LOCK SWITCH

1

2

Driver Power Door Lock Switch C505

3

Carry out the driver power door lock switch component test. Refer to Wiring Diagrams Section 700-09-00, Component Testing.

- Is the driver power door lock switch OK?

→ Yes

GO to [C4](#).

→ No

INSTALL a new driver power door lock switch. REFER to [Section 501-14A](#).

REPEAT the self-test. CLEAR the DTCs.

C4 CHECK CIRCUITS 8-AA10 (WH/BK) AND 8-AA11 (WH/VT) FOR SHORT TO GROUND

1

DDM C501d

2

2

Measure the resistance between DDM C501d pin 23, circuit 8-AA10 (WH/BK), harness side and ground; and between DDM C501d pin 24, circuit 8-AA11 (WH/VT), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit(s) in question. REPEAT the self-test. CLEAR the DTCs.

C5 CHECK DRIVER POWER DOOR LOCK SWITCH

1

2

Driver Power Door Lock Switch C505

3

Carry out the driver power door lock switch component test. Refer to Wiring Diagrams Section 700-09-00, Component Testing.

- Is the driver power door lock switch OK?

→ **Yes**
GO to [C6](#).

→ **No**
INSTALL a new driver power door lock switch. REFER to [Section 501-14A](#).
REPEAT the self-test. CLEAR the DTCs.

C6 CHECK CIRCUIT 31-LH28 (BK) FOR OPEN

1

1 Measure the resistance between driver power door lock switch C505 pin 4, circuit 31-LH28 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [C7](#).

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

C7 CHECK CIRCUITS 8-AA10 (WH/BK) AND 8-AA11 (WH/VT) FOR OPEN

1

DDM C501d

2

2 Measure the resistance between DDM C501d pin 23, circuit 8-AA10 (WH/BK), harness side and driver power door lock switch C505 pin 1, circuit 8-AA10 (WH/BK), harness side; and between DDM C501d pin 24, circuit 8-AA11 (WH/VT), harness side and driver power door lock switch C505 pin 2, circuit 8-AA11 (WH/VT), harness side.

● Are the resistances less than 5 ohms?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**

REPAIR the circuit(s) in question.
 REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST D: ALL DOOR LOCKS ARE INOPERATIVE — FROM PASSENGER DOOR SWITCH

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>D1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST — REM</p>	<p>1 Use the recorded REM DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any REM DTCs recorded? <p>→ Yes For DTC B1300 or B1310, GO to D3.</p> <p>For all other REM DTCs, REFER to the REM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to D2.</p>
<p>D2 CHECK PASSENGER DOOR LOCK SWITCH AND CIRCUITS — MONITOR THE REM PID PD_LOCK AND PD_UNLK</p>	<p>NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.</p>
<p>1</p>  <p>2</p>  <p>NGS</p> <p>3</p>  <p>4</p> 	<p>4 Monitor the REM PIDs PD_LOCK and PD_UNLK, while locking and unlocking the passenger door using the passenger power door lock switch.</p> <ul style="list-style-type: none"> ● Do the REM PID values agree with the passenger power door lock switch positions? <p>→ Yes INSTALL a new REM. REFER to Section</p>

[419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
If the PID(s) read YES at all times GO to [D3](#).

If the PID(s) read NO at all times GO to [D5](#).

D3 CHECK PASSENGER POWER DOOR LOCK SWITCH

1

2

Passenger Power Door Lock Switch C605

3 Carry out the passenger power door lock switch component test. Refer to Wiring Diagrams Section 700-09-00, Component Testing.

● **Is the passenger power door lock switch OK?**

→ **Yes**
GO to [D4](#).

→ **No**
INSTALL a new passenger power door lock switch. REFER to [Section 501-14A](#). REPEAT the self-test. CLEAR the DTCs.

D4 CHECK CIRCUITS 8-AA20 (WH/BU) AND 8-AA21 (WH/GN) FOR SHORT TO GROUND

1

REM C420c

2

A0004041

2 Measure the resistance between REM C420c pin 20, circuit 8-AA20 (WH/BU), harness side and ground; and between REM C420c pin 21, circuit 8-AA21 (WH/GN), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
 INSTALL a new REM. REFER to [Section 419-10](#) . REPEAT the self-test. CLEAR the DTCs.

→ **No**
 REPAIR the circuit(s) in question. REPEAT the self-test. CLEAR the DTCs.

D5 CHECK PASSENGER POWER DOOR LOCK SWITCH

1

2

Passenger Power Door Lock Switch C605

3 Carry out the passenger power door lock switch component test. Refer to Wiring Diagrams Section 700-09-00, Component Testing.

- Is the passenger power door lock switch OK?

→ **Yes**
 GO to [D6](#) .

→ **No**
 INSTALL a new passenger power door lock switch. REFER to [Section 501-14A](#) . REPEAT the self-test. CLEAR the DTCs.

D6 CHECK CIRCUIT 31-LH42 (BK) FOR OPEN

1

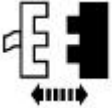

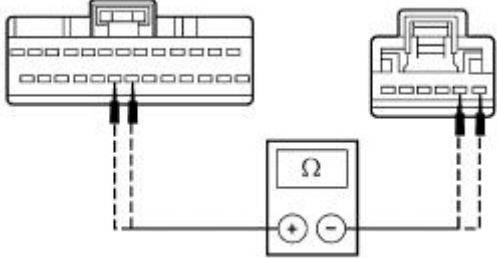

A0004130

1 Measure the resistance between passenger power door lock switch C605 pin 4, circuit 31-LH42 (BK), harness side and ground.

- Is the resistance less than 5 ohms?

	<p>→ Yes GO to D7.</p> <p>→ No REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.</p>
--	--

D7 CHECK CIRCUITS 8-AA20 (WH/BU) AND 8-AA21 (WH/GN) FOR OPEN

<p>1</p>  <p>REM C420c</p> <p>2</p>  <p>A0004113</p>	<p>2 Measure the resistance between REM C420c pin 20, circuit 8-AA20 (WH/BU), harness side and passenger power door lock switch C605 pin 1, circuit 8-AA20 (WH/BU), harness side; and between REM C420c pin 21, circuit 8-AA21 (WH/GN), harness side and passenger power door lock switch C605 pin 2, circuit 8-AA21 (WH/GN), harness side.</p> <p>● Are the resistances less than 5 ohms?</p> <p>→ Yes INSTALL a new REM. REFER to Section 419-10. REPEAT the self-test. CLEAR the DTCs.</p> <p>→ No REPAIR the circuit(s) in question. REPEAT the self-test. CLEAR the DTCs.</p>
--	--

PINPOINT TEST E: ALL DOOR LOCKS ARE INOPERATIVE — FROM DRIVER DOOR LOCK CYLINDER

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST — DDM	<p>1 Use the recorded DDM DTCs from the continuous and on-demand self-test.</p> <p>● Are any DDM DTCs recorded?</p> <p>→ Yes For DTC B2112 or DTC B2116, GO to E3.</p> <p>For all other DDM DTCs, REFER to the</p>

DDM Diagnostic Trouble Code (DTC) Index.

→ **No**
GO to [E2](#).

E2 CHECK DRIVER DOOR LOCK CYLINDER AND CIRCUITS — MONITOR THE DDM PID DRLKCYL AND DR_DSRM

NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.

1

2

NGS

3

4

4

Monitor the DDM PIDs DRLKCYL AND DR_DSRM, while locking and unlocking the driver door using the driver door lock cylinder.

5

● **Do the DDM PID values agree with the driver door lock cylinder positions?**

→ **Yes**

INSTALL a new DDM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**

GO to [E3](#).

E3 CHECK CIRCUITS 31S-AA78 (BK/BU) AND 31S-AA79 (BK/WH) FOR SHORT TO GROUND

1

2

DDM C501c

3

3

Measure the resistance between DDM

A0003773

C501c pin 16, circuit 31S-AA78 (BK/BU), harness side and ground; and between DDM C501c pin 17, circuit 31S-AA79 (BK/WH), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
GO to [E5](#).

→ **No**
GO to [E4](#).

E4 CHECK DRIVER DOOR LOCK ACTUATOR FOR SHORT TO GROUND

1

Driver Door Lock Actuator C525

2

A0003773

2 Measure the resistance between DDM C501c pin 16, circuit 31S-AA78 (BK/BU), harness side and ground; and between DDM C501c pin 17, circuit 31S-AA79 (BK/WH), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
INSTALL a new driver door lock actuator. REFER to [Section 501-14A](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit(s) in question. REPEAT the self-test. CLEAR the DTCs.

E5 CHECK DDM FOR INTERNAL SHORT TO GROUND

1

2

Driver Door Lock Actuator C525

3

3

Measure the resistance between driver door lock actuator C525 pin 7, circuit 31S-AA78 (BK/BU), harness side and ground; and between driver door lock actuator C525 pin 5, circuit 31S-AA79 (BK/WH), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
GO to [E6](#).

→ **No**
INSTALL a new DDM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

E6 CHECK CIRCUIT 31-AA58 (BK) FOR OPEN

1

1

Measure the resistance between driver door lock actuator C525 pin 6, circuit 31-AA58 (BK), harness side and ground.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [E7](#).

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

E7 CHECK DRIVER SET AND RESET SWITCH

1

Driver Door Lock Actuator C525

2

DDM C501c

3

A0003773

3

Measure the resistance between DDM C501c pin 16, circuit 31S-AA78 (BK/BU), harness side and ground, while turning the key cylinder to the SET position; and between DDM C501c pin 17, circuit 31S-AA79 (BK/WH), harness side and ground, while turning the key cylinder to the RESET position.

- Are the resistances less than 5 ohms?

→ Yes

INSTALL a new DDM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ No

GO to [E8](#).

E8 CHECK CIRCUITS 31S-AA78 (BK/BU) AND 31S-AA79 (BK/WH) FOR OPEN

1

Driver Door Lock Actuator C525

2

A0004115

2

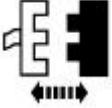

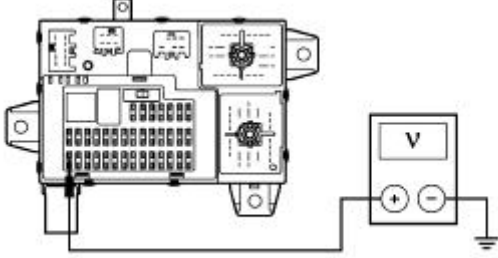

Measure the resistance between DDM C501c pin 16, circuit 31S-AA78 (BK/BU), harness side and driver door lock actuator C525 pin 7, circuit 31S-AA78 (BK/BU), harness side; and between DDM C501c pin 17, circuit 31S-AA79 (BK/WH), harness side and driver door lock actuator C525 pin 5, circuit 31S-AA79 (BK/WH), harness side.

- Are the resistances less than 5 ohms?

→ **Yes**
 INSTALL a new driver door lock actuator.
 REFER to [Section 501-14A](#) . REPEAT
 the self-test. CLEAR the DTCs.

→ **No**
 REPAIR the circuit(s) in question.
 REPEAT the self-test. CLEAR the DTCs.

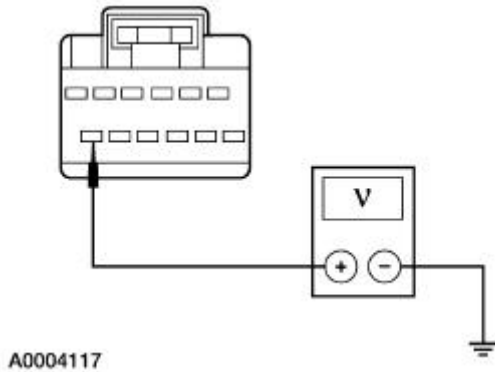

PINPOINT TEST F: A SINGLE DOOR LOCK IS INOPERATIVE — DRIVER DOOR

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK CENTRAL JUNCTION BOX FUSE (CJB) 222 (10A) FOR VOLTAGE	
NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p>  <p>CJB Fuse 222 (10A)</p> <p>2</p>  <p>A0004116</p>	<p>2</p> <p>Measure the voltage between CJB Fuse 222 (10A) pin 1, circuit 30-DD3 (RD/OG), component side and ground.</p> <ul style="list-style-type: none"> • Is the voltage greater than 10 volts? <p>→ Yes RECONNECT the CJB Fuse 222 (10A).GO to F2.</p> <p>→ No REPAIR circuit 30-DD3 (RD/OG). REPEAT the self-test. CLEAR the DTCs.</p>
F2 CHECK CIRCUIT 29S-AJ86 (OG/BU) FOR OPEN	
<p>1</p>  <p>2</p>  <p>DDM C501a</p>	

3

4

4 Measure the voltage between DDM C501a pin 12, circuit 29S-AJ86 (OG/BU), harness side and ground.

• Is the voltage greater than 10 volts?

→ Yes
GO to [F3](#).

→ No
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

F3 CHECK DRIVER DOOR LOCK OPERATION USING ACTIVE COMMANDS

1

2

DDM C501a

3

NGS

4

5

5 Trigger the DDM active commands DD LOCK and DD UNLOCK ON and OFF.

• Do the DDM active commands DD

LOCK and DD UNLOCK operate correctly?

- **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#) . REPEAT the self-test. CLEAR the DTCs.
- **No**
GO to [F4](#) .

F4 CHECK DDM LOCK AND UNLOCK OUTPUTS USING ACTIVE COMMANDS

1

2

Driver Door Lock Actuator C525

3

4

A0004118

- 4 Measure the voltage between driver power door lock actuator C525 pin 2, circuit 33-AA10 (YE/BK), harness side and ground, while triggering the DDM active command DD LOCK to ON; and measure the voltage between driver power door lock actuator C525 pin 10, circuit 32-AA11 (WH/VT), harness side and ground, while triggering the DDM active command DD UNLOCK to ON.

● **Are the voltages greater than 10 volts?**

- **Yes**
INSTALL a new door lock actuator. REFER to [Section 501-14A](#) . REPEAT the self-test. CLEAR the DTCs.
- **No**
GO to [F5](#) .

F5 CHECK CIRCUITS 33-AA10 (YE/BK) AND 32-AA11 (WH/VT) FOR OPEN

1

2

DDM C501c

3

3

Measure the resistance between driver power door lock actuator C525 pin 2, circuit 33-AA10 (YE/BK), harness side and DDM C501c pin 8, circuit 33-AA10 (YE/BK) harness side; and between driver power door lock actuator C525 pin 10, circuit 32-AA11 (WH/VT) harness side and DDM C501c pin 9, circuit 32-AA11 (WH/VT) harness side.

- Are the resistances less than 5 ohms?

→ **Yes**
GO to [F6](#).

→ **No**
REPAIR the circuit(s) in question.
REPEAT the self-test. CLEAR the DTCs.

F6 CHECK CIRCUITS 33-AA10 (YE/BK) AND 32-AA11 (WH/VT) FOR SHORT TO GROUND

1

1

Measure the resistance between driver power door lock actuator C525 pin 2, circuit 33-AA10 (YE/BK), harness side and ground; and between driver power door lock actuator C525 pin 10, circuit 32-AA11 (WH/VT), harness side and ground.

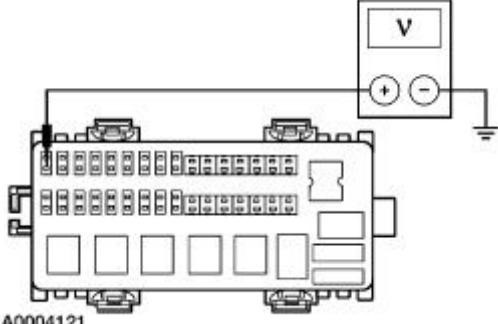

- Are the resistances greater than 10,000 ohms?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit(s) in question.
REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST G: MORE THAN ONE DOOR LOCK IS INOPERATIVE

— PASSENGER DOOR, RIGHT REAR DOOR, AND LEFT REAR DOOR

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST — REM	
	<p>1 Use the recorded REM DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes REFER to the REM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to G2.</p>
G2 CHECK BATTERY JUNCTION BOX (BJB) FUSE 401 (15A) FOR VOLTAGE	
NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p>  <p>BJB Fuse 401 (15A)</p> <p>2</p>  <p>A0004121</p>	<p>2 Measure the voltage between BJB Fuse 401 (15A) pin 1, component side and ground.</p> <ul style="list-style-type: none"> ● Is the voltage greater than 10 volts? <p>→ Yes RECONNECT the BJB Fuse 401 (15A). GO to G3.</p> <p>→ No REPAIR the BJB. REPEAT the self-test. CLEAR the DTCs.</p>
G3 CHECK CIRCUIT 29S-DK31 (OG/BK) FOR OPEN	
<p>1</p> 	

2

REM 420c

3

4

A0004122

4

Measure the voltage between REM C420c pin 13, circuit 29S-DK31 (OG/BK), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [G4](#).

→ **No**
REPAIR circuit 29S-DK31 (OG/BK).
REPEAT the self-test. CLEAR the DTCs.

G4 CHECK REM OUTPUT USING ACTIVE COMMANDS

1

2

REM 420c

3

NGS

4

5

5

Trigger the REM active commands LR LOCK and LR UNLOCK ON and OFF while observing the passenger, right rear and left rear lock actuators.

- Do the REM active commands LR LOCK and LR UNLOCK operate correctly?

→ Yes

INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ No

If only an individual lock does not operate, REFER to Symptom Chart.

If two or more do not operate, GO to [G5](#).

G5 CHECK CIRCUITS 33-AA2 (YE/RD), 32-AA1 (WH/RD), 33-AA15 (YE/GN) AND 32-AA16 (WH/BK) FOR SHORT TO GROUND

1

2

REM C420c

3

A0004123

3

Measure the resistance between the REM connector, harness side and ground as follows:

Connector Pin	Circuit
C420c Pin 5	33-AA2 (YE/RD)
C420c Pin 6	32-AA1 (WH/RD)
C420c Pin 4	33-AA15 (YE/GN)
C420c Pin 7	32-AA16 (WH/BK)

- Are the resistances greater than 10,000 ohms?

→ Yes

INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ No

REPAIR the circuit(s) in question.

REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST H: MORE THAN ONE DOOR LOCK IS INOPERATIVE — PASSENGER DOOR AND RIGHT REAR DOOR

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 RETRIEVE THE RECORDED DTCs FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST — REM	<p>1 Use the recorded REM DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none">● Are any DTCs recorded? <p>→ Yes REFER to the REM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to H2.</p>
H2 CHECK REM OUTPUT USING ACTIVE COMMANDS	
<p>1</p>  <p>2</p>  <p>NGS</p> <p>3</p>  <p>4</p> 	<p>4 Trigger the REM active commands LR LOCK and LR UNLOCK ON and OFF while observing the passenger and right rear lock actuators.</p> <ul style="list-style-type: none">● Do the REM active commands LR LOCK and LR UNLOCK operate correctly? <p>→ Yes INSTALL a new REM. REFER to Section 419-10. REPEAT the self-test. CLEAR the DTCs.</p> <p>→ No GO to H3.</p>

H3 CHECK REM OUTPUT TO PASSENGER AND RIGHT REAR LOCK ACTUATORS

NOTE: Disconnect the inoperative lock actuator. If both actuators are inoperative you must disconnect both actuators.

1

2

Right Rear Door Lock Actuator C804

3

Passenger Door Lock Actuator C609

4

5

A0004118

6

A0004118

5

Measure the voltage between passenger door lock actuator C609 pin 2, circuit 33-AA20 (YE/BU), harness side and ground, while triggering the REM active command LR LOCK to ON; and measure the voltage between passenger door lock actuator C609 pin 10, circuit 32-AA21 (WH/GN), harness side and ground, while triggering the REM active command LR UNLOCK to ON.

6

Measure the voltage between right rear door lock actuator C804 pin 2, circuit 33-AA25 (YE/RD), harness side and ground, while triggering the REM active command LR LOCK to ON; and measure the voltage between right rear door lock actuator C804 pin 10, circuit 32-AA26 (WH/BU), harness side and ground, while triggering the REM active command LR UNLOCK to ON.

- Are the voltages greater than 10 volts?

→ Yes

INSTALL a new door lock actuator(s). REFER to [Section 501-14A](#). REPEAT

the self-test. CLEAR the DTCs.

→ **No**
GO to [H4](#).

H4 CHECK CIRCUITS 33-AA20 (YE/BU), 32-AA21 (WH/GN), 33-AA25 (YE/RD) AND 32-AA26 (WH/BU) FOR OPEN

NOTE: Disconnect the inoperative lock actuator. If both actuators are inoperative you must disconnect both actuators.

1

2

REM C420c

3

A0004124

4

A0004124

3 Measure the resistance between passenger door lock actuator C609 pin 2, circuit 33-AA20 (YE/BU), harness side and REM C420c pin 5, circuit 33-AA25 (YE/RD), harness side; and between passenger door lock actuator C609 pin 10, circuit 32-AA21 (WH/GN), harness side and REM C420c pin 6, circuit 32-AA26 (WH/BU), harness side.

4 Measure the resistance between right rear door lock actuator C804 pin 2, circuit 33-AA25 (YE/RD), harness side and REM C420c pin 5, circuit 33-AA25 (YE/RD), harness side; and between rear door lock actuator C804 pin 10, circuit 32-AA26 (WH/BU), harness side and REM C420c pin 6, circuit 32-AA26 (WH/BU), harness side.

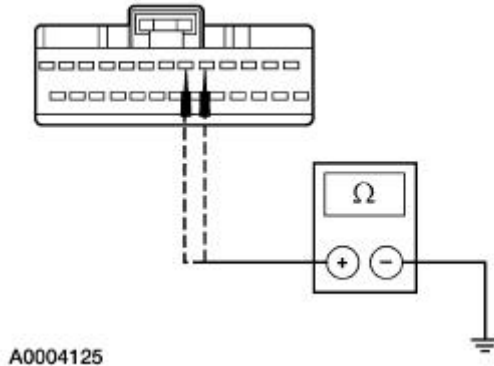

● **Are the resistances less than 5 ohms?**

→ **Yes**
GO to [H5](#).

→ **No**
REPAIR the circuit(s) in question.
REPEAT the self-test. CLEAR the DTCs.

H5 CHECK CIRCUITS 33-AA25 (YE/RD) AND 32-AA26 (WH/BU) FOR SHORT TO GROUND

NOTE: Disconnect the inoperative lock actuator. If both actuators are inoperative you must disconnect both actuators.

<div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;">1</div>  <p style="margin-top: 20px;">A0004125</p>	<div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;">1</div> <p>Measure the resistance between REM C420c pin 5, circuit 33-AA25 (YE/RD) harness side and ground; and between REM C420c pin 6, circuit 32-AA26 (WH/BU), harness side and ground.</p> <ul style="list-style-type: none"> ● Are the resistances greater than 10,000 ohms? <p>→ Yes INSTALL a new REM. REFER to Section 419-10. REPEAT the self-test. CLEAR the DTCs.</p> <p>→ No REPAIR the circuit(s) in question. REPEAT the self-test. CLEAR the DTCs.</p>
--	--

PINPOINT TEST I: A SINGLE DOOR LOCK IS INOPERATIVE — LEFT REAR DOOR

CONDITIONS	DETAILS/RESULTS/ACTIONS
I1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST — REM	<div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;">1</div> <p>Use the recorded REM DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes REFER to the REM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to I2.</p>
I2 CHECK REM OUTPUT USING ACTIVE COMMANDS	
<div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;">1</div> 	<div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;">2</div>

NGS

3

4

4 Trigger the REM active commands LR LOCK and LR UNLOCK ON and OFF while observing the left rear lock actuator.

- Do the REM active commands LR LOCK and LR UNLOCK operate correctly?

→ Yes
INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ No
GO to [13](#).

13 CHECK REM OUTPUT TO LEFT REAR LOCK ACTUATOR

1

2

Left Rear Door Lock Actuator C704

3

4

A0005706

4 Measure the voltage between left rear door lock actuator C704 pin 2, circuit 33-AA15 (YE/GN), harness side and ground, while triggering the REM active command LR LOCK to ON; and measure the voltage between left rear door lock actuator C704 pin 10, circuit 32-AA16 (WH/BK), harness side and ground, while triggering the REM active command LR UNLOCK to ON.

- Are the voltages greater than 10

volts?

→ **Yes**
INSTALL a new door lock actuator.
REFER to [Section 501-14A](#). REPEAT
the self-test. CLEAR the DTCs.

→ **No**
GO to [14](#).

14 CHECK CIRCUITS 33-AA15 (YE/GN) AND 32-AA16 (WH/BK) FOR OPEN

1

2

REM C420c

3

3 Measure the resistance between left rear door lock actuator C704 pin 2, circuit 33-AA15 (YE/GN), harness side and REM C420c pin 4, circuit 33-AA15 (YE/GN), harness side; and between left rear door lock actuator C704 pin 10, circuit 32-AA16 (WH/BK), harness side and REM C420c pin 7, circuit 32-AA16 (WH/BK), harness side.

● **Are the resistances less than 5 ohms?**

→ **Yes**
GO to [15](#).

→ **No**
REPAIR the circuit(s) in question.
REPEAT the self-test. CLEAR the DTCs.

15 CHECK CIRCUITS 33-AA15 (YE/GN) AND 32-AA16 (WH/BK) FOR SHORT TO GROUND

1

1 Measure the resistance between REM C420c pin 4, circuit 33-AA15 (YE/GN), harness side and ground; and between REM C420c pin 7, circuit 32-AA16 (WH/BK), harness side and ground.

A0004141

- Are the resistances greater than 10,000 ohms?

- **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.
- **No**
REPAIR the circuit(s) in question. REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST J: THE LUGGAGE COMPARTMENT DOOR IS INOPERATIVE — FROM RELEASE SWITCH

CONDITIONS	DETAILS/RESULTS/ACTIONS
J1 RETRIEVE THE RECORDED DTCs FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST — REM	<p>1 Use the recorded REM DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> • Are any DTCs recorded? <p>→ Yes For DTC B1551, GO to J3.</p> <p>For all other DTCs, REFER to the REM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to J2.</p>
J2 CHECK REM OUTPUT USING ACTIVE COMMANDS	
NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p> <p>2</p>	

NGS

3

4

4 Trigger the REM active command RELEASE ON.

- Does the REM active command RELEASE operate correctly?

→ Yes
GO to [J3](#).

→ No
GO to the Symptom Chart.

J3 CHECK LUGGAGE COMPARTMENT RELEASE SWITCH INPUT TO REM

NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.

1

2

NGS

3

4

4 Monitor the REM PID DLIDRLS.

5 Depress and release the luggage compartment release switch.

- Does the REM PID DLIDRLS agree with the luggage compartment release switch position?

→ Yes
INSTALL a new REM. REFER to [Section](#)

[419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
REM PID DLIDRLS indicates ON GO to [J4](#).

REM PID DLIDRLS indicates OFF GO to [J6](#).

J4 CHECK LUGGAGE COMPARTMENT RELEASE SWITCH

1

2

Luggage Compartment Release Switch C207

1 Monitor the REM PID DLIDRLS.

- Did the REM PID DLIDRLS change from ON to OFF?

→ **Yes**
INSTALL a new luggage compartment release switch. REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [J5](#).

J5 CHECK CIRCUIT 8-AA30 (WH) FOR SHORT TO GROUND

1

2

REM C420a

3

3 Measure the resistance between REM C420a pin 9, circuit 8-AA30 (WH), harness side and ground.

A0004128

- Is the resistance greater than 10,000 ohms?

- **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.
- **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

J6 CHECK CIRCUIT 8-AA30 (WH) FOR OPEN

1

Luggage Compartment Release Switch C207

2

3

A0004135

- 2 Monitor the REM PID DLIDRLS.
- 3 Connect a 10A fused jumper between luggage compartment release switch C207 pin 6, circuit 8-AA30 (WH), harness side and ground, while monitoring the REM PID DLIDRLS.

- Did the REM PID DLIDRLS change from OFF to ON?

- **Yes**
GO to [J7](#).
- **No**
REPAIR the circuit. REPEAT the self-test.

CLEAR the DTCs.

J7 CHECK LUGGAGE COMPARTMENT RELEASE SWITCH

1

2

A0004136

1

Monitor the REM PID DLIDRLS.

2

Connect a 10A fused jumper between luggage compartment release switch C207 pin 6, circuit 8-AA30 (WH), harness side and luggage compartment release switch C207 pin 5, circuit 31-AA30 (BK), harness side, while monitoring the REM PID DLIDRLS.

● **Did the REM PID DLIDRLS change from OFF to ON?**

→ **Yes**

INSTALL a new luggage compartment release switch. REPEAT the self-test. CLEAR the DTCs.

→ **No**

GO to [J8](#).

J8 CHECK CIRCUIT 31-AA30 (BK) FOR OPEN

1

2

A0004137

2

Measure the resistance between luggage compartment release switch C207 pin 5, circuit 31-AA30 (BK), harness side and ground.

● **Is the resistance less than 5 ohms?**

→ **Yes**

INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

PINPOINT TEST K: THE LUGGAGE COMPARTMENT DOOR IS INOPERATIVE — FROM RELEASE SWITCH AND REMOTE TRANSMITTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: The luggage compartment key cylinder will not arm/disarm the perimeter alarm. Once armed, the perimeter alarm can only be disarmed using the remote transmitter or the driver door lock cylinder switch.</p>	
<p>K1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST — REM</p>	
	<p>1 Use the recorded REM DTCs from the continuous and on-demand self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes REFER to the REM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to K2.</p>
<p>K2 CHECK REM OUTPUT USING ACTIVE COMMANDS</p>	
<p>NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.</p>	
<p>1</p>  <p>2</p>  <p>NGS</p> <p>3</p>  <p>4</p> 	<p>4 Trigger the REM active command RELEASE ON.</p> <ul style="list-style-type: none"> ● Does the luggage compartment unlock?

- **Yes**
INSTALL a new REM. REFER to [Section 419-10](#) . REPEAT the self-test. CLEAR the DTCs.
- **No**
GO to [K3](#) .

K3 CHECK LUGGAGE COMPARTMENT RELEASE SWITCH INPUT TO REM

NOTE: Cycle the ignition switch from OFF to RUN to enable the switched system power feature.

1

1

Monitor the REM PID DLIDRLS.

2

Depress and release the luggage compartment release switch.

- **Does the REM PID DLIDRLS agree with the luggage compartment release switch position?**

→ **Yes**

GO to [K4](#) .

→ **No**

INSTALL a new REM. REFER to [Section 419-10](#) . REPEAT the self-test. CLEAR the DTCs.

K4 CHECK LUGGAGE COMPARTMENT RELEASE SWITCH INPUT TO REM

1

Luggage Compartment Release Solenoid C430

2

3

A0004138

2

Trigger the REM active command RELEASE ON.

3

Measure the voltage between the luggage compartment release solenoid C430 pin 2, circuit 29S-AA83 (OG), harness side and ground.

- **Is the voltage greater than 10 volts?**

→ **Yes**
GO to [K5](#).

→ **No**
GO to [K6](#).

K5 CHECK CIRCUIT 31-AA83 (BK/OG) FOR OPEN

1

2

A0008423

2 Measure the resistance between the luggage compartment release solenoid C430 pin 1, circuit 31-AA83 (BK/OG), harness side and ground.

● **Is the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new luggage compartment release solenoid. REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.

K6 CHECK CIRCUIT 29S-AA83 (OG) FOR OPEN

1

2

REM C420c

3

3 Measure the resistance between REM C420c pin 10, circuit 29S-AA83 (OG) harness side and luggage compartment release solenoid C430 pin 2, circuit 29S-AA83 (OG), harness side.

A0004140

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [K7](#).

→ **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

K7 CHECK CIRCUIT 29S-AA83 (OG) FOR SHORT TO GROUND

1

2

A0005707

2 Measure the resistance between REM C420c pin 10, circuit 29S-AA83 (OG) harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new REM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
REPAIR the circuit. REPEAT the self-test.
CLEAR the DTCs.

PINPOINT TEST L: THE DOORS DO NOT LOCK AND UNLOCK USING THE REMOTE TRANSMITTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
------------	-------------------------

L1 CHECK THE DOOR LOCKS AT THE DRIVER DOOR LOCK SWITCH

1 Check the locks from the driver door lock switch.

- Do the doors lock and unlock?

→ **Yes**
GO to [L2](#).

→ **No**
GO to [Pinpoint Test C](#).

L2 CHECK REMOTE TRANSMITTER BUTTONS WITH NGS TESTER

1

2

NGS

3

4

4 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the lock, then the unlock button on the remote transmitter.

- Does the data received indicate LOCK, then UNLOCK?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [L3](#).

L3 CHECK THE BATTERY IN REMOTE TRANSMITTER

1

1 Install a new battery in the remote transmitter.

2

2 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the lock, then the unlock button on the remote transmitter.

- Does the data received indicate LOCK, then UNLOCK?

→ **Yes**
TEST all remote transmitter functions. REPEAT the self-test. CLEAR the DTCs.

	<p>→ No GO to L4.</p>
<p>L4 CHECK THE PROGRAMMING OF THE REMOTE TRANSMITTER</p>	
<p>2</p> 	<p>1 Reprogram the remote transmitter; REFER to Programming—Remote Keyless Entry Transmitter.</p> <p>2 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the lock, then the unlock button on the remote transmitter.</p> <p>● Does the data received indicate LOCK, then UNLOCK?</p> <p>→ Yes Fault found as remote transmitter not programmed. REPEAT the self-test. CLEAR the DTCs.</p> <p>→ No PROGRAM a new remote transmitter to the vehicle. REFER to Programming—Remote Keyless Entry Transmitter. REPEAT the self-test. CLEAR the DTCs.</p>

PINPOINT TEST M: THE MEMORY SEAT DOES NOT OPERATE CORRECTLY USING THE REMOTE TRANSMITTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>M1 CHECK THE MEMORY SET SWITCH</p>	
	<p>1 Operate the memory seat using the memory set switch.</p> <p>● Does the memory seat operate correctly?</p> <p>→ Yes GO to M2.</p> <p>→ No REFER to Section 501-10.</p>
<p>M2 CHECK REMOTE TRANSMITTER BUTTONS WITH NGS TESTER</p>	
<p>1</p>  <p>2</p>  <p>NGS</p> <p>3</p>	

4

4 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the lock, then the unlock button on the remote transmitter.

● Does the data received indicate LOCK, then UNLOCK?

→ **Yes**
INSTALL a new DDM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [M3](#).

M3 CHECK THE BATTERY IN REMOTE TRANSMITTER

2

1 Install a new battery in the remote transmitter.

2 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the lock, then the unlock button on the remote transmitter.

● Does the data received indicate LOCK, then UNLOCK?

→ **Yes**
TEST all the remote transmitter functions. REPEAT the self-test. CLEAR the DTCs.

→ **No**
GO to [M4](#).

M4 CHECK THE PROGRAMMING OF THE REMOTE TRANSMITTER

2

1 Reprogram the remote transmitter; refer to [Programming—Remote Keyless Entry Transmitter](#).

2 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the lock, then the unlock button on the remote transmitter.

● Does the data received indicate LOCK, then UNLOCK?

→ **Yes**
The remote transmitter was not programmed. REPEAT the self-test. CLEAR the DTCs.

→ **No**
PROGRAM a new remote transmitter to the vehicle. REFER to [Programming—Remote Keyless Entry Transmitter](#). REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST N: THE AUTO-LOCK DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
N1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST — FEM	<p>1 Verify that the Auto-lock feature is ON using the Message Center (MCM) Module. If the Auto-lock feature is OFF, switch to ON and retest</p> <p>2 Use the recorded FEM DTCs from the continuous and on-demand self-test.</p> <p>● Are any FEM DTCs recorded?</p> <p>→ Yes For DTC U1041, carry out the ABS self-test. REFER to Section 206-09A. For DTC U1059, REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual Section 3. For all other FEM DTCs, REFER to the FEM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to N2.</p>
N2 CHECK DRIVER DOOR AJAR PID D_DOOR	<p>1 </p> <p>2  NGS</p> <p>3 </p> <p>4 Close all doors and luggage compartment.</p> <p>5 </p> <p>5 Monitor the FEM driver door ajar PID D_DOOR.</p> <p>● Does the PID read AJAR?</p> <p>→ Yes REFER to Section 417-02.</p> <p>→ No GO to N3.</p>

N3 CHECK PASSENGER DOOR AJAR PID P_DOOR

1

1 Monitor the FEM passenger door ajar PID P_DOOR.

● Does the PID read AJAR?

→ **Yes**
REFER to [Section 417-02](#).

→ **No**
GO to [N4](#).

N4 CHECK LR DOOR AJAR PID LRDR_SW

1

1 Monitor the REM LR door ajar PID LRDR_SW.

● Does the PID read AJAR?

→ **Yes**
REFER to [Section 417-02](#).

→ **No**
GO to [N5](#).

N5 CHECK RIGHT REAR DOOR AJAR PID RRDR_SW

1

1 Monitor the REM RR door ajar PID RRDR_SW.

● Does the PID read AJAR?

→ **Yes**
REFER to [Section 417-02](#).

→ **No**
GO to [N6](#).

N6 CHECK LUGGAGE COMPARTMENT AJAR PID DECKLID

1

1 Monitor the REM luggage compartment ajar PID DECKLID.

● Does the PID read AJAR?

→ **Yes**
REFER to [Section 417-02](#).

	→ No GO to N7 .
N7 CHECK IGNITION SWITCH STATUS	
1 	1 Monitor the FEM ignition switch PID IGN_R. <ul style="list-style-type: none"> ● Does the PID read YES? → Yes INSTALL a new DDM. REFER to Section 419-10 . REPEAT the self-test. CLEAR the DTCs. → No REFER to Section 211-05 .

PINPOINT TEST O: THE SMART LOCK DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
O1 CHECK COURTESY LIGHTS	
	1 Open the driver door. <ul style="list-style-type: none"> ● Do the courtesy lights illuminate? → Yes GO to O2 . → No REFER to Section 417-02 .
O2 CHECK WARNING CHIMES	
1 	1 Open the driver door. <ul style="list-style-type: none"> ● Do the warning chimes operate? → Yes INSTALL a new DDM. REFER to Section 419-10 . REPEAT the self-test. CLEAR the DTCs → No REFER to Section 413-09 .

PINPOINT TEST P: PANIC FEATURE IS INOPERATIVE

--	--

CONDITIONS	DETAILS/RESULTS/ACTIONS
P1 CHECK FEM INPUT	
<p>1 </p> <p>2  NGS</p> <p>3 </p> <p>4 </p>	<p>4 Monitor the FEM PID AL_1.</p> <p>5 Press the PANIC button.</p> <ul style="list-style-type: none"> ● Does the FEM PID indicate PANIC? <p>→ Yes REFER to Section 419-01A.</p> <p>→ No GO to P2.</p>
P2 CHECK THE REMOTE TRANSMITTER LUGGAGE COMPARTMENT RELEASE BUTTON WITH NGS TESTER	
<p>1 </p>	<p>1 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the luggage compartment release button on the remote transmitter.</p> <ul style="list-style-type: none"> ● Does last received data indicate TRUNK? <p>→ Yes INSTALL a new DDM. REFER to Section 419-10. REPEAT the self-test. CLEAR the DTCs.</p> <p>→ No GO to P3.</p>
P3 CHECK THE BATTERY IN THE REMOTE TRANSMITTER	
<p>2 </p>	<p>1 Install a new battery in the remote transmitter.</p> <p>2 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the luggage compartment release button on the remote transmitter.</p>

	<ul style="list-style-type: none"> ● Does last received data indicate TRUNK? <p>→ Yes TEST all remote transmitter functions. REPEAT the self-test. CLEAR the DTCs.</p> <p>→ No GO to P4.</p>
P4 CHECK THE PROGRAMMING OF THE REMOTE TRANSMITTER	
<p>2</p> 	<p>1 Reprogram the remote transmitter. Refer to Programming—Remote Keyless Entry Transmitter.</p> <p>2 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the decklid release button on the remote transmitter.</p> <ul style="list-style-type: none"> ● Does last received data indicate TRUNK? <p>→ Yes The remote transmitter was not programmed. REPEAT the self-test. CLEAR the DTCs.</p> <p>→ No PROGRAM a new remote transmitter to the vehicle. REFER to Programming—Remote Keyless Entry Transmitter. REPEAT the self-test. CLEAR the DTCs.</p>

PINPOINT TEST Q: THE LUGGAGE COMPARTMENT DOOR IS INOPERATIVE USING THE REMOTE TRANSMITTER

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>NOTE: The luggage compartment key cylinder will not arm/disarm the perimeter alarm. Once armed, the perimeter alarm can only be disarmed using the remote transmitter or the driver door lock cylinder switch.</p>	
<p>Q1 TEST LUGGAGE COMPARTMENT RELEASE AT THE LUGGAGE COMPARTMENT RELEASE SWITCH</p>	
	<p>1 Press the luggage compartment release switch.</p> <ul style="list-style-type: none"> ● Did the decklid open? <p>→ Yes GO to Q2.</p> <p>→ No GO to Pinpoint Test K.</p>
<p>Q2 CHECK THE REMOTE TRANSMITTER LUGGAGE COMPARTMENT RELEASE BUTTON WITH NGS TESTER</p>	
<p>1</p>	

2

NGS

3

4

4 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the luggage compartment release button on the remote transmitter.

• Does last received data indicate TRUNK?

→ Yes
INSTALL a new DDM. REFER to [Section 419-10](#). REPEAT the self-test. CLEAR the DTCs.

→ No
GO to [Q3](#).

Q3 CHECK THE BATTERY IN THE REMOTE TRANSMITTER

2

1 Install a new battery in the remote transmitter.

2 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the luggage compartment release button on the remote transmitter.

• Does last received data indicate TRUNK?

→ Yes
TEST all remote transmitter functions. REPEAT the self-test. CLEAR the DTCs.

→ No
GO to [Q4](#).

Q4 CHECK THE PROGRAMMING OF THE REMOTE TRANSMITTER

2

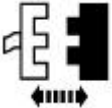

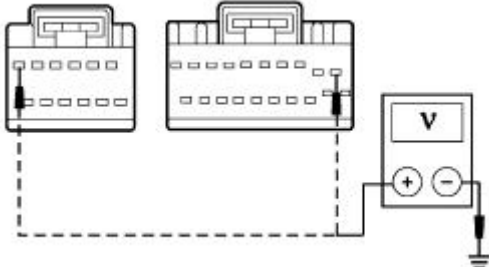

1 Reprogram the remote transmitter. Refer to [Programming—Remote Keyless Entry Transmitter](#).

2 Monitor the DDM FUNCTION TEST TIC/DATA, while pressing the luggage compartment release button on the remote transmitter.

• Does last received data indicate TRUNK?

- **Yes**
The remote transmitter was not programmed. REPEAT the self-test. CLEAR the DTCs.
- **No**
PROGRAM a new remote transmitter to the vehicle. REFER to [Programming—Remote Keyless Entry Transmitter](#). REPEAT the self-test. CLEAR the DTCs.

PINPOINT TEST R: NO COMMUNICATION WITH THE FRONT ELECTRONIC MODULE (FEM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
R1 CHECK CIRCUITS 29-DK20 (OG/GN) AND 29S-DK22 (OG/YE) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1 </p> <p>2  FEM C201c</p> <p>3  FEM C201f</p> <p>4 </p> <p>5 </p> <p>A0006297</p>	<p>5 Measure the voltage between FEM C201c pin 6, circuit 29-DK20 (OG/GN), harness side and ground; and between FEM C201f pin 1, circuit 29S-DK22 (OG/YE) harness side and ground.</p> <ul style="list-style-type: none"> ● Are the voltages greater than 10 volts? <p>→ Yes</p>

GO to [R2](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

R2 CHECK CIRCUITS 31-DK20 (BK/RD), 31-DK20A (BK/RD), 31-DK20B (BK/RD), 31-DK20C (BK/RD) AND 31-DK20D (BK/RD) FOR OPENS

1

2

FEM C201a

3

3 Using the following table, measure the resistance between FEM connectors, harness side and ground:

FEM	Pin	Circuit
C201c	12	31-DK20 (BK/RD)
C201a	11	31-DK20A (BK/RD)
C201a	13	31-DK20B (BK/RD)
C201a	14	31-DK20C (BK/RD)
C201a	15	31-DK20D (BK/RD)

● **Is the resistance less than 5 ohms?**

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

Programming —Remote Keyless Entry Transmitter

Special Tool(s)

	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052 or equivalent
---	--

NOTE: All remote transmitters are programmable and must be set at the same time.

NOTE: To program (or reprogram) the remote transmitters into the driver door module (DDM), carry out the following steps:

1. Connect the New Generation STAR/Service Bay Diagnostic System (diagnostic tool/SBDS) tester. Turn the ignition from OFF to RUN.
2. From diagnostic tool/SBDS: Using the Ford Service Function (FSF) card, select SERVICE BAY FUNCTION.
3. Select DDM.
4. Select KEY FOB PROGRAMMING.
5. Press any button on the remote transmitter.
6. Select the FOB 1, 2, 3, or 4, and select STORE. It may be necessary to select CANCEL more than once to exit the menu.
7. Repeat steps five and six for additional transmitters.
8. **NOTE:** It may be necessary to select CANCEL more than once to exit the menu.

Select CANCEL to exit the menu.

General Specifications

Item	Specification
RH wiper blade adjustment tolerance	12mm (.47in)
LH wiper blade adjustment tolerance	10mm (.39in)

Torque Specifications

Description	Nm	lb-ft	lb-in
Battery ground cable	10	—	89
Degas bottle bolts	10	—	89
Mounting arm and pivot shaft bolts	12	9	—
Pivot arm nuts	25	18	—
Strut support brace bolts	20	15	—
Windshield washer fluid reservoir bolt	6	—	53
Windshield wiper motor bolts	12	9	—
Windshield wiper motor crank bolt	12	9	—

Wipers And Washers

The wiper and washer system consists of:

- pivot arms
 - mounting arm and pivot shaft
 - windshield wiper motor
 - windshield washer fluid pump
 - headlamp washer fluid pump (if equipped)
 - windshield washer fluid reservoir
 - front electronic module (FEM)
 - rear electronic module (REM)
 - rain sensor module (RSM) (if equipped)
-

Wipers And Washers

Refer to Wiring Diagrams Section [501-16](#) for schematic and connector information.

Special Tool(s)

 ST2332-A	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052, or equivalent diagnostic tool
 ST1137-A	73III Automotive Meter 105-R0057 or equivalent
 ST1453-A	Alternator, Regulator, Battery and Starter Tester (ARBST) 010-00725 or equivalent

Principles of Operation

Wipers and Washers

The wiper and washer systems are controlled by the front electronic module (FEM). The wiper/washer portion of the multifunction switch is hardwired to the FEM. When the switch is moved to the desired position, the FEM processes this information and outputs the appropriate command(s) to one of three relays. The relays control the wiper high and low motor speeds and washer pump actuation.

Intermittent wiper speed control can vary dependent upon vehicle speed. This is accomplished by the FEM receiving vehicle speed information from the anti-lock brake control module and throttle position status from the powertrain control module (PCM). When the wiper switch is in any of the intermittent positions, the FEM will process the information from the PCM and anti-lock brake control module and decrease the wiper delay time as vehicle speed increases.

Rain Sensor Wiper Function—Rain Sensor Module

The rain sensor module (RSM) is located on the inside of the windshield below the interior rear view mirror and the direct pattern of the wiper blades, if equipped. When the ignition switch is turned to the RUN position, the RSM starts monitoring both the DELAY/WASH and the wiper mode circuits. When the multifunction switch is placed into the INT and AUTO positions, the rain sensor takes control of the mode circuit. In dry conditions the RSM keeps the mode circuit at the correct voltage for the OFF position. In the presence of moisture the RSM directs the mode circuit into individual low pulse, or continuous LOW or HIGH operation, based on the amount of moisture.

Low Washer Fluid Level Lamp/Indicator

The low washer fluid lamp/indicator feature is controlled by the FEM and instrument cluster. The low washer fluid switch is hardwired to the FEM. If fluid is low, the FEM will send a message via the standard corporate protocol (SCP) communication network to the instrument cluster. The instrument cluster will then process the message and output an audible and visual warning. If equipped with a message center, a warning message will be displayed. For additional information, refer to [Section 413-08](#).

Heated Wiper Park

The heated wiper park feature is controlled by the dual automatic temperature control (DATC) module. For additional information, refer to [Section 501-11](#).

