

BRITAIN BRANCH RELOCATION PROJECT

EDITION 11 • SPRING 2019

What has been accomplished to date is truly remarkable, giving evidence of Jehovah's blessing. Many who visit and see the tremendous scale of the new branch facilities are moved to echo sentiments similar to the Queen of Sheba who was left "completely breathless."

"I did not put faith in the reports until I had come and seen it with my own eyes. And look! I had not been told the half."—1 Kings 10:4-7.

01 Residences

■ Balcony colours were chosen to reflect the natural colour palette of the changing seasons. This design feature also helps to differentiate each Residence building.

03 Office Building

■ This will be the new home for departments such as Service, Legal, Local Design and Construction, Purchasing and Translation. Exterior panels have been designed so as to maximise the amount of natural light entering the building.

02 Reception

■ The Reception links the Office and Multi-Purpose building complex and will house a new visitor centre experience. Floor to ceiling glass panels reveal panoramic views of the surrounding landscape.

04 Production Buildings

■ 1,640 solar PV panels have been installed on the roofs to generate electricity.
■ Rain water harvesting systems have been incorporated into the design. Collected water will be pumped to underground tanks, treated and then reused around the site.

THANK YOU

Your many prayers and continued support are greatly valued as we approach project completion in December 2019.
