How To Create A Modded Minecraft Server On Pterodactyl Panel

The easiest way to create a Minecraft server with mods, is to choose a pack! A "modpack" is a collection of individual mods which you can install to your server. Generally, the mods chosen by the pack creator all work and interact together making your gaming experience more streamlined, and fun. MINECRAFT SERVER This also adds a more technical feel to the general Minecraft game.

To find your mod pack, head on over to the Technic Launcher's official website and hit download. This program allows you to install thousands of packs at a click of a button. Once downloaded and installed, login with your Mojang account and start having a scroll through and install the ones you find interesting! Once you have picked a final pack - its time to install your server! For this post, we will be using Tekkit Legends, because lets be honest.. its classic, takes you back to the old Minecraft 1.7.10 days, and its awesome! !

Jump on over to the Technic Launcher's website once again, click on "Browse Modpacks" and search for the pack you chosen. On the right hand side of the modpack page, you should see "Server Download" - if you don't see this, im afraid the author hasn't released the server version yet. If you are lucky, click the download button to grab your Minecraft server files!