Inspection and Verification

1. Verify the customer concern by operating the windshield wiper and washer system to duplicate the condition.
2. Visually inspect for the obvious signs of mechanical or electrical damage; refer to the following chart.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Wiper blade ● Binding wiper pivot arm ● Binding wiper mounting arm and pivot shaft ● Empty washer reservoir ● Washer hoses 	<ul style="list-style-type: none"> ● Underhood auxiliary junction box (AJB) <ul style="list-style-type: none"> Fuses: <ul style="list-style-type: none"> ■ 102 (10A) ■ 120 (30A) ● Battery junction box (BJB) Fuses: <ul style="list-style-type: none"> ■ 422 (20A) ■ 423 (30A) ■ 424 (30A) ■ 425 (40A) ■ 427 (30A) ■ 432 (30A) ● Central junction box (CJB) Fuse 205 (5A) ● Wiper motor ● Washer pump ● Connectors or connections ● Circuitry ● Multifunction switch ● Wire harness routing ● FEM ● Instrument cluster

3. If the fault is not visually evident, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.

4. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.
5. Carry out the DATA LINK DIAGNOSTICS test. If the diagnostic tool responds with:
 - CKT914, CKT915, or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for FEM, go to Pinpoint Test A.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out the self-test diagnostics for the generic electronic module.
6. If the DTCs retrieved are related to the concern, go to FEM Diagnostic Trouble Code (DTC) Index to continue diagnostics.
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart.

FEM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1319	Driver Door Ajar Circuit Failure	FEM	REFER to Section 417-02 .
B1327	Passenger Door Ajar Circuit Failure	FEM	REFER to Section 417-02 .
B1342	ECU Is Defective	FEM	CLEAR the DTC. REPEAT the FEM self-test. If DTC B1342 is retrieved, INSTALL a new FEM. REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test.
B1438	Wiper Mode Select Switch Circuit Failure	FEM	GO to Pinpoint Test D .
B1446	Wiper Park Sense Circuit Failure	FEM	GO to Pinpoint Test B .
B1479	Wiper Washer Fluid Level Sensor Circuit Failure	FEM	REFER to Section 413-01 .
B1499	Lamp Turn Signal Left Circuit Failure	FEM	REFER to Section 417-01 .
B1501	Lamp Turn Signal Left Circuit Short to Battery	FEM	REFER to Section 417-01 .
B1503	Lamp Turn Signal Right Circuit Failure	FEM	REFER to Section 417-01 .
B1505	Lamp Turn Signal Right Circuit Short to Battery	FEM	REFER to Section 417-01 .
B1519	Hood Switch Circuit Failure	FEM	REFER to Section 419-01A.
B1567	Lamp Headlamp High-Beam Circuit Failure	FEM	REFER to Section 417-01 .
B1676	Battery Pack Voltage Out of Range	FEM	REFER to Section 414-00 .
B1794	Lamp Headlamp Low-Beam Circuit Failure	FEM	REFER to Section 417-01 .
B2214	Window Passenger Front Up Switch Short to Battery	FEM	REFER to Section 501-11 .

B2215	Window Passenger Front Down Switch Short to Battery	FEM	REFER to Section 501-11 .
B2312	Mirror Passenger Horizontal Feedback Potentiometer Circuit Failure	FEM	REFER to Section 501-09 .
B2316	Mirror Passenger Vertical Feedback Potentiometer Circuit Failure	FEM	REFER to Section 501-09 .
B2443	Powertrain Performance Mode Switch Circuit Failure	FEM	Not Used
B2477	Module Configuration Failure	FEM	REFER to Section 418-01 .
C1284	Oil Pressure Switch Failure	FEM	REFER to Section 413-01 .
C1446	Brake Switch Circuit Failure	FEM	REFER to Section 413-01 .
C1924	VAPS Solenoid Actuator Output Circuit Short to Ground	FEM	REFER to Section 211-00 .
C1925	VAPS Solenoid Actuator Return Circuit Failure	FEM	REFER to Section 211-00 .
U1027	SCP (J1850) Invalid or Missing Data for Engine RPM	PCM	CARRY OUT the PCM self-test. REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
U1041	SCP (J1850) Invalid or Missing Data for Vehicle Speed	ABS	CARRY OUT the ABS self-test. REFER to Section 206-09A .
U1059	SCP (J1850) Invalid or Missing Data for Transmission / Transaxle / PRNDL	PCM	CARRY OUT the PCM self-test. REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
U1218	SCP (J1850) Invalid or Missing Data for External Lamps	ICM	CARRY OUT the ICM self-test. REFER to Section 413-01 .
U1222	SCP (J1850) Invalid or Missing Data for Interior Lamps	ICM	CARRY OUT the ICM self-test. REFER to Section 413-01 .
U1227	SCP (J1850) Invalid or Missing Data for Body Status Request	ICM	CARRY OUT the ICM self-test. REFER to Section 413-01 .

Pinpoint Tests

CAUTION: Electronic modules are sensitive to electrical charges. If exposed to these charges, damage may result.

PINPOINT TEST A: NO COMMUNICATION WITH THE FRONT ELECTRONIC MODULE (FEM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK CIRCUITS 29-DK20 (OG/GN) AND 29S-DK22 (OG/YE) FOR VOLTAGE	
NOTE: Cycle ignition switch from OFF to RUN to enable the switched system power feature.	
<p>1</p>  <p>2</p>  <p>FEM C201c</p>	

3

FEM C201f

4

5

A0006297

5

Measure the voltage between FEM C201c pin 6, circuit 29-DK20 (OG/GN), harness side and ground; and between FEM C201f pin 1, circuit 29S-DK22 (OG/YE) harness side and ground.

• Are the voltages greater than 10 volts?

→ **Yes**
GO to [A2](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

A2 CHECK CIRCUITS 31-DK20 (BK/RD), 31-DK20A (BK/RD), 31-DK20B (BK/RD), 31-DK20C (BK/RD) AND 31-DK20D (BK/RD) FOR OPENS

1

2

FEM C201a

3

3

Using the following table, measure the resistance between FEM connectors, harness side and ground:

FEM	Pin	Circuit
C201c	12	31-DK20 (BK/RD)
C201a	11	31-DK20A (BK/RD)
C201a	13	31-DK20B (BK/RD)
C201a	14	31-DK20C (BK/RD)

C201a | 15 | 31-DK20D (BK/RD)

● Is the resistance less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST B: THE WIPERS ARE INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK THE FEM PID WPMODE	
<p>1</p> 	<p>2</p> <p>Monitor the FEM PID WPMODE, while activating the multifunction switch to the OFF, Low, High, Pulse, Intermittent, and Positions 1 through 7.</p> <p>● Do the FEM PID WPMODE values agree with the multifunction switch position?</p> <p>→ Yes GO to B10.</p> <p>→ No If equipped with rain sensor module, GO to B2. Otherwise GO to B3.</p>
B2 CHECK THE RAIN SENSOR MODULE	
<p>1</p>  <p>2</p>	

Rain Sensor Module C914 (If equipped)

3

4 Monitor the FEM PID WPMODE, while activating the multifunction switch to the OFF, Low, Medium, High, Pulse, intermittent, and positions 1 through 7.

- Do the wiper FEM PID WPMODE values agree with the multifunction switch?

→ Yes
INSTALL a new rain sensor module. REFER to [Module—Rain Sensor](#) in this section. TEST the system for normal operation.

→ No
GO to [B3](#).

B3 CHECK THE MULTIFUNCTION SWITCH OPERATION

1

2

Multifunction Switch C202

3 Carry out the multifunction switch component test. Refer to Wiring Diagrams Section 700–09.

- Is the multifunction switch OK?

→ Yes
GO to [B4](#).

→ No
INSTALL a new multifunction switch. REFER to [Section 211-05](#). TEST the system for normal operation.

B4 CHECK VOLTAGE TO THE MULTIFUNCTION SWITCH

1

2

A0006307

2

Measure the voltage between multifunction switch C202 pin1, circuit (OG/GN) harness side and ground; and between multifunction switch C202 pin 3, circuit (BU/WH), harness side and ground.

• Are the voltages greater than 10 volts?

→ Yes
GO to [B5](#).

→ No
GO to [B8](#).

B5 CHECK THE MULTIFUNCTION SWITCH FOR SHORT TO POWER

1

2

FEM C201f

3

4

A0006307

4

Measure the voltage between multifunction switch C202 pin1, circuit (OG/GN) harness side and ground; and between multifunction switch C202 pin 3, circuit (BU/WH), harness side and ground.

• Are the voltages greater than 10 volts?

→ **Yes**

REPAIR the circuit(s) in question. TEST the system for normal operation.

→ **No**
GO to [B6](#).

B6 CHECK CIRCUIT 7-KA19 (YE/BK) FOR SHORT TO POWER

1

1

Measure the voltage between multifunction switch C202 pin 2, circuit (BN/WH), harness side and ground.

● **Is the voltage greater than 10 volts?**

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
GO to [B7](#).

B7 CHECK CIRCUIT 7-KA19 (YE/BK) AND CIRCUIT 7-KA1 (YE/RD) FOR AN OPEN

1

2

2

Measure the resistance between multifunction switch C202 pin 2, circuit (BN/WH), harness side and FEM C201f pin 14, circuit 7-KA1 (YE/RD), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

B8 CHECK CIRCUITS 7-KA1 (YE/BK), 8-KA2 (WH/RD) AND 10-KA3 (GY/VT) FOR OPENS

1

2

FEM C201f

3

Multifunction Switch C202

4

4 Using the following table measure the resistance between multifunction switch C202 harness side and FEM C201f harness side:

Multifunction Switch C202	FEM C201f
pin 1, circuit (OG/GN)	pin 2, circuit 8-KA2 (WH/RD)
pin 2, circuit (BN/WH)	pin 14, circuit 7-KA1 (YE/BK)
pin 3, circuit (BU/WH)	pin 13, circuit 10-KA3 (GY/VT)

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [B9](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

B9 CHECK WIPER DELAY AND WIPER MODE CIRCUITS FOR SHORTS TO GROUND

1

1 Measure the resistance between multifunction switch C202 pin 1, (OG/GN) harness side and ground; and between multifunction switch C202 pin 3, (BU/WH) harness side and ground.

A0006315

- Is the resistance greater than 10,000 ohms?

→ **Yes**

INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

B10 CHECK CIRCUIT 91S-KA39 (BN/YE) FOR VOLTAGE

1

2

Underhood AJB Wiper Park Relay

3

4

A0003784

- 4 Measure the voltage between wiper park relay C1002 pin 2, Circuit 91S-KA39 (BN/YE), harness side and ground.

- Is the voltage greater than 10 volts?

→ **Yes**

GO to [B11](#).

→ **No**
GO to [B12](#).

B11 CHECK CIRCUIT 91S-KA39 (BN/YE) FOR SHORT TO POWER

1

2

FEM C201b

3

4

A0003784

4 Measure the voltage between wiper park relay C1002 Pin 2, Circuit 91S-KA39 (BN/YE), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

B12 ACTIVATE WIPER PARK RELAY COMMAND AND TEST FOR GROUNDING FROM FEM

1

1 Trigger the FEM active command WIPER RLY to ON, while measuring the resistance between wiper park relay C1002 Pin 2, Circuit 91S-KA39 (BN/YE), harness side and ground.

A0003785

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [B14](#).

→ **No**
GO to [B13](#).

B13 CHECK CIRCUIT 91S-KA39 (BN/YE) FOR AN OPEN

1

2

FEM C201b

3

A0003786

3 Measure the resistance between wiper park relay C1002 Pin 2, Circuit 91S-KA39 (BN/YE), harness side and FEM C201b Pin 1, Circuit 91S-KA39 (BN/YE), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

B14 CHECK UNDERHOOD AJB FUSE 120 (30A) FOR VOLTAGE

1

2

Underhood AJB Fuse 120 (30A)

3

4

4 Measure the voltage between underhood AJB Fuse 120 (30 A) input side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [B15](#).

→ **No**
REPAIR the power source. TEST the system for normal operation.

B15 CHECK BETWEEN UNDERHOOD AJB FUSE 120 (30A) AND WIPER PARK RELAY FOR OPENS

1

2

Underhood AJB Wiper Park Relay

3

3 Measure the resistance between underhood AJB Fuse 120 (30A), input side, and wiper park relay C1002 Pin 1.

● Is the resistance less than 5 ohms?

→ **Yes**
 INSTALL a new underhood AJB Fuse 120 (30A), GO to [B16](#).

→ **No**
 INSTALL a new underhood AJB. TEST the system for normal operation.

B16 CHECK CIRCUIT 75-KA39 (YE/BK) FOR VOLTAGE

1

Windshield Wiper Relay C1009

2

3

3 Measure the voltage between windshield wiper relay C1009 pin 2, circuit 75-KA39 (YE/BK) and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
 GO to [B20](#).

→ **No**
 GO to [B17](#).

B17 CHECK CIRCUIT 75-DD1 (YE) FOR VOLTAGE

1

CJB Fuse 226 (3A)

2

2

Measure the voltage between CJB fuse 226 (3A) input side and ground.

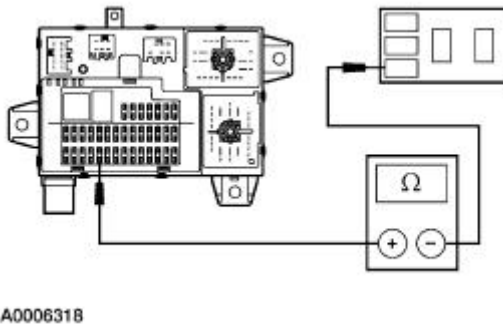

• Is the voltage greater than 10 volts?

→ **Yes**
GO to [B18](#).

→ **No**
GO to [B19](#).

B18 CHECK CIRCUIT 75-KA39 (YE/BK) FOR OPENS

1

1

Measure the resistance between windshield wiper relay C1009 pin 3, circuit 75-KA39 (YE/BK), and CJB fuse 226 (3A), circuit 75-KA39 (YE/BK) output side.

• Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new AJB. TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

B19 CHECK CIRCUIT 75-DD1 (YE) FOR OPENS

1

Ignition Switch C250

2

2

Measure the resistance between ignition

A0008595

switch C250 pin 4, circuit 75-DD1 (YE), harness side and CJB fuse 226 (3A), circuit 75-DD1 (YE) input side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new CJB. TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

B20 CHECK CIRCUIT 31-KA39 (BK/RD) FOR OPENS

1

Windshield Wiper Relay C1009

2

A0006326

2

Measure the resistance between windshield wiper relay C1009 pin 1, circuit 31-KA39 (BK/RD), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [B21](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

B21 CHECK WIPER PARK AND WIPER HIGH/LOW RELAYS

1

2

Underhood AJB Wiper High/Low Relay C1001

3 Carry out the wiper park and wiper high/low relay component tests. Refer to the Wiring Diagrams Section 700–09.

- Are the wiper park and wiper high/low relays OK?

→ **Yes**
GO to [B22](#).

→ **No**
INSTALL a new relay(s) as necessary.
TEST the system for normal operation.

B22 CHECK CIRCUIT 75S-KA12 (YE/VT) FOR OPENS

1

1 Measure the resistance between wiper park relay C1002 pin 3, circuit 75S-KA12 (YE/VT), harness side and wiper high/low relay C1001 pin 3, circuit 75S-KA12 (YE/VT), harness side.

- Is the resistance less than 5 ohms?

→ **Yes**
GO to [B23](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

B23 CHECK AJB FOR OPENS

1

Wiper Run/Park Relay C1002

2

2 Measure the resistance between wiper run/park relay C1002 pin 1, harness side and wiper run/park relay C1002 pin 5, harness side

A0006320

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [B24](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

B24 CHECK AJB BETWEEN WIPER PARK AND WIPER HIGH/LOW RELAYS FOR OPENS

1

Wiper Run/Park Relay C1002

2

A0006321

2 Measure the resistance between wiper run/park relay C1002 pin 1, harness side and wiper high/low relay C1001 pin 1, harness side

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [B25](#).

→ **No**
INSTALL a new AJB. TEST the system for normal operation.

B25 CHECK CIRCUIT 31S-KA12 (BK/WH) FOR VOLTAGE

1

2

Wiper Motor C125

3

4

A0003790

4 Measure the voltage between wiper park relay C1002 Pin 4, Circuit 31S-KA12 (BK/WH), harness side and ground.

• Is the voltage greater than 10 volts?

→ Yes
GO to [B26](#).

→ No
GO to [B27](#).

B26 CHECK CIRCUITS 31S-KA12 (BK/WH), 31S-KA1 (BK/YE), AND 31S-KA8 (BK/BU) FOR SHORTS TO POWER

1

2

FEM C201b

3

4

4 Measure the voltage between wiper park relay C1002 Pin 4, Circuit 31S-KA12 (BK/WH), harness side and ground.

A0003790

● Is the voltage greater than 10 volts?

→ **Yes**
REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

→ **No**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

B27 CHECK CIRCUIT 31S-KA12 (BK/WH) FOR CONTINUITY

1

2

A0003791

2 Measure the resistance between wiper park relay C1002 Pin 4, Circuit 31S-KA12 (BK/WH), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ **Yes**
GO to [B29](#).

→ **No**
GO to [B28](#).

B28 CHECK CIRCUIT 31S-KA12 (BK/WH), 31S-KA1 (BK/YE) AND 31S-KA8 (BK/BU) FOR SHORTS TO GROUND

1

FEM C201b

2

2

Measure the resistance between wiper park relay C1002 Pin 4, Circuit 31S-KA12 (BK/WH), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
REPAIR Circuit 31S-KA12 (BK/WH), Circuit 31S-KA1 (BK/YE) or Circuit 31S-KA8 (BK/BU). CLEAR the DTCs. REPEAT the self-test.

B29 CHECK CIRCUIT 75S-KA2 (YE/RD) BETWEEN WIPER RUN/PARK AND WINDSHIELD WIPER RELAYS FOR OPENS

1

1

Measure the resistance between wiper run/park relay C1002 pin 5, circuit 75S-KA2 (YE/RD) harness side and windshield wiper relay C1009 pin 5, circuit 75S-KA1 (YE/BK) harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [B30](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

B30 CHECK CIRCUITS 75S-KA2 (YE/RD) AND 30-KA9 (RD/OG) BETWEEN WIPER MOTOR AND WINDSHIELD WIPER RELAYS FOR OPENS

1

Wiper Motor C125

2

2

Measure the resistance between wiper run/park relay C1002 pin 5, circuit 75S-KA2 (YE/RD), harness side and windshield wiper motor C125 pin 4, circuit 30-KA9 (RD/OG), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [B31](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

B31 CHECK CIRCUIT 31-KA9 (BK) FOR OPENS

1

1

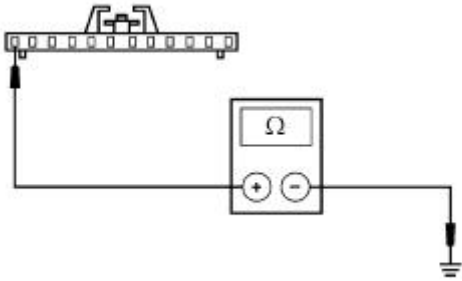

Measure the resistance between wiper motor C125 Pin 3, Circuit 31-KA9 (BK), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
CHECK the wiper motor; REFER to Component Test in this section. If the wiper motor does not pass the test, INSTALL a new wiper motor, REFER to [Windshield Wiper Motor](#) in this section. TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST C: THE WIPERS STAY ON CONTINUOUSLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK THE MULTIFUNCTION SWITCH OPERATION	
<p>1 </p> <p>2 </p> <p>Multifunction Switch C202</p>	<p>3 Carry out the multifunction switch component test. Refer to Wiring Diagrams Section 700–09.</p> <ul style="list-style-type: none"> ● Is the multifunction switch OK? <p>→ Yes GO to C2.</p> <p>→ No INSTALL a new multifunction switch. REFER to Section 211-05. TEST the system for normal operation.</p>
C2 CHECK CIRCUIT 8–KA41 (WH/GN), 8–KA19 (WH/BK) AND 8–KA2 (WH/RD) FOR SHORTS TO GROUND	
<p>1 </p> <p>A0006327</p>	<p>1 Measure the resistance between multifunction switch C202 pin 1, (OG/GN), harness side and ground.</p> <ul style="list-style-type: none"> ● Is the resistance greater than 10,000 ohms? <p>→ Yes GO to C5.</p> <p>→ No If equipped with moisture sensitive wipers GO to C3. All others GO to C4.</p>
C3 CHECK FOR A FAULTY RAIN SENSOR MODULE	
<p>1</p>	

Rain Sensor Module C914

2

A0006327

2

Measure the resistance between multifunction switch C202 pin 1, (OG/GN), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new rain sensor module. REFER to [Module—Rain Sensor](#) in this section.

→ **No**
GO to [C4](#).

C4 CHECK CIRCUITS 8-KA2 (WH/RD), 8-KA19 (WH/BK) AND 8-KA41 (WH/GN) FOR SHORTS TO GROUND

1

FEM C201f

2

A0006327

2

Measure the resistance between multifunction switch C202 pin 1, (OG/GN), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
REPAIR circuit(s) in question. TEST the system for normal operation.

C5 CHECK WIPER PARK AND WIPER HIGH/LOW RELAYS

- 1 Remove the AJB wiper park and wiper high/low relays.
- 2 Carry out the relay component test. Refer to Wiring Diagrams Section 700–09.

● **Are both relays OK?**

→ **Yes**
GO to [C6](#).

→ **No**
INSTALL a new relay(s). TEST the system for normal operation.

C6 CHECK CIRCUIT 91S-KA39 (BN/YE) FOR CONTINUITY

1

- 1 Measure the resistance between wiper park relay C1002 Pin 2, Circuit 91S-KA39 (BN/YE), harness side and ground.

● **Is the resistance greater than 10,000 ohms?**

→ **Yes**
GO to [C8](#).

→ **No**
GO to [C7](#).

C7 CHECK CIRCUIT 91S-KA39 (BN/YE) FOR SHORTS TO GROUND

1

FEM C201b

2

- 2 Measure the resistance between wiper park relay C1002 Pin 2, Circuit 91S-KA39 (BN/YE), harness side and ground.

A0003785

- Is the resistance greater than 10,000 ohms?

- **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.
- **No**
REPAIR the circuit. TEST the system for normal operation.

C8 CHECK CIRCUIT 75S-KA12 (YE/VT) FOR SHORTS TO BATTERY

1

A0006325

- 1 Measure the voltage between wiper park relay C1002 pin 3, circuit 75S-KA12 (YE/VT) and ground.

- Is the voltage greater than 10 volts?

- **Yes**
REPAIR the circuit. TEST the system for normal operation.
- **No**
GO to [C9](#).

C9 CHECK CIRCUIT 75S-KA11 (YE/BK) AND CIRCUIT 75S-KA10 (YE/GN) FOR SHORT TO BATTERY

1

Wiper Motor C125

2

3

A0003793

3

Measure the voltage between wiper high/low relay C1001 pin 4, circuit 75S-KA10 (YE/GN), harness side and ground; and between wiper high/low relay C1001 pin 5, circuit 75S-KA11 (YE/BK), harness side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**

REPAIR circuit(s) in question. TEST the system for normal operation.

→ **No**

INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

PINPOINT TEST D: THE HIGH/LOW WIPER SPEEDS DO NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 CHECK THE FEM PID WPMODE	
	<p>1 Monitor the FEM PID WPMODE, while activating the multifunction switch to the high and low positions.</p> <p>• Do the FEM PID WPMODE values agree with the multifunction switch positions?</p> <p>→ Yes GO to D2.</p> <p>→ No GO to D3.</p>
D2 ACTIVATE THE FRONT WINDSHIELD WIPER/WASHER COMMAND	
<p>1</p> 	<p>2 Trigger the FEM active command</p>

SPEED RLY to the LOW and HIGH speeds.

- **Do the wipers work in LOW and HIGH?**

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
GO to [D6](#).

D3 CHECK THE MULTIFUNCTION SWITCH OPERATION

1

2

Multifunction Switch C202

3 Carry out the multifunction switch component test. Refer to Wiring Diagrams Section 700–09.

- **Is the multifunction switch OK?**

→ **Yes**
If equipped with moisture sensitive wipers. GO to [D4](#).

All others GO to [D5](#).

→ **No**
INSTALL a new multifunction switch. REFER to [Section 211-05](#). TEST the system for normal operation.

D4 CHECK RAIN SENSOR MODULE

1

Multifunction Switch C202

2

Rain Sensor Module C914

3

4

4

Monitor the FEM PID WPMODE while activating the multifunction switch to the high and low positions.

- Does the FEM PID WPMODES agree with the multifunction switch positions?

→ Yes

INSTALL a new rain sensor module. REFER to [Module—Rain Sensor](#) in this section. TEST the system for normal operation.

→ No

GO to [D5](#).

D5 CHECK CIRCUITS 8-KA2 (WH/RD), 8-KA19 (WH/GN) AND 8-KA41 (WH/GN) FOR SHORTS TO GROUND

1

FEM C201f

2

Multifunction Switch C202

3

A0006327

3

Measure the resistance between multifunction switch C202 pin 1, circuit (OG/GN), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ Yes

INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
REPAIR circuit(s) in question. TEST the system for normal operation.

D6 CHECK WIPER HIGH/LOW RELAY PIN 2 FOR VOLTAGE

1

2

Underhood AJB Wiper HIGH/LOW Relay

3

4

A0003784

4 Measure the voltage between wiper high/low relay C1001 pin 2, circuit 91S-KA16 (BN/GN), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [D7](#).

→ **No**
GO to [D8](#).

D7 CHECK CIRCUIT 91S-KA16 (BN/GR) FOR SHORTS TO POWER

1

2

FEM C201b

3

4

A0003784

- 4 Measure the voltage between wiper high/low relay C1001 pin 2, circuit 91S-KA16 (BN/GN), harness side and ground.

● Is the voltage greater than 10 volts?

- **Yes**
REPAIR the circuit. TEST the system for normal operation.
- **No**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

D8 CHECK WIPER HIGH/LOW RELAY PIN 2 FOR CONTINUITY TO GROUND

1

2

A0003785

- 2 Measure the resistance between wiper high/low relay C1001 pin 2, circuit 91S-KA16 (BN/GN), harness side and ground.

● Is the resistance greater than 10,000 ohms?

- **Yes**
GO to [D10](#).
- **No**
GO to [D9](#).

D9 CHECK CIRCUIT 91S-KA16 (BN/GN) FOR SHORTS TO GROUND

1

FEM C201b

2

2

Measure the resistance between wiper high/low relay C1001 pin 2, circuit 91S-KA16 (BN/GN), harness side and ground.

● Is the resistance greater than 10,000 ohms?

→ Yes

INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ No

REPAIR the circuit. TEST the system for normal operation.

D10 ACTIVATE WIPER HIGH/LOW RELAY

1

2

2

Trigger the FEM active command SPEED RLY to ON, while measuring the resistance between wiper high/low relay C1001 Pin 2, Circuit 91S-KA16 (BN/GN) and ground.

● Is the resistance less than 5 ohms?

→ Yes

GO to [D11](#).

→ No

GO to [D14](#).

D11 CHECK UNDERHOOD AJB WIPER HIGH/LOW RELAY

- 1 Carry out the wiper high/low relay component test. Refer to Wiring Diagrams Section 700–09.
- Is the wiper high/low relay OK?
- **Yes**
GO to [D12](#).
- **No**
INSTALL a new wiper high/low relay.
TEST the system for normal operation.

D12 CHECK WIPER HIGH/LOW RELAY PIN 1 FOR VOLTAGE

1

- 1 Measure the voltage between wiper high/low relay C1001 Pin 1, harness side and ground.
- Is the voltage greater than 10 volts?
- **Yes**
GO to [D13](#).
- **No**
INSTALL a new underhood AJB. TEST the system for normal operation.

D13 CHECK CIRCUITS 75S-KA10 (YE/GN) AND 75S-KA11 (YE/BK) FOR OPENS

1

2

Wiper Motor C125

3

- 3 Measure the resistance between wiper high/low relay C1001 pin 4, circuit 75S-KA10 (YE/GN), harness side and wiper motor C125 pin 4, circuit 75S-KA10 (YE/GN), harness side; and between wiper high/low relay C1001 pin 5, circuit 75S-KA11 (YE/BK), harness side and wiper motor C125 Pin 5, circuit 75S-

A0005358

KA11 (YE/BK), harness side.

- Is the resistance greater than 10,000 ohms?

→ Yes

CHECK the wiper motor; REFER to Component Test. If the wiper motor does not pass the test, INSTALL a new wiper motor, REFER to [Windshield Wiper Motor](#) in this section. TEST the system for normal operation.

→ No

REPAIR circuit(s) in question. TEST the system for normal operation.

D14 CHECK CIRCUIT 91S-KA16 (BN/GN) FOR OPENS

1

FEM C201b

2

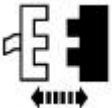

A0003796

2

Measure the resistance between wiper high/low relay C1001 pin 2, circuit 91S-KA16 (BN/GN), harness side and FEM C201b pin 3, circuit 91S-KA16 (BN/GN), harness side.

	<ul style="list-style-type: none"> ● Is the resistance less than 5 ohms? <p>→ Yes INSTALL a new FEM. REFER to Section 419-10. TEST the system for normal operation.</p> <p>→ No REPAIR the circuit. TEST the system for normal operation.</p>
--	--

PINPOINT TEST E: THE WASH AND WIPE FUNCTION DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 MONITOR THE FEM PID WPMODE	
<p>1</p> 	<p>2</p> <p>Monitor the FEM PID WPMODE while activating the wash and wipe functions.</p> <ul style="list-style-type: none"> ● Do the FEM PID WPMODE values agree with the multifunction switch positions? <p>→ Yes GO to E6.</p> <p>→ No If equipped with moisture sensitive wipersGO to E2. All othersGO to E3.</p>
E2 CHECK RAIN SENSOR MODULE	
<p>1</p>  <p>2</p>  <p>Rain Sensor Module C914</p>	<p>3</p> <p>Monitor the FEM PID WPMODE while activating the wash and wipe functions.</p> <ul style="list-style-type: none"> ● Do the FEM PID WPMODE values

agree with the multifunction switch positions?

→ **Yes**
INSTALL a new rain sensor module.
REFER to [Module—Rain Sensor](#) in this section. TEST the system for normal operation.

→ **No**
GO to [E3](#).

E3 CHECK THE MULTIFUNCTION SWITCH OPERATION

1

Multifunction Switch C202

2 Carry out the multifunction switch component test. Refer to Wiring Diagrams Section 700–09.

● **Is the multifunction switch OK?**

→ **Yes**
GO to [E4](#).

→ **No**
INSTALL a new multifunction switch.
REFER to [Section 211-05](#). TEST the system for normal operation.

E4 CHECK CIRCUITS 10-KA3 (GY/VT), 10-KA19 (GY/BK) AND 10-KA41 (GY/OG) FOR SHORTS TO GROUND

1

FEM C201f

2

A0005352

2 Measure the resistance between multifunction switch C202 pin 3, circuit (BU/WH), harness side and ground.

● **Is the resistance greater than 10,000 ohms?**

→ **Yes**

GO to [E5](#).

→ **No**
REPAIR circuit(s) in question. TEST the system for normal operation.

E5 CHECK CIRCUITS 10-KA3 (GY/VT), 10-KA19 (GY/BK) AND 10-KA41 (GY/OG) FOR OPENS

1

A0006686

1

Measure the resistance between multifunction switch C202 pin 3, circuit (BU/WH), harness side and FEM C201f pin 13, circuit 10-KA3 (GY/VT); and between multifunction switch C202 pin 2, circuit (BN/WH), harness side and FEM C201f pin 14, circuit 7-KA1 (YE), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
GO to [E6](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

E6 CHECK CIRCUITS 31S-KA8 (BK/BU) AND 31S-KA1 (BK/YE) FOR OPENS

1

FEM C201b

2

2

Measure the resistance between wiper motor C125 pin 5, circuit 31S-KA1 (BK/YE), and FEM C201b pin 13, circuit 31S-KA8 (BK/BU).

A0008597

- Is the resistance less than 5 ohms?

→ **Yes**

INSTALL a new FEM. REFER to [Section 419-10](#). CLEAR the DTCs. REPEAT the self-test.

→ **No**

REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST F: THE WASHER PUMP IS INOPERATIVE/ON CONTINUOUSLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 VERIFY THE WASHER PUMP SYMPTOM	
<p>1</p>  <p>2</p> 	<p>3 NOTE: If the wipers are also inoperative, REFER to the Symptom Chart. If the wash and wipe function does not operate correctly, REFER to Pinpoint Test E.</p> <p>Verify if the washer pump is never ON or if the pump is always ON.</p> <ul style="list-style-type: none"> ● Is the washer pump always on? <p>→ Yes GO to F12.</p> <p>→ No GO to F2.</p>

F2 ACTIVATE THE WASHER PUMP

1 Trigger the FEM active command WASH RLY to ON.

● **Did the washer pump work?**

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
GO to [F3](#).

F3 CHECK FOR VOLTAGE AT UNDERHOOD AJB FUSE 102 (10A)

2

1 Remove the underhood AJB Fuse 102 (10A).

2 Measure the voltage between underhood AJB Fuse 102 (10A) input side and ground.

● **Is the voltage greater than 10 volts?**

→ **Yes**
GO to [F4](#).

→ **No**
REPAIR the power source. TEST the system for normal operation.

F4 CHECK WASHER PUMP RELAY

1

Washer Pump Relay C1004

2 Carry out the washer pump relay component tests. Refer to the Wiring Diagrams Section 700–09.

● **Did the washer relay pass the component test?**

→ **Yes**
GO to [F5](#).

→ **No**
INSTALL a new relay. TEST the system for normal operation.

F5 CHECK CIRCUITS 31-KA42A (RD/BK) AND 30-KA43 (RD/WH) FOR OPENS

1

Underhood AJB Fuse 102 (10A)

2

3

A0006329

3 Measure the resistance between underhood AJB fuse 102 (10A) output side, circuit 30-KA42 (RD) and washer pump relay C1004 pin 3, circuit 30-KA42A (RD/BK) harness side; and between underhood AJB fuse 102 (10A) output side, circuit 30-KA42 (RD) and washer pump relay C1004 pin 2, circuit 30-KA43 (RD/WH) harness side.

● **Is resistance less than 5 ohms?**

→ **Yes**
GO to [F6](#).

→ **No**
REPAIR circuit(s) in question. TEST the system for normal operation.

F6 CHECK CIRCUIT 15S-KA7 (GN/WH) FOR OPENS

1

Washer Pump Motor C137

2

2 Measure the resistance between washer

A0008598

pump motor C137 pin 2, circuit 15S-KA7 (GN/WH), harness side and washer pump relay C1004 pin 5, circuit 15S-KA7 (GN/WH) harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [F7](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

F7 CHECK CIRCUIT 31-KA7 (BK/WH) FOR OPENS

1

A0006331

1

Measure the resistance between washer pump motor C137 pin 1, circuit 31S-KA7 (BK/WH), harness side and ground.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL underhood AJB fuse 102 (10A).
GO to [F8](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

F8 CHECK CIRCUIT 31S-KA43 (BK/WH) FOR SHORT TO POWER

1

A0006332

1

Measure the voltage between windshield washer relay C1004 pin 1, circuit 31S-KA43 (BK/WH), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [F9](#).

→ **No**
GO to [F10](#).

F9 CHECK CIRCUIT 31S-KA43 (BK/WH) FOR SHORT TO POWER

1

2

FEM C201b

3

4

A0006332

4 Measure the voltage between windshield washer relay C1004 pin 1, circuit 31S-KA43 (BK/WH), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

F10 CHECK CIRCUIT 31S-KA43 (RD/WH) FOR OPEN

1

2

FEM C201b

3

3

Measure the resistance between windshield washer relay C1004 pin 1, circuit 31S-KA43 (BK/WH), harness side and FEM C201b pin 14, circuit 31S-KA43 (BK/WH), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [F11](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

F11 CHECK WINDSHIELD WASHER PUMP

1

1

Using a fused (10A) jumper wire, jumper windshield washer relay C1004 pin 3, circuit 30-KA42 (RD/BK), harness side and windshield washer relay C1004 pin 5, circuit 15S-KA7 (GN/WH), harness side.

● Does the washer pump turn ON?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
INSTALL a new washer pump motor. Refer to [Washer Pump and Reservoir](#) in this section.

F12 CHECK WASHER PUMP RELAY

1

Washer Pump Relay C1004

2 Carry out the washer pump relay component tests. Refer to the Wiring Diagrams Section 700–09.

• Did the washer relay pass the component test?

→ Yes
GO to [F13](#).

→ No
INSTALL a new relay. TEST the system for normal operation.

F13 CHECK CIRCUIT 15S-KA7 (GN/WH) FOR SHORT POWER

1

Washer Pump Motor C137

2

2 Measure the voltage between washer pump relay C1004 pin 5, circuit 15S-KA7 (GN/WH), harness side and ground.

• Is the voltage greater than 10 volts?

→ Yes
REPAIR the circuit. TEST the system for normal operation.

→ No
GO to [F14](#).

F14 ISOLATE FEM AND CIRCUIT 31S-KA43 (BK/WH) FOR SHORTS TO GROUND

2

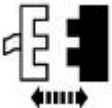

FEM C201b

1 Verify motor is running.

	<ul style="list-style-type: none"> ● Did washer pump motor stop running? <p>→ Yes INSTALL a new FEM. REFER to Section 419-10. TEST the system for normal operation.</p> <p>→ No REPAIR the circuit. TEST the system for normal operation.</p>
--	---

PINPOINT TEST G: THE SPEED DEPENDENT INTERVAL MODE DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 CHECK THE FEM PID WPMODE	
<p>1</p> 	<p>2</p> <p>Monitor the FEM PID WPMODE, while activating the intermittent washers through all speeds (positions) at the multifunction switch.</p> <ul style="list-style-type: none"> ● Do the FEM PID WPMODE values agree with the multifunction switch position? <p>→ Yes GO to G7.</p> <p>→ No If equipped with moisture sensitive wipers. GO to G2.</p> <p>All others GO to G3.</p>
G2 CHECK THE RAIN SENSOR MODULE	
<p>1</p>  <p>2</p>  <p>Rain Sensor Module C914</p> <p>3</p>	

4 Monitor the FEM PID WPMODE, while activating the intermittent washers through all speeds (positions) at the multifunction switch.

- Do the FEM PID WPMODE values agree with the multifunction switch position?

→ **Yes**
INSTALL a new rain sensor module. REFER to [Module—Rain Sensor](#) in this section. TEST the system for normal operation.

→ **No**
GO to [G3](#).

G3 CHECK THE MULTIFUNCTION SWITCH OPERATION

1

2

Multifunction Switch C202

3

4 Carry out the multifunction switch component test. Refer to the Wiring Diagrams Section 700–09.

- Is the multifunction switch OK?

→ **Yes**
GO to [G4](#).

→ **No**
INSTALL a new multifunction switch. REFER to [Section 211-05](#). TEST the system for normal operation.

G4 CHECK CIRCUITS 10–KA3 (GY/VT), 10–KA19 (GY/BK) AND 10–KA41 (GY/OG) FOR VOLTAGE

1

1 Measure the voltage between multifunction switch C202 pin 3, (BU/WH), harness side and ground.

A0006336

● Is the voltage greater than 10 volts?

→ **Yes**
GO to [G5](#).

→ **No**
GO to [G6](#).

G5 CHECK CIRCUITS 10-KA3 (GY/VT), 10-KA19 (GY/BK) AND 10-KA41 (GY/OG) FOR SHORTS TO POWER

1

2

FEM C201f

3

4

A0006336

4 Measure the voltage between multifunction switch C202 pin 3, circuit (BU/WH), harness side and ground.

● Is the voltage greater than 10 volts?

→ **Yes**
REPAIR the circuit(s) in question. TEST the system for normal operation.

→ **No**

INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

G6 CHECK CIRCUITS 10-KA3 (GY/VT), 10-KA19 (GY/BK) AND 10-KA41 (GY/OG) FOR OPENS

1

2

FEM C201f

3

A0006680

3 Measure the resistance between multifunction switch pin 3, circuit (BU/WH), harness side and FEM C201f pin 13, circuit 10-KA3 (GY/VT), harness side.

● Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

G7 MONITOR THE FEM PID WPPRKS

1

2 Trigger the FEM active command WIPER RLY ON and OFF while monitoring the FEM PID WPPRKS.

● Did the PID change from PARKED to notPRK?

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
GO to [G8](#).

G8 CHECK WIPER PARK RELAY

- 1 Remove the underhood AJB wiper park relay.
- 2 Carry out the relay component test. Refer to the Wiring Diagrams Section 700-09.

● **Is the wiper park relay OK?**

→ **Yes**
GO to [G9](#).

→ **No**
INSTALL a new wiper park relay. TEST the system for normal operation.

G9 CHECK THE WIPER MOTOR

1

2

Wiper Motor C125

3

4

A0003780

- 4 Monitor the FEM PID WPPRKSX while connecting a (20 A) fused jumper wire between wiper motor C125 pin 5, circuit 31S-KA1 (BK/YE), harness side and wiper motor C125 pin 4, circuit 75S-KA9 (YE/BU), harness side.

● **Did the PID change from notPRK to PARKED?**

→ **Yes**
INSTALL a new wiper motor. REFER to [Windshield Wiper Motor](#) in this section. TEST the system for normal operation.

→ **No**
GO to [G10](#).

G10 CHECK CIRCUITS 31S-KA1 (BK/YE) AND 31S-KA12 (BK/WH) FOR OPENS

1

1 Measure the resistance between the wiper park relay C1002 Pin 4, Circuit 31S-KA12 (BK/WH), harness side and wiper motor C125 pin 5, circuit 31S-KA1 (BK/YE), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
GO to [G11](#).

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

G11 CHECK CIRCUIT 31S-KA8 (BK/BU) FOR OPENS

1

2

FEM C201b

3

3 Measure the resistance between the wiper park relay C1002 pin 4, circuit 31S-KA12 (BK/WH), harness side and FEM C201b pin 13, circuit 31S-KA8 (BK/BU), harness side.

● **Is the resistance less than 5 ohms?**

→ **Yes**
INSTALL a new FEM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**
REPAIR the circuit(s) in question. TEST the system for normal operation.

PINPOINT TEST H: THE RAIN MOISTURE SENSITIVE FUNCTION DOES NOT OPERATE CORRECTLY

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 RETRIEVE THE FEM DIAGNOSTIC TROUBLE CODES	
	<p>1 Using recorded results from the FEM self-test.</p> <ul style="list-style-type: none"> ● Are any DTCs recorded? <p>→ Yes GO to the FEM Diagnostic Trouble Code (DTC) Index.</p> <p>→ No GO to H2.</p>
H2 QUICK VISUAL CHECKS	
	<p>1 Check if the rain sensor module is mounted correctly.</p> <ul style="list-style-type: none"> ■ Interior side of the windshield. ■ Near and behind the mirror. ■ The optical windows must be within the wiper pattern. <p>2 Check if the rain sensor module connector is in place.</p> <p>3 Check if the green slides are fully closed.</p> <p>4 Check presence and proper coupling of silicon pads (About 80% of pad area should form a seal to the glass).</p> <p>5 Check if brackets are in place (not broken off the windscreen).</p> <p>6 Check windscreen, over the optical windows, for cracks, scratches, covered, etc.</p> <p>7 Make sure multifunction switch was set in AUTO, in order for the moisture sensitive wiper function to work.</p> <ul style="list-style-type: none"> ● Does everything check out OK? <p>→ Yes</p>

GO to [H3](#).

→ **No**
REPAIR as necessary. TEST the system for normal operation.

H3 VERIFY WIPER AUTO FUNCTION

1 Verify the moisture sensitive wiper system is continuously wiping when the multifunction switch is placed in AUTO.

- **Do wipers wipe continuously when switch is placed in AUTO?**

→ **Yes**
GO to [H10](#).

→ **No**
GO to [H4](#).

H4 VERIFY SYMPTOM

1 Verify if the wipers are totally inoperative or working erratically.

- **Are the wipers totally inoperative?**

→ **Yes**
GO to [H5](#).

→ **No**
REMOVE rain sensor module, clean the interior windshield glass and RE-INSTALL. For additional information, refer to [Module—Rain Sensor](#) in this section. TEST system for normal operation.

H5 CHECK THE FEM PID WPMODE

1

2 Monitor the FEM PID WPMODE, while activating the multifunction switch to the AUTO position.

- **Do the wiper FEM PID WPMODE values agree with the multifunction switch?**

→ **Yes**
GO to [H7](#).

→ **No**
GO to [H6](#).

H6 CHECK THE FEM PID WPMODE WHILE SELECTING OTHER POSITIONS WITH THE MULTIFUNCTION SWITCH

1 Monitor the FEM PID WPMODE, while activating the multifunction switch positions 2 through 7.

- Do the wiper FEM PID WPMODE values agree with the multifunction switch?

→ **Yes**
INSTALL a new multifunction switch. REFER to [Section 211-05](#). TEST the system for normal operation.

→ **No**
GO to the Symptom Chart for further diagnosis.

H7 CHECK RAIN SENSOR MODULE CIRCUIT 20-AD15 (PK) FOR VOLTAGE

1

Rain Sensor Module C914

2

3

A0006681

3 Measure the voltage between the rain sensor module C914 pin 6, circuit 20-AD15 (PK), harness side and ground.

- Is the voltage greater than 10 volts?

→ **Yes**
GO to [H9](#).

→ **No**
GO to [H8](#).

H8 CHECK CJB FUSE 216 (5A) VOLTAGE SUPPLY

1

CJB Fuse 216 (5A)

2

3

A0006682

3 Measure the voltage between CJB Fuse 216 (5A) input side and ground.

• Is the voltage greater than 10 volts?

→ **Yes**
REPAIR the circuit(s) in question. TEST the system for normal operation.

→ **No**
INSTALL a new CJB power supply. TEST the system for normal operation.

H9 CHECK CIRCUITS 7-KA41 (YE/GN), 8-KA41 (WH/GN) AND 10-KA41 (GY/OG) FOR AN OPEN

1

Multifunction Switch C220

2

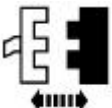

A0006684

2 Using the following table measure the resistance between multifunction switch C220 harness side and rain sensor module C914 harness side:

Multifunction Switch C220	Rain Sensor Module C914
pin 1, circuit (OG/GN)	pin 1, circuit 8-KA41 (WH/GN)
pin 2, circuit (BN/WH)	pin 4, circuit 7-KA41 (YE/GN)
pin 3, circuit (BU/WH)	pin 3, circuit 10-KA41 (GY/OG)

• Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new rain sensor module. For additional information, refer to [Module—Rain Sensor](#) in this section .

	<p>→ No REPAIR the circuit(s) in question. TEST the system for normal operation.</p>
<p>H10 VERIFY CONTINUOUSLY RUNNING WIPERS</p>	
	<p>1 Verify if the moisture sensitive wipers system is continuously wiping in interval #1 speed (longest delay time) or running in a higher speed when in AUTO.</p> <ul style="list-style-type: none"> ● Are wipers running in a higher speed? <p>→ Yes GO to H11 .</p> <p>→ No INSTALL a new rain sensor module. For additional information, refer to Module—Rain Sensor in this section.</p>
<p>H11 CHECK THE RAIN SENSOR MODULE</p>	
<p>1</p>  <p>3</p>  <p>Rain Sensor Module C914</p>	<p>2 Select AUTO with the multifunction switch.</p> <ul style="list-style-type: none"> ● Did the wipers turn off? <p>→ Yes INSTALL a new rain sensor module. REFER to Module—Rain Sensor in this section. TEST the system for normal operation.</p> <p>→ No GO to Pinpoint Test C .</p>

Component Test

Windshield Wiper Motor

CAUTION: Do not handle the wiper motor abusively when diagnosing the wiper operations. Failure to follow this caution may result in damage to the motor magnets and will make the wiper motor inoperative. Rough handling of new replacement wiper motors may also

damage the motor magnets.

Use Alternator, Regulator, Battery and Starter Tester (ARBST) to test the wiper motor on the vehicle.

To test the wiper motor, disconnect the windshield wiper mounting arm and pivot shaft from the windshield wiper motor; refer to [Pivot Arm](#).

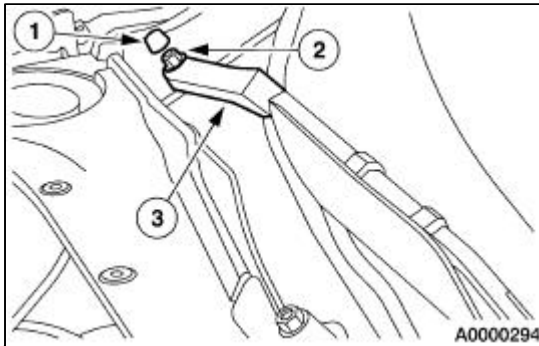

Disconnect the wiper motor. Connect the (1) green lead from (2) (ARBST) to the battery negative (-) post. Connect the (3) red lead from ARBST to the wiper motor (4) common brush terminal (terminal 3).

Test the low speed mode by connecting a (5) cable from the battery positive (+) post to the (6) low speed brush terminal (terminal 4) and measure the current draw. If the current draw is greater than 3.5 amperes, install a new windshield wiper motor.

Test the high speed mode by connecting a cable from the battery positive (+) post to the (7) high speed brush terminal (terminal 5) and measure the current draw. If the current draw is greater than 5.5 amperes, install a new wiper motor.

Wiper Blade and Pivot Arm Adjustment

1. Cycle and park the windshield wipers.
2. Remove the pivot arm(s).
 1. Remove the pivot arm nut cover(s).
 2. Remove the nut(s).
 3. Remove the pivot arm(s).

3. Install the wiper blade and pivot arm onto the pivot shaft and align the blade to the silver dots in the windshield.

4. Tighten the windshield wiper pivot arm nut(s).
 - Install the pivot arm nut cover(s).

Pivot Arm

Removal

1. Remove the pivot arm (RH shown, LH similar).
 1. Remove the pivot arm nut cover.
 2. Remove the nut.
 3. Remove the pivot arm.

Installation

1. Cycle and park the windshield wipers.
2. Install the wiper blade and pivot arm onto the pivot shaft and align the blade to the silver dots in the windshield.

3. Tighten the windshield pivot arm nuts.
 - Install the pivot arm nut covers.

Mounting Arm and Pivot Shaft

Removal and Installation

1.  **CAUTION:** The windshield wiper system has an auto park feature. It is necessary to disconnect the battery.

Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).

2. Remove the cowl top vent panels. For additional information, refer to [Section 501-02](#).
3. Remove the bolts and the strut tower support brace.

4. Partially drain the engine cooling system. For additional information, refer to [Section 303-03](#).
5. Disconnect the degas return hose from the degas return tube.

6. **NOTE:** When positioning the degas bottle aside it will be necessary to reroute the degas bottle lower hose in front of the brake booster.

Remove the bolts and position the degas bottle aside.

7. Remove the windshield wiper mounting arm and pivot shaft bolts.

8. Disconnect the drain boot from the windshield wiper mounting arm and pivot shaft assembly.
9. Position the windshield wiper mounting arm and pivot shaft assembly aside, and loosen the upper windshield wiper motor bolt.

10. Remove the windshield wiper mounting arm and pivot shaft assembly.
 1. Rotate wiper output arm to the six o'clock position.
 2. Remove the lower wiper motor bolts.
 3. **NOTE:** It is necessary to rotate the bottom of the windshield wiper mounting arm and pivot shaft assembly upward.

Remove the windshield wiper mounting arm and pivot shaft assembly.

- Disconnect the electrical connector.

11. To install, reverse the removal procedure.

Windshield Wiper Motor

Removal and Installation

1. Remove the windshield wiper mounting arm and pivot shaft (17566) assembly; refer to [Mounting Arm and Pivot Shaft](#) in this section.
2. Remove the windshield wiper motor (17508).
 1. Remove the bolt.
 2. Remove the windshield wiper motor crank bolt.
 3. Remove the windshield wiper motor.

3. To install, reverse the removal procedure.

Washer Pump and Reservoir

Removal and Installation

1.  **CAUTION:** Do not make electrical connections prior to filling the windshield washer reservoir. Do not operate the windshield washer pump prior to filling the windshield washer reservoir.

Disconnect the battery ground cable. Refer to [Section 414-01](#).

2. Remove the RF wheel and tire assembly. For additional information, refer to [Section 204-04](#).
3. Position RF fender splash shield aside.
 1. Remove the screws.
 2. Remove the pin-type retainers.
 3. Position the RF splash shield aside.

4. **NOTE:** Windshield washer fluid should be collected in a container after the windshield washer hose is disconnected.

Disconnect the washer hose.

5. Remove the washer fluid reservoir.
 1. Disconnect the two electrical connectors.
 2. Remove the bolts.
 3. Remove the washer reservoir.

6. If necessary remove the windshield washer pump and if equipped remove the headlamp washer pump.

7. To install, reverse the removal procedure.
-

Module —Rain Sensor

Removal and Installation

1. **NOTE:** To avoid damage to the rain sensor module cover, push up on the cover while rotating the top of the cover toward the rear of the vehicle.

NOTE: Prior to installing the rain sensor module, the windshield glass area between the rain sensor module brackets must be cleaned.

NOTE: When installing the rain sensor module, it is necessary to apply inward pressure on the module prior to locking the rain sensor module retaining slides in place.

Remove the rain sensor module cover (17D550).

2. Remove the rain sensor module 17D547.
 1. Pull the latch on the connector away from the harness and disconnect the electrical connector.
 2. **NOTE:** When removing the rain sensor module, it is necessary to apply inward pressure on the module prior to releasing the rain sensor module retaining slides.
- Release the rain sensor module retaining slides.
3. Remove the rain sensor module.

3. To install, reverse the removal procedure.

Torque Specifications

Description	Nm	lb-in
Roof opening panel assembly bolts	10	89
Roof opening glass assembly screws	4	35
Roof opening panel control module bolts	3	27
Roof opening panel motor assembly bolts	6	53

Roof Opening Panel

The roof opening panel consists of the following components:

- Left sight shield
- Right sight shield
- Water trough
- Roof opening panel opening shield
- Roof opening panel assembly
- Roof opening panel track and rail assembly
- Roof opening panel control module
- Roof opening panel motor assembly
- Roof opening glass assembly
- Roof opening glass seal

The roof opening panel is available as an option. The roof opening panel control module controls the roof opening panel. The roof opening panel may be operated from the roof opening panel switch or the global open and close function.

Roof Opening Panel

Refer to Wiring Diagrams Section [501-17](#), Roof Opening Panel for schematic and connector information.

Special Tool(s)

 ST1137-A	73III Automotive Meter 105-R0057 or equivalent
 ST1217-A	New Generation STAR Tester 418-F048 (007-00500) or equivalent

Principles of Operation

Roof Opening Panel Control Module

Battery power is continuously supplied to the roof opening panel control module. However, the roof opening panel will only operate from the roof opening panel switch with the ignition switch in the RUN or ACCY position. The global open and close feature is controlled by two circuits from the rear electronic module (REM). The two circuits must be at ground potential before the roof opening panel control module will acknowledge the roof opening panel switch. When the ignition switch is turned to RUN or ACCY, the REM provides ground to these circuits.

The roof opening panel control module incorporates soft stops at the end of all travel positions. The roof opening panel control module monitors the internal switches to determine the roof opening glass position and the soft stops. The internal switches are activated by the roof opening panel motor rotation.

The roof opening panel control module supplies the power and ground to the roof opening panel motor depending on the ordered function. Power is supplied to the roof opening panel motor for a maximum of 12 seconds. Under normal operation, position is monitored by the roof opening panel control module and power is removed from the roof opening panel motor as soon as the roof opening panel reaches the commanded position.

Roof Opening Panel Switch

Four circuits connect the roof opening panel switch to the roof opening panel control module. One circuit is the common return. The other three are the control circuits open, close and tilt. The roof opening panel control module monitors these lines for voltage fluctuation to determine which function was selected.

With the ignition switch in the RUN or ACCY position, the roof opening panel supplies a five volt reference voltage to the three control lines. Activation of the roof opening panel switch connects one or more of these lines to the common return which pulls the line low. The roof opening panel control

module will sense the line or lines being connected to the common line and carry out the appropriate function.

The express open function connects the open and tilt circuits to the common return when the roof opening panel switch is moved rearward to the second detent position. The operator-controlled open function connects the open circuit to the common return. The close function connects the close circuit to the common causing the roof opening panel to close from a slide or vent position.

Global Open and Close

Two circuits connect the REM to the roof opening panel control module for these functions. Global open and close operation for the roof opening panel is controlled by one of these two circuits being grounded by the REM.

Global open and close operation is only available with the ignition in the OFF position and the ignition key removed.

When the ignition switch is in the RUN or ACCY position, the REM grounds both of these circuits allowing normal operation of the roof opening panel from the roof opening panel switch.

When global open or close operation is selected, the roof opening panel switch is not recognized by the roof opening panel control module throughout the operation and five seconds after the operation is completed.

With the ignition switch in the OFF position, the roof opening panel control module supplies a constant voltage to these two circuits. The roof opening panel control module monitors these lines for a low state, caused by the REM grounding the line, to determine the ordered global function by the REM.

Global open is commanded by the REM grounding control line two. Line one will remain at previous voltage.

Global close is commanded by the REM grounding control line one. Line two will remain at previous voltage.

If both lines have voltage, the roof opening panel will be inoperative.

The global open function is activated by:

- unlocking the driver door using the remote keyless entry transmitter. Within five seconds, press and hold the unlock button.
- unlocking the driver door using the driver door lock cylinder and the key. Hold the key in the unlock position.

The global close function is activated by:

- turning the driver door lock cylinder to the lock position and holding.

Global open and close operates as follows:

- With the roof opening glass in the flush position, activating global open will operate the roof opening glass to the full open position.
- With the roof opening glass in the open position, activating global close will close the roof opening glass to the flush position.
- If a global open is commanded within five seconds of a completed global operation, the roof opening panel control module will reverse the previous completed global operation. If the roof opening glass was globally closed from the vent position, a global open within five seconds

would tilt the roof opening glass back up.

- If the roof opening glass was globally closed from the slide open position, a global open within five seconds would slide the roof opening glass back open.

Inspection and Verification

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Roof opening panel track and rail assembly ● Roof opening glass seal ● Roof opening glass adjustment ● Roof opening panel assembly timing 	<ul style="list-style-type: none"> ● Battery junction box (BJB) Fuse 416 (20A) ● Central junction box (CJB) Mini Fuse 207 (5A) ● Roof opening panel switch ● Roof opening panel motor assembly ● Rear electronics module (REM) ● Roof opening panel control module ● Wiring harness ● Loose or corroded connections

3. If the concern remains after the inspection, connect the New Generation STAR (NGS) Tester to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the NGS Tester menu. If the NGS Tester does not communicate with the vehicle:
 - check that the program card is correctly installed.
 - check the connections to the vehicle.
 - check the ignition switch position.
4. If the NGS still does not communicate with the vehicle, refer to the New Generation STAR Tester manual.
5. Carry out the DATA LINK DIAGNOSTIC TEST. If the NGS responds with:
 - CKT914, CKT915 or CKT70 = ALL ECUS NO RESP/NOT EQUIP, refer to [Section 418-00](#).
 - NO RESP/NOT EQUIP for REM, go to Pinpoint Test A.
 - SYSTEM PASSED, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the REM.
6. If the DTCs retrieved are related to the concern, go to REM Diagnostic Trouble Code (DTC) Index to continue diagnostics.
7. If no DTCs related to the concern are retrieved, proceed to Symptom Chart to continue diagnostics.

REM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1201	Fuel Sender Circuit Failure	REM	REFER to Section 413-01 .

Pinpoint Tests

PINPOINT TEST A: NO COMMUNICATION WITH THE REAR ELECTRONIC MODULE (REM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK BJB FUSE 425 (40A) FOR POWER	
<p>1</p>  <p>2</p>  <p>BJB Fuse 425 (40A)</p> <p>3</p>  <p>A0003586</p>	<p>3</p> <p>Measure the voltage between BJB Fuse 425 (40A) pin 1, and ground.</p> <ul style="list-style-type: none"> ● Is the voltage greater than 10 volts? <p>→ Yes GO to A2.</p> <p>→ No REPAIR the power supply to BJB Fuse 425 (40A). TEST the system for normal operation.</p>
A2 CHECK CIRCUIT 30-DD1 (RD/YE) FOR AN OPEN	
<p>1</p>	

CJB Mini Fuse 207 (5A)

2

A0003615

2

Measure the resistance between BJB Fuse 425 (40A) pin 2, circuit 30-DD1 (RD/YE), and CJB Mini Fuse 207 (5A) pin 1, circuit 30-DD1 (RD/YE).

● Is the resistance less than 5 ohms?

→ **Yes**
REFER to [Section 418-00](#). TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST B: THE ROOF OPENING PANEL LEAKS

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK THE ROOF OPENING PANEL OPERATION	<p>1 Cycle the roof opening glass from the full-open position to the full-closed position.</p> <p>● Does the roof opening glass operate smoothly and close tightly?</p> <p>→ Yes GO to B2.</p> <p>→ No CHECK the roof opening glass adjustment. REFER to Height Adjustment. If</p>

	the roof opening glass closes unevenly, CHECK the roof opening panel timing. REFER to Timing Adjustment . TEST the system for normal operation.
B2 CHECK THE ROOF OPENING PANEL FRAME DRAIN TUBES	
	<p>1 Gain access to the roof opening panel frame drain tubes.</p> <ul style="list-style-type: none"> ● Is there blockage or damage to the roof opening panel frame drain tubes? <p>→ Yes CLEAR the blockage or if necessary, INSTALL a new drain tube. TEST the system for normal operation.</p> <p>→ No GO to B3.</p>
B3 CHECK THE ROOF OPENING GLASS SEAL	
	<p>1 Actuate the roof opening glass to the full-open position.</p> <ul style="list-style-type: none"> ● Is the roof opening glass seal damaged? <p>→ Yes INSTALL a new roof opening glass seal. REFER to Glass—Roof Opening Assembly. TEST the system for normal operation.</p> <p>→ No REPAIR as necessary. TEST the system for normal operation.</p>

PINPOINT TEST C: THE ROOF OPENING PANEL IS NOISY DURING OPERATION

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK THE OPERATION OF THE ROOF OPENING GLASS	
	<p>1 Cycle the roof opening glass from the full-open to the full-closed position.</p> <ul style="list-style-type: none"> ● Is the roof opening glass loose? <p>→ Yes ADJUST the roof opening glass. REFER to Height Adjustment. TEST the system for normal operation.</p> <p>→ No GO to C2.</p>
C2 CHECK FOR OBSTRUCTIONS	
	<p>1 Check the roof opening panel track and rail assembly for foreign material, damage or looseness.</p> <ul style="list-style-type: none"> ● Is the roof opening panel obstructed or damaged? <p>→ Yes REMOVE the obstruction. If necessary, INSTALL a new roof opening panel</p>

	<p>track and rail assembly. REFER to Panel—Roof Opening Assembly . TEST the system for normal operation.</p> <p>→ No GO to C3 .</p>
<p>C3 CHECK THE ROOF OPENING PANEL MOTOR</p>	
	<p>1 Cycle the roof opening glass from the full-open to the full-closed position.</p> <ul style="list-style-type: none"> • Does the roof opening panel motor make excessive noise? <p>→ Yes CHECK the roof opening panel motor for the correct mounting. If necessary, INSTALL a new roof opening panel motor assembly. REFER to Motor—Roof Opening Panel Assembly . TEST the system for normal operation.</p> <p>If the roof opening panel opens or closes unevenly, ADJUST the roof opening panel timing. REFER to Timing Adjustment . TEST the system for normal operation.</p> <p>→ No CHECK the flushness. REFER to Height Adjustment . ADJUST the roof opening panel glass as necessary. TEST the system for normal operation.</p>

PINPOINT TEST D: THE ROOF OPENING PANEL DOES NOT OPEN OR CLOSE

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>D1 CHECK THE POWER SUPPLY TO THE ROOF OPENING PANEL CONTROL MODULE</p>	
<p>1</p>  <p>Roof Opening Panel Module C921b</p> <p>2</p>  <p>A0001447</p>	<p>2 Measure the voltage between roof opening panel control module C921b pin 1, circuit 30-AG12 (RD), harness side and ground.</p> <ul style="list-style-type: none"> • Is the voltage between 9 and 16 volts? <p>→ Yes GO to D4 .</p>

→ **No**
GO to [D2](#).

D2 CHECK CIRCUIT 30-AG12 (RD) FOR AN OPEN

1

BJB Fuse 416 (20A)

- **Is BJB Fuse 416 (20A) OK?**

→ **Yes**
REPAIR the circuit. TEST the system for normal operation.

→ **No**
GO to [D3](#).

D3 CHECK CIRCUITS 30-AG12 (RD), 32-AG6 (WH) AND 33-AG6 (YE) FOR A SHORT TO GROUND

1

1 Using the following table, measure the resistance between roof opening panel control module C921b pins, harness side and ground:

Pin	Circuit
1	30-AG12 (RD)
2	33-AG6 (YE)
3	32-AG6 (WH)

- **Are the resistances greater than 10,000 ohms?**

→ **Yes**
INSTALL a new BJB Fuse 416 (20A). TEST the system for normal operation. If BJB Fuse 416 (20A) opens again, INSTALL a new roof opening panel control module. REFER to [Module—Roof Opening Panel Control](#). TEST the system for normal operation.

→ **No**
REPAIR the circuit. TEST the system for normal operation.

D4 CHECK THE ROOF OPENING PANEL CONTROL MODULE GROUND

1

1 Measure the resistance between roof opening panel control module C921b pin 4, circuit 31-AG12 (BK/GN), harness side and ground.

A0001449

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [D5](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

D5 CHECK THE REM INPUT TO THE ROOF OPENING PANEL CONTROL MODULE

1

Roof Opening Panel Control Module C921a

2

3

A0001450

3 Measure the resistance between roof opening panel control module C921a pin 5, circuit 5-AG12 (BU/BK), harness side and ground; and between roof opening panel control module C921a pin 6, circuit 4-AG12 (GY/OG), harness side and ground.

● Are the resistances less than 5 ohms?

→ **Yes**
GO to [D7](#).

→ **No**
GO to [D6](#).

D6 CHECK CIRCUIT 5-AG12 (BU/BK) AND 4-AG12 (GY/OG) FOR AN OPEN

1

2

REM C420c

3

3

Measure the resistance between roof opening panel control module C921a pin 5, circuit 5-AG12 (BU/BK), harness side and REM C420c pin 14, circuit 5-AG12 (BU/BK), harness side; and between roof opening panel control module C921a pin 6, circuit 4-AG12 (GY/OG), harness side and REM C420c pin 15, circuit 4-AG12 (GY/OG), harness side.

● **Are the resistances less than 5 ohms?**

→ **Yes**

INSTALL a new REM. REFER to [Section 419-10](#). TEST the system for normal operation.

→ **No**

REPAIR the circuit. TEST the system for normal operation.

D7 CHECK CIRCUIT 5-AG12 (BU/BK) AND 4-AG12 (GY/OG) FOR A SHORT TO GROUND

1

2

REM C420c

3

A0001450

3

Measure the resistance between roof opening panel control module C921a pin 5, circuit 5-AG12 (BU/BK), harness side and ground; and between roof opening panel control module C921a pin 6, circuit 4-AG12 (GY/OG), harness side and ground.

- Are the resistances greater than 10,000 ohms?

→ **Yes**
GO to [D8](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

D8 CHECK THE ROOF OPENING PANEL CONTROL MODULE FOR REFERENCE VOLTAGE OUTPUT

1

2

REM C420c

3

Roof Opening Panel Control Module C921a

4

Roof Opening Panel Switch C912

5

6

6 Using the following table, measure the voltage between roof opening panel switch C912 pins, harness side and ground:

Pin	Circuit
4	32-AG12 (WH/GN)
2	32-AG10 (WH/BU)
5	33-AG10 (YE/BU)

- Are the voltages approximately 5 volts?

→ **Yes**

GO to [D9](#).

→ **No**
GO to [D10](#).

D9 CHECK THE ROOF OPENING PANEL SWITCH INPUT

1

Roof Opening Panel Control Module C921a

2

Roof Opening Panel Switch C912

3

A0001453

3 Using the following table, measure the resistance between roof opening panel control module C921a pin 8, circuit 9-AG7 (BN/RD), harness side and roof opening panel control module pins, harness side, while the roof opening panel switch is activated to each position.

Pin	Circuit	Switch Position
4	32-AG10 (WH/BU)	Depress the switch to open (first detent position)
4	32-AG10 (WH/BU)	Depress the switch to express open (second detent position)
7	32-AG12 (WH/GN)	Depress the switch to tilt
7	32-AG12 (WH/GN)	Depress the switch to express open (second detent position)
3	33-AG10 (YE/BU)	Depress the switch to close

- Are the resistances greater than 10,000 ohms with the switch in the resting state and less than 5 ohms when activated?

→ **Yes**
GO to [D12](#).

→ **No**
INSTALL a new roof opening panel switch. REFER to [Switch—Roof Opening Panel](#). TEST the system for normal

operation.

D10 CHECK CIRCUITS 9-AG7 (BN/RD), 32-AG12 (WH/GN), 32-AG10 (WH/BU) AND 33-AG10 (YE/BU) FOR A SHORT TO GROUND

1

1

Using the following table, measure the resistance between roof opening panel control module C921a pins, harness side and ground:

Pin	Circuit
3	33-AG10 (YE/BU)
4	32-AG10 (WH/BU)
7	32-AG12 (WH/GN)
8	9-AG7 (BN/RD)

- Are the resistances greater than 10,000 ohms?

→ **Yes**
GO to [D11](#).

→ **No**
REPAIR the circuit. TEST the system for normal operation.

D11 CHECK CIRCUITS 9-AG7 (BN/RD), 32-AG12 (WH/G), 32-AG10 (WH/BU) AND 33-AG10 (YE/BU) FOR AN OPEN

1

Roof Opening Panel Switch C912

2

2

Using the following table, measure the resistance between roof opening panel control module C921a pins, harness side and the roof opening panel switch C912 pins, harness side:

Roof Opening Panel Control Module C921a Pin	Circuit	Roof Opening Panel Switch C912 Pin
3	33-AG10 (YE/BU)	5
4	32-AG10 (WH/BU)	2
7	32-AG12 (WH/GN)	4
8	9-AG7 (BN/RD)	3

- Are the resistances less than 5 ohms?

→ Yes

INSTALL a new roof opening panel switch. REFER to [Switch—Roof Opening Panel](#). TEST the system for normal operation.

→ No

REPAIR the circuit. TEST the system for normal operation.

D12 CHECK THE OUTPUT TO THE ROOF OPENING PANEL MOTOR ASSEMBLY

1

Roof Opening Panel Motor Assembly C920

2

Roof Opening Panel Control Module C921a

3

4

A0001456

4

Measure the voltage between roof opening panel motor assembly C920 pin 1, circuit 32-AG6 (WH), harness side and roof opening panel motor assembly C920 pin 2, circuit 33-AG6 (YE), harness side.

5

Depress the roof opening panel switch to the open position; then the closed position.

- Is the voltage greater than 9 volts in both directions?

→ Yes

GO to [D14](#).

→ No

GO to [D13](#).

D13 CHECK CIRCUIT 32-AG6 (WH) AND 33-AG6 (YE) FOR AN OPEN

1

2

Roof Opening Panel Control Module C921b

3

3

Measure the resistance between roof opening panel control module C921b pin 3, circuit 32-AG6 (WH), harness side and roof opening panel motor assembly C920 pin 1, circuit 32-AG6 (WH), harness side; and between roof opening panel control module C921b pin 2, circuit 33-AG6 (YE), harness side and roof opening panel motor assembly C920 pin 2, circuit 33-AG6 (YE), harness side.

- Are the resistances less than 5 ohms?

→ Yes

INSTALL a new roof opening panel control module. REFER to [Module—Roof Opening Panel Control](#). TEST the system for normal operation.

→ No

REPAIR the circuit. TEST the system for normal operation.

D14 CHECK THE ROOF OPENING PANEL MOTOR ASSEMBLY

1

3

Roof Opening Panel Motor Assembly C920

4

2

Remove the roof opening panel motor assembly. For additional information, refer to [Motor—Roof Opening Panel Assembly](#).

5

Firmly hold the roof opening panel motor

	<p>making sure not to make contact with the motor gear.</p> <p>6 Depress the roof opening panel switch to the open position.</p> <ul style="list-style-type: none"> ● Does the roof opening panel motor operate? <p>→ Yes CHECK the roof opening panel for obstructions. If no obstructions are found, Install a new roof opening panel assembly. REFER to Panel—Roof Opening Assembly. TEST the system for normal operation.</p> <p>→ No INSTALL a new roof opening panel motor assembly. REFER to Motor—Roof Opening Panel Assembly. TEST the system for normal operation.</p>
--	--

PINPOINT TEST E: THE ROOF OPENING PANEL DOES NOT OPEN OR CLOSE IN VENT POSITION

CONDITIONS	DETAILS/RESULTS/ACTIONS
E1 CHECK THE ROOF OPENING PANEL OPEN/CLOSE OPERATION	
<p>1</p> 	<p>2 Depress the roof opening panel switch rearward and then forward.</p> <ul style="list-style-type: none"> ● Did the roof opening panel open and close? <p>→ Yes GO to E2.</p> <p>→ No GO to Pinpoint Test D.</p>
E2 CHECK THE ROOF OPENING PANEL VENT UP OPERATION	
<p>1</p> 	<p>2 Make sure the roof opening panel is in the flush position.</p> <p>3 Depress the roof opening panel switch</p>

up to the vent position.

- **Did the roof opening panel vent up?**

→ **Yes**

VERIFY the symptom. Circuit 33-AG10 (YE/BU) is used for close and vent down operation. If the roof opening panel is still inoperative in the vent down position, CHECK for loose connections, a binding roof opening panel track, a sticking switch or intermittent operation of the roof opening panel control module.

→ **No**

GO to [E3](#).

E3 CHECK THE ROOF OPENING PANEL EXPRESS OPERATION

1 Depress the roof opening panel switch rearward to the second detent position and release.

- **Did the roof opening panel express operation work correctly?**

→ **Yes**

INSTALL a new roof opening panel switch. REFER to [Switch—Roof Opening Panel](#). TEST the system for normal operation.

→ **No**

GO to [E4](#).

E4 CHECK FOR REFERENCE VOLTAGE TO THE ROOF OPENING PANEL SWITCH

1

2

Roof Opening Panel Switch C912

3

4

4 Measure the voltage between roof opening panel switch C912 pin 4, circuit 32-AG12 (WH/GN), harness side and ground.

A0001458

● Is the voltage approximately 5 volts?

→ Yes
GO to [E7](#).

→ No
GO to [E5](#).

E5 CHECK CIRCUIT 32-AG12 (WH/GN) FOR AN OPEN

1

2

Roof Opening Panel Module C921a

3

A0001459

3 Measure the resistance between roof opening panel control module C921a pin 7, circuit 32-AG12 (WH/GN), harness side and roof opening panel switch C912 pin 4, circuit 32-AG12 (WH/GN), harness side.

● Is the resistance less than 5 ohms?

→ Yes
GO to [E6](#).

→ No
REPAIR the circuit. TEST the system for normal operation.

E6 CHECK CIRCUIT 32-AG12 (WH/GN) FOR A SHORT TO GROUND

1

1 Measure the resistance between roof opening panel control module C921a pin

A0001460

7, circuit 32-AG12 (WH/GN), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
 INSTALL a new roof opening panel control module. REFER to [Module—Roof Opening Panel Control](#). TEST the system for normal operation.

→ **No**
 REPAIR the circuit. TEST the system for normal operation.

E7 CHECK THE INPUT TO THE ROOF OPENING PANEL CONTROL MODULE

1

Roof Opening Panel Switch C912

2

Roof Opening Panel Control Module C921a

3

A0001461

3 Measure the resistance between roof opening panel control module C921a pin 7, circuit 32-AG12 (WH/GN), harness side and roof opening panel control module C921a pin 8, circuit 9-AG7 (BU/RD), harness side.

4 Depress the roof opening panel switch to the VENT position.

- Is the resistance less than 5 ohms?

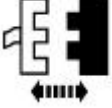

→ **Yes**
 INSTALL a new roof opening panel control module. REFER to [Module—Roof](#)

	<p>Opening Panel Control . TEST the system for normal operation.</p> <p>→ No INSTALL a new roof opening panel switch. REFER to Switch—Roof Opening Panel . TEST the system for normal operation.</p>
--	--

PINPOINT TEST F: THE ROOF OPENING PANEL DOES NOT STOP IN FLUSH FROM ANY POSITION

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK THE ROOF OPENING GLASS ADJUSTMENT	
	<p>1 Check the roof opening glass adjustment. Refer to Height Adjustment .</p> <ul style="list-style-type: none"> ● Is the roof opening glass adjusted correctly? <p>→ Yes GO to F2 .</p> <p>→ No ADJUST the roof opening glass as necessary. TEST the system for normal operation.</p>
F2 CHECK THE ROOF OPENING GLASS SEAL	
	<p>1 Inspect the roof opening glass seal for looseness, damage and correct installation.</p> <ul style="list-style-type: none"> ● Is the roof opening glass seal OK and installed correctly? <p>→ Yes GO to F3 .</p> <p>→ No REPAIR or INSTALL a new roof opening glass seal as necessary. REFER to Glass—Roof Opening Assembly . TEST the system for normal operation.</p>
F3 CHECK FOR OBSTRUCTION IN THE ROOF OPENING PANEL	
	<p>1 Inspect the roof opening panel assembly for obstructions in the track.</p> <ul style="list-style-type: none"> ● Are any obstructions found? <p>→ Yes REMOVE the obstruction. If necessary, INSTALL a new roof opening panel track and rail assembly. REFER to Panel—Roof Opening Assembly . TEST the system for normal operation.</p> <p>→ No INSTALL a new roof opening panel control module. REFER to Module—Roof Opening Panel Control . TEST the system for normal operation.</p>

PINPOINT TEST G: THE EXPRESS OPEN IS INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
G1 CHECK THE ROOF OPENING PANEL OPEN/CLOSE OPERATION	
<p>1</p> 	<p>2 Depress the roof opening panel switch rearward and then forward.</p> <ul style="list-style-type: none"> ● Did the roof opening panel open and close? <p>→ Yes GO to G2.</p> <p>→ No GO to Pinpoint Test D.</p>
G2 CHECK THE ROOF OPENING PANEL VENT UP OPERATION	
<p>1</p> 	<p>2 Make sure the roof opening panel is in the flush position.</p> <p>3 Depress the roof opening panel switch up to the vent position.</p> <ul style="list-style-type: none"> ● Did the roof opening panel vent up? <p>→ Yes GO to G7.</p> <p>→ No GO to G3.</p>
G3 CHECK FOR REFERENCE VOLTAGE TO THE ROOF OPENING PANEL SWITCH	
<p>1</p>  <p>2</p>  <p>Roof Opening Panel Switch C912</p> <p>3</p>	

4

A0001458

4

Measure the voltage between roof opening panel switch C912 pin 4, circuit 32-AG12 (WH/GN), harness side and ground.

● Is the voltage approximately 5 volts?

→ Yes
GO to [G6](#).

→ No
GO to [G4](#).

G4 CHECK CIRCUIT 32-AG12 (WH/GN) FOR AN OPEN

1

2

Roof Opening Panel Module C921a

3

A0001459

3

Measure the resistance between roof opening panel control module C921a pin 7, circuit 32-AG12 (WH/GN), harness side and roof opening panel switch C912 pin 4, circuit 32-AG12 (WH/GN), harness side.

● Is the resistance less than 5 ohms?

→ Yes
GO to [G5](#).

→ No
REPAIR the circuit. TEST the system for

normal operation.

G5 CHECK CIRCUIT 32-AG12 (WH/GN) FOR A SHORT TO GROUND

1

1

Measure the resistance between roof opening panel control module C921a pin 7, circuit 32-AG12 (WH/GN), harness side and ground.

- Is the resistance greater than 10,000 ohms?

→ Yes

INSTALL a new roof opening panel control module. REFER to [Module—Roof Opening Panel Control](#). TEST the system for normal operation.

→ No

REPAIR the circuit. TEST the system for normal operation.

G6 CHECK THE INPUT TO THE ROOF OPENING PANEL CONTROL MODULE

1

Roof Opening Panel Switch C912

2

Roof Opening Panel Control Module C921a

3

3

Measure the resistance between roof opening panel control module C921a pin 7, circuit 32-AG12 (WH/GN), harness side and roof opening panel control module C921a pin 8, circuit 9-AG7 (BU/RD), harness side.

4

Depress the roof opening panel switch to the vent position.

- Is the resistance less than 5 ohms?

→ **Yes**
INSTALL a new roof opening panel control module. REFER to [Module—Roof Opening Panel Control](#) . TEST the system for normal operation.

→ **No**
INSTALL a new roof opening panel switch. REFER to [Switch—Roof Opening Panel](#) . TEST the system for normal operation.

G7 CHECK FOR AN INTERMITTENT OPEN SIGNAL

1

2

Roof Opening Panel Control Module C921a

3

A0001462

3 Measure the resistance between roof opening panel control module C921a pin 4, circuit 32-AG10 (WH/BU), harness side and roof opening panel control module C921a pin 8, circuit 9-AG7 (BU/RD), harness side.

4 Monitor the resistance as the roof opening panel is moved to the open (first detent) position, then express open (second detent) position.

- **Is the resistance continuously less than 5 ohms through the open position to the express open position?**

→ **Yes**
GO to [G8](#) .

→ **No**
INSTALL a new roof opening panel switch. REFER to [Switch—Roof Opening Panel](#) . TEST the system for normal operation.

G8 CHECK FOR AN INTERMITTENT EXPRESS OPEN SIGNAL

1

1 Measure the resistance between roof opening panel control module C921a pin

A0001461

7, circuit 32-AG12 (WH/GN), harness side and roof opening panel control module C921a pin 8, circuit 9-AG7 (BU/RD), harness side.

2 Monitor the resistance as the roof opening panel is moved to the open (first detent) position, then express open (second detent) position.

- **Is the resistance greater than 10,000 ohms in the open position and continuously less than 5 ohms in the express open position?**

→ **Yes**
 INSTALL a new roof opening panel control module. REFER to [Module—Roof Opening Panel Control](#). TEST the system for normal operation.

→ **No**
 INSTALL a new roof opening panel switch. REFER to [Switch—Roof Opening Panel](#). TEST the system for normal operation.

PINPOINT TEST H: THE ROOF OPENING PANEL HAS EXCESSIVE WIND NOISE

CONDITIONS	DETAILS/RESULTS/ACTIONS
H1 CHECK THE ROOF OPENING GLASS FIT	
	<p>1 Cycle the roof opening glass from the full-open to the full-closed position.</p> <p>2 Inspect the roof opening glass seal for correct fit or damage.</p> <ul style="list-style-type: none"> ● Is the roof opening glass seal OK? <p>→ Yes GO to H2.</p> <p>→ No INSTALL a new roof opening glass seal. REFER to Glass—Roof Opening Assembly. TEST the system for normal operation.</p>
H2 CHECK THE ROOF OPENING GLASS OPERATION	
	<p>1 Cycle the roof opening glass from the full-open to the full-closed position.</p>

- **Does the roof opening glass travel to the full-open and the full-closed position?**

→ **Yes**

ADJUST the roof opening glass. REFER to [Height Adjustment](#) . If the roof opening glass closes unevenly, CHECK the roof opening panel timing. REFER to [Timing Adjustment](#) . TEST the system for normal operation.

→ **No**

CHECK the roof opening glass seal. If necessary, INSTALL a new roof opening glass seal. REFER to [Glass—Roof Opening Assembly](#) . TEST the system for normal operation.

Height Adjustment

1. Operate the roof opening glass assembly to the closed position.
2. Swing the left sight shield and right sight shield rearward and loosen the screws on each side.

3. Adjust the front glass edge to between flush and 1.7 - 2.7 mm (0.07 - 0.11 in) low.

4. Adjust the rear glass edge to between flush and 0.7 - 1.7 mm (0.02 - 0.07 in) low.

5. **NOTE:** Make sure to carefully align the sight shield to the snap retainer prior to positioning into place.

Tighten the four screws and swing the left and right sight shields forward and snap into place.

Timing Adjustment

1. Remove the roof opening panel assembly. For additional information, refer to [Panel—Roof Opening Assembly](#) in this section.
2. Remove the roof opening glass assembly.
 1. Swing the left and right sight shields rearward.
 2. Remove the screws on each side.
 3. From the exterior of the vehicle, lift the roof opening glass assembly from the vehicle.

3. Disconnect the connectors.

4. Remove screws and the roof opening panel motor assembly.

5. Remove the screw and the roof opening panel control module.

6. **NOTE:** It may be necessary to slightly separate the rail assembly to visually see the two alignment holes.

Align the holes in the mechanism on each side.

7. Make sure the flush locating pin is centered in the slot on each side.

8. **NOTE:** The alignment pins must remain in place until the roof opening panel control module is installed.

NOTE: A number 33 drill bit may be used as an alignment pin.

Install an alignment pin in the alignment hole in each side of the mechanism.

- The alignment pin should be approximately 2.83 mm (0.11 in) in diameter

9. Position the roof opening panel motor assembly on the roof opening panel control module.

10.  **CAUTION: Do not snug or overtighten the roof opening panel mounting screws. Damage to the roof opening panel control module may result.**

Install the screws approximately two to three turns.

11. Remove the harness from the roof opening panel assembly.

12. Position the headlining panel against the right rear quarter panel.

- The rear of the headliner should be towards the right rear door opening and the cloth side towards the vehicle.

13. Connect the headlining panel body harness connector at the right rear C-pillar.

14. Connect the roof opening panel harness between the module motor assembly and the roof opening panel switch.

15. **NOTE:** Make sure the battery is fully charged.

Turn the ignition switch to RUN.

16. Firmly hold the roof opening panel control module and roof opening panel motor together.

17. Operate the roof opening panel switch rearward (OPEN position) until the motor stops.
18. Operate the roof opening panel switch forward (CLOSE position) until the motor stops.
19. Disconnect the front body harness connector.

20. **NOTE:** Make sure the roof opening panel control module gear position is not altered.

Remove the screws.

21. Make sure the alignment hole is visible in the view hole.

22. **NOTE:** Make sure the roof opening panel control module gear position is not altered.

Install the roof opening panel control module on the cable sleeves.

- Make sure the shoulder of each cable sleeve is correctly seated in the roof opening panel control module.

23. Make sure the roof opening panel control module is seated flush to the bracket and install the screw.

24. **NOTE:** Make sure the roof opening panel motor is correctly aligned and inserted into the control module. The roof opening panel motor should be sitting flush with the frame before installing the bolts.

Position the roof opening panel motor assembly and install the screws.

25. Connect the connectors.

26. Install the roof opening panel harness tie down and clip into place.

27. Remove the alignment pins from each side.

28. Install the roof opening glass assembly.

1. Install the roof opening glass assembly in place aligning screw holes.
2. Install the screws on each side.
3. **NOTE:** Make sure to carefully align the sight shield to the snap retainer prior to positioning into place.

Swing the left and right sight shields forward and snap into place.

29. Position the roof opening panel assembly near the headliner and connect the roof opening panel harness to the headliner harness.

30. **NOTE:** Make sure the battery is fully charged.

Operate the roof opening panel to the full open and full close position. Make sure both sides activate at the same time and the roof opening panel operates smoothly without jerking or binding. Make sure both sides reach flush at the same time.

31. Install the roof opening panel assembly. For additional information, refer to [Panel—Roof Opening Assembly](#) in this section.

32. Adjust the roof opening glass height. For additional information, refer to [Height Adjustment](#) in this section.

Panel —Roof Opening Assembly

Removal

1. Remove the headliner. For additional information, refer to [Section 501-05](#).
2. Remove the roof opening panel assembly.
 1. Disconnect the drain tubes.
 2. Remove the bolts.
 3. **NOTE:** Support the roof opening panel assembly to prevent the unit from dropping.

Remove the bolts.

Installation

NOTE: The roof opening panel is available as an assembly or a track and rail assembly. The track and rail assembly must have the roof opening glass and the roof opening panel opening shield transferred from the old unit. The roof opening panel assembly can be installed without transferring parts from the old unit.

1. If necessary, transfer the roof opening glass assembly and the roof opening panel opening shield to the new roof opening panel assembly.
2. Install and support the roof opening panel assembly in the vehicle.
 - Make sure the alignment pins are correctly seated on each side.

3. Install the roof opening panel assembly bolts.

4. Connect the drain tubes.

5. Install the headliner. For additional information, refer to [Section 501-05](#).
 6. Adjust the roof opening glass height. For additional information, refer to [Height Adjustment](#).
-

Glass —Roof Opening Assembly

Removal

1. Operate the roof opening glass assembly to the closed position.
2. Remove the roof opening glass assembly.
 1. Swing the left and right sight shields rearward.
 2. Remove the four screws.
 3. From the exterior of the vehicle, lift the roof opening glass assembly from the vehicle.

3. Remove the roof opening glass seal.

Installation

1. Install the roof opening glass seal.
 - Position the roof opening glass seal seam in the center of the passenger side of the roof opening glass.

2. Install the roof opening glass assembly.
 1. Install the roof opening glass assembly in place aligning screw holes.
 2. Install the four screws.
 3. **NOTE:** Make sure to carefully align the sight shield to the snap retainer prior to positioning into place.

Swing the left and right sight shields forward and snap into place.

3. Adjust the roof opening glass height. For additional information, refer to [Height Adjustment](#).
-

Opening Shield —Roof Opening Panel

Removal

1. Remove the roof opening glass assembly. For additional information, refer to [Glass—Roof Opening Assembly](#).
2. Remove the water trough.
 1. Remove the two screws.
 2. Remove the water trough.

3. Pull the roof opening panel opening shield forward, lifting up slightly at the front openings until the front and rear tabs are disengaged from the track.

Installation

1. Insert the rear tabs into the track and slide the roof opening panel opening shield rearward until the front tabs insert into the track.

2. Install the water trough under the tab on each side.

3. Position the water trough and install the two screws.

4. Install the roof opening glass assembly. For additional information, refer to [Glass—Roof Opening Assembly](#).
-

Motor —Roof Opening Panel Assembly

Removal and Installation

⚠ CAUTION: Make sure the roof opening glass assembly is not moved during motor removal or installation. The roof opening panel assembly timing may be affected and cause the roof opening panel assembly to bind or be damaged.

1. Remove the headliner. For additional information, refer to [Section 501-05](#).
2. Remove the roof opening panel motor assembly.
 1. Disconnect the electrical connector.
 2. Remove the tie strap.
 3. Remove the bolts.

3. **NOTE:** If the roof opening glass assembly was moved while the roof opening panel motor was removed, the timing must be reset. Refer to [Timing Adjustment](#).

To install, reverse the removal procedure.

Trough Assembly

Removal

1. Remove the roof opening glass assembly. For additional information, refer to [Glass—Roof Opening Assembly](#).
2. Remove the water trough (5454022).
 1. Remove the two screws.
 2. Remove the water trough.

Installation

1. Install the water trough under the tab on each side.

2. Position the water trough and install the two screws.

3. Install the roof opening glass assembly. For additional information, refer to [Glass—Roof](#)

[Opening Assembly](#).

Air Deflector

Removal and Installation

1. Move the roof opening glass assembly fully rearward.
2. Remove the two air deflector screws.

3. Move the air deflector to the complete vertical position.

4. Slide the air deflector rearward to unhook from the frame.

5. To install, reverse the removal procedure.

Switch —Roof Opening Panel

Removal and Installation

1. Position the dome/map lamp assembly aside.
2. Disconnect the electrical connector, remove the screws and the roof opening panel switch.

3. To install, reverse the removal procedure.
-

Module —Roof Opening Panel Control

Removal

1. **NOTE:** Make sure the roof opening glass assembly is in the closed position.

Remove the roof opening panel assembly. For additional information, refer to [Panel—Roof Opening Assembly](#).

2. Remove the bolts and position the roof opening panel motor assembly aside.

3. Remove the roof opening panel control module.
 1. Disconnect the electrical connectors.
 2. Remove the screw.
 3. Remove the roof opening panel control module.

Installation

1. **NOTE:** Before a new roof opening panel control module can be installed, the roof opening panel and control module must be timed. The timing procedure will install the roof opening panel control module once the unit is timed.

Carry out the roof opening panel assembly timing. Refer to [Timing Adjustment](#).

Torque Specifications

Description	Nm	lb-ft	lb-in
Front bumper cover bracket bolts	7	—	62
Rear bumper cover nuts	7	—	62
Rear bumper cover bolts	7	—	62
Front bumper bolts (8mm)	25	18	—
Rear bumper bolts	23	17	—
Exhaust hanger bracket bolt	30	22	—
Front bumper bolts (6mm)	10	—	89

Bumpers

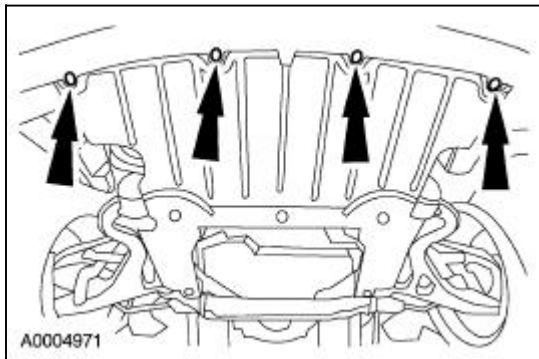

The bumper system consists of the following components:

- Front bumper cover (17D957)
 - Front bumper cover trim
 - Front bumper (17750)
 - Front bumper isolator (17E898)
 - Rear bumper cover (17K835)
 - Rear bumper cover trim
 - Rear bumper (17775)
 - Rear bumper isolator (17E899)
-

Bumper Cover —Front

Removal and Installation

1. Remove the screws.

2. Remove the two screws from the inner fender splash shields.

3. Remove the six screws from inner fender splash shields.

4. Disconnect the two fog lamp electrical connectors.

5. Disconnect the two side marker lamp electrical connectors.
6. Remove the four front bumper cover bracket bolts from the fenders.

7. Release the ambient air temperature sensor.

8. Remove the radiator grille opening cover at the top shelf of the bumper.

9. Remove the front bumper cover by pulling the center tabs downward and the outboard tabs on each side outward.

Item	Description
1	Grille opening panel reinforcement
2	Bumper cover
3	Fender

10. To install, reverse the removal procedure.

Bumper Cover —Rear

Removal and Installation

RH and LH Side

1. Remove the screws.

2. Remove the four inner fender screws.

RH Side Only

3. Remove the rear bumper cover bolt and the nut located in the wheelwell area.

LH Side Only

4. Remove the rear bumper cover bolt.

RH and LH Side

5. Remove the luggage compartment scuff plate.

6. Remove the luggage compartment back and side panel trim.
7. From the luggage compartment, remove the rear bumper cover nuts.

8. From the luggage compartment, remove the 10 rear bumper cover nuts (five each side).
 9. Remove the rear bumper cover.
 10. To install, reverse the removal procedure.
-

Bumper Cover —Trim, Front

Removal and Installation

1. Remove the front bumper cover. For additional information, refer to [Bumper Cover—Front](#).
2. Remove the retaining clips and the poly foam.

3. Remove the retaining clips and the trim.

4. To install, reverse the removal procedure.
-

Bumper Cover —Trim, Rear

Removal and Installation

1. Remove the rear bumper cover. For additional information, refer to [Bumper Cover—Rear](#).
2. Remove the retaining clips and the poly foam.

3. Remove the retaining clips and the trim.

4. To install, reverse the removal procedure.

Bumper —Front

Removal

1. Remove the front bumper cover. For additional information, refer to [Bumper Cover—Front](#) in this section.
2. Disconnect the horn electrical connector.
3. Remove the front bumper.
 1. Drill out the six spot welds.
 2. Remove the eight bolts.

Installation

1. **NOTE:** Transfer the horns if required.
NOTE: Spot welding the bumper is not required.
To install, reverse the removal procedure.

Bumper —Rear

Removal and Installation

1. Remove the rear bumper cover. For additional information, refer to [Bumper Cover—Rear](#).
2. Remove the exhaust hanger bracket.
 1. Remove the bolt.
 2. Remove the bracket.

3. Remove the bolts and the rear bumper.

4. To install, reverse the removal procedure.

Part Replacement Chart — Safety Belt With Damaged Weld Nut Anchor Plate Threads

Safety Belt System

 **WARNING:** All safety belt assemblies including retractors, buckles, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjusters, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. All belt assemblies should be installed new unless a qualified technician finds the assemblies show no damage and operate correctly. Belt assemblies not in use during a collision should also be inspected. New safety belt assemblies should be installed if either damage or incorrect operation is noted.

 **WARNING:** Each seating position in the vehicle has a specific safety belt assembly which consists of one buckle and one tongue. The safety belt assembly is designed to be used as a pair and is not to be used across seating positions.

The active restraint system consists of:

- the front safety belt retractors with pretensioners secured to the body under the B-pillar lower trim panel.
- the rear LH and RH safety belt retractors secured to the body behind the quarter trim panels.
- the rear center safety belt retractor secured to the body under the package tray trim panel.
- the front inboard buckle end secured to the front seat assembly.
- the rear LH, RH, and center buckle ends secured to the rear floor pan under the rear seat cushion.
- the safety belt shoulder height adjuster, attached at the B-pillar under the trim panel.
- the child safety seat tether anchors attached to the package tray under the trim panel.
- the child safety seat LATCH system, attached to the floor pan under the second row seating.

A continuous-loop, single retractor active restraint system is used on both the front and rear seat safety belt assemblies.

Pretensioner System

The front safety belt and retractor assembly uses a pretensioner system which works in conjunction with the front air bag system mounted in the steering wheel and instrument panel. When the front air bag system is deployed, the pretensioner in the retractor deploys, causing the retractor spool to rotate. The rotating spool action removes excess webbing from the safety belt assembly, tightening the webbing around the occupant.

New driver and front passenger seat belt system (including belt and retractor assembly, buckles, and height adjusters) must be installed if the vehicle is involved in a collision that results in deployment of the front air bags and safety belt pretensioners.

For diagnostic information, refer to [Section 501-20B](#).

For pretensioner retractor disposal information, refer to [Section 501-20B](#).

Safety Belt, Lap/Shoulder

While the vehicle is in motion, the combination lap and shoulder belt adjusts to the occupant's movement. However, if the vehicle is braked hard, cornered hard or if the vehicle receives an impact of 8 km/h (5 mph) or more, the lap and shoulder belt locks and helps reduce the occupant's forward movement.

Safety Belt, Buckle End—Front

The inboard front safety belt buckle end and outboard anchor is secured to the front seat. This allows the front safety belt buckle end and outboard anchor to move with the front seat.

Safety Belt, Lap/Shoulder—Dual Locking Mode

WARNING: Rear-facing infant seats should never be placed in the front seats.

The dual locking mode retractor on the shoulder belt portion of the combination lap/shoulder safety belt for the front seat passenger and rear seat passengers operates in two ways:

1. In the vehicle-sensitive (emergency locking) mode, the shoulder belt retractor will allow the occupant freedom of movement, locking tight only on hard braking, hard cornering or impacts of approximately 8 km/h (5 mph) or more. The front and rear outboard safety belt retractors can also be made to lock by pulling/jerking on the belt.
2. In the automatic locking mode, the shoulder belt retractor will be automatically locked and remain locked when the combination lap/shoulder safety belt is buckled and does not allow the occupant freedom of movement. This mode provides tight lap/shoulder belt fit on the occupant and on a child safety seat or infant carrier installation restraint.

When the combination lap/shoulder belt is unbuckled and allowed to retract completely, the retractor will switch to the vehicle sensitive (emergency locking) mode.

The automatic locking mode must be used when installing a child safety seat.

Lower Anchors and Tethers for Children (LATCH)

The Lower Anchors and Tethers for Children (LATCH) system is a standardized and uniform attachment system for installing child safety seats in passenger vehicles. LATCH-equipped child safety seats have two lower attachments that connect to the vehicle portion of the LATCH system.

The vehicle portion of the system consists of two brackets, with two attachment points (6 mm wires) welded to each bracket. The attachment points protrude from the biteline between the seat cushion and seat backrest of the second row seating.

If a child safety seat was in use during a collision, inspect the vehicle portion of the system for damage. If any of the attachment points (6 mm wires) are damaged, install a new LATCH bracket.

Safety Belt Warning System

The safety belt warning indicator illuminates and a chime sounds to remind the occupants to fasten

their safety belts.

The conditions of operation for the safety belt warning indicator and chime are as follows:

- If the driver safety belt is not buckled before the ignition switch is turned to RUN, then the safety belt warning indicator illuminates for one to two minutes and the warning chime sounds for four to eight seconds.
- If the driver safety belt is buckled while the warning indicator is illuminated and the reminder chime is sounding, then the safety belt warning indicator and reminder chime turn off.
- If the driver safety belt is buckled before the ignition switch is turned to RUN, then the safety belt warning indicator and reminder chime remain off.

Belt Minder

The Belt Minder feature is a supplemental warning to the safety belt warning function. This feature provides additional reminders to the driver that the driver's safety belt is unbuckled by intermittently sounding a chime and illuminating the safety belt warning lamp in the instrument cluster.

To activate or deactivate the Belt Minder feature, refer to [Section 413-09](#).

If...	Then...
The driver's safety belt is not buckled before the vehicle has reached at least 5 km/h (3 mph) and 1-2 minutes have elapsed since the ignition switch has been turned to ON...	The Belt Minder feature is activated — the safety belt warning light illuminates and the warning chime sounds for 6 seconds every 30 seconds, repeating for approximately 5 minutes or until the safety belt is buckled.
The driver's safety belt is buckled while the safety belt indicator light is illuminated and the safety belt warning chime is sounding...	The Belt Minder feature will not activate.
The driver's safety belt is buckled before the ignition switch is turned to the ON position...	The Belt Minder feature will not activate.

Safety Belt System

Inspection and Verification

1. Verify the customer's original concern by operating the active restraint system to duplicate the condition.
2. Inspect to determine if any of the following mechanical or electrical concerns apply:

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Inspect the safety belt webbing for integrity. 	<ul style="list-style-type: none"> ● Open fuse. ● Bare, broken or disconnected wire. ● Connector not tightly engaged. ● Safety belt warning indicator lamp burned out or broken.

3. If the inspection reveals an obvious concern(s) that can be readily identified, repair the concern (s) as necessary.
4. If the concern remains after the inspection, determine the symptom. GO to [Symptom Chart](#).

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
<ul style="list-style-type: none"> ● The safety belt warning chime does not operate, the safety belt warning indicator lamp is OK 	<ul style="list-style-type: none"> ● Virtual image cluster (VIC). ● Circuitry. ● Driver seat module (DSM). 	<ul style="list-style-type: none"> ● REFER to Section 413-09.
<ul style="list-style-type: none"> ● The safety belt warning indicator lamp does not operate, the safety belt warning chime is OK 	<ul style="list-style-type: none"> ● Burned-out bulb. ● Circuitry. ● DSM. 	<ul style="list-style-type: none"> ● REFER to Section 413-01.
<ul style="list-style-type: none"> ● Neither the safety belt warning chime nor the safety belt warning indicator lamp operates 	<ul style="list-style-type: none"> ● Safety belt switch. ● DSM. ● Circuitry. 	<ul style="list-style-type: none"> ● REFER to Section 413-01.
<ul style="list-style-type: none"> ● Excessive pressure on the occupant during normal wear, the webbing cannot be extracted, excessive 	<ul style="list-style-type: none"> ● Front safety belt retractor and tongue. ● Rear safety 	<ul style="list-style-type: none"> ● CARRY OUT the Functional Test; REFER to Component Test in this section. INSTALL a

slack in webbing does not retract	belt retractor and tongue.	new safety belt retractor and tongue, if necessary.
<ul style="list-style-type: none"> ● Front safety belt and retractor does not function and a supplemental restraint system (SRS) fault code is present 	<ul style="list-style-type: none"> ● Pretensioner deployment. 	<ul style="list-style-type: none"> ● INSTALL a new driver and passenger safety belt system (including safety belt and retractor assembly, buckles, and height adjusters).

Component Test

Functional Test

1. **NOTE:** If the RH or the rear safety belts are to be tested, a passenger must be used.

Fasten the safety belts and proceed to a safe area.

2. Attain a speed of 8 km/h (5 mph).

3.  **WARNING: The driver and passenger must be prepared to brace themselves if the retractor does not lock.**

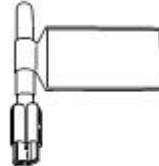

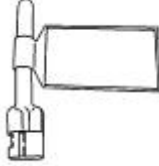

Test the safety belts.

1. Grasp the shoulder harness and prepare to lean forward.
 2. Make maximum brake application without a skid.
 3. **NOTE:** Do not jerk on the safety belt webbing when carrying out this test. Lean forward slightly when the brake application is made.
4. The safety belts should lock up with minimum webbing extension.
 5. If there is a lockup of both shoulder straps, the safety belt assemblies are functioning correctly. Should either or both retractors fail to lock up at the 8 km/h (5 mph) speed, repeat the test at a constant 24 km/h (15 mph) speed. (This test must be carried out with a RH front or rear passenger if the RH front or rear outboard safety belts are to be tested).
 6. **NOTE:** If either or both the shoulder belts do not lock up, the sheet metal in the retractor's mounting surface may need to be returned to its original shape and structural integrity.

If either or both shoulder belts do not lock up at the 24 km/h (15 mph) test, replace the suspect retractor with a new retractor.

Supplemental Restraint System (SRS) Deactivation and Reactivation

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F395
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Deactivation

 **WARNING:** Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

 **WARNING:** The safety belt buckle pretensioner and safety belt retractor pretensioner are pyrotechnic devices. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

WARNING: Vehicle sensor orientation is critical for proper system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and properly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.**

NOTE: Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

- WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).

- Remove the two screws and pull out on the lower steering column opening finish panel enough to access the electrical connectors.

3. Remove the lower steering column opening finish panel.
 1. Disconnect the electrical connectors.
 2. Remove the lower steering column opening finish panel.

4. Remove the screws. Separate the hood latch release cable and handle assembly from the steering column opening reinforcement.

5. Remove the two pin-type retainers and the RH instrument panel insulator.
 - Disconnect the courtesy lamp.

6. Remove the screw and the heater duct.

7. Loosen the two driver-side instrument panel tunnel brace bolts.
 - Position the carpet aside to gain access to the bolts.

8. Remove the screws and the steering column opening reinforcement.

9. Disconnect the clockspring electrical connector at the base of the steering column.

10. Attach the restraint system diagnostic tool to the vehicle harness side of the clockspring

electrical connector.

11. Remove the glove compartment. For additional information, refer to [Section 501-12](#).
12. Disconnect the passenger air bag module electrical connector.
 1. Reaching into the glove box opening toward the center of the instrument panel, under the cross-car beam, slide and disengage the passenger air bag module electrical connector locking clip.
 2. Push in on the two release tabs and disconnect the passenger air bag module electrical connector.

13. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger air bag electrical connector.

14. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
15. Move and tilt the front seats to their highest and most forward position.
16.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors,

instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).

17. From under the passenger seat, release the tab on the connector bracket and remove the passenger seat side air bag electrical connector.

18. Disconnect the passenger seat side air bag electrical connector.
 1. Slide and disengage the passenger seat side air bag electrical connector locking clip.
 2. Push in to release the tab and disconnect the passenger seat side air bag electrical connector.

19. Attach the restraint system diagnostic tool to the passenger seat side air bag floor electrical connector.

20. Remove the passenger side B-pillar weatherstripping.
21. Position the safety belt D-ring to its highest point.
22. Remove the passenger side B-pillar upper trim panel.

23. Remove the passenger side front and rear door scuff plates.

24. Remove the passenger side B-pillar lower trim panel.

25. Disconnect the passenger side safety belt retractor pretensioner floor electrical connector.

26. Attach the restraint system diagnostic tool to the passenger side safety belt retractor pretensioner floor electrical connector.

27. From under the driver seat, release the tab on the connector bracket and remove the driver seat side air bag electrical connector.

28. Disconnect the driver seat side air bag electrical connector.
1. Slide and disengage the driver seat side air bag electrical connector locking clip.
 2. Push down to release the tab and disconnect the driver seat side air bag electrical connector.

29. Attach the restraint system diagnostic tool to the driver seat side air bag floor electrical connector.

30. Remove the driver side B-pillar weatherstripping.
31. Position the safety belt D-ring to its highest point.
32. Remove the driver side B-pillar upper trim panel.

33. Remove the driver side front and rear door scuff plates.

34. Remove the driver side B-pillar lower trim panel.

35. Disconnect the driver side safety belt retractor pretensioner electrical connector.

36. Attach the restraint system diagnostic tool to the driver side safety belt retractor pretensioner floor electrical connector.

37. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
38. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).
39. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).

Reactivation

⚠️ WARNING: To reduce the risk of serious personal injury, read and follow all warnings and notes at the beginning of the deactivation procedure.

1. Remove the restraint system diagnostic tool from the driver side safety belt retractor pretensioner floor electrical connector.

2. Connect the driver side safety belt retractor pretensioner electrical connector.

3. Install the driver side B-pillar lower trim panel.

4. Install the driver side front and rear door scuff plates.

5. **NOTE:** Position the safety belt D-ring to its highest point.

Install the driver side B-pillar upper trim panel.

6. Install the driver side B-pillar weatherstripping.
7. Remove the restraint system diagnostic tool from the driver seat side air bag floor electrical connector.

8. Connect the driver seat side air bag electrical connector.
 1. Connect the driver seat side air bag electrical connector.
 2. Slide and engage the driver seat side air bag electrical connector locking clip.

9. Install the driver seat side air bag electrical connector onto the connector bracket under the driver seat.

10. Remove the restraint system diagnostic tool from the passenger side safety belt retractor pretensioner electrical connector.

11. Connect the passenger side safety belt retractor pretensioner electrical connector.

12. Install the passenger side B-pillar lower trim panel.

13. Install the passenger side front and rear door scuff plates.

14. **NOTE:** Position the safety belt D-ring to its highest point.

Install the passenger side B-pillar upper trim panel.

15. Install the passenger side B-pillar weatherstripping.

16. Remove the restraint system diagnostic tool from the passenger seat side air bag floor electrical connector.

17. Connect the passenger seat side air bag electrical connector.

1. Connect the passenger seat side air bag electrical connector.
2. Slide and engage the passenger seat side air bag electrical connector locking clip.

18. Install the passenger seat side air bag electrical connector onto the connector bracket under the passenger seat.

19. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).

20. Position the front seats rearward.

21.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).

22. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger air bag electrical connector.

23. Connect the passenger air bag module electrical connector.
1. Reach into the glove box opening toward the center of the instrument panel, under the cross-car beam and connect the passenger air bag module electrical connector.
 2. Slide and engage the passenger air bag module electrical connector locking clip.

24. Install the glove compartment. For additional information, refer to [Section 501-12](#).
25. Remove the restraint system diagnostic tool from the vehicle harness side of the clockspring electrical connector.

26. Connect the clockspring electrical connector at the base of the steering column.

27. Position the steering column opening reinforcement and install the screws.

28. Tighten the two driver-side instrument panel tunnel brace bolts.

- Reposition the carpet.

29. Position the heater duct and install the screw.

30. Install the RH instrument panel insulator and the two pin-type retainers.
- Connect the courtesy lamp.

31. Position the hood latch release cable and handle assembly to the steering column opening reinforcement and install the screws.

32. Connect the electrical connectors to the switches in the lower steering column opening finish panel.

33. Install the lower steering column opening finish panel to the instrument panel.
1. Position the lower steering column opening finish panel to the instrument panel and push in, seating the retaining clips.
 2. Install the screws.

34. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).

35.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

36. Check the active restraint system for correct operation. For additional information, refer to [Safety Belt System](#) in the Diagnosis and testing portion of this section.
-

Safety Belt Cleaning

1.  **WARNING: Do not bleach or re-dye the webbing, as the webbing may weaken.**

Clean the safety belt webbing only with a mild soap solution recommended for cleaning upholstery or carpets. Follow the instructions provided with the soap.

Safety Belt Maintenance

WARNING: All safety belt assemblies include retractors, buckles, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjuster, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. All belt assemblies should be installed new unless a qualified technician finds the assemblies show no damage and operate correctly. Belt assemblies not in use during a collision should also be inspected. New safety belt assemblies should be installed if either damage or incorrect operation is noted.

1. The safety belt assemblies should be periodically inspected to make sure that they have not become damaged and that they remain in correct operating condition, particularly if they have been subjected to severe stress.
 2. Before installing the new safety belt assembly; the safety belt retaining areas must be inspected for damage and distortion. If the retaining points are damaged and distorted, the sheet metal must be reworked back to its original shape and structural integrity.
 3. Install the new safety belt(s) using the appropriate instructions. Carry out the Functional Test Procedure. For additional information, refer to [Safety Belt System](#) in this section.
-

Replacement of the Weld Nut and Reinforcement

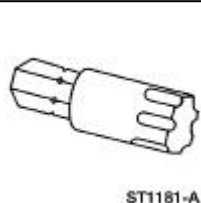

1. **NOTE:** If the safety belt anchor nuts or reinforcements are stripped or missing, a new nut/reinforcement plate must be installed.

Expose the suspect anchor point.

2. Drill out two 8 mm (5/16 inch) diameter access holes adjacent to the weld nut clearance hole.
 3. Thread a length of copper welding wire through the clearance hole and position to secure the weld nut and washer.
 4. Use MIG wire feed welder and plug weld a M10 weld nut and standard washer in place at the two 8 mm (5/16 inch) holes.
 5. Metal finish as necessary.
 6. Install the restraint system.
 7. Carry out the Functional Test. For additional information, refer to [Safety Belt System](#) in this section.
-

Safety Belt Shoulder Height Adjuster With Stripped Weld Nuts

Special Tool(s)

 <p>ST1657-A</p>	D-Ring Installation Kit 100-F012 (134-00018) or equivalent
 <p>ST1181-A</p>	Safety Belt Bolt Bit 501-010 (T77L-2100-A) or equivalent

1. Remove the shoulder safety belt height adjuster. For additional information, refer to [Height Adjuster—Front Shoulder Safety Belt](#) in this section.
2. Use the half-inch drill provided in the D-Ring Installation Kit to drill out the damaged threads in the upper pillar structure.

3. **NOTE:** After each rotation, back off the tap slightly to remove the new cuttings and be sure to blow out any chips before proceeding.

Apply a suitable lubricant to the M14x1.5 tap provided in the D-Ring Installation Kit and tap new threads.

4. Use a threaded insert (Part of #N807170-S190) provided in the D-Ring Installation Kit and screw it into the retapped hole until it is slightly below the surface.

5. Use a hammer to lightly tap the installation tool provided in the D-Ring Installation Kit several times to seat the insert keys.

6. **NOTE:** If the shoulder safety belt height adjuster bolts are stripped, install a new height adjuster.

Insert the shoulder safety belt height adjuster in the opening of the upper B-pillar structure, making sure the shoulder belt height adjuster knob on the shoulder safety belt height adjuster is positioned above the D-ring attachment nut. (The tab is located at the top and is to be inserted in the hole provided in the B-pillar structure).

7. Hand tighten the height adjuster bolts until they are snug.

8. Using the special tool, tighten the height adjuster bolts.

9. **NOTE:** Make sure the D-ring rotates freely.

Install the safety belt D-ring and tighten the nut.

10. **NOTE:** Position the safety belt D-ring to its highest point before installing B-pillar trim.

Install the B-pillar trim.

11. Operate the front seat shoulder strap adjuster. Make sure it travels from top to bottom and locks correctly in each position.

12. Check the restraint system for correct operation.
-

Safety Belt Procedure After a Collision

WARNING: All safety belt assemblies include retractors, buckles, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjuster, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. All belt assemblies should be installed new unless a qualified technician finds the assemblies show no damage and operate correctly. Belt assemblies not in use during a collision should also be inspected. New safety belt assemblies should be installed if either damage or incorrect operation is noted.

NOTE: The driver and front passenger seat belt system (including belt and retractor assembly, buckles, and height adjusters) must be replaced if the vehicle is involved in a collision that results in deployment of the front air bags and safety belt pretensioners.

1. Before installing a new safety belt assembly, the safety belt attaching areas must be inspected for damage and distortion. If the attaching points are damaged and distorted, the sheet metal must be worked back to its original shape and structural integrity.
 2. Install the new safety belt(s). For additional information, refer to the procedure in this section. Carry out the Functional Test. For additional information, refer to [Safety Belt System](#) in this section.
-

Safety Belt Tongue Rotated on Belt

1. Grasp the belt tongue and pull the belt webbing down to form a loop through the slot in the tongue.

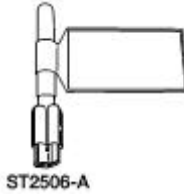

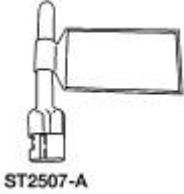

2. Rotate and fold the belt webbing over itself within the slot to remove the twist.
3. Pull the excess belt webbing back through the slot in the belt tongue.
4. Pull the excess belt webbing through the slot.
5. The safety belt tongue should face inward when completed.

Safety Belt Retractor and Pretensioner

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F395
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)
 ST1181-A	Safety Belt Bolt Bit 501-010 (T77L-2100-A)

Removal

 **WARNING:** The safety belt buckle pretensioner and safety belt retractor pretensioner are pyrotechnic devices. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner.

 **WARNING:** The safety belt buckle pretensioner and safety belt retractor pretensioner are pyrotechnic devices. Never probe an electrical connector pretensioner. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

 **WARNING:** After deployment, the air bag surface could contain deposits of sodium hydroxide, a product of the gas gernerant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so could result in air bag deployment which could result in personal injury.

NOTE: The driver side is shown, the passenger side is similar.

1. Prepare the vehicle for safety belt retractor and pretensioner removal.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in the General Procedures portion of this section.

2.  **CAUTION:** Do not use a screwdriver to remove the safety belt cover.

Remove the front safety belt anchor cover by placing fingers behind the cover and pushing outward.

3. Remove the nut and the front safety belt anchor.

4. Remove the D-ring nut and route the safety belt out of the B-pillar trim panel.

5. Remove the web guide.

6. **NOTE:** For pretensioner retractor disposal procedure, refer to [Section 501-20B](#).

Remove the safety belt retractor and pretensioner assembly.

1. Using the special tool, remove the bolt.
2. Remove the safety belt retractor and pretensioner.

Installation

WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions and notes at the beginning of the removal procedure.

1. Install the safety belt retractor and pretensioner assembly.
 1. Position the safety belt retractor and pretensioner.
 2. Using the special tool, install the bolt.
 3. Remove the restraint system diagnostic tool from the driver side safety belt retractor pretensioner electrical connector.
 4. Connect the electrical connector.

2. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
3. With the restraint system diagnostic tools still installed at the remaining deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

4.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).

5. Install the web guide.

6. Install the D-ring and nut.

7. Remove the shipping clip from the safety belt webbing.

8. Install the B-pillar lower trim panel.

9. Install the driver side front and rear door scuff plates.

10. **NOTE:** Position the D-ring to its highest point.

Route the safety belt through the B-pillar upper trim panel. Install the upper B-pillar trim panel.

11. Position the front safety belt anchor and install the nut.

12. Install the front safety belt anchor cover.

13. Restore the vehicle to operating condition.

1.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in the General Procedures portion of this section.

2.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

3. Check the active restraint system for correct operation. For additional information, refer to [Safety Belt System](#).

Retractor —Rear Center Safety Belt

Special Tool(s)

Removal

1. Using a suitable tool, release the mini-buckle.

2. Remove the retractor cover.
3. Using the special tool, remove the retractor.

Installation

1. To install, reverse the removal procedure.
 - Check the restraint system for correct operation.

Retractor —Rear LH and RH Safety Belt

Special Tool(s)

Removal

1. Remove the seat backrest rear side bolsters. For additional information, refer to [Section 501-10](#).
2. Using the special tool, remove the rear safety belt anchor bolt.

3. Remove the quarter trim panel.

4. Using the special tool, remove the D-ring bolt.

5. Using the special tool, remove the bolt and the retractor.

Installation

1. Using the special tool, install the retractor.

2. Remove the shipping clip from the safety belt webbing.

3. Using the special tool, install the D-ring bolt.

4. Install the rear quarter trim panel.

5. Using the special tool, install the rear safety belt anchor bolt.

6. Install the seat backrest rear side bolsters. For additional information, refer to [Section 501-10](#).

7. Check the restraint system for correct operation.
-

Height Adjuster —Front Shoulder Safety Belt

Special Tool(s)

Removal and Installation

1. Pull back the weather-strip surrounding the upper B-pillar trim.
2. **NOTE:** Position the safety belt D-ring to its highest point.

Remove the upper B-pillar trim.

3. Remove the D-ring nut.

4. Using the special tool, remove the height adjuster bolts.

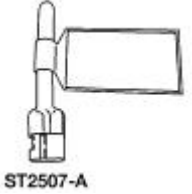

5. **NOTE:** Position the safety belt D-ring to its highest point.

To install, reverse the removal procedure.

- Check the restraint system for correct operation.
-

Safety Belt Buckle —Front

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F395
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal

 **WARNING:** Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface could contain deposits of sodium hydroxide, a product of the gas gernerant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so could result in air bag deployment which could result in personal injury.

All vehicles

1. Prepare the vehicle for seat removal.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system deactivation/reactivation procedure.**

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in the General Procedures portion of this section.

3.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the seat removal and installation procedure.**

Remove the seat on the side with the affected safety belt buckle. For additional information, refer to [Section 501-10](#).

Driver seat only

2. Disconnect the safety belt buckle usage detection switch electrical connector.

All front safety belt buckles

3. Remove the bolt and the safety belt buckle.

Installation

All front safety belt buckles

1. Position the safety belt buckle to the seat. Install the bolt.

Driver seat only

2. Connect the safety belt buckle usage detection switch electrical connector.

All vehicles

3. Restore the vehicle to operating condition.
 1.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the seat removal and installation procedure.**

Install the seat with the affected safety belt buckle. For additional information, refer to [Section 501-10](#).

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in the General Procedures portion of this section.

3.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Section 501-20B](#).

4. Check the active restraint system for correct operation. For additional information, refer to [Safety Belt System](#) in this section.

Safety Belt Buckle —Rear

Removal and Installation

1. Remove the rear seat cushion. For additional information, refer to [Section 501-10](#).
2. Remove the nut and the rear safety belt buckle.

3. To install, reverse the removal procedure.
 - Check the restraint system for correct operation.
-

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS)

The air bag supplemental restraint system (SRS) is designed to provide increased collision protection for front seat occupants in addition to that provided by the three-point safety belt system. Safety belt use is necessary to obtain the best occupant protection and to receive the full advantages of the SRS.

The air bag supplemental restraint system (SRS) components are shown in the following illustration.

Air Bag Supplemental Restraint System (SRS) Components

A0005395

Item	Part Number	Description
1	044A74	Passenger air bag module
2	14B345	Side impact sensor (RH)
3	611B08	Belt retractor pretensioner, passenger
4	611D10	Passenger side air bag module
5	14B321	Restraints control module (RCM)
6	043B13	Driver air bag module
7	611B09	Belt retractor pretensioner, driver
8	14A664	Clockspring

9	611D11	Driver side air bag module
10	14B345	Side impact sensor (LH)

Driver Air Bag Module

NOTE: References to the driver air bag module must not be confused with the seat-mounted air bag components of the supplemental restraint system (SRS).

The driver air bag module:

- is steering wheel mounted.
- will deploy upon receiving a signal from the RCM.
- has no subassemblies.

Clockspring

The clockspring:

- is mounted on the steering column, behind the steering wheel.
- provides a continuous electrical path from the driver air bag module to the restraints control module (RCM).

Driver Seat Side Air Bag Module

NOTE: References to side air bag modules refer to the seat-mounted and not to the steering wheel or instrument panel mounted air bag components of the supplemental restraint system (SRS).

The driver seat side air bag module:

- is installed as an assembly.
- is mounted in the driver seat back.

Passenger Seat Side Air Bag Module

NOTE: References to side air bag modules refer to the seat-mounted and not to the steering wheel or instrument panel mounted air bag components of the supplemental restraint system (SRS).

The passenger seat side air bag module:

- is installed as an assembly.
- is mounted in the passenger seat back.

Passenger Air Bag Module

NOTE: References to the passenger air bag module must not be confused with the seat-mounted air bag components of the supplemental restraint system (SRS).

The passenger air bag module:

- is installed as an assembly.
- is mounted in the passenger side of the instrument panel.

Safety Belt Pretensioners

As part of the supplemental restraint system (SRS), the safety belt retractors are equipped with pretensioners. The safety belt retractor pretensioners rotate the safety belt retractors to remove excess slack from the safety belt webbing. The pretensioners are activated by the restraints control module (RCM) when the module detects a crash event force exceeding a programmed limit.

Restraints Control Module (RCM)

The restraints control module (RCM) is mounted on the center tunnel under the instrument panel. The RCM performs the following functions:

- signals the inflators to deploy the air bags in the event of a deployable crash.
- activates the belt retractor pretensioners to remove slack from the safety belt webbing.
- monitors the air bag supplemental restraint system (SRS) for faults.
- illuminates the air bag indicator if a fault is detected.
- flashes the air bag indicator to indicate the lamp fault code (LFC) detected.
- communicates the current or historical diagnostic trouble codes (DTCs) through the data link connector (DLC).
- signals the instrument cluster to activate a chime if the air bag indicator is not available and another SRS fault exists.
- contains an internal safing sensor which is not serviced separately.

The RCM monitors the SRS for possible faults. If a fault is detected while the ignition switch is in the RUN position, the RCM will illuminate the air bag indicator located in the instrument cluster.

When the ignition is cycled (turned off and then on), the air bag indicator will remain lit for six seconds and then go out. If an SRS fault exists, the air bag indicator will then flash the two-digit LFC associated with that fault. The air bag indicator will flash the LFC five times, then remain illuminated for the rest of the key cycle. The RCM will also communicate the current and historical DTCs through the data link connector (DLC), using the New Generation Star (NGS) Tester. If the air bag indicator does not function, and the system detects a fault condition, the RCM will signal the instrument cluster to activate an audible chime. The chime is a series of five sets of five tone bursts. If the chime is heard, the SRS and the air bag indicator require repair.

LFCs are prioritized. If two or more faults occur at the same time, the fault having the highest priority will be displayed first. After that fault has been corrected, the next highest priority fault will be displayed.

The RCM includes a backup power supply. This feature provides sufficient backup power to deploy the air bags and belt retractor pretensioners in the event that the ignition circuit is damaged in a collision before the safing and air bag sensors determine that an air bag deployment is required. The backup

power supply will deplete its stored energy approximately one minute after the battery ground cable is disconnected.

Electrical System

The electrical system that supports the air bag supplemental restraint system (SRS):

- is powered from the battery through the ignition circuit.
- provides the electrical path from the restraints control module (RCM) to the SRS components.
- provides the electrical path from the RCM to the air bag indicator.
- provides the electrical path from the RCM to the data link connector (DLC).
- provides the electrical path from the RCM to the instrument cluster.

Sensors

WARNING: The restraints control module (RCM) orientation is critical for proper system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) has been involved in a collision in which the center tunnel area has been damaged, inspect the mounting and bracket for deformation. If damaged, the RCM must be replaced whether or not the air bags have deployed. In addition, make sure the area of the RCM mounting is restored to its original production configuration.

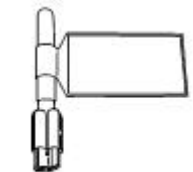

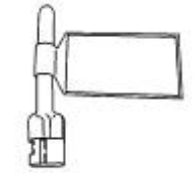

CAUTION: Sensors are repaired by replacement only. Do not attempt to determine whether a sensor is OK. Always replace the sensor even if it does not appear to be damaged.

For this vehicle the SRS employs four impact sensors. Two of the sensors are integral to the RCM and are not separately serviceable. In addition, there are two side impact sensors located at the base of the B-pillars. The RCM is mounted on the center tunnel under the instrument panel. Mounting orientation is critical for correct operation of all impact sensors.

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS)

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F395 (014-R1079)
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Restraint System Diagnostic Tool Warning

 **WARNING:** This tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

Diagnosing Customer Concerns Without Hard Diagnostic Trouble Codes (DTCs)

If a lamp fault code (LFC) is reported by the customer but is not present when the vehicle comes in for repair, follow the Diagnostic Instructions procedure in this section to identify the intermittent diagnostic trouble code (DTC).

Once the DTC is known, read the Normal Operation section for the code involved.

- Follow the deactivation procedure in this section.
- Determine the location of components involved in creating that code.
- Carry out a thorough visual inspection of:
 - components.
 - connectors.
 - splices and wiring harnesses.

- pinched wires.
- worn insulation on conductors.
- opens, shorts or loosely mounted sensors.

Refer to Possible Causes, which lists the common concerns that relate to a particular code. Concerns are listed according to priority.

Diagnosing Customer Concerns with Hard Diagnostic Trouble Codes (DTCs)

Most air bag supplemental restraint system (SRS) diagnostic procedures will require the use of the deactivation and reactivation procedures in this section.

The deactivation and reactivation require the installation and removal of restraint system diagnostic tools. These procedures require removal of driver air bag module, and the disconnection of the passenger air bag module, driver side air bag module, passenger side air bag module, driver safety belt retractor pretensioner, and passenger safety belt retractor pretensioner. This reduces the risk of deployment of air bag modules and safety belt pretensioners while diagnostics are being carried out.

Restraint system diagnostic tools are required to carry out diagnosis and testing of the supplemental restraint system (SRS). It is not acceptable to short-circuit the air bag module connections with a jumper wire. If a jumper wire is used to short-circuit the air bag module connections, a lamp fault code (LFC) will be displayed.

Deactivation and Reactivation Procedures

There are two deactivation and reactivation procedures.

- One procedure requires removal of the front seats. This procedure will be used when diagnosing or repairing a seat side air bag concern. This procedure will also be used when diagnosing or repairing any in-seat or seat mounted component of a seat equipped with a seat side air bag.
- The other procedure does not require front seat removal during the diagnostic and repair process. This procedure will be used when diagnosing or repairing a concern that is not related to a seat equipped with a seat side air bag.

Deactivation Procedure — Seats Removed

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301). For additional information, refer to [Section 414-01](#).

2. Wait at least one minute for the backup power supply in the restraints control module (RCM) to deplete its stored energy.
3.  **WARNING:** Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

Remove the driver air bag module from the vehicle. For additional information, refer to [Driver Air Bag Module](#) in this section.

4. Attach a restraint system diagnostic tool 418-F395 to the clockspring side of the driver air bag module electrical connector.
5. Remove the glove compartment. For additional information, refer to [Section 501-12](#).

6. Disconnect the passenger air bag electrical connector.
 1. Reaching over the cross-car beam, slide the passenger air bag module electrical connector lock downward.

2. Squeeze the electrical connector locking tabs and pull the electrical connector from the passenger air bag module.
7. Attach a restraint system diagnostic tool 418-F395 to the harness side of the passenger air bag module electrical connector.
8. Remove the affected front seat(s). For additional information, refer to [Section 501-10](#).
9. Disconnect (if necessary) and attach a restraint system diagnostic tool 418-133 to the passenger side air bag module electrical connector.
10. Access the passenger safety belt retractor pretensioner in the passenger side B-pillar.
11. Disconnect the passenger side safety belt retractor pretensioner electrical connector.
12. Attach a restraint system diagnostic tool 418-F088 to the passenger safety belt retractor pretensioner electrical connector.
13. Disconnect (if necessary) and attach a restraint system diagnostic tool 418-133 to the driver side air bag electrical connector.
14. Access the driver safety belt retractor pretensioner in the driver side B-pillar.
15. Disconnect the driver safety belt retractor pretensioner electrical connector.
16. Attach a restraint system diagnostic tool 418-F088 to the driver safety belt retractor pretensioner electrical connector.
17. Reconnect the battery ground cable. For additional information, refer to [Section 414-01](#).

Reactivation Procedure — Seats Removed

WARNING: The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

WARNING: To reduce the risk of serious personal injury, read and follow all warnings and notes at the beginning of the deactivation procedure.

1. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
2. Wait at least one minute for the backup power supply in the restraints control module (RCM) to deplete its stored energy.

3. **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

Remove the restraint system diagnostic tool from the driver side air bag module electrical connector.

4. **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and**

possible violation of vehicle safety standards.

Remove the restraint system diagnostic tool from the driver seat belt retractor pretensioner electrical connector.

5. Connect the driver seat belt retractor pretensioner electrical connector.
6. Install the driver side B-pillar trim panels.
7.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

Remove the restraint system diagnostic tool from the passenger side air bag electrical connector.

8.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

Remove the restraint system diagnostic tool from the passenger seat belt buckle pretensioner electrical connector.

9. Connect the passenger seat belt retractor pretensioner electrical connector.
10. Install the passenger side B-pillar trim panels.
11. Install the affected front seat(s). For additional information, refer to [Section 501-10](#).
12. Connect the driver and passenger side air bag module electrical connectors.

13.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

Remove the restraint system diagnostic tool from the passenger air bag module electrical connector.

14. Reconnect the passenger air bag module electrical connector electrical connector.
15. Install the glove compartment. For additional information, refer to [Section 501-12](#).

16.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

Remove the restraint system diagnostic tool from the driver air bag module electrical connector.

17. Install the driver air bag module from the vehicle. For additional information, refer to [Driver Air Bag Module](#) in this section.
18. Reconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
19. Prove out the system.

Deactivation Procedure — Seats Not Removed

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301). For additional information, refer to [Section 414-01](#).

2. Wait at least one minute for the backup power supply in the restraints control module (RCM) to deplete its stored energy.

3.  **WARNING:** Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

Remove the driver air bag module from the vehicle. For additional information, refer to [Driver Air Bag Module](#) in this section.

4. Attach a restraint system diagnostic tool 418-F395 to the clockspring side of the driver air bag module electrical connector.

5. Remove the glove compartment. For additional information, refer to [Section 501-12](#).

6. Disconnect the passenger air bag electrical connector.
 1. Reaching over the cross-car beam, slide the passenger air bag module electrical connector lock downward.
 2. Squeeze the electrical connector locking tabs and pull the electrical connector from the passenger air bag module.
7. Attach a restraint system diagnostic tool 418-F395 to the harness side of the passenger air bag module electrical connector.
8. Reconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
9. Move and tilt the front seats to their highest and most forward position.
10.  **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301). For additional information, refer to [Section 414-01](#).

11. Disconnect the passenger side air bag module electrical connector beneath the passenger seat.
12. Attach a restraint system diagnostic tool 418-133 to the passenger side air bag floor electrical connector.
13. Access the passenger safety belt retractor pretensioner in the passenger side B-pillar.
14. Disconnect the passenger side safety belt retractor pretensioner electrical connector.
15. Attach a restraint system diagnostic tool 418-F088 to the passenger safety belt retractor pretensioner electrical connector.
16. Disconnect the driver side air bag module electrical connector beneath the driver seat.
17. Attach a restraint system diagnostic tool 418-133 to the driver side air bag module electrical connector.

18. Access the driver safety belt retractor pretensioner in the driver side B-pillar.
19. Disconnect the driver safety belt retractor pretensioner electrical connector.
20. Attach a restraint system diagnostic tool 418-F088 to the driver safety belt retractor pretensioner electrical connector.
21. Reconnect the battery ground cable. For additional information, refer to [Section 414-01](#).

Reactivation Procedure — Seats Not Removed

WARNING: The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

WARNING: To reduce the risk of serious personal injury, read and follow all warnings and notes at the beginning of the deactivation procedure.

1. Disconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
2. Wait at least one minute for the backup power supply in the restraints control module (RCM) to deplete its stored energy.

3.  **WARNING:** The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

Remove the restraint system diagnostic tool from the driver side air bag module electrical connector.

4. Connect the driver side air bag module electrical connector.

5.  **WARNING:** The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

Remove the restraint system diagnostic tool from the driver seat belt retractor pretensioner electrical connector.

6. Connect the driver seat belt retractor pretensioner electrical connector.
7. Install the driver side B-pillar trim panels.

8.  **WARNING:** The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

Remove the restraint system diagnostic tool from the passenger side air bag module electrical connector.

9. Connect the passenger side air bag module electrical connector.

10.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

Remove the restraint system diagnostic tool from the passenger seat belt buckle pretensioner electrical connector.

11. Connect the passenger seat belt retractor pretensioner electrical connector.
12. Reconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
13. Move and tilt the front seats rearward.

14.  **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301). For additional information, refer to [Section 414-01](#).

15.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

Remove the restraint system diagnostic tool from the passenger air bag module electrical connector.

16. Reconnect the passenger air bag module electrical connector electrical connector.
17. Install the glove compartment. For additional information, refer to [Section 501-12](#).

18.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

Remove the restraint system diagnostic tool from the driver air bag module electrical connector.

19. Install the driver air bag module from the vehicle. For additional information, refer to [Driver Air Bag Module](#) in this section.
20. Reconnect the battery ground cable. For additional information, refer to [Section 414-01](#).
21. Prove out the system.

Prove Out Procedure

Turn the ignition switch from the OFF to the RUN position and visually monitor the air bag indicator with the air bag modules or restraint system diagnostic tools installed. The air bag indicator will light continuously for approximately six seconds and then turn off. If an air bag supplemental restraint system (SRS) fault is present, the air bag indicator will either:

- fail to light.
- remain lit continuously.
- flash.

The flashing might not occur until approximately 30 seconds after the ignition switch has been turned from the OFF to the RUN position. This is the time required for the restraints control module (RCM) to complete the testing of the SRS. If the air bag indicator is inoperative and an SRS fault exists, a chime will sound in a pattern of five sets of five beeps. If this occurs, the air bag indicator will need to be repaired before diagnosis can continue.

Glossary

Restraint System Diagnostic Tools

Restraint system diagnostic tools are used to simulate air bag module connections to the system.

Disconnect the Component

Disconnect the component means disconnect the component vehicle harness connector. It does not mean remove the component. Do not reconnect a disconnected component unless instructed to do so.

Deactivate the System

Deactivate the system means to carry out the deactivation procedure. Refer to Deactivation Procedure in this section.

Prove Out the System

Prove out the system means to turn the ignition switch from the OFF to the RUN position and visually monitor the air bag indicator with the air bag modules installed. Refer to Prove Out Procedure in this section.

Reactivate the System

Reactivate the system means to carry out the reactivation procedure. Refer to Reactivation Procedure in this section.

Reconnect the System

Reconnect the system means to reconnect all system components. Refer to Air Bag Reconnect Checklist in this section.

Install a New Component

Install a new component means to remove the existing component and install a new authorized part obtained from Ford Customer Service Division.

Verify the System

Verify the system means to prove out the system with restraint system diagnostic tools for the air bag

modules in place of the components.

Air Bag Reconnect Checklist

The checklist below should be completed following diagnosis or repair of any air bag system concern:

1. All restraint system diagnostic tools removed?
 2. All in-seat electrical connectors connected?
 3. All air bag modules connected?
 4. Restraints control module (RCM) connected?
 5. All safety belt pretensioners connectors connected?
 6. All sensors (side impact) connected?
 7. Battery connected?
-

Diagnostic Instructions — Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS)

Special Tool(s)

	Worldwide Diagnostic System (WDS) 418-F224, New Generation STAR (NGS) Tester 418-F052, or equivalent scan tool
---	---

The symptom chart can be used to help locate the air bag supplemental restraint system (SRS) concerns if no diagnostic trouble codes (DTCs) are retrieved and the listed symptoms are observed. Whether or not the listed symptoms are observed, always carry out the following:

1. Retrieve all DTCs stored in the restraints control module (RCM) memory. For additional information, refer to Retrieve/Clear Continuous DTCs in this section.
2. Run the On-Demand Self Test to determine what DTCs are currently being sensed by the RCM. For additional information, refer to On-Demand Self Test in this section.
3. If the stored DTCs are different than the current DTCs, always repair the current DTCs first.
4. If memory displays different continuous DTCs than the On-Demand Self Test, perform in the following order:
 - On-Demand Self Test.
 - Memory (Retrieve/Clear Continuous DTCs).

A DTC can indicate several concerns. The DTCs are to assist in system diagnosis and are not to be considered definitive. Always refer to the pinpoint test corresponding to the DTC to determine where the concern lies and to repair the concern correctly.

The SRS diagnostics can be divided into three sections:

- diagnostic test modes.
- PID/data monitor and record.
- active command modes.

Diagnostic Test Modes

Two menu options are available under the diagnostic test modes:

- Retrieve/Clear Continuous DTCs.

- On-Demand Self Test.

Retrieve/Clear Continuous DTCs

During vehicle operation the restraints control module (RCM) will detect and store both intermittent and hard fault DTCs in nonvolatile memory. The DTC strategy employed by the RCM incorporates a time-out scheme for determining when a concern exists in the system. This requires a concern to exist for up to one minute in the system before the RCM will detect it. For the RCM to determine that a concern no longer exists, the concern must be absent for up to one minute. The actual detection time-outs vary with each DTC. The DTCs can be retrieved with the scan tool. Any DTCs stored in the RCM will be displayed on the scan tool along with a brief description of the DTC. If no DTCs are present, the scan tool will display a SYSTEM PASSED message. The scan tool can also be used to clear DTCs from the RCM memory, as long as the concern no longer exists. Once 254 key cycles have been recorded since the concern was last detected, the DTC will automatically be removed from memory.

To retrieve or clear DTCs, connect the scan tool to the data link connector (DLC). Follow the instructions for the scan tool being used. All continuous DTCs will be displayed on the screen. Before proceeding with the clearing operation, make note of the DTCs displayed, because once cleared, they cannot be retrieved. Hard DTCs will be redisplayed after clearing DTCs since they cannot be cleared from the RCM.

On-Demand Self Test

The On-Demand Self Test option is used to verify that no electrical concerns exist with the air bag supplemental restraint system (SRS). Upon entering the self test, the restraint control module (RCM) will make an electrical check of each electrical component in the system. If a concern is detected, a DTC is displayed on the scan tool with a brief description of the DTC. Concerns detected during the self test are not stored in memory, unless the same concern was also detected during normal vehicle operation. The self test should always be run after any repair to verify that the repair was successful.

To run the On-Demand Self Test, connect the scan tool to the data link connector (DLC). Follow the instructions for the scan tool being used. The RCM will run the On-Demand Self Test and display on-demand DTCs (reflecting hard system concerns) on the screen.

PID/Data Monitor and Record

The PID/Data Monitor and Record option allows the scan tool operator to read the state of several parameter IDs (PIDs) to aid in diagnosing the system. PIDs are real time measurements of parameters such as voltages, resistances, etc., calculated by the restraints control module (RCM) and sent to the scan tool for display. Many of the PIDs supported by the RCM are calculated periodically and therefore are not true real time readings.

To retrieve PIDs, connect the scan tool to the data link connector (DLC). Follow the instructions for the scan tool being used. PIDs are updated continuously on the display.

Active Commands

This command allows the technician to verify operation of the air bag indicator and chime. When the air bag output command is executed, the indicator and the chime are activated simultaneously for approximately four seconds. Both devices are deactivated automatically.

Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table

DTC ^a	LFC ^b	LFC Priority	Description	Action To Take
—	—	1	RCM Disconnected, Inoperative, or Lost/Low Ignition Feed	Go To Pinpoint Test A.
B1342	24	2	RCM is Faulted	INSTALL a new RCM.
B1231	19	3	RCM Crash Data Memory Full	INSTALL a new RCM and impact sensors.
B1921	21	4	RCM Bracket Ground Resistance High	Go To Pinpoint Test B.
C1414	29	5	Incorrect Vehicle Identification Code	Go To Pinpoint Test C.
B1887	15	6	Driver Air Bag Circuit Shorted to Ground	Go To Pinpoint Test D.
B1888	16	7	Passenger Air Bag Circuit Shorted to Ground	Go To Pinpoint Test E.
B1916	15	6	Driver Air Bag Circuit Shorted to Battery or Ignition	Go To Pinpoint Test F.
B1925	16	7	Passenger Air Bag Circuit Shorted to Battery or Ignition	Go To Pinpoint Test G.
B1932	32	8	Driver Air Bag Circuit Resistance High	Go To Pinpoint Test H.
B1933	33	9	Passenger Air Bag Circuit Resistance High	Go To Pinpoint Test I.
B1934	34	10	Driver Air Bag Circuit Resistance Low	Go To Pinpoint Test J.
B1935	35	11	Passenger Air Bag Circuit Resistance Low	Go To Pinpoint Test K.
B2444	48	16	Driver Side Crash Sensor is Faulted	Go To Pinpoint Test L.
B2440	43	19	Passenger Side Crash Sensor Mounting Fault	Go To Pinpoint Test M.
B2441	42	18	Driver Side Crash Sensor Mounting Fault	Go To Pinpoint Test N.
B2445	49	17	Passenger Side Crash Sensor is Faulted	Go To Pinpoint Test O.
U2017	44	20	Driver Side Crash Sensor Communication Fault	Go To Pinpoint Test P.
U2018	45	21	Passenger Side Crash Sensor Communication Fault	Go To Pinpoint Test Q.
B1993	36	22	Driver Side Air Bag Circuit Shorted to Ground	Go To Pinpoint Test R.
B1997	37	23	Passenger Side Air Bag Circuit Shorted to Ground	Go To Pinpoint Test S.
B1992	36	22	Driver Side Air Bag Circuit Shorted to Battery or Ignition	Go To Pinpoint Test T.
B1996	37	23	Passenger Side Air Bag Circuit Shorted to Battery or Ignition	Go To Pinpoint Test U.
B1994	36	22	Driver Side Air Bag Circuit High Resistance	Go To Pinpoint Test V.
B1998	37	23	Passenger Side Air Bag Circuit Resistance High	Go To Pinpoint Test W.
B1995	36	22	Driver Side Air Bag Circuit Resistance Low	Go To Pinpoint Test X.
B1999	37	23	Passenger Side Air Bag Circuit Resistance Low	Go To Pinpoint Test Y.

B1877	46	24	Driver Pretensioner Circuit Resistance High	Go To Pinpoint Test Z .
B1885	46	24	Driver Pretensioner Circuit Resistance Low	Go To Pinpoint Test Z .
B1881	47	25	Passenger Pretensioner Circuit Resistance High	Go To Pinpoint Test AA .
B1886	47	25	Passenger Pretensioner Circuit Resistance Low	Go To Pinpoint Test AA .
B1878	17	26	Driver Pretensioner Circuit Shorted to Battery or Ignition	Go To Pinpoint Test AB .
B1879	17	26	Driver Pretensioner Circuit Shorted to Ground	Go To Pinpoint Test AC .
B1882	18	27	Passenger Pretensioner Circuit Shorted to Battery or Ignition	Go To Pinpoint Test AD .
B1883	18	27	Passenger Pretensioner Circuit Shorted to Ground	Go To Pinpoint Test AE .
B1892	—	—	Air Bag Tone Warning Indicator Circuit Shorted to Ground or Open	Go To Pinpoint Test AF .
B1891	—	—	Air Bag Tone Warning Indicator Circuit Shorted to Battery or Ignition	Go To Pinpoint Test AG .
B1869	Tone ^c	—	Air Bag Indicator Inoperative	Go To Pinpoint Test AH .
B1870	Tone ^c	—	Air Bag Indicator Shorted to Battery	Go To Pinpoint Test AI .
—	—	—	No Communication with the Restraints Control Module (RCM)	Go To Pinpoint Test AJ .
—	5Hz	—	RCM in Plant Mode	Go To Pinpoint Test AK .

^a DTC: Diagnostic trouble code, retrieved using scan tool.

^b LFC: Lamp fault code, flashed on air bag indicator.

^c Tone will sound only if additional DTCs are present.

Inspection and Verification

1. Verify the customer concern by checking the air bag indicator in the instrument cluster. For additional information, refer to Prove Out Procedure in this section.
2. Visually inspect for obvious signs of mechanical and electrical damage using the following chart.

Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> ● Damaged restraints control module (RCM) bracket ● Loose component mounting 	<ul style="list-style-type: none"> ● Open fuse(s) ● Damaged wiring harness ● Loose or corroded connectors ● Circuitry open/shorted ● Damaged shorting bars

3. If the concern is not visually evident, use the scan tool to retrieve diagnostic trouble codes (DTCs) and carry out the on-demand self test.
4. If the on-demand self test is passed and no DTCs are retrieved, GO to [Symptom Chart .](#)

5. If DTCs are retrieved, refer to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table.

Symptom Chart

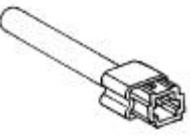

Symptom Chart

Condition	Possible Sources	Action
<ul style="list-style-type: none"> ● Air bag indicator is illuminated continuously 	<ul style="list-style-type: none"> ● Connector shorting bar. ● Circuitry. ● RCM disconnected. ● RCM. ● Instrument cluster. 	<ul style="list-style-type: none"> ● Go To Pinpoint Test A.
<ul style="list-style-type: none"> ● Air bag indicator flashing 	<ul style="list-style-type: none"> ● Air bag SRS system fault. 	<ul style="list-style-type: none"> ● REFER to DTC Priority Table.
<ul style="list-style-type: none"> ● Audible tone — DTCs retrieved 	<ul style="list-style-type: none"> ● Air bag SRS system fault. 	<ul style="list-style-type: none"> ● Go To Pinpoint Test AF. ● Go To Pinpoint Test AG.

Restraint System Diagnostic Tool Warning

 **WARNING:** Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove diagnostic tools could result in injury and possible violation of vehicle safety standards.

Pinpoint Test A: Air Bag Warning Indicator Is Illuminated Continuously — RCM Disconnected, Inoperative or Lost/Low Ignition Feed

Normal Operation

NOTE: Be sure to cycle the ignition switch and look for a 6 second indicator prove-out without LFCs.

During normal operation the air bag indicator will illuminate continuously for 6 seconds after the ignition switch is placed in the RUN position. The air bag indicator will also illuminate after five cycles of a lamp fault code (LFC) if a fault exists. The restraints control module (RCM) will communicate diagnostic trouble codes (DTCs) to the scan tool through the data link connector (DLC). If the scan tool displays NO COMMUNICATION when retrieving continuous DTCs, use Pinpoint Test AL to troubleshoot the system.

Possible Causes

An air bag indicator that is illuminated continuously can be caused by:

- a damaged shorting bar or other electrical connector component.
- the ignition circuit damaged.
- the RCM disconnected from the vehicle harness.
- a loss of RCM ground circuit.
- the RCM is faulted.
- air bag indicator circuit shorted to ground.

PINPOINT TEST A: AIR BAG WARNING INDICATOR IS ILLUMINATED CONTINUOUSLY — RCM DISCONNECTED, INOPERATIVE OR LOST/LOW IGNITION FEED

CONDITIONS	DETAILS/RESULTS/ACTIONS
A1 CHECK FOR CONTINUOUS OR ON-DEMAND SELF TEST DTCs	
<p>1 </p> <p style="text-align: center;">Retrieve/Clear Continuous DTCs</p> <p>2 </p> <p style="text-align: center;">On-Demand Self Test</p>	<p>1 Retrieve and record any continuous DTCs for use later in this pinpoint test.</p> <p>● Were any continuous or on-demand self test DTCs retrieved?</p> <p>→ Yes If continuous DTCs were retrieved, GO to A3. If on-demand DTCs were retrieved, GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.</p>

→ **No**
GO to [A2](#).

A2 CHECK THE RCM CONNECTION

 **WARNING:** If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

RCM C310a

1

Make sure RCM C310a is fully connected and the locking tab is engaged.

- Is RCM C310a fully connected and are the locking tabs engaged?

→ **Yes**
GO to [A3](#).

→ **No**
CONNECT C310a and ENGAGE the locking tabs. GO to [A7](#).

A3 CHECK THE RCM CONNECTOR

1

RCM C310a

2

2

Inspect RCM C310a component side for worn, or damaged camming beam.

DR1540-A

3

DR1541-A

3 Inspect C310a harness side for worn, damaged or dislodged shorting bar at pins 20 and 21.

● Were any connector concerns found?

→ Yes
CORRECT connector concerns.GO to [A7](#).

→ No
GO to [A4](#).

A4 CHECK THE IGNITION CIRCUIT 20-JA10A (PK/OG) FOR AN OPEN

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

3

4

DR0994-A

2 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

4 Measure the voltage to ground at RCM C310a pin 2, circuit 20-JA10A (PK/OG), harness side.

• Is the voltage between 9 and 16 volts?

→ Yes
GO to [A5](#).

→ No
REPAIR the circuit. GO to [A7](#).

A5 CHECK THE GROUND CIRCUIT 31-JA10A (BK/RD) FOR AN OPEN

1

2

DR0995-A

2 Measure the resistance between RCM C310a pin 21, circuit 31-JA10A (BK/RD), harness side and a sheet metal ground near the RCM.

• Is the resistance less than 10 ohms?

→ **Yes**
GO to [A6](#).

→ **No**
REPAIR the circuit. GO to [A7](#).

A6 CHECK CIRCUIT 31S-JA14 (BK/GN) FOR A SHORT TO GROUND

1

DR1217-A

1 Measure the resistance between RCM C310a pin 20, circuit 31S-JA14 (BK/GN), harness side and RCM C310a pin 21, circuit 31-JA10 (BK/RD), harness side.

- **Is the resistance less than 5 ohms?**

→ **Yes**
REPAIR the circuit. GO to [A7](#).

→ **No**
INSTALL a new RCM. GO to [A7](#).

A7 CHECK FOR ADDITIONAL DTCs

1 Refer to the continuous DTCs recorded during Step A1.

- **Were any continuous DTCs retrieved during Step A1?**

→ **Yes**
Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.

→ **No**
RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#). CLEAR all DTCs.

Pinpoint Test B: LFC 21/DTC B1921 — RCM Bracket Ground Resistance High

Normal Operation

WARNING: The tightening torque of the restraints control module (RCM) retaining bolts is

critical for proper air bag supplemental restraint system (SRS) operation. Refer to [Restraints Control Module \(RCM\)](#) in this section for correct torque values.

The restraints control module (RCM) monitors the resistance between the ground connections at its housing and the reference ground at pin 21. If the RCM detects a resistance greater than 100 ohms, it will store a diagnostic trouble code (DTC) B1921 in memory and flash a lamp fault code (LFC) 21 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

High resistance between the RCM housing ground and pin ground can be caused by:

- incorrect seating of the RCM retaining bolts.
- incorrect tightening torque of the RCM retaining bolts.
- high resistance on RCM logic ground circuit 31-JA10A (BK/RD).

PINPOINT TEST B: LFC 21/DTC B1921 — RCM BRACKET GROUND RESISTANCE HIGH

CONDITIONS	DETAILS/RESULTS/ACTIONS
B1 CHECK FOR A HARD OR INTERMITTENT DTC	
<p>1 </p> <p>Retrieve/Clear Continuous DTCs</p> <p>2 </p> <p>On-Demand Self Test</p>	<p>1 Retrieve and record any continuous DTCs for use later in this pinpoint test.</p> <p>● Was DTC B1921 retrieved during the on-demand self test?</p> <p>→ Yes This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to B2.</p> <p>→ No This is an intermittent fault. The fault condition is not present at this time. GO to B6.</p>
B2 INSPECT THE RCM MOUNTING, MOUNTING BRACKET AND MOUNTING SURFACE	
	<p>1 Remove the RCM. Refer to Restraints Control Module (RCM) in this section.</p> <p>2 Visually inspect the RCM, mounting</p>

bracket and mounting surface for damage, corrosion or dirt.

3 Inspect the RCM mounting and make sure that the retaining bolts are fully seated and tightened correctly. Refer to [Restraints Control Module \(RCM\)](#) in this section for correct tightening torque.

- **Was a significant amount of corrosion or dirt found, the RCM mounting bracket attached to the mounting surface incorrectly or were the four RCM retaining bolts not fully seated and tightened correctly?**

→ **Yes**
MAKE SURE the RCM, mounting bracket and mounting surface are free of damage, corrosion or dirt, and the four retaining bolts are fully seated and correctly tightened. REATTACH the RCM and mounting bracket to the mounting surface. GO to [B7](#).

→ **No**
GO to [B3](#).

B3 CHECK THE RCM HARNESS CONNECTION

1 Check the RCM harness connection.

- **Are the RCM harness connectors connected to the RCM correctly with the red locking clips engaged?**

→ **Yes**
GO to [B4](#).

→ **No**
ATTACH the RCM harness connectors correctly. GO to [B7](#).

B4 CHECK THE VEHICLE CHASSIS GROUND

1 Measure the resistance between a known good chassis ground and the mounting surface of the RCM.

- **Is the resistance greater than 100 ohms?**

→ **Yes**
REPAIR the chassis grounding system. GO to [B7](#).

→ **No**
GO to [B5](#).

B5 CHECK THE GROUND CIRCUIT 31-JA10A (BK/RD) FOR AN OPEN

1

2

RCM C310a

3

3

Measure the resistance between RCM C310a pin 21, circuit 31-JA10A (BK/RD), harness side and a sheet metal ground near the RCM.

- Is the resistance greater than 100 ohms?

→ **Yes**
REPAIR the circuit. GO to [B7](#).

→ **No**
INSTALL a new RCM. GO to [B7](#).

B6 CHECK FOR AN INTERMITTENT FAULT

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

3

On-Demand Self Test

2 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#).

● **Was DTC B1921 retrieved during the on-demand self test?**

→ **Yes**
GO to [B2](#).

→ **No**
CHECK for causes of intermittent high resistance on circuit 31-JA10A (BK/RD). ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to [B7](#).

B7 CHECK FOR ADDITIONAL DTCs

1 Refer to the continuous DTCs recorded during Step B1.

● **Were any continuous DTCs retrieved during Step B1?**

→ **Yes**
Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.

→ **No**
RECONNECT the system. PROVE OUT the system. REFER to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#). CLEAR all DTCs.

Pinpoint Test C: LFC 29/DTC C1414 — Incorrect Vehicle Identification Code

Normal Operation

The restraints control module (RCM) monitors the electrical condition at C310a pins 10, 13 and 14 to determine if it is installed on the correct vehicle. If the RCM detects an unexpected condition on any of these pins, it will store a diagnostic trouble code (DTC) C1414 in memory and flash a lamp fault code (LFC) 29 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

An incorrect vehicle ID code can be caused by:

- incorrect RCM.
- RCM incorrectly programmed.
- a wiring concern at RCM C310a pins 10, 13 and 14.

PINPOINT TEST C: LFC 29/DTC C1414 — INCORRECT VEHICLE IDENTIFICATION CODE

CONDITIONS	DETAILS/RESULTS/ACTIONS
C1 CHECK FOR A HARD OR INTERMITTENT DTC	
<p>1  Retrieve/Clear Continuous DTCs</p> <p>2  On-Demand Self Test</p>	<p>1 Retrieve and record any continuous DTCs for use later in this pinpoint test.</p> <ul style="list-style-type: none"> ● Was DTC C1414 retrieved during the on-demand self test? <p>→ Yes This is a hard fault. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. The</p>	

restraint system diagnostic tools must be removed prior to operating the vehicle over the road.

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

2

RCM C310a

3 Inspect C310a harness side. Make sure there is no wire attached to pin cavity 10.

• Does C310a cavity 10 contain a wire?

→ **Yes**
DETERMINE the cause of incorrect vehicle harness configuration. REPAIR as necessary. GO to [C5](#).

→ **No**
GO to [C3](#).

C3 CHECK THE VEHICLE IDENTIFICATION PIN NO. 2

NOTE: For this vehicle application, RCM C310a pin 13 should be ignition voltage.

1

2

Battery Ground Cable

3

4

4 Measure the resistance between RCM C310a pin 13, circuit 20-JA10B (PK/OG) and pin 2, circuit 20-JA10A (PK/OG).

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [C4](#).

→ **No**
REPAIR the circuit. GO to [C5](#).

C4 CHECK THE VEHICLE IDENTIFICATION PIN NO. 3

NOTE: For this vehicle application, RCM C310a pin 14 should be grounded.

1

2

2 Measure the resistance to ground at RCM C310a pin 14, circuit 31-JA10B (BK/RD).

● Is the resistance less than 5 ohms?

→ **Yes**
GO to [C5](#).

→ **No**
REPAIR the circuit. GO to [C7](#).

C5 CHECK THE RCM PROGRAMMED VEHICLE ID

1

PID/Data Monitor and Record

2 Select PID VID No.1, VID No. 2 and VID No. 3.

- Was vehicle ID No. 1 open circuit, ID No. 2 ignition and No. 3 ground?

→ Yes
GO to [C6](#).

→ No
INSTALL a new RCM. GO to [C7](#).

C6 CHECK FOR AN INTERMITTENT FAULT

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

3

On-Demand Self Test

2 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#).

- Was DTC C1414 retrieved during the on-demand self test?

→ Yes
GO to [C2](#).

→ No

	CHECK for causes of intermittent open circuits. ATTEMPT to recreate the failure by flexing the wire harness and cycling the key frequently. REPAIR any intermittent concerns found. GO to C7 .
C7 CHECK FOR ADDITIONAL DTCs	
	<p>1 Refer to the continuous DTCs recorded during Step C1.</p> <ul style="list-style-type: none"> ● Were any continuous DTCs retrieved during Step C1? <p>→ Yes Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.</p> <p>→ No RECONNECT the system. PROVE OUT the system. CLEAR all DTCs.</p>

Pinpoint Test D: LFC 15/DTC B1887 — Driver Air Bag Circuit Shorted to Ground

Normal Operation

The restraints control module (RCM) checks for driver air bag circuit shorts to ground by monitoring the voltage of circuits 30S-JA8 (RD/OG) and 31S-JA8 (BK/OG) at pins 3 and 4. If the RCM detects a short to ground on either of these pins, it will store a diagnostic trouble code (DTC) B1887 in memory and flash a lamp fault code (LFC) 15 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver air bag circuit short to ground can be caused by:

- a short to ground on circuit 30S-JA8 (RD/OG).
- a short to ground on circuit 31S-JA8 (BK/OG).
- a short to ground on the clockspring (14A664).
- a short to ground on the driver air bag module.

PINPOINT TEST D: LFC 15/DTC B1887 — DRIVER AIR BAG CIRCUIT SHORTED TO GROUND

CONDITIONS	DETAILS/RESULTS/ACTIONS
D1 CHECK FOR A HARD OR INTERMITTENT DTC	
1	1 Retrieve and record any continuous DTCs for use later in this pinpoint test.

Retrieve/Clear Continuous DTCs

2

On-Demand Self Test

- Was DTC B1887 retrieved during the on-demand self test?

→ Yes

This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to [D2](#).

→ No

This is an intermittent fault. The fault condition is not present at this time. GO to [D2](#).

D2 CHECK THE DRIVER AIR BAG MODULE

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

2

Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

3

On-Demand Self Test

● Was DTC B1887 retrieved?

→ Yes

GO to [D3](#).

→ No

INSTALL a new driver air bag module.

GO to [D6](#).

D3 CHECK THE DRIVER AIR BAG MODULE CIRCUIT

1

2

RCM C310a

3

DR0999-B

3

NOTE: Do not separate or remove the shorting bars from RCM C310a.

Measure the resistance between RCM C310a pin 3, circuit 30S-JA8 (RD/OG), harness side and RCM C310a pin 21, circuit 31-JA10A (BK/RD), harness side.

● Is the resistance less than 10,000 ohms?

→ Yes

GO to [D4](#).

→ No

INSTALL a new RCM. GO to [D6](#).

D4 CHECK THE DRIVER AIR BAG MODULE WIRING AND THE CLOCKSPrING

1

Driver Air Bag Module Restraint System Diagnostic Tool

2

Clockspring C218C

3 Inspect all crimps, terminals, wires and connectors in circuit 30S-JA8 (RD/OG) feeding the RCM pin 3, circuit 31S-JA8 (BK/OG) feeding pin 4, the clockspring assembly and the clockspring connector C218C. Check for pinched wires and damaged connector pin terminals.

● Was any damage found?

→ Yes
REPAIR as necessary. GO to [D6](#).

→ No
GO to [D5](#).

D5 CHECK FOR AN INTERMITTENT FAULT

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS). CLEAR all DTCs.</p>

Pinpoint Test E: LFC 16/DTC B1888 — Passenger Air Bag Circuit Shorted to Ground

Normal Operation

The restraints control module (RCM) checks for passenger air bag circuit shorts to ground by monitoring the voltage of circuits 30S-JA11 (RD/WH) and 31S-JA11 (BK/WH) at pins 6 and 7. If the RCM detects a short to ground on either of these pins, it will store a diagnostic trouble code (DTC) B1888 in memory and flash a lamp fault code (LFC) 16 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A passenger air bag circuit short to ground can be caused by:

- a short to ground on circuit 30S-JA11 (RD/WH).
- a short to ground on circuit 31S-JA11 (BK/WH).
- a short to ground on the passenger air bag module.

PINPOINT TEST E: LFC 16/DTC B1888 — PASSENGER AIR BAG CIRCUIT SHORTED TO GROUND

CONDITIONS	DETAILS/RESULTS/ACTIONS

E4 CHECK THE PASSENGER AIR BAG MODULE WIRING

<p>1</p>  <p>Passenger Air Bag Module Restraint System Diagnostic Tool</p>	<p>2</p> <p>Inspect all crimps, terminals, wires and connectors in circuit 30S-JA11 (RD/WH) feeding the RCM pin 6, circuit 31S-JA11 (BK/WH) feeding pin 7. Check for pinched wires and damaged connector pin terminals.</p> <ul style="list-style-type: none"> ● Was any damage found? <p>→ Yes REPAIR as necessary. GO to E6.</p> <p>→ No GO to E6.</p>
---	---

E5 CHECK FOR AN INTERMITTENT FAULT

 **WARNING:** If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

<p>1</p> 	
--	--

3

On-Demand Self Test

2 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

● **Was DTC B1888 retrieved during the on-demand self test?**

→ **Yes**

CHECK for causes of intermittent fault at or near the passenger air bag module connector. REPAIR any intermittent concerns found.

If an intermittent concern **was** found and repaired, GO to [E6](#).

If an intermittent concern **was not** found, GO to [E3](#).

→ **No**

CHECK for causes of intermittent short to ground on circuits 30S-JA11 (RD/WH) and 31S-JA11 (BK/WH). ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the key frequently. REPAIR any intermittent concern found. GO to [E6](#).

E6 CHECK FOR ADDITIONAL DTCs

1 Refer to the continuous DTCs recorded during Step E1.

● **Were any continuous DTCs retrieved during Step E1?**

→ **Yes**

Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.

→ **No**

RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#). CLEAR all DTCs.

Pinpoint Test F: LFC 15/DTC B1916 — Driver Air Bag Circuit Shorted to Battery or Ignition

Normal Operation

The restraints control module (RCM) checks for driver air bag circuit shorts to battery or ignition by monitoring the voltage of circuit 30S-JA8 (RD/OG) and 31S-JA8 (BK/OG) at pins 3 and 4. If the RCM detects a short to battery or ignition on either of these pins, it will store a diagnostic trouble code (DTC) B1916 in memory and flash a lamp fault code (LFC) 15 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver air bag circuit short to battery or ignition can be caused by:

- a short to battery or ignition on circuit 30S-JA8 (RD/OG).
- a short to battery or ignition on circuit 31S-JA8 (BK/OG).
- a short to battery or ignition on the clockspring.
- a short to battery or ignition on the driver air bag module.

PINPOINT TEST F: LFC 15/DTC B1916 — DRIVER AIR BAG CIRCUIT SHORTED TO BATTERY OR IGNITION

CONDITIONS	DETAILS/RESULTS/ACTIONS
F1 CHECK FOR A HARD OR INTERMITTENT DTC	
<p>1 </p> <p>Retrieve/Clear Continuous DTCs</p> <p>2 </p> <p>On-Demand Self Test</p>	<p>1 Retrieve and record any continuous DTCs for use later in this pinpoint test.</p> <p>● Was DTC B1916 retrieved during the on-demand self test?</p> <p>→ Yes This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to F2.</p> <p>→ No This is an intermittent fault. The fault condition is not present at this time. GO to F5.</p>
F2 CHECK THE DRIVER AIR BAG MODULE	

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

3

On-Demand Self Test

2

Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

● Was DTC B1916 retrieved?

→ **Yes**
GO to [F3](#).

→ **No**
INSTALL a new driver air bag module.
GO to [F6](#).

Pinpoint Test G: LFC 16/DTC B1925 — Passenger Air Bag Circuit Shorted to Battery or Ignition

Normal Operation

The restraints control module (RCM) checks for passenger air bag circuit shorts to battery or ignition by monitoring the voltage of circuits 30S-JA11 (RD/WH) and 31S-JA11 (BK/WH) at pins 6 and 7. If the RCM detects a short to battery or ignition on either of these pins, it will store a diagnostic trouble code (DTC) B1925 in memory and flash a lamp fault code (LFC) 16 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A passenger air bag circuit short to battery or ignition can be caused by:

- a short to battery or ignition on circuit 30S-JA11 (RD/WH).
- a short to battery or ignition on circuit 31S-JA11 (BK/WH).
- a short to battery or ignition on the passenger air bag module.
- an RCM internal concern.

Pinpoint Test H: LFC 32/DTC B1932 — Driver Air Bag Circuit Resistance High

Normal Operation

The restraints control module (RCM) monitors the resistance of the driver air bag ignitor by measuring the resistance between pins 3 and 4. If the RCM detects high resistance between these pins, it will store a diagnostic trouble code (DTC) B1932 in memory and flash a lamp fault code (LFC) 32 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

Driver air bag high resistance can be caused by:

- a poor connection or corrosion in the driver air bag module circuits or the clockspring.
- high resistance in the clockspring.
- high resistance in the wiring harness.
- high resistance in the driver air bag module.
- RCM is faulted.

PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) . CLEAR all DTCs.</p>
--	--

Pinpoint Test J: LFC 34/DTC B1934 — Driver Air Bag Circuit Resistance Low

Normal Operation

The restraints control module (RCM) monitors the resistance of the driver air bag ignitor by measuring the resistance between pins 3 and 4. If the RCM detects low resistance between these pins, it will store a diagnostic trouble code (DTC) B1934 in memory and flash a lamp fault code (LFC) 34 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

Driver air bag low resistance can be caused by:

- a short in the clockspring.
- a short in the wiring harness.
- a low resistance in the driver air bag module.
- worn or damaged electrical connector shorting bar.
- worn or damaged electrical connector camming beam.
- RCM is faulted.

PINPOINT TEST J: LFC 34/DTC B1934 — DRIVER AIR BAG CIRCUIT RESISTANCE LOW

CONDITIONS	DETAILS/RESULTS/ACTIONS
J1 J1 CHECK FOR A HARD OR INTERMITTENT DTC	
<p>1 </p> <p>Retrieve/Clear Continuous DTCs</p> <p>2</p>	<p>1 Retrieve and record any continuous DTCs for use later in this pinpoint test.</p>

On-Demand Self Test

- Was DTC B1934 retrieved during the on-demand self test?

→ **Yes**

This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to [J2](#).

→ **No**

This is an intermittent fault. The fault condition is not present at this time. GO to [J5](#).

J2 CHECK THE DRIVER AIR BAG MODULE

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

3

On-Demand Self Test

2

Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

● Was DTC B1934 retrieved?

→ **Yes**
GO to [J3](#).

→ **No**
INSTALL a new driver air bag module.
GO to [J6](#).

J3 CHECK THE DRIVER AIR BAG MODULE CIRCUIT

1

2

Driver Air Bag Module Restraint System Diagnostic Tool

3

3 Measure the resistance between driver air bag C216, circuit 30S-JA8 (RD/OG), harness side and driver air bag C216, circuit 31S-JA8 (BK/OG), harness side.

● Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new RCM. GO to [J6](#).

→ **No**
GO to [J4](#).

J4 CHECK THE CLOCKSPRING

1

Clockspring C218C

2

2 Measure the resistance between clockspring C218C, circuit 30S-JA8 (RD/OG) and circuit 31S-JA8 (BK/OG), harness side.

- Is the resistance greater than 10,000 ohms?

- **Yes**
INSTALL a new clockspring. GO to [J6](#).
- **No**
REPAIR the circuit(s) as necessary. GO to [J6](#).

J5 CHECK FOR AN INTERMITTENT FAULT

⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

3

- 2 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

<p>On-Demand Self Test</p>	<p>● Was DTC B1934 retrieved during the on-demand self test?</p> <p>→ Yes CHECK for causes of intermittent fault at or near the driver air bag module connector. REPAIR any intermittent concerns found.</p> <p>If an intermittent concern was found and repaired, GO to J6.</p> <p>If an intermittent concern was not found, GO to J3.</p> <p>→ No CHECK for causes of intermittent short to battery or ignition on circuits 30S-JA8 (RD/OG) and 31S-JA8 (BK/OG) and the clockspring. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the key frequently. REPAIR any intermittent concern found. GO to J6.</p>
<p>J6 CHECK FOR ADDITIONAL DTCs</p>	
	<p>1 Refer to the continuous DTCs recorded during Step J1.</p> <p>● Were any continuous DTCs retrieved during Step J1?</p> <p>→ Yes Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.</p> <p>→ No RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS). CLEAR all DTCs.</p>

Pinpoint Test K: LFC 35/DTC B1935 — Passenger Air Bag Circuit Resistance Low

Normal Operation

The restraints control module (RCM) monitors the resistance of the passenger air bag ignitor by measuring the resistance between pins 6 and 7. If the RCM detects low resistance between these pins, it will store a diagnostic trouble code (DTC) B1935 in memory and flash a lamp fault code (LFC) 35 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

Passenger air bag low resistance can be caused by:

- a short in the wiring harness.
- a low resistance in the passenger air bag module.
- an RCM internal concern.
- a worn or damaged electrical connector shorting bar.
- a worn or damaged electrical connector camming beam.

PINPOINT TEST K: LFC 35/DTC B1935 — PASSENGER AIR BAG CIRCUIT RESISTANCE LOW

CONDITIONS	DETAILS/RESULTS/ACTIONS

PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS). CLEAR all DTCs.</p>

Pinpoint Test L: LTC 48/DTC B2444 — Driver Seat Side Impact Sensor Is Faulted

Normal Operation

The driver seat side impact sensor monitors the severity of a crash event. If the crash is severe enough, the sensor will signal the restraints control module (RCM) to deploy the driver seat side air bag.

The RCM monitors the two-wire current loop to the driver seat side impact sensor for a signal that is out of the expected range. If the RCM detects an out-of-range signal from the driver seat side impact

sensor, indicating a fault, it will store diagnostic trouble code (DTC) B2444 and flash a lamp fault code (LFC) 48 (or a higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver seat side impact sensor fault can be caused by:

- Faulted driver seat side impact sensor.

PINPOINT TEST L: LFC 48/DTC B2444 — DRIVER SEAT SIDE IMPACT SENSOR IS FAULTED

CONDITIONS	DETAILS/RESULTS/ACTIONS
L1 CHECK FOR A HARD OR INTERMITTENT DTC	
<p>1</p>  <p>Retrieve/Clear Continuous DTCs</p> <p>2</p>  <p>On-Demand Self Test</p>	<p>1 Retrieve and record any continuous DTCs for use later in this pinpoint test.</p> <p>● Was DTC B2444 retrieved during the on-demand self test?</p> <p>→ Yes This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. INSTALL a new driver seat side impact sensor. GO to L2.</p> <p>→ No This is an intermittent fault. The fault condition is not present at this time. INSTALL a new driver seat side impact sensor. GO to L2.</p>
L2 CHECK FOR ADDITIONAL DTCs	
	<p>1 Refer to the continuous DTCs recorded during Step L1.</p> <p>● Were any continuous DTCs retrieved during Step L1?</p> <p>→ Yes Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.</p> <p>→ No CLEAR all DTCs.</p>

Pinpoint Test M: LFC 43/DTC B2440 — Passenger Seat Side Impact Sensor Mounting Fault

Normal Operation

The passenger seat side impact sensor monitors the severity of a crash event. If the crash is severe enough, the sensor will signal the restraints control module (RCM) to deploy the passenger seat side air bag.

The RCM monitors the two-wire current loop to the passenger seat side impact sensor for a signal that is out of the expected range. If the RCM detects an out-of-range signal from the passenger seat side impact sensor, indicating a sensor mounting fault, it will store diagnostic trouble code (DTC) B2440 and flash a lamp fault code (LFC) 43 (or a higher priority code if one exists) on the air bag indicator.

Possible Causes

A passenger seat side impact sensor mounting fault can be caused by:

- a passenger seat side impact sensor internal fault.
- a passenger seat side impact sensor mounting fault.
- RCM is faulted.

PINPOINT TEST M: LFC 43/DTC B2440 — PASSENGER SEAT SIDE IMPACT SENSOR MOUNTING FAULT

CONDITIONS	DETAILS/RESULTS/ACTIONS
M1 CHECK FOR A HARD OR INTERMITTENT DTC	
<p>1 </p> <p>Retrieve/Clear Continuous DTCs</p> <p>2 </p> <p>On-Demand Self Test</p>	<p>1 Retrieve and record any continuous DTCs for use later in this pinpoint test.</p> <p>● Was DTC B2440 retrieved during the on-demand self test?</p> <p>→ Yes This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to M2.</p> <p>→ No This is an intermittent fault. The fault condition is not present at this time. GO to M5.</p>
M2 CHECK THE MOUNTING OF THE PASSENGER SEAT SIDE IMPACT SENSOR	

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

- 1 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.
 - 2 Remove the passenger seat side impact sensor. Refer to [Side Impact Sensor](#) in the Removal and Installation portion of this section.
 - 3 Visually inspect the passenger seat side impact sensor, mounting bracket and mounting surface for damage, corrosion or dirt.
 - 4 Inspect the passenger seat side impact sensor mounting and make sure that the retaining bolts are fully seated and tightened correctly. Refer to [Side Impact Sensor](#) in the Removal and Installation portion of this section for correct tightening torque.
- **Was a significant amount of corrosion or dirt found, the passenger seat side impact sensor mounting bracket attached to the mounting surface in correctly, or the two passenger seat side impact sensor retaining bolts not fully seated and tightened correctly?**
- **Yes**
MAKE SURE the passenger seat side impact sensor, mounting bracket and mounting surface are free of damage, corrosion or dirt and the two retaining bolts are fully seated and correctly tightened. REATTACH the passenger seat side impact sensor and mounting bracket to the mounting surface. GO to [M6](#).
- **No**
GO to [M3](#).

M3 CHECK THE PASSENGER SEAT SIDE IMPACT SENSOR HARNESS CONNECTION

- 1 Check the passenger seat side impact sensor harness connection.
- **Is the passenger seat side impact sensor harness connector connected to the passenger seat side impact sensor correctly?**
- **Yes**
GO to [M4](#).

→ **No**
ATTACH the passenger seat side impact sensor harness connector correctly. GO to [M6](#).

M4 CHECK THE VEHICLE CHASSIS GROUND

1 Measure the resistance between a known good chassis ground and the mounting surface of the passenger seat side impact sensor.

- **Is the resistance greater than 100 ohms?**

→ **Yes**
REPAIR the chassis grounding system. GO to [M6](#).

→ **No**
INSTALL a new RCM. GO to [M6](#).

M5 CHECK FOR AN INTERMITTENT FAULT

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

2

On-Demand Self-test

3 Refer to the continuous DTCs recorded during Step M1.

- **Was DTC B2440 retrieved during the on-demand self test?**

→ **Yes**
GO to [M2](#).

→ **No**

	CHECK for causes of an intermittent mounting fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to M6 .
M6 CHECK FOR ADDITIONAL DTCs	
	<p>1 Refer to the continuous DTCs recorded during Step M1.</p> <ul style="list-style-type: none"> ● Were any continuous DTCs retrieved during Step M1? <p>→ Yes Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.</p> <p>→ No RECONNECT the system. PROVE OUT the system. CLEAR all DTCs.</p>

Pinpoint Test N: LFC 42/DTC B2441 — Driver Seat Side Impact Sensor Mounting Fault

Normal Operation

The driver seat side impact sensor monitors the severity of a crash event. If the crash is severe enough, the sensor will signal the restraints control module (RCM) to deploy the driver seat side air bag.

The RCM monitors the two-wire current loop to the driver seat side impact sensor for a signal that is out of the expected range. If the RCM detects an out-of-range signal from the driver seat side impact sensor, indicating a sensor mounting fault, it will store diagnostic trouble code (DTC) B2441 and flash a lamp fault code (LFC) 42 (or a higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver seat side impact sensor mounting fault can be caused by:

- a driver seat side impact sensor internal fault.
- a driver seat side impact sensor mounting fault.
- RCM is faulted.

PINPOINT TEST N: LFC 42/DTC B2441 — DRIVER SEAT SIDE IMPACT SENSOR MOUNTING FAULT

CONDITIONS	DETAILS/RESULTS/ACTIONS
N1 CHECK FOR A HARD OR INTERMITTENT DTC	
<p>1</p>  <p>Retrieve/Clear Continuous DTCs</p> <p>2</p>	<p>1 Retrieve and record any continuous DTCs for use later in this pinpoint test.</p>

On-Demand Self Test

- Was DTC B2441 retrieved during the on-demand self test?

→ Yes

This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to [N2](#).

→ No

This is an intermittent fault. The fault condition is not present at this time. GO to [N5](#).

N2 CHECK THE MOUNTING OF THE DRIVER SIDE CRASH SENSOR

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

- 1 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.
- 2 Remove the driver seat side impact sensor. Refer to [Side Impact Sensor](#) in the Removal and Installation portion of this section.
- 3 Visually inspect the driver seat side impact sensor, mounting bracket and mounting surface for damage, corrosion or dirt.
- 4 Inspect the driver seat side impact sensor mounting and make sure that the retaining bolts are fully seated and tightened correctly. Refer to [Side Impact Sensor](#) in this section for correct tightening torque.

- Was a significant amount of corrosion or dirt found, the driver seat side impact sensor mounting bracket attached to the mounting surface incorrectly, or the two driver seat side impact sensor retaining bolts not fully seated and tightened correctly?

→ Yes

MAKE SURE the driver seat side impact sensor, mounting bracket and mounting surface are free of damage, corrosion or dirt and the two retaining bolts are fully seated and correctly tightened. REATTACH the driver seat side impact sensor and mounting bracket to the mounting surface. GO to [N6](#).

→ **No**
GO to [N3](#).

N3 CHECK THE DRIVER SEAT SIDE CRASH SENSOR HARNESS CONNECTION

1 Check the driver seat side impact sensor harness connection.

- **Is the driver seat side impact sensor harness connector connected to the driver seat side impact sensor correctly?**

→ **Yes**
GO to [N4](#).

→ **No**
ATTACH the driver seat side impact sensor harness connector correctly.
GO to [N6](#).

N4 CHECK THE VEHICLE CHASSIS GROUND

1 Measure the resistance between a known good chassis ground and the mounting surface of the driver seat side impact sensor.

- **Is the resistance greater than 100 ohms?**

→ **Yes**
REPAIR the chassis grounding system. GO to [N6](#).

→ **No**
INSTALL a new RCM. GO to [N6](#).

N5 CHECK FOR AN INTERMITTENT FAULT

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing

<p>2</p>  <p>On-Demand Self Test</p>	<p>portion of this section.</p> <ul style="list-style-type: none"> ● Was DTC B2441 retrieved during the on-demand self test? <p>→ Yes GO to N2.</p> <p>→ No CHECK for causes of an intermittent mounting fault. Pinpoint Test P: LFC 44/DTC U2017 — Driver Side Impact Sensor Communication Fault

Normal Operation

The driver seat side impact sensor monitors the severity of a crash event. If the crash is severe enough, the sensor will signal the restraints control module (RCM) to deploy the driver seat side air bag.

The RCM monitors the two-wire current loop to the driver seat side impact sensor for a signal that is out of the expected range. If the RCM detects an out-of-range signal from the driver seat side impact sensor, indicating a sensor communication fault, it will store diagnostic trouble code (DTC) U2017 and flash a lamp fault code (LFC) 44 (or a higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver seat side impact sensor communication fault can be caused by:

- damaged wiring on circuit 7-JA39 (YE).
- damaged wiring on circuit 9-JA39 (BN).
- damaged driver seat side impact sensor.

PINPOINT TEST P: LFC 44/DTC U2017 — DRIVER SEAT SIDE IMPACT SENSOR COMMUNICATION FAULT

CONDITIONS	DETAILS/RESULTS/ACTIONS
<p>P1 CHECK FOR CONTINUOUS OR ON-DEMAND SELF TEST DTCs</p>	
<p>1  Retrieve/Clear Continuous DTCs</p> <p>2  On-Demand Self Test</p>	<p>1 Retrieve and record any continuous DTCs for use later in this pinpoint test.</p> <ul style="list-style-type: none"> ● Was DTC U2017 retrieved during the on-demand self test? <p>→ Yes This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to P2.</p> <p>→ No This is an intermittent fault. The fault condition is not present at this time. GO to P9.</p>
<p>P2 CHECK THE DRIVER SIDE CRASH SENSOR HARNESS CONNECTOR</p>	
<p> WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.</p> <p>The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.</p> <p>NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. GO to [P8](#).

→ **No**
REPAIR the circuit. GO to [P10](#).

P8 CHECK CIRCUIT 9-JA39 (BN) FOR A SHORT TO BATTERY OR IGNITION

1

A0030433

1 Measure the voltage between RCM C310b pin 9, circuit 9-JA39 (BN), harness side and ground.

- Is the voltage less than 0.2 volt?

→ **Yes**
INSTALL a new driver seat side impact sensor. GO to [P10](#).

→ **No**
REPAIR the circuit. GO to [P10](#).

P9 CHECK FOR AN INTERMITTENT FAULT

 **WARNING:** If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

2

On-Demand Self Test

1 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

- Was DTC U2017 retrieved during the on-demand self test?

→ **Yes**
GO to [P2](#).

→ **No**
CHECK for causes of a communication fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to [P10](#).

P10 CHECK FOR ADDITIONAL DTCs

1 Refer to the continuous DTCs recorded during Step P1.

- Were any continuous DTCs retrieved during Step P1?

	<p>→ Yes Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.</p> <p>→ No RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) . CLEAR all DTCs.</p>
--	--

Pinpoint Test Q: LFC 45/DTC U2018 — Passenger Seat Side Impact Sensor Communication Fault

Normal Operation

The passenger seat side impact sensor monitors the severity of a crash event. If the crash is severe enough, the sensor will signal the restraints control module (RCM) to deploy the passenger seat side air bag.

The RCM monitors the two-wire current loop to the passenger seat side impact sensor for a signal that is out of the expected range. If the RCM detects an out-of-range signal from the passenger seat side impact sensor, indicating a sensor communication fault, it will store diagnostic trouble code (DTC) U2018 and flash a lamp fault code (LFC) 45 (or a higher priority code if one exists) on the air bag indicator.

Possible Causes

A passenger seat side impact sensor communication fault can be caused by:

- damaged wiring on circuit 7-JA40 (YE/VT).
- damaged wiring on circuit 9-JA40 (BN/WH).
- damaged passenger seat side impact sensor.

PINPOINT TEST Q: LFC LFC 45/DTC U2018 — PASSENGER SIDE IMPACT SENSOR COMMUNICATION FAULT

CONDITIONS	DETAILS/RESULTS/ACTIONS
Q1 CHECK FOR CONTINUOUS OR ON-DEMAND SELF TEST DTCs	
<p>1 </p> <p>Retrieve/Clear Continuous DTCs</p> <p>2</p>	<p>1 Retrieve and record any continuous DTCs for use later in this pinpoint test.</p>

On-Demand Self Test

- **Was DTC U2018 retrieved during the on-demand self test?**

→ **Yes**

This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to [Q2](#).

→ **No**

This is an intermittent fault. The fault condition is not present at this time. GO to [Q9](#).

Q2 CHECK THE PASSENGER SIDE IMPACT SENSOR HARNESS CONNECTOR

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

2 Check the passenger seat side impact sensor electrical connector for a correct connection.

- **Is the passenger seat side impact sensor connected correctly?**

→ **Yes**

GO to [Q3](#).

→ **No**
CONNECT the passenger seat side impact sensor connector correctly. GO to [Q6](#).

Pinpoint Test R: LFC 36/DTC B1993 — Driver Seat Side Air Bag Circuit Shorted to Ground

Normal Operation

The restraints control module (RCM) monitors the resistance to ground at RCM C310b pins 2 and 3. If the resistance is less than 10,000 ohms at either pin, the RCM will interpret that as a ground short, store diagnostic trouble code (DTC) B1993 and flash lamp fault code (LFC) 36.

Possible Causes

A driver seat side air bag circuit short to ground can be caused by:

- grounded wiring on circuit 30S-JA37 (RD/GN).
- damaged wiring on circuit 31S-JA37 (BK/GN).
- ground short in the driver seat side air bag module.
- RCM is faulted.

CHECK for causes of intermittent fault at or near the passenger seat air bag module connector. REPAIR any intermittent concerns found.

If an intermittent concern **was** found and repaired, GO to [S6](#).

If an intermittent concern **was not** found, GO to [S3](#).

→ **No**

CHECK for causes of intermittent short to ground on circuits 30S-JA38 (RD/BK) and 31S-JA38 (BK/RD). ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the key frequently. REPAIR any intermittent concern found. GO to [S6](#).

S6 CHECK FOR ADDITIONAL DTCs

1 Refer to the continuous DTCs recorded during Step S1.

● **Were any continuous DTCs retrieved during Step S1?**

→ **Yes**

Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.

→ **No**

RECONNECT the system. REACTIVATE the system. PROVE OUT the system.

REFER to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#). CLEAR all DTCs.

Pinpoint Test T: LFC 36/DTC B1992 — Driver Seat Side Air Bag Circuit Shorted to Battery or Ignition

Normal Operation

The restraints control module (RCM) monitors the driver seat side air bag circuits at RCM C310b pins 2 and 3 for a short to battery or ignition. If battery or ignition voltage is detected, the RCM will store diagnostic trouble code (DTC) B1992 and flash lamp fault code (LFC) 36.

Possible Causes

A driver seat side air bag circuit short to battery or ignition can be caused by:

- battery or ignition voltage on circuit 30S-JA38 (RD/BK).
- battery or ignition voltage on circuit 31S-JA38 (BK/RD).
- battery or ignition voltage short in the driver seat side air bag module.
- RCM is faulted.

PINPOINT TEST T: LFC 36/DTC B1992 — DRIVER SEAT SIDE AIR BAG CIRCUIT SHORTED TO BATTERY OR IGNITION

CONDITIONS	DETAILS/RESULTS/ACTIONS
T1 CHECK FOR A HARD OR INTERMITTENT DTC	
<p>1  Retrieve/Clear Continuous DTCs</p> <p>2  On-Demand Self Test</p>	<p>1 Retrieve and record any continuous DTCs for use later in this pinpoint test.</p> <p>● Was DTC B1992 retrieved during the on-demand self test?</p> <p>→ Yes This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to T2.</p> <p>→ No This is an intermittent fault. The fault</p>

condition is not present at this time. GO to [T5](#).

T2 CHECK THE DRIVER SEAT SIDE AIR BAG MODULE

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

3

INSTALL a new RCM. GO to [X5](#).

→ **No**
REPAIR the circuit(s) as necessary. GO to [X5](#).

X4 CHECK FOR AN INTERMITTENT FAULT

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

3

On-Demand Self Test

- 2 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

● **Was DTC B1995 retrieved during the on-demand self test?**

→ **Yes**

CHECK for causes of intermittent fault at or near the driver seat air bag module connector. REPAIR any intermittent concerns found.

If an intermittent concern **was** found and repaired, GO to [X5](#).

If an intermittent concern **was not** found, GO to [X3](#).

→ **No**

CHECK for causes of intermittent high resistance on circuits 30S-JA37 (RD/GN) and 31S-JA37 (BK/GN). ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the key frequently. REPAIR any intermittent concern found. GO to [X5](#).

X5 CHECK FOR ADDITIONAL DTCs

- 1 Refer to the continuous DTCs recorded during Step X1.

● **Was the continuous DTC retrieved during Step X1?**

→ **Yes**

Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.

→ **No**

RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to [Air Bag and](#)

Pinpoint Test Y: LFC 37/DTC B1999 — Passenger Seat Side Air Bag Circuit Resistance Low

Normal Operation

The restraints control module (RCM) monitors the resistance of the passenger seat side air bag circuit loop and the air bag module igniter at RCM C310b pins 5 and 6. If the resistance is less than 0.7 ohms, the RCM will store diagnostic trouble code (DTC) B1999 and flash lamp fault code (LFC) 37.

Possible Causes

A low resistance on the passenger seat side air bag circuit can be caused by:

- damaged wiring on circuit 30S-JA38 (RD/BK).
- damaged wiring on circuit 31S-JA38 (BK/RD).
- damaged passenger seat side air bag module.
- RCM is faulted.
- damaged electrical connector shorting bar.
- damaged electrical connector camming beam.

PINPOINT TEST Y: LFC 37/DTC B1999 — PASSENGER SIDE AIR BAG CIRCUIT RESISTANCE LOW

CONDITIONS	DETAILS/RESULTS/ACTIONS
Y1 CHECK FOR A HARD OR INTERMITTENT DTC	
<p>1  Retrieve/Clear Continuous DTCs</p> <p>2  On-Demand Self Test</p>	<p>1 Retrieve and record any continuous DTCs for use later in this pinpoint test.</p> <p>● Was DTC B1999 retrieved during the on-demand self test?</p> <p>→ Yes This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to Y2.</p>

→ **No**
This is an intermittent fault. The fault condition is not present at this time. GO to [Y4](#).

Y2 CHECK THE PASSENGER SIDE AIR BAG MODULE

⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

3

On-Demand Self Test

2 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

● **Was DTC B1999 Retrieved?**

→ **Yes**
GO to [Y3](#).

→ **No**
INSTALL a new passenger seat side air bag module. GO to [Y5](#).

Y3 CHECK THE PASSENGER SIDE AIR BAG MODULE CIRCUIT

1

2

Passenger Side Air Bag Module Restraint System Diagnostic Tool

3

DR1050-A

3

Measure the resistance between passenger seat side air bag C337, circuit 30S-JA38 (RD/BK), harness side and circuit 31S-JA38 (BK/RD), harness side.

- Is the resistance greater than 10,000 ohms?

→ **Yes**
INSTALL a new RCM. GO to [Y5](#).

→ **No**
REPAIR the circuit(s) as necessary. GO to [Y5](#).

Y4 CHECK FOR AN INTERMITTENT FAULT

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

2

Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner](#)

3

On-Demand Self Test

[Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

- **Was DTC B1999 retrieved during the on-demand self test?**

→ **Yes**

CHECK for causes of intermittent fault at or near the passenger seat air bag module connector. REPAIR any intermittent concerns found.

If an intermittent concern **was** found and repaired, GO to [Y5](#).

If an intermittent concern **was not** found, GO to [Y3](#).

→ **No**

CHECK for causes of intermittent high resistance on circuits 30S-JA38 (RD/BK) and 31S-JA38 (BK/RD). ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the key frequently. REPAIR any intermittent concern found. GO to [Y5](#).

Y5 CHECK FOR ADDITIONAL DTCs

1 Refer to the continuous DTCs recorded during Step Y1.

- **Were any continuous DTCs retrieved during Step Y1?**

→ **Yes**

Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.

→ **No**

RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#). CLEAR all DTCs.

Normal Operation

The restraints control module (RCM) monitors the resistance of the circuit to the driver safety belt retractor pretensioner. When the RCM detects a resistance that is out of the expected range (high or low) it will set lamp fault code (LFC) 46 and diagnostic test code (DTC) B1885 or B1877.

Possible Causes

An out of range resistance on the driver safety belt retractor pretensioner circuit can be caused by:

- out of range resistance on circuit 30S-JA33 (RD/BU).
- out of range resistance on circuit 31S-JA33 (BK/BU).
- out of range resistance on the driver safety belt retractor pretensioner.
- RCM is faulted.

PINPOINT TEST Z: LFC 46/DTC B1885/B1877 — DRIVER SAFETY BELT RETRACTOR PRETENSIONER CIRCUIT RESISTANCE HIGH OR LOW

CONDITIONS	DETAILS/RESULTS/ACTIONS

--	--

Pinpoint Test AA: LFC 47/DTC B1881/B1886 — Passenger Safety Belt Retractor Pretensioner Circuit Resistance High or Low

Normal Operation

The restraints control module (RCM) monitors the resistance of the circuit to the passenger safety belt retractor pretensioner. When the RCM detects a resistance that is out of the expected range (high or low) it will set lamp fault code (LFC) 47 and diagnostic test code (DTC) B1881 or B1886.

Possible Causes

An out of range resistance on the passenger safety belt retractor pretensioner circuit can be caused by:

- out of range resistance on circuit 30S-JA34 (RD/BK).
- out of range resistance on circuit 31S-JA34 (BK/RD).
- out of range resistance on the passenger safety belt retractor pretensioner.
- RCM is faulted.

PINPOINT TEST AA: LFC 47/DTC B1881/B1886 — PASSENGER SAFETY BELT RETRACTOR PRETENSIONER CIRCUIT RESISTANCE HIGH OR LOW

CONDITIONS	DETAILS/RESULTS/ACTIONS
AA1 CHECK FOR A HARD OR INTERMITTENT DTC

4

Measure the resistance to ground at RCM C310a pin 18, circuit 30S-JA33 (RD/BU) and pin 22, circuit 31S-JA33 (BK/BU).

- Is the resistance less than 10,000 ohms at either pin?

→ **Yes**
REPAIR the short to ground. GO to [AC5](#).

→ **No**
INSTALL a new RCM. GO to [AC5](#).

AC4 CHECK FOR AN INTERMITTENT FAULT

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS). CLEAR all DTCs.</p>

Pinpoint Test AD: LFC 18/DTC B1882 — Passenger Safety Belt Retractor Pretensioner Circuit Shorted to Battery or Ignition

Normal Operation

The restraints control module (RCM) monitors the circuit to the passenger safety belt retractor pretensioner. When the RCM detects a circuit short to battery or ignition it will set lamp fault code (LFC) 18 and diagnostic test code (DTC) 1882.

Possible Causes

A short to battery or ignition on the passenger safety belt retractor pretensioner circuit can be caused by:

- a short to battery or ignition on circuit 30S-JA34 (RD/BK).
- a short to battery or ignition on circuit 31S-JA34 (BK/RD).
- a short to battery or ignition on the passenger safety belt retractor pretensioner.
- RCM is faulted.

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1 Refer to the continuous DTCs recorded during Step AE1.

- **Was DTC B1883 retrieved during the on-demand self test?**

→ **Yes**

CHECK for causes of intermittent fault at or near the passenger safety belt retractor pretensioner connector. REPAIR any intermittent concerns found.

If an intermittent concern **was** found and repaired, GO to [AE5](#).

If an intermittent concern **was not** found, GO to [AE3](#).

→ **No**

CHECK for causes of intermittent short to ground on circuit 30S-JA34 (RD/BK) and circuit 31S-JA34 (BK/RD).

ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to [AE5](#).

AE5 CHECK FOR ADDITIONAL DTCs

1 Refer to the continuous DTCs recorded during Step AE1.

- **Were any continuous DTCs retrieved during Step AE1?**

→ **Yes**

Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.

→ **No**
 RECONNECT the system.
 REACTIVATE the system. PROVE OUT the system. REFER to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#). CLEAR all DTCs.

Pinpoint Test AF: B1892 — Air Bag Tone Warning Indicator Circuit Shorted to Ground or Open

Normal Operation

The restraints control module (RCM) monitors its connection to the instrument cluster at C310a at pin 26. This connection is used to signal a chime if the air bag indicator is inoperative and another SRS fault exists. If the RCM detects a short to ground or open on the connection to the instrument cluster, it will store a diagnostic trouble code (DTC) B1892 in memory.

Possible Causes

An air bag tone warning indicator circuit short to ground or open can be caused by:

- a short to ground or open on circuit 8-JA13 (WH/BK).
- a damaged or inoperative instrument cluster.
- RCM is faulted.

--	--

Pinpoint Test AH: DTC B1869 — Air Bag Indicator Inoperative

Normal Operation

The air bag indicator is designed to illuminate for 6 (+/-2) seconds when the ignition switch is turned to the RUN position. This initial 6 seconds of illumination is considered normal operation and is called prove out of the air bag indicator. The air bag indicator is then used to warn the driver that there is a fault in the air bag supplemental restraint system (SRS).

The restraints control module (RCM) monitors the air bag indicator for open and short to ground conditions. If the RCM detects an open or short to ground condition on the air bag indicator circuit, it will store a diagnostic trouble code (DTC) B1869 in memory.

If the RCM detects an air bag indicator failure in addition to another SRS failure, the RCM will send a signal to the air bag tone warning indicator to produce five sets of five tone bursts.

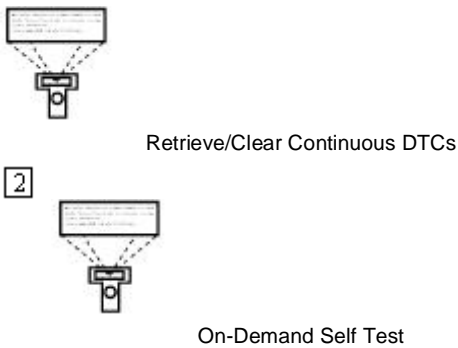

Possible Causes

An air bag indicator inoperative condition can be caused by:

- damaged wiring on circuit 31S-JA14.
- a damaged or burned out air bag indicator.
- an instrument cluster malfunction.
- RCM is faulted.

PINPOINT TEST AH: DTC B1869 — AIR BAG INDICATOR INOPERATIVE

CONDITIONS	DETAILS/RESULTS/ACTIONS
AH1 CHECK FOR A HARD OR INTERMITTENT DTC	
1	1 Retrieve and record any continuous

DTCs for use later in this pinpoint test.

- Was DTC B1869 retrieved during the on-demand self test?

→ Yes

This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to [AH2](#).

→ No

This is an intermittent fault. The fault condition is not present at this time. GO to [AH5](#).

AH2 CHECK THE RCM

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

3

RCM C310a

4

DR1034-A

4

Measure the resistance between the RCM C310a, pin 20, component side, and a known good chassis ground.

● Is the resistance less than 100 ohms?

→ **Yes**
INSTALL a new RCM. GO to [AH6](#).

→ **No**
GO to [AH3](#).

AH3 CHECK CIRCUIT 31S-JA14 FOR A SHORT TO GROUND

1

DR1217-A

1

Measure the resistance between RCM C310a pin 20, circuit 31S-JA14, harness side and RCM C310a pin 21, circuit 31-JA10 (BK/RD), harness side.

● Is the resistance less than 100 ohms?

→ **Yes**
REPAIR the circuit. GO to [AH6](#).

→ **No**
GO to [AH4](#).

AH4 CHECK CIRCUIT 31S-JA14 (BK/GN) FOR AN OPEN

1

Instrument Cluster C220A

2

A0003426

2

Measure the resistance between RCM C310a pin 20, circuit 31S-JA14, harness side and instrument cluster C220A pin 22, circuit 31S-JA14, harness side.

- Is the resistance greater than 10 ohms?

→ **Yes**
REPAIR the circuit. GO to [AH6](#).

→ **No**
REPAIR the instrument cluster. REFER to [Section 413-01](#). GO to [AH6](#).

AH5 CHECK FOR AN INTERMITTENT FAULT

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

3

On-Demand Self-Test

2 Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

● Was DTC B1869 retrieved during the on-demand self test?

→ Yes
GO to [AH2](#) .

→ No
CHECK for causes of intermittent short to ground or open on circuit 31S-JA14. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to [AH6](#) .

AH6 CHECK FOR ADDITIONAL DTCs

1 Refer to the continuous DTCs recorded during Step AH1.

● Were any continuous DTCs retrieved during Step AH1?

→ Yes
Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction.

→ No
RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) . CLEAR all DTCs.

Pinpoint Test AI: DTC B1870 — Air Bag Indicator Shorted to Battery

Normal Operation

The air bag indicator is designed to illuminate for 6 seconds when the ignition switch is turned to the

RUN position. This is considered normal operation and is called SRS prove out . The air bag indicator is used to warn the driver that there is a fault in the (SRS).

The restraints control module (RCM) monitors the air bag indicator for short to battery conditions. If the RCM detects a short to battery condition on the air bag indicator circuit, it will store a diagnostic trouble code (DTC) B1870 in memory.

If the RCM detects an air bag indicator failure in addition to another SRS failure, the RCM will send a signal to the air bag tone warning indicator to produce five sets of five tone bursts.

Possible Causes

An air bag indicator short to battery condition can be caused by:

- damaged wiring on circuit 31S-JA14.
- an instrument cluster concern.
- RCM is faulted.

PINPOINT TEST AI: DTC B1870 — AIR BAG INDICATOR SHORTED TO BATTERY

CONDITIONS	DETAILS/RESULTS/ACTIONS
AI1 CHECK FOR A HARD OR INTERMITTENT DTC	
<div style="display: flex; flex-direction: column; align-items: center;"> <div style="margin-bottom: 20px;"> 1  <p>Retrieve/Clear Continuous DTCs</p> </div> <div> 2  <p>On-Demand Self Test</p> </div> </div>	<div style="margin-bottom: 20px;"> 1 Retrieve and record any continuous DTCs for use later in this pinpoint test. </div> <ul style="list-style-type: none"> ● Was DTC B1870 retrieved during the on-demand self test? <div style="margin-top: 10px;"> <p>→ Yes This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to AI2.</p> <p>→ No This is an intermittent fault. The fault condition is not present at this time. GO to AI3.</p> </div>
AI2 CHECK THE AIR BAG INDICATOR CIRCUIT	
 <p>WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.</p>	

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1

2

Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

3

RCM C310a

4

● Is the air bag indicator illuminated?

→ Yes

INSTALL a new RCM. GO to [AI4](#).

→ No

CHECK the air bag indicator. REFER to [Section 413-01](#). If the air bag indicator is OK, REPAIR the circuit. GO to [AI4](#).

AI3 CHECK FOR AN INTERMITTENT FAULT

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The**

restraint system diagnostic tools must be removed prior to operating the vehicle over the road.

NOTE: After diagnosing or repairing an SRS, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

<p>1</p> 	<p>2</p> <p>Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.</p> <ul style="list-style-type: none">● Was DTC B1870 retrieved during the on-demand self test? <p>→ Yes GO to A12.</p> <p>→ No CHECK for causes of intermittent short to battery on circuit 31S-JA14. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS). CLEAR all DTCs.</p>

Pinpoint Test AJ: No Communication with the Restraints Control Module (RCM)

Normal Operation

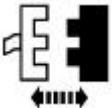

The RCM communicates with the scan tool using ISO 9141 communication mode through the data link connector (DLC).

Possible Causes

A no communication condition can be caused by:

- damage to circuit 4-EE1 (GY).
- DLC connection open.
- scan tool inoperative.
- RCM is faulted.

PINPOINT TEST AJ: NO COMMUNICATION WITH THE RESTRAINTS CONTROL MODULE (RCM)

CONDITIONS	DETAILS/RESULTS/ACTIONS
AJ1 CHECK THE RCM CONNECTOR C310a AND CONNECTOR PIN 5 FOR DAMAGE	
<p>NOTE: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.</p> <p>NOTE: Restraint system diagnostic tools MUST be installed under the seats in the side airbag and safety belt retractor pretensioner electrical connectors.</p> <p>NOTE: Diagnostics or repairs are not to be performed on a side airbag system or safety belt retractor pretensioner with the seat in the vehicle. Prior to attempting to diagnose/repair the side airbag system or safety belt retractor pretensioner the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the side airbag and the safety belt retractor pretensioner electrical connectors. The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.</p> <p>NOTE: Diagnostics may be performed on seat systems other than the side airbag or the safety belt retractor pretensioner such as (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the SRS system is deactivated and the restraint system diagnostic tools are installed under the seats in the side airbag and safety belt retractor pretensioner electrical connectors.</p> <p>NOTE: After diagnosing/repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road.</p>	
<p>1</p>  <p>3</p>  <p>RCM C310a</p>	<p>2 Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.</p> <p>4 Inspect RCM C310a and RCM C310a pin 5 for damage.</p> <ul style="list-style-type: none"> ● Are RCM C310a and RCM C310a pin 5 OK?

→ **Yes**
GO to [AJ2](#).

→ **No**
REPAIR RCM C310a or RCM C310a pin 5 as necessary. RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#).

AJ2 CHECK THE DLC CONNECTOR C251 AND CONNECTOR PIN 7 FOR DAMAGE

1 Inspect DLC C251 and DLC C251 pin 7 for damage.

- **Are DLC C251 and DLC C251 pin 7 OK?**

→ **Yes**
GO to [AJ3](#).

→ **No**
REPAIR DLC C251 or DLC C251 pin 7 as necessary. RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#).

AJ3 CHECK CIRCUIT 4-EE1 (GY) FOR AN OPEN

1

DR1019-A

1 Measure the resistance between RCM C310a pin 5, circuit 4-EE1 (GY), harness side and DLC C251 pin 7, circuit 4-EE1 (GY), harness side.

- **Is the resistance less than 5 ohms?**

	<p>→ Yes INSTALL a new RCM. RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS).</p> <p>→ No REPAIR the circuit. RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS).</p>
--	---

Pinpoint Test AK: LFC 5 Hz — RCM in Plant Mode

Normal Operation

A new restraints control module (RCM) is programmed to flash a special code. The code is 5 Hz and is used during vehicle assembly. The code indicates that both (driver and passenger) side air bags are not installed correctly. The code will normally occur when both (and only both) of the following conditions are met:

- a new RCM is installed.
- both side air bags are not correctly installed.

Possible Causes

A 5 Hz LFC can be caused by:

- both front seats not installed.
- both side air bags not correctly installed.
- RCM is faulted.

PINPOINT TEST AK: PINPOINT TEST AG: LFC 5 HZ — RCM IN PLANT MODE

CONDITIONS	DETAILS/RESULTS/ACTIONS
AK1 CHECK THE LAMP FAULT CODE (LFC)	<p>1 Observe the flashing air bag indicator.</p> <p>● Is the air bag indicator flashing rapidly with no pauses?</p> <p>→ Yes GO to AK2.</p> <p>→ No REFER to the Restraints Control Module (RCM) Diagnostic Trouble</p>

Code (DTC) Priority Table for the indicated LFC.

AK2 CHECK FRONT SEAT INSTALLATION

- 1 Check that both front seats are installed.
- Are both front seats correctly installed?
- **Yes**
GO to [AK3](#).
- **No**
INSTALL the front seats. PROVE OUT the system. REFER to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#).

AK3 CHECK SIDE AIR BAG INSTALLATION

- 1 Check that both side air bags are correctly installed and connected.
- Are both side air bags correctly installed and connected?
- **Yes**
GO to [AK4](#).
- **No**
Correctly INSTALL and CONNECT both side air bags. PROVE OUT the system. REFER to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#).

AK4 CHECK BOTH SIDE AIR BAG LOOP RESISTANCES

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

3

Battery Ground Cable

4

Driver and Passenger Side Air Bag Module Restraint System Diagnostic Tools

5

RCM C310b

6

DR1050-A

2

Deactivate the system. Refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

6

NOTE: By disconnecting RCM C310b each driver and passenger seat side air bag loop circuit will be shorted through a shorting bar. Do not remove the shorting bar.

Measure the resistances through C367 circuits 30S-JA37 (RD/GN) and 31S-JA37 (BK/GN) and through C337 circuits 30S-JA38 (RD/BK) and 31S-JA38 (BK/RD).

● **Is the resistance more than 1.0 ohm for both measurements?**

→ **Yes**

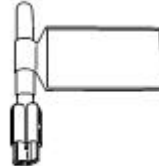

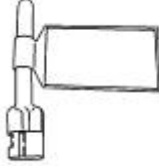

REPAIR the circuits. RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#).

→ **No**

INSTALL a new RCM. RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#).

Supplemental Restraint System (SRS) Deactivation and Reactivation

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F395 (014-R1079)
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Deactivation

 **WARNING:** Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

 **WARNING:** The safety belt buckle pretensioner and safety belt retractor pretensioner are pyrotechnic devices. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

WARNING: Vehicle sensor orientation is critical for proper system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and properly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.**

NOTE: Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.

NOTE: Diagnostics or repairs are not to be performed on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

- WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).

- Remove the two screws and pull out on the lower steering column opening finish panel enough to access the electrical connectors.

3. Remove the lower steering column opening finish panel.
 1. Disconnect the electrical connectors.
 2. Remove the lower steering column opening finish panel.

4. Remove the screws. Separate the hood latch release cable and handle assembly from the steering column opening reinforcement.

5. Remove the two pin-type retainers and the RH instrument panel insulator.
 - Disconnect the courtesy lamp.

6. Remove the screw and the heater duct.

7. Loosen the two driver-side instrument panel tunnel brace bolts.
 - Position the carpet aside to gain access to the bolts.

8. Remove the screws and the steering column opening reinforcement.

9. Disconnect the clockspring electrical connector at the base of the steering column.

10. Attach the restraint system diagnostic tool to the vehicle harness side of the clockspring

electrical connector.

11. Remove the glove compartment. For additional information, refer to [Section 501-12](#).
12. Disconnect the passenger air bag module electrical connector.
 1. Reaching into the glove box opening toward the center of the instrument panel, under the cross-car beam, slide and disengage the passenger air bag module electrical connector locking clip.
 2. Push in on the two release tabs and disconnect the passenger air bag module electrical connector.

13. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger air bag electrical connector.

14. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
15. Move and tilt the front seats to their highest and most forward position.
16.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors,

instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).

17. From under the passenger seat, release the tab on the connector bracket and remove the passenger seat side air bag electrical connector.

18. Disconnect the passenger seat side air bag electrical connector.
 1. Slide and disengage the passenger seat side air bag electrical connector locking clip.
 2. Push in to release the tab and disconnect the passenger seat side air bag electrical connector.

19. Attach the restraint system diagnostic tool to the passenger seat side air bag floor electrical connector.

20. Remove the passenger side B-pillar weatherstripping.
21. Position the safety belt D-ring to its highest point.
22. Remove the passenger side B-pillar upper trim panel.

23. Remove the passenger side front and rear door scuff plates.

24. Remove the passenger side B-pillar lower trim panel.

25. Disconnect the passenger side safety belt retractor pretensioner floor electrical connector.

26. Attach the restraint system diagnostic tool to the passenger side safety belt retractor pretensioner floor electrical connector.

27. From under the driver seat, release the tab on the connector bracket and remove the driver seat side air bag electrical connector.

28. Disconnect the driver seat side air bag electrical connector.
1. Slide and disengage the driver seat side air bag electrical connector locking clip.
 2. Push down to release the tab and disconnect the driver seat side air bag electrical connector.

29. Attach the restraint system diagnostic tool to the driver seat side air bag floor electrical connector.

30. Remove the driver side B-pillar weatherstripping.
31. Position the safety belt D-ring to its highest point.
32. Remove the driver side B-pillar upper trim panel.

33. Remove the driver side front and rear door scuff plates.

34. Remove the driver side B-pillar lower trim panel.

35. Disconnect the driver side safety belt retractor pretensioner electrical connector.

36. Attach the restraint system diagnostic tool to the driver side safety belt retractor pretensioner floor electrical connector.

37. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
38. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.
39. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).

Reactivation

WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the deactivation procedure.

1. Remove the restraint system diagnostic tool from the driver side safety belt retractor pretensioner floor electrical connector.

2. Connect the driver side safety belt retractor pretensioner electrical connector.

3. Install the driver side B-pillar lower trim panel.

4. Install the driver side front and rear door scuff plates.

5. **NOTE:** Position the safety belt D-ring to its highest point.

Install the driver side B-pillar upper trim panel.

6. Install the driver side B-pillar weatherstripping.
7. Remove the restraint system diagnostic tool from the driver seat side air bag floor electrical connector.

8. Connect the driver seat side air bag electrical connector.
 1. Connect the driver seat side air bag electrical connector.
 2. Slide and engage the driver seat side air bag electrical connector locking clip.

9. Install the driver seat side air bag electrical connector onto the connector bracket under the driver seat.

10. Remove the restraint system diagnostic tool from the passenger side safety belt retractor pretensioner electrical connector.

11. Connect the passenger side safety belt retractor pretensioner electrical connector.

12. Install the passenger side B-pillar lower trim panel.

13. Install the passenger side front and rear door scuff plates.

14. **NOTE:** Position the safety belt D-ring to its highest point.

Install the passenger side B-pillar upper trim panel.

15. Install the passenger side B-pillar weatherstripping.

16. Remove the restraint system diagnostic tool from the passenger seat side air bag floor electrical connector.

17. Connect the passenger seat side air bag electrical connector.

1. Connect the passenger seat side air bag electrical connector.
2. Slide and engage the passenger seat side air bag electrical connector locking clip.

18. Install the passenger seat side air bag electrical connector onto the connector bracket under the passenger seat.

19. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
20. Position the front seats rearward.
21.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).

22. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger air bag electrical connector.

23. Connect the passenger air bag module electrical connector.
 1. Reach into the glove box opening toward the center of the instrument panel, under the cross-car beam and connect the passenger air bag module electrical connector.
 2. Slide and engage the passenger air bag module electrical connector locking clip.

24. Install the glove compartment. For additional information, refer to [Section 501-12](#).
25. Remove the restraint system diagnostic tool from the vehicle harness side of the clockspring electrical connector.

26. Connect the clockspring electrical connector at the base of the steering column.

27. Position the steering column opening reinforcement and install the screws.

28.  **CAUTION:** Be sure the steering column opening reinforcement is in place before tightening the driver-side instrument panel tunnel brace bolts.

Tighten the two driver-side instrument panel tunnel brace bolts.

- Reposition the carpet.

29. Position the heater duct and install the screw.

30. Install the RH instrument panel insulator and the two pin-type retainers.

- Connect the courtesy lamp.

31. Position the hood latch release cable and handle assembly to the steering column opening reinforcement and install the screws.

32. Connect the electrical connectors to the switches in the lower steering column opening finish panel.

33. Install the lower steering column opening finish panel to the instrument panel.
 1. Position the lower steering column opening finish panel to the instrument panel and push in, seating the retaining clips.
 2. Install the screws.

34. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).

35.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

36. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).

Inspection and Repair After a Supplemental Restraint System (SRS) Deployment

WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1. When any deployable device (driver air bag, passenger air bag, seat side air bag, safety belt pretensioner, etc.) or combination of devices are deployed and/or the RCM has the DTC B1231 (Crash Data Memory Full) in memory, the repair of the vehicle's supplemental restraint system (SRS) is to include the removal of all deployed devices and the installation of new deployable devices, the removal and installation of new impact sensors, and the removal and installation of a new RCM.
2. When any damage to the impact sensor mounting points or mounting hardware has occurred, repair or install new mounting points and mounting hardware as needed.
3. When the driver air bag module has deployed a new clockspring must be installed.
4. Inspect the entire vehicle for damage, including the following components:
 - steering column.
 - instrument panel knee bolsters and mounting points.
 - instrument panel braces and brackets.
 - instrument panel and mounting points.
 - seats and seat mounting points.
 - safety belts, safety belt buckles, and safety belt retractors. For additional information, refer to [Section 501-20A](#).
 - supplemental restraint system (SRS) wiring, wiring harnesses, and connectors.
5. After carrying out the review and inspection of the entire vehicle for damage, repair or install

new components as needed.

Air Bag Disposal —Deployed

1.  **WARNING:** Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

Dispose of the deployed air bag modules and safety belt pretensioners in the same manner as any other part to be scrapped.

Air Bag Disposal —Undeployed Inoperative

 **WARNING:** Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

 **WARNING:** Carry a live air bag module with the air bag and trim cover or deployment door pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

NOTE: All inoperative air bag modules and safety belt pretensioners have been placed on the Mandatory Return List. All discolored or damaged air bag modules must be treated the same as any inoperative live air bag being returned.

1. Remove the inoperative component from the vehicle. For additional information, refer to the appropriate air bag procedure in this section.

AIR BAG MODULE VERIFICATION

VEHICLE SERIAL NO.

This 17 digit number can be found (1) on your vehicle registration (2) on the dash panel at left side close to lower edge of windshield.

ATTENTION INSTALLER

Please complete and mail this postcard with your New Air Bag Module Serial Number (see sample below) and the Vehicle Identification Number (VIN) of the vehicle in which you are installing this module.

LOOK FOR YOUR REPLACEMENT AIR BAG MODULE SERIAL NUMBER (SN) AT THE LOCATION SHOWN IN THIS SAMPLE AND ENTER IT IN THE SPACE PROVIDED BELOW

SAMPLE

REPLACEMENT AIR BAG MODULE SERIAL NO.

A0005406

2. **NOTE:** When installing a new air bag module, a prepaid return postcard is provided with the replacement air bag module. The serial number for the new part and the vehicle identification number (VIN) must be recorded and sent to Ford Motor Company.

If installing a new air bag module, record the necessary information and return the inoperative air bag module to Ford Motor Company.

Air Bag Disposal —Driver, Undeployed, Scrapped Vehicle

Remote Deployment

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module or safety belt retractor/pretensioner assembly. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover or deployment door pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Remote deployment is to be performed outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the air bag is deployed, hearing protection is required.

⚠ WARNING: Do not place the driver or passenger air bag module with the trim cover or deployment door facing down, as the forces of the deploying air bag can cause it to ricochet and cause personal injury.

1. Remove the driver air bag from the vehicle. For additional information, refer to [Driver Air Bag Module](#) in this section.
2. Obtain two wires (20 gauge minimum) at least 6.1 meters (20 feet) long and attach one end of each wire to the connector pins on the air bag module.

3. Place the air bag module on a flat surface in an open outdoor area with the trim cover facing upward.
4. Remain at least 6.1 meters (20 feet) away from the air bag module.
5. Deploy the air bag module by touching the other ends of the two wires to the terminals of a 12-volt battery.

6. To allow for cooling, wait at least ten minutes before approaching the deployed air bag.
 7. Dispose of the deployed air bag module in the same manner as any other part to be scrapped.
-

Air Bag Disposal —Passenger, Undeployed, Scrapped Vehicle

Remote Deployment

 **WARNING:** Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module or safety belt retractor/pretensioner assembly. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Carry a live air bag module with the air bag and trim cover or deployment door pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Remote deployment is to be performed outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the air bag is deployed, hearing protection is required.

 **WARNING:** Do not place the driver or passenger air bag module with the trim cover or deployment door facing down, as the forces of the deploying air bag can cause it to ricochet and cause personal injury.

1. Remove the passenger air bag from the vehicle. For additional information, refer to [Passenger Air Bag Module](#) in this section.
2. Obtain two wires (20 gauge minimum) at least 6.1 meters (20 feet) long and attach one end of each wire to the connector pins on the air bag module.

3. Place the air bag module on a flat surface in an open outdoor area with the deflector can facing downward.
4. Remain at least 6.1 meters (20 feet) away from the air bag module.
5. Deploy the air bag module by touching the other ends of the two wires to the terminals of a 12-volt battery.

6. To allow for cooling, wait at least ten minutes before approaching the deployed air bag.
 7. Dispose of the deployed air bag module in the same manner as any other part to be scrapped.
-

Air Bag Disposal —Side, Undeployed, Scrapped Vehicle

Remote Deployment

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module or safety belt retractor/pretensioner assembly. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover or deployment door pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Remote deployment is to be carried out outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the air bag is deployed, hearing protection is required.

⚠ WARNING: Do not place the side air bag module with the tear seam facing down or the attaching studs facing upward, as the forces of the deploying air bag can cause it to ricochet and cause personal injury.

1. Remove the side air bag from the vehicle. For additional information, refer to [Side Air Bag Module](#) in this section.
2. Cut and strip the wires and connect the connector to the air bag module.

3. Obtain two wires (20 gauge minimum) at least 6.1 meters (20 feet) long and attach one end of each wire to the connector pins on the air bag module.

4. Place the air bag module on a flat surface in an open outdoor area with the tear seam facing upward and the attaching studs facing downward.
5. Remain at least 6.1 meters (20 feet) away from the air bag module.
6. Deploy the side air bag module by touching the other ends of the two wires to the terminals of a 12-volt battery.

7. To allow for cooling, wait at least ten minutes before approaching the deployed air bag.
 8. Dispose of the deployed side air bag module in the same manner as any other part to be scrapped.
-

Safety Belt Pretensioner Disposal —Deployed

1.  **WARNING:** The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

Dispose of the deployed safety belt pretensioner in the same manner as any other part to be scrapped.

Safety Belt Pretensioner Disposal —Undeployed, Inoperative

WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

WARNING: Carry a live safety belt retractor pretensioner or safety belt buckle pretensioner so as to keep fingers and clothing away from moveable parts. This will reduce the risk of injury in the event of an accidental deployment.

NOTE: All inoperative safety belt buckle pretensioners and safety belt retractor pretensioners have been placed on the Mandatory Return List. All damaged safety belt buckle pretensioners and safety belt retractor pretensioners must be treated the same as any inoperative live safety belt buckle pretensioner or safety belt retractor pretensioner being returned.

1. Remove the inoperative safety belt buckle pretensioner or safety belt retractor pretensioner from the vehicle. For additional information, refer to [Section 501-20A](#).
 2. Package and return the inoperative safety belt buckle pretensioner or safety belt retractor pretensioner to Ford Motor Company.
-

Safety Belt Pretensioner Disposal —Undeployed, Scrapped Vehicle

Remote Deployment

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: Carry a live safety belt retractor/pretensioner assembly so as to keep fingers and clothing away from moveable parts. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Remote deployment is to be carried out outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the safety belt pretensioner is deployed, hearing protection is required.

⚠ WARNING: Do not position the safety belt retractor/pretensioner assembly so that moveable parts contact the support surface, as the forces of the deploying pretensioner can cause it to ricochet and cause personal injury.

1. Remove the safety belt retractor/pretensioner assembly from the vehicle. For additional information, refer to [Section 501-20A](#).
2. Cut off the electrical connector and strip 25 mm (1 inch) of insulation off the wires.

3. Obtain two wires (20 gauge minimum) at least 6.1 meters (20 feet) long and attach one end of each wire to the safety belt pretensioner wires.

4. Position the safety belt retractor/pretensioner assembly on a flat surface in an open outdoor area so that moveable parts do not contact the support surface.
5. Remain at least 6.1 meters (20 feet) away from the safety belt retractor/pretensioner assembly.
6. Deploy the safety belt pretensioner by touching the other ends of the two wires to the terminals of a 12-volt battery.

7. To allow for cooling, wait at least ten minutes before approaching the deployed safety belt pretensioner retractor/pretensioner assembly.
 8. Dispose of the deployed safety belt retractor/pretensioner assembly in the same manner as any other part to be scrapped.
-

Wiring Repair

1. Inspect the supplemental restraint system (SRS) wiring and the wiring harness for any damage that may have occurred as a result of the accident. Inspect and repair or install new, as required, any damaged:
 - wires.
 - insulation.
 - terminal.
 - connectors.
 - splices.

 2. Splice damaged wires using the specified butt-splice connector or equivalent.
 - For splices required in adjacent wiring, stagger the splices 51 mm (2 inches) apart from each other.
 - Use waterproof butt-splice type connectors.
 - Use the correct size heat shrink nylon tube to prevent water, salt, condensation, and heat from affecting the wiring repair. Make sure the tube extends 25 mm (1 inch) each side of the repair.
 - Use a splice connector that is lined with a sealer that melts when heated with a heat gun and flows from the tubing, sealing and splice.
 - Use the correct gauge connector for the wire being repaired.
 - Use connectors that are transparent to allow inspection of the finished splice.
-

Weld Nut Repair — "J" Nut, Restraints Control Module (RCM) and Side Impact Sensor

WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side impact sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

NOTE: There are two procedures to repair a vehicle having missing restraints control module or side impact sensor attaching weld nut(s). Read both this procedure and [Weld Nut Repair—Missing Weld Nut, Restraints Control Module \(RCM\) and Side Impact Sensor](#) before proceeding with the repair.

NOTE: If two or more weld nuts are missing, do not install the "J" nuts as outlined in this procedure. Weld nuts must be installed as outlined in [Weld Nut Repair—Missing Weld Nut, Restraints Control Module \(RCM\) and Side Impact Sensor](#).

NOTE: The following procedure applies to vehicles that have a rectangular hole in the sheet metal that is in close proximity to the missing weld nut.

1. Obtain a "J" nut (part number N623332-S301) or any of the following optional "J" nuts (part numbers: N623342-S101, N800854-S100, N800925-S100).
2. Obtain a 6 mm (0.24 in) grounding screw (part number N806327-S190) or equivalent.
3. Install the "J" nut through the rectangular hole in the sheet metal.
4. **NOTE:** Be sure the threaded portion of the "J" nut is aligned with the clearance hole in the sheet metal.

Install the crash sensor.

5. Tighten the attaching screws to specification. For additional information, refer to Torque Specifications in this section.
-

Weld Nut Repair —Missing Weld Nut, Restraints Control Module (RCM) and Side Impact Sensor

⚠ WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side impact sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

NOTE: There are two procedures to repair a vehicle having missing restraints control module or side impact sensor attaching weld nut(s). Read both this procedure and [Weld Nut Repair—"J" Nut, Restraints Control Module \(RCM\) and Side Impact Sensor](#) before proceeding with the repair.

NOTE: Use only this procedure if two or more weld nuts are missing, do not install the "J" nuts as outlined in Weld Nut Repair — "J" Nut, Restraints Control Module (RCM) and Side Crash Sensor.

NOTE: Radiator support repair shown, others are similar.

1. Obtain a 6 mm (0.24 in) weld nut (part number N806285-S190).
2. Obtain a 6 mm (0.24 in) grounding screw (part number N806327-S190).
3. Route a sufficient length of copper welding wire through the weld nut clearance hole and back out an adjacent access hole.

4. Feed the copper welding wire through the weld nut, then through a standard flatwasher.

5. Secure the flatwasher so that it cannot be pulled off the end of the copper welding wire.
 6. Pull the copper welding wire back through the clearance hole, allowing the weld nut and flatwasher to follow the copper welding wire through.
 7. Position the weld nut to the weld nut clearance hole, firmly pulling on the copper welding wire allowing the secured flatwasher to hold the weld nut in position.
 8. Holding the weld nut securely in place and using a MIG welder, weld in four places around the edge of the weld nut.
 9. Metal finish as required.
 10. Verify the nut is securely in place.
 11. Install the crash sensor.
 12. Tighten the attaching screws to specification. For additional information, refer to Torque Specifications in this section.
-

Weld Nut Repair —Stripped Weld Nut, Restraints Control Module (RCM) and Side Impact Sensor

WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

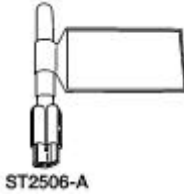

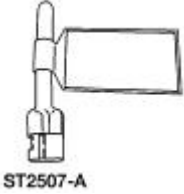

The side impact sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

1. Obtain an 8 mm (0.32 in) grounding screw (part number N802455-S190).
 2. Drill out the internal threads of the stripped-out weld nut to 7.37 mm (0.29 in) using a letter "L" size drill bit.
 3. Position the crash sensor to the vehicle.
 4. Install the 8 mm (0.32 in) grounding screw into the drilled-out weld nut.
 5. Install the remaining attaching screws.
 6. Tighten the attaching screws to specification. For additional information, refer to Torque Specifications in this section.
-

Side Impact Sensor

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F395 (014-R1079)
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal

 **WARNING:** Vehicle sensor orientation is critical for proper system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and properly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and perform the diagnostic procedure again.

NOTE: The left side is shown, the right side is similar.

1. Prepare the vehicle for side impact sensor removal.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power

supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in the General Procedures portion of this section.

3.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

Remove the seat on the side with the affected side impact sensor. For additional information, refer to [Section 501-10](#).

2. Position the carpet away from the B-pillar.
3. Remove the side impact sensor.
 1. Disconnect the side impact sensor electrical connector.
 2. Remove the bolts.
 3. Remove the side impact sensor with bracket.

Installation

 **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions and notes at the beginning of the removal procedure.**

1.  **WARNING: The tightening torque of the air bag side impact sensor retaining bolts is critical for proper system operation.**

Install the side impact sensor.

1. Position the side impact sensor with bracket.
2. Install the bolts.
3. Connect the side impact sensor.

2. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
3. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#), in the Diagnosis and Testing portion of this section.
4. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).
5. Reposition the carpet back at the B-pillar.
6. Restore the vehicle to operating condition.

1.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

Install the seat on the side with the affected side impact sensor. For additional information, refer to [Section 501-10](#).

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in the General Procedures portion of this section.

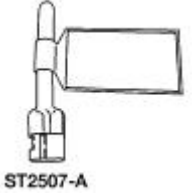

3.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

4. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).
-

Restraints Control Module (RCM)

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F395 (014-R1079)
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal

 **WARNING:** The restraints control module (RCM) orientation is critical for proper air bag supplemental restraint system (SRS) operation. If a vehicle equipped with an SRS system has been involved in a collision in which the center tunnel area has been damaged, inspect the mounting and bracket for deformation. If damaged, the RCM must be replaced whether or not the air bags have deployed. In addition, make sure the area of the RCM mounting is restored to its original condition.

 **WARNING:** Vehicle sensor orientation is critical for proper system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and properly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

 **CAUTION:** Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage can result.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and perform the diagnostic procedure again.

All vehicles

1. Prepare the vehicle for restraints control module (RCM) removal.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the

backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

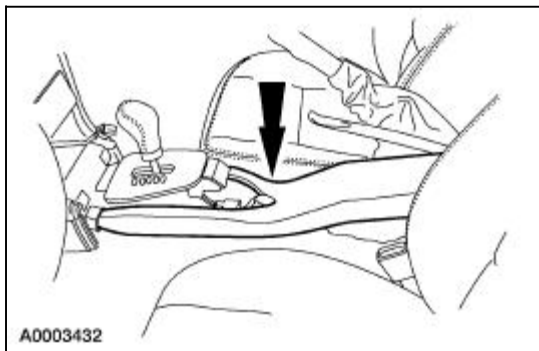

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

2. Remove the center console. For more information, refer to [Section 501-12](#).
3. Remove the rear vent duct.

Vehicles with automatic transmission

4. Position the shifter out of the way.
 1. Disconnect and separate the shifter interlock cable and casing from the shifter.
 2. Remove the shifter retaining bolts (two shown).
 3. Position the shifter out of the way.

All vehicles

5. Remove the extension duct.

6. **NOTE:** The instrument panel has been removed for clarity.

Remove the bolts.

7. Remove the RCM.
 1. Slide and disengage the RCM electrical connector locking clips.
 2. Depressing the locking tab, disconnect the RCM electrical connectors.
 3. Remove the RCM.

Installation

 **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions and notes at the beginning of the removal procedure.

All vehicles

1.  **WARNING:** The tightening torque of the air bag restraints control module (RCM)

retaining bolts is critical for correct system operation.

Position the RCM. Install the bolts.

2. Connect the RCM electrical connector.
 1. Connect the RCM electrical connectors.
 2. Slide and engage the RCM electrical connector locking clips.

3. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
4. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#), in the Diagnosis and Testing portion of this section.
5. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).
6. Install the extension duct.

Vehicles with automatic transmission

7. Install the shifter.

1. Position the shifter.
2. Install the shifter bolts (two shown).
3. Connect the shifter interlock cable and casing to the shifter.

All vehicles

8. Install the rear vent duct.

9. Install the center console. For additional information, refer to [Section 501-12](#).
10. Restore the vehicle to operating condition.
 1.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.

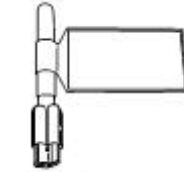

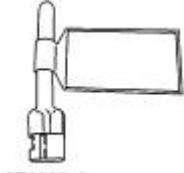

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

2.  **WARNING:** The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

Driver Air Bag Module

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F395 (014-R1079)
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal

 **WARNING:** Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

 **WARNING:** Air bag modules with discolored or damaged trim covers must be replaced, not repainted.

NOTE: A repair is made by installing a new part only. If the new part does not correct the condition,

install the original part and perform the diagnostic procedure again.

1. Prepare the vehicle for driver air bag module removal.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

2. Remove the two steering wheel plugs.

3. Remove the two driver air bag module retaining bolts.

4. Disconnect and remove the driver air bag module.
 1. Slide and disengage the driver air bag electrical connector locking clip.

2. Depress the locking tabs and disconnect the driver air bag module electrical connector.
3. Remove the driver air bag module.

5. Remove the restraint system diagnostic tool from the vehicle harness side of the clockspring electrical connector at the base of the steering column.

6. Connect the clockspring electrical connector at the base of the steering column.

7. Attach the restraint system diagnostic tool to the clockspring electrical connector at the top of the steering column.

8. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
9. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.
10. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).

Installation

 **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions and notes at the beginning of the removal procedure.

1. Remove the restraint system diagnostic tool from the clockspring electrical connector at the top of the steering column.

2. Connect and position the driver air bag module to the steering wheel.
 1. Connect the driver air bag module electrical connector.
 2. Slide and engage the driver air bag module electrical connector locking clip.
 3. Position the driver air bag module to the steering wheel.

3. Install the two driver air bag module bolts.

4. Install the two steering wheel back cover plugs.

5. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
6. With the restraint system diagnostic tools still installed at the remaining deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.
7.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).

8. Restore the vehicle to operating condition.
 1.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

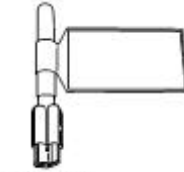

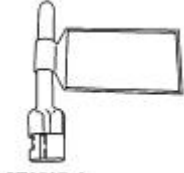

2.  **WARNING:** The restraint system diagnostic tool is for restraint system

service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

Passenger Air Bag Module

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F395 (014-R1079)
 ST2506-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal

 **WARNING:** Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Do not set a live air bag module with the trim cover in the face down position. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

 **WARNING:** If the air bag module is discolored or damaged it must be replaced, not repaired.

NOTE: A repair is made by installing a new part only. If the new part does not correct the condition,

install the original part and perform the diagnostic procedure again.

1. Prepare the vehicle for passenger air bag module removal.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side impact sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in the General Procedures portion of this section.

2. Remove the instrument panel. For additional information, refer to [Section 501-12](#).
3. Position the instrument panel face down on the bench.
 - Cover the work area with something clean and nonabrasive to protect the instrument panel.
4. Remove the screw for the passenger side A/C duct near the center of the instrument panel.

5. Remove the screws from the passenger side A/C and demister duct.

6. Remove the passenger side air conditioning register.
 1. Separate the A/C duct from the register.
 2. Push in on the retaining clips and remove the passenger side air conditioning register.

7. Remove the eight screws. Separate the driver side demister duct and remove the defrost nozzle.

8. Remove the plenum chamber. For additional information, refer to [Section 412-01](#).
9. Remove the center A/C duct.
 1. Remove the screws.
 2. Pull out on the center A/C duct, separating the passenger A/C duct.
 3. Remove the center A/C duct.

10. **NOTE:** If installing a new passenger air bag module, install new retaining nuts and bolts.

Remove the passenger air bag module nuts.

1. Remove the passenger air bag module nuts.
2. Release the three retainers and position the wire harness out of the way.

11. **NOTE:** If installing a new passenger air bag module, install new retaining nuts and bolts.

Remove the passenger air bag module nuts.

- Position the passenger side A/C duct out of the way to access the passenger air bag nuts.

12. **NOTE:** If installing a new passenger air bag module, install new retaining nuts and bolts.

Remove the passenger air bag module bolts.

13. Remove the passenger air bag module through the back of the instrument panel.

Installation

⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions and notes at the beginning of the removal procedure.

1. Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).
2. **NOTE:** If installing a new passenger air bag module, install new retaining nuts and bolts.

Position the passenger air bag module to the instrument panel. Start all nuts and bolts by hand. Do not tighten at this time.

3. Tighten the passenger air bag module nuts.
 1. Tighten the passenger air bag module nuts to specification.
 2. Route the wire harness. Install the retainers.

4. Tighten the passenger air bag module nuts to specification.
 - Position the glove box and passenger side A/C duct out of the way to access the passenger air bag nuts.

5. Tighten the passenger air bag module bolts.

6. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger air bag module electrical connector.

7. **NOTE:** The passenger air bag module is shown with instrument panel removed for clarity.

This is a blind operation due to the passenger air bag module electrical connector mounting location.

Connect the passenger air bag module electrical connector (this is a blind operation).

1. Connect the passenger air bag module electrical connector.
2. Slide and engage the driver air bag module electrical connector locking clip.

8. Position the center A/C duct into the passenger A/C duct.

9. Position the center A/C duct to the instrument panel. Install the screws.

10. Install the plenum chamber. For additional information, refer to [Section 412-01](#).
11. Position the defrost nozzle to the instrument panel while installing the driver side demister duct. Install the eight screws.

12. Position the passenger side demister duct to the instrument panel. Install the screw.

13. Install the passenger side air conditioning register into the instrument panel and engage the retaining clips.
 - Attach the passenger side air conditioning duct to the register.

14. Position the A/C duct and install the screw near the center of the instrument panel.

15. Install the screw for the A/C duct near the passenger register.

16. Install the instrument panel. Do not install the driver air bag module at this time. For additional information, refer to [Section 501-12](#).

17. Install the glove compartment. For additional information, refer to [Section 501-12](#).
18. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
19. With the restraint system diagnostic tools still installed at the remaining deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

20.  **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side impact sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).

21.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the driver air bag module procedure.**

Install the driver air bag module. For additional information, refer to [Driver Air Bag Module](#) in this section.

22. Restore the vehicle to operating condition.

1.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

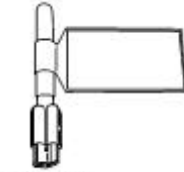

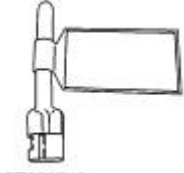

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in the General Procedures portion of this section.

2.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in the Diagnosis and Testing portion of this section.

Side Air Bag Module

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F395 (014-R1079)
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal

 **WARNING:** Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Carry a live side air bag module with the air bag and tear seam pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Do not set a live side air bag module down on the cover tear seam. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

 **WARNING:** Side air bag modules with damaged covers must be replaced.

NOTE: If a side air bag deployment took place the seat back pad, trim cover, and side air bag module must be replaced. The seat back frame should be replaced if necessary.

NOTE: When replacing the side air bag after deployment, refer to [Section 501-10](#) for additional information concerning the installation of a new side air bag.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and perform the diagnostic procedure again.

NOTE: The passenger seat is shown, the driver seat is similar.

1. Prepare the vehicle for side air bag module removal.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

3.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.

Remove the seat on the side with the affected side air bag module. For additional information, refer to [Section 501-10](#).

2.  **WARNING:** Front seat back trim covers installed on seats equipped with side air bags cannot be repaired, they are to be replaced (cleaning is permissible).

 **CAUTION:** When removing the seat back trim panel, be careful not to damage the J-hooks. If the seat back trim panel J-hooks are damaged, install a new seat back trim panel.

Remove the seat back trim panel.

1. Pull and release the pin-type retainers at the bottom of the seat back trim panel.
2. While pushing in at the top of the seat back trim panel, slide it down to disengage the J-hooks.
3. Pull out evenly at the top of the seat back trim panel and remove it.
4. Inspect the seat back trim panel J-hooks and pin-type retainers for damage.

3. Disconnect the electrical connectors.

4. Separate the pin-type retainers from the seat back frame as indicated.

5. Detach the seat back trim cover J-clips.

6. Reposition the seat back trim cover and pad and remove the side air bag module retaining nut cover.

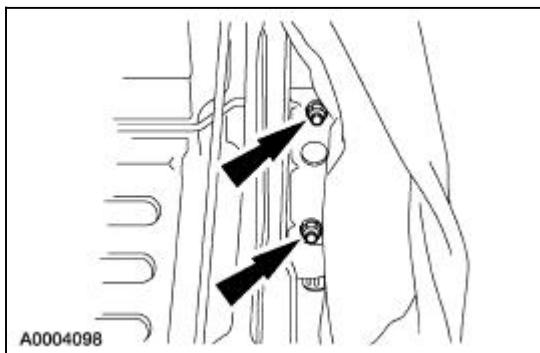

7. Push the wire harness and grommet through the seat back frame.

8. **NOTE:** If installing a new side air bag module, use new retaining nuts. If the same side air bag module is to be reused then reuse the side air bag module nuts.

Remove the side air bag module retaining nuts.

9. With one hand on the side air bag module, position the seat back trim cover and pad forward

enough to access the side air bag module.

10. Remove the side air bag module from the deployment chute.
 1. Separate the side air bag module and deployment chute from the seat back mounting bracket.
 2. Pull the side air bag module mounting studs back through the deployment chute openings and remove the side air bag module from the deployment chute.

11. Remove the side air bag module.
 1. Slide the side air bag electrical connector locking clip to disengage it.
 2. Release the two connector tabs (one shown) by pushing in on them and disconnect the side air bag module.
 3. Remove the side air bag module.

Installation

WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions and notes at the beginning of the removal procedure.

1. Connect the side air bag module electrical connector.
 1. Install the connector to the side air bag module.
 2. Slide the side air bag module electrical connector locking clip to secure the connector to the side air bag module.

2. Make sure the electrical connector is securely fastened to the side air bag module.

3.  **WARNING:** Inspect the mounting surfaces of the side air bag module for any foreign objects before installing the side air bag module. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

 **WARNING:** Inspect the side air bag deployment chute and the side air bag cavity in the seat back pad for any foreign objects. If any foreign objects are found remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

 **WARNING:** Before installing the side air bag module into the deployment chute, check it for damage and foreign objects. If the air bag module is damaged, replace it. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

 **WARNING:** If the air bag cover has separated or the air bag material has been exposed, install a new side air bag module. Do not attempt to repair the air bag module. Failure to do so may result in personal injury, in the event of an air bag deployment.

 **WARNING:** Check the side air bag deployment chute for damage. The deployment chute must not be repaired. If there is any damage to the deployment chute, the seat back trim cover and deployment chute must be installed new as a unit.

 **WARNING:** If the air bag deployment chute is not properly positioned, the side air bag may not deploy properly.

NOTE: The alignment pin will only allow the side air bag module to be installed to the seat back mounting bracket one way.

Position the side air bag module into the deployment chute.

- Position the side air bag module into the deployment chute with the alignment pin offset to the top and the electrical connector to the bottom of the seat back. This will position the alignment pin correctly when the side air bag module and deployment chute are mounted to the seat back frame mounting bracket.
- The side air bag module mounting studs must come through the deployment chute stud openings.

4.  **WARNING: Inspect the mounting surfaces of the deployment chute and the seat back frame mounting bracket for any foreign objects, before installing the side air bag module/deployment chute assembly. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

Install the side air bag module onto the front seat back frame mounting bracket. Install the nuts.

- The deployment chute should not have any wrinkles or folds where it contacts the seat back frame mounting bracket.

5. Pull the wire harness back through the hole in the seat back frame and seat the grommet.

6. Reposition the seat back pad and trim cover to the seat back frame.

7. Attach the side air bag retaining nuts cover.

- Check that all three attaching clips on the side air bag nuts cover are correctly installed around the side air bag mounting bracket.

8. Fasten the seat back trim cover J-clips.

9. Install the pin-type retainers indicated.

10. Connect the electrical connectors.

11.  **CAUTION: Inspect the seat back trim panel J-hooks for damage. If damaged, install a new seat back trim panel.**

Install the seat back trim panel.

1. Angle the top of the seat back trim panel inward and up to engage the upper J-hooks to the seat back frame.
2. While holding the seat back trim panel up, align the pin-type retainers at the bottom of the seat back trim panel and install them into the seat back frame.

12. Restore the vehicle to operating condition.

1.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

Install the seat on the side with the affected side air bag. For additional information, refer to [Section 501-10](#).

2.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

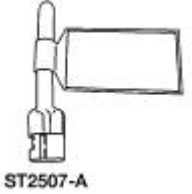

3.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

4. Check the active restraint system for correct operation. For additional information, refer to [Section 501-20A](#).
-

Clockspring

Special Tool(s)

 ST2502-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F395 (014-R1079)
 ST2506-A	Diagnostic Tool, Restraint System (3 Req'd) 418-F088 (105-R0012)
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (40-009)

Removal

 **WARNING:** Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

 **WARNING:** After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

 **WARNING:** Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

 **WARNING:** Air bag modules with discolored or damaged trim covers must be replaced, not repainted.

NOTE: A repair is made by installing a new part only. If the new part does not correct the condition,

install the original part and perform the diagnostic procedure again.

All vehicles

1. Prepare the vehicle for clockspring removal.

1.  **WARNING:** To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.

Please refer to the appropriate vehicle shop manual to determine location of the front air bag sensors.

The side air bag sensors are located at or near the base of the B-pillar.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to [Section 414-01](#).

2.  **WARNING:** To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.

Deactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

2. Remove the two steering wheel back cover plugs.

3. Remove the two driver air bag module bolts.

4. Remove the driver air bag module.
 1. Slide and disengage the driver air bag module electrical connector locking clip.
 2. Depressing the locking tabs, disconnect the driver air bag module electrical connector.
 3. Remove the driver air bag module.

5. **NOTE:** Make sure the wheels are in the straight-ahead position.

Remove the steering wheel. For additional information, refer to [Section 211-04](#).

6. Apply two strips of masking tape across the clockspring to prevent accidental rotation when the clockspring is removed.

7. Remove the two screws and the lower steering column shroud.

8. Pull out and remove the ignition switch finish panel.

9. Remove the headlight switch finish panel by pulling out on it enough to disconnect the electrical connectors and remove it.

10. Lower the steering column.
 1. Remove the two steering column retaining nuts.
 2. Loosen the two steering column retaining nuts enough to pivot the steering column and remove the instrument cluster finish panel.

11. Remove the screws and the instrument cluster finish panel enough to access the automatic temperature control sensor assembly.

12. Separate the automatic temperature control sensor assembly from the instrument cluster finish panel by pushing in and releasing the tabs.

13. Remove the instrument cluster finish panel.
14. Remove the upper steering column shroud.

Vehicles with hands free microphone

15. Disconnect the microphone electrical connector.

All vehicles

16. Disconnect the steering column position sensor electrical connector.

17. Separate the clockspring electrical connector assembly from the steering column.
 1. Disconnect the remaining clockspring electrical connectors.
 2. Release the four clockspring connector assembly retaining clips (two shown).
 3. Separate the clockspring electrical connector assembly from the steering column.

18. Releasing the three clips, remove the clockspring with the multi-function switch.

19. Cut the tie strap. Disconnect the electrical connector.

20. Releasing the tabs, separate the clockspring from the multi-function switch.

Installation

WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions and notes at the beginning of the removal procedure.

All vehicles

1. Align the clockspring to the multi-function switch and attach the two, engaging the retaining tabs.

2. Connect the electrical connector. Install a new tie strap to secure the wire harness.

Vehicles receiving a new clockspring

3. **NOTE:** A new clockspring is supplied in a centralized position and held there with a key.

Remove the key from the clockspring, holding the rotor in its centralized position.

- Do not allow the clockspring rotor to turn from this position.

Vehicles needing clockspring recentering

4. **⚠ WARNING:** Incorrect centralization may result in premature component failure. If in doubt when centralizing the clockspring, repeat the centralizing procedure. Failure to follow this instruction may result in personal injury.

⚠ CAUTION: Make sure the road wheels are in the straight ahead position.

NOTE: If a clockspring has rotated out of center, follow through with this step.

Centralize the clockspring.

1. Hold the clockspring outer housing stationary.
2. **⚠ CAUTION:** Overturning will destroy the clockspring. The internal ribbon wire acts as the stop and can be broken from its internal connection.

While turning the rotor clockwise, carefully feel for the ribbon wire to run out of length, and a slight resistance is felt. Stop turning at this point.

3. Turn the rotor counterclockwise 2-1/2 turns. This is the center point of the clockspring.
 - Do not allow the rotor to turn from this position.

Vehicle repairs reusing the same clockspring

5. **NOTE:** When the tape is removed, do not allow the clockspring to turn.

Remove the tape applied during clockspring removal.

All vehicles

6. **NOTE:** Slight turning of the clockspring rotor is allowable for alignment purposes to the steering column.

With the flats of the clockspring aligned to the flats of the steering column, slide the clockspring onto the steering column engaging the retaining tabs.

7. Remove the restraint system diagnostic tool from the vehicle harness side of the clockspring electrical connector.

8. Install and connect the clockspring electrical connector assembly.
 1. Align the clockspring electrical connector assembly to the steering column and engage the four retaining tabs (two shown).
 2. Connect the clockspring electrical connector assembly electrical connectors.

9. Connect the steering column position sensor electrical connector.

Vehicles with hands free microphone

10. Connect the microphone electrical connector.

All vehicles

11. Position the upper steering column shroud.

12. Align the instrument cluster finish panel to the instrument panel and install the four screws.
 - Install the automatic temperature sensor to the instrument cluster finish panel (not shown).

13. Install the nuts.

14. Install the steering wheel. Do not install the driver air bag module at this time. For additional information, refer to [Section 211-04](#).
15. Attach the restraint system diagnostic tool to the clockspring electrical connector at the top of the steering column.

16. Connect the battery ground cable. For additional information, refer to [Section 414-01](#).
17. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.
18. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to [Section 414-01](#).
19. Connect the electrical connectors. Aligning the retaining clips, install the headlight switch panel.

20. Align the ignition switch finish panel and push in, seating the retaining clips.

21. Position the lower steering column shroud. Install the screws.

22. Remove the restraint system diagnostic tool from the clockspring electrical connector at the top of the steering column.

23. Connect and position the driver air bag module to the steering wheel.
1. Connect the driver air bag module electrical connector.
 2. Slide and engage the driver air bag module electrical connector locking clip.
 3. Position the driver air bag module to the steering wheel.

24. Install the two driver air bag module bolts.

25. Install the two steering wheel back cover plugs.

26. Restore the vehicle to operating condition.

1.  **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

Reactivate the supplemental restraint system (SRS). For additional information, refer to [Supplemental Restraint System \(SRS\) Deactivation and Reactivation](#) in this section.

2.  **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to [Air Bag and Safety Belt Pretensioner Supplemental Restraint System \(SRS\)](#) in this section.

General Specifications

Item	Specification
Fluid/Lubricant Specification	
Premium Life Long Grease XG-1-K	ESA-M1C75-B

Torque Specifications

Description	Nm	lb-ft	lb-in
A/C and power steering bracket bolts	10	—	89
Balance nuts	24	18	—
Center bearing bracket bolts	40	30	—
Control arm cam nuts	175	129	—
Driveshaft yoke adjuster	90	66	—
Engine crossmember bolts	103	76	—
Engine mount nuts	63	46	—
Flex coupling bolts	85	63	—
Flex coupling nuts	85	63	—
Front brake capiler bolts	35	26	—
Front I-brace bolts (front)	55	41	—
Front I-brace bolts (rear)	30	22	—
Front I-brace bracket shoulder bolt	30	22	—
Front strut mount bolts	175	129	—
Power steering gear bolts	103	76	—
Radiator support crossmember bolts	103	76	—
Rear anti-lock brake sensor bolts	9	—	80
Rear brake hose bolts	47	35	—
Rear shock mount bolts	133	98	—
Rear subframe bolts	103	76	—
Stabilizer bar bolts	55	41	—
Stabilizer bar link nuts	55	41	—
Tie rod end nuts	80	59	—
Upper ball joint nuts	90	66	—
Water control valve bracket nuts	9	—	80

Body Misalignment Check

CAUTION: Do not attempt to correct any serious misalignment with one pulling/pushing operation. Damage to the structure could occur.

NOTE: All body alignment measurements should be made without trim and from metal to metal.

1. To check the body alignment, take two opposite diagonal measurements between the front, center or rear pillars. Take the measurements between reference points, such as crease lines or weld joints which are diagonally opposite each other on the two pillars being measured.
-

Underbody Misalignment Check

1. The dimensions of the underbody must be restored to provide the correct front and rear wheel alignment geometry.
2. All the dimensions are measured between the centers of the existing holes in the underbody unless otherwise specified.
3. Inspect all underbody structural members for cracks, twists or bends. Check all welded connections for cracks. Inspect the support brackets for looseness. Carry out any necessary repairs or install new components as necessary.
4. The X axis is referenced from the front of the vehicle. The Y axis is referenced from the center line of the vehicle.

Underbody Dimensions

Dimension	X axis mm(in)	Y axis mm(in)
1	2,044.59 mm (80.49 in)	614 mm (24.17 in)
2	2,164 mm (85.19 in)	273 mm (10.74 in)
3	2,643 mm (104.05 in)	614 mm (24.17 in)
4	3,258 mm (128.26 in)	224 mm (8.81 in)
5	3,275 mm (146.65 in)	675 mm (26.57 in)
6	4,150 mm (163.38 in)	365 mm (14.37 in)
7	4,490 mm (176.77 in)	240 mm (9.44 in)
8	5,100 mm (200.78 in)	500 mm (19.68)
9	5,250 mm (206.69 in)	50 mm (1.96)
10	2,044.59 mm (80.49 in)	614 mm (24.17 in)
11	2,164 mm (85.19 in)	273 mm (10.74 in)
12	2,643 mm (104.05 in)	614 mm (24.17 in)
13	3,258 mm (128.26 in)	224 mm (8.81 in)
14	3,725 mm (146.65 in)	675 mm (26.57 in)
15	4,150 mm (163.38 in)	365 mm (14.37 in)
16	4,490 mm (176.77 in)	240 mm (9.44 in)
17	5,100 mm (200.78 in)	500 mm (19.68 in)
18	1,118 mm (44.01 in)	—
19	1,825 mm (71.85 in)	—
20	1,990 mm (78.34 in)	—
21	2,300 mm (90.55 in)	—
22	3,258 mm (128.26 in)	—

Subframe —Rear

Special Tool(s)

 ST2455-A	Torque Wrench, Driveshaft Coupler 205-474
---	---

Removal

NOTE: If a new rear subframe is to be installed, the differential and halfshafts must be removed prior to removal of the rear subframe. For all other procedures, the differential, halfshafts and rear subframe are to be removed as an assembly.

All

1. Drain the fuel tank. For additional information, refer to [Section 310-00](#).
2. Remove the rear wheel and tire assemblies. For additional information, refer to [Section 204-04](#).

Installing a new rear subframe only

3. Remove the differential and halfshafts. Refer to [Section 205-02](#).

Removing rear subframe assembly (differential and halfshafts attached)

4. Remove the muffler and rear heat shield. For additional information, refer to [Section 309-00](#).
5.  **CAUTION: The differential companion flange bolts, nuts and washers must be removed as matched pairs and installed in the original location. The system balance add-on nuts must be installed in the original location.**

NOTE: Make sure to disconnect the flexible coupling only from the differential companion flange.

Using different color paint markers, place index matchmarks on the differential companion flange, driveshaft flexible coupling and the differential companion flange bolts, nuts, washers and system balance add-on nuts so the driveshaft and differential may be realigned during installation.

6. Remove the flex coupling bolts, nuts and washers.
 - If equipped, remove the balance nuts prior to the removal of the flex coupling nuts.

7. Support the driveshaft at the center and rear.

8. Using the special tools, loosen the driveshaft yoke adjuster nut.

9. **NOTE:** There are shims between the center bearing mounting bracket and the body.

NOTE: The shims must be installed in the original location.

Remove the center bearing bracket bolts and the shims.

10. Slide the rear driveshaft to the full forward position.

11. Using the special tools, tighten the driveshaft yoke adjuster nut.

All

12. Remove the two bolts and position the rear anti-lock brake sensors aside.

13. Disconnect the two rear parking brake cables.

14. Disconnect the two parking brake cables from the junction bracket located to the rear of the fuel tank.

15. Remove the two bolts and position the rear brake hoses aside.

16. Remove and discard the two lower rear shock mount bolts.

17. Paint or mark the position of the subframe to the body for assembly reference.

18.  **CAUTION:** Make sure to remove any residual fuel from the fuel filler hose prior to removal to avoid potential spillage.

Loosen the clamp and remove the fuel filler hose from the fuel tank.

19. Support the vehicle with jack stands at the engine crossmember.

20.  **WARNING:** Make sure the rear subframe is secured to the lift table. Failure to follow these instructions may result in personal injury.

Position the lift table under the rear subframe and remove the rear subframe bolts.

21. **NOTE:** Make sure to clear the fuel filler tube and the differential pinion stem during the subframe removal.

Lower the rear subframe.

Installation

All

1. **NOTE:** Make sure the subframe clears the fuel filler tube and that the differential pinion stem aligns with the driveshaft.

Raise the subframe into contact with the body and hand-start the rear subframe bolts.

2. Align the location marks.
3. Tighten the rear subframe bolts.

Installing a new rear subframe only

4. Install the differential and halfshafts. Refer to [Section 205-02](#).

All

5. Install the two new lower rear shock mount bolts.

6. Position the two rear brake hoses and install the bolts.

7. Connect the two parking brake cables to the junction bracket located to the rear of the fuel tank.

8. Connect the two rear parking brake cables.

9. Position the two rear anti-lock brake sensors and install the bolts.

10. Using the special tools, loosen the driveshaft yoke adjuster nut.

11. **NOTE:** Install one gram (0.04 ounce) of Premium Long Life Grease, XG-1-K or equivalent meeting Ford specification ESA-M1C75-B, in the alignment bushing prior to installation.

Slide the driveshaft rearward until the flexible coupling engages with the differential companion

flange.

12. **NOTE:** Make sure to install the shims between the center bearing bracket and the floor pan.
Install the shims in their original position and loosely install the center bearing bracket bolts.

13. **NOTE:** Align the driveshaft index matchmarks.

NOTE: Make sure to match the bolts, washers, attaching nuts and balance nuts (if equipped) to their original locations.

Install the flex coupling bolts, attaching nuts and washers.

- If equipped, install the balance nut(s).

14. **NOTE:** Tighten the bolts using hand tools only.

NOTE: Avoid twisting the center bearing bracket when tightening.

Tighten the center bearing bracket bolts evenly.

- Using the special tools, tighten the driveshaft yoke adjuster nut.

- Install the rear heat shield and muffler exhaust system. For additional information, refer to [Section 309-00](#).
- Install the fuel filler hose and tighten the clamp.

- Install the rear wheel and tire assemblies. For additional information, refer to [Section 204-04](#).
 - Bleed the brake system. For additional information, refer to [Section 206-00](#).
 - Refill the fuel tank.
 - Check and adjust rear alignment. For additional information, refer to [Section 204-00](#).
 - Test drive the vehicle. If any vibration is present, refer to [Section 100-04](#).
-

Crossmember —Front

Removal

All Vehicles

1. Remove the upper radiator sight shield.
2. Support the radiator to the upper radiator support.
3. Install the three-bar engine support.
4. Remove the front wheel and tire assemblies. For additional information, refer to [Section 204-04](#).
5. If equipped, remove the eight bolts and the two I-braces.
 - Discard the bolts.

6. Remove the two clips and position the front anti-lock brake sensors aside.

7. Remove the four bolts, position and support the front brake calipers aside.

8.  **CAUTION: Hold the external hex of the tie rods when removing the nuts.**

Remove and discard the two nuts and separate the tie rod ends from the front spindles.

9.  **CAUTION: Hold the external hex of the stabilizer bar links when removing the nuts.**

Remove and discard the two nuts and separate the stabilizer bar links from the lower control arm and position aside.

10.  **CAUTION: Hold the external hex of the ball joints when removing the nuts.**

Remove and discard the nuts and separate the upper ball joint from the spindle.

11. Remove the underbody splash shields.
12. Remove the A/C and power steering line bracket bolts.

13. **NOTE:** The nut is most easily accessed from above the front of the radiator support crossmember.

Loosen the nut two turns, remove the bolt and position the water control valve aside.

3.9L Only

14. Remove the block heater harness retainer.

All Vehicles

15. Remove the bolts, position and support the power steering gear aside.
 - Discard the nuts.

16. Remove the engine mount nuts.

17. Remove and discard the lower front strut mount bolts.

18.  **WARNING:** Make sure the front crossmembers are secured to the lift table. Failure to follow these instructions may result in personal injury.

NOTE: Mark the right and left crossmember locations to the body.

Position the lifting table under the two crossmembers and remove the four engine crossmember bolts and the four radiator support crossmember bolts.

19. Lower the radiator support and engine crossmembers as an assembly.

20. **NOTE:** Discard the control arm nuts and bolts.

Remove the control arm nuts and bolts.

Radiator Support Crossmember Removal

21. Remove the bolts and the water control valve bracket.

22. Remove and discard the bolts and position the stabilizer bar aside.

Installation

Radiator Support Crossmember

1. **NOTE:** If equipped, the I-brace guide bolt will have 1.5mm (0.059in) of clearance between the I-brace bracket and the bolt. This is normal and the bolt should not be tightened any further.

Position the stabilizer bar and install the new bolts.

2. Position the water control valve bracket and install the bolts.

All Vehicles

3. Loosely install the new control arm cam bolts and nuts.

4. Position the radiator support and engine crossmembers as an assembly.
5. **NOTE:** Align the crossmember markings.

NOTE: Make sure the weight of the engine is not contacting the crossmember and make sure the crossmember assembly is in contact with the body before tightening the bolts.

Install the four engine crossmember bolts and the four radiator support crossmember bolts.

6. Install the engine mount nuts.

7. Install the new lower front strut mount bolts.

8.  **CAUTION: Hold the external hex of the ball joints when installing the nuts.**

Position the upper ball joints into the spindles and install the new nuts.

9.  **CAUTION: Hold the external hex of the stabilizer bar links when installing the nuts.**

Position the two stabilizer bar links into the lower control arm and install the new nuts.

10. Position the power steering gear and install the bolts.

11.  **CAUTION: Hold the external hex of the tie rods when installing the nuts.**

Position the two tie rod ends into the spindles and install the new nuts.

12. Position the two front brake calipers and install the bolts.

13. Position the two front anti-lock brake sensors and install the clips.

3.9L Only

14. Install the block heater harness.

All Vehicles

15. Position the water control valve and tighten the nut.

16. Position the A/C and power steering brackets and install the bolts.

17. If equipped, position the two I-braces and loosely install the bolts.
 1. Loosely install the front bolts.
 2. Position the I-braces.
 3. Loosely install the rear bolts.

18. If equipped, make sure that the I-brace insulators are correctly positioned.

19. If equipped, install the I-brace bolts.

20. If equipped, tighten the I-brace bolts.

21. Install the underbody splash shields.
 22. Install the front wheel and tire assemblies. For additional information, refer to [Section 204-04](#).
 23. Remove the three-bar engine support.
 24. Remove the support from the radiator.
 25. Install the upper radiator sight shield.
 26. Align the front suspension. For additional information, refer to [Section 204-00](#).
-

Crossmember —I-Brace Bracket

Removal

1. Raise and support the vehicle. For additional information, refer to [Section 100-02](#).
2. Remove the four bolts and the front I-brace. Discard the bolts.

3. Remove and discard the front I-brace bracket shoulder bolt.

4. Remove the rear lower control arm nut and the front I-brace bracket. Discard the nut.

5. Remove the bolts and position the power steering gear aside.
 - Discard the nuts.

6. Remove and discard the rear lower control arm bolt.

Installation

1. Position the front I-brace bracket and install the rear lower control arm cam bolt and nut.

2. Position the power steering gear and install the bolts.

3. **NOTE:** The front I-brace shoulder bolt will have 1.5mm (0.059in) if clearance between the front I-brace bracket and the bolt. This is normal and the bolt should not be tightened any further.

Install the front I-brace bracket shoulder bolt.

4. Position the front I-brace and loosely install the bolts.
 1. Loosely install the front bolt.
 2. Position the front I-brace.
 3. Loosely install the rear bolt.

5. Make sure that the front I-brace insulators are correctly positioned.

6. Install the front I-brace bolts.

7. Tighten the front I-brace bolts.

8. Align the front suspension. For additional information, refer to [Section 204-00](#).
-

GENERAL INFORMATION

INTRODUCTION

In the past, when cars were simpler, diagrams were simpler. All components were connected by wires, and diagrams seldom exceeded 4 pages in length. Today, some wiring diagrams require more than 16 pages. It would be impractical to expect a service technician to trace a wire from page 1 across every page to page 16.

Components shown with a dashed line instead of a solid line indicate not all circuits are shown in this particular diagram (circuits shown in system diagrams are typically applicable to that system only). The remaining circuits connected to that component will be shown in the appropriate system that they apply to.

Today, the wiring diagram necessary to support a given repair procedure is included within that article or a link is provided to the appropriate SYSTEM WIRING DIAGRAM article. For example, the wiring diagram for a Ford EEC-IV system may be included in ENGINE PERFORMANCE and WIRING DIAGRAMS articles for Ford Motor Co. The wiring diagram for a cruise control system may be included in ACCESSORIES & EQUIPMENT section for the specific vehicle manufacturer, and the wiring diagram for an anti-lock brake system may be included in BRAKES and WIRING DIAGRAMS for the specific manufacturer.

WIRING DIAGRAMS contains all wiring diagrams not included in STARTING & CHARGING SYSTEMS and ACCESSORIES & EQUIPMENT. This includes: Data Link Connectors, Ground Distribution, Power Distribution, Engine Performance, Electric Cooling Fans, Anti-Lock Brakes, Electronic Suspension and Electronic Steering wiring diagrams. The Data Link Connectors wiring diagrams show the circuits by which the various on-board computers exchange information, and the diagnostic connectors used for diagnosis and their location. The Ground Distribution wiring diagrams show all vehicle ground points, their location, and the components common to those ground points. The Power Distribution wiring diagrams show the power feed circuits and the components common to those power feeds.

Wiring diagrams used to support the information in ACCESSORIES & EQUIPMENT are drawn in a "top-down" format. The diagrams are drawn with the power source at the top of the diagram and the ground point at the bottom of the diagram. Component locations are identified on the wiring diagrams. Any wires that do not connect directly to a component are identified on the diagram to indicate where they go.

WIRING DIAGRAM SYMBOLS

NOTE: Standard wiring symbols are used on all wiring diagrams. The list below will help clarify any symbols that are not easily understood at a glance. Most components are labeled "Motor", "Switch" or "Relay" in addition to being drawn with the standard symbol.

G50E03637

Fig. 1: Identifying Standard Wiring Diagram Symbols

WIRING DIAGRAM GROUND NUMBER LOCATIONS

NOTE: The following illustration depicts standardized ground numbers and locations to be used in conjunction with wiring diagrams applying to 2001 and prior model years only. See Fig. 2 . Wiring diagrams applying to newer model years depict manufacturer-specified ground numbers and locations. Do not utilize the illustration with 2002 and newer

model year wiring diagrams.

Fig. 2: Ground Numbers & Locations (2001 & Prior Model Years)

WIRING DIAGRAM COMPONENT LOCATIONS

When trying to locate a component in a wiring diagram and you don't know the specific system where it is located, use this handy component locator to find the system wiring diagram in which the component is located. Then, go to that system and locate the component within the wiring diagram.

For example, if you don't know the specific system in which the ignition switch is located, look up ignition switch in the wiring diagram component location tables and go to the appropriate wiring diagram(s) which contain either full or partial views of the ignition switch. The full view of the ignition switch is located in Power Distribution.

The first listing for the component will be the full or most complete view of the component. Additional listings will be partial views of the component. Not all components are used on all models.

All components will have a partial view in Ground Distribution and Power Distribution. Data Link Connectors show connecting circuits between modules. Alternate names for components may be listed in wiring diagram component locations tables.

WIRING DIAGRAM COMPONENT LOCATIONS

Component	Wiring Diagram
ABS Electronic Control Unit	Anti-Lock Brakes; Data Link Connectors
ABS Hydraulic Unit	Anti-Lock Brakes
Acceleration Sensor	Anti-Lock Brakes
Accessory Delay Relay	Power Windows
A/C Compressor Clutch Relay	Engine Performance
A/C Sensor	Engine Performance
A/C Pressure Switch	Engine Performance
Adaptive Lamp Control Module	Exterior Lights
Air Bag(s)	Air Bag Restraint System
Air Bag Module	Air Bag Restraint System
Air Bag Sensor(s)	Air Bag Restraint System
Air Injection Pump Relay	Engine Performance
Air Temperature Sensor	Overhead Console
Alternator (Generator)	Generators & Regulators
Anti-Theft Control Module	Anti-Theft System; Starters
Autolamp Control Relay	Headlight Systems; Daytime Running Lights
Automatic Shutdown (ASD) Relay	Engine Performance; Generators & Regulators
Autostick Switch	Engine Performance
Auxiliary Battery Relay	Generators & Regulators
Back-Up Lights	Back-Up Lights; Exterior Lights
Barometric (BARO) Pressure Sensor	Engine Performance
Battery	Power Distribution
Battery Temperature Sensor	Engine Performance
Body Control Module	Body Control Computer; Anti-Theft System; Daytime Running Lights; Engine Performance; Headlight Systems; Warning Systems
Boost Control Solenoid	Engine Performance
Boost Sensor	Engine Performance
Brake Fluid Level Switch	Analog Instrument Panels
Brake On/Off (BOO) Switch	Cruise Control Systems; Engine Performance; Shift Interlock Systems
Buzzer Module	Warning Systems

Camshaft Position (CMP) Sensor	Engine Performance
Central Control Module	Anti-Theft System
Clockspring	Air Bag Restraint System; Cruise Control Systems; Steering Column Switches
Clutch Pedal Position Switch	Starters
Clutch Start Switch	Starters
Combination Meter	Analog Instrument Panels
Constant Control Relay Module (CCRM)	Engine Performance; Electric Cooling Fans
Convenience Center	Power Distribution; Illumination/Interior Lights
Convertible Top Motor	Power Convertible Top
Convertible Top Switch	Power Convertible Top
Crankshaft Position (CKP) Sensor	Engine Performance
Cruise Control Module	Cruise Control Systems
Cruise Control Switch	Cruise Control Systems
Condenser Fan Relay(s)	Electric Cooling Fans
Data Link Connector (DLC)	Engine Performance
Daytime Running Lights Module	Daytime Running Lights; Exterior Lights
Defogger Relay	Rear Window Defogger
Diagnostic Energy Reserve Module (DERM)	Air Bag Restraint System
Discriminating Sensor (Air Bag)	Air Bag Restraint System
Distributor	Engine Performance
Door Lock Actuators	Power Door Locks; Remote Keyless Entry
Door Lock Relay(s)	Power Door Locks
Electrochromic Mirror	Power Mirrors
Electronic Level Control (ELC) Height Sensor	Electronic Suspension
Electronic Level Control (ELC) Module	Electronic Suspension
Engine Coolant Temperature (ECT) Sending Unit	Analog Instrument Panels
Engine Coolant Temperature (ECT) Sensor	Engine Performance
Engine Control Module	Engine Performance; Generators & Regulators; Starters
ETACS ECU	Warning Systems; Power Windows; Remote Keyless Entry
Evaporative (EVAP) Emissions Canister	Engine Performance
EVAP Canister Purge Solenoid	Engine Performance
EVAP Canister Vent Solenoid	Engine Performance
Exhaust Gas Recirculation (EGR) Valve	Engine Performance
Fuel Tank Vacuum Sensor	Engine Performance
Fog Lights	Headlight Systems; Daytime Running Lights
Fog Light Relay	Headlight Systems; Daytime Running Lights
Fuel Door Release Solenoid	Power Fuel Door Release
Fuel Gauge Sending Unit	Analog Instrument Panels
Fuel Injectors	Engine Performance
Fuel Pump	Engine Performance
Fuel Pump Relay	Engine Performance; Power Distribution

Fuse/Relay Block	Power Distribution
Fusible Links	Power Distribution; Generators & Regulators; Starters
Generator	Generators & Regulators; Engine Performance; Power Distribution
Generic Electronic Module (GEM)	Body Control Modules; Electronic Suspension
Glow Plug Relay	Engine Performance
Glow Plugs	Engine Performance
Grounds	Ground Distribution
Headlight Door Module	Headlight Doors
Headlight Relay	Headlight Systems; Daytime Running Lights
Headlights	Headlight Systems; Daytime Running Lights
Heated Oxygen Sensor(s) (HO2S)	Engine Performance
Heated Windshield Control Module	Heated Windshields
Height Sensor	Electronic Suspension
Horns	Steering Column Switches
Horn Relay	Steering Column Switches
Idle Air Control (IAC) Motor/Valve	Engine Performance
Ignition Coil(s)	Engine Performance
Ignition Key Lock Cylinder	Anti-Theft System
Ignition Module	Engine Performance
Ignition Switch	Power Distribution; Engine Performance; Generators & Regulators; Starters
Illuminated Entry Module	Illumination/Interior Lights
Illumination Lights	Illumination/Interior Lights
Impact Sensor	Air Bag Restraint System
Inertia Fuel Shutoff Switch	Engine Performance
Inhibit Relay	Starters
Instrument Cluster	Analog Instrument Panels
Intake Air Temperature (IAT) Sensor	Engine Performance
Interior Lights	Illumination/Interior Lights
Interlock Switch	Starters
Junction Block	Power Distribution
Keyless Entry Receiver	Remote Keyless Entry
Key Reminder Switch	Starters
Knock Sensor	Engine Performance
Lamp Control Module	Exterior Lights
License Plate Lamp	Exterior Lights
Lighting Control Module	Lighting Control Modules; Anti-Theft System; Daytime Running Lights; Headlight Systems
Lower Relay	Power Convertible Top
Malfunction Indicator Light (MIL)	Engine Performance; Instrument Panels
Manifold Absolute Pressure (MAP) Sensor	Engine Performance
Mass Airflow (MAF) Sensor	Engine Performance

Mega Fuse	Generators & Regulators
Memory Seat/Mirror Module	Memory Systems
Mirror Defogger	Rear Window Defogger
Moon Roof Motor	Power Moon Roof
Moon Roof Relay	Power Moon Roof
Multi-Function Control Module	Warning Systems
Neutral Safety Switch	Starters
Oil Level Switch	Engine Performance
Oil Pressure Switch/Sending Unit	Analog Instrument Panels; Engine Performance
Overhead Console	Overhead Console
Oxygen Sensor(s) (O2S)	Engine Performance
Parking Brake Switch	Analog Instrument Panels
Park Lights	Exterior Lights
Park/Neutral Position Switch	Starters; Engine Performance; Anti-Theft System; Body Control Module
Perimeter Lighting Control Relay	Exterior Lights
Power Amplifier	Power Antennas
Power Antenna Module	Power Antennas
Power Antenna Motor	Power Antennas
Power Distribution Center	Power Distribution; Generators & Regulators; Starters
Power Door Lock Motors	Power Door Locks
Power Mirror Motors	Power Mirrors; Memory Systems
Power Sliding Door Controller	Power Sliding Side Door
Power Seat Motors	Power Seats; Memory Systems
Power Steering Pressure Switch	Engine Performance
Power Top Motor	Power Convertible Top
Power Top Relay(s)	Power Convertible Top
Powertrain Control Module	Engine Performance; Analog Instrument Panels; Cruise Control Systems; Data Link Connectors; Generators & Regulators; Starters
Power Window Motors	Power Windows
Power Window Relay(s)	Power Windows
Radiator Fan Motor(s)	Electric Cooling Fans
Radiator Fan Relay(s)	Engine Performance; Electric Cooling Fans;
Rainsense Module	Wiper/Washer Systems
Raise Relay	Power Convertible Top
Remote Anti-Theft Personality (RAP) Module	Anti-Theft System; Starters; Warning Systems
Seat Belt Pretensioners	Air Bag Restraint System
Seat Belt Retractor Solenoid	Passive Restraints
Seat Belt Switch	Air Bag Restraint System; Passive Restraints
Shift Interlock Solenoid	Shift Interlock Systems
Shift Lock Actuator	Shift Interlock Systems
Side Marker Lights	Exterior Lights

SIR Coil Assembly (Clockspring)	Air Bag Restraint System
Slip Ring (Clockspring)	Air Bag Restraint System; Steering Column Switches
SRS Control Module	Air Bag Restraint System
Starter Motor	Starters
Starter Interrupt Relay	Starters
Starter Solenoid	Starters
Starter Relay	Starters
Steering Wheel Position Sensor	Anti-Lock Brakes
Stoplights	Exterior Lights
Stoplight Switch	Engine Performance; Cruise Control Systems; Anti-Lock Brakes
Sun Roof ECU	Power Sun Roof
Sun Roof Motor	Power Sun Roof
Sun Roof Position Sensor	Power Sun Roof
Taillights	Exterior Lights
Throttle Position (TP) Sensor	Engine Performance
Torque Converter Clutch Solenoid/Switch	Engine Performance
Traction Control Switch	Anti-Lock Brakes
Trailer Tow Connector	Exterior Lights
Trailer Tow Relay	Exterior Lights
Transmission/Transaxle	Engine Performance
Transmission Control Module (TCM)	Engine Performance; Starters
Transmission Range Sensor	Starters; Back-Up Lights; Engine Performance
Transmission Range Switch	Back-Up Lights; Engine Performance; Anti-Theft System
Turn Signal Flasher	Exterior Lights
Turn Signal Lights	Exterior Lights
Twilight Sentinel Switch	Headlight Systems; Daytime Running Lights
Vapor Canister Leak Detection Pump	Engine Performance
Vehicle Control Module (VCM)	Engine Performance
Vehicle Dynamic Module	Electronic Suspension
Vehicle Speed Control Servo	Cruise Control Systems
Vehicle Speed Sensor	Data Link Connectors; Analog Instrument Panels; Cruise Control Systems; Electronic Suspension
Voltage Regulator	Generators & Regulators
Water-In-Fuel Sensor	Engine Performance; Analog Instrument Panels
Wheel Speed Sensors	Anti-Lock Brakes
Window Timer Module	Power Convertible Top
Windshield Intermittent Wiper Relay	Wiper/Washer Systems
Windshield Washer Motor	Wiper/Washer Systems
Wiper Motor	Wiper/Washer Systems

2000 FORD LS

2000 FORD**LS****BUZZERS, RELAYS & TIMERS****BUZZERS, RELAYS & TIMERS**

Component	Location
A/C Clutch Relay	In underhood auxiliary junction box.
Air Pump Relay	Front of left front wheelwell.
Auxiliary Coolant Pump Relay	In underhood auxiliary junction box.
Blower Motor Relay	In underhood auxiliary junction box.
Compressor Relay	In front center of engine compartment, above right cooling fan.
COPS & Heated Oxygen Sensor (HO2S) Relay	In underhood auxiliary junction box.
Foglight Relay	In underhood auxiliary junction box.
Fuel Pump Relay	In battery junction box.
Heated Wiper Park Relay	In underhood auxiliary junction box.
Horn Relay	In underhood auxiliary junction box.
PCM Power Relay	In underhood auxiliary junction box.
Rear Window Defrost Relay	In battery junction box.
SSP 1 Relay	In battery junction box.
SSP 2 Relay	In battery junction box.
SSP 3 Relay	In battery junction box.
SSP 4 Relay	In battery junction box.
Starter Relay	In underhood auxiliary junction box.
Trailer Exterior Lamp Relay	Rear end of vehicle.
Windshield Washer Relay	In underhood auxiliary junction box.
Windshield Wiper Relay	In underhood auxiliary junction box.
Wiper High/Low Relay	In underhood auxiliary junction box.
Wiper Run/Park Relay	In underhood auxiliary junction box.

CIRCUIT PROTECTION DEVICES**CIRCUIT PROTECTION DEVICES**

Component	Location
Auxiliary Junction Box (Interior)	Under left side of dash. See Fig. 10 .
Auxiliary Junction Box (Underhood)	In right front of engine compartment. See Fig. 7 .
Battery Junction Box	In luggage compartment, near battery. See Fig. 11 .
Central Junction Box	Behind right kick panel.
Circuit Breaker 2	In right side of luggage compartment.
Mega Fuse	In luggage compartment, near battery junction box. See Fig. 11 .

2000 Lincoln LS

2000 FORD LS

CONTROL UNITS**CONTROL UNITS**

Component	Location
ABS Control Module	Right front side of engine compartment. See Fig. 8 .
Audio Unit	Behind center of dash.
Cellular Phone Module	In left side of luggage compartment.
Driver Door Lock Unit	In driver's door.
Driver Door Module (DDM)	In driver's door.
Driver Heated Seat Module	Under driver's seat.
Driver Seat Module	Under driver's seat.
Electrochromatic Inside Mirror Unit	In center of roof panel.
Electronic Automatic Temperature Control (ETAC) Unit	Behind center of dash.
Front Electronic Module (FEM)	In left "A" pillar.
Fuel Pump Module	Under rear of vehicle.
Heater Blower Control Module	Behind left side of dash. See Fig. 10 .
Instrument Panel Dimming Module	Behind left side of dash.
Intake Manifold Runner Control (IMRC) Module (3.0L)	Right rear of engine compartment. See Fig. 1 .
Intake Manifold Runner Control (IMRC) Module (3.9L)	Right rear of engine compartment.
Passenger Door Lock Unit	In passenger's door.
Passenger Heated Seat Module	Under passenger's seat.
Passive Anti-Theft Transceiver Module	Behind center of dash.
Powertrain Control Module (PCM)	Right rear of engine compartment.
Rain Sensor Module	In rear center of roof panel opening.
Rear Electronic Module (REM)	In right side of luggage compartment. See Fig. 11 .
Remote Emergency Satellite Cellular Unit (RESCU)	In left side of luggage compartment.
Restraint Control Module (RCM)	In center console.
Roof Opening Panel Module	In center of roof panel opening.
Trailer Tow Control Unit	Rear center of luggage compartment.

MOTORS**MOTORS**

Component	Location
Air Pump Motor	Front of left front wheelwell.
Auxiliary Coolant Pump Motor	In right front of engine compartment. See Fig. 6 .
Blower Motor	Behind center of dash.
Speed Control Servo	In left rear of engine compartment.
Steering Column Position Motor	On steering column.

2000 Lincoln LS

2000 FORD LS

Washer Pump Motor	On windshield washer fluid reservoir.
Windshield Wiper Motor	On center of firewall. See Fig. 5 .

SENDING UNITS & SENSORS

SENDING UNITS & SENSORS

Component	Location
Ambient Air Temperature Sensor	Right front of engine compartment.
Autolamp Sensor	Behind right side of dash.
Brake Booster Sensor	In left rear of engine compartment. See Fig. 5 .
Camshaft Position (CMP) Sensor (3.0L)	On top left side of engine compartment. See Fig. 1 .
Camshaft Position (CMP) Sensor (3.9L)	On top left rear of cylinder head. See Fig. 2 .
Crankshaft Position (CKP) Sensor (3.0L)	Lower left front of engine. See Fig. 1 .
Crankshaft Position (CKP) Sensor (3.9L)	Lower left front of engine.
Cylinder Head Temperature Sensor (3.0L)	On middle of left cylinder head. See Fig. 1 .
Cylinder Head Temperature Sensor (3.9L)	On right cylinder head, under intake. See Fig. 2 .
Digital Transmission Range (DTR) Sensor	On left side of transmission. See Fig. 9 .
Discharge Temperature Sensor (Left)	Behind left side of dash.
Discharge Temperature Sensor (Right)	Behind right side of dash.
Driver Memory Backrest Sensor	In driver's seat.
Driver Memory Seat Front Height Sensor	Under driver's seat.
Driver Memory Seat Horizontal Sensor	Under driver's seat.
Driver Memory Seat Rear Height Sensor	Under driver's seat.
Dual Axis Acceleration Sensor	In center console.
Evaporator Discharge Air Temperature Sensor	Behind center of dash.
Exhaust Pressure Transducer (EPT) Sensor (3.0L)	Left rear side of engine compartment. See Fig. 1 .
Exhaust Pressure Transducer (EPT) Sensor (3.9L)	Left rear side of engine compartment. See Fig. 4 .
Fuel Pump/Fuel Gauge Sender	On top of fuel tank.
Fuel Rail Pressure Transducer Sensor (3.0L)	On left side of engine.
Fuel Rail Pressure Transducer Sensor (3.9L)	On left side of engine. See Fig. 4 .
Fuel Tank Pressure Transducer Sensor	Under rear of vehicle.
Heated Oxygen Sensor (HO2S) No. 11 (Front)	Lower right rear of engine in exhaust manifold.
Heated Oxygen Sensor (HO2S) No. 21 (Front)	Lower left rear of engine in exhaust manifold.
Heated Oxygen Sensor (HO2S) No. 12 (Rear)	In exhaust, rear of catalyst.
Heated Oxygen Sensor (HO2S) No. 22 (Rear)	In exhaust, rear of catalyst.
Intake Air Temperature (IAT) Sensor	On left side of engine compartment.
Intermediate Shaft Speed (ISS) Sensor	On left side of transmission. See Fig. 9 .
In-Vehicle Temperature Sensor	Behind center of dash.
Knock Sensor 1 (3.0L)	On top right side of engine. See Fig. 1 .
Knock Sensor 1 (3.9L)	On top right side of engine. See Fig. 2 .
Knock Sensor 2 (3.0L)	On top left side of engine. See Fig. 1 .
Knock Sensor 2 (3.9L)	On top left side of engine. See Fig. 2 .
Mass Airflow (MAF) Sensor	On air intake assembly.
Output Shaft Speed (OSS) Sensor	On left side of transmission. See Fig. 9 .

2000 Lincoln LS

2000 FORD LS

Primary Brake Pressure Sensor	In left rear of engine compartment. See Fig. 5 .
Secondary Brake Pressure Sensor	In left rear of engine compartment. See Fig. 5 .
Side Air Bag Sensor (Left)	Under driver's seat.
Side Air Bag Sensor (Right)	Under passenger's seat.
Steering Column Position Sensor	On steering column.
Steering Position Sensor	On steering column.
Sun Load Sensor	On top of dash, above glove box.
Throttle Position (TPS) Sensor (3.0L)	On right side of engine. See Fig. 1 .
Throttle Position (TPS) Sensor (3.9L)	On right side of engine. See Fig. 3 .
Turbine Shaft Speed (TSS) Sensor	On lower rear of transmission. See Fig. 9 .
Wheel Speed Sensor (Left Front)	On left front wheel assembly, on spindle assembly.
Wheel Speed Sensor (Left Rear)	On left rear wheel assembly, on brake knuckle.
Wheel Speed Sensor (Right Front)	On right front wheel assembly, on spindle assembly.
Wheel Speed Sensor (Right Rear)	On right rear wheel assembly, on brake knuckle.
Yaw Velocity Sensor	In center console.

SOLENOIDS & SOLENOID VALVES**SOLENOIDS & SOLENOID VALVES**

Component	Location
A/C Clutch Solenoid (3.0L)	In left side of engine compartment. See Fig. 1 .
A/C Clutch Solenoid (3.9L)	In left side of engine compartment.
Brake Shift Interlock	Behind left side of dash, near steering column.
Coolant Control Valve Solenoid	In right front of engine compartment. See Fig. 6 .
Electronic Vacuum Regulator (EVR) Solenoid Valve (3.0L)	On left rear of engine. See Fig. 1 .
Electronic Vacuum Regulator (EVR) Solenoid Valve (3.9L)	On left rear of engine. See Fig. 4 .
EVAP Canister Purge Valve	In left side of engine compartment. See Fig. 5 .
Evaporative Emission (EVAP) Canister Vent Valve	Under rear of vehicle.
Fuel Door Release Solenoid	In luggage compartment on right side. See Fig. 11 .
Hydraulic Fan Solenoid (3.0L)	On top right side of engine. See Fig. 1 .
Hydraulic Fan Solenoid (3.9L)	On top right side of engine. See Fig. 3 .
Inlet Air Control Valve Solenoid (3.0L)	On top right side of engine. See Fig. 1 .
Inlet Air Control Valve Solenoid (3.9L)	On top right side of engine. See Fig. 3 .
Luggage Compartment Lid Release Solenoid	In luggage compartment deck lid.
Power Steering Valve Solenoid	On left side of engine compartment. See Fig. 5 .
Shift Lock Actuator	In top of steering column.
Vacuum Diverter Valve Solenoid (3.0L)	On front of engine. See Fig. 1 .
Vacuum Diverter Valve Solenoid (3.9L)	On front of engine.

2000 Lincoln LS

2000 FORD LS

SWITCHES**SWITCHES**

Component	Location
A/C Clutch Cycling Pressure Switch	In left front of engine compartment.
Anti-Theft Hood Switch	In top left front of engine compartment.
Brake Fluid Level Switch	In left rear of engine compartment, on brake fluid reservoir. See Fig. 5 .
Brake Pedal Position Switch	On top of brake pedal support.
Brake Pressure Switch	On top of brake pedal support.
Clutch Pedal Position Switch	On top of clutch pedal support.
Emergency Message Switch	In center of roof panel.
Inertia Fuel Shut-Off (IFS) Switch	Inside left kick panel. See Fig. 10 .
Luggage Compartment Lid Ajar Switch	In deck lid.
Luggage Compartment Lid Release Switch	On left side of dash panel.
Oil Pressure Switch (3.0L)	On lower left side of engine. See Fig. 1 .
Oil Pressure Switch (3.9L)	On lower left side of engine.
Park Brake Switch	At base of parking brake assembly in center console.
Power Steering Pressure Switch	In left side of engine compartment. See Fig. 5 .
Safety Belt Buckle Switch	In seat belt buckle.
Washer Fluid Level Switch	In windshield washer fluid reservoir.

MISCELLANEOUS**MISCELLANEOUS**

Component	Location
ABS Test Connector	In left rear of engine compartment. See Fig. 5 .
Battery	In right side of luggage compartment.
Data Link Connector (DLC)	Under left side of dash.
Fuel Pump Motor Diode	In luggage compartment under floor lining.
Ignition Transformer Capacitor 1 (3.0L)	In left rear of engine compartment. See Fig. 1 .
Ignition Transformer Capacitor 1 (3.9L)	In left rear of engine compartment. See Fig. 4 .
Ignition Transformer Capacitor 2 (3.0L)	In right rear of engine compartment. See Fig. 1 .
Ignition Transformer Capacitor 2 (3.9L)	In right rear of engine compartment. See Fig. 3 .
Joint Connector 1	Behind right side of dash.
Joint Connector 2	Behind right side of dash.
Joint Connector 3	Behind left side of dash.
Joint Connector 4	Behind left side of dash.
PCM Module Power Diode	In right front side of engine compartment.
Remote Amplifier	Behind front center of dash.
Subwoofer Amplifier	In front of luggage compartment.

CONNECTORS

2000 Lincoln LS

2000 FORD LS

CONNECTORS

Component	Location
C110 (8 Pin)	At left front of vehicle.
C133 (8 Pin)	At right front of vehicle.
C134 (6 Pin)	At right front of engine compartment. See Fig. 6 .
C139 (A/T) (6 Pin)	Behind upper center of engine. See Fig. 9 .
C139 (M/T) (6 Pin)	Behind upper center of engine.
C140 (3.0L) (Black, 12 Pin)	At right rear of engine. See Fig. 1 .
C140 (3.9L) (Black, 12 Pin)	At right rear of engine. See Fig. 3 .
C144 (20 Pin)	At right front footwell.
C145 (Gray, 4 Pin)	At right front footwell.
C146 (2 Pin)	At right front wheelwell.
C192 (12 Pin)	At rear of engine. See Fig. 1 .
C210 (12 Pin)	Under left side of dash, at footwell. See Fig. 10 .
C211 (20 Pin)	Under left side of dash, at footwell. See Fig. 10 .
C212 (20 Pin)	Under left side of dash, at footwell. See Fig. 10 .
C213 (16 Pin)	Under left side of dash, at footwell. See Fig. 10 .
C214 (3 Pin)	Under left side of dash, at footwell. See Fig. 10 .
C215 (3 Pin)	Under left side of dash, at footwell. See Fig. 10 .
C219 (7 Pin)	Behind right side of dash.
C248 (4 Pin)	On steering column.
C260 (16 Pin)	Behind center of dash. See Fig. 10 .
C263 (20 Pin)	Under right side of dash, at footwell.
C264 (16 Pin)	Under right side of dash, at footwell.
C265 (3 Pin)	Under right side of dash, at footwell.
C274 (1 Pin)	Under left side of dash, at footwell. See Fig. 10 .
C275 (2 Pin)	Behind center of dash. See Fig. 10 .
C300 (12 Pin)	Under center console.
C311 (10 Pin)	At right "C" pillar.
C312 (8 Pin)	At right "C" pillar.
C313 (8 Pin)	Under right front seat.
C314 (2 Pin)	Under right front seat.

2000 STARTING & CHARGING SYSTEMS**Generators & Regulators - LS****DESCRIPTION**

System consists of 110-amp generator, internal voltage regulator, battery, Powertrain Control Module (PCM), warning indicator, related fuses and wiring. PCM and generator communicate using pulse-width modulated signals. A dedicated line communicates desired charging rate from PCM to generator and a second dedicated line communicates load from generator to PCM.

Warning indicator should illuminate with ignition on, engine off. Warning indicator should not illuminate with ignition off, or with engine running. Generator and regulator cannot be serviced separately, and must be replaced as an assembly.

ADJUSTMENTS**BELT TENSION**

Vehicles are equipped with automatic drive belt tensioner. Drive belt does not require adjustment. Inspect condition and tension of generator drive belt prior to performing any on-vehicle charging system tests. Replace belt and/or repair tensioner mechanism if necessary.

TROUBLE SHOOTING

NOTE: See **TROUBLE SHOOTING** article in **GENERAL INFORMATION**.

PRELIMINARY CHECKS

- Verify battery condition.
- Inspect accessory drive belt and tensioner.
- Inspect battery junction box fuse No. 415 (5-amp).
- Inspect central junction box fuse No. 217 (5-amp).
- Check all connections for looseness or corrosion.

ON-VEHICLE TESTING**GENERATOR LOAD TEST**

Verify battery condition. Charge or replace as necessary. Connect load tester and ammeter according to tool manufacturer's instructions. With engine running at 2000 RPM and all accessories off, load system to determine generator voltage output. With engine running, turn A/C (if equipped) and headlights on, turn blower motor to high speed. Increase engine speed to 2000 RPM. Voltage should increase a minimum of .5 volt above base voltage.

GENERATOR NO-LOAD TEST

Verify battery condition. Charge or replace battery as necessary. Connect voltmeter positive lead to B+

2000 Lincoln LS

2000 STARTING & CHARGING SYSTEMS Generators & Regulators - LS

off. Read voltmeter when voltage stabilizes. Voltage should be 13-15 volts. If voltage is not as specified, replace generator. See **GENERATOR** under REMOVAL & INSTALLATION.

SELF-DIAGNOSTIC SYSTEM

RETRIEVING DIAGNOSTIC TROUBLE CODES

Connect New Generation Star (NGS) tester to Data Link Connector (DLC) and retrieve charging system Diagnostic Trouble Codes (DTCs). See **POWERTRAIN CONTROL MODULE (PCM) DIAGNOSTIC TROUBLE CODE (DTC) INDEX**. If any other Diagnostic Trouble Code (DTC)s are present, see SELF-DIAGNOSTICS - EEC-V article in ENGINE PERFORMANCE to diagnose fault. After repair is complete, clear DTCs. See **CLEARING DIAGNOSTIC TROUBLE CODES**. If no DTCs are present, repair by symptom. See **SYMPTOM INDEX** table under SYSTEM TESTS.

POWERTRAIN CONTROL MODULE (PCM) DIAGNOSTIC TROUBLE CODE (DTC) INDEX

DTC	Description	Perform Test
P1244	Generator Load Input Low	(1)
P1245	Generator Load Input High	(1)
P1246	Generator Load Input Failure	(1)

(1) See appropriate SELF-DIAGNOSTICS article in ENGINE PERFORMANCE to diagnose fault.

CLEARING DIAGNOSTIC TROUBLE CODES

Connect New Generation Star (NGS) tester to Data Link Connector (DLC). Using NGS tester manufacturer's instructions, clear Diagnostic Trouble Code (DTC)s.

SYSTEM TESTS

INTRODUCTION

Identify symptom and perform appropriate test. See **SYMPTOM INDEX**.

SYMPTOM INDEX

Symptom	Perform Test
Warning Indicator On With Engine Running, System Not Charging	<u>A</u>
System Overcharges	<u>B</u>
Warning Indicator On With Engine Running, System Is Charging	<u>C</u>
Warning Indicator Off With Ignition On	<u>D</u>
Warning Indicator Flickers, Or Is Intermittent	<u>E</u>

TEST A: WARNING INDICATOR ON WITH ENGINE RUNNING, SYSTEM NOT CHARGING

1. Connect NGS tester. Turn ignition on and perform PCM self-test. If any Diagnostic Trouble Code (DTC)s are retrieved, see **POWERTRAIN CONTROL MODULE (PCM) DIAGNOSTIC TROUBLE CODE (DTC) INDEX** table. If no DTCs are retrieved, go to next step.
2. Turn ignition off. Disconnect NGS tester and generator 3-pin connector. Turn ignition on. Measure voltage of Gray/Red wire at generator 3-pin connector. If voltage is not present, go to step 4. If

2000 Lincoln LS

2000 STARTING & CHARGING SYSTEMS Generators & Regulators - LS

voltage is present, go to next step.

3. Turn ignition off. Disconnect PCM connector C175c. Measure resistance of Gray/Red wire between generator 3-pin connector and terminal No. 28 at PCM connector C175c. See **Fig. 1** . If resistance is 5 ohms or less, go to next step. If resistance is greater than 5 ohms, repair open in Gray/Red wire between generator and PCM. See **WIRING DIAGRAMS** . Retest system operation.
4. Connect PCM connector C175c. Check generator output. Perform **GENERATOR LOAD TEST** and **GENERATOR NO-LOAD TEST** under ON-VEHICLE TESTING. If generator is okay, go to next step. If generator is not okay, replace generator. See **GENERATOR** under REMOVAL & INSTALLATION.
5. Disconnect PCM connector C175c. Inspect connector for pushed out pins, corrosion or bent terminals. Repair as necessary. If connector is okay, reconnect and retest system operation. If fault is still present, replace PCM. Clear DTCs and repeat PCM self-test. If fault is still not present, system is operating correctly at this time.

C175a

C175b

C175c

G00011081

Fig. 1: Identifying Powertrain Control Module (PCM) C175c Connector Terminals
 Courtesy of FORD MOTOR CO.

TEST B: SYSTEM OVERCHARGES

1. Connect NGS tester. Turn ignition on and perform PCM self-test. If any Diagnostic Trouble Code (DTC)s are retrieved, see **POWERTRAIN CONTROL MODULE (PCM) DIAGNOSTIC TROUBLE CODE (DTC) INDEX** table. If no DTCs are retrieved, go to next step.

2. Turn ignition off. Disconnect NGS tester. Start engine. With engine running and all accessories turned off, measure voltage between battery terminals while varying engine speed. If voltage is greater than 15 volts, go to step 4 . If voltage is less than 15 volts, go to next step.
3. Turn ignition off. Disconnect generator 3-pin connector. Start engine. Check generator output. See **GENERATOR LOAD TEST** under ON-VEHICLE TESTING. If generator tests okay, go to next step. If generator does not test okay, replace generator. See **GENERATOR** under REMOVAL & INSTALLATION.
4. Measure voltage of Red wire at generator 3-pin connector. If voltage is less than .5 volt from battery voltage, replace generator. See **GENERATOR** under REMOVAL & INSTALLATION. Clear DTCs and retest system operation. If voltage is greater than .5 volt from battery voltage, repair high resistance in Red wire. See **WIRING DIAGRAMS** . Clear DTCs and retest system operation.

TEST C: WARNING INDICATOR ON WITH ENGINE RUNNING, SYSTEM IS CHARGING

1. Connect NGS tester. Turn ignition on and perform PCM self-test. If any Diagnostic Trouble Code (DTC)s are retrieved, see **POWERTRAIN CONTROL MODULE (PCM) DIAGNOSTIC TROUBLE CODE (DTC) INDEX** table. If no DTCs are retrieved, go to next step.
2. Turn ignition off. Disconnect NGS tester. Start engine. With engine running and all accessories turned off, measure voltage between battery terminals while varying engine speed. If voltage is greater than 15 volts, perform **TEST B: SYSTEM OVERCHARGES** . If voltage is less than 15 volts, go to next step.
3. Turn ignition off. Disconnect generator 3-pin connector. Turn ignition on. Measure voltage of Red wire at generator 3-pin connector. If battery voltage is present, go to next step. If voltage is not present, repair open or short in Red wire. See **WIRING DIAGRAMS** . Retest system operation.
4. Turn ignition off. Disconnect PCM connector C175c. Turn ignition on and observe warning indicator. If warning indicator is illuminated, repair short to ground in Gray/Red wire between generator and PCM. See **WIRING DIAGRAMS** . If warning indicator is not illuminated, go to next step.
5. Turn ignition off. Reconnect PCM connector C175c. Disconnect generator 3-pin connector. Check generator output. See **GENERATOR LOAD TEST** under ON-VEHICLE TESTING. If generator tests okay, go to next step. If generator does not test okay, replace generator. See **GENERATOR** under REMOVAL & INSTALLATION.
6. Disconnect PCM connector C175c. Inspect connector for pushed out pins, corrosion or bent terminals. Repair as necessary. If connector is okay, reconnect and retest system operation. If fault is still present, replace PCM. Clear DTCs and repeat PCM self-test. If fault is still not present, system is operating correctly at this time.

TEST D: WARNING INDICATOR OFF WITH IGNITION ON

1. Connect NGS tester. Turn ignition on and perform PCM self-test. If any Diagnostic Trouble Code (DTC)s are retrieved, see **POWERTRAIN CONTROL MODULE (PCM) DIAGNOSTIC TROUBLE CODE (DTC) INDEX** table. If no DTCs are retrieved, go to next step.
2. Turn ignition off. Disconnect NGS tester and generator 3-pin connector. Turn ignition on. Connect a fused (15-amp) jumper wire between generator 3-pin Gray/Red wire terminal and ground. If warning indicator illuminates, replace generator. See **GENERATOR** under REMOVAL & INSTALLATION. If warning indicator does not illuminate, go to next step.
3. Disconnect PCM connector C175c. Inspect connector for pushed out pins, corrosion or bent terminals. Repair as necessary. If connector is okay, reconnect and retest system operation. If fault is still present, replace PCM. Clear DTCs and repeat PCM self-test. If fault is still not present, system is operating correctly at this time.

TEST E: WARNING INDICATOR FLICKERS, OR IS INTERMITTENT

1. Connect NGS tester. Turn ignition on and perform PCM self-test. If any Diagnostic Trouble Code (DTC)s are retrieved, see **POWERTRAIN CONTROL MODULE (PCM) DIAGNOSTIC TROUBLE CODE (DTC) INDEX** table. If no DTCs are retrieved, go to next step.
2. Disconnect generator 3-pin connector. Inspect generator, battery and battery junction box for looseness, corrosion or bent terminals. Clean and tighten any loose connection. If connections are okay, reconnect generator 3-pin connector and go to next step.
3. Start engine. With engine running, inspect battery junction box fuse No. 415 (5-amp), by wiggling fuse and observing warning indicator. If warning indicator flickers, repair loose fuse connection. Retest system operation. If warning indicator does not flicker, go to next step.
4. With engine running and all accessories turned off, measure voltage between battery terminals. If battery voltage is greater than 15 volts, perform **TEST B: SYSTEM OVERCHARGES** . If battery voltage is less than 15 volts, go to next step.
5. Turn ignition off. Disconnect generator 3-pin connector. Connect a fused (15-amp) jumper wire between generator 3-pin Gray/Red wire terminal and ground. Turn ignition on and observe warning indicator. If warning indicator illuminates, go to next step. If warning indicator does not illuminate, repair open in Gray/Red wire. See **WIRING DIAGRAMS** . Retest system operation.
6. Turn ignition off. Connect generator 3-pin connector. Turn ignition on and observe warning indicator. If warning indicator illuminates, system is operating correctly at this time. Inspect circuits for intermittent opens or shorts. Retest system operation. If warning indicator does not illuminate, go to next step.
7. Disconnect PCM connector C175c. Inspect connector for pushed out pins, corrosion or bent terminals. Repair as necessary. If connector is okay, reconnect and retest system operation. If fault is still present, replace PCM. Clear DTCs and repeat PCM self-test. If fault is still not present, system is operating correctly at this time.

REMOVAL & INSTALLATION

CAUTION: When battery is disconnected, vehicle computer and memory systems may lose memory data. Driveability problems may exist until computer systems have completed a relearn cycle. See COMPUTER RELEARN PROCEDURES article in GENERAL INFORMATION before disconnecting battery.

GENERATOR**Removal & Installation (3.0L)**

Disconnect negative battery cable. Remove drive belt from pulley. Raise and support vehicle. Remove bolts, pin-type retainers and lower splash shield. Remove 3 mounting bolts from generator. Hand support generator and rotate to access electrical connections. Disconnect wiring from generator. Remove generator. To install reverse removal procedure. Tighten fasteners to specification. See **TORQUE SPECIFICATIONS** .

Removal (3.9L)

Disconnect negative battery cable. Remove engine cover and air cleaner inlet tube. Remove drive belt from pulley. Raise and support vehicle. Remove 5 bolts and lower splash shield. Remove generator mounting

2000 Lincoln LS

2000 STARTING & CHARGING SYSTEMS Generators & Regulators - LS

bolts. Rotate generator to access B+ terminal, and remove nut. Slightly lower generator and disconnect electrical connectors. Rotate and remove generator.

Installation

Position generator and connect electrical connectors. Rotate generator to access B+ terminal, install cable and nut. Install pivot bolt and nut, leave loose. Install generator expanding bushing/bolt assembly and tighten to specification in 2 steps. Install remaining mounting bolts and tighten to specification. See **TORQUE SPECIFICATIONS** table. Install lower splash shield. Lower vehicle, install drive belt to generator pulley and air cleaner inlet tube. Reconnect negative battery cable.

TORQUE SPECIFICATIONS

TORQUE SPECIFICATIONS

Application	Ft. Lbs. (N.m)

WIRING DIAGRAMS

2000 Lincoln LS

2000 STARTING & CHARGING SYSTEMS Generators & Regulators - LS

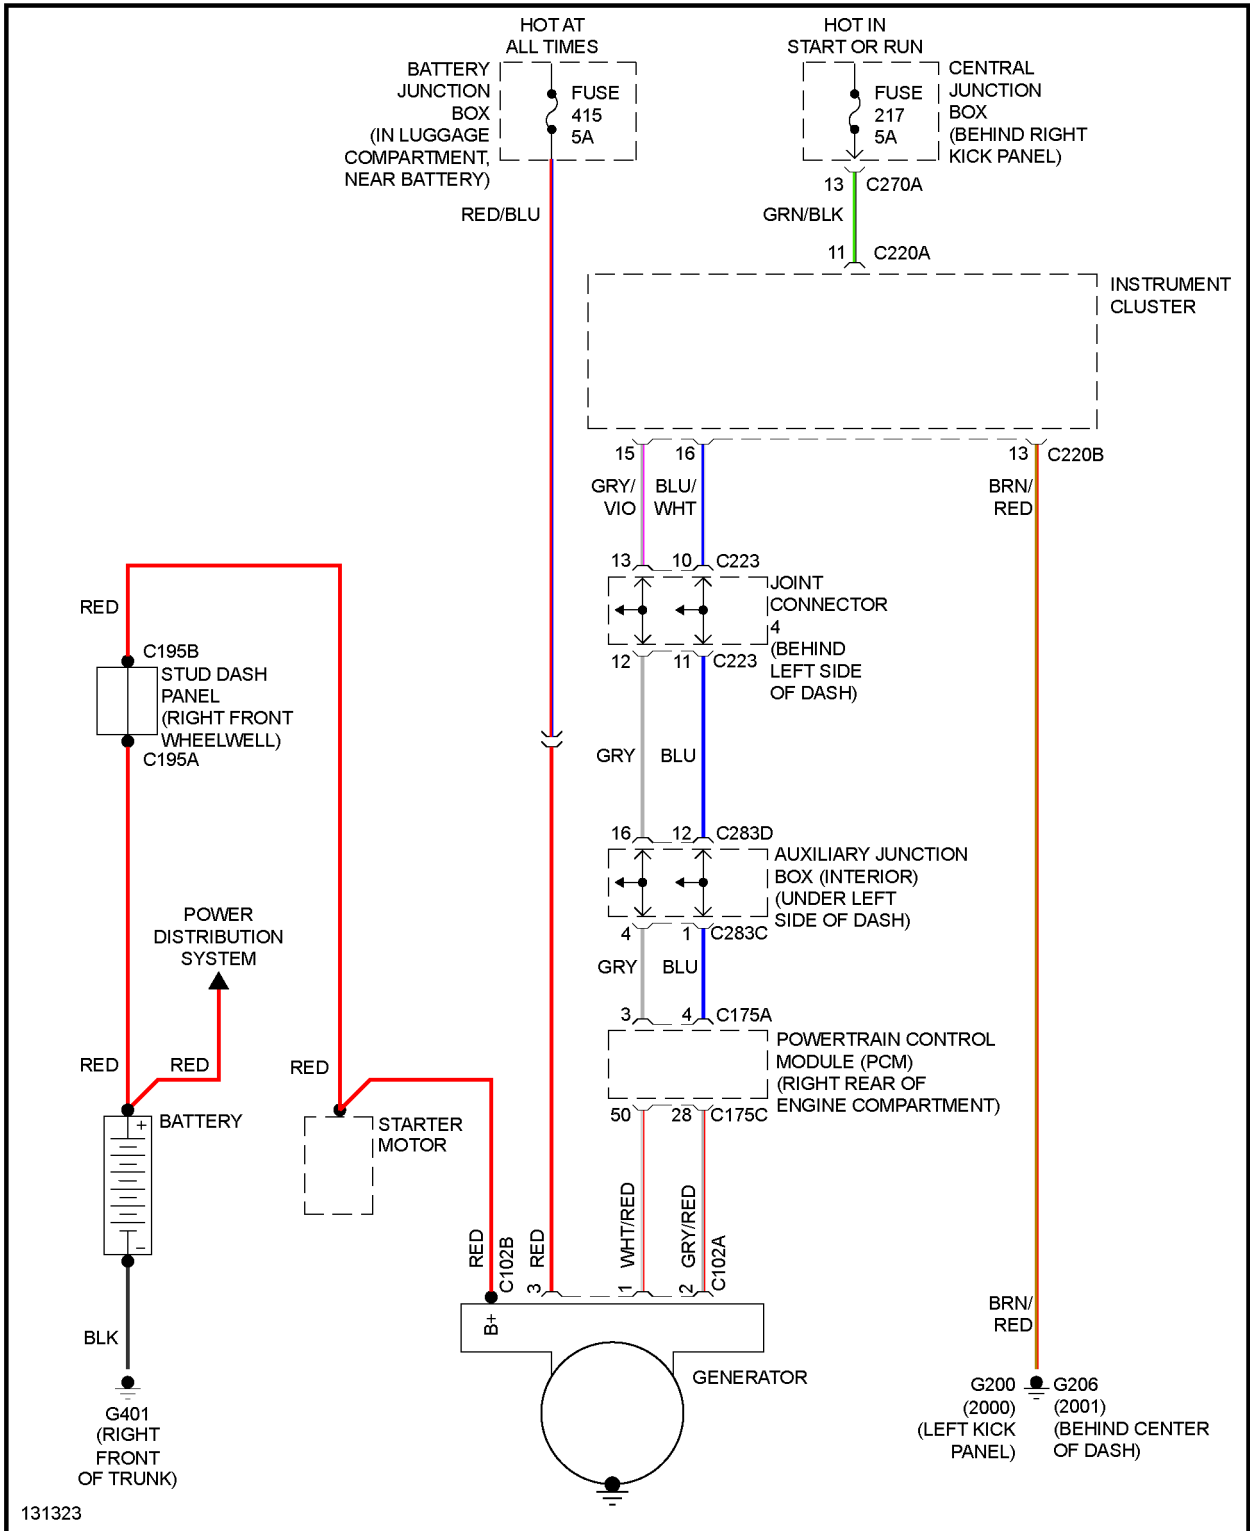

Fig. 2: Charging System Wiring Diagram (LS)

2000 STARTING & CHARGING SYSTEMS**Starters - LS****DESCRIPTION**

The starter is a gear-reduction motor with an externally-mounted solenoid. Starting system consists of a starter motor, solenoid, battery, ignition switch, Digital Transmission Range (DTR) sensor, starter relay, and interconnecting cables and wires.

ADJUSTMENTS**DIGITAL TRANSMISSION RANGE (DTR) SENSOR**

1. Place transmission in Neutral. Raise and support vehicle. Remove catalytic converter. Remove heat shield. Mark front driveshaft flex coupling components to ensure installation is in same position. Using Driveshaft Coupler Torquing Wrenches (205-474), loosen driveshaft coupler nut, located in front of driveshaft bushing. Remove front driveshaft flex coupling nuts. Do not remove flex coupling bolts. Slide driveshaft back to clear transmission flange. Support driveshaft and tighten coupler nut. Support transmission. Remove transmission mount. Lower transmission to access DTR sensor. Disconnect manual shift control cable.
2. Disconnect DTR electrical connector. Loosen DTR sensor bolts. Using DTR Sensor Aligner (T97L-70010-A), align DTR sensor slots. Tighten DTR sensor bolts to specification. See **TORQUE SPECIFICATIONS** . To complete assembly, reverse removal procedure. Use marks to align components in original positions. Use Loctite on flex coupling bolts.

TROUBLE SHOOTING

- Check battery for state of charge.
- Check cable connections at battery and starter motor.
- Ensure transmission is fully engaged in Park or Neutral.
- Check fuse F121 (30-amp) in auxiliary junction box, located underhood.
- Check fuse F22 (20-amp) in battery junction box, located on right side of trunk.
- Check fuse F201 (5-amp) in central junction box, located under right side of instrument panel.

ON-VEHICLE TESTING

CAUTION: When battery is disconnected, vehicle computer and memory systems may lose memory data. Driveability problems may exist until computer systems have completed a relearn cycle. See **COMPUTER RELEARN PROCEDURES** article in **GENERAL INFORMATION** before disconnecting battery. Before testing starter, ensure transmission is in Park or Neutral.

CAUTION: Before testing starter, ensure transmission is in Park or Neutral.

VOLTAGE DROP TEST

NOTE: Make all voltmeter connections at component terminal rather than at cable or wire end.

1. Verify battery condition. Battery voltage should be 12 volts or more. Load test battery at approximately one-half cold cranking amperage rating. See load tester manufacturer's instructions. If battery voltage is less than 12 volts or loaded battery voltage is less than 9.6 volts, service battery or charging system as necessary.
2. Disconnect inertia fuel shutoff switch to disable fuel system. Connect remote starter switch between starter solenoid terminal "S" (Gray wire) and positive battery post. See **Fig. 1**.

G95B12519

Fig. 1: Testing Voltage Drop
 Courtesy of FORD MOTOR CO.

3. Connect positive voltmeter lead to positive battery post, and negative lead to solenoid terminal "M" (solenoid-to-motor connection).
4. Engage remote starter switch. Voltmeter should indicate .8 volt or less. If voltmeter indicates more than .8 volt, go to next step. If voltmeter indicates .8 volt or less, go to **STARTER GROUND CIRCUIT TEST**.
5. Move negative voltmeter lead to solenoid terminal "B". Engage remote starter switch. If voltmeter still indicates more than .8 volt at terminal "B", go to next step. If voltmeter indicates less than .8 volt, proceed to the next test step.

through 5) . If voltmeter still indicates more than .8 volt at terminal "M" and less than .8 volt at terminal "B", solenoid contacts are bad. Replace starter motor. See **STARTER MOTOR** under REMOVAL & INSTALLATION.

6. Clean cables and connections at solenoid and battery. If voltmeter still indicates more than .8 volt at terminal "B", replace battery cable.

NOTE: To locate excessive voltage drop, move voltmeter negative lead toward battery, and check each connection point. When high voltmeter reading disappears, problem is between last connection point and previous connection point.

STARTER GROUND CIRCUIT TEST

NOTE: Make all voltmeter connections at component terminal rather than at cable or wire end.

1. Disconnect inertia fuel shutoff switch to disable fuel system. Connect remote starter switch between starter solenoid terminal "S" (Gray wire) and positive battery post. See **Fig. 2** . Using a digital voltmeter set at lowest voltage scale, connect positive voltmeter lead to starter housing, and negative lead to negative battery post.
2. Engage remote starter switch while observing voltmeter. Voltmeter should indicate .5 volt or less. If voltmeter indicates more than .5 volt, clean negative cable connections at battery and chassis. Also clean engine ground cable connections at front cover and engine mount bracket. If voltage drop is still excessive, repair or replace negative battery cable and/or engine ground cable as necessary. Repeat starter circuit test after repair to ensure problem has been corrected. If battery and cables test okay and starter motor still cranks slowly or not at all, replace starter motor. See **STARTER MOTOR** under REMOVAL & INSTALLATION.

G98B12279

Fig. 2: Testing Ground Circuit
 Courtesy of FORD MOTOR CO.

SYSTEM TESTS

CAUTION: When battery is disconnected, vehicle computer and memory systems may lose memory data. Driveability problems may exist until computer systems have completed a relearn cycle. See **COMPUTER RELEARN PROCEDURES** article in **GENERAL INFORMATION** before disconnecting battery. Before testing starter, ensure transmission is in Park or Neutral.

STARTER DOES NOT CRANK

1. Check for Passive Anti-Theft System (PATS) Diagnostic Trouble Codes (DTC). See **PASSIVE ANTI-THEFT SYSTEMS - LS** article. If no PATS DTCs exist, go to next step. If any PATS DTCs exist, diagnose and repair as necessary.
2. Verify battery condition. Battery voltage should be 12 volts or more. Load test battery at approximately one-half cold cranking amperage rating. See load tester manufacturer's instructions. If battery is okay, go to next step. If battery voltage is less than 12 volts or loaded battery voltage is less than 9.6 volts, service battery or charging system as necessary. Check system operation.
3. Measure voltage between positive battery post and negative battery cable connection at engine block.

If voltage is more than 10 volts, go to next step. If voltage is 10 volts or less, replace battery ground cable. Check system operation.

4. Measure voltage between positive battery post and starter motor case. If voltage is more than 10 volts, go to next step. If voltage is 10 volts or less, clean starter mounting flange and ensure starter is mounted properly. Check system operation.
5. Measure voltage between starter motor terminal "B" and ground. See **Fig. 3**. If voltage is more than 10 volts, go to next step. If voltage is 10 volts or less, replace battery positive cable. Check system operation.

G98J12277

Fig. 3: Identifying Starter Solenoid Terminals
Courtesy of FORD MOTOR CO.

6. Connect a heavy gauge jumper wire to starter terminal "B". Momentarily touch other end of jumper wire to starter terminal "S". If starter cranked engine, go to next step. If starter did not crank engine, replace starter. Check system operation.
7. Disconnect starter harness connector "S" (Gray wire). Measure voltage between starter harness connector "S" (Gray wire) and ground while turning ignition switch to START position. If voltage is 10 volts or less, go to next step. If voltage is more than 10 volts, clean or repair "S" terminal and connector. Check system operation.
8. Remove starter relay from Auxiliary Junction Box (AJB), located underhood. On manual transmission models, have a helper depress clutch. On all models, measure voltage between starter relay cavity No.

86 and ground while turning ignition switch to START position. See **Fig. 4** . If voltage is more than 10 volts, go to next step. If voltage is 10 volts or less, go to step 17 .

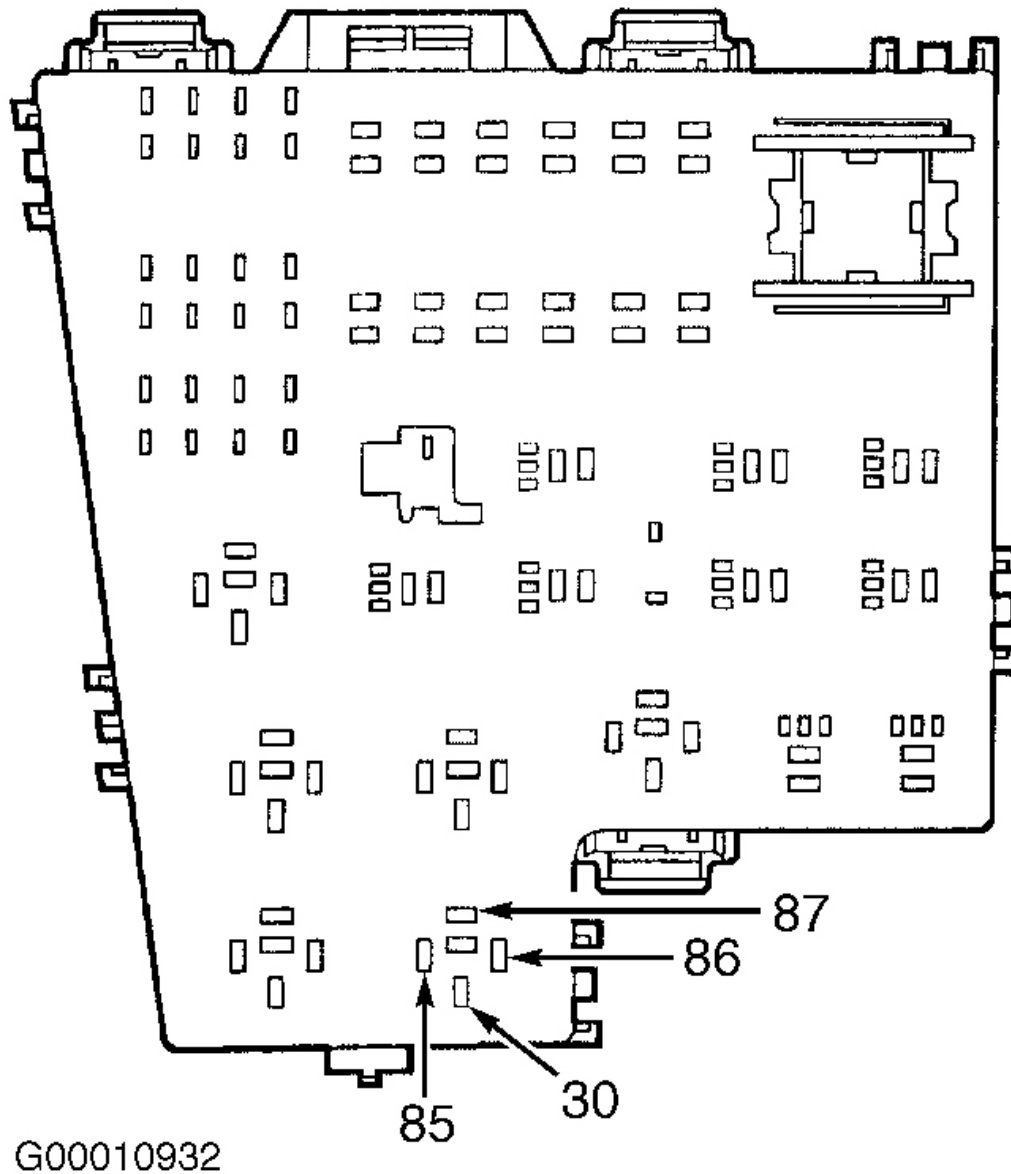

Fig. 4: Identifying Starter Relay Cavity Terminals
Courtesy of FORD MOTOR CO.

9. On manual transmission models, have a helper depress clutch. On all models, measure resistance between starter relay cavity No. 85 and ground while turning ignition switch to START position. If resistance is less than 5 ohms, go to step 14 . If resistance is 5 ohms or more, go to step 11 (M/T), or next step (A/T).
10. Disconnect 20-pin instrument cluster connector C220B. Measure resistance of Black/Yellow wire between starter relay cavity No. 85 and instrument cluster connector C220B terminal No. 18. See **Fig.**

5. If resistance is less than 5 ohms, replace instrument cluster. See ANALOG INSTRUMENT PANELS - LS article. If resistance is 5 ohms or more, repair open on Black/Yellow wire. After repairs, check system operation.

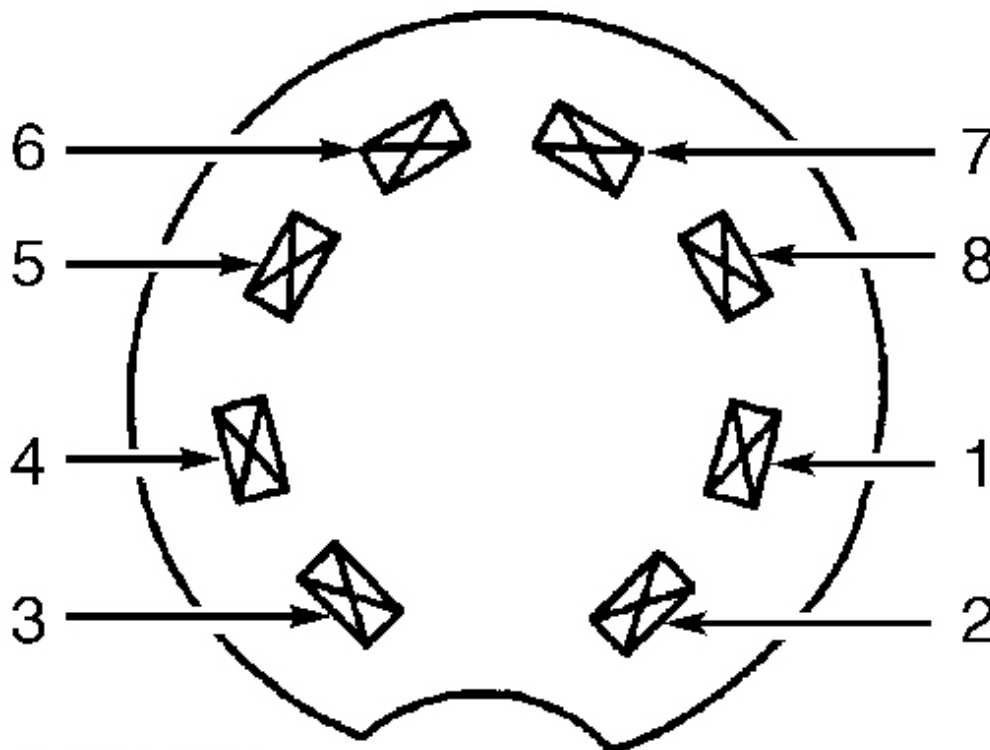

Fig. 5: Identifying Instrument Cluster Connector C200B Terminals
Courtesy of FORD MOTOR CO.

11. Disconnect 2-pin Clutch Pedal Position (CPP) switch connector. Measure resistance between CPP switch harness connector terminal No. 2 (Black/Yellow wire) and ground while turning ignition switch to START position. If resistance is less than 5 ohms, go to next step. If resistance is 5 ohms or more, go to step 13 .
12. Measure resistance of Black/Yellow wire between CPP harness connector terminal No. 1 and starter relay cavity No. 85. If resistance is less than 5 ohms, replace CPP switch. If resistance is 5 ohms or more, repair open in Black/Yellow wire. After repairs, check system operation.
13. Measure resistance of Black/Yellow wire between CPP switch harness connector terminal No. 2 and instrument cluster connector C220B terminal No. 18. If resistance is less than 5 ohms, replace instrument cluster. See ANALOG INSTRUMENT PANELS - LS article. If resistance is 5 ohms or

more, repair open in Black/Yellow wire. After repairs, check system operation.

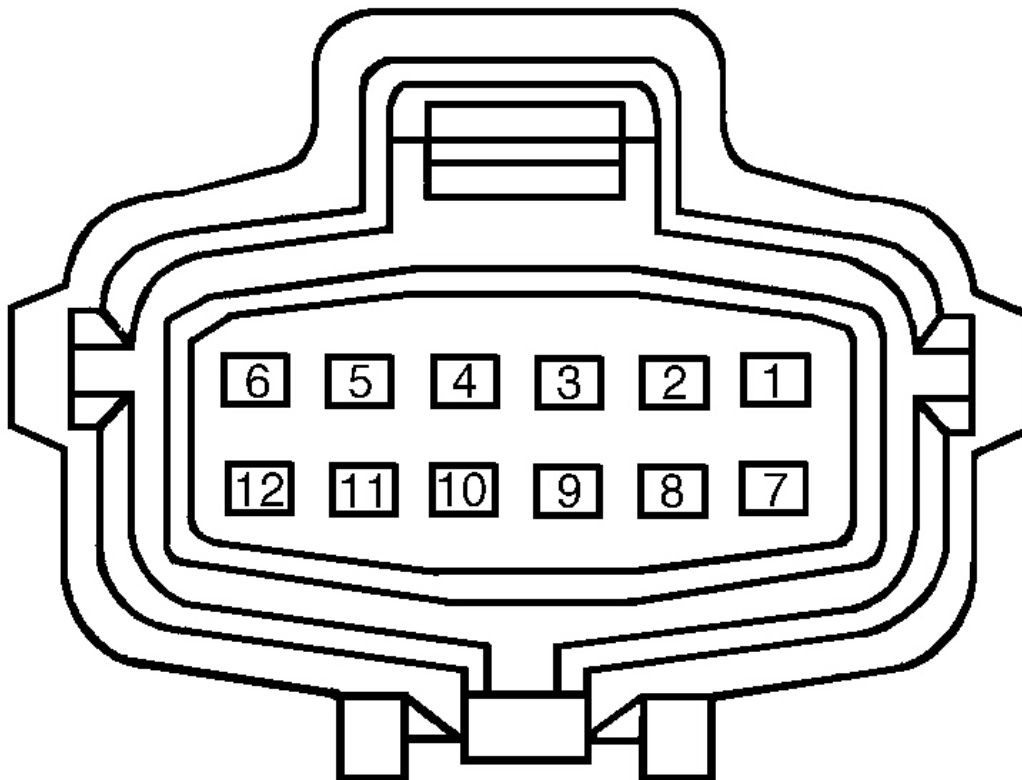

14. Measure voltage between starter relay cavity terminal No. 30 and ground. See **Fig. 4** . If voltage is more than 10 volts, go to next step. If voltage is less than 10 volts, repair open in power feed circuit to starter relay. See **WIRING DIAGRAMS** . Check system operation.
15. Disconnect starter terminal "S" connector (Gray wire). Measure resistance of Gray wire between starter relay cavity terminal No. 30 and starter harness connector. If resistance is less than 5 ohms, go to next step. If resistance is 5 ohms or more, repair open in Gray wire. Check system operation.
16. Measure resistance between starter relay cavity terminal No. 87 (Gray wire) and ground. If resistance is less than 10,000 ohms, repair short to ground in Gray wire. If resistance is 10,000 ohms or more, replace starter relay. After repairs, check system operation.
17. Remove fuse F201 (5-amp), located in Central Junction Box (CJB). CJB is located under right side of instrument panel. Check fuse F201. If fuse is okay, go to next step. If fuse is faulty, go to step 24 .
18. Measure voltage between input side of fuse F201 cavity in CJB and ground while turning ignition switch to START position. If voltage is less than 10 volts, go to next step. If voltage is 10 volts or more, go to step 22 .
19. Disconnect 8-pin ignition switch connector C250. Measure voltage between ignition switch harness connector C250 terminal No. 1 (Red wire) and ground. See **Fig. 6** . If voltage is 10 volts or more, go to next step. If voltage is less than 10 volts, repair open power feed circuit to ignition switch. See **WIRING DIAGRAMS** . Check system operation.

G00010934

Fig. 6: Identifying Ignition Switch Connector Terminals
 Courtesy of FORD MOTOR CO.

20. Measure resistance of Gray/Black wire between ignition switch harness connector C250 terminal No. 3 and input side of fuse F201 cavity in CJB. If resistance is less than 5 ohms, go to next step. If resistance is 5 ohms or more, repair open in Gray/Black wire. Check system operation.
21. Measure resistance between ignition switch harness connector C250 terminal No. 3 (Gray/Black wire) and ground. If resistance is less than 10,000 ohms, repair short to ground in Gray/Black wire. If resistance is 10,000 ohms or more, replace ignition switch. After repairs, check system operation.
22. Install fuse F201 (5-amp) in CJB. Disconnect Digital Transmission Range (DTR) sensor connector. DTR is located on left side of transmission. Measure voltage between DTR sensor harness connector terminal No. 10 (Gray/Orange wire) and ground while turning ignition switch to START position. See **Fig. 7** . If voltage is 10 volts or more, go to next step. If voltage is less than 10 volts, repair open in Gray/Orange wire. Check system operation.

G98F01752

Fig. 7: Identifying Transmission Range Switch Harness Connector
 Courtesy of FORD MOTOR CO.

23. Measure resistance of Gray wire between DTR harness connector terminal No. 12 and starter relay cavity No. 86. If resistance is less than 5 ohms, adjust DTR switch. See **DIGITAL TRANSMISSION RANGE (DTR) SENSOR** under ADJUSTMENTS. If resistance is 5 ohms or more, repair open in Gray wire. After repairs, check system operation.

2000 Lincoln LS

2000 STARTING & CHARGING SYSTEMS Starters - LS

24. Measure resistance between output side of fuse F201 cavity in CJB (Gray/Orange wire) and ground. If resistance is 10,000 ohms or more, go to next step. If resistance is less than 10,000 ohms, repair short to ground in Gray/Orange wire. Check system operation.
25. Measure resistance between DTR harness connector terminal No. 12 (Gray wire) and ground. If resistance is 10,000 ohms or more, go to next step. If resistance is less than 10,000 ohms, repair short to ground in Gray wire. Check system operation.
26. Connect DTR sensor connector. Install new fuse F201 (5-amp). Check system operation. If fuse fails, replace shorted DTR sensor. Recheck system operation.

UNUSUAL STARTER NOISE

1. Verify starter is installed properly. Ensure bolts are tight. Repair as necessary and check system for normal operation. If starter is mounted properly, go to next step.
2. Connect remote starter switch between starter terminal "B" (Red wire) and starter motor terminal "S" (Gray wire). Engage starter motor and verify noise is coming from starter motor. If noise is coming from starter motor, go to next step. If noise is not coming from starter motor, diagnose engine mechanical concern. See appropriate article in ENGINES.
3. Remove starter motor. See **STARTER MOTOR** under REMOVAL & INSTALLATION. Inspect flywheel ring gear for wear or damage. If ring gear is okay, replace starter motor. If ring gear is worn or damaged, replace ring gear and inspect starter drive gear. If drive gear is also damaged, replace starter motor.

BENCH TESTING

Information is not available from manufacturer.

REMOVAL & INSTALLATION

CAUTION: When battery is disconnected, vehicle computer and memory systems may lose memory data. Driveability problems may exist until computer systems have completed a relearn cycle. See **COMPUTER RELEARN PROCEDURES** article in **GENERAL INFORMATION** before disconnecting battery. Before testing starter, ensure transmission is in Park or Neutral.

STARTER MOTOR

Removal & Installation

Disconnect negative battery cable. Raise and support vehicle. Disconnect ground strap. Remove wiring. Remove starter bolts and starter. To install, reverse removal procedure. Tighten fasteners to specification. See **TORQUE SPECIFICATIONS**.
